BIGOTRY.—A term of disputed etymology, denoting the moral characteristic which combines strong will with narrow intelligence in its direction. It appears sometimes in that lack of moral perspective which distinguishes the stickler for trifles, exalting trivial and variable forms into equal rank with the immutable principles of moral and religious life. Sometimes a strong will may grasp tenaciously even a doctrine or line of conduct that is wrong, and then we may have the cruel intolerance of an inquisitor or of the leaders in the Reign of Terror during the French Revolution. When a strong will is supported by religious enthusiasm, bigotry is well described as 'a zeal for God, but not according to knowledge' (Ro 10^2).

J. CLARK MURRAY.

BIJĀPUR (Skr. *vijayapura*, 'city of victory'). —The capital of the District of the same name in the Bombay Presidency, lat. 16° 49′ 45″ N.; long. 75° 46′ 5″ E. The present city was founded on an ancient site which was already the site of Hindu and Jaina worship. It became the seat of the famous Adil Shāhi dynasty, the existence of which terminated on its capture by Aurangzīb in A.D. 1686. In recent years the British Government has taken steps to conserve the splendid series of buildings which were erected by this Musalmān dynasty. Among those of a religious character may be noticed the Jāmi' Masjid, or Cathedral Mosque, commenced by 'Alī Adil Shāh (A.D. 1557–1579), but never completely finished, which Fergusson calls 'one of the finest mosques in India.' Equally remarkable are the splendid tombs of 'Alī Adil Shāh, and his successors, Ibrahīm and Maḥmūd, the last remarkable for its wonderful dome, supported by a method much less clumsy than that employed in the Pantheon and in most of the domes of Europe.

LITERATURE.—Meadows Taylor and Fergusson, *Architecture at Bijapur* (1866); Fergusson, *History of Indian and Eastern Architecture* (1876), 558 ff.; *Bombay Gazetteer*, xxiii. 601 ff. For the old Hindu and Jaina remains, *IA* vii. 121 ff.

W. CROOKE.

BINDING AND LOOSING.—In Mt 16^{19} and 18^{18} Christ bestows the power of binding and loosing upon St. Peter and all the Apostles respectively, with the promise that what they bind on earth shall be bound in heaven, and what they loose on earth shall be loosed in heaven. For a right understanding of the nature of the power involved in this gift, it is necessary to consider what must have been the meaning conveyed to the minds of the Apostles, typical Jews of their time, by these words of Jesus. First, we notice that the power to bind and loose is granted in connexion with *things*, not with persons, which concurs with the common use of the terms in the Talmuds. In them the phrases are applied to such questions as the sending of letters by the

hands of a Gentile on the eve of the Sabbath (Jerus. *Shabb.* fol. 4. 1), the beginning of voyages, or the gathering of wood (Jerus. *Jom. Tobh.* fol. 61. 1). They are used, in doctrinal and judicial matters, of things allowed or not allowed in the Law; in particular, there is the recurrent formula, 'The House of Shammai binds . . . the House of Hillel looses.' Interpreting the former passage in Mt. by the normal usage of the time, we shall conclude that our Lord declared St. Peter to be a competent Rabbi, whose decisions in the matter of conduct (*halakha*) would be ratified by the Heavenly Tribunal. In the exercise of his authority, he would forbid (bind) certain things, and permit (loose) others. In view of the close connexion in Mt 16[18, 19] between the keys and the power of binding and loosing, we may note that the power of the keys (*q.v.*), equally with that of binding and loosing, belonged to the office of scribe or teacher; the scribe, when admitted to office, received 'the key of knowledge' (Lk 11[52]). Thus St. Peter was qualified to be a scribe fully instructed unto the Kingdom of Heaven, endowed with legislative power concerning things, not judicial power concerning persons. In Mt 18[18] the sense of 'bind' and 'loose' has developed in view of the context, and its positive content has become greater: the power to exclude from the society in view of a stubbornly maintained refusal to rectify an offence is involved; vv.[19, 20] as well as vv.[15-17] show that the new society is regarded as possessing powers of self-government from God, and that its decisions will be ratified by God.

Mt 16[19] and 18[18] cannot legitimately be connected with Jn 20[23] ('whose soever sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained'), though, as we shall see, the identification began very soon and became normal. δέειν corresponds to Heb. אָסַר and Aram. אסר; λύειν to Heb. הִתִּיר and Aram. שְׁרָא. The most that we can say is that in Mt 18[18] the context seems to show that the power of binding and loosing implies, among other things, the power of treating sin as pardonable or the reverse, with reference to admission into, or exclusion from, the community. And this conception can be obtained only from the context; it must not be read into the words, for whereas such a phrase as λύειν ἁμαρτίας might be allowed, the corresponding δέειν ἁμαρτίας would be impossible. Dalman (*Words of Jesus*, 216) partially supports the Patristic connexion of Mt 16[19] and 18[18] with Jn 20[23]. He thinks it doubtful whether Matthew understood Jesus as merely bestowing on His disciples power to give authoritative decisions in matters of conduct, and points to the exclusion from the community, which, admittedly, is involved in the context of Mt 18[18]. Therefore, with the inclusion of the conception of St. Peter as the steward of God's house on earth, who possesses the keys, and has power to open or shut, he allows that the sense of Jn 20[23] is latent in the passages of Mt., since 'exclusion from the community on account of some offence includes the "retaining" of the sins; the re-admission of the sinner includes the "remission" of his sins.' Yet, while the natural connexion in thought between the passages in Mt. and Jn. is not to be denied, we ought not to interpret the Matthæan passages by the later passage in Jn.; nor can we say that the gift of the power to open and shut, to bind and loose, was only promised in Mt 16[18, 19], and not actually conferred till Jn 20[23]—a position adopted in *The Pulpit Commentary*.

The power to remit and to retain sins is not without analogy with the power to bind and loose; but it was a distinct and additional power. The interpretation of 'bind' and 'loose' in accordance with the practice of the Rabbinic schools is the natural and obvious one. Neither Lange's objection, in his commentary on St. Matthew's Gospel, that Christ would not have spoken merely after the Rabbinic pattern, nor Dalman's inference that Mt. can hardly have understood Christ in that sense, since δέειν and λύειν do not in his Greek mean 'forbid' and 'permit,' is really a serious objection to this view. Lange does not give adequate weight to the fact that our Lord and His disciples must be interpreted as far as possible in accordance with the Jewish usages of the time, while Dalman's objection loses its force when we remember that the *ipsissima verba* of Jesus, if they can be obtained, are of more importance for the interpreter than the Greek translation given in Mt. It is agreed that the Aramaic words used by Jesus were the same as those so constantly found in the Talmuds in the sense indicated above. Moreover, there is no need to suppose that Mt. found in the passage some force other than 'forbid,' 'permit'; he used δέειν and λύειν as being the nearest Greek equivalents in literal meaning to אסר and שְׁרָא.

We may regard as instances of loosing and binding in the Apostolic Church, the action of St. Peter in having intercourse with Gentiles (Ac 10), and the letter of the Church of Jerusalem with reference to abstention from things offered to idols, blood, and fornication (15[29]). The same assembly refused to bind distinctively Jewish customs upon Gentile Christians. St. Paul's action with regard to the incestuous person (1 Co 5), which was ratified by the community, and led to the excommunication of the offender, at least for a time, may also, in view of Mt 18[15-18], be regarded as a case of binding.

An account of the various ways in which discipline has been exercised in the Christian Church, based largely on the two passages in Mt., would hardly be in place in the present article; but it is possible to gather from the Fathers considerable information as to the influence of these texts, and the manner in which they were utilized in the interests of disciplinary authority. In the *Clementine Homilies, ad Jac.* ii., St. Peter is represented as communicating to Clement the power of binding and loosing, 'so that with respect to everything which he shall ordain in the earth, it shall be decreed in the heavens. For he shall bind what ought to be bound, and loose what ought to be loosed, as knowing the rule of the Church.' The natural, Rabbinic meaning of the words is clearly kept here, though the sentences which immediately follow seem to point to a power extended over persons as well as things. Tertullian deals with the question in *de Pudicitia*, xxi. His strictness in his Montanist days led him to combat the notion of discipline and forgiveness generally prevalent in the Church. In the chapter referred to he distinguishes between the doctrine of the Apostles and their power, and argues that, even if they had forgiven any sin committed against God, the prerogative to pardon which, in accordance with Mk 2[7], belonged to God alone, they did so in the exercise of power, not of discipline; such power was akin to their power of performing miracles, both of healing and destruction. Tertullian demands an equal display of power before he will recognize in the Catholic clergy the power to remit sin; since the mere fact that the functions of discipline had been entrusted to them carried with it no such capacity. As to the argument that, in view of Mt 16[18] (it is interesting to note that he does not deal with Jn 20[23]), the Church has the power to bind and loose, Tertullian answers that this gift was conferred personally upon St. Peter, who made use of it by bringing men to Christian baptism, and so into the Kingdom, 'in which are loosed the sins beforetime bound, and those which have not been loosed are bound in accordance with true salvation.' The same power was exhibited in the death of Ananias and the healing of the impotent man, while both operations were seen in St. Peter's speech, recorded in Ac 15, when certain parts of the law were loosed and others bound. Tertullian does not give any proper weight to the fact that the letter of the Jerusalem assembly was the work of the whole local Church, and not the mere outcome of a number of individual opinions, of which St. Peter's was the first. In any case,

if we accept Tertullian's distinction between the doctrine (*i.e.* discipline) of the Apostles and their power, it can hardly be denied that the 'binding and loosing' letter falls under the former head. But Tertullian's chief anxiety in his discussion is to show that nowhere has authority to *remit sins against God*—the only point round which controversy could rage—been granted to the Apostles, much less to the Church.

Questions with regard to binding and loosing naturally arose in connexion with the controversies in which Cyprian was involved, on the one hand with the Novatians concerning the lapsed, on the other with Stephen in the matter of the re-baptism of heretics. While he urged with ever-increasing force against the Novatians that the power of loosing from even the gravest sins existed in the Church, Cyprian maintained against Stephen that outside the Church there was no one to bind and loose, to baptize and give remission of sins (*Ep.* 73. 7, *ad Jub.*). In the same letter he shows that he completely identifies the power given to St. Peter in Mt 16 with the power given to all the Apostles in Jn 20. To 'loose' is for him the same as to 'remit sins'; and as in *Ep. ad Magnum* 11 he seems to make of 'baptizare et remissum peccatorum dare' one idea, it is likely that 'loosing' was in his mind specially connected with baptism. The same identification of Mt 16[19] with Jn 20[23] is seen in the letter of Firmilian to Cyprian (Migne, *PL* iii. 1201); he insists on the power of forgiveness having been given to the Apostles, from whom it descended to the bishops ordained by them, and so on in continual succession. We see from this how the use of the power to bind and loose was being regularized in the interests of Church order and a ministry that was becoming increasingly sacerdotal. Ambrose, as well as Cyprian, attacked the Novatian restrictions on the Church's power to loose. Novatian and his followers had denied that the Church could extend forgiveness to the lapsed or to those who had fallen into any of the graver sins. Ambrose (*de Pœn.* i. 2), relying on Jn 20[23], replied that the Church had power both to bind and to loose, and turned the attack upon the Novatians by arguing that, as they rejected the power of loosing, clearly they had not the power of binding.

Origen, in his treatment of Mt 16[19] (*Com. in Mt.*, tom. xii.) is more careful to insist on the spiritual character of the gift. According to his interpretation, St. Peter was entrusted with the keys of the Kingdom of Heaven, to open to *those who* were loosed on earth, that they might be loosed and free in heaven. While allowing that bishops also had the right to pronounce *things* bound on earth, which would then be bound in heaven, Origen insists on two qualifications for them, before they can exercise such power. (i.) They must possess that ἔργον in virtue of which it was said to St. Peter, 'Thou art Peter.' (ii.) Their character must be such that the Church can be built upon them: a bishop 'tied by ropes of his own sins' would bind and loose in vain. It is clear that Origen is maintaining the necessity for soundness of faith and life, if the bishop is to be able to bind and loose—a doctrine of the worthiness of the minister which not unnaturally alarmed the annotator of Jerome's exposition of the same passage (*PL* xxvi. 131). In another place, Origen shows the same tendency to urge spirituality rather than office as the essential thing for one seeking to forgive sins. In *de Orat.* 28 he says that, while we can all forgive sins against ourselves, he on whom Jesus has breathed as on the Apostles, and who can be recognized as made spiritual through the gift of the Holy Spirit, forgives what God would forgive, and, on the other hand, retains sins which cannot be healed. Of other Eastern teachers we may notice Chrysostom and Cyril of Alexandria. Chrysostom (*in Mt.*, Hom. liv.), while interpreting binding and loosing as the power to retain and remit sins, which belongs to God alone, in which he agrees with Tertullian, differs from the African theologian in seeing in Christ's words a specific promise to bestow this very power on St. Peter. Cyril Alex. (*Com. in Mt.* lv.), commenting on Mt 16[19], postpones the actual delivery of the power of the keys till after the Resurrection, as recorded in Jn.; on Mt 18[18] he writes that Christ gives to those who have obtained the office of teaching the power to bind and loose, which suggests a possible appreciation of the original force of the words, and their connexion with Jewish custom.

The *Apostolic Constitutions* (ii. 11) connects binding and loosing with the bishop's authority to judge offenders, and interprets Mt 18[18] as specially addressed to the bishops. The great Fathers of the West came to connect binding and loosing more and more strictly with penance and priestly absolution. Thus Augustine (*Sermo* lxvii. 2) makes 'loose' equivalent to letting go free, and makes use of the words of Jesus to Lazarus in Jn 11[44], λύσατε αὐτὸν καὶ ἄφετε αὐτὸν ὑπάγειν, to enforce his meaning. As Lazarus was awakened to life, and came forth at the word of Christ, so does the sinner spiritually revive when he penitently confesses his sins; but, as all had not been done for Lazarus till the disciples loosed him and let him go free, so the penitent needs the Church's absolution. Hilary interprets binding on earth as leaving entangled in the noose of sin, and loosing as receiving into the safety of pardon (*PL* xi. 1021). Jerome, commenting on Mt 18[18] (*Comment. in Ev. Mt.* iii. cap. 18), says that priests and bishops have no power to bind and loose of themselves, but can only decide who is pure and who is not, who is to be bound and who loosed, and compares Lv 14[2-4]; elsewhere (*in Ev. Mt.* iii. cap. 16) he says that the Church has judicial power to declare those freed whom God's grace has freed within; those bound who are not so loosed. Gregory the Great (Hom. 26 *in Evangelia*) says that the bishops have the power of binding and loosing, but that it is lost by those who use it for their own ends, and not for the advantage of their penitents. He also makes use of the raising of Lazarus to show that the Church has power to absolve those whose hearts God has touched and revived by His grace. Gregory warns against unjust binding; yet, at the same time, bids the penitent ever fear, lest, even if he be unjustly bound in connexion with the particular matter which he confesses, the binding may be merited, and therefore valid, owing to some other fault. Gregory connects the official sentence most closely with the sinner's inner feeling, which, in fact, the loosing and binding of the bishop regularizes. Rabanus (*Com. in Mt.* lib. v.), differentiating between the gift to St. Peter and the gift to all the Apostles, points out that, while the power of binding and loosing was given to all, as is clear from Jn 20[23], St. Peter had it conferred upon him in a special way, so that no one separated from the unity of faith and communion with him could be loosed, *i.e.* absolved. Paschasius Radbertus distinguishes between the power of binding and loosing given to St. Peter in Mt 16[19] and that given to all the Apostles in Mt 18[18]. The latter, he says, are urged to argue three times with the offender before binding him, while St. Peter has the keys of all heavens, not merely the power of binding in heaven (*Exp. in Mt.* lib. viii. cap. 16). Bernard, Abbot Fontis Calidi, interprets 1 Co 5[5] as a possible instance of binding by excommunication. In Thomas Aquinas the power of the keys and the

power of binding and loosing are identical, and he distinguishes, in binding and loosing, between the power of authority, which belongs to God alone, the power of excellence, which belongs to Christ, and the power of ministering, which belongs to the priests (*Summa Theol.* 3ª s. Qu. xvii.–xx.).

Of the Reformers, Luther makes the power to bind and loose equivalent to the power of the keys, and interprets it of absolving or retaining sins. Mt 18[18] was addressed to all Christians, and may apply to any one who confesses his sins privately before a brother. He does not distinguish the passages in Mt. from Jn 20[23]. These words are intended to call forth the faith of penitents, so that the word of the Divine promise may free them. A Christian should know that, if he believes and is absolved, he will be truly absolved in heaven. For Luther the power of the keys belongs to the Church, not to the Pope, and the Church's judgment, if the Church be truly spiritual, is God's judgment. Binding and loosing could be exercised both in preaching and in private absolution. The Church, which possesses the power, allows particular individuals to exercise it ('Babylonish Captivity of the Church,' in Luther's *Primary Works*, ed. Wace-Buchheim; also 'Of the Keys'). Melanchthon (*Loci Comm.*, 'de Confess.') interprets Mt 18[18] of the giving of the power of absolution—a power operative in dealing with the lapsed and excommunicate. Calvin distinguishes Mt 16[19] and Jn 20[23] from Mt 18[18]: the former passages have to do with the ministry of the word by preaching, the latter with the spiritual jurisdiction and discipline of the Church. Of Mt 16[18, 19] he says that the keys apply to teaching, and he compares Lk 11[52]. Loosing is directly connected with the forgiveness of sins; the doctrine of the gospel is applied to the loosing of our bonds—that being loosed on earth through man's testimony we may be loosed in heaven also; binding, on the other hand, is accidental to the gospel. In Mt 18[18] the discipline exercised by the Church is in question, and Calvin understands by the Church's sentence on the offenders, which God ratifies, the sentence presided over by Christ through His word (*Works*, 'Harmony of Matthew, Mark, and Luke,' ii. 292).

The Council of Trent (sess. 14, vi.), in opposition to the teachers of the Reformation, insisted on the application of Mt 18[18] strictly to bishops and priests, and to them alone. Bellarmine (*Disput. de cleric.* 5) argues that by the keys delivered to St. Peter the supreme power is intended, as may be seen from Mt 16[19], since in the Scriptures he is said to bind who gives orders and punishes. Cornelius a Lapide (*Commentarius*, tom. 15) goes with some fullness into the question. He argues that in Mt 16[19] 'quodcumque' (ὃ ἐὰν δήσῃς) is equivalent to 'quemcumque,' but that the neuter is used as more universal, since the Pope binds and looses sins, vows, etc., as well as men. Binding is exercised in (1) retaining sins and denying absolution, (2) enjoining penance, (3) excommunication and other censures, (4) laws and councils, (5) binding Christians to a confession of faith; while loosing is to release from these obligations. By a curious piece of exegesis he refers 'super terram' (ἐπὶ τῆς γῆς) to St. Peter, not to the thing bound.

Hooker (*Eccl. Pol.* vi. 4) discusses the question. He argues that the office of regiment over God's Church consists of functions both of doctrine and of discipline, contained in the name of the keys: there is in the Church power to excommunicate, and make sinners as heathens and publicans. God has promised to ratify what is done by His Church, first by the Apostles, then by their successors. The custom of binding by ecclesiastical censure and retaining till repentance leads to loosing has been adopted as the most expedient method for the cure of sin.

Modern commentaries on Mt., while slightly differing among themselves as to the exact force of the words, agree in dissociating the passages in Mt. from Jn 20[23]. For a point of view which denies that the power conferred has reference to any discipline in the visible Church, admission to or exclusion from the Kingdom of Heaven, or specific authority of the Apostles over the Jewish law, see Lyman Abbot's *New Testament with Notes and Comments*. He interprets the promised power as power in the spiritual life: whatever Christians permit themselves, God will permit; whatever they prohibit, God will prohibit; the passage is therefore the spiritual Magna Charta of Christ's disciples. But such an interpretation is too individualistic, and does not do justice to the historic situation, or to the obviously present idea of a community in Mt 18[17]. The idea of the power of self-government in the Church is the nearest modern parallel to the idea conveyed in Mt 16[19] and 18[18].

J. K. MOZLEY.

BIOGENESIS.—Biogenesis is a term used to express a fact of observation in regard to the present-day beginning of living organisms, that they arise from parents approximately like themselves, and in no other way. It is perhaps possible that they may arise in some other way, *e.g.* from not-living matter, or from parents quite different from themselves—both of these hypotheses have their supporters, but as yet no exception to the fact of biogenesis has been proved. The fact is often expressed in the aphorism *omne vivum e vivo*, which in most cases may read *omne vivum ex ovo*. It is unnecessary to speak of this as 'the law of biogenesis,' for the biologist who states that he does not know of any form of life arising except from a parent form of the same kind is not thereby denying the possibility of abiogenesis in the past, the present, or the future. See ABIOGENESIS.

The term 'biogenesis' is sometimes used to mean individual development—a usage which should not be encouraged. Thus Haeckel's 'fundamental law of biogenesis' states that individual development (ontogeny) tends to recapitulate racial evolution (phylogeny). See RECAPITULATION.

J. ARTHUR THOMSON.

BIOLOGY (βίος, 'life'; λόγος, 'discourse') is the science of life in the widest acceptation of that term. It deals with the general conclusions relating to life that may be drawn as the result of study of the structure and activities of all living things. As such it is as intimately connected with the activities of the human organism as with those of the malarial parasite that passes a stage of its existence in man's blood; it concerns itself with every feature in the apparently passive manifestation of the oak tree's vitality, as in that of the active gall-fly, whose developing eggs stimulate the gall-formations upon its leaves. In popular thought, life displays itself in two great, apparently unrelated, fashions corresponding to the animal and vegetable kingdoms respectively—types which undoubtedly are sufficiently distinctive and apart in their most highly developed representatives, but which, as they are studied in a descending series, are found to become ever more

simple until forms are reached which, from the point of view of morphology, are practically alike in the two instances, although still differentiable physiologically; while eventually, certain forms are reached when the last *differentia* ceases to hold, and no unequivocal judgment can be passed upon their animal or vegetable nature. Yet let it not be imagined that to study life in these simpler forms does anything more than eliminate certain secondary constituent elements. 'Livingness' in itself is not more intelligible in the amœba than in the elephant.

At the same time it is convenient to think of the subject-matter of Biology as comprising, in the first instance, the two great realms of animal and vegetable life, corresponding to the sciences of Zoology and Botany. Any individual in either of these realms may be studied from the point of view of its gross build and form (Anatomy = Morphology, in the strictest sense of that term), or minute structure (Histology); from the point of view of general functional and adaptive relation to the external environment (Ecology), or particular ability to do work, associated with definite organs (Physiology proper). Morphology and Physiology suffer, however, more than any other two aspects, from separate consideration, for in life they are most intimately connected, inasmuch as form is conditioned by the function to be performed; in fact, they are the dynamical and statical aspects of one and the same thing. Further, the living organism may be studied stage by stage as a developing organism (Ontogeny), or the historical treatment may be extended to its racial ancestry (Phylogeny, expressed in some classes by Palæontology); it may be regarded in connexion with its various *habitats* on the earth's surface (Geographical Distribution), or its place in a scheme of classification (Taxonomy); investigation may further be directed into the causes that have combined to make it what we find it to be (Ætiology). Finally, in each of these subdivisions the individual may be studied in relation to other individuals more or less like it, which will give us, as in the first instance, Comparative Anatomy and Comparative Histology. Nor should it ever be forgotten in what intimate and often conditioning relation these different aspects stand to one another, so that biological interpretation is incomplete to the extent in which it fails to realize this co-ordination.

The importance of biological study, not merely as a discipline, but from the bearing of its varied subject-matter upon human life in general, can hardly be exaggerated. To recognize the truths of Biology, and appreciate them aright, is a great aid to living; the life of the spirit is grounded in them. In connexion with questions of human health and food supply, and the various other economic aspects of living forms that stand in desirable and undesirable relations to man, a knowledge of Biology should be part of the equipment of every educated man; Psychology and Sociology are torso-like studies in so far as they are not recognized as grounded on Biology. In the same way Biology rests in great measure on Physics and Chemistry, while the relations to and influence on Philosophy, Sociology, and Theology of such an integral component of biological construction as Evolution are a leading element in modern thought.

The initial question of Biology is the nature and characteristics of living matter—the determination of that wherein 'livingness' consists. Conceivably, this may be best attempted by consideration of the simplest forms of life; yet to solve the problem of their 'greatest common measure' does not necessarily mean that we have determined the unit of life. Wherein, then, does 'livingness' consist? Possibly we should instinctively reply, movement—movement, either purely locomotive, or such as is involved in the maintenance of the functions of nutrition and reproduction. Yet in the case of any seed or egg, life is somehow there, but we see no movement. We can ask about either the seed or the egg, Is it alive? or, Is it capable of living? but these are obviously two very different questions. It is known that if dry seeds be kept for a long period in hermetically sealed jars they cease to respire, failing to manifest any chemical production of CO_2, one of the great signs of life. Hence their chemical answer to the question, Are you alive? is No. But does this answer necessarily imply that they are dead? And again the answer is No; for, if released from their prison and placed in suitable conditions, they will germinate and produce new plants. 'So that a seed, in so far as it does not manifest chemical change, is not proved to be living; and, inasmuch as it germinates, is proved not to be dead' (Waller, *The Signs of Life*, p. 5). Of course, the usual escape from this dilemma is to say that the seed is in a state of latent life, during which there is a complete suspension of all the chemical changes that are characteristic of the living state. But a more correct statement is that we have no means of chemical investigation sufficiently refined to reveal to us the infinitesimal changes that are probably going on in the apparently dry and perfectly dormant seed; and it is further possible that chemical change may be completely arrested for a time (*e.g.* by low temperature) without that arrest being of necessity final and definitive. The reason for believing that infinitesimal changes, which our methods are too crude to detect, are going on in the seeds, simply is the experience in the first place that seeds that are kept for a long time do wear out, and that the percentage of seeds that germinate and grow gets smaller and smaller the longer they are kept. The deterioration is more or less rapid according to the nature of the seed and its coats, but in every known instance there is deterioration sooner or later—deterioration, *i.e.* change, chemical change. We do not know, but it is not unreasonable to suppose, that the change is of the nature of a tendency towards stability on the part of the seed molecules because of the lack of stimulation. A stage is reached when no response is offered. Similarly, in the contrary direction, the process of growth when once begun cannot be arrested; it must proceed, or the organism will disintegrate immediately. Life is a process rather than a condition. When once, as in the case of the developing egg, a certain temperature has disturbed its statically arranged molecules, proper energy must be furnished for continuing the process, or the whole structure comes tumbling down, and we say that the thing is dead.

Hence, with Waller, we ought probably to specify the character of the seed or the egg in this way: Matter—Not living—Formerly living—Capable of living again. They are physico-chemical structures whose life may begin, rather than living things themselves. Further, it has been shown that the vitality of seeds can be tested by the electromotive method (electrical changes being taken as the token of chemical changes, which are in turn a sign of life); so that in addition to the question, Are you alive? we can put the question, How much are you alive? to the seed, and learn its answer in terms of electric units. Plants are obviously not as alive as animals, and in the case of the seed, different degrees of vitality will be shown corresponding with its age. At the same time we have made little advance in our inquiry as to wherein livingness consists. For the simple truth is that we cannot tell what life is. Yet if we cannot tell what life is, we can state what living things do. It is possible to make a series of statements descriptive, if not definitive, of living things.

(1) All living things consist of a colloidal substance called **Protoplasm**. As seen in the simplest plants and animals, it is viscid and translucent,

generally colourless, immiscible in water, and yet composed of it sometimes to the extent of 90 per cent. Chemically analyzed, after treatment by re-agents, which rob it of its essential character, it is found to consist of carbon, oxygen, nitrogen, hydrogen, and sulphur, together with traces of various salts; but this complex of proteids ($C_{72}H_{112}N_{18}O_{22}S$ = possible minimal composition of a molecule of egg albumen) exhibits such a variety of qualities that the mere chemical synthesis of protoplasm is no longer a useful conception. Whether these proteids should be thought of as the actual constituents of protoplasm or its first decomposition products is difficult to decide.

Chief amongst these characteristic qualities is the fact of its organization. Careful examination shows that under the morphological aspect two main constituents are present, one of which, the more liquid ground-substance, is continuously distributed throughout the meshes of the more active and, at the same time, firmer spongioplasm or *reticulum*, as the second constituent is called. But it is just here that the greatest divergence of opinion occurs, possibly because each of the two views that are most in favour expresses a part of the truth. Bütschli, and with him a considerable and latterly increasing number of biologists, look upon protoplasm as essentially liquid, or rather a mixture of liquids showing a foam-like structure in which the firmer portion forms the walls of separate chambers that are filled with minute, closely crowded drops of the more fluid portion. Any reticular appearance is therefore an illusion, being simply the sectional aspect of the alveolar structure. With singular skill that investigator has succeeded in preparing artificial emulsions which show a striking resemblance to actual protoplasm. The majority of the earlier observers, together with a large modern school, hold to the view that asserts the presence of extremely delicate, though coherent, threads which extend through the more liquid ground-substance, either forming an uneven but continuous meshwork like the fibres of a sponge (Klein, van Beneden), or consisting of disconnected threads and their branches (Flemming). Now, although it is undoubtedly true that in many instances protoplasm does present a vacuolar or foam-like structure, to admit this does not necessarily commit us to Bütschli's special theory of its intimate structure. On the other hand, the fibrillar network so often and so widely demonstrated, especially during cell-division, seems to be a general, perhaps the more typical structure. Hence we come with Oscar Hertwig to the conclusion that 'the protoplasm of different organisms varies in its material, composition and structure. Apparently, however, these important differences are due to variations in molecular structure.' There is no universal mode in its structure; protoplasm is polymorphic, and it is just possible that the different types represent different phases.

In virtue of this organization, the attempt is continually made to offer a complete explanation of the living thing in terms of mechanics. The living organism is certainly more of a mechanism than of a chemical compound, and its activities will find a better explanation along these lines than in the mere consideration of its chemical nature. Doubtless the properties of the living cell may in the end be traced to chemical forces, just as in the case of the activities of the steam engine; yet no one will maintain that chemical forces explain the motion of the steam engine. The action of the living cell will be better explained in terms of its mechanism than of its chemistry, yet even here imperfectly. Superficial resemblances disclose themselves, that in their greater or less completeness simply serve to hide the critical points of difference. Thus it is obvious that in either case suitable fuel or food requires to be more or less continuously supplied, that this fuel or food is subjected to definite changes in the interior of the mechanism, in the course of which heat is evolved, and that waste products are formed. Yet the living organism is unlike a mechanism in various respects. (*a*) The organism is itself continually being changed in the course of its automatic developmental activity. The engine may be said to consume the fuel supplied to it, but it does not incorporate it with its own substance. The food, self-procured, of an organism is in a sense its fuel, but it becomes directly transformed into the machinery that is at work. (*b*) The organism has a power of self-adjustment and regulation amounting to self-preservation, which has not been added to it from the outside, nor is a necessary property of the substance of which it is composed; the activity of a machine, on the other hand, is of no use to it in the line of preserving its integrity. (*c*) The organism has a certain regenerative power; in its case that which is consumed is the actual machinery, and food repairs both the gaps left in the mechanism and any damage within definite limits, self- or otherwise inflicted. The coal supplied to an engine does nothing to repair its tear and wear, nor can the engine execute its own repairs. (*d*) A machine is constructed to execute a certain function or limited number of functions, and these it perpetually performs in the same way; the organism's range of activity is as wide and varied as its methods of operation. (*e*) The organism can completely reproduce itself by means of parts thrown off from itself; there is nothing analogous to sexual reproduction in the inorganic kingdom. (*f*) The activity of a machine is usually the sum of the activities of its constituent parts, but in the case of the organism it is something more, for its living unity is not merely represented by the sum of its organs, but involves a certain subtle interplay and mutual influence of its constituent activities. In fact, the differences are so great that unless they are steadily held in view, the analogy becomes positively misleading. To attempt, then, to explain the living organism and its activities in physico-chemical terminology, is permissible as a scientific ideal. Even in that most difficult of all realms, the study of nervous process, Professor Gotch is perfectly entitled to claim that nervous activity 'does not owe its physiological mystery to a new form of energy, but to the circumstance that a mode of energy displayed in the non-living world occurs in colloidal electrolytic substances of great chemical complexity' (*Brit. Assoc. Report*, 1906, p. 716). On the other hand, to pretend that even an approximation has already been reached in general or in detail is mere myopia.

Further, protoplasm has no other mode of origin than from pre-existing protoplasm (see art. ABIOGENESIS).

The above discussion may be considered as having indicated the relation of life to matter. The mere fact that the first touch of the chemical re-agent in the analysis of protoplasm robs it of its distinctive character shows that life is not material; we know life only in association with matter, yet it is not matter. A cat weighs no more or no less after the loss of its proverbial nine lives than it did in life. If life were material, then *ex hypothesi* it ought to weigh more in life than in death. On the contrary, an equally false impression that dead things weigh more, instead of less, than living things is preserved in the popular expression, 'a dead weight.' Life, then, is not matter, nor is it exhausted by the concept of matter. In itself it occupies no space; it has no weight as we know gravity. It may be figured as the flow of something—a procession.

(2) All living things exhibit a directive control over energy which leads to its further availability. They are able *to transform energy* in their own interests, for their self-maintenance.

These statements deal with the relation of life to energy—in some ways the most complicated of all the problems that fall to be considered in this connexion. In comparing what we know of life with all other forms of energy, we realize in the first place that the origin of the latter is under command in a way that is not predicable of the origin of life. Numerous experiments prove the transformation of energy and the ease of this transformation; but as yet there has been no hint of the direct transformation of any known form of energy into life.

Nevertheless, living matter is able to effect such transformations; it is, in fact, the seat of continuous transformation of energy. Now, in these transformations there is nothing that goes contrary to the fundamental laws of the conservation of matter and of energy: the potential energy in any food can be calculated, and the value found unimpaired in some type of equivalent work done or heat evolved. But this does not mean that there is nothing distinctive in connexion with these

transformations. Certain physical and chemical characteristics abide with the organism in death as in life; but when the typical energy phenomena are no longer in evidence, we say that the thing is dead. Life, then, has to do with energy, but is not itself energy, not even a specific kind of energy; its characteristic is seen in the way in which that energy is directed and controlled. Every living thing is not merely a centre at which energy is being constantly transformed—a mechanical energy-transformer—a centre, further, at which the tendency to degradation of energy is resisted, but it also acts as a directive channel along which energy can flow to accomplish specific work: as long as the organism is alive it is continually disturbing the equilibrium which should otherwise arise between itself and the environment. Life is unceasing, directive, and selective* control of energy; but it is also accumulation of energy, *e.g.* in specific tissues, and a transformation of it leading to further availability. The organism up to a certain stage appears to be continually gaining energy at the expense of the environment, and in reproduction the process is perpetuated.

There are, however, other controls of energy: temperature, *e.g.*, controls its passage in the form of heat from the hotter to the colder body. But this passage involves not merely degradation in that particular form. Hibbert brings out very clearly that the difference in temperature is a determining factor, and that in any calculation of the work done it will find a place; whereas it is impossible to show that life is a factorial element in any calculation of the work done by a living organism. The nearest parallel, yet hardly a parallel, would be in the unique characteristic of reproduction, when, owing to the accumulation of energy, it may reasonably be conceived that the control or potential factor exhibits itself in the process of division. This control is superlatively seen in the development of the segmenting egg to its predestined goal in the typical adult form. Accordingly we conclude that after the methods borrowed from the analysis of inorganic nature are exhausted, there is a residuum of fact which is untouched by them, viz. the directive control and co-ordinated adaptation of every element of its activity by the organism to its own end. The biological whole is greater than the sum of its physical or chemical parts. And it is no objection to urge that we are not objectively aware of this peculiar control, for the same is true of all physical actions, as, *e.g.*, gravitational attraction. Life is known to us as control and guidance of energy, interacting with matter in ways that, if not yet wholly intelligible to us, are clearly not covered by what we know of its physico-chemical properties.

(3) All living things are characterized by *cellular structure*. Life, that is to say, so far as we know it, appears only in one form—that of the cell. The further apart living forms are from the point of view of classification, the deeper is it necessary to go to find community. In extreme cases this may be found only in their cell-structure and protoplasm; hence the fundamental importance of these aspects. Briefly, the cell-theory amounts to the statement that the bodies of every form of life, plant or animal, are composed of one or more minute structural units known as cells, out of which, in the case of higher forms, directly or indirectly, every part is built; all organisms consist of cells and of cell-products. The body is a mosaic rather than an asphalt, but the cells are in communication, unisolated by cement. From the view-point of this cell-theory, the animal kingdom (as likewise the plant kingdom) may be regarded as an ascending series, at the bottom of

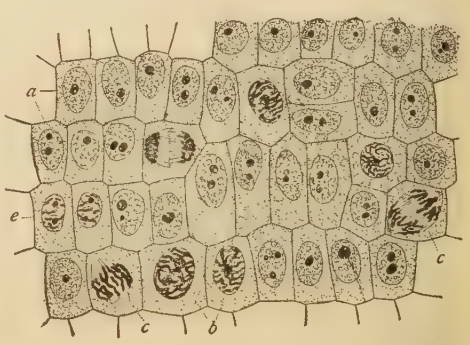

Fig. 1.—General view of cells in the growing root-tip of the onion, from a longitudinal section (×300). (*a*) Non-dividing cells with chromatin-network and deeply-stained nucleoli; (*b*) nuclei preparing for division (chromatin in form of continuous thread); (*c*) dividing cells showing mitotic figures; (*e*) pair of daughter-cells shortly after division. (From Wilson's *The Cell*, by kind permission of the publishers.)

which may be put those forms that are unicellular—the Protozoa; next above them, although essentially of them, come forms that are mere balls or colonies of cells, *e.g. Volvox globator*; thereafter we reach the sponges, where tissues, *i.e.* aggregates of similar cells performing a single function in common, are, as it were, in the making; next come the simpler members of the Cœlenterata—mere two-layered sacs of cells, with hints of organs, *i.e.* higher complexes of tissues devoted to one or more specific functions—and so we arrive at those higher forms, the substance of whose skin, bone, or muscle is not homogeneous according to the naked-eye impression, but with the help of the microscope is resolved into aggregates of those countless minute units called cells. And it may be here remarked that Ontogeny discloses the remarkable fact that every one of these higher forms, in its individual life-history, passes through a broadly corresponding series, of which the first stage is likewise a single cell, the fertilized ovum. Palæontology, as interpreted by Evolution, teaches the further striking fact that what is thus true of the individual history holds likewise for the history of the race, which began in the farthest æons with the simplest forms, and progressed through ever higher forms, till it culminated, mentally and spiritually, in man.

But in addition to thus furnishing us with a valuable point of view from which to regard the organic world in relation to structure (Morphology), the cell-theory performs a similar service from the point of view of function or activity (Physiology). The cell is not merely the unit of organization; it is the unit of function. In every Protozoon the vital functions—locomotion, respiration (or whatever corresponds to it), absorption of food, digestion, excretion, which in the higher forms are distributed amongst different groups of cells or organs devoted to the discharge of these specific functions—are all performed by the single cell.

The theory that organisms are composed of cells was first suggested by the study of plant-structure. As long ago as 1665 Hook discovered 'the chambered structure of plants,' but nearly 200 years passed before anything comparable to the modern understanding of the fact was attained. By the middle of the 18th cent. Caspar Wolff and others had in a measure got on to modern lines in their study of development, endeavouring to show that the various ducts and vessels of the plant are all derived from cells; and by the beginning of last century it was already recognized that in the cell we have the structural and physiological unit of the plant. If the nature of botanical material kept the early investigators' attention fixed on the cell-wall, the softer tissues—the skeleton apart—that constitute animal substances first incited study of the nature of living

* In the sense that it selects this or that mode of attaining an end.

matter. Already in 1835 Dujardin gave the name of 'sarcode' to the substance composing the bodies of the ciliate protozoa he was examining. But it is not till we reach the names of Schleiden and Schwann (1837–1839) that we have before us the foundation upon which all the more recent work upon the cell has been built. The former first drew attention to the significance of the nucleus in the life-history of the cell; the latter, by carefully demonstrating a corresponding development from cells in the case of the tissues of the animal body, arrived at a theory of the essential correspondence in structure of both plant and animal. Much error, however, was combined with the brilliant work of these investigators. Although they partially perceived the importance of the nucleus, they still imagined that the membrane was the most essential part of the cell, and it remained for Max Schultze (1861) to dethrone the cell-membrane from the high place it had hitherto held in the biological world, by showing that certain cells were apparently on occasion able to do without it, whilst in other cases it did not exist: he also maintained the primary importance, on the other hand, of the nucleus and protoplasm. It was likewise through the labours of Schultze, Cohn, and De Bary that the identity of plant and of animal protoplasm was completely established. The word 'protoplasm' was first used in its specific sense, however, in 1846 by Hugo von Mohl, who, perhaps, first clearly recognized the importance of the formative substance of the cell.

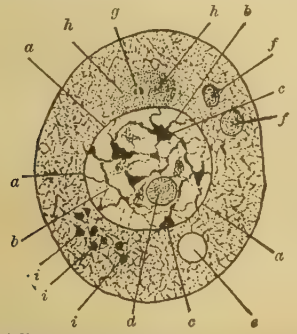

Fig. 2.—Semi-diagrammatic representation of a cell. (*a*) Nuclear membrane; (*b*) linin reticulum; (*c*) chromatin masses contained in envelopes of linin (chromatin nucleoli); (*d*) true nucleolus; (*e*) vacuole; (*f*) plastids; (*g*) centrosomes; (*h*) archoplasm, from which attraction-sphere, astral rays etc., are developed; (*i*) food particles. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

Next to protoplasm—the fundamental constituent of the cell—the second most important element is the nucleus: indeed, its significance is hardly less than that of protoplasm itself. The nucleus, with few exceptions, is a characteristic of every cell. Modern theories of heredity are theories of the cell-nucleus.

In any ordinary nucleus, the following structural elements may commonly be recognized:

(*a*) The nuclear membrane, which is probably a condensation of the general protoplasmic reticulum, although its existence has not been demonstrated in every case. It has a variable staining capacity.

(*b*) The nuclear reticulum, which is composed of two distinct substances—chromatin and linin. The former is the nuclear substance *par excellence*, in that it is restricted to the nucleus, and is generally seen as irregular granules and masses, deposited, as it were, on the threads of linin; sometimes the relation is of a more intimate character, and the chromatin seems embedded in the linin, giving the impression of a very intimate relation between the two substances. Some of the most recent work, in fact, suggests that the chromatin, on which hitherto such stress has been laid in connexion with theories of inheritance, is nothing more than a secretion of the linin, and that it is really with the latter that the ideas of permanence and individuality should be associated. The most striking support for this view is found in the way in which during certain critical phases of the nuclear history the chromatin decreases in amount, sometimes even to the vanishing point, and is supposed to have been employed in nourishing the cell during the stage in question. The linin likewise after treatment shows a granular structure, and seems similar in composition to the cytoplasmic reticulum. The quantity of chromatin in a cell is not constant, but in the processes connected with cell division and fertilization the granules form into little rod-like bodies known as chromosomes, which are now regarded by many as the vehicles of inheritance. The number of chromosomes is constant for each species. It is still, however, 'an open question whether the chromatin-granules of the reticulum are individually identical with those forming the chromosomes' (Wilson, *The Cell*, p. 37). At certain stages the chromosomes appear perfectly homogeneous, and the same is sometimes true of the entire nucleus.

The evidence then goes to show that in the great majority of cases the chromatin thread is built up of a series of minute, deeply-staining granules (chromomeres) that are embedded, as it were, in the linin, sometimes irregularly, sometimes with such regularity that the meshwork seems entirely composed of them, and that these aggregate to form the typical chromosomes. The splitting of the chromosome involves actual splitting of these granules. As the living cells of an organism are capable of assimilation, growth, and division, so likewise are we compelled to think of the rôle the chromatin granule plays in its relation to the chromosome. But are these chromatin granules ultimate units, and can we assign to them the value of individuals?

The problem only becomes the more arresting when we further inquire into the relation of chromatin granules to the linin network of the nucleus and cytoplasm. Recent research tends to confirm van Beneden's conclusion, reached already in 1883, that the chromatin network of the nucleus, the cytoplasmic reticulum, and even the nuclear membrane, are all alike built up out of microsomes united by connective substance, and that even the chromatic granules may be transformed into achromatic, and *vice versa*. The sole limitation appears to be the restriction of the chromatic microsomes to the nucleus, while, on the other hand, the linin network of the nucleus appears to have the same granular structure as the cytoplasmic reticulum, and the nuclear membrane appears to originate in a condensation of the same substance. Are these microsomes, then, the ultimate units of life? Yes and no! Yes, in the sense that they are the ultimate units that we know capable of growth and division in their particular environment—incapable, however, of an independent existence. No, in the double sense that we can hardly suppose that the ultimate units of living matter happen to coincide with the revelations of the most powerful microscope of the 20th cent.; and that if we insist on independent existence in an ordinary environment they fail to respond to the criterion. We must obviously, therefore, look to our terminology. Possibly in a more restricted sense some of these elements of protoplasm might be spoken of as 'living.' 'In its fullest meaning, however,' says Wilson (*op. cit.* p. 29), 'the word "living" implies the existence of a group of co-operating activities more complex than those manifested by any one substance or structural element.' Life, perhaps, should only properly be regarded as a property of the cell-system as a whole, and we do better to designate the separate elements as 'active' and 'passive' rather than as 'living' and 'lifeless.' The enucleated cell cannot reproduce: strictly, therefore, it is not living, although for a short time it may still show a characteristic of life.

The demonstration of these microsomes—intra-cellular units of a lower order—has an interesting bearing upon biological theory. Altmann's granular theory of the constitution of protoplasm, ill-founded as it apparently was in relation to his own investigations, regarded protoplasm as a colony of more elementary, extremely minute units which he called bioblasts. In a real measure, these microsomes, evidencing assimilation, growth, and division, correspond to Altmann's theoretical units, and invite consideration as more elementary individuals than the cell, standing between the latter and the ultimate molecule of living matter. Herbert Spencer's 'physiological units,' Darwin's 'gemmules,' and Weismann's 'biophors,' all hitherto hypothetical units, playing the principal part in the theories of regeneration, development, and heredity associated with these great names, would thus appear to correspond to a reality.

As to the ultimate independent unit of living matter—the smallest mass that exhibits to the biologist the phenomena of independent life—it is, perhaps, neither necessary nor possible to make any precise statement. Everything depends upon the criterion that we use. If we demand that living matter show the phenomena of independent growth and assimilation, then the unit will need to consist of protoplasm plus nuclear substance: in the absence of nuclear material all synthetic metabolism is at an end. This has been experimentally proved on a very extended scale by merotomy and numerous investigations in regeneration. On the other hand, if irritability is all that is required, then the unit might well be smaller and simpler: for that particular manifestation within a certain limit, cytoplasm alone would be sufficient. Destructive metabolism may continue without the nucleus, where constructive metabolism is at an end. That is to say, if the question is viewed in the form 'how far the divisibility of living matter can be carried without interfering with its function,' the answer, as we have seen, is not difficult to find, and can be experimentally verified, depending as it does upon the physical structure of the cell, and varying for different cells.

(*c*) The nucleoli, rounded irregular bodies composed of a proteid substance markedly different from chromatin. They are, however, very varied both in structure and character, and in some instances, at any rate, are possibly a source of chromatin supply for the nucleus. They stain deeply, giving reactions similar to those presented by the fibrillar network.

(*d*) The nuclear sap or ground substance occupying the interstices of the network, and apparently unaffected by many of the stains that act on the chromatin. It is clear and essentially liquid.

A third element of the cell is the peculiar little centrosome first definitely discovered by van Beneden in 1885, which as the special organ of cell division is often regarded as the dynamic centre of the cell. It commonly lies outside the nucleus, although close to it; sometimes, however, inside (*Ascaris univalens*). It is generally surrounded either by a radiating area of the cyto-reticulum, termed the attraction-sphere or centrosphere; or by an area of protoplasm denser

than the rest of the cytoplasm (archoplasm): sometimes in the vegetative stage it lies unattended by any differentiated matter, and is then often very difficult to demonstrate. Typically the centrosome, which stains deeply, is a single organ; but, as a rule, dividing cells show a double centrosome due to anticipation of the succeeding division in which each of the daughter-cells receives one of them. The failure to substantiate its presence in the case of the cells of many of the higher plants, and the fact that in some instances at the close of cell division, or during fertilization in animals, it disappears entirely to appear again *de novo*, rather militate against the earlier view of its indispensable and dominant function, and tend to relegate it to a less important position. At the same time as an organ that assimilates, grows, divides, and is in many cases passed on from cell to cell, it also answers to the conception of an intra-cellular unit of independent existence: it is essentially a centre of determining activity, and it seems finally to disappear with the loss of the power of reproduction.

With regard to the cell-membrane, we have already seen that its importance is now perceived to be secondary. It is more characteristic of plant than of animal tissues. In the former case it has a more or less firm consistency, and is often of considerable thickness; on the other hand, many animal cells, *e.g.* rhizopods and leucocytes, are 'naked,' although even here some difference in consistency can be established between the outermost layer of the cytoplasm and that immediately beneath it. Where a definite membrane occurs, it usually arises as a secretion product, although cases are known where it seems to be a direct physical and chemical transformation of the peripheral layer of protoplasm. Cellulose is the name applied to the carbo-hydrate that forms the basis of the plant membrane ($C_6H_{10}O_5$): it is, however, impregnated with, or transformed into, other substances such as lignine, cork, etc.

Hitherto we have regarded the cell as an independent organism, as an organic unit. Actually, however, it is such only in the case of unicellular organisms and the germ-cells of multicellular forms. When we consider other cells, *e.g.* the tissue-cells of the higher creatures, we see that in point of origin and structure, *i.e.* morphologically, they are equivalent to a collection of unicellular organisms, but physiologically the tissue-cell can hardly be regarded as independent, inasmuch as its activity is part and parcel of that of the organism—'its autonomy,' to use Wilson's phrase, 'is merged in a greater or less degree into the general life of the organism' (*op. cit.* p. 58).

What, then, is this organic unity of the body, and how is it maintained? The problem is very much the problem of the cell and its enzymes repeated on a larger scale. There, as we shall see, the question is how the cell links together and co-ordinates the activities of various substances within it, each of them with its specific industry, so to speak. In the higher animals and plants the different tissues retain in varying capacities vestiges of the primitive power of altering their function: under normal conditions they behave according to their specific character. But evidently there is some restraining influence that limits and regulates the activity of any particular cell, or group of cells, in relation to the other cells of the organism. The older workers thought of the organism as a composite, a mosaic, whose life was simply the sum of the life of its independent, yet reciprocating parts. But it becomes increasingly clear that, so far as growth and development are concerned, cells can be regarded as co-operative units in a limited degree only. 'They are rather,' says Wilson, 'local centres of a formative power pervading the growing mass as a whole, and the physiological autonomy of the individual cell falls into the background' (*op. cit.* p. 59). No true conception of the life of a multi-cellular organism is gained except in so far as that life is conceived of as a whole, untrammelled by cell boundaries. Doubtless it expresses itself in many ways, particularly in the form of the cell, thereby giving to itself an apparently composite character. But in reality this mosaic-like character is due to the secondary distribution of the organism's energy among local centres of action. This does not, however, as already stated, prevent tissues from occasionally asserting their primitive independence and functioning in an unusual way under certain special conditions: such, at any rate, is one modern explanation of cancerous growth.

(4) A further characteristic of living things is *irritability*, by which is understood the capacity for response or reaction to stimulus. Life, in fact, resolves itself into the science of response,—response to various external and internal stimuli,—simple at first in the case of the lower forms, but infinitely complex, embracing in the last instance all that is implied in the word 'education' in the higher forms; the unresponsive is the dead, that peculiar condition in which the capacity for response is gone.

Now, in all applications of stimuli to living matter, what we see as a direct consequence is a series of very complex phenomena due to the fact that these stimuli have affected an exceedingly complex object in the organism upon which they act. When we analyze these phenomena of irritability, as exemplified in a Protozoon, we find a series of specific capacities for response which we may call the various tactisms. *Paramecium* is sensitive to light in that it moves towards it; it is positively phototactic. Irritability, then, usually expresses itself in some form of movement of the organic mass, which has often led to this feature being set down as a characteristic of living matter: but while every response need not necessarily be in the form of obvious movement (the energy liberated may take some other form, *e.g.* heat), on the other hand, in many cases of apparently spontaneous movement, the cause is to be found in internal changes rather than in the external environment. It is essentially a liberation of energy,—the transformation of potential into kinetic energy, and this commonly shows itself in movement.

In the case of the higher animals and plants, the distinctive elements of irritability, studied singly as tactisms in the case of unicellular forms, may function in a specific way in the parts of a multicellular organism, giving rise to those movements that are known as the various tropisms: thus a characteristic turning towards the sun gives its name to the flower heliotrope. It is found that many movements of animals and attitudes of plants depend upon mechanisms that are 'a function of the symmetrical structure and symmetrical distribution of irritability on the surface of the body of the organisms' (Loeb, *Dynamics of Living Matter*, p. 5). Now, if lines of force (*e.g.* light rays, gravitation lines, lines of diffusion) strike an organism with greater profusion on one side than on another, the tension of the contractile elements is unequal, and if the animal moves, it tends to turn in such a direction that the lines of force impinge with equal density at symmetrical points, and at the same angle on both sides, and will continue to move in that direction, or away from it, according as it is apparently attracted or repelled. Such automatic orientation is known as a tropism.

The external stimuli which act upon the world of life are manifold: but we may consider five important groups—(*a*) thermal stimuli, (*b*) light stimuli, (*c*) electrical stimuli, (*d*) gravitational stimuli, and (*e*) chemical stimuli. The reaction of an organism is, then, simply its response to the particular stimulus applied to it. The experience of everyday life is sufficient to show us that, under the same stimulus, the reaction will vary considerably with different individuals. In fact, the same stimulus may produce totally different effects on differently constituted objects: a kick elicits a different response in the case of a stone, a bulldog, and a Skye terrier; under electrical stimulation the salivary gland yields its saliva, the liver its bile. On the other hand, it does not strike one as quite so obvious at first sight that very different stimuli will but produce identical effects upon the same protoplasmic body. Apply to a muscle cell electrical, chemical, in short any possible form of stimulus; it has but one answer,—it contracts. The same holds true for many Protozoa: they have but a single characteristic response to all kinds of stimuli. We have thought of the stimulus as exciting, or even producing, an increase of the specific activity in various forms of living substance: its action may, however, also result in a diminution of that characteristic activity. Irritability is considered to be a fundamental property of living protoplasm, but it expresses itself in specific actions, according to the specific structure of the organism, under the influence of the external world.

(*a*) With regard to thermo-tactism, it may be noted that the temperature of the environment is of vital importance to every organism. There is a limit above and below which life ceases; this limit varies with the organism, and indeed with the stage of its development. The maximum temperature for plants

and animals is generally about 45° Centigrade. The minimum temperature is not so easily determined; temperatures below zero are, on the whole, less injurious than high ones. As a rule, however, the power that plants, for example, have of resistance to cold or heat is inversely proportional to the amount of water that they contain. Accordingly, we find that spores and bacilli can resist great extremes of high and of low temperature, there being instances on record in which they have not lost their power of development after exposure to −110° C., while in practical bacteriology the assumption is never made that life is destroyed in any particular instance before the germ has been subjected to a dry heat of 140° C. for at least three hours.

We may also note the exceedingly small range on the scale of temperature that is occupied by life. On the surface of the earth the extreme variations may be roughly placed within the scale of from 60° C. above, to about 60° C. below the freezing point, so that life, as existing for the most part between −15° C. and 45° C., occupies about half of the range that is due to the earth's climatic conditions. In fact, the restricted scale within which life ordinarily manifests itself corresponds roughly to the temperature scale of liquid water, which is an indispensable conjunct of life and an important constituent of protoplasm. Further, if we estimate the internal heat of the earth at 5500° C., we find that life has a place on not more than a $\frac{1}{110}$th part of the scale of terrestrial temperature.

(*b*) Light, also, acts as a stimulus to plants and animals. Some love it; others seem to hate and shun it; they are positively or negatively phototactic. As heliotropism, this tendency to turn towards the light is very marked in the stems of many plants, and in sessile and free-moving animals is most distinctive. Experiments with coloured screens have shown that in the case of plants and sessile animals 'the more refractive green, blue, and violet rays of the spectrum are more effective heliotropically than the less refractive red and yellow rays' (Loeb, *op. cit.* p. 113). That is to say, there is a sort of division of labour—the longer light waves (reds and yellows) accelerate assimilation; the shorter waves (blue and violet) hasten heliotropism. In cases of ordinary curvature, such as in a twining tendril, the explanation is found in an excess of growth on the outer side; but in heliotropism, if growth is associated, it is but accidentally, and the explanation is found rather in a certain protoplasmic *contractility* of the cells that are directly affected by the light. 'The essential feature of the heliotropic reaction consists in the fact that the light automatically puts the plant or the animal into such a position that the axis of symmetry of the body, or organ, falls into the direction of the rays of light' (*ib.* p. 124). Loeb has shown that in the case of free-moving animals the explanation may be given in identically the same terms. He has correlated the tendency of animals, particularly insects, to fly or creep towards the flame, with the heliotropic curvature of plants, maintaining 'that the essential effect of the light upon these animals might consist in a compulsory automatic turning of the head toward the source of light, corresponding to the turning of the head, or the tip, of a plant stem toward the light; and that the process of moving toward the source of light was only a secondary phenomenon' (*ib.* p. 125). That is to say, it is not curiosity, or love of light, that makes the moth fly to the candle flame, but the compelling power of the light in turning the creature's head towards it. Other animals (e.g. *Gammarus pulex*, a fresh-water crustacean, and the larvæ of the house-fly) are found to be negatively heliotropic, *i.e.* their heads bend automatically away from the source of light, while most creatures are probably not heliotropic at all. Further, in the case of some forms it is found that they are heliotropic at different periods in their life history, *e.g.* ants at the time of sexual maturity are markedly heliotropic, while the workers are not—a difference probably correlated with definite chemical changes in the creatures; in fact, by the addition of certain chemical substances to the media in which some forms were kept, Loeb found that he could make them negatively or positively heliotropic at will. Heliotropism plays a great part in determining the behaviour of animals, and there are some forms whose life at certain periods of their existence may almost be said to be a function of light.

(*c*) Light rays are, however, not the only lines of force that bring about an automatic orientation of animals. Definite responses to galvanic currents produce the phenomena of galvanotropism. When animals are exposed to a galvanic current, there may result compulsory reactions very similar to those produced by light, except that we substitute the current curves for the light rays. As the current not merely influences the superficial layers of an organism, as in the case of the light rays, but permeates the whole body, the responses in galvanotropic orientation are not so ideal as in the case of heliotropism.

(*d*) The orientation seen in plants and animals, due to gravitation, is known as geotropism. Geotropism expresses the fact that, whilst the tips of the roots of plants show a tendency to grow vertically downwards, the tip of the main stem seems constrained to grow in the opposite direction; the same holds true with limitations in the case of sessile animals, and it is probable that the attempts of free-moving creatures to keep the axis of their eyes as much as possible in the normal position when their bodies are maintained in an abnormal position is also due to the stimulus of gravitation. Although the problem is still far from solution, Loeb (*op. cit.* p. 152) considers it probable that the really geotropic reactions of higher animals are determined in certain cells of the inner ear, or in certain cells of the brain, 'through an influence upon the reaction velocity of certain chemical processes.'

(*e*) Chemotropism is the name applied to the reply made by organisms to the stimulus from particles of substances emanating from a centre of diffusion: the organism is found to bend or move itself in the direction of the lines of diffusion. The orientation is, however, rarely as perfect as in that of the other tropisms, inasmuch as the 'lines of diffusion are commonly disturbed by currents due to changes and variations in temperature' (*ib.* p. 153). Thus oxygen is known to exercise a great attractive power over freely moving cells. Experiments can be arranged by which that gas can be introduced into water crowded with unicellular organisms, when they will be seen to rush for the point from which the gas is liberated. Engelmann put small algæ into a fluid containing certain bacteria, and observed that very quickly they surrounded the weed, for the sake of the oxygen that it liberated by means of its chlorophyll. It then occurred to him that several species of bacteria might be used as a delicate test for minute quantities of oxygen.

The whole question of the chemical irritability of cells has a very human interest when we investigate it in relation to the colourless blood corpuscles known as leucocytes. The modern germ-theory as applied to most diseases holds that inflammation is set up by micro-organisms and their metabolic products (*i.e.* the products due to chemical change in the micro-organisms themselves); these various toxines are carried in the circulatory system to all parts of the body. Now Metchnikoff has shown how certain of these colourless corpuscles, by their power of absorbing the injurious elements, constitute themselves the very guardians of the organism. He has shown that, *e.g.*, the cocci of erysipelas, the spirilla of relapsing fever, and the bacilli of anthrax are eaten up, or their toxines neutralized, by the antidotes elaborated by these wandering amœboid cells, and thus rendered harmless. Hence, between these foreign micro-organisms and the leucocytes continual war is waged, and the life or death of the organism depends upon the result of the struggle. Now, if, as is practically certain, the leucocytes are initially stimulated by means of chemical substances produced by the micro-organisms, such stimulation can occur only in accordance with laws similar to those that are known to hold in the case of free cells. Recently, Wright and Douglas have shown that in the blood serum there is something that makes the bacteria more acceptable to the leucocytes: this substance they have termed generically opsonin (*ὀψωνέω*, 'I cater'). Its action is to sensitize the bacteria so that they more readily stimulate the leucocytes to absorb them. The opsonic value of the serum in any specific case can be heightened by the injection of suitable substances.

(5) All living things are further characterized by *continual change*, physical and chemical, of the material composing the body in every part. Certain parts are being continually used up, and fresh material is brought in and built up into its place. This ceaseless internal cycle of supply and waste, waste and supply, is designated by the term metabolism. The living organism is as a flame that, fed with oil, preserves its outward form, yet all the while the substance by which the flame is fed is being decomposed into its constituent elements and passes off transformed. Biology, apart from Morphology, knows no statics. Nutrition and digestion, respiration and circulation, secretion and excretion, are various phases of this comprehensive activity. In order to live, the cell must absorb nutrient substances which it proceeds to elaborate, retaining some portions within its body, and rejecting others. Continually, in the living cell, substances of complex molecular, and in that measure unstable, structure are being built up from substances less complex and more stable, with the absorption of energy; concurrently, other substances—food reserves, or the protoplasm itself—are being broken down in order to provide the energy required. The more intense the life, the more comprehensive are those parallel processes of construction and destruction. And yet, if parallel, they are hardly equal. In the period of youth the constructive is in excess of the destructive, and we say the organism grows.

Now, all living things grow in a sense that is not predicable of other objects to which the word may be applied. For in the saturated solution of salt or alum the crystal grows by accretion—particles are added on the outside, layer by layer; living things grow by taking up particles of matter in between already existing particles at every point—interstitial growth. Further, the crystal grows by adding to itself particles of the same matter as itself—particles that it takes up, already existing, out of the fluid around it; whereas the living thing

makes the materials of its growth, manufacturing particles like itself out of material different from itself, which it then uses for growth—by assimilation. The ciliate protozoon, *Paramecium caud.*, if kept in a hay infusion at a definite temperature, will grow and reproduce by binary fission at a definite rate. This growth and reproduction are accomplished at the expense of elements in the medium which are transformed into Paramecium; at the same time other substances appear in the medium which are the waste from the growth process. If we call these last *b*, and let *a* represent the material that goes to form new Paramecium, then $P+a=nP+b$. This growth formula may be constructively compared with that of any purely chemical equation, with the result that a striking difference is noticeable. In the case of an effective chemical reaction between different compounds, the result will be found to be of the general character $A+B=C+D$; *i.e.* different substances are found in the two terms (*e.g.* $Zn+H_2SO_4=ZnSO_4+H_2$). In the former equation the fact that P appears on either side constitutes a veiled expression of a characteristic of life: that it occurs in a greatly increased quantity indicates the amount of growth. As a matter of fact, however, this formula represents but half of what is actually in progress; for at the same time other processes of a contrary or destructive character are in operation, and the organism is alive only so long as they do not gain the ascendancy over the assimilative activities.

From the work of destruction, which may involve the breaking up of complex substances into simpler ones, or their combination with oxygen, various end products arise, some useful to the organism, *e.g.* bile, others not so useful, or positively harmful, as urea, carbon dioxide, and mineral salts. In the case of animals the whole of their energy is derived from waste; in plants only a small part is thus derived, the rest being obtained from sunlight. The metabolic processes that are going on in any higher organism, plant or animal, are manifold in the extreme, and even in the case of unicellular forms our understanding of them is far from complete. At the same time the unity of the entire organic kingdom is well illustrated in a restricted series of fundamental metabolic processes which are common to every living creature.

(*a*) Every plant and animal respires, *i.e.* it takes up oxygen from its environment, whereby it oxidizes the carbo-hydrates and albuminous substances of its own body, producing as final products carbon dioxide and water.

(*b*) The food materials of all living organisms, plant and animal alike, are originally prepared from the inorganic world through the instrumentality of chloroplasts. Further, while it is true that growing plants are able to live on simpler compounds than animals, yet a study of the development of the embryo in the seed (also the growing cells in a young stem or root) shows it to be without the adult capacity, and dependent on manufactured carbo-hydrates, proteids, and fats, as in the case of animals. The differences relating to the mode of supply in the case of the two kingdoms are ultimately referable to differences in the cell structure. The exaggerated development of the vegetable cell-wall prevents the ingestion of solid material.

(*c*) In both animal and vegetable kingdoms, characteristic corresponding substances make their appearance during metabolism, such as ptyalin in animals, and diastase in plants. These substances are known as ferments or enzymes, and particularly in the constructive process, as it occurs in plants and animals, they play a very important part. In many cases of breaking up of reserves, *i.e.* in destructive processes, it is also found that the cell produces an enzyme for this end. So fundamental is the action of these enzymes that there is a very true, but limited sense, in which it may be said that life is a series of fermentations. The evidence goes to show that a soluble enzyme is at the basis of every functional activity. Digestion is due in part to the action of pepsin which breaks up proteids. Respiration is achieved only through the presence of oxidase, which seizes the oxygen in the lungs, and hands it over to the red corpuscles of the blood. Under certain conditions—commonly greater condensation of the solution—the action of some enzymes is reversible, *i.e.* they can put together again what they have taken apart, and there are others that devote themselves solely to this aspect of the matter. What the enzyme is in its inner nature is still unknown. It appears to be colloidal, and, in several cases, is certainly not proteid; still, as a rule, in elementary structure it is more like a proteid than anything else. Possibly it is produced through a partial breakdown of the protoplasm. Its activity seems to be bound up with the peculiarities of its atomic structure rather than with any mysteries of ingredients, which are quite simple. The action of the enzymes appears, however, in large measure to be a hydrolysis: the substance acted upon is made to take up water and then undergo decomposition.

(*d*) As the result of these metabolic processes, corresponding products are organized in the plant and animal kingdoms, *e.g.* starch in plants and glycogen in animals, oxidases and trypsins in both.

We have spoken of the point of view that likens life to a series of fermentations. Investigation into the nature of these enzymes proceeds apace, and marvellous success has been achieved in the separation of them and the instigation of them to work apart from the living environment (*e.g.* rennet). Nevertheless it should not be forgotten that this does not in the least help our ultimate account of life, because no account of enzyme-action, however complete, gives us any clue to the characteristic achievement of the cell in co-ordinating and regulating these various activities that take place within it. Each enzyme is usually able to act in its specific way only upon one definite type of molecular arrangement; but the cell as an energy transformer is distinguished by the way in which it connects the varied complex reactions effected by these enzymes which it has itself produced. Accordingly, to consider the cell activity as simply the sum of its varied enzyme activity, is to make the same mistake as to suppose that an organism is the sum of its organs. It is to offer only a partial account of cell life. If regard were had only to the action of the enzymes, the interpretation would be purely katabolic, and there could be no account of the building up of compounds with higher chemical potential, which is so distinctive a feature of life. The study of enzymes is the study of isolated, yet highly selective, activities—each enzyme must fit its substratum like lock and key, or the reaction does not occur; but the characteristic of the living cell is seen in the connecting of one reaction with another, and in the using of the free energy of one reaction to carry on another. The cell directs and co-ordinates the enzymic activities, but in the more difficult cases of metabolic change, as in the conversion of carbo-hydrates into fats, or of CO_2 and H_2O into organic compounds, energy is taken up from other sources, and this the cell alone can do. 'This is the part taken up by the living cell, which in one oxidizing action obtains free energy, and in an accompanying reducing action stores this energy up, at least in part, in a new synthesized body at a higher potential of chemical energy than that from which it came. In this process, enzymes may freely be used by the cell, but they are co-ordinated and regulated in the process' (Moore, *Recent Advances in Physiology and Biochemistry*, p. 138). All this fundamental metabolic activity then is in some way controlled for the good of the individual, and in this directed control we have the distinctive character of life.

In metabolism there are three great stages which may each be characterized by a single word—Absorption (of new material); Transformation (in the interior of the protoplasm); leading to Retention and Excretion. Protoplasm is found capable of absorbing or excreting matter in either a gaseous, a fluid, or a solid condition.

The differences between Metazoa and Metaphyta are based on broad lines, physiological rather than morphological. From the food point of view we have seen that all the organic substance in the world is ultimately created by plants under the influence of sunlight. Animals, so far from creating, are continually destroying organic matter and re solving it again into its original components. Th food of plants exists in a gaseous state in the atmosphere, or as salts in solution in water; it requires therefore no preparation, and can be directly absorbed by the surface of the roots and leaves. But the food of animals, being organic matter, is usually in a more or less solid condition, which necessitates the presence of an internal reservoir in which the food can be stored until it is reduced to a more or less liquid absorbable condition. That is to say, almost all animals require a stomach, and in the case of the Protozoa the whole creature functions as such for the time being.

Again, the food of plants is everywhere present. Every wind that blows brings food to the leaves: rain-water with salts in solution bathes the roots. Their food-taking is essentially passive. Animals have to seek their food—it does not usually come to them. Hence the nature of animal food requires that they shall have a definite mouth, a digestive tract, organs to carry the body in search of food, organs to seize it when found, and definite ex-

cretory organs to get rid of the waste. Free locomotion in the case of plants, apart from the Protophyta, is confined temporarily to the male cells, and, with the absence of movement, the function of sensation is at a minimum. Plants and animals thus differ in the nature of their food, yet both are dependent on the environment for supply, and that food, when elaborated into 'the physical basis of life' by contact with the living body, shows little chemical difference as animal or vegetable protoplasm.

(6) All living things exhibit *cyclical phases of activity* known collectively as a life history, in which they manifest various degrees of vitality, sometimes with accompanying change of form. Every living creature, unicellular and multicellular alike, passes through a regular cycle of changes mainly determined by forces within itself, to which there is nothing comparable in the inorganic realm. Reference has been made to a period of youth characterized in both cases by active cell-proliferation; the constructive (anabolic) phase of metabolism is then in excess of the destructive (katabolic), and the creature grows. This is followed by a period of adolescence, in which, although at first the two phases practically balance, yet the energy of division sooner or later diminishes, and is accompanied by certain morphological changes in the cells previous to fertilization—that process whereby the energy for division is renewed. This in turn—particularly in the case of unicellular forms, when fertilization is not effected—is succeeded by the period of old age, in which destruction slowly overtakes construction, and eventually the organism dies. The unicellular organism dies from protoplasmic senile degeneration just as surely as does the multicellular form. Now this 'capacity for death' is in a sense a distinguishing feature of living things. In a very real way, moreover, death is the servant of life, holding the balance between unlimited reproduction and limited feeding area. To it is due the circumstance that life is periodic in appearance; the recurrence of the living individual is a phenomenon unique in the realm of nature. This intermittent character of life is, however, seeming only. The death of the individual that has reproduced by means of a germ cell divided from off its body involves no break in that series of continuous cell divisions which thus extends backwards to the dawn of life.

To this cyclical movement there are apparent exceptions. Weismann long ago suggested the immortality of the protozoa, but it is incapable of verification, and experience is against it. In some cases of parthenogenesis that procedure is apparently strictly followed throughout the specific history, but again there is always, ultimately, death of the individual. In some of the higher plants and trees, construction appears to be continually in excess of destruction, and the tree may be said to grow as long as it lives: nevertheless the individual eventually dies, even although, *e.g.* by grafting, we have perpetuation of the race without fertilization.

Further, we remark that not merely during those internal changes of every part which comprise metabolism, but in those changes of the whole which are involved in the conception of its life history, the living organism maintains its individuality and its integrity. In spite of the constant metabolic change, in spite of growth and decay, the living organism possesses a more or less constant form which serves as the arena in which those changes are displayed. We are aware of the persistence of a state of dynamic equivalence between the organism and its environment which has no parallel in the inorganic realm. Continuously it is alive, and yet its material identity does not depend upon identity of matter. The matter changes, but the form remains more or less constant, the individuality usually even more so. These forms, with their similarities and dissimilarities, serve as the basis of classification; Morphology in its account of the internal structures that give rise to forms is the basis of classification. We may speak of life in general, but we never know it except as the special phenomena of a particular organism. Life clearly has unity or individuality at the core of its meaning, and in the scheme of nature, one of whose dominant features is a tendency towards ever higher individuation, the supreme example is found in man, with his characteristic awareness of individuality.

(7) All living things are *capable of reproduction*. Having a definite term of existence, they must reproduce themselves; otherwise the organic kingdom would soon pass out of existence. The individual dies—life is intermittent in form—not, however, before having, in most cases, by a kind of discontinuous growth, given rise to forms more or less like itself, which in their turn grow and reproduce their kind. No non-living thing reproduces itself in this way.

(*a*) *Cell-division.*—The simplest form of reproduction is by cell-division. The need for this arises directly out of assimilation. For the due interchanges (*e.g.* respiration) between a cell and its environment, a certain ratio is necessary between surface and bulk. But this ratio is disturbed by growth in the case of an organism that retains its shape, inasmuch as, while the bulk varies as the cube of the diameter, the surface grows but with the square. Further, as we have learned, the nucleus which is so intimately concerned with assimilation, is limited in the area of cytoplasm which it affects through the continual intercourse between the two. Accordingly the requisite surface is gained through division of the mass, and the mother cell loses her identity in that of the two daughter cells. Such reproduction accordingly takes the form of discontinuous growth. Growth, then, is primarily assimilation, secondarily cell-division—the multiplication of cells.

Since 1846 it has been clearly recognized that new plant cells arise only from previously existing cells by the division of a mother cell into two daughter cells (Biogenesis): it was not till many years later that enough was known about the genesis of cells in the animal kingdom to overthrow for ever the doctrine of spontaneous generation.

To-day, then, we maintain that the cell has no other mode of origin than by division of a pre-existing cell; and knowing something of the importance and permanence of the nucleus, we are prepared to believe that it plays a leading part in this process of multiplication by division. Fifty years ago Remak very naturally thought that division must commence in the very centre of the cell and work gradually outwards. Accordingly he pictured the process as beginning by division of the nucleolus, followed by constriction and division of the nucleus, and completed by division of the cell-body and membrane. Now, if we do not press the point about the nucleolus, this description holds good for several cases of cell-division in both animal and vegetable kingdoms. It is termed Direct Division (Amitotic Division).

Such a method of division seems very natural, and, if it were conducted with regularity, it would obviously result in a fair division of the total mass of nuclear substance. But so delicate is the balance of nature that this method is found to be in operation with comparative rarity; nay more, evidence is gradually accumulating to show that direct division, which is a division of the mass of the nuclear substance without formation of chromatic thread or chromosomes, rarely occurs in embryonic cells or such as are in the course of rapid multiplication; while, on the contrary, it is often characteristic of such cells as are on the way towards degeneration, of tumours and various other pathological formations. Direct division seems often to be associated with highly specialized cells whose nuclei are commonly of unusually large size; here it has proved again and again to be the forerunner of destruction. Germ-cells and fundamental tissues do not usually divide by amitosis, although certain exceptions only make the whole process more difficult to understand. The other method typically known as Indirect Division, or Mitosis (*μίτος*, 'a thread'), is complicated, and involves the arrangement of the linin and chromatin in a continuous thread, the breaking up of this thread into the characteristic number of chromosomes, their arrangement by the aid of the centrosomes on the equator of a spindle formed of linin, their exact longitudinal halving, regression towards the polar centrosomes, and re-construction as the nuclei of the daughter cells that are thus formed as the result of a division of the cytoplasm of the mother cell in the region of that same equator.

Biologists speak glibly of the separation of the chromosomes

by contraction of the spindle fibres, but it is certain that other factors, *e.g.* chemical and physical changes going on in the centrosphere and nucleus, must be taken into account before any satisfactory explanation of these marvellous phenomena is attempted. Possibly the persistent centrosome is the vehicle of ferments, which in their activity produce the characteristic cell-division phenomena. Further, it is possible that, while only the outer fibres attached to the chromosomes contract, the central fibres of the spindle actually elongate, and push the spindle poles apart: certainly the chromosomes themselves play a passive rôle at this particular stage. Boveri regards the splitting of the chromosomes 'as an independent vital manifestation, an act of reproduction' on their part. The splitting of the chromosomes is now known to involve the splitting of the actual chromatin granules, which possibly alone have the value of individuals (inasmuch as in the case of the Protozoa chromosomes are in many instances not formed), and which are found in the fashion of granules firstly to allow of their uniform growth, and secondly to admit of their precisely equal quantitative and qualitative division; for it is the end of mitosis to divide every particle of the chromatin of the mother cell equally between the daughter nuclei. Further, this splitting seems in some cases to take place independently of the centrosome, making the relation between the two more doubtful than was formerly supposed.

(*b*) *Fertilization.*—Cell division, however, is only one aspect of reproduction. With the possible exception of a few extremely low organisms, there comes a time in the life history of all unicellular forms when, after a greater or less number of ordinary divisions, it appears as if the cells were becoming worn out, were gradually shrinking in size after every such division, and showing signs of nuclear degeneration, so that a prospect of final extinction looms in the future, unless they are able to fuse together in pairs with cells of different origin, thus producing an elementary organism that becomes the starting-point for a new series of multiplications by division. Accordingly, amongst the Protozoa, the life history resolves itself into a cycle, the starting-point being furnished by any two cells which, after fusion, either separate and divide, or commence to divide as a single organism when fused, and continue so to multiply a-sexually, sometimes to the number of thousands, till what has been described as senile degeneration sets in. At this stage union of these cells with others of different origin is absolutely necessary for the perpetuation of the species. This process of cell union, of which, in those instances where the organisms latterly separate, the fundamental characteristic is a reciprocal exchange and fusion of nuclear substance —an exchange of experiences—between the uniting or conjugating elements, illustrates the simplest type of that second aspect of cell reproduction which we know as fertilization.

The number of divisions that may occur before the a-sexual cycle of reproduction closes, varies considerably with different species. Maupas in certain classical studies (*Archives de Zoologie expérimentale*, 2nd series, tome vi. pp. 165–273; *Recherches expérimentales sur la Multiplication des Infusoires ciliés*, tome vii. pp. 149–517; *Le Rajeunissement karyogamique chez les Ciliés*) shows that in the case of *Stylonichia pust.* the ability to conjugate is reached after 128–130 fissions, that at the 175th degeneration sets in if conjugation has not been effected, and that the creature dies by the 316th fission. In the case of *Paramecium caudatum*, maturity is often reached much sooner, and degeneration commences after 170 divisions. Maupas' statements have been subjected to re-examination by experiment and careful criticism, most particularly by G. Calkins, who succeeded in keeping cultures of Paramecium for 742 generations, by feeding the infusorians with various kinds of stimulating food (brain extract, beef, pancreas), and thus tiding them over three depression periods corresponding to the need for conjugation, and so prolonging their life without that process. Any argument, however, for the immortality of the Protozoa based on such artificial experimentation cannot be said to rest on a very secure basis.

In the higher forms of life, instances of parthenogenesis apart, we have a similar process—a fusion of cells of different origin; here, however, the fusing cells never separate, so that the element of exchange drops quite out of sight. The essential feature of fertilization is the union of a nucleus of paternal origin, with a nucleus of maternal origin, to form the primary nucleus of the next generation. In multicellular organisms the cells which result from the division of the fertilized egg remain associated together, thus forming a complex colony of cells, an organic individual, however, of a higher order than the *Volvox* community. In a sense this multicellular organism is morphologically comparable with the sum of the cells produced by a-sexual division from two unicellular ex-conjugates. The cycle closes in the higher forms when the sexual cells have become mature, and separate from the parent to unite in the process of fertilization, which forms the starting-point for the new generation of dividing cells. All this, of course, is a very complicated process in the case of the vertebrates and invertebrates, but in the lower multicellular Algæ it is simple enough. The capacity which every cell, *e.g.* of *Pandorina*, exhibits of helping to reproduce the whole multicellular organism is not seen when the organism is somewhat more highly developed. For in that case the cells of the body sooner or later become differentiated into two great classes, the members of which Weismann has termed somatic and germ cells respectively. The former are of prime importance for the individual life, being differentiated into those various tissues which collectively form the 'body.' The germ cells, on the other hand, are of less significance for the individual life, but in eventually giving rise to new creatures are intimately concerned with the interests of the species. This differentiation is already noticeable so far down in the animal scale as *Volvox globator*. Amongst the very numerous cells that constitute this colonial form some remain vegetative and others are transformed into reproductive cells. The eggs are large, and are fertilized by minute biflagellate male spores which are produced in dozens by the division of a mother sperm-cell. Indeed, we may consider that in the plant world egg- and sperm-cells are derived from reproductive cells which initially are similar in size, appearance, and origin, but have become differentiated through developing in different directions. The evolution can particularly well be traced in the group of the Algæ. At the same time it is right to bear in mind that the distinction, even in the case of the higher animals, is only relative, since both sets of cells ultimately have a common origin in the parent germ-cell.

Associated with fertilization in some of these higher forms is at least one interesting phenomenon complicating the life history. We have seen, *e.g.* in the case of *Paramecium*, that between two acts of conjugation a great deal occurs in the way and as the result of cell division. Now, there is an analogous state of affairs amongst higher forms. Sometimes the individual proceeding from the fertilized egg is unable itself to form reproductive cells. It can multiply only by means of buds, spores, or parthenogenetic eggs. These, or their a-sexually produced descendants, become sexually mature and produce eggs and sperms. Such a cycle is known as an alternation of generations. It occurs in the life history of some worms, as also particularly in the case of some members of the Cœlenterata.

There is, then, a stage in the development of every multicellular organism at which the progenitors of the germ-cells are apparently alike in the two sexes, and for that matter indistinguishable from the surrounding somatic cells. Then in the course of development follows their differentiation from these somatic cells, and eventually a divergence in themselves corresponding to the different functions that they will have to perform later. The female germ-cell, ovum, or egg supplies most of the substance for the body of the embryo, and stores the food whereby it is nourished. Accordingly not only is it large, but its cytoplasm is laden with yolk or food-matter, and it is usually

surrounded by one or more membranes for the protection of the developing individual. All its activities are, therefore, anabolic or constructive on the whole; for the early life of the egg consists in the accumulation of cytoplasm and the storage of potential energy. On the other hand, the metabolism of the male germ-cell or spermatozoon is destructive or katabolic. To the mass of the embryo it contributes merely a nucleus, centrosome, and a minimum of cytoplasm. Its early life is not spent in the accumulation of food material; it has about it no more protoplasm than is sufficient to form the typically single flagellum by whose active, rapid movements it seeks the ovum. Hence in their final mature state the ovum and spermatozoon have no external similarity. What we find is a physiological division of labour between the cells which are to join in the act of fertilization, in virtue of which one of them becomes active and a fertilizer, while the other remains passive and capable of being fertilized. In fact, we are forced to the conclusion that all the arrangements and adaptations connected with sex have the same two-fold object, namely, to facilitate the meeting of the sexual cells and to arrange for the nourishment and protection of the egg. The organization that effects the one part of the scheme we call male; the organization that carries out the other we term female. These relationships are secondary and have nothing whatever to do with the process of fertilization itself, which consists of the union of two equivalent and apparently similar nuclear substances derived from different cells. This means, in its turn, that the original morphological equivalence of the germ-cells (seen, *e.g.*, in the Protozoa) is lost; what is left is an equivalence of nuclei. Hence the essential fact of fertilization and sexual reproduction comes to be a union of equivalent nuclei; and to this all other processes are tributary. Although the cell character of the ovum was perhaps recognized by Schwann, yet it is not so many years ago (*c.* 1878) since the fact that the spermatozoon is likewise a cell was universally admitted.

With regard to the growth and origin of the germ-cells, it may be stated that both ova and spermatozoa take their rise from primordial germ-cells which are at first identical in appearance in the two sexes. These identical primordial germ-cells in turn arise in the case of sponges, in a jelly-like mesogloea that separates ectoderm and endoderm. In the Cœlenterata they arise in a germinal epithelium which may be either ecto-dermal or endodermal, but in the higher groups is mesodermal. What exactly determines the subsequent differentiation is not yet clearly made out. External conditions play an important, a determining part in some instances. Yung, experimenting upon tadpoles, found that by increasing the richness of the nutrition in which he kept the early undifferentiated (?) forms, he could raise the percentage of females. Maupas seemed to show with regard to rotifers that a high temperature results in the production of males. A truer reading of the facts shows that the higher temperature induced greater activity, resulting in a speedier exhaustion of the food, and, in consequence, a tendency to the production of males. It is doubtful, however, how far these experiments correspond to real facts. The decisive factor in the determination of sex is still unknown: indeed, there is evidence to show that it probably is determined previous to fertilization, which simply in that case provides the egg with the necessary stimulus to development.

The prior history of these primordial germ-cells has been very carefully investigated by different workers (Hertwig, Häcker, Boveri). They have been tracked very far back in the developing egg, and identified at their earliest appearance. In the case of the roundworm *Ascaris*, Boveri already recognizes the progenitor of the germ-cells at the two-cell stage. Further, it has been shown that this progenitor of the germ-cells differs from the somatic cells, not only in its greater size and richness in chromatin of the nucleus, but also in the manner of the subsequent distribution of this chromatin. It has been observed that only the germ-cells proper receive the sum-total of the egg-chromatin handed down from the parent, since the germ-cells in the early (5 or 6) divisions cast out a portion of that substance in the case of one of the daughter cells into the surrounding cytoplasm, where it degenerates, so forming somatic cells with less chromatin.

Fertilization we can now state to be a process by which the energy lost in a continuous cycle of divisions is restored by the admixture of living matter from another cell. It consequently entails

Fig. 8.—Fertilized ovum of Ascaris; male and female germ-nuclei, with chromatin at continuous thread stage; the centrosomes are separating. To the right are the extruded polar bodies. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

the blending of two independent lines of descent. But when we ask—What then is the *ultimate* end of fertilization? an answer cannot be given with certainty. The mere asking of the question involves that introduction of teleological considerations which is the bane of Science, according to some of her foremost exponents; yet every one has attempted his rationale of the phenomenon.

Fertilization may be, as Maupas and others believe, rejuvenescence of the conjugating individuals: in the case of the Protozoa it certainly has this effect, for it is always the commencement of a new series of divisions—in fact, strictly it means the formation of a new individual in protozoon and metazoon alike. Further, the usual assumption in the case of *Paramecium* has been that the two ex-conjugates were equally stimulated to divide; but the more recent work of Calkins shows that in the majority of cases, 'while one individual of the original pair is markedly vigorous after conjugation, the other one either forms a weak strain or dies off at an early period' (*Biol. Bull.* vol. xi. p. 242). Now, if this is the case, it suggests in these apparently isogamous conjugants a hint of that differentiation that results in a spermatozoon losing its identity in the egg which it has fertilized. Nevertheless, experiments have shown that Ciliata can be induced to continue dividing long after the usual term has passed, and parthenogenetic eggs develop without the stimulus of fertilization. Weismann sees in it a means of mixing germ-plasms whereby variations are produced and multiplied; these variations are the material upon which natural selection is supposed to work in the production of new species. This, then, is the purpose of fertilization for him. But considerable variation has been shown to exist in the case of forms reproducing by binary fission and by parthenogenesis, contrary to the older view, which considered the forms so resulting to be mere duplicates. Consequently it is not permissible for him to say more than that fertilization is a source of variation, or is accompanied by it. But it is also possible to regard fertilization, with Darwin, Spencer, Hatschek, and others, as a means of checking variations, and so, on the contrary, of keeping the species true to the specific type. The offspring of sexual reproduction, instead of being more variable than either parent, is, so to speak, half-way between them, and so departs less widely from the mean than either of them. Which of these statements represents the truest and most complete interpretation of fertilization it is not yet possible to decide. No one of them can well be applied universally in face of the groups that show no such gametic unions, and those numerous cases in which the uniting cells are very closely related.

Previous to fertilization, a ripening process takes place in both ovum and spermatozoon, which is usually termed maturation. With this phenomenon is intimately connected a reduction in the number of the chromosomes to one-half the number characteristic of the species; in this way a progressive summation of the chromosomes throughout succeeding generations is prevented. The procedure is very complicated, and still imperfectly understood; but it is probable that, previous to the penultimate of the two final divisions by which the definitive germ-cells are formed, the peculiar condensation of the chromatin thread (synapsis), and its appearance ultimately in a number of bodies corresponding to half the typical number of chromosomes, really represent in each case a conjugation of the paternal and maternal chromosomes which have hitherto remained distinct, followed by a division in which these double chromosomes divide longi-

tudinally, succeeded in turn by a reducing division in which they divide transversely, so bringing the number to half that which is characteristic of the species, but really also segregating the paternal and maternal chromosomes into separate cells. Accordingly, the life cycle of the organism is after this fashion—conjugation of maternal and paternal cells, somatic divisions, and conjugation of maternal and paternal chromosomes.

Fig. 4.—Later stage in fertilization (Ascaris). The membranes of the germ-nuclei have disappeared, and the two chromosomes derived from each, four in all, have become attached to the spindle fibres. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

Boveri has summarized the process of fertilization in the following words: 'The ripe egg possesses all of the organs and qualities necessary for division excepting the centrosome, by which division is initiated. The spermatozoon, on the other hand, is provided with a centrosome, but lacks the substance in which this organ of division may exert its activity. Through the union of the two cells in fertilization, all of the essential organs necessary for division are brought together; the egg now contains a centrosome which by its own division leads the way in the embryonic development' (*Sitz.-Ber. Ges. Morph. Phys.*, Munich, iii. p. 155). If this were an exact account, we should be further warranted in saying that during segmentation the blastomeres, or earliest cells of the embyro, derive their cytoplasm from that of the egg, their centrosomes from the spermatozoon, and their nuclei, *i.e.* their chromatin, in equal amounts from both germ-cells. In general terms the statement is true, but it is doubtful whether the actual centrosome of the spermatozoon identically persists as the organ around which the dividing aster directing the division of the egg is formed, or whether it is simply a locus, *e.g.* of enzymes, under whose influence a new centrosome is formed in the egg cytoplasm. Further, it has been questioned whether the sperm centrosomes are actually identical with the segmentation centrosomes, for there are cases where the former seem to disappear for a time, although this may be due to variation in staining capacity at a critical period. Still the general fact remains, that something certainly is introduced into the egg by the middle piece of the fertilizing sperm which either is the original centrosome, or has the power to stimulate the formation of one out of the egg cytoplasm—something that can divide and produce division of the cell-mass independently even of fusion of the nuclei, something that is in some way directly connected with the corresponding apparatus of the succeeding division. What it is, however, that actually starts the segmentation cannot be definitely determined; but it need not necessarily be the spermatozoon or even its centrosome. Artificially fertilization has been induced in sea-urchin eggs by exposing them to sea water whose concentration has been increased some 50 per cent. by the addition of Na Cl; development takes place right up to the larval stage (Loeb). Nathansohn has caused the parthenogenetic development of the eggs of a fern (*Marsilia*) by simply keeping them at a sufficiently high temperature, thus suggesting that the mechanism of development is in the egg, and that all it requires is a certain stimulus to set it in motion; such a stimulus in this case is the difference in metabolic activity induced by the high temperature. Accordingly we conclude generally that while the stimulus to development is normally connected with the sperm centrosome, yet this is not the only way of supplying the conditions requisite to initiate the process. While undoubtedly in some forms (*e.g.* the sea-urchin *Toxopneustes*) a real fusion of the sperm- and egg-nuclei takes place, and out of the mixed chromatins chromosomes arise, yet in other and probably the majority of animals the two nuclei simply lie closely side by side, and in that position give rise each to its own group of chromosomes preparatory to the first division. Thus the paternal and maternal chromatin may remain distinct and separate in the later stages of development, possibly throughout life. Accordingly the possibility arises that 'every cell in the body of the child may receive from each parent not only half of its chromatin-substance, but one half of its chromosomes, as distinct and individual descendants of those of the parents' (Wilson, *op. cit.* p. 208).

Every nucleus, then, arising by the segmentation of a fertilized egg-cell contains a double set of chromosomes, nuclear substance derived from both parents. As a matter of experimental fact, however, it has been ascertained in certain instances that either set is sufficient for complete development, at least as far as the larval stages. The egg may be caused to develop without the presence of paternal chromosomes, while, conversely, development has been induced in a sperm-fertilized egg from which the maternal nucleus was removed. For these and other reasons the chromosomes are now regarded as the vehicles of inheritance.

The question of the individuality of the chromosomes has lately received very close attention. From a theoretical point of view the denial of their individuality seems to make mitosis meaningless. Why this careful and accurate division of the chromosomes, if after every such division the substances of the different chromosomes are jumbled up in a common mass at nuclear re-construction? The assumption of their stability likewise gives us the better explanation of their constant number. From the practical side Rabl, so long ago as 1885, maintained, as the result of study of mitosis in the epithelial cells in the salamander, that the chromosomes do not lose their individuality between succeeding divisions, but persist in the chromatic reticulum of the resting nucleus. His idea was that the reticulum arose as the result of a transformation of the chromosomes, which gave off anastomosing branches, causing the temporary appearance of a network that was again lost as the reticulum contracted at various definite points to form the typical number of original chromosomes. Boveri, in particular, and others have further shown that, whatever be the number of chromosomes entering into the composition of a nuclear reticulum, the same number issues from it at a later stage, and in very much the same position. This is particularly striking in certain abnormal cases of fertilization, where it was noticed that the irregular number of chromosomes persisted from one cell generation to another, so suggesting that 'the number of chromosomes appearing in a nucleus during mitosis is the same as the number of chromosomes from which it was originally formed' (Walker, *The Essentials of Cytology*, p. 92). In certain species the chromosomes can be distinguished during the resting stage of the nucleus; and even if in most cases it looks as if the identity of the chromosomes was lost at this stage, yet this does not prove, of course, that it is so lost. In other species the chromosomes appear to show constant differences of size and shape, so suggesting that they may possess specific individual characters. Finally, Häcker, Herla, and Zoja have shown that, in several cases (*Ascaris*, *Cyclops*), not merely do the germ-nuclei not fuse, but they give rise to two separate yet parallel series of paternal and maternal chromosomes that remain perfectly distinct, as far, at any rate (in *Ascaris*), as the twelve-cell stage, and probably throughout life. Indeed, as the result of the later researches of Montgomery, we consider that in synapsis there is a conjugation of homologous chromosomes which are later separated in the reduction division; as a final result we have the separation of whole somatic chromosomes. Here then, in general, is an important—if it can be absolutely demonstrated—an epoch-making discovery. With Harvey's name we associate the discovery *Omne vivum e vivo*. To

Virchow we owe the induction *Omnis cellula e cellula*. Strasburger first clearly established the truth *Omnis nucleus e nucleo*. And with Boveri's name it is just possible that we shall have to establish the further truth that there are chromosome generations corresponding to cell generations, that the chromosomes of one generation arise endogenously in the chromosomes of a previous generation, that growth and reproduction, characteristic features of living things, are predicable of these intracellular units—in short, *Omne chromosoma e chromosomate*.

Boveri has further shown experimentally that qualitative physiological differences exist amongst the chromosomes; complete development is apparently possible only in presence of a particular combination of them. This suggests that some definite relation exists between individual chromosomes (or possibly the chromomeres composing them) and the development of definite characters or groups of characters. What interaction takes place during the conjugation of chromosomes we do not know. If we assume that the hereditary characters are distributed amongst different chromosomes, then their segregation is achieved at the reduction division, the results are in accordance with the Mendelian view-point (see art. HEREDITY), and the individuality of the chromosomes is fairly established. But in any case it is difficult to banish the idea of some more or less persistent morphological organization corresponding to what we at present roughly include within the conception of the chromosomes.

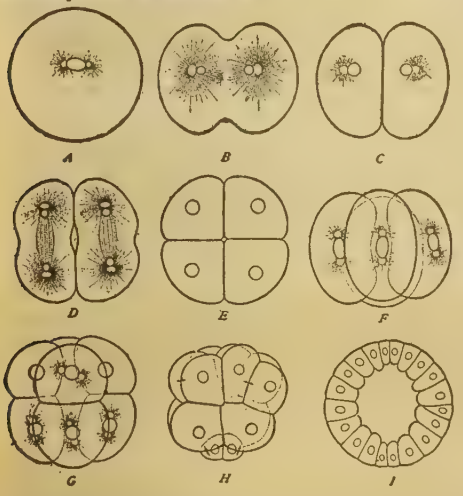

FIG. 5.—Cleavage of the ovum of the sea-urchin Toxopneustes (×330). The successive divisions up to the 16-cell stage (*H*) occupy about two hours. *I* is a section of the embryo of three hours, consisting of approximately 128 cells surrounding a central cavity. (From Wilson's *The Cell*, by kind permission of the publishers.)

As a result of some form of stimulus consequent on fertilization, the egg commences to segment. These cleavage divisions are similar to what has been described in connexion with mitosis, except that very early they are accompanied by differentiation. Differentiation in the higher forms of life is expressed in the establishment of tissues and later of organs, in connexion with that physiological division of labour which usually means so much greater capacity for doing work. The more complex the organic structure, the more detailed is this subdivision of labour; the greater the degree of co-ordination and unification of these activities, the higher the creature stands, as a general rule, in the scale of life. How all the different stages have arisen with their genetic continuity is the story of evolution, most interesting, if most difficult, in the lower grades of life, where, however, modern study, *e.g.*, of the Protozoa, sheds floods of light upon the question. In the course of this differentiation considerable change is often noticed in the functions of organs—what at one stage played one particular rôle is found at a later stage to function in a different manner.

Again, the cleavage divisions of the developing egg are often effected in planes that show some definite relation to the structural axes of the adult body. Typically the cells tend rhythmically to divide into exactly equal parts, and any new plane of division tends to intersect the preceding one at right angles. Variations, however, occur not merely in the rhythm, but in the quantitative character of the divisions, as also in the direction of the cleavage planes; these variations are often of regular occurrence. Not merely do the cells divide in accordance with the requirements of definite mechanical conditions, but also, and more distinctively, with reference to the future cell-orientation and structure of the animal: of this forward look, as of the unequal division that sometimes sets in as early as the first segmentation, and in every case appears sooner or later, no sufficient account has been offered. In fact, as Wilson puts it (*op. cit.* p. 377), 'we cannot comprehend the forms of cleavage without reference to the end-result.' Study of all purely mechanical factors, such as pressure, form, etc., only makes it more obvious that the work is subordinated to that of some superior controlling law of growth.

How far the later structure of the developmental form is already determined in the structure of the egg is one of the root problems of Embryology. In many cases a definite relationship appears to exist between early blastomeres and the later adult areas to which they give rise; in other cases, again, it becomes evident, particularly as the result of experiment, that there can be no definite, unalterable, pre-localization of parts of the egg. In several cases the egg axis is not established until after fertilization, and is even then experimentally alterable. But no general consideration holds in any number of cases. Cell-formation and localization of areas seem, ultimately, alike subordinate to some controlling formative process that expresses itself in growth. Development takes the form of an orderly correlated progress towards a definite end. The egg in each case in a remarkably short time evolves into a type about which certain general statements can be prophetically hazarded, but of the inwardness of this process no account can yet be given. To speak of developmental capacities as being involved in the organization of the egg is, perhaps, effective, but not informing; at the most an accurate descriptive account of the stages is within our power.

The idea of pre-determination or pre-localization of embryonic parts in the fertilized (possibly even in the unfertilized) egg cytoplasm has fascinated many workers; not, of course, in the crude sense of the early evolutionists, who maintained the existence of a pre-formed though invisible embryo, or even in some cases a miniature of the adult, in the egg, but in the more general sense that definite areas, perhaps definite substances, in the apparently homogeneous cytoplasm, correspond to definite parts which will later be built up out of them. Segmentation would then simply reveal what is already pre-determined. On the other hand, the identification of the physical basis of hereditary with nuclear material shows that such cytoplasmic pre-localization — if it exists — must be determined and controlled from the nucleus; and the attempt has been made, notably by De Vries and Weismann in their respective theories, to transfer the assumed germinal localization from the cytoplasm to the nucleus. The differentiation corresponding to later embryonic regions, which is early noticeable in the cytoplasm, is induced secondarily through the influence of the ultimate nuclear units that migrate into the cytoplasm and direct its development. In Weismann's theory, development resolves itself into the gradual qualitative distribution of these units from their massed

condition in the early cells, until at last in each cell there is simply left that particular determinant which controls it. But of these qualitative divisions, save in the reduction division in maturation, there is no evidence whatever; and facts like regeneration, and the ability of a single cell of the two- or four-cell stage to reproduce the whole embryo (*Amphioxus*), although on a reduced scale, seem to negative it; while in the cases where, as in the frog, the right cell of the two-cell stage appears to contain the material for the right half of the body, that cell if isolated can yet in great measure supply the deficiency by a peculiar kind of regeneration.

If, then, there be no qualitative distribution of the chromatin (idioplasm), if, on the contrary, it be equally distributed at every cell division, how is differentiation accomplished? Driesch has suggested that the answer lies in part in the relation of a blastomere to the remainder of the embryo. 'The relative position of a blastomere in the whole determines in general what develops from it; if its position be changed, it gives rise to something different; in other words, its prospective value is a function of its position' (*Studien*, iv. 39). The suggestion bears a true relation to what does occur in many instances; but it is evident that not merely the position of a blastomere to its neighbours, but the position of its own constituents has to be considered, for Morgan has shown that even in the case of the two-cell frog the single isolated cell may give rise to a half embryo or to a whole embryo of half size, as in *Amphioxus*, according as the isolated cell is left in its normal position, or turned upside down. This seems to indicate that all the material for a complete, if half-sized, embryo exists in the single cell of the two-cell stage, and that at this stage, as in *Amphioxus*, the blastomere is not so firmly set that it can only develop into the half of the creature that normally it would. In fact, embryology discloses a whole series of forms in which this equivalence of the cells at the early stages is greater or less, some easily overcoming the tendency to develop only (as normally) into a part, others doing so with greater difficulty, and even failing, with the result that a monster (defective larva or adult) is formed. Accordingly it would seem as if primarily the egg cytoplasm is equipotential, in the sense that the various regions do not stand in any fixed relation to parts which may develop out of them, but that sooner or later differentiation of these regions, resulting in a mosaic-like development, does take place from causes that we do not understand—sooner, as in the case of the mollusc *Dentalium*, whose single cells when separated cannot completely overcome the tendency to form a part and develop into monsters resembling pieces of a single embryo (and the same result is achieved by artificially cutting off pieces of the egg); later, as in the case of *Amphioxus*, where a cell of the two-cell stage or the four-cell stage may develop into a complete dwarf adult, either half or quarter size. A suggested solution of this phenomenon consists in assuming the various protoplasmic constituents as arranged in bands or zones (cf. Wilson, *Science*, vol. xxi., No. 530). In *Amphioxus* the first division would separate these symmetrically and equally. In *Dentalium* the division may be apparently symmetrical but really qualitative, so that all of one band or zone passes into one of the cells.

Further, it is difficult to avoid believing that differentiation of a kind, slight perhaps but still effective, has not occurred much earlier, even previous to fertilization, for the egg has a developmental history previous to that experience. These axial differentiations are probably due to the nucleus, and form the scaffolding, as it were, within which the development after fertilization goes on. The ability to re-adjust displayed by the isolated blastomeres largely depends on the degree to which this scaffolding has been effectively reared.

At the same time it must not be forgotten that this ability of the cells of an embryo to reproduce the whole organism is confined merely to the earliest stages of the developing form. Cells do become differentiated, and this seems to imply nuclear differentiation of some sort, even if not after the manner of qualitative division. It is possible that part of the chromatin may be cast out of the nucleus, or dissolved, or be transformed into something else. The former circumstance has been indeed observed by Boveri in the early somatic cells of the developing *Ascaris*. Driesch's conception of the nucleus as a 'storehouse of ferments which pass out into the cytoplasm and there set up specific activities,' is at least interesting. Certain it is that 'specific protoplasmic stuffs' are distributed to the cells in a definite way during division; and since they have a definite arrangement in the egg, to this extent development is mechanical, and the cleavage mosaic is an actual mosaic. If it could be shown that initially protoplasm contains only a few of these specific stuffs, that, as development proceeds, new stuffs are progressively formed and distributed, and finally that their number decreases and that they weaken as differentiation progresses, we should have an interpretation of development that is essentially epigenetic — progressive in the sense that new additional parts not already there are formed; and in this combination of the two older and contrasted view-points of pre-formation and epigenesis the truth is probably to be found.

Finally, we are unable to forget the dominating rôle of the environment in all development; without its stimuli the inherited organization of the living creature would not work itself out. The living form is at any moment the resultant of external stimuli acting upon its inherited organization. This has been experimentally proved time and again: a normal development is the response to normal conditions. The development is thus educed, and it may be modified by the environment; but the fundamental character and cause of it lie in the inherited organization. The developing organism and its environment react the one upon the other independently; yet in virtue of its adaptiveness the organism continually sets itself free from the control of the environment and proves itself the more constant of the two. Separation of the two is practically impossible; we are almost compelled to consider the organism and its environment as a single system undergoing change.

In conclusion, we re-affirm that of that marvellous co-ordinating power which guides development rhythmically and orderly to its predestined goal we have no explanation. As Wilson puts it, 'we no more know how the organization of the germ-cell involves the properties of the adult body than we know how the properties of hydrogen and oxygen involve those of water' (*op. cit.* 433). Of the origin of that 'co-ordinated fitness, that power of active adjustment between internal and external relations,' that capacity of the idioplasm of the germ-cell to respond to the influence of the environment so as to call forth an adaptive variation, we are in complete ignorance. This directive control, as we already saw, is a distinctive characteristic of life. See also artt. DEVELOPMENT, EVOLUTION, HEREDITY.

BIRTH (Introduction).—In the lowest stages of civilization the observances connected with pregnancy and child-birth are relatively simple, though the germs, and frequently something more than germs, are found of ceremonies which undergo elaboration as civilization advances. Such rites and observances may be considered under six heads:

1. The condition of tabu entailed by gestation and birth.
2. The dangers from evil spirits and from witchcraft.
3. The attempt to secure an easy delivery.
4. The attempt to secure good fortune for the child.
5 and 6. The admission of the child, and the re-admission of the parents, into society.

1. **The condition of tabu.**—It is rare to find an express statement like that made by an experienced missionary in reference to the Murray Islands, that 'the woman was not considered unclean after child-birth, nor was any ceremony necessary for her re-admission into society' (*JAI* xxviii. 11). On the other hand, this condition of tabu is sometimes, as among many Bantu peoples, emphasized by the separation of husband and wife at an early stage of the pregnancy. It is continued right into the higher civilizations, in which, even at the present day, it is perpetuated in various ecclesiastical and traditional observances. The husband and sometimes all the household are also affected by the condition of tabu, according to the well-known law of its contagiousness. A condition of tabu is conceived of as a material infection communicated by contact with the person or with anything used by him, or even by relations of kinship or neighbourhood. Women are, during the whole of their reproductive life, specially subject to it. From the attainment of puberty, at every recurrence of menstruation, as well as at every pregnancy and parturition, they are under its ban. It is a condition associated with the mysterious, the awful, and the relations of beings more than human with mankind. The processes of generation and reproduction, so mysterious even to us, are in lower stages of culture the object of emotions that we can hardly understand. Blood, too, is regarded with horror. The slaughter even of an enemy is enough to place a man under tabu: hence warriors returning from even a successful raid are required to be purified. But of all the blood that inspires horror, that which proceeds from the female organs of sex is the most effective, perhaps because its normal cause is unknown. A menstruating woman is set apart; her touch defiles; her ordinary ministrations to husband and household are suspended. It is therefore not wonderful that pregnancy and child-birth are conditions of tabu, and that others than the woman, especially her husband, are involved.

(*a*) *Couvade.*—It would be a mistake, however, to suppose that all the prohibitions imposed on husband and wife during pregnancy and at child-birth have reference to the considerations just mentioned. Many of them concern the welfare, present and future, of the child. Such, it is now well recognized, is the intention of the couvade. This custom, which has been in modern times the subject of innumerable jests at the expense of the savage husband, is very wide-spread. It is practised by a considerable number of peoples in the lower culture, but is not strictly a primitive rite. A fairly-developed example is given by Sir Everard im Thurn. Speaking of the native tribes of British Guiana, he says:

'Even before the child is born, the father abstains for a time from certain kinds of animal food. The woman works as usual up to a few hours before the birth of the child. At last she retires alone, or accompanied only by some other women, to the forest, where she ties up her hammock; and then the child is born. Then in a few hours—often less than a day—the woman, who, like all women living in a very unartificial condition, suffers but little, gets up and resumes her ordinary work. . . . In any case, no sooner is the child born than the father takes to his hammock, and, abstaining from every sort of work, from meat and all other food, except weak gruel of cassava meal, from smoking, from washing himself, and, above all, from touching weapons of any sort, is nursed and cared for by all the women of the place. One other regulation, mentioned by Schomburgk, is certainly quaint: the interesting father may not scratch himself with his finger-nails, but he may use for this purpose a splinter, specially provided, from the mid-rib of a cokerite palm. This continues for many days, and sometimes even weeks' (im Thurn, *Indians of Guiana*, p. 217).

The name *couvade* as applied to this custom, also known as the 'man-childbed,' is traceable to a misunderstanding of a phrase used by Rochefort, a French writer of the 17th cent., in his *Histoire Naturelle et Morale des Antilles*. But the 'man-childbed' is only one of a large number of observances by the husband intended for the protection and advantage of the child and of the child's mother. The close relationship between husband and wife engenders a mystic sympathy between them, so that the acts of the one are reflected in the physical condition and success or failure in enterprises of the other: each becomes, so long as the relationship endures, as it were an outlying portion of the other. Thus, when the great national hunt, held every year by the Santals of Rājmahāl, is organized, the master of the hunt leaves his wife at home lightly bound and facing a bowl of water in the centre of the room. She must remain exactly as her husband left her and continue to gaze into the bowl until she sees its contents turn to blood. If she move or divert her gaze before this occurrence, which, of course, always takes place, the success of the hunt will be imperilled. Once the change is accomplished, she is free to go about her ordinary avocations (Bradley-Birt, *Story of an Indian Upland*, 1905, p. 273). Among the tribes about Lake Nyasa, while a woman's husband is absent on a journey, she must not anoint her head or wash her face, she must neither bathe nor cut her hair, she may hardly wash her arms; her oil-vessel is kept full of oil hung up in the house or at her bedside. Any indiscretion may not merely mar the husband's domestic peace, but even cause his death (Macdonald, *Africana*, 1882, i. 80). Conversely, her absent husband will eat no salt, lest, if his wife misconduct herself, the salt may act as a potent poison (*Archivio*, xiii. 489). A married man of Timor-Laut may not cut his

hair, otherwise his wife will speedily die (Riedel, *Sluik- en kroesharige rassen*, p. 292).

This mystic sympathy extends to parent and child. Many peoples are still at the stage in which relationship is not reckoned between father and offspring; and it is probable that the purely matrilineal reckoning of kinship generally preceded that which recognizes the father's relationship. The custom of couvade proper does not appear to exist among purely matrilineal peoples,* for the sufficient reason that they do not recognize the tie of kinship on which it depends. As the result of inquiries by Prof. Tylor and Mr. Ling Roth, it is found in the greatest force among those peoples in which matrilineal is in process of transition to patrilineal kinship, and its frequency and elaboration diminish with the gathering strength and prevalence of paternal kinship, although, even in the higher civilizations, where kinship is reckoned through both parents, observances linger which are based upon the same idea of mystic sympathy (*JAI* xviii. 255; xxii. 204). Whether its gradual disappearance is due to this idea having fallen into the background with the advance in civilization has not finally been determined. Another cause has been suggested. Bachofen (*Mutterrecht*[2], 1897, pp. 17, 255) saw in the couvade the assertion of the father's relation to his child, the mode by which he claimed it for his stock rather than the mother's. Prof. Tylor, after hesitation, gave the great weight of his authority to this opinion, which is supported by some of the cases. But it is clear that the *quasi*-legal fiction which would be thus created must be founded on the pre-existing idea of mystic sympathy and the practices connected therewith. When patrilineal reckoning became fully established, the stage of legal fiction was past. The couvade became unnecessary as an assertion of paternity, and therefore would in time be dropped. (In addition to the works cited above, discussions on the couvade will be found in Tylor, *Early Hist. of Mankind*[3], 1878, p. 291; Hartland, *Legend of Perseus*, 1894–96, ii. 400; Crawley, *Mystic Rose*, 1902, p. 416.)

(*b*) *Delivery in seclusion.*—It follows from the condition of tabu imposed on a parturient that child-birth must almost always take place in seclusion. Among many peoples, where the climate permits, the event takes place in the open air. The Herero woman in South Africa is delivered behind her mother's hut; and after the birth she is placed in a small hut, where she remains until the navel-string drops from the child (Dannert, *Zum Rechte der Herero*, Berlin, 1906, p. 19; *S. Afr. F. L. Journ.* i. 41, ii. 61). In British Columbia the Kwakiutl woman is delivered out of doors; the Sk'qomic woman retires to the woods, unless it be winter or retirement to the woods be for any other reason inconvenient, in which case she is delivered behind a screen of reed-mats in the general dwelling, which is of considerable size (Boas, *Brit. Ass. Rep.*, 1896, p. 573; 1900, p. 479). Among some of the tribes of New South Wales it is said that the spot to which the parturient withdraws is fixed upon by the elders of the band (Mathews, *Ethnol. Notes*, Sydney, 1905, p. 15). In tropical countries delivery frequently takes place in the forest; in the Babar Archipelago, on the seashore (Riedel, p. 354). The Indians of Rio de la Plata are delivered on the shore of a lagoon or river, where immediately afterwards they wash themselves and the infant (Granada, *Superst. del Rio de la Plata*, Montevideo, 1896, p. 56). Where parturition does not take place in the open air, a special hut is commonly provided for the purpose. In Japan this hut used to be a mere shed without a door (Aston, *Shinto*, 1907, p. 113). Where a separate dwelling is provided for menstruant women, as is often the case, the parturient retires thither to be delivered; the other occupants also being under tabu, no harm can be inflicted on them by her presence. This is the practice, for example, of the Kotas of the Nilgiri Hills and other tribes in the south of India. In comparatively civilized countries like Russia, among the peasants of the Government of Smolensk, the woman is placed for delivery in a barn or a hut at a distance from the house (*L'Anthropologie*, xiv. 716). The Votiak woman gives birth in the family dwelling, but behind a curtain, for it would be a bad omen for any one but the woman in attendance as midwife to see the birth (*Rev. Trad. Pop.* xiii. 254). This clearly means that it is not a desire for privacy on the part of the patient that leads to the seclusion, so much as a ban on the part of the other members of the household.

Where the seclusion cannot be carried out by delivery in the open air away from the community, or where by custom or special circumstances delivery takes place in the hut usually occupied, the tabu is none the less strict. In the west of Victoria the Australian woman remains in her husband's *wuurn*, or shelter, but he is required to live elsewhere; the neighbouring shelters are temporarily deserted, and every one is sent away from the vicinity except two married women, who stay with her (Dawson, *Austr. Aborigines*, p. 38). Among the Koragars of the western coast of India the hut is deserted by the other inmates for five days (*JAI* iv. 375). The Visayans of the Philippine Islands remove the fishing-nets and the fighting cocks from the house, just as when a person is dying there, else they would be unlucky (*JAFL* xix. 209). When a birth takes place in the house, the Indians of the Uaupes Valley in Brazil take everything out of the house, even the pans and pots and bows and arrows, until the next day (Wallace, *Trav. on the Amazon*, p. 345). All these objects would be affected by the uncleanness of child-birth if allowed to remain, and probably would have to be destroyed, as is done, among some of the tribes of New South Wales, with every vessel used by the parturient during her seclusion (*JAI* ii. 268). So contagious is the tabu, that, if the men do not avoid the neighbourhood of the hut, they, it is widely believed, will be unlucky in their own occupations, as in the New Hebrides, where the yams they cultivate will be spoiled (*ARW* x. 515).

(*c*) *Absence of the father at birth.*—As a rule the husband, in common with all other men, is required to be absent on the occasion of child-birth. The reason of this requirement has been supposed to be the condition of tabu under which the parturient woman lies—a condition that would be communicated to every one present. But the explanation will not fit the facts everywhere. Thus among the Opatas of Mexico a parturient is attended by her nearest relatives; but so little is seclusion deemed necessary, that men, and even children, may be present (*Amer. Anthr.* [N.S.] vi. 80). In the Loyalty Islands, again, the act of birth is a spectacle that everybody—men, women, and children—flocks to enjoy, except the husband, who alone must be absent. During the whole of the woman's subsequent seclusion, which lasts until the child is big enough to crawl, her husband never pays her a visit, though he occasionally sends her food (*JAI* xix. 503). He is under a special ban. On the other hand, some tribes require the husband to be present and act as midwife, while all other

* The present writer is aware of only one case, that of the Arawak of British Guiana (Brett, *Ind. Tribes of Guiana*, 1868, p. 101). A reference to Mr. Ling Roth's table (*JAI* xxii. 232), and to his authority (Codrington, *The Melanesians*, 1891), shows that in the other alleged case mother-right, though still the rule, has begun to give way. More information is desirable on the Arawak and their surroundings.

men must keep away. This is the custom of some of the wild tribes in the Malay Peninsula (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, 1906, ii. 20, 22, 25). Among the Yaroinga of Queensland the parturient is attended by an old woman as midwife, but the husband is at liberty to be present and witness the process of delivery, contrary to the practice of the neighbouring Kalkadoon, who allow only a very old man or two to be present (Roth, *Ethnol. Studies*, pp. 182, 183). The active assistance of the husband is expected in the Andaman Islands (*JAI* xii. 86) and the Babar Archipelago (Riedel, *op. cit.* 354), as well as among the Basques (*ZE* xxxi. Verhandl. 292); while among the Bontoc Igorot of Luzon he is at least present (Jenks, *Ethnol. Survey, Philippine Islands*, i. 59). In the Marquesas Islands he is not only at hand, but must have conjugal relations with his wife almost immediately after the birth when she goes to bathe (*L'Anthrop.* vii. 546).

Moreover, presence at the birth is not necessary to render the husband unclean, or, in other words, to place him in the condition of tabu. He is already subjected to it by the mere fact of his relationship to the parturient. In many cases his uncleanness is expressly affirmed; in others it is to be inferred from some of the tabus by which he is bound, and which are not to be explained by mystic sympathy with the newborn child. Indeed, the tabu extends more or less to the whole household, or sometimes even to the whole community. The Kafirs of South Africa seem to regard all the members of the kraal as unclean, for they 'eat medicine,' as on the occasion of a death (Leslie, *Among the Zulus*, p. 197). The Sulkas of New Pomerania are similarly affected; and not only the men, but their weapons and the cuttings of plants they are about to put in the ground, require to be purified (*AA* [N.F.] i. 209). To the same origin we may probably attribute the stories, framed as they now stand at a period when the custom was no longer understood, of the famous couvade of the Ulstermen, when all the male population was annually laid up as a penalty for an act of cruelty to a woman about to be delivered.

Without dogmatizing on the matter, an alternative conjecture may be hazarded that the husband's enforced absence is to be regarded as a relic of earlier social conditions, when the wife dwelt at her mother's house, and descent was counted only through women. In such a case the identity of the father of the child would be of small importance, and might even be unknown, and the occurrence would be one in which he had small concern. The conjecture is supported by the frequent, if not ordinary, presence and assistance of the parturient woman's mother when alive and within reach. This might be supposed to be merely natural, were it not that the large divergences of custom and feeling between the lower culture and our own hinder any cautious anthropologist from laying down a general rule as to what is natural and what is not. It is further supported by the custom of sundry African and Indian peoples, whereby a woman, particularly at her first confinement, returns to her maternal home, and is there delivered and remains in seclusion for a ritual period, apart from her husband and unvisited by him. Among one of these peoples at least (the Basuto) the first child belongs to, and remains with, the mother's parents (*FL* xv. 250).

(*d*) *Tabu of the child.*—The condition of tabu thus affecting father and mother extends, it need not be said, to the newborn child. It is unclean, and must be cleansed by a rite of purification which assumes various forms among different peoples; and this purification, as in Christian baptism (*q.v.*), is the rite of introduction to, and incorporation in, the community. Sometimes father, mother, and child are all purified together in one and the same rite. Among certain Indians in the north-west of Brazil both parents and child remain in seclusion for five days. The parents neither work nor wash, and their diet is strictly limited. Any transgression of these rules will be injurious to the child. At the end of the five days the husband's father gives them permission to bathe and resume their ordinary food, and a common bath by the young parents and their little one brings to a close the period of seclusion. It may be noted in reference to what has been said above, that though the father shares the mother's seclusion and abstinence, *all* men are expressly stated to be absent at parturition (*Globus*, xc. 351). The Swahili of East Africa, who are nominally Muhammadan, have a similar rite for putting an end to the forty days' seclusion and dieting of the mother. At the end of that period she and the father are required to resume cohabitation. After the first occasion of cohabitation, the father, mother, and child bathe one after the other in the same water. This ceremony is called *Kurinja Miko*, 'diet-breaking,' and it is held necessary for the child's health. Ordinary life is then resumed (*ZE* xxxi. 61). It was perhaps some rite incidental to the tabu and purification of the infant among the ancient Trausi of Thrace which was misunderstood by Herodotus (v. 4) when he described the kinsmen as sitting round the child and lamenting the ills to which it was heir. That the Trausi, in opposition to the general sentiment and practice of mankind, were pessimistic philosophers of the type implied by the historian is hardly credible.

2. **Dangers attendant on child-birth.**—That very serious dangers, however, attend the entrance upon human existence is widely, if not universally, believed. These dangers (which can be but briefly alluded to here) affect the mother as well as the child, and in some cases the father also. They arise from two sources—evil spirits and witchcraft. Against them a pregnant woman provides by means of ceremonies (often with the co-operation of priests and shamans), abstinence, and amulets. Ceremonies and amulets are also used for the protection of the newborn child. In Christian countries baptism is of all protective ceremonies the most effectual. It is probably due as much to the belief that the devil and other evil spirits have special powers for inflicting physical evil on an unbaptized child, and often for snatching it away, as to the theological doctrine of original sin, that baptism has been hastened so eagerly and widely. At Gossensass in the Tirol the devil is believed to have power over both mother and babe. Until the one is churched and the other christened, something may befall them. They must not be left in the house alone; and the nurse in attendance must not sleep, but pray without ceasing. It would be useless to make the sign of the cross by way of prophylactic over the child before it is baptized, for it is not yet a Christian, and the mother is no longer a real Christian until she is churched, for she has been despoiled of her Christianity by the child in the act of birth (*ZVK* vi. 309). By many peoples one of the kinds of spirit most to be dreaded on these occasions is that of a woman who has died in childbed. Special ceremonies are performed over the corpse of such a woman to prevent her returning for mischief (cf. *PR* ii. 269–274). To evil spirits are ascribed difficulty of parturition, the death of the parturient or of the child, the infliction of disease on the child, the carrying off of a child or its exchange (see CHANGELINGS). Witchcraft is often practised by means of the evil eye (*q.v.*). Where the exclusion of all strangers, as such, is rigid, the reason,

express or implied, very often, if not always, is the danger from this source. For the same reason precautions are observed, as in Macedonia (Abbott, *Maced. Folkl.* p. 123), in summoning the midwife. On the island of Kythnos, in the Greek Archipelago, all the mirrors are covered during labour, no one is allowed to enter the birth-chamber after sundown, and, during the first three nights, to turn away the evil eye and conciliate the Fates, all the mother's trinkets (such as ear-rings, brooches, rings, and so forth) are laid out on the bed with a pot of jam (Hauttecœur, *Folkl. Kythnos*, 7). On the island of Karpathos the child is washed and swaddled in public, and no one is allowed to enter or leave the house until this ceremony is over and the priest has blessed the babe (Bent, *Macmillan's Mag.*, July 1886, p. 201). But witchcraft may also be practised by ceremonies, as in Ovid's account of the birth of Hercules retarded by Lucina sitting before the door muttering charms, her knees pressed together, and her fingers interlocked about them, until the yellow-haired Galanthis, one of Alcmene's attendants, induced her by a false report of her mistress' delivery to spring up in surprise, and thus undo the spell (*Metam.* ix. 295). Difficult delivery may also be caused by the acts, even unintentional, of the husband. Among the fisher-folk of Lower Brittany delivery is harder when the husband is away at sea following his occupation of fisherman (Sébillot, *Folkl. des Pêcheurs*, p. 3).

3. Attempt to obtain easy delivery.—Against the agony thus inflicted and the disasters which may ensue, various countervailing means are employed. It is not an unreasonable conjecture that this is the reason why delivery is often required among savage and barbarous peoples to be effected in the open air. Probably not merely the convenience of washing but the sympathetic influence of the free waves causes the seashore to be selected in some of the Moluccas as the proper place for parturition. In the Philippines the husband strips stark naked, and stands on guard either inside the house or on the roof, flourishing his sword incessantly to drive away the evil spirits until the child is born. The recitation of charms is common. Offerings and prayers are made to benevolent gods and spirits, wherever the development of religious belief sanctions them; and these are sometimes combined with a banning of the malevolent spirits. Thus, among the Chingpaw of Upper Burma sacrifices are offered to the house-spirit, and ceremonies are performed to drive away the Jungle-*Nât* and the *swawn* or *munla*, the ghost of a woman who has died in child-birth (*Internat. Arch.* xvi., Suppl. 59). In extreme cases obscene performances take place by a band of young men in the presence of the patient, when it is believed that the evil spirits for very shame take to flight (Stoll, *Geschlechtsleben*, p. 681); though it may be doubted whether the original intention of the ceremony was not rather to overcome sterility and sterilizing influence by the exhibition of generative acts. A common spell against difficult labour is the opening of all doors and cupboards, the untying of all knots, the loosening of garments, or even stripping by all present. The Arunta husband in Central Australia, though not present at the birth, takes off all his personal adornments, and empties his wallet of knick-knacks on the ground; and his hair-girdle is taken to the woman and tied tightly round her body just under her breast, apparently with the object of driving out the child. If this be ineffectual, the husband walks slowly up and down, quite unadorned, in front of the women's camp, where his wife lies about fifty yards away, with a view to inducing the child to follow him (Spencer-Gillen[a], p. 466). In Malta a specimen of the dried flower known as the Rose of Jericho is procured and put into water in the parturient's chamber. It is believed that when it opens the child will be born. Analogous to this piece of sympathetic magic is the custom in the Mark of Brandenburg of boiling peas to bring about the birth (*ZVK* i. 183); in Karpathos the patient holds an olive branch in her hand. Then, again, care must be taken to avoid doing certain acts in the house. Nobody, for instance, in Bavaria may step over a broom—a prohibition current also in India. Nor, by a widely-diffused superstition, may anything be lent out of the house; especially fire must not be given, for fear of witchcraft. Adultery among many peoples is held to be a cause retarding delivery. In cases of difficult labour the unhappy woman is closely questioned and made to confess. It is believed that, until she does so, the child cannot be born. In Europe various saints are invoked to aid delivery. They are often successors of pagan divinities; or rather they are pagan divinities under the thin disguise of a slight change of name. In continental and insular Greece, for example, St. Eleutherios has taken the place of the goddess Eileithyia.

Amulets are intended to provide against dangers to the mother both before and after delivery, and also to the child. They are hung on the person of the mother and on that of the child, or about the house, either inside or out; or they are laid or hung in or upon the bed of the lying-in woman, or the cradle of the child. When a population has passed into the age of metals, metallic objects are held to be of special value as amulets. But such various objects as parts of sundry animals and plants, stones of remarkable shape or rarity, egg-shells, bread, besoms, salt, pitch, the husband's clothes, mirrors, crosses, consecrated girdles, magical or sacred texts, Bibles—anything, in short, that may be supposed, though for reasons often obscure to us, to cause difficulty or be repugnant to malignant spirits or evil influences—are employed; and they avail not only for assisting delivery but for protecting the mother and babe during the perilous time preceding and following birth. The use of fire and lights is almost universal. The rule that, where a mother and new-born child are lying, fire and light must never be allowed to go out, is equally binding in the Highlands of Scotland, in Korea, and in Basutoland; it was observed by the ancient Romans; and the sacred books of the Parsis enjoin it as a religious duty; for the evil powers hate and fear nothing so much as fire and light.

4. Attempt to secure good fortune for the child.—The child's future must be divined and provided for. Before birth, means are frequently taken to divine the sex of the infant, or even to ensure the sex desired. There are lucky and unlucky times for birth. The qualities and fate of a child born on one day of the week or of the month differ from those of a child born on another day—a superstition not quite extinct in England. In Greece the three Fates are believed to visit the child three days after birth, at midnight, and decide its destiny—another relic of pagan belief. To welcome and propitiate them a feast is provided. In Karpathos the ceremony is very elaborate. The child is placed, stark naked, on a pile of its father's clothes in the wooden bowl from which the family eat on feast-days. This stands in the middle of the room, and around it seven jars containing honey. In every one stands a long candle specially made for the occasion. The priest blesses the candles, and they are named after various saints. They are then lighted, and the extinction of one of them is awaited in silence.

The first to go out indicates the saint who is to be the child's protector. In the evening, guests assemble round the bowl to eat from it a confection of flour, water, honey, and butter. When they disperse, the bowl is again filled with the same mixture and left all night for the enjoyment of the Fates, who are invoked to come and bless the child (Bent, *loc. cit.* p. 203). The child's destiny is supposed to be written by the Fates on its nose or forehead, and any little mark or abrasion of the skin is called 'the fating of the Fates' (*τὸ μοίρωμα τῶν Μοιρῶν*). But they never spin the lot of a wholly happy life (Rodd, *Customs and Lore of Modern Greece*, 1892, p. 111). Elsewhere, ceremonies are performed to ascertain the child's fate and to provide, according to its sex, that it shall grow up with all the qualities necessary for its after-life. First, however, where exposure of children or infanticide is practised, a decision must be taken whether it is to live or die. Where the lineage is reckoned through the father, the child's life is usually in his hands, as among the ancient Romans and Scandinavians. In other cases the mother often decides, and herself puts the child to death. If the mother die in child-birth, savage peoples as a rule bury the child with her, on account of the difficulty in rearing it; or sometimes because they fear that she will not rest without it.

Afterbirth, etc.—A point of great importance is the disposal of the afterbirth and navel-cord, and of the caul when there is one. The Swahili inter the placenta on the spot where the delivery took place, in order that the child, through a mystic power, even after it has grown up, may feel itself continually drawn to its parents' house. The cord is worn round the child's neck for some years, and afterwards is buried in the same place. By this proceeding it is believed that the child's growth is promoted (*ZE* xxxi. 62). The Australian natives on the Pennefather River in Queensland hold that part of the *cho-i* ('vital principle,' 'soul') of the child remains in the afterbirth. The latter, as soon as it comes away from the mother, is buried in the sand, and a number of twigs are stuck in the ground to mark the place, and bound together at the top in a conical form. It is believed that Anjea—a supernatural being whose business is the making of babies out of mud and their insertion in the womb—recognizes the spot, takes out the *cho-i*, carries it to one of his haunts, and keeps it for years, until it is wanted for the completion of another baby. When he has formed a baby, he puts into it, if a boy, a portion of the father's *cho-i*, or, if a girl, a portion of the father's sister's *cho-i*. He takes an opportunity of secretly placing the baby, thus completed, in the womb of the mother for whom it is intended (Roth, *Bull. North Queensland Ethnog.* v. 68). The Toba-bataks call the placenta the younger brother of the child. They hold that every man has seven souls. One of these abides with the placenta, which is buried, but can leave it to warn the child to whom it belongs, or, if he be acting rightly, to encourage him and thus play the part of conscience. The Javanese believe that the souls of their forefathers are housed in crocodiles. In the interior of the island, after the birth of a child, the women are accustomed to take the placenta, surrounded with fruits and flowers, and lighted by little lamps, in the dusk of the evening to the river, and commit it to the waters as a gift for the crocodiles, or rather by way of dedication to the forefathers whose souls inhabit them (Kruyt, *Animisme in den Ind. Archipel*, pp. 25, 189). In Europe, on the other hand, what is most dreaded is that the afterbirth and cord should be eaten by an animal, or exposed to the evil offices of fairies or sorcerers. In Spain, for example, if the least part of the placenta were eaten by an animal, the infant would be possessed of all the bad qualities of the animal in question (Sébillot, *Paganisme*, p. 30); for the placenta and cord are regarded as being an essential part of the child. Moved by the same belief, the Kwakiutl of British Columbia take precisely the opposite course of exposing a boy's placenta where it will be eaten by ravens: he will then have the gift of foreseeing the future. The same tribe bury a girl's placenta at high-water mark, in order that she may grow up an expert clam-digger (Boas, *Rep. Brit. Ass.*, 1896, p. 574). The Swahili practice, already mentioned, of wearing the cord is wide-spread. Even in Europe the cord is preserved and often worn as a talisman, or given to the child at different crises of life to suck.

The custom of planting a tree at a birth is common among sedentary nations. Such a tree is regarded as having a mystic relationship with the child. It is an index of the child's condition and fate: it grows, prospers, and decays with the child. Very often the placenta and cord are buried beneath it, as in countries so far apart as New Zealand and Old Calabar. In Pomerania the afterbirth is buried at the foot of a young tree. The Hupa of California split a small Douglas spruce, place the umbilical cord in the opening, and tie the tree together again. 'The fate of the tree is watched, and the future of the child is judged accordingly' (Goddard, *Life and Culture of the Hupa*, p. 52). Elsewhere, as in the Moluccas, the afterbirth is hidden in a tree. If we are not always told that the tree is in these various ways united with the child's fate, we may suspect that very generally a mystic connexion with the child is established.

Similar superstitions attach to the *caul*. A child born with a caul is endowed with extraordinary powers. Among the Negroes of the West Indies and North America, and among the Dutch, he can see ghosts. In England it is believed that he cannot be drowned, perhaps because (as the Icelanders believe) the caul contains the child's guardian spirit (*fylgia*) or a part of its soul. The Icelandic midwife therefore is careful not to injure the caul. She buries it beneath the threshold over which the mother has to pass (Grimm, *Teut. Myth.*, 1880–88, ii. 874). It is probable that this proceeding is adopted in order that in the event of the child's death the soul may re-enter the mother and so the child may be born again—a belief frequently implicit, and sometimes more than implicit, in the like burial of dead and still-born babes. However that may be, the caul is everywhere prized. In many places it is sewed up in a bag and hung round the child's neck, or preserved elsewhere. In Königsberg it is carried to baptism with the child (Ploss, *Kind*, i. 13). It is also regarded as a talisman valuable in itself, and is sold and bought as a preservative against shipwreck and for other luck-bringing purposes. In England, a century ago, or even less, advertisements of such objects for sale were not very rare in the newspapers.

5. **Admission of the child into the community.**—The moment comes at length when the most imperious tabus relating to the child are put an end to and the child is introduced into the community. He cannot, as a rule, become a full-fledged member of the community until he has, years later, passed through the puberty ceremonies; but he may be recognized as a portion, however imperfect, of the family or clan on emerging from the seclusion which follows his birth. The ceremony of reception and that of release from tabu (or purification) are, as already pointed out, the same. The giving of a name in many cases forms part of it, though the name so given is not neces-

sarily that which the child will bear throughout life. These three objects are effected in Christianity by baptism; and there can be little doubt that Christianity has in infant baptism taken up and modified, to suit its own teaching, certain pre-existing ideas and rites (see BAPTISM).

(*a*) *Visit of friends.*—Prior to the ceremony of reception, however, the relatives, and especially the female friends of the mother, despite her tabu, often pay her a formal visit to offer their congratulations and inspect the baby. It is an occasion for rejoicing, on which the visitors either bring or receive presents. It is not, however, without danger for mother or child. The evil eye is particularly dreaded, and the guests are expected to put themselves above suspicion by their expressions and conduct. They must, as is usual at other times for this purpose, either salute the child in the name of God, or speak of it as a nasty, ugly little thing, or use some such offensive expression. This is the only way open to them of praising it: direct praise is dangerous. A very common rite is to spit on it—a rite known equally well in Eastern Uganda and in Western Ireland, indeed, throughout Europe (see EVIL EYE, SALIVA). In Austria, visitors are sprinkled with holy water. Among some peoples the neighbouring children are invited to see the child, and take part in a ceremony, and are feasted—a custom practised by the Continental Jews, the Watubela Islanders, the ancient natives of Mexico, and others. It is perhaps a rite of sympathetic magic.

(*b*) *Recognition by the father.*—Formal recognition of the child as his by the husband is among various peoples a preliminary to the actual reception into the community, though it is sometimes combined with that ceremony. Occasionally it is preceded by a test of legitimacy, as among the Baganda (*JAI* xxxii. 31), where the rite is performed not by the husband, but by his father. Recognition is effected in various ways. The Santal father murmurs the name of his ancestral deity, and puts his hand on the child's head (Hunter, *Annals of Rural Bengal*, p. 203). The Fijian father makes a gift of food (*JAI*, xiv. 23). Among the ancient Norse the child was laid on the earth when born, and not lifted up until the father gave permission. This permission decided the child's fate, for otherwise it would have been exposed or put to death; but doubtless it involved also an acknowledgment of paternity. Recognition by the father involves reception into the immediate kin. Among the Amaxosa a feast is given on the occasion; the father goes to the kraal and chooses a cow from whose tail he pulls a tuft of hair and hands it to the mother. She fastens it round the child's neck. Neither the cow nor any of her posterity may be sold or disposed of in any way to strangers; but if the child be a girl, they are handed over with her on her marriage (Fritsch, *Eingeb. Süd-Afr.* p. 108). Among the ancient Welsh it would seem that there was no binding recognition by the father until the mother had first taken a solemn oath upon the altar and the relics that he and none other was the father. If the father then did not deny the child by an equally solemn ceremony within a year and a day, he could not afterwards deny him. The mode of reception into the kin was by a kiss; for a kiss, says the code of Gwynedd, is a sign of affinity. If the father were dead, the ceremony was performed by the chief of the kindred with six of the best men of the kindred; if there were no chief of the kindred, then by twenty-one of the best men of the kindred; and once performed it was conclusive (*Anc. Laws of Wales*, Venedotian Code, ii. 31).

(*c*) *Presentation to the god.*—Sometimes the child is presented to the divinity. The Chingpaw of Upper Burma formally announce the birth to the house-spirit, and place the infant under its protection (*Internat. Arch.* xvi., Suppl. 60). In Mexico the Tarahumara mother on the fourth day after delivery goes to bathe, and lays the child down naked and exposed to the sun for an hour, that Father Sun may see and know his new child (Lumholtz, *Unknown Mexico*, i. 273). The Wichita present the child to the moon, praying for its growth and other blessings (Dorsey, *Myth. Wichita*, pp. 11, 19, 29). A somewhat similar ceremony is performed by the Ronga mother in South Africa; but, since the Baronga do not worship the moon, the words used are rather an incantation than a prayer; 'Grow, grow, grow; there is thy moon!' (Junod, *Baronga*, p. 17). Among the Basuto, in the second month after birth, the child is made to look at the moon, which is called his wife if a boy, or her playmate if a girl (*Bull. Soc. Neuchat. Géog.* ix. 121). On the island of Kythnos, if the child suffers from any complaint, it is presented to the new moon with the prayer: 'O new moon, I shall be very grateful if thou wilt cure my child' (Hautte-cœur, 9). In direct contrast to these practices is the Albanian forbidding of children to look at the moon. The Euahlayi of New South Wales also forbid them to look at the full moon. Among the Hupa of California a curious method of presentation to the divinities is practised. Parturition takes place in the house set apart for women in a state of tabu. The first ten days are a period of great danger to the child; and they are spent in rites to ward off the evil spirits. At the end of the period a little of the child's hair is cut off and put in the fire. 'It was thought that the divinities on smelling the burning hair became cognizant for the first time of the child's existence.' The ceremonies culminating in the burning of the hair are thus, it would seem, not merely intended to ward off evil spirits: we are justified in thinking that they are ceremonies of purification. After they are over, the mother and child leave the parturition-house, though the mother is under tabu for some time longer (Goddard, *Hupa*, Berkeley, Cal. 1903–4, p. 51. The author states elsewhere that the mother remains in the parturition-house for a longer period [p. 18]).

(*d*) *Ceremonies of admission.*—The community into which the child in lower stages of civilization is more or less formally introduced is primarily that of the kin; and, wherever ancestor-worship or the cult of a divinity in the more accurate acceptation of that term is practised, reception into the community and presentation to the divinity are, as a rule, only two aspects of the same ceremony. Thus, among the Chukchi, on the fifth day after birth the mother and child are drawn in a sledge round the tent, sunwise, to the place of sacrifice. The reindeer employed to draw the sledge is then slaughtered; the mother and child, at least two other members of the family, the sacred amulets, and the three central poles of the tent-frame are painted with the blood. The mother then proceeds to divine which of the deceased relatives has returned; and, on this being ascertained, the name of the relative in question is imposed upon the child by acclamation of the people present (*Jesup Exped.* vii. 511). The painting with blood of the sacrificed reindeer has placed the mother and child under the protection of the divinities, and has also united them with the kin represented by those members who have been painted and by the other persons present. And this is completed by the identification of the ancestor who has returned in the person of the child. The Herero of German South-West Africa perform an elaborate ceremony when the mother is released from her seclusion. She takes the

child to the sacred fire, which burns on the hearth in the open air at the eastern side of the hut where the chief of the *werft* lives. She is sprinkled with water by the chief's eldest unmarried daughter, whose duty it is to keep the fire always burning. She seats herself on the outspread hide of an ox, and the chief spurts a mouthful of water over her and the child, afterwards addressing his ancestors: 'To you is a child born in your village; may this [village] never come to an end!' Then he rubs mother and child with fat and water, taking the child upon his knees in doing so. He takes the child in his arms, and, touching its forehead with his own, he gives it a name. The other men present repeat this action on the child, uttering the name already given by the chief of the *werft* or the father, or, if they please, each giving a new name (*S. Afr. F. L. Journ.* ii. 66). Here both the mother and child are purified, and the child is presented to the ancestral spirits and received into the kin. Where, as, for instance, among the ancient Mexicans, the worship of gods had been evolved, the ceremony took place at the temple. There the child was presented to the god, and there it received the gifts which were a recognition of its membership of the kin (Payne, *Hist. of New World*, 1899, ii. 479). Among the Santals of Bengal the child is admitted into the family by a secret rite which includes the recognition by the father of his paternity. Admission into the clan is more public; it takes place three days after the birth of a girl, or five days after the birth of a boy. The child's head is shaven. The clansmen stand round and sip water mingled with a bitter vegetable juice. The father solemnly names the child, and the midwife thereupon sprinkles rice-water over each of the visitors, pronouncing, as she does so, the child's name. The family, which up to this moment has been unclean, is by the ceremony re-admitted with the newborn babe into the clan, and the kinsmen on both sides sit down to huge earthen pitchers of beer previously provided. Admission into the wider circle of the race takes place some four or five years later. It consists in marking the child's right arm with the spots indicating his Santal nationality, and the drinking of beer by the friends of the family, who, irrespective of clan, have been invited (Hunter, *Rural Bengal*[7], 1897, p. 203). The bestowal of a name among the Kayans and Kenyahs of Borneo is accompanied with great formalities. It is the starting-point of the child's life in its social aspects; before it is named, the child would not be enumerated as one of the family, and would not be mourned for any more than if it had been still-born—it is, in fact, non-existent (Furness, *Born. Head-hunters*, p. 18).

(*e*) *Admission in the higher religions: baptism.*—In the higher religions, as in Muhammadanism and Christianity, the dedication of the child to God effects its entrance into a wider society than that of the kin, and the importance of the ecclesiastical rite tends to efface its social meaning. The ecclesiastical rite insists on the relation between the child and the Deity, and the effect on the child as a social being falls into the background. But outside the ecclesiastical rite the occasion is often made one of social interest. The Swahili, a Bantu people of East Africa, have accepted Islām, which they practise diluted with much of the ancient paganism. Forty days after its birth, all friends of the house assemble for the baptism of the child. The whole night is occupied with ritual readings from a sacred book, repeated after the reader by all present. At four o'clock in the morning (the hour when the Prophet was born) the actual baptism and naming take place. The celebration is then closed with a feast (*ZE* xxxi. 67).

Throughout Europe the most curious ceremonies and superstitions attend the baptism of a child. The utmost importance is attached to the choice of godparents, for the child inherits their qualities. They must therefore be morally and physically in a state of purity and without any bodily defect. In the Sollinger Wald, for example, they must take care to rinse their mouths with water before going to the ceremony, and abstain from spirituous liquors until it is over (*Am Urquell*, ii. 198). In Provence, if one of them were one-eyed, a stammerer, bandy-legged, or a hunchback, the child would be afflicted in the same way (Bérenger-Féraud, *Trad. de la Provence*, p. 171). The invitation to become godparents is frequently of the most formal and deferential character, by special messenger or the father in person, or else by letter. It is sometimes, as in the south-west of France, given before the birth. This is a practical necessity where baptism follows speedily on birth. The number of godparents varies: in one German family as many as twenty-three are recorded on one occasion—a luxury in which only wealth could indulge. The child's future depends on the conduct and even the dress of the godparents. On the way to the church they must not look round, or stand about, or perform any bodily needs. Their thoughts must not wander during the ceremony. Above all, they must make no mistake in repeating the Creed; nor must the clergyman stutter or make a mistake in the service. On the way back from church the same care is necessary; but now they are expected to give alms, especially to children. There are also rules as to the manner in which the children are held at the font, as to the order in which they are to be presented if more than one child be baptized on the same day, and so forth, on which much of the child's luck depends. The parents themselves do not attend the baptism. They are (at least the mother is) still under the ban, being as yet unchurched. But where this is the case, their occupations during the absence of the little one do not affect it any the less. The Esthonian father runs rapidly round the church during the service, that his child may be endowed with fleetness of foot (Grimm, *Teut. Myth.* iv. 1845). The mother, in some parts of Germany, must read her Bible and hymn-book, that the child may be able to learn easily. Elsewhere she has to perform nine kinds of work, that the child may be active. The child's conduct at the font, too, is much regarded. If it cries, in most parts of England the devil has gone out of it. But this is not the universal belief. In Auvergne, if it does not cry, it will be good; at Liège, if it cries, it will become a bad character. At Marseilles, to cry is a sign of a good constitution; but it is also the sign of an arbitrary and choleric temper. In Germany, the child who cries will not live to grow old; in Portugal and elsewhere, on the other hand, the child who does not cry will hardly live. On leaving and returning to the house a special ritual has frequently to be followed. Among the Masurs about Gilgenburg the midwife carries out the child, stepping over an axe on which three glowing charcoal brands are laid: this is held to be the best preservative against everything evil. A piece of steel is elsewhere among the same people packed in the child's swaddling clothes, or laid from time to time upon its eyes. The midwife says three times as she goes: 'I take away a heathen and bring you back a Christian' (Töppen, *Abergl. aus Masuren*[2], 1867, p. 81)—a sentiment of very common provenance. The child, on returning, is carried thrice round the table. These and other ceremonies, too numerous to be detailed here, intended to affect the child's after-life, are found

in some form or other all over Europe. When they are at an end, the feast begins, sometimes in the inn, sometimes in the parental dwelling, at which the child is now qualified to be, and frequently is, present. The godparents, the clergyman and sacrist, and the midwife are joined by the relatives and neighbours. Christening cakes are everywhere a special feature of the meal. The godparents must taste of every dish, in order that the child may speedily learn to eat and may thrive accordingly. The occasion is one for merriment, games, practical jokes, and dancing. It need not be said that the godparents are expected to present gifts to the child and to the midwife. So far as the child is concerned, that is only the beginning of their duties. He will expect gifts and help from them whenever in the course of his life he needs them. In some places, as in the Tyrol, the godparents of the first child of a family fulfil the same office for the subsequent children: it would be an insult to them to ask any others. In Greece the unbaptized child is called *drakos*, or dragon. It is not yet a fellow-Christian. The epithet, moreover, is probably deemed to have an influence on its future development by promoting its strength. At baptism the priest and godparents dance round the font. In Karpathos, on its return home the mother meets the little procession on the threshold with a ploughshare, the hollow of which is filled with embers. She waves this before the child to secure for it strength and skill in agriculture. The child is then solemnly delivered by the godfather into her hands, no longer a *drakos* but a Christian; and sweets and raki conclude the rites (Bent, *loc. cit.* p. 204).

The christening feast is the analogue of the merry-making which very generally in the lower culture follows a birth. Thus is celebrated the accession of a new member to the community. Children are the greatest asset of a people; they are a pledge of its continuance; and in a barbarous society they are often a source of wealth rather than a drain and an encumbrance. The ideas of barbarism persist in the peasant classes of Europe, among whom the various and complicated ceremonies roughly enumerated above are observed. The actual rite of reception into the community has taken an ecclesiastical form, that of baptism; and round it these other ceremonies cluster. They present, it is true, the appearance of regarding only the child. But this is delusive. It is to the interest of the entire community that the new member should grow up well-conducted, strong, and prosperous. The auguries, the omens, the provision for securing the child's future luck, are an index of the importance which the community, first in the narrower sense of the family, and in a less degree, but still really in the wider sense of the village and neighbourhood, feels to attach to the moral and mental qualities and the material prosperity of the neophyte.

6. **Re-admission of the parents into the community.**—The tabu of the mother is in the lowest stages of civilization often comparatively light. Among the Arunta of Central Australia the mother leaves her husband's camp and goes to that of the unmarried girls, where she is delivered; and there she remains for three or four weeks. She then resumes her ordinary life, so far as appears, without any special ceremony of purification. When among the Uaupes of Brazil birth takes place in the hut, everything, as we have already seen, is taken out of the house until the next day. The mother then washes herself and her child in the river, and returns to her hut, where she remains without doing any work for four or five days (Wallace, *Trav. Amazon*, 1853, p. 345). She is perhaps not yet completely pure, but the traveller's account does not enable us to say whether any further ceremony is performed. In the west of India the hut in which a Koragar mother is delivered is deserted by the other inmates for five days. On the sixth day the mother and child are restored to purity by a tepid bath, and the child is named. Rice and vegetables are presented to the mother; several coco-nuts are split, and given, one half to her, the other half to her husband (*JAI* iv. 375). When the mother is returning to ordinary life, in some of the tribes of New South Wales part of her hair is burnt off: this is doubtless a ceremony of purification (*JAI* ii. 268). The Maori have two alternative ceremonies to deliver the mother and child from *tapu* and make them *noa* (common). The one consists in the cooking on new fire (made by friction) of fern-root, which is waved over the child and brought into contact with it, and then offered to the *atua* (gods or ancestral spirits). In the other, mother and child are sprinkled with water by means of a branch, food is offered to the *atua*, and the branch is planted in the ground; if it grows, the child will become a warrior (*JAI* xix. 98).

Much more complex rites, elsewhere repeated, are required to restore the new mother to purity. The Hopi mother must not see the sun or put on her moccasins until the fifth day. She then bathes her head and her baby's with amole, and is at liberty to go out of doors and to resume the charge of household affairs. She is not, however, fully cleansed. She cannot yet eat meat or salt, and may drink only warm water or juniper-tea. The bathing must be repeated on the tenth and fifteenth days. On the twentieth day a much more elaborate rite takes place, including a vapour-bath administered to the mother, usually by her husband's mother or sister. The house is thoroughly cleansed. The child is formally bathed and rubbed with corn-meal, named, and presented by the mother to the sun at the moment it rises above the horizon. In the house a feast is prepared, and presents are made to the guests in return for those which the mother has received from them during her confinement (*Journ. Am. Ethn. and Arch.* ii. 165). Here it will be observed that the unbroken series of ceremonies culminating on the twentieth day effects the restoration of the mother to purity, and at the same time the purification and naming of the child. Mother and child are thus admitted together into the community. In some cases, as we have already observed (§ 1 (*d*)), father, mother, and child are simultaneously thus purified and admitted.

But while it may be possible in many stages of society for a mother to remain for a length of time under the ban, this would be very inconvenient, not to say impossible, for the father, upon whom lies the duty of providing for the wants of his family. As a rule, therefore, his tabu is light and easily got rid of, while that of the mother may extend over a lengthened period and be only progressively removed. Suckling often goes on for a lengthened period—two, three, or even four years. Among many peoples the mother is in some degree unclean until the child is weaned: she may not eat certain food or have matrimonial relations with her husband. This rule is general, for example, among the Bantu and negro tribes of Africa, and is the excuse given for the polygyny so largely practised by those peoples. The same rule applies to the Sakalava of Madagascar; but it is said that, although the Southern Sakalava woman is tabu at this time to her husband, she may admit to her bed any other man, subject to a fine payable to the husband if he discover the infidelity (van Gennep, *Tabou et Totémisme*, 1904, p. 168).

The tabu on the mother is practised also in Europe. The rule is very general that she must not go outside her home until she goes to be churched. Before that ceremony she is distinctly regarded as impure. Special precautions must be taken to drive away the powers of evil. She must eat apart; she must not work; she must not enter another house lest she bring ill-luck. When she goes to be churched (usually on the fortieth day), she steps over a hatchet or a knife fixed in the threshold of the house; a flaming brand or a packet of salt is thrown after her. On her return a feast is provided to celebrate her re-entry into ordinary life. In Karpathos the mother takes her child and a jug of water to church. The water is blessed after the churching ceremony. She then visits her neighbours, sprinkling water from the jug at each house, 'that your jugs may not break.' As she crosses the threshold she puts the handle of the door-key into her mouth, 'to make the plates as strong as the iron of the key' (Bent, *loc. cit.* p. 205). Newly fortified and cleansed by the rites she has undergone, she is no longer *tabu*, a centre of infection, but, with her child in her arms, a fountain of beneficent and in particular of prolific influence; and the interpretations of her proceedings just quoted must not be taken literally.

The foregoing general account of the rites and superstitions connected with birth is, of course, the merest sketch. But it is believed that it will suffice to give a notion of the meaning of, at all events, the most important and wide-spread customs, and of the ideas attached to them. See also BAPTISM, CHANGELINGS, CHARMS AND AMULETS, DIVINATION, EVIL EYE, FAMILY, INFANTICIDE, NAMES, PURIFICATION, TABU, TWINS.

LITERATURE.—The best general accounts of birth customs and superstitions are to be found in *Das Kind in Brauch und Sitte der Völker*, by H. Ploss, 2nd ed., 2 vols., Leipzig, 1884, and *Das Weib in der Natur- und Völkerkunde*, by the same author, 3rd ed., edited by Max Bartels, 2 vols., Leipzig, 1891, and subsequent editions. For the customs and superstitions of particular peoples, reference may be made to the various works cited above, and to others too numerous to mention here. In this, as in other departments of anthropology, there is now a large accumulation of materials in monographs, works of scientific explorers and missionaries, the journals of anthropological (including folklore) and geographical societies, and the publications of American and European museums and universities, and of the Bureau of Ethnology at Washington.

E. SIDNEY HARTLAND.

BIRTH (Assyro-Babylonian).—With the Assyro-Babylonians, as with other nationalities, especially the Semites, the birth of a child was an event of importance, and all the more so if the newborn happened to be a male. It is true that records of births are rare, but the attention paid to such events may be judged from the reference to the 'geometrical number' in Plato's *Republic*, viii. 546 B–D.* Even the ideal city, it is there stated, will come to decay, the cause thereof not being in the city itself, but from without. This degeneration was brought about by wrong or inopportune marriages and births. Plato then constructs a 'geometrical number' out of the elements which express the shortest period of gestation in man (216 days), the number in question being 12,960,000, which he calls 'the lord of better and worse births.' The connexion of 216 with 12,960,000 is rather complicated, but the former may be obtained by cubing 3, 4, and 5, and adding together the results. These numbers are also the elements of the Bab. sexagesimal unit (60), which, multiplied three times by itself, produces the 'geometrical number' referred to. As that high number, and numerous others connected with it, are found in the Assyr.-Bab. mathematical texts, there would seem to be no doubt that both that and the idea connected with it originated with the older of the nations which have handed down to us the tablets. It is natural that parents should desire to have fine and healthy offspring, but, in addition to this, the Assyro-Babylonians seem to have sought the improvement of the race by trying to arrange that births should take place at the proper time—with them, the periods when the moon had reached certain positions, either in its phases or in its course, probably the former. The numbers expressing these positions are contained in the British Museum fragment 80–7–19, 273, and are all fractions of the 'geometrical number.' They show the progress of the phases of the moon, culminating on the 15th (the moon's 'Sabbath'*), and decreasing afterwards.†

Naturally, there is at present much doubt as to how these numbers were used in deciding the times for propitious births, but certain celestial forecasts referring to the moon will give an idea of the method employed. Thus, if on the 16th of the month Tammuz an eclipse of the moon, or on the 16th of Chislev an eclipse of the sun, take place, pregnant women, it is said, will not have their offspring prosper (a variant has 'their offspring will fall').‡ This is the day after the moon was regarded as reaching its maximum fullness; and as that date would be an unexpected time for an eclipse, it seems to have been regarded as an evil omen. Independently, however, of the lunar numbers and dates influencing births, the moon was supposed to affect the offspring in other ways; for, when a halo surrounded our satellite, women, it was believed, would bring forth male children. Also, if the star Lugala or Šarru, 'the king' (*Regulus*, Merodach), stood in its place, women would likewise bring forth male offspring.§

Notwithstanding the moon's importance in its influence over births, it seems to have been less regarded than Ištar or Venus, and that goddess less than Zēr-panîtum, the spouse of Merodach, as is indicated by the name *Eru'a*, 'conception,' or the like, which she bore. It is on this account that, in the bi-lingual legend of the Creation, she appears under the name of *Aruru*, as the one who formed, with Merodach, the creator of all things, the seed of mankind.‖ Among the names of Ištar-Zēr-panîtum bearing on this subject were *Ama-du-bat=ummu pitât burki*, 'the mother who openeth the loins'; *Nagar-šaga*, 'the framer of the fetus'; *Šasuru*, 'the goddess of the fetus'; *Nin-tur*, 'the lady of the womb'; *Nin-zizna=bêlit binti*, 'the lady of birth(?)'; *Nin-dim*, 'the lady of procreation'; *Ani*, *Ama*, *Mama*, and *Mami*,¶ all, apparently, meaning 'mother.' It will thus be seen that the Assyr.-Bab. name of Zēr-panîtum (for Zēr-banîtum, 'seed-creatress'), which she bore (often transformed by Assyriologists into *Šarpanitum*, 'the bright one'), is more than justified.

In addition to his spouse, however, Merodach himself appears as a deity of generation, or god of birth—whether by reflexion, as it were, of his spouse Zēr-panîtum, or because he was regarded as 'begetter of the gods,' is uncertain; though the theory of reflected power is possibly the right one, since Merodach was the creator of the gods only because identified with them—an identification due to the theory by which, after the rise of Babylon (the city of which he was patron), the

other gods, including the older ones, became merely his manifestations. The name which he bore in this connexion was Tutu,* which is rendered *mûllid îlâni, mûddiš îlâni*, 'begetter of the gods, renewer of the gods.'†

Children being naturally desired, it is not to be wondered at that a letter should exist congratulating a woman that she was likely to become a mother. In this text Arad-Bêl writes to Epirtum, whom he calls his sister,‡ 'My heart hath rejoiced that thou art *enceinte* (*libbâa ilṣi* (?) *kî târi*).'§ Notwithstanding this natural desire, however, the Babylonians believed in the existence of certain stones and plants, of which they presumably made use, which furthered or prevented not only love, but also conception and bearing—*âban êri, âban lâ êri*, 'stone of conception, stone of non-conception'; *âban âlâdi, âban lâ âlâdi*, 'stone of bearing, stone of not-bearing'; *šammi êri, šammi lâ êri*, 'plant of conception, plant of non-conception'; *šammi âlâdi, šammi lâ âlâdi*, 'plant of bearing, plant of not-bearing.'‖ The 'plant of bearing' is referred to in the Etana-legend, in which the hero says to the sun-god Šamaš: 'Give me then the herb of bearing—show me then the herb of bearing! Bring forth my offspring and shape for me a name.' Whether this implies that a glance at the plant was sufficient is uncertain; in all probability a potion was made from the herb which one or both of the prospective parents had to drink. The sun-god tells Etana how to acquire the plant, and he goes and asks the eagle, which is one of the personages in the legend. It was probably in search of this plant that Etana, on the eagle's back, mounted up to heaven, and apparently appealed to the goddess Ištar; but the mutilation of the record deprives us of the sequel.¶

References to birth-rites in the Assyr.-Bab. inscriptions are rare, but there is every probability that the present material will be greatly augmented by the discovery of further stores of inscribed tablets. In the account of the birth and exposure of the infant Sargon of Agadé by his mother, there is no reference to any ceremonies or incantations which she may have made on his behalf. In all probability, however, the mother of a newly-born infant was regarded as being incapable of initiating any prayers or ceremonies herself, and another person, possibly a priest, would seem to have been employed to perform the duty. The British Museum fragment K 879 has apparently part of a prayer, or incantation, recited on behalf of a pregnant woman and her prospective offspring:

'The woman . . . . . .
Her binding, which is before thy divinity, may it be relieved;
. . . . . safely may she bring forth—
May she bring forth, and may she live; may what is there prosper.
Into the presence of thy divinity safely may she go,
Safe[ly may she bring forth, and] may she perform thy service.'

This fragment, which has neither beginning nor end, is bi-lingual, having been used by the Sumero-Akkadians as well as by the Semitic Babylonians.

A rather remarkable reference to creation and birth occurs in the 4th column of the legend of Atarpi, or, as Jensen* reads the name, Atar-ḫasis (the Chaldæan Noah, if this be correct). Apparently the mother-goddess, Maḫ or Mami (Zēr-panîtum, the spouse of Merodach), after uttering her incantation, threw down clay, and detached therefrom 14 pieces, laying 7 to the right and 7 to the left, placing a brick or tile between. Then, seemingly, she called out, 'Women, husbands!' There were 7 and 7 fetus (representatives of future living things)—7 were made male, and 7 female—fate formed (each) fetus. 'Forms of human beings Mami shaped them.' In the house of the undelivered woman about to bear, a brick was to be placed for 7 days, for the protectress (?) of the house, Maḫ, the spouse Mami. They (apparently the fetus) were to become swarms (?), and there was to be joy in the house of the undelivered woman. When the woman about to bear brought forth, the mother of the child was expected to withhold (?) (her)self. Two mutilated lines follow containing the words *zikaru*, 'male,' and *elli-*, . , probably part of *êllitu* (*-ti, -ta*), 'pure,' suggesting that she was to keep from men, and purify herself. This text being exceedingly difficult, there is much therein which is doubtful, but the words which are certain make it a valuable contribution to the subject of the ritual attending births in Babylonia. It is not implied in this inscription that images of children were made when the birth of a child was expected, but the brick, which is referred to, was probably regarded as sufficient. It would seem to have typified the building up of the house or family.

Tablets of late date show that the hour of birth was carefully noted, and celestial observations were made for the purpose of casting the horoscope, if the child was a male; and, probably, other ceremonies followed. If a conclusion may be drawn from the tablet K 1285, it would seem that, at least in the case of the children of people of note, certain ceremonies took place in the temple of Ištar, and also, perhaps, at the fanes of other deities:

'Young wast thou, Aššur-bani-âpli, whom I (Nebo) left unto the Queen of Nineveh;
A suckling wast thou, Aššur-bani-âpli, whom I satisfied on the lap of the Queen of Nineveh;
The fullness of the teats which are placed in thy mouth, twain thou suckest, twain thou pressest to thy face.'†

The expression, 'Queen of Nineveh,' has the determinative for divinity before it, showing that the personage intended is none other than Ištar, the patron of that city. The third line of the extract has the verbs in the present tense, probably to give the phrase greater vividness.

Naturally certain days of the month, and probably certain months of the year, were regarded as especially lucky for births. At the time of the dynasty of Babylon (about 2000 years B.C.), such names as 'the son of the 20th day' (*Mâr-âmi-êsrâ*) are met with; and from a student's exercise-tablet of late date, we learn that the 20th was the festival of the sun-god, not because, according to the Calendar in the British Museum,‡ eclipses could then take place (the days quoted are the 20th of Sivan, the 20th of Tishri, and the 20th of Chislev, the common expression, *antalu îlu Šamaš*, 'eclipse of the sun,' being used), but probably because, after the eclipse, the sun was regarded as shining victoriously. *Ululâa* (*Elulâa* = *Elulœus*), 'he of the month Elul,' and *Ṭebetâa*, 'he of the month Tebet,' are also found; but though this, to all appearance, records the month of the

* The word for 'bring forth,' 'beget,' in Sumero-Akkadian, was *utu*, of which *Tutu* is evidently a reduplicate form.

† In what way Merodach was regarded as the renewer of the gods is uncertain; the phrase may refer simply to the 'captive-gods,' who had been Tiamat's helpers in the fight with her. He is said to have visited them in prison and comforted them, apparently with the promise of ultimate release.

‡ Probably a term of affection for a beloved wife, as in Heb. (*cf.* Ca 4[9] ‖ כַּלָּה, 'bride'), etc.

§ Campbell Thompson, *Late Babylonian Letters*, 1906, No. 40. The text is not certain in some places.

bearer's birth, it is doubtful whether any lucky omen was attached thereto.

As may be gathered from the reference to fate forming each fetus, the Babylonians seem to have believed that the sexes were foreordained by the gods, who were the 'makers of fate.' A disturbing element probably existed in the influence of Tiamat, the spirit of confusion, and on this account they believed also that there was nothing absolutely constant in nature, and that the species could change, so that a woman, or a sheep, might bring forth a lion, etc., and infants might have parts of the body like those of animals, such as the eye of a boar, the ear of a lion, etc. To all these departures from the normal, omens were attached; and in all probability they were regarded as being sent by the gods for the information or the warning of men. The following will give some idea of the nature of these forecasts:

'If a woman has brought forth, and there is the ear of a lion, there will be a powerful king in the land.
If a woman has brought forth, and its right ear does not exist, the life of the prince will be long.*
If a woman has brought forth, and its right ear is small, the house of the man will be destroyed.
If a woman has brought forth, and from the first his head is filled with grey hairs, the life of the prince will be long.*
If a woman has brought forth 2 males, there will be hardship in the land, etc.
If a woman has brought forth twins for the second time, that country will be destroyed.
If a cow has brought forth 3, and (they are) 2 male and 1 female, hardship of a year—the harvest will not prosper.'†

These omens are exceedingly numerous, and often very difficult to translate.

T. G. PINCHES.

BIRTH (Celtic).—The data concerning the birth-rites of the pagan Celts are lamentably scanty. Aristotle (*Politica*, VII. xv. [xvii.] 2) records that 'many of the barbarians have the custom either of plunging their newborn children (ἀποβάπτειν τὰ γιγνόμενα) into a cold river, or of putting on them scanty covering, as among the Celts.' The Emperor Julian states (*Orationes*, ii.) that with the Celts (though with him this may mean the Germans) the father placed his newborn child on a shield, which was put in the Rhine. If the child was legitimate, the shield would float, but otherwise it would sink, thus affording a test of the fidelity of the mother to her husband. The only other passage which seems to bear upon the birth-rites of the Continental Celts is the curious statement of Strabo (p. 165), that among the Celts, as among the Thracians and Scythians, 'the women themselves, after giving birth, go on with agriculture and also tend their husbands, putting them to bed in their own steads.' This implies the couvade (above, p. 635[a]); but this custom is reported in Europe only of the Corsicans (Diodorus Siculus, v. 14)—a fact which would seem to imply a confusion on the part of Strabo between the Celts and the Iberians, a race entirely different ethnologically (cf. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, p. 347 f.; Hirt, *Indogermanen*, Strassburg, 1905–7, p. 717 f.; in favour of the Celtic explanation, Jullian, *Recherches sur la religion gauloise*, Bordeaux, 1903, p. 64 f.). At the same time, it should be noted that, whatever its racial origin, the couvade existed, at least in clear reminiscence, to a late period in Provence, as is shown by the Picard romance of *Aucassin et Nicolette* (probably early 13th cent.), ch. 39. Another apparent survival of ancient custom is recorded from a 14th cent. source by Ploss (*Das Weib*, Leipzig, 1885, ii. 70), to the effect that no woman was allowed to give birth to a child on certain islands in the mouth of the Loire, but when her time approached was sent to the mainland or placed in a boat in the river until the child was born. Herein, as Ploss notes, we may have a reminiscence of an island, sacred to 'Dionysus,' at the mouth of the Loire (described by Strabo, p. 198), where only women dwelt, all sexual intercourse (which, like birth, would thus be ceremonially impure in Celtic religion) being held on the mainland (but cf. below, p. 692 f.).

The pagan Irish material on birth-rites is still more meagre. According to Stowe MS, No. 992 (ed. and tr. Meyer, *RCel* vi. 173 ff.), Ness, when about to become the mother of Concobar, 'went to the meadow that was on the bank of the river Concobar. There she sat her down on a flagstone (*nos fuirim iarum for in licc cloichthi*) that was on the brink of the river. So there came the pangs of childbirth upon her.' Too much must not, however, be drawn from this, for the *Cóir Anmann*, 213 (ed. and tr. Stokes, in Stokes and Windisch, *Irische Texte*, Leipzig, 1880–1905, iii.), states that a band of girls (*inghenraidh*) kept watch round a prospective mother. After the birth had taken place, the mother 'waited for a lucky hour for the child' (*ib.* 273), *i.e.* probably for the casting of the horoscope, etc. Thus the Druid Cathfaidh observed omens from the stars, the clouds, and the age of the moon immediately after the birth of Déirdre (Hyde, in *Zeit. f. kelt. Philologie*, ii. 143). In the case of the infant who afterwards became the hero Conall Cernach, 'Druids came to baptize the child into heathen baptism, and they sang the heathen baptism (*chansat an mbaithis ngeintlidhe*) over the little child' (*Cóir Anmann*, 251).

LOUIS H. GRAY.

BIRTH (Chinese).—The customs which are observed in China, in connexion with child-birth, differ widely in the various portions of the Empire, and it would be almost as difficult to describe them in general terms as to include in one article 'Birth customs in Europe.'

Many of these customs are significant of religious preconceptions, though it is not always possible to trace the connexion, owing to the gradual deflexion from the ancient usage; and modern explanations tend to emphasize the physical benefits which are supposed to accrue from these observances.

It should be remembered that the elaborate preparations which are made previous to birth are intended to secure not only a happy issue to the anxious crisis—the safety of the child and mother—but their first and primary purpose is to prevent the awful contingency of death before delivery, which would involve the mother in endless torments in the 'Lake of Blood,' which is the special department of the under-world reserved for such unfortunates. From this point of view, therefore, the anxious care which surrounds the birth-chamber may be said to be replete with religious significance.

A month previous to the expected date of birth, the bride's mother, or other near relative on that side of the house, is expected to arrive with the accustomed gifts, and perform the office known as 'undoing the fastening.' The gifts include eatables, various articles of clothing required by the expected arrival (in the South, it seems, no provision of this kind is made), and tonics for the mother with a view to producing a quiet and successful parturition. Charms from the neighbouring temple are sometimes procured to fasten on the baby's body as soon as born, for the event is supposed to be attended by hosts of

* Lit. 'the days of the prince will be old.'
† From *WAI* ii. pl. 65, No. 1, obv. lines 1, 2, 4, rev. line 7; Boissier, *Documents relatifs aux présages*, Paris, 1894–99, p. 115, verso 11, p. 116, 19; and B.M. tablet K 78, ll. 2–8.

spirits with malicious designs upon both mother and child.

As soon as the birth-pangs begin to be felt, the female members of the family hasten to light candles and burn incense before the ancestral tablets, in the little shrine over the main partition of the entrance hall, and also in front of the 'god of wealth' and the 'kitchen god,' offering extempore prayers, as no settled form is provided for the occasion, and taking vows of future deeds of merit in the event of a favourable response—and all with a view to securing the assistance of the 'birth-speeding goddess,' who is supposed to have the ordering of such affairs. The midwife is at the same time summoned, together with other assistants, whose office it is to 'clasp the waist' of the expectant mother, who is maintained in a sitting posture throughout the ordeal, and is encouraged to drink a brew of dried 'longan' fruit and thin gruel to sustain her, together with certain medical potions which are held to be very efficacious. Red candles are lighted in the chamber, as for a wedding, and all words of ill-omen are carefully omitted—the idea being the ostentation of a cheerful confidence, and the avoidance of any suggestion of ill or fear.

As soon as the child is born, a messenger is despatched to the nearest lake or pond to procure a small quantity of water, which is then heated for the baby's first bath. (The bath is in some places postponed till the 3rd day; in the farther North it is generally omitted, and a little oil dabbed on the body instead.) The use of such water is said to ensure that the child, when he grows up, will become an expert fisherman. After the bath the child's body is rubbed dry with alum (in some places a raw egg is applied). A pad of fresh cotton-wool is placed over the navel, and the umbilical cord, which is cut at about a foot's length from the body, is rolled up and tightly bound, the long end sloughing away in about a week. The infant's clothes are then put on, in shape like the robes of a Buddhist *bonze*, or monk, probably with a view to deceiving the malignant spirits. (In the South, old garments warm from the wearer's body are put round the child in lieu of baby-clothes.) The male and female 'guardians of the bed' are then respectfully 'worshipped.' The placenta and its attachment are placed in a bottle, hermetically sealed, and put under the bedstead, or sometimes disposed of for the manufacture of pills.

No food is given to the infant during the first twenty-four hours, but at the end of this period three tea-spoonfuls of a liquid compounded of materials representing the five flavours—salt, sour, bitter, pungent, and sweet—are administered before the first drop of milk is allowed. The infant is not supposed to sample its own mother's milk until it has first been supplied from another household, where a baby of the opposite sex is being reared. A bowlful of this milk is obtained, and artificially warmed before being given to the child. A second bath is sometimes administered on the 3rd day, and a great number of articles are presented to neighbours and friends, each symbolical of some good wish, and duck-eggs dyed red are also sent, with the idea of advertising the fact of birth.

At the end of the first month the elaborate ceremonial of head-shaving takes place, and the various gods are 'invited,' *i.e.* by offerings of food, lighted candles, fireworks, etc. The baby-hair is shaved off with the exception of a little spot over the fontanel, which is allowed to grow and is called the 'filial lock.' In the afternoon the ancestors are 'worshipped,' and then follows a feast to which the neighbours and others are invited, each guest arriving armed with some gift, generally some object of superstitious use, such as silver necklets or bangles, which are supposed to moor the infant in the harbour of life, in view of the terrible mortality which prevails amongst young children in China. The child is sometimes taken out for an airing on this day, dressed in all the finery which can be imposed upon him, with amulets and charms to protect him from evil influences—a row of silver-gilt genii upon his bonnet, or perhaps a bright mirror to ward off the evil eye. In some of the country districts he is placed in a boat and subjected to violent rocking, to accustom him to the motion, or he is carried over a bridge in the hope that he may have a 'rise in life,' and also be able to keep his head when high promotion comes.

On the fortieth day the mother goes to the temple to offer incense (in some places, in the case of a boy being born, she goes on the 30th day), and to acknowledge the good hand of the gods in her safe delivery and happy fortune.

W. GILBERT WALSHE.

BIRTH (Egyptian).—A tale dating from the end of the Middle Kingdom relates how the wife of the priest of Rē in a local temple gave birth to three sons destined to be kings of Egypt. Four goddesses, Isis, Nephthys, Hôki (*Ḥq·t*, the frog-goddess, consort of Khnum), and Meskhôni (see below), officiated as midwives, having disguised themselves as strolling dancers, while Khnum accompanied them as baggage-carrier. They accepted a bushel of barley for their services; and the mother, we are told, was purified for 14 days ('Le roi Khoufoui et les magiciens,' in Maspero's *Contes popul. de l'Egypte ancienne*[3], 1882, pp. 36–40; Petrie, *Egyp. Tales*, 1895, i. 33ff.). At Deir el-Bahari is pictured the divine birth of Queen Hatshepsut amidst a crowd of deities of birth, food, fortune, etc. (Naville, *Deir el Bahari*, 1898–1901, iii., plates xlvii.–lv.), and at Luxor that of Amenhotep III. (Champollion, *Monumens*, 1825, pl. cccxl.–xli.; Gayet, *Temple de Louxor*, pl. lxv.).

The name of Meskhôni, the goddess perhaps of female functions, is generally characterized by a brick, referring to that which supported the mother, or on which the child was laid. In Ex 1[16], where late Egyptian customs may be reflected, the Hebrew women are represented as delivered on 'stones,' *i.e.* bricks (?) (cf. Spiegelberg, *Randglossen z. AT*, p. 19); and the Coptic *Apocalypse of Elias* (4th cent. A.D., ed. Steindorff) still refers to the 'birth-stool' as 'the brick.' A wooden couch is also figured early as the 'determinative' of Meskhôni as well as in the birth scenes, and probably among the wealthy the brick had only ceremonial importance. The word *tôbi*, 'brick,' is feminine, and the birth-brick, figured with the head of a goddess, is present in detailed illustrations of the Psychostasia; in the Papyrus of Ani (Brit. Mus., ed. Budge) it is accompanied by Shai the god of Fate and the goddesses Meskhôni and Ermûti (*Rnn·t*, 'the Nurse'); in that of Anhai (Brit. Mus., ed. Budge) two bricks with female heads are named Shai (masc.) and Ermûti respectively. In a funerary papyrus at Edinburgh of the year 11–10 B.C. the deceased is stated to have completed the years which Thoth wrote upon his birth-brick (Brugsch, *Rhind's Zwei bilingue Papyri*, 1865); and in the Westcar Papyrus, quoted above, it is Meskhôni who approaches each child laid on its brick-cradle and pronounces its destiny.

In stories dating from the New Kingdom, the Hathors, seven in number in one text, pronounce the destiny; these may include the birth-goddesses already mentioned (Maspero, *l.c.* p. 51). Horoscopes have not been traced with certainty in

Egypt before the Roman age; but some traditions assigned to Egypt the invention of the art, and there are star-tables in two of the royal tombs of the New Kingdom at Thebes which may have been horoscopes (Petrie, *History*, vol. iii.). The day of birth was a day of rejoicing, but nothing is known of ceremonies for it. Circumcision of the child was not performed before puberty. A collection of gynæcological prescriptions for medical, not surgical, treatment dates from the XIIth Dyn. (Griffith, *Kahun Papyri*); and receipts for ascertaining conception and determining the sex or the vitality of the infant to be born are found in the Ebers Papyrus, in a Berlin text published by Brugsch, and in the London and Leyden Magical Papyrus of the 3rd cent. A.D. (Griffith and Thompson). Erman has published a collection of spells for the nursery (*Zaubersprüche für Mutter und Kind*, Berlin, 1901). The word *misi*, 'to bear,' is written , properly three jackals' tails or skins made into a fly-flap, the name of which had this sound; but possibly it was a birth amulet, for in modern Nubia dead jackals laid above the door of the house are considered to protect women from miscarriage, etc. (Blackman, in *Man*, 1909, p. 10).

F. Ll. GRIFFITH.

BIRTH (Finns and Lapps).—The only important rites connected with birth among the Finns and Lapps are those purificatory ceremonies which belong to what may be called a form of baptism (see also BAPTISM, p. 372[a]). The existence of a non-ecclesiastical form of infant baptism among the Lapps is witnessed to by Norwegian missionaries of the 18th century. The fullest description of this ceremony is found in E. J. Jessen's 'Afhandling om de norske Finners og Lappers Hedenske Religion,' pp. 33–42 (printed as an Appendix to Knud Leem's *Beskrivelse over Finmarkens Lapper*, 1767; cf. also *ib.* pp. 495–497). After the child was brought home from the official baptism in church, where it had received a Norwegian name, it could not be washed or brought into contact in any way with water until it was baptized anew with a Lapp name (*same-nabma*). The pregnant mother, who had placed herself under the protection of the *sarakka* ('creator woman'), had had the name revealed to her by a deceased person in a dream, or she had been informed, by means of the magic drum, which of the deceased meant to come to life again in the child. The baptism was not administered by the magician but by a woman, usually the mother herself. The so-called *risem-edne* ('twig-mother'), who must not have acted as Christian godmother (*Christ-edne*), presented the child with a ring or plate of brass (*nabma-skiello*), which was thrown into the baptismal water. After the ceremony this piece of brass was placed upon the child to be worn as a talisman—in the case of a son, under the arm; in the case of a daughter, upon the breast. Before the baptism both the child and the water were dedicated to the *sarakka*. Baptism with the Lapp name was regarded as one of the two sacraments of the *sarakka*.

This baptism, which was resorted to in order to secure happiness and good health for the child, often proved insufficient. If the child fell sick or cried a great deal, it was once more re-baptized and received a new name, the so-called *udde-* or *adde-nabma*, or *saivo-nabma* ('under-world name'). This fresh bestowal of baptismal names might be repeated again and again in case of sickness, even in later years. It, too, was administered by a woman, the *laugo-edne* ('wash-mother'), with almost the same ceremonies as the other.

Warm water was poured into a trough, and two birch twigs—one in its natural condition, the other bent into a ring—were laid in it. At the same time the child was thus addressed: 'Thou shalt be as fertile, sound, and strong as the birch from which this twig was taken.' Then the copper (or silver) talisman was cast into the water, with the words: 'I cast the *nabma-skiello* into the water, to wash thee; be as melodious and fair as this brass (or silver).' Then came the formula: 'I baptize thee with a new name, N.N. Thou shalt thrive better from this water, of which we make thee a partaker, than from the water wherewith the priest baptized thee. I call thee up by baptism, deceased N.N. Thou shalt now rise again to life and health, and receive new limbs. Thou, child, shalt have the same happiness and joy which the deceased enjoyed in this world.' As she uttered these words, the baptizer poured water three times on the head of the child, and then washed its whole body. Finally she said: 'Now art thou baptized *adde-nabma*, with the name of the deceased, and I will see that with this name thou wilt enjoy good health.'

In the so-called Näro MS of J. Randulf, published by J. Qvigstad (*Det Kgl. norske Videnskabers Selskabs Skrifter*, 1903, No. 1, pp. 53–55), there is mention only of a species of Lapp baptism which was administered immediately after the church baptism, or at latest within half a year, in cases where the child fell sick. In this baptism the child received a new name, *ude-nemo*. The ceremony was performed on a Thursday, in the name of the three chief Lapp gods, borrowed from the Scandinavians, namely, *Hora-Galles* (Thor), *Waralden-Olmay* (Freyr), and *Bieka-Galles* (Njordr). There was a thrice repeated pouring of water on the child. According to a supplementary note by J. Kildal, the child was baptized in the name of the *Maylmen Radien* ('world-ruler'). It is stated by S. Kildal (*Det skandinaviske Litteraturselskabs Skrifter*, vi. 458 f.) that the name selected was that of the father or grandfather.

Outside the sphere of Norwegian Lapps, our only information concerns a formerly Lapp district in N. Finland, and is to the effect that among the Finn new settlers on the rivers Kemi and Ji, about the year 1750, a re-baptism with a new name (*uusi nimi-kaste*) was not unknown. As late as the year 1803, a peasant, Erik Lampela of Tervola, who had long been an invalid, is said to have caused himself to be re-baptized at Izak, and to have recovered (J. Fellman, *Anteckningar under min vistelse i Lappmarken*, ii. 51–52).

That Lapp infant baptism is an imitation of the Christian ordinance is sufficiently proved by the existence among the Norwegian Lapps of a second sacrament of the *sarakka*, which is an imitation of the Eucharist. A similar 'nature-woman,' 'creatrix,' in magic songs of the Finns is a metamorphosed form of the Virgin Mary; and in like manner the *Radien* (father, wife, child) on the magic drums of the Lapps stand for the Trinity in its popular-Catholic form. Another Christian feature of the ceremony is the thrice repeated pouring of water. The use of a talisman of brass does not point to an original stage of Lapp civilization; it is a case of borrowing from the neighbouring Scandinavians—a conclusion that is confirmed by the mention of the three principal Scandinavian deities. The latter still survived in the popular faith of the Lapps, and their presence is in no way inconsistent with a borrowing of infant baptism during the Catholic period of Scandinavia. It is possible, however, that Lapp infant baptism had already been introduced by half-pagan Scandinavians.

The baptism in question must be distinguished from the bestowal upon the child of the name of an ancestor who was supposed to come to life again in the child's person. The determination of the

name by a revelation in a dream or by the oracle of the magical drum is no doubt a primitive Lapp custom. As late as 1534 the Finns under the dominion of Novgorod (the Chudes) had oracle-men whom they summoned to give a newborn child its name—a ceremony which they performed 'in their own peculiar way.' The magician of the Finn-Ugrian Mountain Cheremisses adopts the following method in bestowing the name. Taking the child in his arms, as it is on the point of screaming, he begins a list of names, swaying the child to and fro as he speaks; and that name which he happens to be uttering when the crying ceases is the one selected. The magician of the adjacent Chuvasses—a Finn-Turkish hybrid race—is called to the child, and is received with tokens of the greatest respect by the domestics and the assembled guests, who with one voice express the desire that he will give the child a name of good omen. He takes a bowl of water in his hand, mutters certain words over it, and gives both the mother and the child to drink. Then he works himself into an ecstasy, and at last bestows upon the child a name which he professes to have received by Divine revelation (see Julius Krohn, *Suomen suvun pakanallinen jumalanpalvelus*, pp. 104, 109).

KAARLE KROHN.

BIRTH (Greek and Roman).—1. Greek.—Amongst the goddesses to whom the Greek matron prayed in her throes, Eileithyia, Hera, and Artemis are the foremost (Preller-Robert, *Gr. Mythol.* i. 511 ff.). After these come a number of others, *e.g.* the Hekate-like Eilioneia of Argos, to whom a dog was sacrificed to ensure an easy delivery (Plut. *Qu. Rom.* 52); Genetyllis, who received a like sacrifice (Hesych. *s.v.*; cf. Roscher, ii. 1270; Rohde, *Psyche*, ii.[2], 1898, p. 81, 1); the Nymphs (Eur. *El.* 625 f., cf. F. G. Ballentine, *Harvard Stud.* xv. [1904] p. 74 ff.). Superstitious ceremonies, originating from the idea of binding and unbinding, whose purpose was to ease the birth, and whose age and origin cannot be fixed, are mentioned by Pliny (*HN* xxviii. 33, 34, 42; cf. 59; see also Philologus, lvii. [1898] p. 131). When the birth had ended happily, the women brought their clothes to Artemis as an offering (*Anth. Pal.* vi. 271; schol. *ad Call. Hymn.* i. 77); Artemis Brauronia also received the clothes of women who had died in childbed (Eur. *Iph. Taur.* 1465 ff.). When a child was born in Attica, if it was a boy, an olive-wreath was hung on the outer door; if a girl, a woollen fillet was used, 'because of the spinning of wool' (Hesych. *s.v.* στέφανον ἐκφέρειν). This rationalistic explanation must, of course, be discarded; the underlying artificial differentiation is to be regarded as comparatively late, if, indeed, Hesychius' words correspond to facts. At any rate, a wreath with a woollen fillet attached must be considered as the primary form. The fillet enhances the effect of the wreath. The purpose of the wreath, which still hangs on the door at the *amphidromia* (see below; cf. Ephippos in Athen. p. 370 C), is not, as Rohde (*op. cit.* 72, 1) and Samter (*Familienfeste der Gr. und Röm.* 87) suppose, to lustrate the house, *i.e.* to cleanse it from impurity; it is apotropæic: the luck which it brings drives away ill luck. The woman who is lying-in and the newborn babe require such protection, for they are weak. The numerous amulets, with which it is the custom everywhere to deck small children, have the same purpose. And an olive-wreath is expressly mentioned as one of the protectives given to Ion by his mother when she exposed him (Eur. *Ion*, 1433, Kirchhoff). According to the belief of the Cora Indians, 'the dead would come and harm the (newborn) babe if (the father) did not fix branches of the zapote-tree into the door (Preuss, *ARW* ix. [1906] p. 466). Photius lays stress upon the apotropæic character of a similar rite (*Lex. s.v.* βάμνος), when he relates that, while a child was being born, the house was painted with pitch from thorn-bushes, in order to drive away the evil spirits.* A custom in modern Greece may serve as an analogy: newborn children are rubbed with sacred oil in order to protect them (Wachsmuth, *D. alte Griechenland im Neuen*, 79).

On the fifth day after the birth, the so-called *amphidromia* were celebrated (Plat. *Theæt.* 160 E + schol.; Harpocr., Suid., Hesych. *s.v.*; *Parœmiogr.* ii. 278). Some one, probably the father (the false reading τρέχουσαι in schol. Plat. *l.c.* is explained by the preceding words; cf. Preuner, *Hestia-Vesta*, 54 n.), ran round the hearth with the child in his arms. Friends and relatives came, bringing presents, especially polypi and cuttle-fish. The women who had assisted at the birth and had thereby become unclean (cf. Stengel, *Kultusalt.*[2] 148) cleansed their hands on this day. Banquets were held (Ephippos in Athen. 370 D; Eubulos, *ib.* 65 C); a special kind of bread was baked, if we can trust the incoherent record in the *Etym. Mag. s.v.*; a sacrifice was probably among the celebrations (Plaut. *Truc.* 423 f.). Perhaps the father decided on this day whether he wished to keep the child or to expose it (Plat. *Theæt. l.c.*). Hesychius records an important trait (*s.v.* δρομιάμφιον ἦμαρ); according to him the rite of running round the hearth was performed naked. This, too, is a case of ritual nakedness (cf. *e.g.* Deubner, *de Incub.* 24; Abt, 'Die Apologie des Apulejus,' *Religionsgesch. Vers. und Vorarb.* iv. 246, 1).

Opinions regarding the meaning of running round the hearth are most divergent. The idea of the cleansing influence of the fire must probably be eliminated (Rohde, 72, 1); the interpretation as an ordeal (quoting Plato, *l.c.*, whose simile can, however, not be urged, in view of the decisive data of antiquarian literature), according to which the child originally lay in the fire during the *amphidromia*, is improbable (Gruppe, *Berl. philol. Wochenschr.* 1906, p. 1138).† According to some others, Samter has given the correct explanation (*Familienfeste*, 61), that we find here an initiative rite, which places the child under the protection of the domestic hearth. But this gives no reason for the running. Yet with this rite we seem to reach the lowest stratum of the rites celebrated on this day. By a comparison with folklore parallels, S. Reinach (*Cultes, mythes et religions*[2], 1908, i. 137 ff.) has rendered it very probable that this running round is to ensure fleet-footedness for the child.

In Esthonia the father of the child runs round the church, while the child is being baptized inside, so that it may learn to run quickly. With this compare the custom noted by Wuttke (*D. deutsche Volksaberegl.*[3] 1900, p. 390), in accordance with which, when returning from the christening, the young godfather takes the child when they arrive at the front door, and quickly runs with it into the room to its mother. This is supposed to ensure that the child will become swift (Brandenburg), or will learn walking early (East-Prussia). In Melanesia, magic formulæ promote the child's walking and talking (*ARW* x. [1907] p. 306). The ancient Mexican festival of ear-piercing gives an interesting analogy. During this festival the children born within the last three years are led round a fire, and also lifted up high, so that they may grow tall. The feast is celebrated with a sacrifice, a banquet and dance (Stoll, *Geschlechtsleben in d. Völkerpsychologie*, 118).

Reinach's explanation is very suitable to a people which gave its favourite hero the epithet ποδώκης ('swift-footed'). The derisive answer of Vürtheim (*Mnemos.* xxxiv. [1906] p. 73 ff.) is not to the point. Scenes illustrating the *amphidromia* do not exist in Greek art.

On the tenth day after its birth the child received its name. This day, too, was a festive one, celebrated with sacrifices and banquets for friends

* A very artificial explanation is given by Rohde, *l.c.*, because he understands it to be a lustrative rite.

† Cf. Glotz, *L'ordalie*, 1904, p. 103.

(Eur. *El.* 1126, fr. 2 Nauck²; Aristoph. *Birds*, 494 and 922 f. + scholl.; Isæus, iii. 30. 70; Demosth. xxxix. 20, 22 [according to whom this festival signified the official recognition of the child], 24, xl. 28, lviii. 40; Harpokr. *s.v.* *ἑβδομενομένου* and *ἐνδεκάζοντας*; Hesych. *s.v.* *δεκάτην θύομεν*; Suidas, *s.v.* *ἀμφιδρόμια*, *δεκάτην ἑστιᾶσαι* and *δεκατεύειν*; Bekker, *Anecd. Gr.* i. 237, 26). A cake called *χαρίσιος* was baked, and was given, among other things, as a prize for a women's dance that was performed on this day (Eubulos in Athen. 668 D). Besides the tenth day the seventh was used for giving the name ([Aristot.] *Hist. An.* vii. 12; Harpokr. *s.v.* *ἑβδομενομένου*; Hesych. *s.v.* *ἑβδομαι*, cf. the *ἑβδόμη* as a children's festival in Lucian, *Pseudolog.* 16). The day fixed for this festival has varied in different epochs and districts, whereas the *amphidromia* were more important as being a specifically religious custom, and therefore held to their fixed day. For, whenever these are said to have been celebrated on the 7th (Hesych. *s.v.* *δρομιάμφιον ἡμαρ*) or 10th (schol. Aristoph. *Lysistr.* 757) day, or are brought into connexion with the name-giving (schol. Aristoph. *l.c.*; schol. Plat. *Theæt.* 160 E; Hesych. *s.v.* *ἀμφιδρόμια*), this is doubtless due to a blunder (cf. also Gruppe, *Berl. philol. Wochenschr.* 1906, p. 1137). The schol. to Aristoph. *l.c.* even commits the error of supposing a running *round the child*. (Similar mistakes occur elsewhere in our records; cf. *e.g.* the form *τρέχονται* above, schol. Plat. *l.c.*) It is not warrantable to infer a coincidence of *amphidromia* and *δεκάτη* from Eur. *El.* 654 and 1126 (Preuner, *Hestia-Vesta*, 54, 1), for l. 654 cannot be forced into closer concord with l. 1126. The uncertain notice about a sacrificial feast shortly after birth (Bekker, *Anecd. Gr.* i. 207, 13) probably refers to the *δεκάτη*.

Besides the presents brought at the *amphidromia*, there were also so-called *ἀπτήρια*, gifts presented to the child by those to whom it was shown for the first time (cf. Spanheim and Schneider, *ad Call. Hymn.* iii. 74). Slaves also gave the newborn babe a present (Terence, *Phorm.* 47). Censorinus (*de Die Nat.* 11, 7) mentions the celebration of the 40th day after the birth as a Greek custom. Even in our time the 40th day is still celebrated (cf. Wachsmuth, *op. cit.* 73 f.). But this would seem traceable to Jewish influence (Wachsmuth, *op. cit.* 74, 7). The rocking of the child in the *λίκνον*, which is explained as symbolical by Mannhardt (*Mythol. Forsch.*, 1884, p. 369 f.) and Dieterich (*Mutter Erde*, 101 ff.), must be eliminated from the birth-rites. Not only is the sense of the action not clearly thought out, but for such an explanation the rocking must form part of some *rite*, which it does not. On the other hand, the fact that the babe was put into the *λίκνον* is easily explained, for it was the natural object to use as a small child's cot in a primitive household.

2. Roman.—Roman women made offerings to the Nymph Egeria (cf. the Greek custom) during pregnancy (Festus, p. 77, 10), to ensure an easy birth. While the child was being born, Lucina and Diana (Tertull. *de An.* 39; August. *Civ. Dei*, iv. 11) or Numeria (Varro, *ap.* Non. 352, 34) were called upon. A candle was lit (Tertull. *ad Nat.* ii. 11), as also in Greece in our day a candle burning in the lying-in room has the power of repelling evil (Wachsmuth, *op. cit.* 79; cf. M. Vassitz, 'Die Fackel in Kultus und Kunst der Griechen,' *Münchener Diss.*, Belgrad, 1900, p. 75 f.). The bands with which the women were bandaged were made near the image of some god, therefore probably in a sanctuary (Tertull. *de An.* 39).

When the woman had brought forth a child, three men had to stand round (*circumire*) the threshold, beat it with a hatchet, then with the pestle of a mortar, and then sweep it (August. *Civ. Dei*, vi. 9). This is a cleansing ceremony, which originally was intended to beat the impurity caused by the birth (here felt as a concrete matter) out of the threshold, and to sweep it away. At a later period the ceremony was explained (Aug. *l.c.*) as a protection against Silvanus, who, as a goblin or nightmare, might trouble the woman in childbed. In addition, there were three special deities who were regarded as protectors of mother and newborn babe: Intercidona (from *intercidere*), Pilumnus (from *pilum*), Deverra (from *deverrere*) (*ib.*)—an excellent example of the way in which gods grow out of rites. Pilumnus (together with Picumnus) even receives a sacrificial meal (*lectus*) in the house, in order to protect the woman in childbed (Varro, *ap.* Serv. *Verg. Aen.* x. 76, and *ap.* Non. 528, 15; cf. Wissowa, *Religion und Kultus der Römer*, 357, 1). In the same way Juno was given a *lectus*, and Hercules a *mensa*, after the birth of a boy (Serv. *Verg. Ecl.* iv. 62); for a whole week a table was spread for Juno, according to Tertull. (*de An.* 39). On the last day of the week the *Fata Scribunda* were invoked (cf. Wissowa, *op. cit.* 214). It is Dieterich's merit to have drawn our attention to the custom described by Augustine (*Civ. Dei*, iv. 11), according to which the newborn babe was placed upon the ground and then picked up again (*Mutter Erde*, 6 ff.)—a custom which may be identical with the *tollere* or *suscipere* by the father (Samter, *op. cit.* 62, 3. 4). Only, the signification of this wide-spread custom cannot be that the child is placed under the protection of the earth as a goddess, but that the strength of the earth is to penetrate into the child and make it strong (*e.g.* Marcell. Empir. 32, 20). A rite which bears some affinity to this consists in placing the child erect on the ground, thereby ensuring its upright growth (Varro, *ap.* Non. 528, 12; Tertull. *de An.* 39, cf. *ad Nat.* ii. 11; Varro, *ap.* Non. 532, 18; August. *Civ. Dei*, iv. 21). As in Greece, so also in Rome, wreaths were hung outside the door (Juvenal, ix. 85).

When the first week was over, the child was given its name on the *dies lustricus*: boys on the 9th, girls on the 8th day (Festus, p. 120, 19; Plut. *Qu. Rom.* 102; Macrob. *Sat.* i. 16, 36; see, further, Marquardt-Mau, *Privatleben d. Römer*, 1879, p. 83, 6). We have no information as to the lustrative ceremonies indicated in the name of the day. A sacrificial offering is recorded by Tertull. (*de Idol.* 16), who also uses the appellation 'Nominalia' for this day (*l.c.*). The difference in the treatment of boys and of girls is perhaps originally due to the difference of length of the ancient week, which varied between seven and eight days (Mommsen, *Röm. Chronolog.*² 229).

L. DEUBNER.

BIRTH (Hindu, literary).—Birth, marriage, and death are the three most important events of the natural life; and popular belief has surrounded them with a number of ceremonies, which are designed to secure the accomplishment of good wishes and to avert evil influences. The great advantage which students of Indian philology possess, as compared with those of other philologies, consists in the abundance of the materials at their disposal affording precise and detailed information on all the different branches of Indian culture.

The acts which accompany the events of the domestic life are described especially in the *Gṛhya-sūtras*, partly in the Law-Books, or, as circumstances require, in medical works. These books possess all the greater interest for the history of civilization, in that the ceremonies which they describe go back in large part to a pre-historic epoch, and are related to customs which are found in a most primitive stage of human development, and, on the other hand, have been partially preserved in India down to the present day. Into all the details of these texts it is impossible to enter. The facts which seem to be most noteworthy may here be summarized.

The *garbhādhāna*, 'the second marriage,' the ceremony of consummation, which corresponds to the *putriya vidhi* of the medical texts (Jolly, *op. cit. inf.* p. 50), marks in all cases the initial step. Although not usually referred to in the *Gṛhya-sūtras*, it is known to the Law-Books, and may be regarded as a universal practice. The appropriate time is *ṛtu*, the days or rather the nights (for the daytime is excluded) from the beginning of menstruation until the 16th day, with the exception of the first four, the 11th and 13th, and certain dates especially named, *e.g.* the time of new and full moon. Peculiar importance is attached to the selection of the *nakṣatras*. Yājñavalkya, for example (i. 80), directs that Maghā and Mūla are to be avoided. Other texts, especially the astronomical, go still further, and distinguish between constellations, the choice of which will be attended by complete or partial success, or, on the other hand, followed by failure. Manu (iii. 46 ff.), and to the same effect other texts (*e.g.* Yājñavalkya, i. 79), prescribe cohabitation on the even nights for the man who desires a son; daughters are born as a consequence of cohabitation on the uneven nights. The same texts, clearly under the influence of certain ancient teachers of physiology (Jolly, § 39, p. 51), represent the view that if the seminal fluid preponderates, a boy will be born; if the blood of menstruation is in excess, a female embryo is formed; if there is an equipoise of power, the issue will be twins or even a 'not-man,' 'impotent' (Manu, iii. 49). Bṛhaspati shows how it is possible to assist nature, and by the use of oily foods to increase the male seed. If other days than those named are chosen, *e.g.* the period *after* the *ṛtu* or the actual days of menstruation, a penalty is incurred.

The woman is impure during the first three days of the *menses*; she must avoid excessive food, laughter, or the sight of other men. Several texts, however, allow, on the appearance of the first *ṛtu*, the use of garlands, scents, and betel-nuts. On the fourth day she takes a bath, puts on clean clothes, and at his call appears adorned in the presence of her husband. Cohabitation is effected in an enclosed spot, and is subject, as regards the choice of place, to certain limitations. The *Viṣṇupurāna*, for example (iii. 11, 17 ff.), excludes sacred places and cross-roads. According to some authorities, a lamp should be kept burning, which is kindled by the woman at another light with the help of a small piece of wood, and may be extinguished only by her. The husband recites the text, 'May Viṣnu prepare thy womb,' lays aside the gold ring that he may be wearing on his forefinger, and cohabitation is completed while he repeats various sacred texts on the subject, for the details of which reference is made by the *Saṁskārāratnamālā* to the *Pañchasāyaka* and other works of the *Kāmaśāstra*. The medical texts are still more precise in details than are those that describe the ritual.

If this ceremony proves unsuccessful, recourse is had, according to the statement of the *Gṛhyapariśiṣṭa* (a collection supplementary to the *Gṛhyasūtras*), to an act that serves the purpose of driving off the obstructing *pretas*, or spirits. This is the so-called *nārāyaṇabali*, a kind of offering to the departed spirits or demons, by which Viṣnu is to 'purify' the *preta*; or the *preta* that is supposed to have assumed the form of Viṣnu is propitiated. A *nāgabali*, or offering to snakes, is also to be made, which atones for sins committed against snakes in the present or former births (a deadly blow, etc.), and which is merely a second offering to the dead for those who conceived of the dead as existing in the form of snakes. The *putriyā-iṣṭi*, which Daśaratha, for example, causes to be offered (*Raghuvaṁśa*, x. 4), is different, and is designed to secure a son. It consists, according to the *Taittiriya-Saṁhitā*, in the presentation of cakes to Agni Putravat and to Indra Putrin.

The Purāṇas and other texts prescribe for *the time of pregnancy* a large number of directions for both husband and wife, which are partly of a dietetic and partly of a superstitious nature. Thus, for example, the woman must not bathe in water, or allow her hair to be loose, or lie with the head high or low, or speak without adding an auspicious word, etc. The Law-Books also, such as Yājñavalkya (iii. 79), interpose with various regulations, making it a duty, for instance, to fulfil the wishes of the woman during this period, since otherwise the embryo would be exposed to injury.

Of other observances which follow on conception, the best known is the *puṁsavana*, the generating of a male, which takes place in the second, third, or even fourth month—as Pāraskara says, 'before the child stirs'—and is to assure the birth of a son. Here also, as elsewhere, the selection of the constellation exercises an influence on the rite. But a magical character is most clearly stamped on those usages which give external expression to the wish, and seek to modify the course of events by means of spells. The Hiranyakeśins recite the text, 'Thou art a bull,' and place in the hand of the woman a barley-corn, with two grains of mustard-seed,—in obvious imitation of the male generative organ,—add a drop of sour milk, and cause the whole to be drunk as the 'generating of a male.' Or a shoot of a Nyagrodha tree, hung on both sides with fruit, a blade of Kuśa grass, or a twig of the same plant, are pulverized and placed by the husband or other near relative in the right nostril of the woman. Even entirely different objects may be employed for the same purpose, as a silk-worm or a chip from that side of the north-eastern sacrificial post which is turned towards the fire. The inhaling also of the smoke from the fire kindled with the fire-sticks (*araṇis*) is enjoined *Saṁskārāratnamālā*, p. 815).

A further ceremony, which precedes or follows the *puṁsavana*, is the *sīmantonnayana*, the parting of the hair of the head, which is performed on the woman when she bears her first child. Various utensils (in due order or at option) are necessary for the purpose; the quill of a porcupine furnished with three white spots, and a branch of the Udumbara tree or *Ficus indica*, bearing an even number of unripe fruits, are prescribed by all texts. The former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the lute concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Hillebrandt, *Rituallitteratur*, pp. 43, 44), was to be found a verse giving the name of the native stream. The customs were clearly very different in the different families. Gobhila, for example, makes no mention of the lute-players, but represents Brahman women as sitting with the young wife, and addressing to her auspicious words, such as 'mother of heroes,' 'mother of living sons.'

He enjoins also the cooking of rice and sesamum, upon which the woman has to look. She is asked, 'What do you see?' and answers, 'Descendants.' Many of these customs have not as yet received any ethnological illustration, and need to be explained by comparison with the similar practices of other peoples.

The actual *delivery* takes place in a separate house or room, into which the male members of the family have no right of entrance. At the door a fire is lighted to provide for ordinary purposes as well as to keep off evil spirits. Hiraṇyakeśin (ii. 2, 8) directs that at the time of delivery a bowl of water should be placed at the woman's head and a Tūryantī plant at her feet; and enjoins the performance of various ceremonies with the recitation of texts, one of which is actually found in the Rigveda (v. 78, 79), to relieve and expedite the birth. Whether the several acts are due to a superstitious or to a medical motive is often difficult to determine, owing to the close relation between medicine and magic. Different plants are employed as embrocations or internal remedies; others are merely hung up, or given to the woman for good luck; and fruits with a name of masculine gender are put into her hand. One text (cf. *Saṁskārararatnamālā*, p. 827) prescribes a definite amount of sesamum oil to be stirred from left to right with blades of Dūrvā grass, a part given to the woman to drink, the rest poured on the *yoni*, and the blades placed in her hair. The *Yantraprakāśa* ordains for the time of delivery a diagram of nine compartments, in which are entered from the N.E., N., N.W., etc., in succession the numbers 8, 3, 4, etc.

If the *fœtus is obstructed*, a medical prescription (cf. Jolly, *l.c.*) lays it down that the vagina is to be fumigated by means of the skin of a black snake or with certain plants, or a particular plant given into the woman's hand. Various embrocations facilitate the coming away of the after-birth, and the same purpose is served also by a decoction in which has been steeped, as the most curious medicine, the right ear torn from a living male ass. Continual fumigations with offerings of sesamum and rice serve to drive away the evil spirits which at that time imperil the life of the woman and her newborn child. Whenever the attendants enter they must throw fresh fuel on the fire. The climax of danger is reached on *the sixth day*, which up to the present time in India is dedicated to the Goddess of the Sixth. This day is especially perilous, because on it, or shortly after, the child is exposed to tetanus through unskilful severing of the navel-cord (Jolly). The *Bālatantra* (quoted in the *Saṁskārararatnamālā*, p. 846) knows of more detailed regulations, intended to ward off or conciliate this *Ṣaṣṭī* and other hostile goddesses. It is prescribed that men with swords in their hands shall keep watch, women sing, lamps be kept burning, weapons and clubs laid in the house of the woman, while the father repeats *om* and the *vyāhṛtis*, etc.

For the *newborn* child ceremonies of 'animation,' 'endowment with understanding,' 'tendering of the breast,' and 'naming' are observed. At the first the father must thrice exhale and inhale over the child, or whisper into his navel or right ear some texts relating to a long life. Brahmans are stationed towards the five directions of the heavens, and have to say in order *prāṇa*, *vyāna*, etc. Before this act the boy is fed with a food compounded of butter, honey, and certain other materials. This last as well as the former 'animation' are ceremonies which go back to a remote time, and, as Weber (*Indische Streifen*, 1868, iii. 170) and Speijer (*Jātakarma*, p. 103) have shown, are found also among other peoples. Hiraṇyakeśin's instructions are to take gold, an axe and a stone, to hold the boy over them, and give expression to good wishes for his life. Further ceremonies are recognized by the medical texts (Jolly, 'Medicin,' *GIAP*, § 43, p. 58).

The *endowment with understanding* consists in thrice whispering into the ear of the child the words, 'May the god Savitṛ grant wisdom,' or another text, or the word *vāch*; or in placing butter in his mouth with a golden vessel, while reciting the text, 'May Mitra-Varuṇa grant thee understanding.'

The third ceremony is the first formal *tendering of the breast*, when the father lays the boy on the breast of the mother. The fourth is the important *nāmakaraṇa*. On the giving of the name many peoples have laid great stress (Brinton, *Religions of Primitive Peoples*, 1897, p. 93 ff.; cf. also Kroll, *ARW*, viii. Suppl. p. 49 ff.); and this is no less true of the Indians, who give explicit directions in the ritual and astronomical texts. The ceremony takes place usually on the tenth day. The phonetic value of the chief name is of great importance, and all minutiæ demand attention. The second name is an astronomical name, which may be formed by derivation by means of a suffix, or by simple masculine inflexion of the name of the constellation (Phalguna, from Phalgunī; Hillebrandt, *Rituallitteratur*, § 15). See NAMES.

Immediately after the giving of the name, the woman rises up, and this may therefore be regarded as the closing ceremony of the birth-rites.

A. HILLEBRANDT.

BIRTH (Hindu, popular).—A Hindu woman, when the time of her delivery is at hand, lies in a room on the ground floor, on a cot which must be strung with hempen cord, and not with the cotton tape which is used for ordinary beds. In the room is placed some iron article (iron being a powerful averter of evil), and the woman lies with her head to the north or east, as do all Hindus, for the other cardinal points are dangerous. Should the delivery be delayed, it is believed that, in spite of the precautions taken, the powers of evil are in the ascendant, and, with a view to bringing their working to nought, the lying-in woman is advised: (*a*) to sell that part of the floor on which her cot stands, so that the evil spirits may be led to believe that they have to do with the purchaser (the midwife), who on account of her very low caste is immune from evil; (*b*) to call upon the name of the household god, or the family *guru* (spiritual guide), or of some *satī* (woman who has immolated herself on the pyre of her husband) who is famous on account of her act of wifely devotion; (*c*) to drink the water with which a charm, written by a Brahman, has been washed off, or that in which the feet of her husband, her mother-in-law, or a young virgin have been washed; (*d*) in regions in which rice forms the staple diet of the people, to step seven times over the rice-pounder, this being supposed to hasten labour.

In many cases there is bound on the belly of the lying-in woman a charm, written by a 'skilful man.' This may be a double equilateral triangle, or a collection of magic words such as this:

hrôm hrôm hrôm	hrôm	hrôm hrôm
hrôm	Name of the woman is written here.	klôm klôm
klôm	hrôm	kôm kôm

The above charm is so powerful, that, were it bound on the woman's loins, instead of on her belly, she would never be delivered; so the present writer was assured.

As soon as the child is born, it is placed in a grain-sifting tray, in which have been put cow-dung, ashes, turmeric, and a few coins, and is sprinkled with water. If it be a man-child that has been born, a brass tray is beaten to scare away evil spirits; and as this is never done on the birth of a girl, whose sex protects her against evil, the men of the family know when a boy is born, and fire guns to show their joy. Until the placenta is expelled, every one in the lying-in room must keep silence, lest the placenta again ascend into the womb. As soon as the after-birth is expelled, the child is washed with warm water, dried, and laid on the cot beside the mother, after the midwife has passed her little finger into its nostrils and anus, to widen these apertures so that the child may not suffer from shortness of breath or constipation. The umbilical cord is tied in two places, about 4 cm. from the navel, and cut between these with an iron knife, or a strip of the outer skin of the bamboo, as soon as the placenta is expelled. The placenta is then put into a hole which has been dug in a corner of the room, and a fire is lighted on the spot and kept burning for four or five days. While the placenta is being disposed of, the head of the lying-in woman is bound up, and she is fumigated with the smoke of the burning seeds of *Carum copticum*, which have been thrown on a brazier. This is placed under her cot, and is kept there, however hot the season of the year, for ten days. The doors and windows of the room are kept shut, and light is given by an oil-dip lamp, which is kept alight night and day. As the clothes soiled by the discharges incidental to delivery are not removed till the fourth or fifth day, the state of the atmosphere of the lying-in room, when the shade temperature is 41° C., may be guessed. The woman may drink only of a decoction of ginger, cloves, and the seeds of *Carum copticum* and *Helicteres isora*, in which have been boiled some copper coins. The pot in which the decoction is prepared is touched by seven boys if the infant be a boy, and by seven unmarried girls if it be a girl; these children receive sweetmeats for their services.

When the astrologer, to whom news of the birth has been conveyed, comes to the house, he takes the data on which the calculation of the child's horoscope is to be based, and fixes the time at which the infant is to be put to the breast for the first time, and that at which the mother may be fed: for four days if she have borne a boy, and for five if she have borne a girl, she will be allowed only sweetmeat balls made of coarse sugar, long pepper, ginger, coco-nut, saffron, gum acacia, etc. Her ordinary food she may not have, because during this period the low-caste midwife stays in the room with her.

On the fourth or fifth day the soiled clothes are removed from the room and given to the washerman to be washed. The mother and child are then bathed by the midwife in water in which the leaves of the Nim (*Azadirachta indica*) have been boiled, after which she takes some of the water in the hollow of her right hand, and waves it seven times, with the sun, round the head of the mother, in whose lap the child lies, and then throws the water away in the direction of the door of the room. In some castes this water-waving, which is designed to avert evil, is done only three times. Afterwards the mother sits on the cot, from which the soiled bedding has been removed, with the child in her lap, and dries her hair in the smoke of the seeds of *Carum copticum*, which have been thrown on the brazier: the hair is believed to be a favourite point of entrance of evil into the body. On this day all the earthen pots that are in the house are thrown away, and a feast is given, to which men of low caste are invited, as on the tenth day after a death (see DEATH [Hindu]). Of the food prepared for this feast the mother is given a small quantity, and on the following day she returns to her ordinary diet, the midwife being dismissed and her place taken by the barber's wife, who does not live in the lying-in room, as the midwife did during her term of office; but the mother may not eat after sunset, the time at which the influence of evil is most to be feared, until thirty days have elapsed from the date of her delivery.

On the tenth day the astrologer brings the horoscope of the child, and on it are put some blades of grass, on which are sprinkled a few drops of water, and then water with which turmeric has been mixed; then a few grains of uncooked rice are scattered on the horoscope, and the name of the child is chosen by the father from a few names, appropriate to the time of birth, which the astrologer reads out. This name becomes the ceremonial name of the child, whose ordinary name is that given to it by a certain woman-member of the family, whose relationship varies in different castes.

After the tenth day the family barber is sent round to announce the birth to friends and relatives at a distance. He presents to those to whom he bears the news sweetmeats made of coarse sugar, clarified butter, almonds, raisins, coco-nut, etc., which have been prepared at the house in which the birth took place; and it is taken to be a grave insult to omit to send these sweetmeats to any one who can claim the right to receive them.

From the fourth or fifth day till the thirtieth day after the birth of the child, it may be bathed only on Wednesday or Sunday; on the other days of the week its body is anointed with sesamum oil, with which some castes mix turmeric, which from its colour is an averter of evil.

LITERATURE.—H. A. Rose, 'Hindu Birth Observances in the Punjab,' in *JAI* xxxvii. (1907) p. 220; W. D. Sutherland, in *Münchener med. Wochenschrift*, 1906; and the literature appended to the previous article.

W. D. SUTHERLAND.

BIRTH (Jewish).—I. Biblical.—(1) *Notions and practices surrounding childbirth.*—The mystery of birth and procreation is euphemistically expressed in the Bible by 'knowing.' 'And Adam knew Eve his wife; and she conceived, and bare Cain' (Gn 4^{1}), is the first statement in the Bible regarding conception and birth, though a little earlier the condition is laid down, 'I will greatly increase thy pain and thy conception; in pain thou shalt bring forth children' (Gn 3^{16}). Nothing further is found in the Bible as to the first stages of human life, before it enters the world in a concrete form. Many speculations were rife at a later period about these stages, and legends have been handed down concerning the life of the child in the mother's womb. The pains and pangs of travail are often referred to by the prophets, and used in a figurative sense to express the throes of a new birth of nations and of the heavens. According to Ex $1^{15ff.}$, specially trained women assisted in childbirth, which took

place on the birth-stool, on which the midwives had to look, in order to ascertain whether the newborn babe was a male or a female. Moreover, we learn that the 'Hebrew women are not as the Egyptian women; for they are lively, and are delivered ere the midwife come unto them' (Ex 1^{15-19}). Cases of difficult and dangerous births are, however, also recorded in the Bible, in some of which the issue was fatal to the mother. Such was the case with Rachel (Gn 35^{17}), and with the wife of Phinehas, who died in giving birth to a son; for she heard, whilst in the throes of delivery, of the untimely death of her husband (1 S $4^{19ff.}$). While still in the womb, children, according to Biblical tradition, were believed to be fully conscious: Jacob and Esau 'struggled together within her' (Gn 25^{22}); and, when Tamar was delivered of twins, the children came out, not like Jacob holding the heel of Esau in his hand, but one put out his hand first, and then drew it back, and then the brother came forth first (Gn $38^{28f.}$). Other cases of irregular birth and their treatment will be dealt with later on. For it is necessary to follow up the references, as much as possible, in some historical order, treating the Biblical period practically as one for our purpose.

(2) *Fruitfulness a blessing.*—To have a large family was (and is still) considered a great blessing. The very first blessing mentioned in connexion with the creation of man is: 'Be fruitful, and multiply, and replenish the earth' (Gn 1^{28}); and the references throughout the Bible to this blessing of a large family and to the reverse—the misfortune of childlessness—are numerous. That woman is praised in the gates who has a large family, especially of sons (Pr 31^{28}), and the barren sits as a mourner in the midst of the festive gathering (1 S 1^{7}). Rebecca, Rachel, and Leah, Hannah and Peninnah, and others are cases in point. Barrenness and widowhood stand on the same plane; both are objects of pity and commiseration. No wonder, therefore, that from the very beginning means were sought to remove this reproach and to get children. The *dûdā'îm* of Gn $30^{14ff.}$ have been identified with mandragora, a fruit credited with specific qualities for fruitfulness. But in the Bible the belief is more prominent that, by means of prayer and intercession, barren women could obtain children. Isaac entreated the Lord on behalf of Rebecca, because she was barren (Gn 25^{21}). When Rachel was angry with Jacob, he replied: 'Am I in God's stead, who hath withheld from thee the fruit of the womb?' (Gn 30^{2}); and later on (30^{22}): 'And God remembered Rachel, and God hearkened unto her, and opened her womb.' Similarly in the case of Hannah (1 S 1). The same agency could work also in the opposite direction, and close the womb of the once fruitful, and render them barren. So, when Abraham prayed to God, 'God healed Abimelech, and his wife, and his maidservants; and they bare children. For the Lord had fast closed up all the wombs of the house of Abimelech' (Gn $20^{17f.}$).

No other means are mentioned in the Bible for assisting women in obtaining children. Nor do we find remedies or precautions mentioned, or aught else, preceding the birth. The children were, no doubt, born on the floor of the house. The child lay first on the ground. Then it was washed in water, rubbed with salt, swathed in swaddling clothes, and given to the mother to be suckled (Ezk 16^{4}). Occasionally a wet nurse is mentioned in the Bible, like Deborah the nurse of Rebecca (Gn 35^{8}), or the mother of Moses, who was taken by the daughter of Pharaoh to suckle the child found in the river (Ex 2^{7-9}).

(3) *Uncleanness of the mother.*—The birth of a child made the mother unclean, in the first place, for seven days; and then, if it was a son, thirty-three days; and if a daughter, sixty-six days. At the end of that period lustration or purification took place, and the woman brought an offering to the Temple (Lv $12^{2ff.}$).

(4) *Primogeniture.*—Although the mother is unclean after giving birth, none of that uncleanness attaches to the newborn child. On the contrary, the firstborn, that which 'openeth the womb,' is consecrated to God, be it human, be it animal. The firstborn enjoyed special privileges, and already, in the patriarchal time, had the right of leader. He probably had also preference in inheritance above the other members of the family (cf. Jacob and Esau). In the last dispositions of Jacob (Gn 49), Reuben is deprived of his privileges of primogeniture; and, although not expressly stated, the double portion, which, according to the Mosaic legislation, was given to the firstborn, is there given to Joseph. This is made evident in 1 Ch 5^{1}. The firstborn at a certain time was invested with sacramental rights; later on, his place was taken by the Levites. The male firstborn was originally the family priest. The dedication, as in the case of Samuel, was evidently to the service in the Temple. Traces of sacrifice of the firstborn male, practised by the nations living in Palestine, are found in the Bible, but were condemned by the Law. Since the Levites took the place of the firstborn, these were 'redeemed' at the completion of thirty days after birth (see art. REDEMPTION). The succession to the throne and to the office of high priest went to the firstborn, with the exception of Solomon, who took the place of Adonijah (1 K $1^{11ff.}$), and of Eleazar through the death of his elder brothers (Lv $10^{1ff.}$). The priestly character of the firstborn has to a certain extent been retained in the service of the Synagogue, where, in the absence of Levites, a firstborn present washes the hands of the *Kohanim* (descendants of Aaron) before they ascend the rostrum in front of the Ark to bless the congregation.

(5) *Naming the child.*—After an indefinite period, ranging from one to three years, the child was weaned, and the occasion was celebrated by some public festivities (Gn 21^{8}, Ex $2^{9f.}$). From the time of Abraham onwards the male child was circumcised on the eighth day, but it is not clear from the Biblical account whether the name was given on that occasion. In many instances the name was settled before the birth of the child, and had a symbolical meaning; and on other occasions it had a commemorative character, being connected with events at the birth. Examples of the former are Isaac (Gn 21^{6}), Immanuel (Is 7^{14}), or Jezreel (Hos 1^{4}); of the latter, the twelve sons of Jacob—nay, his own name and that of Esau, etc. Nowhere is a definite date mentioned for the giving of the name. Nor do we find, except in rare cases, a change of name; *e.g.* when a king ascends the throne, his name is sometimes slightly or altogether changed. In the case of girls, names of animals are often taken as prototypes: thus *Rachel*, *Tamar*, *Zipporah* ('lamb,' 'palm tree,' 'bird'), in addition to other symbolical names. In later times, but still within the period covered by the Bible, the grandson often gets the name of the grandfather, such as (2 S 8^{17}) Ahimelech, son of Abiathar, son of Ahimelech.

A few more details concerning birth and early infancy could be gleaned from the Bible, but they would not carry our knowledge much further. The above brief sketch was absolutely necessary for the understanding of the development which took place in the course of subsequent centuries. The Biblical data form the starting-points or the justification for legends, beliefs, and practices which cluster round the birth of children. Each of their stages is governed entirely by the details found in the

Bible. Some have been greatly expanded; others have been interpreted in a peculiar manner; and for a number of practices borrowed, no doubt, from other nations, or survivals of popular habits and moods, a support has been sought in the verses, and precedents found in, or read into, the Bible. The people did not study the Scriptures with any critical intent, and what is found written down therein was the hallowed example. The way in which we may feel inclined to interpret those facts did not obtain with the people. It is now for us to follow that tradition in the spirit in which it was understood and accepted by the people, and upon the lines along which it developed.

2. Post-Biblical.—The second period, stretching from the 1st cent. down to modern times, embraces a variety of practices, of which few may claim universal acceptance. Some may have belonged to one country only or to one period; others were perhaps more widely spread. A good many of these practices are now known only from books, and are little followed in modern life. Others have not yet been sufficiently sifted and verified as to the extent to which they are followed. They cover a large area—Western Asia, North Africa, and the whole of Europe. In some instances it can be proved that a more modern author has simply copied older texts, and embodied these in his collection. An endeavour will here be made to present the data in some chronological order, taking first the references found in the Mishna and the Talmud and other older Rabbinical writings from the 1st to the 5th cent., and then proceeding to works from the 6th to the 18th, finishing with a few quite modern practices, following, as far as possible, the order of the Biblical data.

(1) *Beliefs connected with the pre-natal period of the child's existence.*—The mystery of birth is now no longer veiled. In Talmudical times the notion emerges that a special angel, 'Lailah,' presides at the very beginning of conception, and through his intermediation the embryo is brought before the Divine throne, where his future is decided upon, his station in life is determined, and also whom he is going to marry. At the bidding of God, a spirit enters the sperm, and then it is returned to the womb of the mother. There the child lies folded up with its head between its knees. Two angels watch over it. A light burns over its head, by which it sees from one end of the world to the other. In the morning an angel carries it into Paradise, and shows it all the righteous who had lived a good life in this world; and in the evening he takes it to hell, and shows it the torments of the wicked. Finally, he orders the child to come forth, and he strikes it, thereby extinguishing the light, and causing it to forget whatever it had seen whilst in the womb of the mother (cf. *Chronicle of Jerahmeel*, ed. Gaster, ch. ix. pp. 19 ff. and lxiii ff.). A later legend adds that the indenture on the upper lip under the nose is the place struck by the angel; hence that indenture. Whatever the child hereafter learns is merely a remembrance of the knowledge acquired during its life as an embryo. Another equally ancient treatise contains an anatomical description of the gradual formation of the body of the child and the changes during gestation. But, in spite of the direct Divine influence assumed here on the shape of the child, other traditions say that external influences, especially at the monthly lustration, had a decided effect upon the shape and the mentality of the offspring. An ancient legend, preserved in many versions, tells how the superhuman beauty of the high priest Ishmael was due to the fact that his mother had returned to the bath, time after time, after meeting first a pig, then a dog, and then an ass. Each time after such an animal which would have had an evil influence had met her, she returned, until at last Metatron, the Angel of the Face, came and met her on the way home, and she then conceived and bare a son as beautiful as the countenance of that angel. The meeting with a dog has the effect of making the child's face like a dog's; that with an ass would make the child stupid; and that with a pig would cause the child to have unclean habits. For that reason, R. Johanan placed himself at the gate of the bath-house, so that the women returning home should look at him, who was renowned for his beauty. As a proof of such influence is adduced the experiment of Jacob with the sheep (Gn 30^{39}). The black wife of an Ethiopian king was delivered of a white child; the father suspected the mother, but, having been asked by R. 'Akiba whether there were white images in his bed-chamber, he answered in the affirmative. This, then, said R. 'Akiba, was the reason why she had given birth to a white child. The same motive appears in the *Ethiopica* of Heliodorus. Other ailments in children are also due to the carelessness or callousness of the parents during the period of impurity. Leprosy is one of the results, and dumbness and deafness, as well as other infirmities. A woman may not cut her nails during the period of her impurity and drop them on the ground, lest a man tread on them and be stricken with boils. The children may also be so affected during gestation as to be changed into animals or birds, or even locusts; whereupon the woman miscarries, and her ritual status is determined by the degree of human form which the thing born has (Mishn. *Niddah*, iii. 2; cf. Ch. M. Horowitz, *Uralte Toseftas . . . aus dem 2–5 Jahrhundert*, Krakau, 1890, *passim*).

(2) *Fruitfulness.*—Means are mentioned to prevent barrenness. The women, we are told, mocked the wife of Manoah (Jg 13), and said to her: 'If you wish to get children, take the skin of a fox, burn it in fire, take the ashes and mix them with water, and drink of that water three days, three times each day, and you will get a child' (Horowitz, *op. cit.*, p. 19). 'If a man is bewitched, and cannot bathe (ritual or lustration bath?), a recipe is given, consisting of garlic and onions and the root of *kala* and the tail of *remusa* fried on the fire; leek is boiled, and the other ingredients are mixed with the leek-water; the patient drinks of this mixture for three days, and is cured' (*ib.* p. 22 f.). A pregnant woman, in order to avoid miscarriage, must not take hot baths. She must not eat green vegetables, as they affect the heart of the baby; nor may she eat salt food or fat substances, or the child will be dull; but she must eat small fish and mustard (*ib.* p. 28).

(3) *Assistants at childbirth*, etc.—In addition to midwives, medical practitioners are now mentioned as assisting in the delivery of women. We hear also of operations which took place when the child was in a dangerous position or was dead: incision for the extraction of the child, or dismemberment of the fœtus. The physician was exempt from many legal obligations when attending women in childbirth. He could break the Sabbath, and all other ordinances were considered abolished in the case of a woman in labour. The primary function of the physician was to place the woman on the birth-stool, and to make all the preparations necessary for a safe delivery. In case of twins, his word decided which was first born. Very little is mentioned in the writings of the period of means for easing difficulties of labour; but, being of a more popular nature, they have, no doubt, been preserved in later writings in which the popular element predominates. The newborn babe was treated as in olden times; but we learn now, from the 1st cent. onwards, of the existence of cradles. The name of the cradle is suggestive, for it is identical with

'trough'; and it is customary to this very day in the East to use troughs for cradles. It is mentioned only in writings of Palestinian origin (Mishna and Tosefta), and in one instance a glass cradle is mentioned (Tos. *Kelim*; *Baba bathra*, vii. 12, ed. Zuckermandel, p. 598).

(4) *Danger from demons*, etc.—Dangers not mentioned in the Bible now surround the baby and the mother immediately after the birth of the child. The notion of demons possessing the mother and then affecting the health of the child appears for the first time in the literature of that period, and the terror of these demons and the desire to drive them away or to counteract their evil influence grows steadily. In Tobit the demon Asmodæus possesses the damsel and prevents her from becoming the wife of any mortal. Every bridegroom wedded to her is killed on the night of the marriage, and only Tobit succeeds in driving the demon away by fumigating the bride with the liver of a fish. By this fumigation the charm is broken. This is then an example to be followed in later times on every occasion of difficult labour, as well as on breaking charms, or on driving away those evil spirits which haunt the chamber and bring ills on the mother and the child.

Prayers, which now assume a mystical character and become in time talismans and amulets, are also efficacious in laying the power of the evil spirit, and, according to a Talmudical legend, the Sanhedrin succeeded in capturing the demon of lust or amorous passion, the 'evil inclination' as it is termed. The consequence was that three days afterwards not an egg could be found in the whole of Palestine to feed a woman in childbed. Whereupon they merely blinded the demon in one eye and released him (*Sanh.* f. 64*a*). They resorted also to prayer, we are told, to avert the terrible ill of croup or other like disease of the throat. The cause of many of these diseases was ascribed to the influence of evil spirits. Lilith is the head of the female demons, and is mentioned as the chief cause of all the ills that befall children. Originally identified with the Incubus and with a demoniac first wife of Adam, she became in the course of time the demon who bewitched, stole, changed, and killed the children as well as the mother in childbirth. Another demon mentioned is Agrath, the daughter of Mahlath. (In both cases the etymologies are transparent. Lilith is the 'night demon' and Agrath the 'roof demon,' daughter of 'illness.') A child that is born in the likeness of Lilith is described as being like a human being, but with wings on its back (*Niddah*, 24*b*). No mention is made of the means of protecting mother and child, although no doubt they must have resorted to some magical amulets and also to other conjurations and mystical operations. Another demon Shimdon (or Ashmadon, 'Destruction') is mentioned, who, according to a legend, was met by a child of the giants that lived before the Flood, whom the mother had sent to bring her a knife for cutting the navel. The demon then said to the newborn giant baby: 'Go and tell your mother that the cock has crowed, otherwise I would have struck and killed thee'; to which the baby replied: 'Go and tell your mother that my navel has not yet been cut, otherwise I would have struck and killed thee' (*Genes. Rabb.* ch. 36, § 1). Various demons lay in wait for the newborn child. There was none, however, so dangerous as the above-mentioned Lilith. This demon plays an important rôle in the subsequent development of superstitious practices. If one might infer from the practice mentioned in the Mishna (*Ḥullin*, iv. 7), the *secundines*, or after-birth, must have been used for some superstitious purpose, very likely to prevent miscarriage. It is forbidden to bury at cross-roads or to hang up on a tree the after-birth of the miscarried first-born of an animal, for that would be of the 'ways of the Amorites' (*i.e.* superstitious practices of the heathen). We shall see later on the use made of it. It was also preserved as a remedy for some unnamed illness of children (*Shab.* f. 129*b*).

With the material at our disposal it is difficult to trace the influence of these evil demons (Lilith, Agrath, Shiddin, etc.) further back than the 1st cent., although some of them are found in the Apocryphal literature of the preceding centuries, and the legends are so widely spread among Jews and non-Jews that the roots may lie much further back than the known literary monuments. Lilith is, as stated before, also the demon Incubus, and men are warned not to sleep in ruins lest they fall a prey to lascivious demons and engender children, for female demons are anxious to join human beings and to obtain children from them. Lilith was originally the first wife of Adam, or, according to a different tradition in the *Zohar*, the woman that came up from the deep of the water (Tiamat?) and together with her innumerable company hovered round the body of the newly-created Adam, until the real wife (Ḥavvah) was created, when she was driven away by an angel and sent back to the surging sea. According to a third version, she was the real wife of Adam for a hundred years during the time when he was living in disgrace, and then brought forth demons and evil spirits. Being afterwards driven away, she retained a hatred for man, and lies constantly in wait for man, either to join him in wedlock or to destroy his offspring. In order to frustrate her evil designs, a man must utter the following conjuration before he joins his wife: 'Thy garment has become rent, it is loosened, it is loosened. Thou mayest neither come in nor go out, nothing for thee and no share for thee. Return, return, the sea is stormy, its waves are calling for thee. I lay hold of the share of God, I wrap (cover) myself with the holy king.' And the man has to cover his face and that of his wife whilst speaking thus; and after finishing the conjuration he has to pour clear water round the bed and he will be safe from attacks from Lilith (*Zohar*, Leviticus, fol. 19*a*). Another conjuration which has become the basis and prototype of all other conjurations of Lilith and evil child-stealing demons and witches is that found in the story of ben Sira, in which we have also a version of the virgin birth, for the mother of ben Sira is reported to be the virgin daughter of the prophet Jeremiah. In this story the son of the king was dying without any apparent reason, and he then wrote out an amulet with the names of certain angels upon it, which he explained as follows: Together with Adam, a wife was created from the earth. Considering herself his equal, she refused to obey Adam, and in a moment of rage uttered the ineffable name of God and flew away to the borders of the ocean. At the request of Adam the Lord sent three angels after her to bring her back, and, if she refused to obey, to threaten her with the death of a hundred of her children each day. The angels went after her, and found her at the waters through which the Israelites were to pass when going out of Egypt. They threatened to drown her in the waters of the sea. She implored them to spare her, and in return, as she had the power to hurt male children up to the eighth day of their birth, and female up to the twentieth, she swore unto them that she would not go near the house or hurt the child or the mother where she should see the names of these angels written up. They released her after she had taken that oath; and it was for this reason that ben Sira wrote the names Sinoi, Sinsinoi, Semangelaf, on an amulet and hung it up in the room where the child was, thus driving Lilith away and preventing her from further molesting it (*Alphab. Ps-Siræ*, etc., Steinschneider, f. 23*a-b*; M. Gaster, 'The Child-stealing Witch,' *Folklore*, xi., 1900, pp. 129–162).

(5) *Amulets, charms*, etc.—The amulet is no doubt a later stage. It is preceded, as a rule, by the very act of conjuration in which the conjurer utters those words, and through a process common to all magical operations identifies himself with those angels, and drives away the evil spirit by the account of another operation in which the demon had been vanquished by those powers. From the spoken recital we descend to the written amulet, in which the writing is considered sufficient to terrify away the demon. All the other amulets, like those used in the cases of bewitching or for protection, have gone through the same process, whether they be connected with sterility or birth, or with the protection of mother and child from evil eye and evil spirits, whether it be to facilitate the labour or to increase the difficulty, to prevent man from joining his wife or to untie the magical knots. For we are proceeding now to the third period, or the second section of the second period, from the 6th to the 18th century. Sympathetic remedies, together with medical and magical recipes, appear now in the writings of the 6th century and onwards. Ancient Greek medical

practices and recipes, popular superstitions and customs, were then gathered up and introduced into the medical science of the Arabs, together with all the popular beliefs and practices of the East, and to a certain extent also those of some of the nations of the West, with whom they came into contact. Translated into Greek (Byzantine) and into Latin, these magical, sympathetical, and medical compilations spread among the nations of Europe. Books of recipes and amulets, *Iatrosophiai*, as well as manuals of leechcraft, abound also in mediæval Jewish literature. Most of them are still preserved in manuscripts. What has been printed from the second half of the 17th cent. onwards is mere reprint, and often very faulty, from older MSS. By the aid of manuscripts (mostly in the present writer's possession) we can go back at least to the 12th or 13th cent., but no doubt they contain materials which are far older and may be of extreme antiquity. We are not concerned here with purely medical prescriptions, though it is often difficult to draw the line between the dispensary proper and magical or sympathetical recipes. Nor can we pay any attention here to the astrological horoscopes and nativities, or to prognostications from the influence of the astral bodies, as to the importance ascribed to days and months. Though intimately connected with *births*, these prognostications and nativities have remained the domain of the astrologer, and have seldom if ever formed part of popular practices. A selection of the latter culled from writings ranging from the 6th to the 18th cent. may now follow. Only such have been selected as have enjoyed great popularity and have been found repeated in MSS of diverse origin. Some hail from Spain, others from Italy and Turkey; some from Damascus and Yemen, and not a few from Germany. In all twenty-five MS compilations have been used.

The bewitching of bride and bridegroom may start from the day of marriage. 'Tie three knots during the ceremony, and the bride will be forbidden to her husband so long as those knots remain untied'; or, 'Make a thread of wool on a live sheep and say, while twisting the cord:

"Shurah, Shura, Shabrur; I tie N. against the woman N. with the knot with which God tied night and day, and I tie him in every language and with every word by which a tie can be made under heaven and earth which cannot be loosened. And so long as I do not untie it, N. shall not be able to approach the woman N. I seal these knots with the seal of King Solomon, with which he sealed the demons in the copper vessel and cast them into the sea. And similarly shall no man be able to untie these knots but me."

If he afterwards wishes to break the charm, he must kill a hen, drop the blood upon the knots, and untie them, and the charm will be broken.' Or, 'Three knots made by the woman in her girdle, when with her husband and he not knowing, it will affect him so long as the knots remain tied,' etc. More numerous are the recipes for breaking this tying. 'On both sides of a new-laid egg the verse from 2 S 22[37] "Thou enlargest my footsteps," etc., is written. Cut it in two with a knife or a dagger with which a man has been killed, give each one a half to eat, draw the picture of a small tree on uterine vellum, tie it on his left arm, put some quicksilver into a nutshell and tie it on his right arm, then tear a hole in the woman's shirt, etc., and the charm will be broken.' Or, 'Take flour from a "living" mill, mix it with the mud of the river (or rain-water), make a cake of it, (write on it v.[2] of Ps 2,) bake it on a new fire, and eat it.' Or, 'Pass a stick through a hole made in the door, burn it on coals and fumigate self and wife.' Or, 'Let the tied man go to the field, loosen an ass tied by its foot, take the rope with the knot and burn it, and drink of the ashes mixed with water or wine.' Or, 'Tie the right-foot sandal of the bridegroom to the left foot sandal of the bride, fumigate with sulphur, pour water into them, shake the water from one to the other, and let both drink of it, and the charm will be broken.' The symbolical meaning of all these recipes requires no explanation. On the other hand, some practices like throwing the shoe after bride and bridegroom may find here an unexpected explanation.

The wearing of a dead man's tooth, or the fumigation three times with the tooth or bone of a dead man, seems to have been a universally acknowledged remedy against the 'tie.' Rubbing with raven's brains or with ox-gall is also recommended, the latter mixed with sesame oil. All these recipes and more are found in MSS of the 14th cent., and in some cases are ascribed to authors of the 11th or 12th, *e.g.* Aben Ezra, and even to Asaf of the ninth!

The remedies for removing barrenness and for furthering conception may be divided into two groups: one, the use of amulets and charms; the other, sympathetic magic and medicine. The mediæval and ancient pharmacopœia shrinks from nothing, and in superstitious practices there is no room for æsthetical considerations. The women were so anxious to get children that they would use anything that they thought would further generation. Objectionable and nauseating decoctions and sublimations abound in all these collections, and fumigation, mentioned in the Book of Tobit and practised no doubt long before his time, is resorted to on a large scale. Animal dung and droppings are often recommended by Galen and other ancient writers, and adopted by practitioners down to the time of Quincy's dispensatory. They are found in Arabic and Jewish 'dispensaries' also. But less objectionable ingredients are found which would further conception or remove sterility:

'Take the bone found in a stag's heart, put it into a leather bag sewn up with red silk, fasten on it red silk strings, and tie it round the neck of the woman on a Monday or Thursday before sunrise, and arrange it so that the bag may hang from the strings down to the navel, and take care that the knot is on the back of her neck. A man must hang that amulet on the woman, and she will bear children.' Or, 'Take a big spider, put it into a small wooden case of equal size, stop the opening with the bark of the same tree or with the shell of a nut, and carry it round the neck.' Or, 'Take the first milk of a goat before the kid had touched the udder, make a small cheese of it, put it into a new linen cloth, and tie it upon the left arm; it must never be taken off, and the woman will then bear children.' Or, 'The dried stomach of a hare, bear-gall, ammonica and myrrh, pounded and mixed with butter, taken for two days in broth, will help in getting children.' Or, 'Dip a paper in menses' blood, tie it round a fruit-bearing tree, and say: "I give thee my illness and my infirmity, give thou me thy power of bearing fruit."' Or, 'Make a decoction of bear's or wolf's meat as much as a bean. If the animal is male the child will be male, and if it is female the woman will give birth to a daughter.'

A favourite remedy next to the hare's stomach was the plant 'ox-tongue,' later on confused with the real tongue of an ox, and a decoction of either is recommended. Or, 'Ashes of burnt fox-skin, drunk twice a day in water for nine consecutive days, promote generation.' Or, 'A fish found within a fish, dried and pounded, has the same effect if taken for three nights in wine.' 'Two wings of a raven worn by a woman when with her husband will cause her to conceive.' 'If a woman is anxious to get sons, she must ask a shepherd to get the after-birth of a cow, dry it, and pound it, and drink the powder in wine.' Another remedy is 'to obtain the navel of another woman's child, to burn it, and drink the ashes in wine.' To ascertain whether a woman will always be barren, put an unopened gall in a soft linen rag for three days over her womb, and if afterwards a worm is found in the gall, it is a sign that she is by nature sterile; if the worm be red, then there is no help for her sterility.

If a woman wishes to procure barrenness or to stop bearing children, then 'let the scissors with which the navel of her child has been cut be stuck

in the ground. So long as the scissors remain in the ground, she will have no children.'

Or, 'If the plate out of which a woman has taken her first meal after delivery is placed face downward under her bed, it will prevent her from conceiving until it be turned face upward.' Or, 'Pick up a grain that has dropped from the mouth of an ant, and tie it on the left thigh, and it will prevent child-bearing.' Or, 'The first tooth dropped by a child picked up before it touches the ground, and fastened round the neck, set in silver or gold, will have the same effect.' 'The wearing of a cat's paw out off from the live animal stops fertility.' Carrying of a hare's heart (or hare's droppings) will have the same result. Or, 'Sew into the hem of her shirt, in the front, the ashes of a wolf's heart.' Or, 'Extinguish three live coals in her menstruation blood, and bury them. If this charm is to be broken, the coals must be taken out and thrown into a burning fire.'

Great care is then taken to prevent the mother from mishap caused by various agencies. Of the diverse methods employed, a few may now be mentioned.

'Mare's milk, boiled with virgin wax and then kneaded and put in a bag of buckskin, or of pure linen, and placed on the navel, will prevent miscarriage.' Or, 'Wearing of an eagle-stone' (*aëtites*) (*Shab.* f. 66*b*). Or, 'Drink three days in the morning and in the evening milk of a pregnant ass.' Or, 'Wear a ring made of the stag's bone.' Or, 'The heart of a hare taken out alive.' Or, 'White and red corals pounded and drunk in wine or taken with egg for three consecutive days.' Or, 'A ruby hung round the neck.' Or, 'A dead scorpion tied up in crocus-green cloth, and fastened on to the skirt.' Or, 'A ring with the image of a scorpion engraved on it, worn by the woman, will prevent miscarriage.' Or, 'A girdle made of snake's skin or of that of a she-ass, worn round the waist.' Or, 'An eggshell of a hatched chicken, burnt and powdered and drunk, prevents miscarriage.' Invaluable in preventing miscarriage is declared to be the stone 'enkuntra,' which is found in the field, looks like glass, has a hole in the middle, and is of the size of an egg. If worn, it is infallible in its effect.

All these are mere prophylactic measures. The real crisis begins with the travail of delivery. Here also the danger of the evil spirits is greater, and amulets and incantations are far more numerous than in the previous stages of conception and gestation. Some of the incantations may now be mentioned:

'When a woman is in difficult labour, whisper in her ear: "The angel Michael walking on Mount Sinai heard loud screaming and weeping. He said: O Lord, what is the reason for that screaming and weeping which I hear? And the Lord replied: A doe in the pangs of labour is weeping and screaming; go and tell her. Come forth, come forth, come forth, the earth is seeking thee."' Or, 'Write certain letters on a potsherd, put it on the woman, and say: "In the name of Ansel, who hears women in labour, hearken also to this woman, and let the child come forth in peace and in life. Amen."' Or, 'Write on the four corners of a piece of linen (or, take a basin of still water and say over it) in the presence of the woman: "The gate of heaven was opened, and down came three (seven) angels with three (two) rods in their hands—one was white, the other was red, and the third black. The white one struck the heavens, and the rain came down; the red one struck the sea, and it parted; the third, the black one, struck the woman and brought forth safely child and after-birth." And (give the woman to drink of the water),' or, 'Wash the cloth in sweet water, give her the water to drink, and put the cloth on her head until she is safely delivered.'

Of general use has been another set of amulets and incantations with the verse Ex 11[8] written on pure parchment, beginning and ending with, 'Go forth' and 'I will go forth,' etc. Or, an amulet is prepared with letters in nine squares, which, in whichever way read, have the numerical value of 15, probably=one of the names of God, 'Jah.' Also the words 'Kur, kur, kur' are either written or repeated to the woman in labour; or, permutations of the Aramaic word *puk*, which also means 'go forth.' Permutations of the Tetragrammaton are also found in some amulets, and even the names 'Immanuel,' 'Soter,' and 'Salvator,' often mutilated beyond recognition, are used as sacred names, written on pure parchment, and placed beside the woman in labour; or, variations of 'Sator arepo,' etc. As a supreme remedy in very difficult cases, the scroll of the Law or an ancient copy of the Pentateuch is brought from the Synagogue, and taken into the room where the woman is in pains of delivery. In addition to amulets and conjurations, other means were employed for easing the labour and ejecting the child or the after-birth.

'The woman must drink water gathered at cross-roads.' Or, 'Another woman's milk lapped from the palm of her hand; in some cases, oil.' Or, 'a decoction made of the scrapings or the grime off the sheath of the butcher's knife.' Or, 'Soak the *afikomin* (*i.e.* the piece of Passover cake reserved for the end of the meal), and put it into her mouth. She must be careful not to eat it, and it will ease difficulties of labour.' Or, 'Tie the herb *Vives* under the sole of her left foot.' (No doubt the plant mentioned here is *Vitex*, 'chaste tree.') 'A magnet tied to the left thigh; or sea sponge or red alum has the same effect, when tied on the left thigh.'

Of all herbs and plants none rivals in efficacy the mythical *Eisenkraut*, or *Eisenhart*, as it is called in German. It is akin to the mythical 'Mandragora,' and has great powers to destroy charms and to prevent every evil occurrence. In modern German botany the name stands for 'Verbena' (vervain). Another plant used is the Artemisia, or mugwort, on the stomach or on the thigh. Similarly, 'Dust from under the threshold of the room, wrapped in a piece of cloth and put on the womb.' Or, 'The woman is to keep between her teeth the right horn of a goat or hart.' Or, ashes of silkworms. Or, scraped ivory in wine or water eases difficult labour. We shall pass over the numerous ingredients recommended for fumigation; they belong mostly to the unsavoury class of remedies already referred to. The same are prescribed also in cases where the child dies unborn, and the mother is in grave danger. Drinking of such nostrums, as well as fumigation, was resorted to.

'If a child born appears to be dead, pass a sieve over its face to and fro and it will revive.' Or, 'Cover it with the after-birth' (*Shab.* f. 134*a*). 'If the mother wishes to satisfy herself as to whether the child is alive or dead, she must look into a basin filled with oil, and if it is alive she will see her face in it; if not, she is to put her five fingers into a plate filled with honey, and lick them one after the other, and then drink the honey dissolved in warm water, and the dead child will be ejected with ease.' 'If the woman drinks a decoction of "Sharlel," i.e. *Salvia horminun* (common sage), it will assist in the ejection of the after-birth.' Or, 'The eating of garlic and doves' brains mixed with honey and boiled together in water.'

But the difficulties of labour may be due also to evil influences, for 'the burying of a pomegranate in the room of the woman will prolong the labour and prevent the birth of the child. The only remedy is to remove the pomegranate.' 'The stone found in a viper's head hung on a woman will prolong labour and prevent birth.'

As soon as the child is born, both mother and child are exposed to the evil demons, who are anxious to injure the child and to obtain possession of it, sometimes even bodily, and substitute for it a changeling. Every possible precaution is then taken to frustrate the action of the demons, and to grant as much protection as possible to the newborn babe. Lilith is the chief demon, but hosts of other witches prowl about, and must be kept at a distance. Conjurations play the principal part. A circle is drawn round the walls of the chamber and on the floor, and in it the names of the three dreaded angels, 'Sinoi, Sinsinoi, and Semangelaf,' are written. These were the angels mentioned above who were sent to punish Lilith, and to whom she promised not to come near the house, or the woman and child, wherever these names should be found. A long conjuration is also written on the parchment or paper containing the names of these angels, and hung round the four posts of the bed in which the woman lies, or fastened to the curtains. The conjuration, a modification of the ancient charm against the demon Aveziha, occurs in almost every collection of Oriental and Eastern European charms.

'This child-stealing or -killing witch, then,' so the conjuration runs, 'is met by the prophet Elijah, who stops her in her roamings, and asks her whither she is going. She answers that she is going to a certain house where a baby has been born, to eat its flesh, to drink its blood, to crush its bones, and to destroy it. Threatened by the prophet, she promises not to

go near that or any house where her names are known, written down, or hung up; and she gives to the prophet the list of her 18 or more mysterious names.'

In ancient variants she is known as the demon Lilith, 'Striga' or 'Strigla'; the name is next changed into 'Estrelia,' or 'Strelia Margarita,' and then to the 'Star Margarita.' But Lilith is the more common and the more prominent name. This amulet, once universally used, is still used throughout the east of Europe (Austria, Russia, Rumania, Turkey) and almost everywhere in the East (India, Syria, Arabia, etc.) as quite a common practice among the Jews. The book *Raziel*, containing the description of the holy circle and the pictures of those angels, is in some parts of Poland and Russia placed in addition under the pillow of the woman. But it is not the mother the demons are after; it is the baby. And the effect of the bewitching is seen in the crying of the child for no apparent reason, in its wasting away, and in its untimely death.

'If the mother sees a woman whom she suspects of being a child-eating witch, she must put her left fist into her mouth, and say: "Thou and thy head are of a swine, thou art unto me a dead bitch, the after-birth of thy mother be in thy mouth,"' and she must repeat it three times, and that woman will have no power to hurt her. 'King Solomon asked the demon Ashmedai what should be done to a child that was constantly crying, and the demon said: "Cut a strip of the saddle of an ass first met in the morning, and place it under the child's pillow."' Another remedy against bewitching: 'Buy a new pot from the maker, and pay the price he asks; buy also an open lock. Take still water, wash the baby in it, and pour it into the pot, which must be placed under the bed of the mother, and the open lock in her bed. At the slightest suspicion of an attack on the part of an evil spirit, the mother locks the lock, and puts it upon the child, then some of the water is sprinkled over the child's face, and, without speaking, the water is poured out at the crossing of roads, and the pot replaced under the bed.' Vervain and 'ruta' are the plants which, if put upon the child, are sure to drive evil spirits away. Or, 'The eye of an old black cock put on the right side of the child, the cock's comb under its pillow, and close to the child the white stones found in a hen's stomach.' Or, 'Hang round its neck a bone which a dog has dropped from its mouth.' Or, 'Take some of the earth upon which the child has fallen immediately upon its birth, before either father or mother has seen it, and tie it round its waist for thirty days, and the child will always be safe from trouble and accidents.' Or, 'Take dust from under the threshold (or, over the door), and mix it with the mother's milk, and put it on the baby's head, and it will sleep peacefully.' 'To break the charm of a bewitched child, take a little raven from its nest before it can fly, burn it on the fire, pound the ashes, mix them with milk, and give it to the child before it has started sucking, and it will be safe.' Or, 'Hang a crystal or emerald over the child, and it will be safe.'

As late as the year 1707 the *secundines* burnt, and the ashes given in milk, were believed to destroy the charm of a wasting child. Or, a bag made of it, with snapdragon, St. John's wort, and other flowers put in it and hung round the child's neck, was considered a powerful amulet against bewitching. It must be understood that the 'evil eye' is also considered as a form of bewitching; but *no* reference is made to the 'evil eye' in *any* of *all* the ancient MSS. This notion and name appear for the first time in the 18th century. In modern times, to which we are turning now, most of these latter practices seem to have disappeared. A gold coin is hung in the cap, against the evil eye or any other evil spirit (Turkey and Rumania), or a satchel with blue beads and 'ruta' over the bed. Regarding changelings, a story is told of a famous Rabbi of the 18th cent., who was invited to be present on the occasion of a circumcision. (All the attacks of the demons are concentrated upon the period from the birth of the boy to the eighth day—the day of the circumcision.) Driving from his place to the house, he met on the road a large number of demons and witches, feasting and dancing round that very baby. He ordered his servant to bring him there, and then seven knives, seven saws, two loaves of bread, and seven slippers. He stuck a knife in each slipper, took his own off, washed his hands, and uttered the great Name. The witches and demons melted away and left the baby behind, which he took and brought back to its parents. There he uttered another holy Name, and lo! the baby which the mother had been keeping with her in bed turned into a bundle of straw. 'When a child laughs in its sleep it is a sign that Lilith or some other evil spirit is playing with it,' and it must be awakened by snubbing the nose. In Rumania it is believed that an angel is playing with the child. The child's clothes must not be left outside over night; an owl drops its spittle or a feather on them, and it changes into a long hairlike worm, which enters the body and tortures the child (Egypt). By conjuring it, it comes out of the body in the form of black points, which must be carefully removed (Egypt). Neither mother nor baby is left alone all the eight days. On the eve of the eighth day children come with their teacher and read certain portions of the Law (the Shema', Dt 6^4), and they are regaled with sweets and with bags of peas salted and peppered (Rumania and Poland). The baby is not put into the cradle before the sixth day (the naming day), and is kept all that day on the knees of an assistant woman (Turkey, India, etc.). Before the baby is laid in the cradle, almonds and raisins are put in, and the cradle is gently rocked. The almonds, etc., are then given to other children. Under the pillow the book of Psalms is laid, and under the mattress a sword or horse-shoe (India). A lying-in woman must not see any one all the week (Turkey). Over the bed a satchel is hung, containing a blue bead, some garlic, and a piece of broken glass (Salonica and Palestine). On the Friday before the circumcision similar practices are observed to those on the eve of the circumcision, and visitors are entertained.

If it should happen that a woman is losing her children, then 'she is to go to a bitch, and put her foot on a puppy, and say three times: "Take the dead and give me the living." Then she is to take the puppy and carry it close to her body, with its head to her right and its feet to her left side, and go to the water and loosen her clothes, and let the puppy drop into the water and say three times: "Give me the living and take the dead." This must be done when the woman is in the ninth month.' Or, 'Go to a dried-up nut-tree and bore a hole just over the head, and put into that hole some of the cuttings of the nails of fingers and toes and some hair, and ram a peg into that hole, and say: "I conjure thee, evil spirit, to remain for ever locked up in this tree, and no longer to be able to hurt me."' Or, 'Make a ring from the silver got from nine young maids under age, and put it on the ear of the child immediately after birth before it has been picked up from the ground, and it will live.'

The rocking of an empty cradle causes the premature death of the child, and the walking over a child or its crawling between the legs of another person causes its growth to be stunted (Rumania and Russia). Very few lullabies, if any, have been preserved. As a rule, the mother rocks the child to sleep to some popular tune. Within thirty days the chances of bewitching and changing diminish, or are considered to have entirely disappeared.

(6) *Primogeniture, naming.*—The firstborn must be redeemed within thirty days. He is believed to have some curative powers. If he treads on the back of a person suffering from lumbago or other joint-diseases, he drives the illness away (Rumania). Some of the duties and privileges of the firstborn prescribed by the Bible are still maintained, and on the eve of Passover he is expected to fast in remembrance of the death of the firstborn of the Egyptians. In some marriage settlements the male offspring is the object of an important clause regulating matters of inheritance and succession.

Among the Ashkenazic (German) Jews a child often takes the name of the grandparent, or of a dead relative. Among the Sephardic (Spanish and Eastern) Jews the parent's name is often given to the child. The former believe that it is an evil omen to name a child after a living person. In cases

of dangerous illness the name is often changed, thereby suggesting a re-birth or change in the destiny of the patient.

LITERATURE.—i. *MANUSCRIPTS.*—Most of the material is taken from the medical and magical MSS in the writer's possession, chiefly from the oldest and the fullest. The following is a list of those used, arranged according to antiquity and importance: Cod. 1055 (probably of the 14th cent., North Italy); Cod. 315 (Oriental Spanish hand, 17th cent.; contains also the work attributed to Aben Ezra); Cod. 444 (Ital., 17th cent., 2 vols., i. with 1231 recipes, and ii. with more than 500); Cod. 676 (Germany, 14th or 15th cent., medical treatises, etc.); Cod. 443 (Tunis, 1775, upwards of 400 recipes copied from older MSS); Cod. 177 (Syria, 15th–16th cent., with very ancient Babylonian material); Cod. 118 (Germany, 16th–17th cent., with old German conjurations; upwards of 400 recipes); Cod. 700 (Germany, 17th cent., many hundreds of recipes); Cod. 932 (Germany, hundreds of recipes—some German and the conjuration of the 'Eisenkraut'); Cod. 358 (Morocco, 19th cent., very full); Cod. 466 (Spanish origin, written in Bulgaria 16th cent., more than 400 recipes); Cod. 464 (Italy, 18th cent., with 308 recipes, many from Aben Ezra and other ancient authorities); Cod. 462 (Italy, 17th cent., with 200 recipes); Cod. 128 (Yemen, 18th–19th cent., some Arabic, others Hebrew, very full); Cod. 603 (Turkey, 19th cent., Hebrew, and some in Spanish). Codd. 40, 194, 438, 451, 677, 702, might be mentioned, for they also contain medical, magical, and sympathetical recipes and a number of amulets referring to birth, etc.; also Cod. 134 (Montefiore College, Ramsgate, of the 14th cent.).

ii. *PRINTED LITERATURE.*—For Bible: Winer, *RWB*, *s.v.* 'Kinder.' For Talmudic period: I. Lamperonti, *Paḥad Yitsḥaḳ, passim*; J. Hamburger, *RE* ii., Leipzig, 1883, *s.v.* 'Geburt,' p. 254 ff.; Gideon Brecher, *Das Transcendentale . . . im Talmud*, Vienna, 1850, p. 207 ff.—For modern times: J. Buxtorff, *Synagoga Judaica*, Germ. ed. 1738, p. 81 ff.; M. Grunwald, *MGJV*, Hamburg, i., 1898, p. 90 ff., v., 1900, p. 63 ff. And the following Hebrew works, partly reprints from ancient MSS: Anonym., *Toledoth Adam*, last ed., Lemberg, 1875; B. Benas, *Amtaḥath Binyamin*, Wilmersdorf, 1716; Anonym., *Miṭ'alot Eloḳim*, Lemberg, 1865; David Tevele, *Beth David*, Wilmersdorf, 1733; Anonym., at end of *Urim Ve-Tumim*, Dyhrenfurt (s.a.); S. Pelungian, *Sefer ha-Zechirah*, Hamburg, 1709; H. Palache, *Refuah ve-ḥayim*, Smyrna, 1874; Reuben b. Abraham, *Seguloth*, Jerusalem, 1865; Moses b. Israel Benjamin, *Yalḳut Moshe*, Munkacy, 1894; and one of the most curious collections in Jewish-German of a certain Jeh. Hentchin, *Matsil Nefashoth*, Prag. 1651 (Amsterdam, 1651), agreeing in many points with Cod. 118. M. GASTER.

BIRTH (Muhammadan). — Among Muslim peoples the birth of a child, or at least of a male child, is an event of the first importance. It is especially so to the mother, because a barren wife is held in no regard by husband or relatives. Women therefore resort or resorted to various charms and superstitious rites, even to stepping across the corpse of a decapitated criminal and anointing their persons with his blood, in the hope of becoming fertile; and the intentional avoidance of children by husband or wife is practically unknown, though at the time of Muḥammad such avoidance was permitted to men who did not desire offspring from slave concubines (*Mishkāt al-Maṣābīḥ*, tr. Matthews, 1810, vol. ii. pp. 96–98). The ceremonies attending a birth are numerous, but it is not always easy to distinguish those which are essentially Muslim, *i.e.* handed down from the days of the Prophet, from those which are exotic and are derived from local customs and foreign superstitions. The birth-ceremonies of Muslims vary in different countries, and scarcely any of them, except the *'aqīqah*, rest upon the recorded precepts of Muḥammad; but there is a general agreement in the chief observances, which shows that they are to be ascribed to the usual practice of the Arabs at the time of the promulgation of Islām. Two or three days before the expected date of the birth, the midwife (*dāyah*) brings to the house of the woman to be confined the groaning-chair or 'birth-throne' (*kursī al-wilādah*), upon which the birth is to take place, for Muslim women are delivered sitting. The chair, which belongs to the midwife, is covered with a shawl or embroidery, and *ḥinnā* flowers or roses are tied with an embroidered handkerchief to each of the top corners of the back. As soon as the delivery is safely accomplished, the by-standers trill the *zagharīt*, or lulliloo (as in the tale of King 'Umar b. al-Nu'man in the *Alf Lāylah wa Lāylah*; cf. Burton, ed. Smithers, 1893, i. 401). The child is at once wrapped in white linen, or linen of any colour but yellow, and the father or, in his absence, some other man (but never a woman) repeats the call to prayer (*adhān*) in the infant's ear, or the *adhān* in its right ear and the nearly identical *iqāmah* in its left ear. This is done in imitation of Muḥammad himself, who is related to have acted thus on the birth of his grandson Ḥasan (*Mishkāt*, *ut sup.* ii. 316). Another custom, based upon the same authority, is for some learned man to suck a date or some sweetmeat and put it into the baby's mouth and rub it on its palate, whereby the sucker's wisdom is hoped to be communicated (*Mishkāt*, ii. 315; Herklots, *Qanoon-e-Islam*, 1822, p. 6). Among the well-to-do the mother retires to her bed for from three to six days; but poor women scarcely rest at all after their delivery. Meanwhile rejoicings begin at once; but these are much more festive for the birth of a son than of a daughter. The men recite the *fātiḥah* (Qur. ch. i.) and receive presents. Dancing men and girls assemble and perform before the house, and sometimes the father entertains his friends on each day of the week succeeding the happy event; but usually the seventh day (*yaum al-subū'*) is that chosen for the chief festivities. Lane (*Mod. Egyptians*[6], 1860, ch. xxvii. p. 504 f.) has described the ceremonies of the seventh day as practised in Cairo about 1835:

> 'On the . . . seventh day after the birth of a child the female friends of its mother pay her a visit. In the families of the higher classes *'Awālim* [*'Ālmahs*] are hired to sing in the *ḥarīm*, or *Ālātiyah* perform, or *fiqis* recite a *ḫatmah* [of the Qur'ān] below. The mother, attended by the *dāyah*, sits on the *kursī al-wilādah* [birth-chair], in the hope that she may soon have occasion for it again; for her doing this is considered propitious. The child is brought, wrapped in a handsome coloured shawl or something costly; and, to accustom it to noise that it may not be afterwards frightened by the music and other sounds of mirth, one of the women takes a brass mortar [*ḥaun*] and strikes it repeatedly with the pestle, as if pounding. After this the child is put into a sieve and shaken, it being supposed that this operation is beneficial to its stomach. Next it is carried through all the apartments of the *ḥarīm*, accompanied by several women or girls, each of whom bears a number of wax candles, sometimes of various colours, cut in two, lighted, and stuck into small lumps of paste of *ḥinnā* upon a small round tray. At the same time the *dāyah* or another female sprinkles upon the floor of each room a mixture of salt and seed of the fennel-flower, or salt alone, which has been placed during the preceding night at the infant's head, saying, as she does this, "The salt be in the eye of the person who does not bless the Prophet," or "The foul salt be in the eye of the envier." This ceremony of the sprinkling of salt [*rashsh al-milḥ*] is considered a preservative for the child and mother from the evil eye; and each person present should say, "O God, bless our lord Muḥammad!' The child, wrapped up and placed on a fine mattress, which is sometimes laid on a silver tray, is shown to each of the women present, who looks at its face, says, "O God, bless our lord Muḥammad! God give thee long life," etc., and usually puts an embroidered handkerchief, with a gold coin (if pretty or old, the more esteemed) tied up in one of the corners, on the child's head or by its side. This giving of handkerchiefs is considered as imposing a debt, to be repaid by the mother, if the donor should give her the same occasion; or as the discharge of a debt for a similar offering. The coins are generally used for some years to decorate the head-dress of the child. After these *nuqūt* [wedding presents] for the child, others are given for the *dāyah*. During the night before the *subū'*, a water-bottle full of water (a *dauraq* in the case of a boy, or a *qullah* in that of a girl), with an embroidered handkerchief tied round its neck, is placed at the child's head while it sleeps. This, with the water it contains, the *dāyah* takes and puts upon a tray and presents to each of the women, who put their *nuqūt* for her (merely money) into the tray. In the evening the husband generally entertains a party of his friends.'

On the same seventh day (or on the 14th, 21st, 28th, or 35th day after birth) the child is named, though this is often done a few hours after its birth, without any special ceremony; and the rite of *'aqīqah* is to be observed, together with the shaving of the child's head, though both are commonly neglected at the present day. The *'aqīqah* is enjoined by a tradition of Muḥammad,

who said, 'An *'aqīqah* must be observed at the birth of a child; then slay a goat on its behalf and shave its head'; and again, 'The *'aqīqah* for a son is two goats, and for a daughter one, either male or female'; and Buraydah related: 'We used, in times of Ignorance, when children were born to us, to slay goats and rub their heads with the blood. Then, when the religion of Islām came, we slew a goat on the seventh day, and shaved the child's head, and rubbed saffron upon it' (*Mishkāt, ut sup.* ii. 315, 316; Abū-Dā'ūd, *Ṣaḥīḥ*, Arab. text, ii. 36). The *'aqīqah* is properly the hair of the newborn infant, but the term is applied by metonymy to the sacrifice made on its shaving (Lane, *Arabic Lexicon, s.v.* "Aqīqah"). It may be a ram or a goat, or two for a son and one for a daughter. The animal must be a male yearling and without blemish, according to Abū-Dā'ūd (Hughes, *Dict. of Islām*, art. 'Children'). The rite is held obligatory by Ibn Ḥanbal, but the founders of the three other orthodox schools regard it as unimportant, in spite of Muḥammad's example and the tradition prescribing the *'aqīqah* (or, as he preferred to call it, *nasīkah*). The person sacrificing should say, 'O God, verily this *'aqīqah* is a ransom for my son such a one; its blood for his blood, and its flesh for his flesh, and its bone for his bone, and its skin for his skin, and its hair for his hair. O God, make it a ransom for my son from hell-fire.' A bone of the victim should not be broken. A leg should be given to the midwife, but the *'aqīqah* should first be cooked with water and salt without any part being cut off, and part should be given to the poor (Lane, *loc. cit.*, and *Thousand and One Nights*, note 24 to ch. iv. [1859 ed., vol. i. p. 277]). 'It is a sunneh ordinance, incumbent on the father, to shave, or cause to be shaved, the head of his child, and to give, in alms to the poor, the weight of the hair in gold or silver' (Lane, *Thousand and One Nights, ib.*). Circumcision is also specially approved when performed on the seventh day; but in practice it is usually postponed to the fifth or sixth year, or even much later.

On the fortieth day, as a general rule (not universally observed, however), the purification of the mother is completed, and she goes to the bath; and on the same day the infant is introduced to its rocking cradle, and *ḥarīm* festivities take place. The various additional ceremonies, many of them common to Hindus as well as Muslims, observed in India, may be read in Herklots (*op. cit.*); those commonly witnessed in Turkey in Europe are very fully described by a Consul's wife in *The People of Turkey*, edited by the present writer, 1878, vol. ii. pp. 1–10; but most of these are merely amplifications or variations of the customs described above.

With regard to evidence of birth, the testimony of one woman, be she the midwife or another, in addition to that of the mother, is required, according to Ḥanafī law, to prove that the child is the offspring of the mother; but the father's sole testimony is accepted for his paternity. Further evidence is required, however, when the mother is passing her term of *'iddah* after a complete divorce (Hamilton's *Hidāya*, 1791, iii. 134; Hughes, *Dict. of Islām*, art. 'Birth').

LITERATURE.—The literature has been sufficiently cited in the article. STANLEY LANE-POOLE.

BIRTH (Parsi).—1. The birth of a child is a very auspicious event in a Parsi house. It was so also in ancient Persia. According to the *Vendīdād* (iv. 47), Ahura Mazda says: 'I prefer a person with children (*puthrānē*) to one without children (*aputhrāi*).' Even the very ground where a man lives with his children is allegorically described as feeling happy (*Vend.* iii. 2). Cultivation and a good supply of food to people are recommended, because they make mankind healthy and able to produce healthy progeny (*Vend.* iii. 33). To be the father of good children was a blessing from the Yazatas like Tishtrya (*Yasht* viii. [*Tīr*] 15), Mithra (*Yasht* x. [*Mihir*] 65), Haoma (*Yasna* ix. 4, 7, 10, 13, 22), and Atar (*Yasna* lxii. 10; *Vend.* xviii. 27), and from the Fravashis (*Yasht* x. [*Mihir*] 3; *Yasht* xiii. 134). To be childless was a curse* (*Yasna* xi. 1, 3). Domestic animals, when ill-fed and ill-treated, cursed their masters that they might be childless (*Yasna* xi. 1). Childlessness was something like a punishment from heaven (*Yasna* xi. 3; *Yasht* x. [*Mihir*] 38, 108, 110). Kingly splendour (*kavaēm khvarēnō*) was associated with those who were blessed with children (*Yasht* xix. [*Zamyād*] 75). A Zoroastrian woman often prayed for a good, healthy child (*Yasna* ix. 22). A Zoroastrian man and woman prayed before their sacred fire for a good, virtuous child (*Yasna* lxii. 5; cf. *Vend.* iii. 33). A woman without a child was as sorry as a fertile piece of land that is not cultivated (*Vend.* iii. 24). She prayed for a husband who could make her a mother of children (*Yasht* v. [*Ābān*] 87; *Yasht* xv. 40).

Among the Achæmenians, a wife who gave birth to many children was a favourite with her husband, who did not like to displease her in any way (Herodotus, ix. 111). Children being the choicest gift of God, their lives were, as it were, pledged by parents for the solemn performance of an act (Herodotus, vii. 10). We read in Herodotus (i. 136) that 'next to prowess in arms, it is regarded as the greatest proof of manly excellence to be the father of many sons. Every year the king sends rich gifts to the men who can show the largest number, for they hold that number is strength.' Strabo also says a similar thing (xv. 11). We learn from the writings of the Christian martyrs of Persia that, for the above reasons, the ancient Persians did not like the prohibition against marriage among the Christians in the case of holy young Christian girls.

2. Thus we see that an ancient Zoroastrian considered the birth of a child a great event in his life. The modern Parsis have, to a great extent, inherited the desire. When the wife has conceived, it is considered to be an event of joy in the family. According to the Avesta, the women, on finding themselves enceinte, prayed for a safe delivery and for healthy children (*Yasna* ix. 22). They mostly prayed before Ardvī Sūra for an easy delivery (*Yasht* v. [*Ābān*] 87), and then for a copious supply of milk at their breast for their children (*Ārdvī Sūra Nyāyish*, 3). The allusion to these prayers suggests that there must have been some formal ceremonies accompanying them, but we do not know what they were.

Coming to later Pahlavī-Parsi books, we find that the *Shāyast lā-Shāyast* (x. 4, xii. 11) directs that, when it is known that a woman has become pregnant, a fire should be maintained most carefully in the house.† The house or family that does not keep the fire of the house properly has less pregnancy of women in it (*Shāyast lā-Shāyast* xii. 3). The *Sad-dar* (xvi. 1) also gives this direction.‡ We have the remnant of this injunction in the present custom that, among the modern Parsis, on the occasion of the completion of the fifth and seventh months of pregnancy, a lamp of clarified butter is lighted in the house by some families. The reason assigned for this is that the fire so kindled in the house keeps out *daēvas*, i.e. evil influences, from the house. A fire or a lamp

* Cf. the blessings and the curse of Cambyses (Herodotus, iii. 65). Cf. also those of Darius (*Behistun Inscriptions*, iv. 10, 11).

† *SBE* v. (1880) pp. 316, 343.

‡ *Ib.* xxiv. 277.

is even now taken to be symbolical of the continuation of a line of offspring. For example, it is not rare to hear, even now, words like these: *Tamārō cherāg roshan rahē*, i.e. 'May your lamp be always burning.' This benediction means, 'May your son live long, and may your line of descent continue.'

3. According to the Avesta (*Vend.* xv. 8), a woman in the state of pregnancy is to be looked after very carefully. It is wrong for the husband to have sexual intercourse with her in her advanced state of pregnancy, which, according to the Rivāyats, commences with the fifth month.* She must abstain from coming into contact with any dead or decomposing matter, even with a thing like a tooth-pick, which may contain germs of disease (*Shāyast lā-Shāyast* x. 20, xii. 13; *Sad-dar* xvii. 2; *SBE* v. 323, 344, xxiv. 278).

At times, some families direct the priests to say certain prayers, and generally to recite one or two of the *Yashts*, during the whole or a part of the period of pregnancy.

4. The modern Parsis have no religious ceremonies or rites during the pregnancy of the women. On the completion of the fifth month of pregnancy, a day is celebrated and known as *panchmāsiun*, i.e. 'the day of the fifth month.' Similarly, a day is observed on the completion of the seventh month, and is known as *agharni*. These days are observed only in the case of the first pregnancy. They are not observed in accordance with any religious injunction or with any religious ceremonies or rites. The expectancy of a child being a joyful event, as said above, these days, especially the seventh-month day, are observed as joyous occasions, when the woman who is enceinte is presented with suits of clothes by her parents, relatives, and friends, and especially by the family of her husband. The husband is in turn presented with a suit of clothes by the wife's family. Sweets are sent out as presents by the husband's family to the bride's house and to near relatives and friends. Among these sweets, one prepared in the form of a coco-nut has a prominent place. A coco-nut signifies a man's head, and so it is a symbol of fecundity. Some of the customs observed on these occasions are more Indian in their origin and signification than originally Persian or Zoroastrian.

5. The first delivery generally takes place in the house of the wife's parents. A room, or a part of the room, generally on the ground-floor, is set apart for the purpose. As the *Vendīdād* (v. 46) says, the place for delivery must be very clean, dry, and least frequented by others. It appears that in ancient times such places were specially provided in Parsi houses on the ground-floor. Parsi houses in those times had generally spacious ground-floors that were used for all purposes. The upper floors were low, and were rather like lofts than storeys. So the ground-floors provided proper places for delivery as enjoined in the *Vendīdād*. But, as with changed circumstances, Parsi houses of to-day are not what they were before, and as, at present, in storeyed-houses, the ground-floor in big towns is generally the worst part of the house, it is properly condemned as a place unfit for delivery.

6. In the case of a house or a place where no delivery has taken place before, religious-minded persons generally take care that a religious ceremony takes place in it before the delivery. In other words, they get it consecrated. A priest or two say and perform the *Āfringān* prayer and ceremony in the place. At times even the *Bāj* prayer is recited (cf. Darmesteter, *Le Zend-Avesta*, 1893, ii. 723 ff., 686 ff.).

* Cf. Anquetil du Perron, *Zend-Avesta*, 1771, ii. 563.

7. On the birth of a child, a lamp is lighted and kept burning for at least three days in the room where the woman is confined. The *Sad-dar* (ch. xvi. 2) speaks of three days. It says: 'When the child becomes separate from the mother, it is necessary to burn a lamp for three nights and days—if they burn a fire it would be better.'* Some people keep the lamp burning for ten days, and some for forty days, which is generally observed as the period of confinement. The *Shāyast lā-Shāyast* directs that the lamp must be placed in such a position that no one can pass between it and the newborn child (ch. x. 15). It further says that ten women may be in attendance at the time of delivery, five of them to wait upon the mother and five upon the newborn child to look after its cradle. The child is directed to be besmeared with a mixture of sulphur and the juice of a plant (ch. x. 16). The day-time is preferred to the night-time for child-birth (*Shāyast lā-Shāyast* xii. 7).

8. On delivery the mother is enjoined to remain apart from others. She must not come into contact with fire, water, or any of the furniture of the house (*Vend.* v. 45–49).

The *Sad-dar* (ch. lxxvi. 1–5)† enjoins that 'she should not wash her head for twenty-one days, nor put her hand again on anything. . . . After the twenty-one days, if she sees herself in such a state that she is able to wash her head, she washes her head. And, after that, until the coming on of the fortieth day, it is requisite to abstain from the vicinity of a fire and anything that is wooden or earthen; it is also requisite to abstain from everything of her cooking and pot-boiling. Afterwards, when it is forty days, she is to wash her head, and it is proper for her to do every kind of work. Till the lapse of a second forty days it is not proper for her husband to make an approach to her, for it is a great sin, and it is possible that she may become pregnant a second time, as within a period of forty days women become very quickly pregnant.'

In the case of those who give birth to still-born children it is enjoined in the *Vendīdād* (v. 55 f.) that they must remain separate for twelve days. This period has been latterly extended, as directed in the later Pahlavi and Persian books, to forty days in all cases of delivery. Nowadays a Parsi woman has generally forty days of seclusion after her delivery. The *Sad-dar* (ch. xvi. 4) says, 'During forty days it is not proper that they should leave the child alone; and it is also not proper that the mother of the infant should put her foot over a threshold in the dwelling'‡ (*i.e.* leave the house).

9. Some families observe the fifth day after birth, known as *patchori* ('the fifth day'), and the tenth day, known as *dasori* ('the tenth day'), as gala days; but these days have no religious signification whatever.

10. During these forty days the woman must remain in a state of isolation. She must not come into contact with anybody or with any part of the ordinary furniture of the house, especially wooden furniture and linen articles. Her food is to be served to her on her plate by others. Those who have to come into contact with her have to bathe before they mix with others. Formerly, even the medical attendant had to do so, but nowadays the salutary rule is more honoured in the breach than in the observance. The original injunction seems to have been intended to observe 'purity' in order to prevent the spread of puerperal fever and other such diseases to which women in this state are subject.§

* *SBE* xxiv. 277. † *Ib.* xxiv. 339 f. ‡ *Ib.* xxiv. 277.

§ See the chapter on 'Maternity and its Perils,' in Mr. Havelock Ellis's *The Nationalisation of Health*, 1891, pp. 23–143. It says that in England and Wales, where 4500 women die every year in child-birth, 'about 70 per cent. of this mortality is due

11. At the end of the forty days, the period of confinement, the woman has to purify herself by a bath before mixing with others. At first she takes an ordinary bath, and then goes through what is called *nān* * (a contraction of the Sanskrit word *snān*), which is a sacred bath. A priest, generally the family priest, administers this bath with consecrated water. Even those who have come into contact with the woman during the days of her accouchement have to go through a ceremonial purificatory bath.

12. All the bedding and clothes of the woman used during the forty days of her seclusion after delivery are rejected from ordinary use. They are enjoined to be destroyed, lest they carry and spread germs of disease among others. But nowadays that injunction is not strictly followed. They are now given away to non-Zoroastrian poor people of the sweepers class.

13. Formerly a mother in child-birth first drank a few drops of the sacred Haoma (*q.v.*) juice, squeezed and consecrated in a Fire-temple. The new-born child also was made to drink a few drops of this juice (*Shāyast-lā-Shāyast* x. 16). Anquetil du Perron refers to this religious custom as prevalent in his time (*Zend-Avesta*, ii. 564). In the *Haoma Yasht* (*Yasna* ix. 22) Haoma is said to give fine healthy children to women who give delivery. Haoma was emblematical of immortality; hence this custom. Now, however, the custom is rarely observed, and, in place of the Haoma juice, a sweet drink made of molasses or sugar is given to the child as the first auspicious drink.

JIVANJI JAMSHEDJI MODI.

BIRTH (Teutonic).—All the Teutonic peoples made a rigorous distinction between legitimate and illegitimate birth. They granted the full rights of consanguinity and tribal membership only to the children of legitimate unions, that is, to the offspring of a free father and a free mother joined in lawful wedlock. Whenever a child was born, it was laid upon the ground by the midwife in attendance upon the mother, and this practice is reflected to this day in the Scandinavian terms for midwife, *jordgumma*, *jordemoder*, 'earth-mother.' This rite has maintained its ground in many branches of the Teutonic stock (cf. A. Dieterich, *ARW* viii. 7 ff.); it originated in the old belief that the soul, and therefore the life, of the child issues from 'mother earth,' and that the child derives its vitality therefrom. The next step on the midwife's part was to lift the child up—hence the German term for 'midwife' *Hebamme*, O.H.G. *hevianna*—and hand it to the father. If the latter wished to acknowledge and maintain the infant, he took it in his arms, but he retained the right to condemn it to exposure. This right could be exercised in cases where the child was feeble or deformed, or when the father was in doubt as to its legitimacy—a situation which often arose at the birth of twins, the popular belief being that such an event implied the mother's unfaithfulness; or, again, if it had been predicted that the child's existence threatened the father with danger or misfortune, or even if he felt himself unable to maintain the child. The father's prerogative, however, was annulled by law after the introduction of Christianity, though various fairy-tales assume its survival down to the present day. But even in heathen times the father's decision had to be made within a few hours after the birth, for once the child had taken nourishment, milk or honey, in however small quantities, or had been laved with water, it was regarded as belonging to the family, and shared equal rights with every other individual within the same. Traces of this primitive heathen ordinance are still found in the Christian period; thus, the child's capacity to inherit sometimes dated only from its baptism, while the *wergeld* of an unbaptized child was sometimes reckoned at half the usual amount. Exposure was likewise illegal if the child had received its name. The name was usually given by the father, and at the ceremony (Icel. *nafnfestr*) a presentation was made to the child, while occasionally the blood-relations held a feast (*barnsöl*). The child was generally named after some deceased member of the family, preferably the grandfather on the mother's side, as it was believed that the name carried with it the personal qualities of its original bearer (cf. G. Storm, *Arkiv for nordisk filologi*, ix. 199 ff.). If the father, upon whom these various legal functions devolved, died before the child was born, his place was taken, according to the most ancient usage, by the entire group of his blood relations, frequently augmented by some relations from the mother's side, and these chose one of their number to act as guardian and discharge all legal obligations in regard to the child. The same procedure was observed when the father had been proclaimed an outlaw; in the eye of the law the mother was then a widow and the child an orphan. If the father was unable to be present at the birth, the mother had to decide whether the child should be acknowledged or exposed.

A somewhat different course was adopted in the case of illegitimate birth. The children of slaves were themselves slaves from birth, and belonged to the owner of the mother. In primitive times, distinctions were made amongst the illegitimate children of free parents, and the Old Norse language had special designations for the different classes: thus *hornungr* signified the son of a free mother (*frilla*) with whom the father cohabited, though not in wedlock; *hrísingr*, the son of a free mother with whom the father's relations were clandestine; *þýborinn*, the son of a free father by a slave. These distinctions, however, were gradually done away, and disappeared first of all in Iceland. In regard to the illegitimate, the first step was to find out who the father was; and when this point had been decided, the child, even in early times, acquired the right of inheritance—though in a limited degree—and a claim to the father's protection. Moreover, it frequently happened that the child was received into the family bond (Icel. *ættleiðing*), and this transaction, especially when there were no children of lawful birth and capable of inheriting, was celebrated with feasting and high ceremonial. In all cases it was the duty of the father, or his family, to maintain the child till maturity was reached.

The event of birth became the nucleus of many curious practices and superstitions. In many districts of Germany, Britain, and Scandinavia, there prevails to this day the custom of lighting fires or candles round about the newly-born (cf. Liebrecht, *Zur Volkskunde*, 31), in order to prevent

to puerperal fever,' and that 'almost the whole of this mortality might be avoided.' It is the careless medical practitioners and midwives that are responsible for this mortality, because they do not preserve 'purity,' and carry germs from one woman in confinement to another. The midwifery writers of old said to their disciples: 'Thine is a high and holy calling; see that thou exercise it with purity.' In the enjoined isolation of the Parsi women during their confinement, the original intention seems to be that of observing 'purity.' Some of the later Pazend and Persian writers have not properly understood the original good intention of the early writers, and so have carried the rigour of isolation too far. But, anyhow, the original intention of isolation is intended for the 'purity' referred to by old midwifery writers.

* See art. PURIFICATION (Parsi).

their falling under the power of evil spirits. The same purpose was served by piercing the door or the door-post with a knife, placing some article of steel—a pair of scissors, a key, a horse-shoe, etc.—in the cradle, hanging amulets round the child's neck, stopping the keyholes, or keeping out cats or any old woman who was suspected of having the 'evil eye.' In some places it was the custom to put salt under the child's tongue to prevent its being bewitched. These prophylactic expedients were deemed necessary till the time of baptism, as it was during this period that the demons directed their practices against the child, and tried to put a changeling, a babe of their own, in its place. The immediate surroundings of the child were meanwhile tabu. On the other hand, every possible effort was made to secure good fortune for the newly-born. Special importance was ascribed to the umbilical cord, and to the bladder-like membrane or 'caul' with which some children are born, such children being regarded as the favourites of fortune. The caul was carefully preserved and sewn into the child's clothing, thus ensuring success in all its future undertakings. From this, indeed, developed the Old Norse belief in an attendant spirit, the *fylgja*, which accompanied the person wherever he went. The dried umbilical cord was in course of time given to the child with a meal of eggs, in the expectation that the child would thereby become shrewd and intelligent; or it was sewn into the clothing, as a means of making its possessor clever and capable. Amongst the Teutons, as amongst many other races, great emphasis was laid upon the young tree which was planted on the day of the child's birth, and was thenceforward regarded as his tree of life. The fortunes of the tree ran parallel with those of the child, and from this notion arose the belief in a person's tutelary tree (Swed. *vård-träd*). When it chanced that an animal was born in the homestead on the same day as the child, it was believed that the former, during its whole life, stood in the closest relationship to the latter. The animal was named after the child, and became his constant associate.

Widely diffused throughout the entire Teutonic area are the mythical stories regarding the goddesses of destiny, who appear at the birth of a child and determine his future. Their function is indicated by their names: thus, in Old Norse they are called *urðir*, 'the powers of destiny'; in English, 'the weird sisters'; Anglo-Saxon, *mettena*, 'those who measure out'; Middle High German, *Gaschepfen*, 'the makers.' From early times the sisters were reckoned as three in number, but sometimes also as seven or thirteen, and frequently the part assigned to one of them is to deal out misfortune to the infant. Norse poetry speaks of them as *nornir*—a word of doubtful etymology. They are represented as spinning maidens, who at the child's birth wind his thread of life—his fate; and accordingly, possessing as they do a foreknowledge of the destiny of men, they acquired at length a prophetic character.

The birth of a child was an occasion upon which a part of special importance was played by the myths regarding the origin of children. The thought underlying nearly all these myths was the belief that children come from 'mother earth.' One proof of this is supplied by the primitive heathen practice, already referred to, of laying the child upon the ground immediately after birth. In many parts of Germany and the Norse countries children were supposed to come forth from hollow trees, as these, according to popular notions, were connected with the interior of the earth. Similar ideas were also held about lakes, ponds, and wells. In South Germany various lakes and fish-ponds are known as *Kinderseen*, 'children's lakes'; while, more particularly in Central Germany, there are many *Kinderbrunnen*, 'children's wells,' in which the goddess Frau Holle was believed to keep in charge the souls of children before their birth. Other places of origin were marshes and fens. The prevailing belief in many districts was that children are drawn out of the water and carried to their mothers by water-fowl, especially the stork and the swan, while in other parts they were supposed to issue from caverns or mountains. In Pomerania, for example, we find 'swan-stones' and *Adebarsteine*, 'stork-stones,' and children obtained from these were called 'swan-children' (Jahn, *Volkssagen aus Pommern*, 390). From heathen times comes the belief that children are the men of a former day, re-born into the world. They had passed their intermediate period in an animal form. According to a popular superstition in South Germany, they had been flying around as butterflies. We thus see that these various notions regarding the origin of children are related in the closest way to the primitive Teutonic belief regarding the soul.

E. MOGK.

BIRTH-DAYS.—

The custom of commemorating the day of birth is connected, in its form, with the reckoning of time, and, in its content, with certain primitive religious principles. It is the most conspicuous example of commemorative ritual. Its essence is the repetition of the event commemorated. As culture develops, this primary meaning is obscured by various accidents.

In the lower culture, what is reported of the Congo tribes applies generally: 'no record is kept of birth or age.'* The Hupas of California take no account of the lapse of time, and consider it a ridiculous superfluity to keep a reckoning of age. They guess at a man's years by examination of the teeth. One will say, 'I have good teeth yet.' The only epochs noted are those of babyhood, boyhood or girlhood, youth, manhood or womanhood, and the state of married man or woman, old man or old woman.† The Omahas have a superstitious objection to counting, and therefore never note a person's age.‡

The earliest lunar reckoning produced the seven-day week, the lunar month, and the lunar year, thus providing machinery for the expression of any ideas involving repetition of events. Parallel with these dates, and of earlier origin, are seasonal epochs, marked by changes in vegetation, and also the epochs of human growth, as noted above.

The day of birth itself may be first considered. At an early stage of chronology the influence of ideas of luck is brought to bear upon dates. Every people has its own list of ominous objects and circumstances. In highly developed popular religions the result is a dualism affecting the whole life of man. Of the Cambodians we read that the idea of luck dominates their entire existence.§

The religion of the Baganda is described as a religion of luck.* Among the Tshi people of West Africa each person has his lucky and unlucky days.† In the week of the Asabas of the Niger the days for marketing, for work, and for rest vary for each individual according to the particular *ju-ju* decided for him by the medicine-man.‡

As the circumstances attending the moment of birth are auspicious or inauspicious, so are those attending the day. Any object or circumstance distinguishing it may affect the destiny of the child. When days are marked, they acquire permanent or varying characteristics which automatically influence the event. The Malagasy, who possess an elaborate doctrine of fatalism (*vintana*), mark a certain number of days in each month as lucky or unlucky. The *vava*, or first days, of some months are especially disastrous to children then born, in some cases to the offspring of the people generally, in others to those of the royal family. A child born on an unlucky day, and dying young, is said to have 'too strong a *vintana*.' Formerly, children born on unlucky days were put to death by being buried alive. In modern times this infanticide is commuted to an ordeal, offering, or 'expiatory bath,' the water being buried instead of the child. In one clan of the Sakalavas all children born on a Tuesday were put to death. In the Bara tribe a child was put to death if born on a day which was unlucky to both father and mother; if the day was unlucky for one parent only, the child's life was spared. In the Tanale tribe one particular month was peculiarly unlucky for birth.§

With the rise of astrology comes the development of the horoscope and similar forms of augury. In origin such practices are a species of sympathetic magic; the intention is to influence events, or to assist nature, and the method employed is the rehearsal or artificial previous reproduction of the desired result. The Central Americans possessed an elaborate code of 'signs of the day,' applying to each day of each cycle of twenty days, the *cempohualli*, of which the year was a multiple. Horoscopes were prepared from these signs for the day and hour of birth. Every Mexican bore through life, as a species of personal name, the sign of his birth-day.‖ The Burmese predict a man's character and destiny according to the day of the week on which he is born and the constellation which rules it. The name of the child must begin with one of the letters belonging to the birth-day.¶ The Asabas of the Niger often name a child after the day of its birth.** In China the hour and the day of birth are regarded as being very important. A child born between the hours of 9 and 11 will have a hard lot at first, but finally great riches.†† The Hindus possess an elaborate astrological system of nativities connected with lucky and unlucky days.‡‡ In Madagascar nativities are drawn up from the position not of the stars, but of the moon. This method is earlier; later cultures prefer the star of nativity. The Tshi peoples name children after the day of the week.§§ The Muhammadanized Swahili consider it lucky to be born on Friday, the Muhammadan festival. Children then born are named 'son' or 'daughter of Friday.'* In German folklore Sunday is lucky as a birth-day, particularly the Sunday of the new moon. This idea is connected with growth. 'Sunday children' are supposed to be able to see spirits, or to see in the dark.†

The principle of repeating an event after its occurrence is an inversion of sympathetic magic. Whereas in the ordinary form of magic the coming event is influenced and ensured by previous rehearsal, in this inverted form it is reproduced in order to repeat the original advantages and to effect their continuance. The idea is naturally suggested by the recurrence of the same external or chronological conditions. These were closely bound up with the original event, and are therefore supposed to influence it: they are further supposed to carry it with them, and therefore require its repetition. The intention varies as the event. In the case of the repetition of birth the intention is a renewal of the life acquired by the original birth. Such ideas are illustrated by the general custom of celebrating the renewal of the year. The ritual is designed to renew not only the life of nature, but also the life of men, and at the same time to discard the old life, now regarded as decay and death. The seasonal changes of growth, connected early with the phases of the moon and the path of the sun, naturally fostered such ideas. As individualism developed they were applied to the life of each man. But the important point for the earlier periods is that these annual renewals of nature and life in general practically amounted to universal or social birth-days.

To illustrate the first of these points, we may instance the Hindu festival *saṁvatsarādi*, which celebrates the beginning of the year.

'The chief features of the day are the reading of the new almanac and hearing the forecast of the events of the New Year. New clothes also are worn when procurable, and the food partaken of during the day is, as far as possible, composed of new materials, *i.e.* new grain, pulses and such like, for this is a feast of ingathering. One dish, which must be partaken of by all who wish for good luck during the year, is a conserve composed of sugar, tamarind, and the flowers of the *neem* or *margosa* tree (*Melia Azadirachta*), which is then in full flower. The bitter taste of this is not much relished as a rule; but it is necessary that at least a small portion of the dish should be eaten. This seems to be analogous to the English idea that it is necessary to eat mince-pie at Christmas or at the New Year.'‡

In the next place, such festivals, surviving as they do into the highest stages of evolution, are in the early stages universal birth-days. The Malagasy custom is significant. In the lunar year of Madagascar, time is popularly reckoned by the annual great feast *fandroana*. Remarkable longevity is denoted by the phrase that a man has seen three *fandroanas* at the same season of the year. Thus he might see it in spring at the age of 7, again when 40, and again when 73. We are expressly informed that a man's age is reckoned not by his years, but by the *fandroana*.§

The Japanese supply an instructive case of compromise between the social and the individual birth-day. The first of January, the commencement of the New Year,

'may be considered the universal birth-day, for they do not wait till the actual anniversary of birth has come round to call a person a year older, but date the addition to his age from the New Year. The 61st birth-day is the only one about which much fuss is made. This is because the old man or woman having lived through one revolution of the sexagenary cycle then begins a second round, which is in itself an extraordinary event, for the Japanese reckon youth to last from birth to the age of 32, middle age from 32 to 40, and old age from 40 to 60. A child is born in December 1901. By January 1902 they talk of the child as being 2 years old, because it has lived through a part of two separate years.'‖

In the Chinese religion of piety we find a remarkably explicit illustration of the principle of the renewal of life on the anniversary of birth. 'The birth-day celebration is a peculiar institution,' though not attended with much éclat till after the age of 15. Each person has an annual festival, and every tenth year after reaching 50 an extraordinary celebration. Especially honoured is the 61st birth-day. The Emperor on his birth-day is supposed to acquire 10,000 'longevities.' The courts of justice are closed, and a general amnesty is proclaimed. The ordinary person on his birth-day receives 'longevity presents,' and his friends wish him long life. With the express purpose of prolonging life, a dish of vermicelli in remarkably long strips is eaten. Of particular importance is the 'longevity garment.' This is a handsome robe, embroidered in gold characters with the word 'longevity.' It serves at death as the man's shroud. It is generally a present from the children, and is given to the parent on his birth-day. He wears it then, and on all festive occasions, in order to acquire long life, 'it being generally acknowledged among the Chinese that it is extremely useful and necessary on the birth-day to absorb a good amount of vital energy in order to remain hale and healthy during the ensuing year.'*

The Coreans celebrate the 61st birth-day in the Chinese fashion. On ordinary birth-days new clothes are worn, and a feast is prepared for friends of the family.†

The Burmese offer on their birth-days, celebrated weekly, candles representing the animals connected with the day of the week. The offering is an act of worship at the pagoda.‡

The Central Americans celebrated birth-days with a feast given to the friends of the family. Presents were offered them on their departure.§

Among the Tshi natives of West Africa, a man's birth-day is sacred to his *kra*, or 'indwelling spirit.' If a man is rich, he kills a sheep, if poor, a fowl, and prepares a feast. In the morning, when he washes, he provides himself with an egg, and some new fibre of the kind used as a sponge. He then stands before the calabash containing the water, and addresses his *kra*, asking for its protection and assistance during the coming year, as he is about to worship it, and keep that day sacred to it. He then breaks the egg into the calabash, and washes himself with the fluid; after this he puts white clay on his face, and puts on a white cloth. Members of the higher classes, kings and chiefs, keep sacred to the *kra* the day of the week on which they were born. Thus Kwoffi Kari Kari, having been born on a Friday, made it a law that no blood should be shed on that day.‖

The ancient Persians celebrated birth-days.¶

In ancient Egypt the birth-days of the kings 'were celebrated with great pomp. They were looked upon as holy; no business was done upon them, and all classes indulged in the festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour, of his birth; and it is probable that, as in Persia, each individual kept his birth-day with great rejoicings; welcoming his friends with all the amusements of society and a more than usual profusion of the delicacies of the table.'**

In modern Persia the birth-days of Muhammad and 'Alī, as in Islām generally, are duly honoured. For ordinary persons, however, the New Year's feast is the only real festival.††

Among the modern Jews, the 13th birth-day of a boy is celebrated as a family feast, this date being his religious majority.*

The preceding accounts introduce some secondary principles. The idea, inseparable from festivals, of holiday or rest, combines with the wish to avoid consuming energy and vitality, and to assimilate the same by means of food and drink. A further principle is that of a propitious commencement of an epoch as influencing the whole. At a late stage such ideas are obscured, and an ethical principle arises. This is, in Western culture, faintly suggested by the phrase, 'turning over a new leaf' at the New Year or on the birth-day. In Catholicism, it is more marked in combination with the birth-day of the individual's patron saint. In early Christianity each anniversary was a step towards the new life commencing at death.

The idea of renewal, as we saw, is in the early stages emphasized by the weekly phases of the moon. Thus we get the principle of the octave. One of its earliest applications is the celebration of the seventh day after birth, on which, among various peoples, the name is given or some ritual operation is performed.

The principle of the octave is actually applied at times to produce a weekly birth-day. This has been instanced in West Africa and Burma. A good many recorded birth-days are probably not annual, but weekly or monthly. The ancient Syrians celebrated a monthly birth-day.†

These considerations lead up to some peculiarities of reckoning or commemoration which have influenced the custom. The Apache father makes a note of each moon that follows the birth of a child. A large mark is made for the 10th month.‡ The Mayas celebrated as the birthdays of their children the first step taken, the first word spoken, and the first thing made.§ The Ovaherero reckon a man's age from the time of his circumcision, not counting the previous period. A man is called after the *otyiondo* of his circumcision. Those circumcised at the same time are *omakura*, 'persons of the same age.'‖ Such methods of reckoning age are convenient for the savage, who has little use for any more accurate reckoning. Other such epochs, which at a certain stage are the only 'birth-days,' are weaning, initiation, and marriage. The Baganda reckon a man's age by the reigns of the chiefs. 'It was in the reign of so and so that I was born.'¶

In the lower cultures names are curiously parallel and interchangeable, so to say, with dates. The Central Australians have each a name denoting age in relation to others, but have no annual reckoning. The Maori had one name given at birth, a second at puberty, a third on his father's death, and others whenever he performed some achievement.** An Aht will change his name perhaps ten times in ten years, and celebrate the event each time with a feast.†† In connexion with change of name there is the idea of renewal.

An early application of the principle of commemoration is 'the feast of the dead.' All the ideas connected with the spirits of the departed find expression here. In early religion these celebrations are as frequent and as important as any annual festival. In Oajaca great ceremonial attended the anniversary of the birth of great lords after their death. The belief was that the soul wandered about for many years before entering bliss, and visited its friends on earth once a year ‡‡

The Hindus observe the new moon of the month, *Bhādrapada* (September–October), in honour of the dead. On this day the head of a family must perform prescribed ceremonies for the preceding three generations.' The celebration is for such of the dead as may not have received the usual rites of sepulture. The fact shows, by negation, that the commemoration is the repetition of the event. The annual *śrāddhas* are well known. Their object is to 'assist the departed spirit in the various experiences it will have to pass through. At the same time, the one who duly performs these rites and ceremonies thereby lays up merit for himself and his family, which merit will be duly carried to the credit of his account hereafter.' One *śrāddha* is to provide the spirit with an 'intermediate body.' Another indicates the union of the dead with his immediate ancestors. The monthly *śrāddhas* commence on the 30th day after death. An annual ceremony is performed on the anniversary of the death.*

A slight shifting of the point of view will show the parallelism between such practices as the Hindu and the early Christian principle that the birth-day of the martyr was the day on which he died. The death-day of the faithful was regarded as their birth into a new life. The 'natale' *par excellence* was the day of death. It was a nativity to a glorious crown in the kingdom of heaven. Tertullian observes that St. Paul was born again by a new nativity at Rome because he suffered martyrdom there. Such *natalia* were contrasted with 'natural birth-days,' as spiritual in opposition to worldly. The 'birth-days' of martyrs, celebrated at the grave or monument, had a profound influence on the development of ecclesiastical institutions. The celebration was a service, at which the Communion was received. The ethical principle involved was imitation of the martyr, repetition in others of his life and death. The *fasti* of martyrs were gradually compiled, and churches were erected over their bones, the bones sometimes being replaced under the altar.†

The festivals of gods are frequently their birth-days. Thus the Hindu festival *Śrīrāmajayantī* celebrates the birth-day of Rāma, the seventh incarnation of Vishnu. The image of the god is adorned and carried in procession. Pilgrimage is made to the temple. *Kṛṣṇajayantī* is the birth-day of Kṛishṇa, and is one of the most popular of the annual festivals. The *Bhāgavata* describing the life of the god is read on that day. *Vināyakachaturthī* is the birth-day festival of Ganeśa. Every house sets up an image of the god, before which lights are placed. A *mantra* of consecration, *pratiṣṭā*, is pronounced, on which the spirit of the god enters the image.

In such acts we see a ritual re-creation of the divinity, a repetition of his birth.

At this feast, artizans worship their tools, and students their books, placing them before the image. Ganeśa is the god who is invoked in all undertakings, and who helps man on his way.‡

In Christianity the birth-day of Christ is only less important than the Passion and the Resurrection. Even here the social aspect of religion is prominent, and, by a coincidence, the date finally decided upon is that celebrated in paganism as the annual birth-day of the Sun, just as the weekly day of the sun, the Christian Sunday, was the weekly birth-day of the Solar Deity, and in Hebrew mythology the first day of Creation.

A. E. CRAWLEY.

BIRTH-DAYS (Greek and Roman).—Birth-day celebrations are to be met with in antiquity from a very early date. Æschylus presupposes them when he makes Apollo receive on his birth-day his oracle as a present from Phœbe (*Eumenides*, 6–8). Birth-days were celebrated with prayers, sacrifices, and banquets, and it was also the custom to offer presents to the person whose birth-day it was (*e.g.* a book, *Anthol. Pal.* ix. 93). Sometimes those who were born on the same day of the month formed a society, and called themselves τετραδίσται, εἰκαδίσται, etc. Later, it was frequently the custom for such societies to celebrate the birth-days of members of distinction, or these members themselves left an endowment to enable their associates to celebrate their birth-day even after their death. Such a posthumous celebration was called γενέσια, whereas the celebration during a man's lifetime was termed γενέθλια (schol. Plato, *Alcibiades*, 121 C). Plato's birth-day was celebrated by the Academy on the 7th of Thargelion, because Apollo was supposed to have been born on that day; and in other cases as well the celebrations of birth-days were fixed for sacred days (Plut. *Theseus*, 36; the Athenians mention the 8th of a month as the birthday of Theseus, ἐκ Ποσειδῶνος γεγονέναι λεγομένῳ· καὶ γὰρ Ποσειδῶνα ταῖς ὀγδόαις τιμῶσιν). From the time of the Diadochi we often hear of the celebration of the birth-days of kings, and from the time of Cæsar, of those of emperors (there is an important inscription which indicates that in Asia Minor the year began with the birth-day of Augustus [*Athen. Mitt.* xxiv. 288]), when festivities, games, etc., took place. The same honour was also extended to empresses and princes.

These honours passed from persons to cities: thus in Rome the *Palilia* was celebrated as the *natalis urbis*. More especially were such honours transferred to the gods: Athene was supposed to have been born on the 3rd of a month, Hermes on the 4th, Apollo on the 7th, and so on. In these cases the festival must always have been the *prius*, the birth-day the *posterius*. It often happens that the birthday of the god and the *natalis templi* coincide (Cic. *ad Att.* IV. i. 4, *CIL* xii. 3058).

BIRTHRIGHT.—See INHERITANCE.

BISHOP.—See MINISTRY.

BISMILLĀH.—1. **Meaning and early usage.**—*Bismillāh(i)*, an Arabic expression signifying 'in the name of Allah,' was borrowed by Muḥammad from the religious phraseology of Jews and Christians,* and was formulated by him in full as follows: *bismillāhi-r-raḥmāni-r-raḥīmi*, 'in the name of Allah, the Compassionate, the Merciful.' Muḥammad employed the phrase both in its shorter and in its complete form as an introductory formula, designed to connect the beginnings of action with the devout remembrance of God, and it is probable that, while still resident at Mecca, he recommended his adherents to use it in a similar way. In the Qur'ān he represents Noah as summoning the faithful to enter the ark with the words, 'Bismillāh ("in the name of Allah") be its voyage and its landing' (xi. 43); and, similarly, a letter purporting to have been written by King Solomon to the Queen of Sheba opens thus: '*Bismillāhi-r-raḥmāni-r-raḥīmi*' (xxvii. 30). Probably, too, he began his own ceremonial discourses, as collected in the Qur'ān,

* Padfield, *op. cit.* 165, 217, 225.

with the phrase, and the redactors of the sacred volume, in prefixing it (in plenary form) to the various *sūras*, evidently regarded it as a prefatory formula having Muḥammad's own sanction. We cannot divine the reason of its omission from the 9th *sūra*, although the Muslim exegetes show no perplexity in the matter, and provide several explanations, as may be found in commentaries to the Qur'ān. The earlier theologians of Islām were at variance with each other regarding the question whether the *bismillāhi*-formula at the beginning of the *sūras* was to be considered an article of revelation, *i.e.* an utterance of God, or an item proceeding from the Prophet himself; but eventually the former alternative carried the day, and it came to be held that everything between the two covers (*bāina-l-daffatain*) of the book, including, of course, the prefatory formula of the *sūras*, was the word of God.

It is recorded that, before Muḥammad arose, the heathen Quraish made use of the sacred formula *bismika Allāhumma* ('in thy name, O God') for a similar purpose—a statement which is certainly credible, though we have no evidence to test it by. According to Arabic tradition, which delights to associate every particular custom with the name of an individual founder, the person who introduced the use of this phrase into Mecca was Umayya b. Abi-l-Ṣalt, the reputed author of many apocryphal poems which promulgated monotheistic and Biblical ideas before the time of Muḥammad. Umayya is said to have learned the formula, as a potent talisman against the evil influence of demonic powers, from the lips of a Christian hermit, and to have made personal trial of it.* But as he was an older contemporary of Muḥammad, and survived the latter's entrance upon his public career, the older formula cannot, agreeably to the above tradition, have been in use long before the Prophet's day. It is even said, indeed, that Muḥammad himself had employed it, but that the revelation of certain verses in the Qur'ān (xi. 93, xxvii. 30) induced him to substitute for it, first the shorter, and then the longer, form of the *bismillāh*.† Nevertheless he would appear, according to Muslim tradition, to have sometimes resorted to the earlier Meccan formula even at a later period;‡ thus in a treaty which he made with the people of Mecca near Ḥudaibiyah in A.H. 6, he deferred to the vigorous opposition they offered to the new formula introduced by him, and quite readily sanctioned the use of the Quraish '*bismika Allāhumma*' as a heading to the document.§ '*Allāhumma*' is also approved as an invocation of God in Muslim petitions.

We may regard it as historically established that rescripts drawn up by Muḥammad's instructions, contracts concluded between him and tribes which yielded him their allegiance,‖ and even records of a more private character,¶ were usually prefaced by the plenary form of the *bismillāh*.** Thereafter its insertion in similar documents as a prefatory formula became part of the religious practice of the adherents of Islām.†† Official records from the early age of Islām, preserved either as transcriptions in historical works, or, more authentically still, as originals on papyrus sheets, always begin with the *bismillāh*. It is also found on textile fabrics and other products of industrial art.‡‡ In bilingual (Arabic-Greek) documents, which were common, especially in the Egyptian province, till far on in the Umayyad period, the Greek portion contains a translation of the formula, the shorter appearing as ἐν ὀνόματι τοῦ θεοῦ, while the plenary form expands this with the words τοῦ ἐλεήμονος φιλανθρώπου.§§

In accordance with the common Arabic practice of giving a convenient name to formulas by the device of omitting some of their constituent letters (as, *e.g.*, *ḥamdala* for '*al-ḥamdu lillāhi*,' *ḥay'ala* for *ḥayya 'ala-ṣ-ṣalāti*, etc.), the *bismillāh* is contracted to *basmala*, which is also a verb meaning 'to utter the *bismillah*'; and the use of the formula is also referred to as *tasmiya*, the invocation of the name (*ism*) of God.

2. Ceremonial use.—The *bismillāh* acquires a special ceremonial significance as the formula of benediction pronounced before slaughtering animals for food—a usage which, without doubt, was suggested by the Jewish law enjoining the utterance of the *b'rākhā* before killing and eating. The relevant injunction in the Qur'ān is found in vi. 118, 121: 'Eat of that over which the name of Allah hath been pronounced if ye believe in His signs' . . . 'Eat not therefore of that on which the name of Allah hath not been named, for that were certainly sin.' From this passage was argued the obligatory use of the *tasmiya** before slaughter; and, similarly, it was required that the benediction in Allah's name should precede the eating of the flesh of animals prescribed for that purpose. Even in the chase (v. 6) it was imperative to utter the name of Allah before releasing the falcon or the hound, and only on this condition could the quarry be afterwards used as food.† In pursuance of a hermeneutic practice of later Muhammadan theologians, certain theological schools attenuated the character of this absolutely binding ordinance to that of a mere wish, and in this way the omission of the actual utterance of Allah's name before the act of killing did not necessarily proscribe the use of the animal for food. If, for example, the observance of the regulation had been inadvertently neglected, the food might still be partaken of without misgiving—for, of course, the thought of Allah is never absent from the devout heart. But it is obvious that these interpretations and practical accommodations are at variance with the actual language of the injunction as given in the Qur'ān—a fact emphatically insisted upon in the teaching of the more rigid and literalistic interpreters of the book.‡

Another question of ceremonial relating to the use of the *bismillāh* arises in connexion with the Muḥammadan ritual of prayer (*ṣalāt*). The latter, as is well known, begins with the recitation of the 'opening' *sūra* of the Qur'ān (*al-fātiḥa*), whose first sentence is the *bismillāh* in its complete form. It has been from early times a subject of debate in the schools of the law whether this introductory phrase should be spoken aloud (*jahran*) or in an inaudible whisper—a controversy connected in its origin with the disputed question already referred to, viz. whether the *bismillāh* is to rank as Divine revelation or not. Most of the orthodox schools decided that the formula might be uttered in an undertone,§ but the Shāfi'ites, and especially the Shī'ites, demand that it be spoken in an audible voice.‖

3. Everyday use.—Having dealt with the use of the *bismillāh* in ceremonial functions and in im-

§ It is expressly recorded of 'Omar II. that, when leading in prayer, he did not pronounce the *bismillāh* of the *fātiḥa* audibly (*lā yajharu*) (Ibn Sa'd, v. 246, 25). The Khalīf al-Musta'in was accused by his opponents of double-dealing, because he spoke the *bismillāh* of the *fātiḥa* inaudibly when in Sāmarra, but elsewhere hypocritically uttered it aloud (Ṭabari, *Annales*, iii. 1683, 3 ff.).

‖ On this question see the present writer's 'Beiträge zur Litteraturgesch. der Schī'a u. d. sunnitischen Polemik,' *SWAW* (1874), 15 ff., 86.

portant affairs of public and private life, we proceed to speak of a view which sprang up in Islām at a very early period, and soon established itself in everyday practice—the view, namely, which finds expression in a proverb commonly regarded as a saying (*ḥadīth*) of the Prophet: *Kullu amrin dhī bālin lā yubtada'u bi-dhikri*-llāhi fahuwa abtaru*, i.e. 'every matter of importance which is begun without mention of God is maimed.' This maxim was taken by devout adherents of Islām as their warrant for the practice of inaugurating every action† by ejaculating a *bismillāh*. The prophet is traditionally reported to have said that Satan sits behind every one who mounts an animal without first having uttered the formula.‡ Its use as a blessing before meals is regarded as of special importance, and on social occasions the saying of the *bismillāh* by the head of the household intimates to the guests that the repast is to begin.§ Nor must the *tasmiya* be omitted when a person enters or leaves a house, or puts on his clothes.‖ The practice is felt to be in accordance with the thought of Qur'ān xxxiii. 41: 'Remember Allah with frequent remembrance'—a maxim highly approved in Islām. The idea that the utterance of God's holy name involves an impiety never found a footing among the Muslims, who are wont to say, rather, that if we love a person we often mention his name (*man aḥabba shay'an akthara dhikrahu*).¶

4. Superstitious ideas and use.—The deep significance and the sacred character with which Islām invested the *bismillāh* led at length to its being pressed into the service of folk-lore, mysticism, and even magic. It was said that God had inscribed it upon the breast of Adam, the wing of the angel Gabriel, the seal of Solomon, and the tongue of Jesus.** The Creator has written the sacred words upon His works. The imaginative eye can sometimes trace the formula in the veins of the leaf or the varied colourings of the butterfly's wing, where nature has imprinted it in mystic (Syriac) characters. The written and oral application of the *bismillāh* possesses talismanic virtues. When the soul in its death-struggle is striving to escape from the body, the angel of death brings from paradise an apple upon which is inscribed the formula, or the angel himself writes it upon the palm of the dying man, whose agony is alleviated by the sight of it, and whose soul then yields itself to the angel.†† The *bismillāh* serves also as a means of defence against the baneful effects of the evil eye, and other malign influences of occult forces. It is a popular notion amongst Muḥammadans that the *jinn* are easily offended, as, for instance, by human encroachment upon their haunts, by pouring out hot water, etc.; but if a man feels that he has provoked their resentment, he may drive them away by uttering the *bismillāh*.‡‡ Similarly, in order to render his goods proof against the *jinn*, he uses the phrase as a charm when he shuts the door, or stores articles of food in their appropriate receptacles, or lays down his clothes at night. An article protected in this way is called *musammā* (commonly pronounced *musemmī*), *i.e.* 'something over which has been named (the name of Allah).'*

The *bismillāh*, by reason of its prophylactic virtues, is deemed specially serviceable as an inscription for amulets, and, in general, as an accessory of practical magic.† Copious illustrations of this are to be found in the *Shams al-ma'ārif* of al-Būnī (†A.H. 622, A.D. 1225) and works of a similar nature. The Muslims also construct magic squares, and distribute the words of the *basmala* in magical combinations amongst the various compartments.‡ Al-Būnī is also the author of a monograph dealing specially with the use of the formula for magical purposes (*Faḍā'il al-basmala*).§

5. Calligraphic usage.—Mention ought finally to be made of a certain convention in the method of transcribing the *bismillāh*. When the Muslim calligraphist writes the formula for a ceremonial purpose, he imparts a peculiar form to its first word by way of signalizing, as it were, the exceptional character of the phrase as a whole. The vertical stroke of the initial letter *bā* (ب) is considerably prolonged in an upward direction, and slightly curved; then, the *'alif* (of *'ism*) being omitted altogether,‖ the *sīn* (س) is placed immediately after the *bā*, while the final letter *mīm* (م) is connected with the *sīn* by a line drawn far beyond the usual length (بســـــــــم). The Muḥammadan scribes would appear at a very early date to have introduced yet another alteration in the written form of the *bismillāh*—a peculiarity of common occurrence in MSS. Here the tips of the third letter *sīn* (س) disappear entirely, as well as the *'alif*, and the initial *bā* (ب) is joined to the final *mīm* (م) by a long horizontal line thus: بـــــــم. The antiquity of this usage is indicated by an incident recorded in Ibn Sa'd, viz. that 'the Khalīf 'Omar b. 'Abd al-'Azīz dismissed a certain scribe (*kātib*) from his office because he wrote *bism* without inserting the *sīn* distinctly' (*walam yaj'al al-sīn*).¶

I. GOLDZIHER.

BLACKMAIL.—The word 'mail' is derived from the Norman-French *maille*, which is used in the Act of 1335, 9 Edward III. c. 3 in the sense of 'half-penny.' We find three meanings assigned to this term.

1. Legally, blackmail refers to rents reserved in labour, cattle, or produce. In mediæval times rent was uniformly paid in kind—a custom that persisted in France down to the days of the great French Revolution. The Black Death and the Peasants' Revolt gave a powerful impetus to the transformation of English agricultural life, and among the results was the substitution of payment in money for payment in kind. In Scotland and Ireland, and indeed in the rest of Europe, this substitution was not effected till a comparatively late date. For rent in kind were substituted 'white rents,' which were reserved in 'white money,' or silver. In the Middle Ages there was a great scarcity of the precious metals, and this doubtless assisted in prolonging the existence of the old method of payment. The discovery of silver in

¶ Ibn Sa'd, v. 270, 14.

South America helped forward the movement from status to contract, with the result that white rent paid in current coin or white money (*mailles blanches*) began to replace the black rent. In Scots law the rents of an estate were called 'mails' or 'maills,' while 'Blanch Holding' and 'Mail' for rent are somewhat similar terms for this old custom. Camden (*Rem.* 205), explaining black money, says, 'What that was I know not, if it were not of Copper, as *Maill* and *Black-maill*.' Coke refers to 'Work-days, rent cummin, rent corn, etc. . . . called *Redditus nigri*, black maile, that is, black rents.' Blackstone supports Coke's explanation of *redditus nigri* (cf. Camden, (*Rem.* 1605, p. 205; Coke, *Inst.*, 1642, ii. 19; Blackstone, *Com.*, 1768, ii. 43; Burn, *Justice*[29], 1845, iii. 214). In this sense the term 'blackmail' is obsolete.

2. Historically, it is the tribute in corn, cattle, other kind, or money—here we are coming to the newer form—levied from the farmers and small owners in the border counties of England and Scotland, and along the Highland border, by free-booting chiefs in return for immunity from pillage. The border counties chiefly affected were Northumberland, Cumberland, Westmoreland, and the bishopric of Durham. Sir Walter Scott in *Waverley* (i. 222) represents one of the better aspects of this custom when one of his characters remarks, 'The boldest of them (*i.e.* the freebooters) will never steal a hoof from any one that pays blackmail to Vich Ian Vohr.' It is somewhat remarkable to find how wide-spread is the use of the word 'mail' with the meaning of 'rent' or 'tribute.' In Irish *mal* signifies a rent or tax. In Armoric *mal* signifies such wealth as is acquired by the strong hand; while in Afghanistan the contributory levy on a village is called *mallia*. Blackmail sometimes denotes the money taken by the harbingers or servants, with their master's knowledge, for abstaining from enforcing exactions like coin and livery. They made up for the abstinence in these places by plundering in others. Curiously enough, we find that in Ireland in the 14th cent. black money or blackmail indicates certain coins of an inferior kind authorized to pass current.

In 1552 Archbishop Hamilton (*Catech.*, 1884, 98), in reference to the forays of the border chieftains, mentions, 'Quhay takis ouer sair mail, ouer mekle ferme, or ony blake maillis, fra thair tennands'; while about 1561 R. Maitland, in *Thievis Liddesd.* vi., describes the 'commoun taking of blak maill.' On both sides of the Border severe Acts were passed to put an end to these depredations. Under the Scots king, James VI., the measure of 1597 describes how 'diuers subjects of the Inland, takis and sittis vnder their assurance, payand them black-maill, and permittand them to reif, herrie, and oppresse their Nichtbouris.' In 1601—a memorable year in economic legislation—an English Act of Parliament also notes that 'sundry of her Maiesties louing subjects within the sayed (*i.e.* the four northern) Counties . . . have been inforced to pay a certaine rate of money, corne, cattell, or other consideration, commonly there called by the name of Blacke maile.' The 43 Eliz. c. 13, s. 1, made the levying or paying of this blackmail a felony without benefit of the clergy. The *Termes de la Ley* informs us that 'Blackmail is a word used in 43 Eliz. c. 13, and it signifies a certainty of money, corn, cattell, or other consideration, given by the poore people in the north parts of England, unto men of great name and aliance in those parts, to be by them protected from such as usually robbe and steal there.' Cowell in his famous Law Dictionary, *The Interpreter*, notes that 'these robbers are of late years called Moss-troopers.' The depredations of the Border chieftains, in spite of these repressive measures, did not cease till towards the end of the 17th century. In 1707 an 'Address from Cumberland' in the *London Gazette* points out that 'there is, now, no Debatable Land to contend for; no Black Mail to be paid to the Leaders of the Robbers, as a Ransom' (cf. Blackstone, *Comm.* iv. 263).

3. The term is now usually applied to offences called in French *chantage*, that is, the extortion of money, or other valuable consideration, by intimidation, by the unscrupulous use of official or social position, or of political influence or vote, by persons upon those whom they have it in their power to help or injure. In one sense the Border robbers have passed away, but in another sense they are with us still. For the organized forms of the Camorra of Naples, the Mafia of Sicily, the Black Hand of the United States, and the Highbinders of China are largely blackmailing bodies. Their methods and rules of procedure are much the same as those of the outlaws of old. Like them, the Black Hand, for example, levy blackmail, kidnap men or their children and hold them to ransom, murder their victims in cold blood if the ransom be not forthcoming, and terrorize the surrounding population into tacit complicity. In private life the only hope of resisting the blackmailer is to refuse to pay the first time he makes his demand. Mr. W. E. Gladstone was accosted late at night by an unfortunate woman to whom he gave alms. A man, who saw him speaking to her, stopped the statesman and attempted to levy blackmail. Mr. Gladstone kept him in conversation till a policeman came in sight, when he at once gave the blackmailer in charge. In English common law it is a misdemeanour to threaten to publish any libel upon any other person, directly or indirectly, if the act is done with the intent to extort any money or other valuable thing. The punishment is imprisonment, with or without hard labour, for three years. It is a felony to demand of any person, with menaces and without any reasonable cause, any property, and the punishment thereof ranges from penal servitude for life to a period not less than three years. The truth or falsehood of a threatening accusation, whether of crime or misconduct, is absolutely immaterial: the accused cannot set up truth as a justification of his conduct. The French and German codes deal with blackmailing in an equally stern manner. The latter states that, if the extortion is committed by violence against a person, or with the application of threats, the author is to be punished like a robber.

LITERATURE.—The authorities are quoted in the article.

ROBERT H. MURRAY.

BLASPHEMY (Gr. *βλασφημία* = (1) an ill-omened or profane utterance, a light or rash prayer; (2) a slander, or any defamation; (3) impious speech against God. Oppos. *εὐφημία*).—1. **Blasphemy as a sin.**—Blasphemy as a sin and an ecclesiastical offence is peculiar to the Jewish and the Christian religion and to allied monotheistic cults. For, though the religions of Greece and Rome, and indeed of most countries, were far from viewing with equanimity the utterance of words which might offend any of their gods, yet the abhorrence caused by such utterances was due mainly to a fear of the disasters which the offended god might be expected to inflict on the whole tribe of which the offender was a member. The trial of Socrates would illustrate this, since he was accused of 'teaching men not to receive the gods whom the city acknowledged, and of having new gods' (Plato, *Apol.* 24 B). Under English common law this offence would have been the subject of an indictment for blasphemy, but the freer Greek spirit treated it as an offence against the welfare of the State. Similarly, in the charge brought by Pythonicus against Alcibiades (Thucydides, vi 53),

that he had divulged the mysteries of Eleusis, the gravamen was not so much that the act was an offence against the gods as that it was dangerous to the community. The Roman criminal law appears to have had no provision against blasphemy, apparently because, 'in spite of the intensity of Roman religious feeling, the religion of the State was always absolutely subject to the political authority' (Hunter, *Roman Law*, 1880, p. 10), and hence an offence against religion was once more not so much a sin as a crime. Persons who introduced new kinds of worship, unknown to custom or reason, disturbing weaker minds, were to be punished—if persons of rank, with deportation; if not of rank, with death.

2. In the Old Testament.—It is to the Jewish and Christian law (with their off-shoots), then, that we have to look for the creation of the offence of blasphemy. We omit the 'contempt' for God referred to in Mal 1^6, the dishonour done Him by withholding the offerings due to Him in Mal $3^{8.9}$, the swearing falsely by His name in Lv 19^{12}, the sin 'with a high hand' of Nu 15^{30} (cf. 2 K 19^{22}), the reviling (or murmuring against) the Elohim of Ex 22^{28}, since, though these all are directed against God, they do not rise to the height of the specific sin of blasphemy. A record, however, of this sin is found in Lv 24^{11}, where a man of mixed breed 'blasphemes the Name.' In this case doubt seems to have been felt about the prescribed penalty, for the offender was put back until 'the mind of the Lord' could be ascertained. This was found to fix the penalty of death by stoning, and the law was then promulgated: 'He that blasphemeth the Name of the Lord, he shall surely be put to death, and all the congregation shall certainly stone him' (v.^{16}). This was the only kind of reproach against God which was punishable with death at the hand of man, lower kinds (such as those referred to above) being left to the judgment of God. For post-Biblical Jewish usages see next article.

3. In the New Testament.—The offence of blasphemy is referred to frequently in the NT: in the case of the sin against the Holy Ghost (Mk $3^{28ff.}$); in the case of the man whose sins were pronounced by Jesus forgiven (Mt 9^3, Lk 5^{21}), when the scribes accused Him of blasphemy; when the Jews declared the saying 'I and my Father are one' to be blasphemous (Jn $10^{33.36}$); when Jesus declared Himself at His judgment (Mk 14^{64}); St. Stephen was accused of speaking 'blasphemous words against Moses and God' (Ac 6^{11}); in Ac 13^{45} and 18^6 and Ro 2^{24} the Jews in their turn are accused of blasphemy; in Ac 26^{11} St. Paul accuses himself of making the Christians blaspheme. The word occurs five times in the Pastoral Epp. (1 Ti 1^{20} $6^{1.4}$ and Tit 2^5 3^2), once in James (2^7), and nine times in the Apocalypse (2^9 $13^{1.5.6\,bis}$ $16^{9.11.21}$ 17^3). From these passages it appears that any expression was considered blasphemous which was wrathfully, despitefully, or contemptuously directed against God, His being, or goodness, which arrogated His attributes for a creature, which opposed a truth revealed by Him, or opposed an institution of which He was the author.

4. In Church history.—The feeling and the judgment expressed in these passages were taken over by Christianity, and enforced, after its union with the civil power, by temporal pains and penalties. The *Novellae* of Justinian (lxxvii. 1) relate that some

'used blasphemous expressions and swore by God, and so provoked Him to anger, and that it was enjoined on such men therefore to abstain from such blasphemies, and from swearing by the hair, or by the head, and similar expressions; for, seeing that blasphemies against men went not unpunished, far less would blasphemies against God. If, in spite of this admonition, any one committed the offence of blasphemy, he was to suffer the extreme penalty of the law' (*Corp. Jur. Civ.*, ed. Schöll, 1895, vol. iii. p. 382).

In the Middle Ages the ecclesiastical court was the principal authority for the punishment of blasphemy, the temporal power being called in, when required, to enforce the judgment of the court ecclesiastical. Thus in a decree of Gregory IX. it is laid down that, if any one shall have presumed to loose in public a blasphemous tongue against God, or any one of His saints, or, in special, against the Blessed Virgin, he shall be condemned by the bishop to public penance at the church door for seven Sundays, being on the last Sunday deprived of his shoes and outer clothing, to fast and give alms. In default he might be excommunicated and deprived of Christian burial, and be subjected to a fine by the temporal power (*Decret. Greg. IX.*, lib. v. tit. 27, c. 2; *Corp. Jur. Canon.*, ed. Richter-Friedberg, ii. 830).

Charlemagne had already incorporated in the law of the Empire the Christian law against blasphemy, and given his sanction to the principle that God Himself was injured by blasphemy, and that He would visit the offence on all the people, thus ingeniously uniting in one the older pagan and the newer Christian sentiment. Louis le Débonnaire followed him with laws against blasphemy which inflicted the death penalty. Philip Augustus fulminated against those who swore: 'Tête bleue!' 'Corbleu!' 'Ventrebleu!' 'Sang bleu!' Offenders, if noble, were to be fined; if *roturiers*, they were to be put into a sack and drowned. St. Louis ordered that offenders should be branded on the forehead, and if they repeated the offence, should have their tongue and lips pierced. With this agrees the ordinance of Henry III., which enacted that, for the first four offences, a blasphemer should be committed to prison on bread and water; for the fifth offence, he should have the under lip slit; for the sixth, he should have it so slit that his teeth were to be seen; for the seventh, his tongue should be bored; and for the eighth, he was to be put to death. It was, indeed, about the end of the 15th cent. that blasphemy was most severely punished; but from that date onwards the feeling has gradually gained ground that God is not a Being who can be injured by man's insults, and that, when blasphemy is punishable, it is as an offence against society.

The Scholastic treatment of blasphemy calls for a short notice. Defining blasphemy, with Gury, as *locutio Deo injuriosa*, or, with Suarez, as *verbum maledictionis, convicii seu contumeliae in Deum*, it divides it into 'immediate' when directed against God Himself, and 'mediate' when it attacks Him through His Word, His Church, His officers, sacraments, or saints. It is in its form threefold, 'heretical' when it involves a false doctrine, 'imprecative' when in the form of a curse, or merely 'abusive' (*probrosa*). Materially, it is threefold: (1) when it attributes to God what is not His; (2) when it deprives Him of what is His; and (3) when it assigns to the creature what belongs to the Creator—the first two of which St. Thomas declares to be but the affirmative and negative sides of the same truth, and the last to be a subdivision of the first. Blasphemy is a mortal sin, as being contradictory to charity; nay, it is the greatest of all sins, seeing that it adds to a denial of the faith a detestation in the will, and is aggravated by its outburst into words, as, on the other hand, faith is augmented by love and confession.

5. As a crime.—It has been already stated that a milder judgment on blasphemy has during the last four or five centuries gradually been ousting the feeling which finds expression in Lv 24^{16}. The change, however, has been of slow growth. So

late as A.D. 1656 we find, for instance, a poor mad Quaker, James Nayler, for allowing himself to be honoured as Jesus Christ, sentenced by the House of Commons to be put in the pillory, whipped from Westminster to the Old Exchange, again placed in the pillory, to have his tongue bored, his forehead branded with 'B,' then taken to Bristol, there again whipped, and then sent to Bridewell to remain until Parliament should release him. Again, in 1812 an unhappy bookseller, Daniel Isaac Eaton, of Ave Maria Lane, London, was sentenced to eighteen months' imprisonment and to the pillory for publishing criticisms on the Bible story, after the manner of Thomas Paine. It is noticeable that Lord Ellenborough, in sentencing Eaton, did so on the express ground that 'the Christian religion is the law of the land, and must be protected as the law.' It was held blasphemy in the Court of Exchequer in 1729 to maintain publicly that the character of Christ is defective, and His teaching misleading, and that the Bible is no more inspired than any other book. In 1868, George Jacob Holyoake was sentenced to six months' imprisonment for oral blasphemy—for saying after a lecture in reply to a challenge: 'I do not believe there is such a thing as a God.' The law of England is still sufficiently severe against blasphemy. 'It is, indeed, still blasphemy,' according to Mr. Justice Erskine, 'punishable at common law, scoffingly or irreverently to ridicule or impugn the doctrines of the Christian faith.' On the other hand, 'if the decencies of controversy are observed, even the fundamentals of religion may be attacked without a person being guilty of blasphemous libel' (Lord Chief Justice Coleridge).

The net result of the slow process of change which has been going on for centuries in men's minds on this, as on all kindred subjects, is that blasphemy has become the technical name for a particular offence against the State. It is a crime against the peace and good order of society; it is an outrage on men's religious feelings, tending to a breach of the peace. As an indictable offence it is described by Blackstone to be 'denying the being or providence of God, contumelious reproaches of our Saviour Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule' (Stephen's *Commentaries*[18], iv. 185). But though the existing law of England still embodies the tradition which regards blasphemy as a sin, and upholds the Christian religion, in practice it treats it as an offence against the peace and good order of society. It is open to anybody to call in question any article of religion, provided that his method of expression is not obnoxious to the authorities. In France the same practical state of things prevails; for, though its Code does not prohibit blasphemy as such, it yet prohibits it as an offence against good order. In Germany public blasphemy is punishable with one to three days' imprisonment; but the blasphemy must be public, coarsely expressed, and offence must actually have been caused (*Deutsches Reichsstrafgesetzbuch*, § 166). The Austrian law is stricter, and the offender may suffer imprisonment for a term ranging from six months to ten years (*ib.* §§ 122, 123, 124). In the United States the law of blasphemy is essentially the same as in England, being based on English common law and early statutes.

Thus Christian Europe and America have brought the wheel full circle round to where it was in Seneca's day, when that distinguished pagan could write:

'We are far from what we ought to be if we do not think of God as possessing all things, bestowing freely all things. Why do the gods bestow on us their bounty? It is their nature to do so. The man who thinks that they do no harm because they are unwilling errs They cannot. They can neither inflict injury nor receive it. For to harm and to be harmed go together' (*Ep.* 95, ed Haase, 1873, iii. 307).

To this it is only necessary to add the remark that, while the legal definition of blasphemy as an indictable and statutory offence is precise, the word itself has in literature and common parlance, as is natural, a wider and looser meaning. Thus, Jefferies (*The Story of my Heart*[2], 1891, p. 125) writes: 'I believe all manner of asceticism to be the vilest blasphemy—blasphemy towards the whole of the human race.' Ruskin (*Stones of Venice*, I. i. 37) speaks of 'representations of Christian subjects which had become blasphemous under the treatment of men like the Caracci'; and Bacon in his *Advancement of Learning* has the phrase 'blasphemy against learning.'

W. F. COBB.

BLASPHEMY (Jewish).—All subsequent Jewish notions on the subject of blasphemy were derived, in their main principles, from the incident narrated in Lv 24[10-23]. In the course of that passage the general rule is enunciated (v.[16]): 'And he that blasphemeth the name of the Lord, he shall surely be put to death; all the congregation shall certainly stone him: as well the stranger as the home born *when he blasphemeth the name* shall be put to death.' Rabbinic tradition (already represented in the Targum) interpreted these italicized words to mean that, to render blasphemy a capital crime, the offender must actually pronounce the name of God, accompanied with disrespect, the nature of which is not defined. The reverential reluctance to *name* God even in worship grew up early, and, as is well known, is already exemplified in Psalms, Chron., and the LXX. The blasphemer who used the prevalent substitutes for the name of God was subjected to flagellation (*Sanh.* 56*a*). The writer of Pentateuchal scrolls was required to place his mind in a devotional attitude when writing the name of God, and in certain cases when he made an error in writing the name, the mistake was irremediable, and the whole column on which the error occurred was withdrawn from use (*Soferim*, ch. iv.). The name itself could not be obliterated. The only individuals who lawfully uttered the name were the priests. The priestly benediction (Nu 6[22-27]) is introduced by the words, '*Thus* shall ye bless the children of Israel,' and closes with the phrase, 'And they shall put *my name* on the children of Israel.' These commands, it was held, compelled the priests to utter the name as written, and made a substitute unlawful (*Soṭa*, 37*b*; *Sifri* on Nu 6[22]). It is recorded that sages communicated the pronunciation of the name to their disciples once in seven years (*Ḳiddushin*, 71*a*). Again, it is reported in a tradition that the priests themselves, after the death of Simon the Just, discontinued the pronunciation of the Tetragrammaton in the blessing (*Yoma*, 39*b*; *Menaḥoth*, 109*b*). The high priest, however, continued to pronounce the name on the Day of Atonement, amid the prostrations of the people (Mishn. *Yoma* iii. 8, etc. According to the Tosefta *Yoma* ii., the high priest uttered the name ten times on the fast).

This reluctance to utter the name of God was paralleled by a similar objection to hearing the name uttered. In the blasphemy trial, as described in the Mishna (*Sanh.* vii. 5), the witnesses were not allowed to repeat the actual blasphemy in their evidence against the accused; but when on a *prima*

facie case the capital charge was proved, then before sentence of death was promulgated one of the witnesses was required to utter the actual blasphemy with which the accused was charged. The judges rose to their feet and rent their garments—the statement of the Mishna thus fully confirms the report in Mt 26^{65}. According to Josephus (*Ant.* IV. viii. 10), a Jew was forbidden to blaspheme a heathen deity. Besides incurring the death penalty, the blasphemer was, in the Rabbinic view, regarded as excluded from Paradise (*'Abodā zārā*, 18*a*; Mishn. *Sanh.* xi. 1. In the latter passage this deprivation is, according to Abba Saul, incurred by any one who utters the Tetragrammaton). The Talmud asserts that the offence of blasphemy greatly increased when the death penalty for blasphemy was abolished with the loss of Jewish jurisdiction (see vol. i. p. 130^b. It may be interesting to add that Eleazar ben Zadok, a contemporary of Josephus, relates that as a child he saw the unchaste daughter of a priest burnt on bundles of grape-vines [Mishn. *Sanh.* vii. 2; Talm. fol. 52 *a–b*]. This the Talmud regards as having been the act of a Sadducean, not of a Pharisaic, court). Yet, despite this supposed increase in the prevalence of blasphemy, we find a strong abhorrence of everything which showed disrespect to the Deity. Rabbinic theology actually included blasphemy among the offences prohibited by natural law; this is the meaning of its inclusion in the seven Noachian prohibitions (with adultery, murder, idolatry, and so forth [*Sanh.* 56*a*]). Moreover, the stern moral denunciation of *profaning the name* (חלל השם) was the outcome of this range of ideas. To *profane the name* came to imply all forms of irreverence, of private insincerity, and of public disrespect for morality and religion. 'For him who has committed this sin there is no power in repentance to suspend the punishment, nor in the Day of Atonement to atone, nor in suffering to purify' (*Yoma*, 86*a*)—full forgiveness was attained only when the sinner died (cf. Schechter, *Some Aspects of Rabbinic Theology*, p. 329). Profaning the name was thus something more than mere blasphemy, for of blasphemy we are emphatically told that repentance suffices to atone (*Pesikta Kahana*, 163*b*).

In the Middle Ages the blasphemer, it was held, ought to be excommunicated (*Responsa of Geonim*, ed. Müller, 103). The current Jewish Code requires the auditor of a blasphemy to show his feeling of revulsion by rending his garment (*Shulhan 'Arukh*, *Yoreh Deah*, 340, 37). Naturally, however, as public opinion has tended to weaken the efficiency of excommunication, so it has become less and less usual to take any practical notice of the offence of blasphemy. Blasphemy in the older view had been an act of rebellion, parallel to Korah's; it was a 'stretching out of the hand to the root' of religion. But such acts of rebellion are no longer punishable, and the Synagogue has shown itself as disinclined as any other organization to attempt the punishment. See HERESY.

I. ABRAHAMS.

BLASPHEMY (Muhammadan).—Blasphemy is regarded by Muslim jurists as one of the most convincing proofs of unbelief. If a Muslim has been guilty of this heinous sin, he is to be put to death as an apostate unless he is willing to repent (cf. art. APOSTASY [Muhammadan]). All utterances expressive of contempt for Allāh Himself, for His names, attributes, laws, commands, or prohibitions, are to be considered as blasphemy. Such is the case, for instance, if a Muslim declares that it is impossible for Allāh to see and to hear everything, or that Allāh cannot endure to all eternity, or that He is not one (*wāḥid*), but only 'one of three,' etc. All scoffing at Muhammad or any of the other prophets or apostles of Allāh is also to be regarded in Islām as blasphemy.

Unbelievers who have obtained permission to reside within the domain of Islām (the so-called *dzimmīs*) are in like manner forbidden to use, in the presence of Muslims, disrespectful expressions about Allāh or His apostles, or about the dogmas and institutions of Islām. For instance, they may not testify publicly that Jesus was the Son of God. The unbeliever who is guilty of blasphemy in the eye of Muslim law is not, however, put to death, but expiates his offence by *ta'zīr* (a penalty determined by the judge, according to circumstances).

BLESSEDNESS (Chinese).—**1. Perhaps the best way of arriving at some preliminary notion of the conceptions of blessedness cherished by the Chinese is to examine in the first instance their methods of ordinary speech, which can easily be traced back in spirit to the utterings of antiquity. When a Chinaman asks an acquaintance how he fares, the stereotyped reply is: 'I depend upon your happiness,' or 'Thanks to you.' In matters of greater gravity, the Emperor or any other of his subjects, official or otherwise, will say: 'Thanks to the shade of my ancestors' happiness, I am,' etc. When two or more persons are thrown together in pursuit of a common interest, whether it be marriage, partnership, political sympathy, or what not, it is the practice to say and to assume that the individuals, or the families to which the individuals immediately concerned belong, 'have a predestination,' *i.e.* have some spiritual affinity which is continued from the anterior existence into the present existence. The word *yüan*, here translated 'predestination,' was extended in later times to signify spiritual sympathy or connexion in the present life, and even in the future life: its original meaning is a 'hem,' 'collar,' 'connecting thread'; hence a 'reason,' 'to follow up,' 'to climb up.' After the advent of Buddhism in the first century of our era, the old term *yin-yüan*, or 'because clue,' was adapted to the *nidāna*, or 'causes and effects' connecting past existences with present (Eitel, *Handbook of Chinese Buddhism*^{2}, 1888, p. 84); and so now in popular usage the Buddhist idea is usually connoted in the mind of the speaker or writer. But, none the less, the basic notion really takes its origin in the ancient ancestor-worship of the Chinese, one of the most elementary principles of which was that no happiness could exist in this life unless the spirits of the dead were conciliated by living representatives through sacrifice, prayer, and duty. In other words, blessedness can exist securely on earth only under the shadow or protection of the Spiritual Abode above. When a man enters into conversation with a stranger, and the interview develops sympathetic interests on both sides, one will say to the other: 'We two have a *yüan*'—meaning, 'it was already planned out before our birth that we should meet,' even if only to buy and**

sell a horse, though the expression belongs rather to matrimonial arrangements. One friend will often write to or hail another as 'old generation elder brother,' the more ordinary term being 'old brother' simply. The addition of the word *shi*, meaning 'generation,' 'world,' or 'hereditary,' (for it signifies all three), delicately suggests for the past a subtle spiritual connexion running, it may be, through more than one world.

Like other nations, the Chinese have never been able to conceive conscious Deity otherwise than in the shape of man. Man has ever conceived of himself as a being above all animals, and thus he cannot but imagine the Deity in the highest conceivable shape. Hence it is scarcely to be wondered at that the Chinese have always conceived the Spiritual Abode to be a mere reproduction of the present earthly abode; its denizens being subject to the same feelings and passions, and divided into the same ranks and classes as here on earth.

One of the most ancient Chinese documents we possess, the *Hung-fan** (B.C. 1100), or 'Great Plan,' thus enumerates the 'Five Blessednesses': Long Life, Wealth, Serenity, Love of Virtue, and Object achieved at Death. This idea of blessedness in the present world is still found, after running an unbroken course of 3000 years, in the popular speech of to-day. Thus, if a Chinese wishes 'a happy New Year,' the reply is: 'May you be promoted; may you have sons; may you live rich and distinguished days!' On almost every door-post or lintel in the empire, at least when the New Year comes in, if not at most other festive times, may be seen the two words 'happiness' and '(old) age.' These two undoubtedly take premier rank among the Five Blessednesses in the Chinese mind: the love of virtue (which in China has nothing whatever to do with sobriety and continence) decidedly takes second rank; but still it is there, and most respectable Chinese, after the immediate necessities of life have been obtained, take a keen pleasure in doing what we should call 'kind acts.' The 'object achieved at death' may reasonably be held to include a proper provision of sons and grandsons for the adequate continuation of the family chain, or 'dying at the zenith of success,' *i.e.* dying with ambition or desires fully achieved—a stock Imperial phrase in reference to deceased statesmen. The ideal picture of Chinese happiness has been best given in many shapes by G. É. Simon (once French Consul at Foochow) in his pretty and sympathetic little work, *La Cité chinoise*, published in the year 1890: such pictures as he draws may be daily seen by any one who travels extensively over the more primitive districts of China, whither 'progress' has not penetrated. The grandest ideal of all blessedness is 'five generations in one hall,' *i.e.* great-grandfather, grandfather, father, son, and grandson—if possible, each with his wife still living—all in the same homestead; the old people calmly smoking their long metal pipes, giving advice, and sipping tea in the comfortable protected corners; the younger generations exposing themselves to the elements and doing the hard work; all the males assembling in the hall (or threshing-floor, according to season) for common meals; all the females decorously confining themselves to the 'inner apartments' (often merely a curtained-off space) or secluded gardens; each generation tenderly caring for the seniors' wants; each venerable man mildly but confidently authoritative to those below him, as he individually is perfectly deferential to his own parent or parents. In the field hard by is the ancestral cemetery; perhaps only the graves of an off-branch are there; possibly those of ten or twenty ancestors, ranged right and left of the 'first (migrating) ascendant.' In any case the book of genealogy for remote ancestors can be found, when needed, somewhere in China. There is little luxury in the ideal Chinese life: no boarded floors; no ceilings or papered walls; no glass or linen; no expensive wines or smart reception rooms. As a rule, the life, no matter how high the retired official may be, is what may be termed 'farm life.' Plain cotton clothes; plenty of rice, pork, and vegetables; good plain cookery; fine clothes for ceremonial occasions stowed away in chests; bedizenments for the women; pigs, poultry, ploughing cattle (seldom carts or horses); manure in heaps (or even plastered to the walls); fish and hams, or pemmican, drying and being smoked in the rafters; stiff chairs or benches; easy demeanour to servants and slaves; and, above all, perfect democracy and entire absence of snobbery: age is the only 'quality'; money counts not. Of late years newspapers have been added to the modest store of 'good books'; and (too often, alas!) so has opium been added to the mild tobacco, rice spirit, and tea of antiquity. (Tobacco, by the way, only dates from about A.D. 1500, and tea from A.D. 600.) Comfortable, healthy griminess may be said to represent well-to-do Chinese country life: baths and sanitary arrangements are, of course, entirely absent, and no one seems one penny the worse.

Here clearly we have long life, wealth, peace, and death with honour. But where does love of virtue come in? Well, a good family is neighbourly, hospitable, and friendly; even foreigners are courteously received as equals, so long as they behave themselves prudently, and so long as evil rumours have not preceded them. Kindness to slaves (who in any case are usually indistinguishable by strangers from free men) is a great Chinese characteristic. A mandarin of rank does not mind a slave lighting his pipe for him; he will sleep on the same mattress with that slave in a travelling boat; he is courteous to him in speech—so long as there is no fault to check. Kindness to animals is another Chinese trait: perhaps negative rather than positive—not fussy solicitude, but negligent easy-going tolerance, subordinate, however, to practical human needs. A country squire of the above described type will associate with equals and inferiors at the temple—he does not mind much whether it be a Buddhist, Taoist, or other temple. He has his own ancestral buildings for the settlement of family disputes; sometimes the whole village or town belongs to one single family-name, or two family-names; the village temple consequently suffices for more general interests. Mandarins are not by any means all bad: the local squireen endeavours none the less to avoid official friction, and to keep his village free of tax-collectors' exactions and the police harpies, who are unpaid, and 'live on their warrants.' Local self-government is universal; so long as the land-tax is paid, order and decency are maintained along the roads, and (latterly) so long as a reasonable tax, or, at all events, the customary tax, on commercial movement is not evaded. The virtuous paterfamilias promotes schools, maternity establishments, charities generally, and favours 'arbitration' in lieu of law. The elders may, as a rule, in council compound or hush up any crime but treason and parricide, so long as they agree, and so long as the mandarin has not the case officially brought before him. Religion in China is ignored rather than cultivated, and the priests (Buddhist and Taoist), though treated politely, especially if they are fairly educated men, are regarded as quite an inferior caste; yet their services are conventionally sought even

* See *SBE*, vol. xvi. p. 420 ff.; and Chavannes, *Mémoires Historiques*, vol. iv. pp. 280–281; also Mayers, *Chinese Readers' Manual*, p. 312.

by orthodox Confucianists when there is death in the house. If unprovoked religious observance is indulged in at all, it usually takes the form of a play at the village temple, when both sexes assemble for the combined purposes of consulting the oracles, praying for rain or children, and hearing historical dramas, and also for formal social intercourse generally. Admittance is free to all, and the local rich man pays the itinerant company.

2. Having now examined the question as to how far the idea of earthly blessedness is discernible from the ordinary conversation of social life, we come to more general, if undefined, principles, one of which is that a happy existence on earth involves no spiritual comfort derived from supernatural considerations, but takes into account solely human desires, passions, dislikes, and fears, as they are born in us, and as they are and ought to be regulated by *li*. What this *li*—usually translated 'rites' or 'propriety'—is, it is not so easy to define verbally as to realize mentally; but it may be called the Law of Nature and Right as seen by the collective wisdom of the highest human types, as understood by tradition, and as laid down by the Emperor (and his lieutenants) as Vicegerent of Heaven. The past life and the future life are the same thing; that is to say, life in heaven is exactly the same as life on earth, except that what the Chinese poets call the 'stinking bag,' or body that contains the human soul or spirit, must be considered as midway between the two. Every individual, though begotten of his father, really comes spiritually from the past life, where the souls of his ancestors are, and returns to the future life, whence his own soul contemplates his descendants on earth: the link is an unbroken one. The duty to ascendants and descendants is the same, though in a different set of phases, as is the duty to one's self; the past, the present, and the future are thus merged in one; the idea of 'time' does not come in at all. The intense anxiety to possess a male heir (by adoption of agnates, or, if none, of cognates, failing a natural heir) is now made intelligible, as also is the extreme punishment of 'cutting off posterity,' which leaves 'uneasy ghosts' to wander about for ever without dutiful attention. What heaven is, of course, no one knows, ever did know, or (in our present state of knowledge) ever can know; but such as it is, it is in the Chinese mind a place where sentient individuals in the shape of human beings conduct affairs, whether as emperors, officials, freemen, or slaves; and, as we have already shown, nothing higher than a human being, or a sentient being with human feelings, has ever or could ever have been conceived of. It is often even uncertain whether heaven is viewed as a place or as a person; or say, rather, 'Heaven forbid' and 'who art in heaven' are Chinese as well as Christian. The 'Spirit of Heaven' and the 'Emperor Above' are often convertible terms. There is but one life. The ancestor in the past is miserable unless he be tended; the mortal in the present is, or ought to be, miserable unless he tends, and unless he secures legitimate born or unborn links to tend himself when he is dead.

Hence the ancestor must always be kept informed, with due fasting and purification, of the successes and failures of the representative individual, be he ruler or ruled; and the ancestor's spirit clings to his special wooden name-tablet standing in the family temple; nor will he accept the sacrificial offerings, or evince his approval of what is done, unless things are conducted in accordance with *li*. Failure to render ghostly service to the spirits is liable to bring on mundane disaster in the shape of inundations or other irregularities of nature. But the spirits of any given family will accept sacrifice only from the legitimate representatives of that family; hence the enormity of cutting off for ever the only persons or links able to continue the family chain of life. Then only it is that Heaven steps in, finds that the virtue has gone out of its former *protégé* or nominee, and confers the vicegerency upon another ruling house: the same thing, *mutatis mutandis*, for private persons. This position is well illustrated in the year 516 B.C., when the ruler of Confucius' State took to flight in consequence of internal revolts (see *Tso Chwan*, ch. 42, p. 2). One of his ministers said: 'I do not know whether it be that Heaven has abandoned the country, or whether the country has committed some great offence against the ghosts and spirits.' It was necessary for a ruler—were he Emperor, king, vassal-prince, or what not—to have a domain before he could sacrifice to the spirits of his ancestors; and thus in ancient China the fiefs were at first subdivided indefinitely, and the domain gave a name which grew into a family name, or, as we say, a surname. Hence we find sacrifices to the gods of the land, the harvests, the rivers, mountains, and the frontiers, all concurrent with the personal sacrifice to ancestors. Dispossessed princes of previous dynasties were rarely cut off without mercy. Not only were their persons spared, but an estate, however insignificant, was conferred upon their lineal representatives by the ruling power favoured by Heaven's new choice, and these representatives were received as guests and peers by the Emperor when they presented themselves to do homage for their holdings. Except under circumstances of great provocation, it was considered impious to cause the extinction of a family, and thus to put a stop to the ancestral sacrifices. That sacrifice to ghosts and spirits can be viewed as distinct from and inferior to the sacrifices to the Emperor Above is instanced by a case in the year B.C. 482 (*Tso Chwan*, ch. 48, p. 20), when an official of Confucius' vassal-State was detained in captivity by the semi-barbarous State lying to its south. Though the State in question was ruled by the same family as the then Imperial family of China, and also the same family as that ruling over Confucius' State, the aboriginal population was still half savage, and even the Chinese rulers had become corrupted by popular spirit-worship and local superstitions. The captive orthodox minister accordingly said, well knowing this superstitious weakness: 'You had better let me go to take part in the sacrifices to the Emperor Above, which my master, the ruling duke, has to render at this season; otherwise the priest of the temple will hurl imprecations against your king!' The device succeeded.

3. It was manifestly considered doubtful whether the dead really had any exact knowledge of what was transpiring on earth; for in B.C. 502 a royal maiden of North China, who found herself dying in the above-named semi-barbarous kingdom, said: 'If the dead really possess any knowledge, please bury me where I can at least see my own native land.' A year before that, a semi-barbarous general, who was about to set fire to the enemy's camp, in which the bodies of many of his own slain also lay, asked, when remonstrated with: 'What does it matter if I burn their bones? If the dead really possess knowledge of what goes on here, then we can sacrifice to them afterwards, and thus give them satisfaction.' As is well known, Confucius himself, whilst adopting a respectful attitude towards the traditional 'nether' world (as we and they still popularly call it), declined to discuss spiritual beings, saying: 'We know little enough of man in this life, without troubling ourselves with theories about the other.' It cannot be too often repeated that in ancient China there

was no word of any kind for 'religion'; none for a public 'church'; none for 'temple' or 'priest,' as distinct from ancestral halls and precentors for Imperial worship; always except and in so far as the doctrine of continuity, through ancestors and descendants, with the past and future spiritual states may have left an inference in the mind. The nearest approach to religion was *li*, the written character expressing which idea is made up of the two separate signs signifying 'spiritual being' or '*themis*' as a radical notion, and 'a sacrificial vessel' as supplementary idea. Consequently, in figuring out for themselves an ideal for blessedness in this life, no idea of collective worship; no notion of a single jealous God; no need for praise, self-denial, confession and pardon of sin; no yearning for holiness as evinced by continence, abstinence, humility, joy in everlasting salvation or Divine grace, etc., ever even remotely entered the Chinese mind. Blessedness in the flesh was purely human, and spiritual blessedness in the past or future was—and this only doubtfully or agnostically—supposed to be the same thing.

4. It was reserved for the philosopher Lao-tse, an archivist at the Imperial Court, who lived during the 6th cent. B.C., a generation before Confucius, and who took the democratic and simple view of a life ushered in by civil strife and commercial activity, in contrast to Confucius' conservative and courtly definitions of *li*, to define for the first time in what ideal blessedness consisted. Like his rival Confucius, he worked entirely on old texts. Both philosophers ignored spiritualist views, and attempted to restore social order in the Chinese federation by interpreting exactly the same ancient texts, each in his own 'advanced' way. Even the word 'teaching,' which since the arrival of Buddhism in China, early in the first century of our era, has come to signify 'religion' or 'faith,' was not yet applied to these diverging interpretations, which were simply styled 'craft,' 'scheme,' or 'plan,' *i.e.* the plan of life, the plan of government, the plan of ancestral continuity. The old *Tao*, or 'way,' which now for the first time began to substitute in men's minds individual blessedness for collective blessedness, or, to use Sir Henry Maine's words, to substitute contract for status, took quite a new form in Lao-tse's hands. The old *Ju* (still meaning 'Confucianists') were the intellectuals of China, according to the *li* theories as developed by the then reigning Imperial dynasty (B.C. 1122–B.C. 255), whose statutes combined in one indivisible idea law, religion, life, government, social decency, war, and punishment. This was *Tao*. Just as *Tao* took a narrower meaning when Lao-tse defined it, so *Ju* took a narrower meaning when Confucius specialized it.

Lao-tse's summing up, literally translated, is as follows:

'My ideal is a series of small States with small populations. Let them possess an army machine of moderate size, but not be too ready to use it. Let them place a proper value on their lives, and refrain from distant migrations. Then, though they will be possessed of boats and carts, there will be no one to ride in them; though they will be possessed of arms and cuirasses, there will be no need for arraying them. Let the people revert to the old *quipo* system of records, enjoy their food, take a pride in their clothes, dwell in peace, and rejoice in their local customs. Each State would be within easy sight of the other; the sound of each other's hens cackling and dogs barking would be heard across. The people of each State would live to a good old age, and would have no movement of intercourse with neighbouring States.

'True words are apt to be not liked; pleasant words are apt to be untrue. Good or beneficent men do not wrangle, and wranglers are apt not to be good men. Those who know best do not range over many subjects, and those who range most widely do not know best. The highest form of man cares not to accumulate: so far as he uses his resources for others, he increases his own store; so far as he gives them to others, he has the more for himself. The Providence of Heaven benefits and does not injure; the Providence of the highest form of man takes action without self-assertive effort.'

Since the importation into China of Buddhism, Zoroastrianism, Manichæism, Muhammadanism, Nestorianism, Catholicism, and Protestantism, respectively, the doctrine of rewards and punishments in a future life has naturally entered more and more into the Chinese imagination; and, of course, to a certain extent the ideas of holiness and blessedness in this life have become correspondingly modified. But the intellectual classes are still largely swayed by the more materialistic philosophy of Lao-tse and Confucius, and it is very doubtful whether the religious enthusiasm which once revolutionized Europe has ever touched, or will ever touch, the trained Chinese intellect; *a fortiori* is it doubtful whether blessedness on earth will ever become less human than it is now, or more of a temporary preparation for supposed everlasting blessedness in eternity.

LITERATURE.—Confucius's *Ch'unts'u*, or 'Springs and Autumns,' enlarged ed. known as *Tso Chwan*; *Shû King*, or 'Book of History'; *Shih King*, or 'Book of Ballads'; *Li Ki*, or 'Book of Rites'; and *Tâo Teh King*, the Taoist classic of Lao-tse—all translated in the *SBE*.

E. H. PARKER.

BLESSEDNESS (Christian). — As distinguished from happiness (*q.v.*), blessedness denotes a state of fruition that is purer and deeper, and free from the accidents of time and circumstance to which happiness is exposed. In modern literature the distinction is familiar; Carlyle recognizes it when he writes, 'There is in man a Higher than Love of Happiness: he can do without Happiness, and instead thereof find Blessedness!' (*Sartor Resartus*, 132). But it is one that goes back to pre-Christian ages; one that, whether verbally expressed or not, has always been discerned more or less clearly from the time when men began to analyze the data of the ethical life or to reflect upon the realities of religious experience. What specially concerns us, seeing that the word 'blessedness' in Christian usage is an inheritance from the employment of the word 'blessed' in the NT, and that 'blessed' in the EV of the NT is a rendering of the Gr. μακάριος, is to notice that in Greek poetry and philosophy a distinction was made between εὐδαίμων as 'happy' and μάκαρ or μακάριος as 'blessed.' The gods of Olympus were the μάκαρες θεοί as raised above the storms and tumults of the earth (Homer, *Odys.* vi. 46); the dead were the μάκαρες θνητοί as delivered now from its griefs and cares (Hesiod, *Op.* 14); the abodes of departed heroes were the μακάρων νῆσοι, the 'islands of the blest' (*ib.* 171). εὐδαίμων, on the other hand, was applied to those who experience the ordinary well-being and happiness that are open to mortals in a world of change and chance; and sometimes it is expressly distinguished from the higher term μακάριος (Aristotle, *Eth.* I. x. 14).

For the Christian point of view it is significant that, while μακάριος is a word of frequent employment in the NT, εὐδαίμων is never found. This may be partly explained by the fact that to a Jewish mind εὐδαίμων had come to be burdened with a sinister connotation. A 'demon' was not the good and friendly 'genius' of the Greek imagination, but an evil spirit by whom men were tormented or urged on to their destruction. But the full explanation lies deeper, and must be sought in the fact that Jesus Christ introduced into the world a new and higher conception of felicity for which 'blessedness' alone is the appropriate term.

To understand Christ's doctrine of blessedness genetically, we must compare it not with Greek ideas upon the subject, but with those which we find in the OT and in contemporary Jewish thought. To a pious Israelite of the earlier history, length of days and earthly prosperity were the con

stituents of blessedness, which was saved from degenerating into a mere equivalence with pagan notions of happiness, by the fact that these outward blessings were regarded as tokens of the Divine favour, the rewards bestowed upon righteousness, and so were associated with feelings of religious gratitude and trust. A larger knowledge of the ways of God with men (Job, Pss 37. 73), and reflexion, above all, upon the experiences of the Exile, shattered those naive conceptions, and drove the best minds in Israel to look for blessedness elsewhere than in present prosperity. There were some pious hearts which, in the midst of trouble, were able to grasp by the sheer energy of faith the profound idea of a blessedness which consists in committing one's way to Jahweh, in loving His Law, and humbly accepting His will (Ps $1^{1, 2}$ 2^{12} 40^{4} $84^{5, 12}$ 112^{1}, Hab $3^{17ff.}$). But for the vast majority the powers of faith needed the reinforcement, which came gradually through the prophetic teaching, of the great Messianic hope of a coming Kingdom of righteousness and peace, in which the faithful should be abundantly rewarded and Israel attain to a blessedness of outward power and glory corresponding to that of inward trust and joy.

Once lighted up in the Jewish heart, this hope of a Messianic blessedness never ceased to burn. But by the time of Christ the pure radiance with which it glows in the writings of the great prophets had changed into a duskier flame, for men had come to think far less of spiritual benefits and obligations than of outward glory and material privilege. It was against this Jewish background that Christ appeared with His new doctrine of blessedness, which must be determinative for all Christian ideas upon the subject. The *locus classicus* here is His proclamation of the Beatitudes (Mt 5^{3-12}, Lk 6^{20-23}); but His teaching elsewhere serves to illuminate the principles there laid down, which are further illustrated by the Apostolic elucidation and enforcement of His words.

1. In its fundamental nature Christian blessedness appears as *an inward spiritual experience.* In setting forth His doctrine regarding it, Jesus vindicated the high idealism of those poet-saints of the OT who had risen to the point of understanding the blessedness of the man who makes Jahweh his trust, while at the same time He repudiated the prevailing popular conceptions as to the blessings of the Messianic Kingdom. In Mt. the list of the Beatitudes begins and ends with a declaration of the blessedness that lies in possessing the Kingdom of heaven ($5^{3, 10}$); and that Divine Kingdom, Jesus affirms elsewhere, is to be sought within the heart (Lk $17^{20f.}$): it is a kingdom, St. Paul explains, of righteousness and peace and joy in the Holy Ghost (Ro 14^{17}). In the Fourth Gospel we have further light upon the true essence of the Christian *summum bonum*, when 'eternal life' appears as the constant equivalent for the Synoptic 'kingdom of God,' and when this eternal life is described as the result of knowing the only true God, and Jesus Christ whom He hath sent (Jn 17^{3}), *i.e.* of knowing the Father through the Son ($14^{8f.}$). It is in the richness and intimacy of its peculiar spiritual content that Christ's doctrine of blessedness rises far above the thoughts of the most spiritual of OT saints. Those holy men of old had discovered the blessedness of trusting in the God of Jeshurun, of realizing that the eternal God was their refuge, and that underneath were the everlasting arms (Dt $33^{26f.}$); but they did not know God as Christ revealed Him, they did not know Him as the Father. It is in those experiences of filial trust and love and fellowship, which result from knowing God through Jesus Christ as our God and Father, that the essence of Christian blessedness lies.

2. But, while spirituality is the inmost quality of Christian blessedness, *natural blessings are not excluded from its scope and content.* There was nothing ascetic or dualistic in Christ's teaching upon this subject, though traces of a leaning in that direction appear in the writings of St. Paul, *e.g.* in some of his utterances regarding marriage (1 Co $7^{1, 8, 9}$; but ct. Eph $5^{25ff.}$). Unquestionably Jesus put spiritual goods above everything else, and taught that to these all natural desires and affections and all concern for earthly benefits must be subordinated, even, when necessary, to the point of utter sacrifice (Mt $5^{29f.}$ 16^{26}, Lk 14^{26}). But He freely recognized the intrinsic worth of the things that are naturally desirable, and their right to a place in any ideal of blessedness. He did not frown upon those familiar enjoyments and activities that belong to the ordinary conception of happiness, but showed again and again His own appreciation and approval of them. He loved the beautiful in nature (Mt $6^{28ff.}$), He gave the sanction of His presence to the joys of social intercourse (Mt 11^{19}, Lk $5^{29ff.}$, Jn 2^{2} 12^{2}), He saw in the work of field and house and market fitting types of the things of the Kingdom of heaven (Mt $25^{14ff.}$, Mk $4^{3ff.}$, Lk 13^{21}), He set forth marriage as the ideal relationship between the sexes (Mt $19^{4ff.}$), and delighted in the charms of little children ($18^{2ff.}$ $19^{13ff.}$). So also He taught His disciples to pray for their bread (Mt 6^{11}, Lk 11^{3}), and forbade them to be anxious about food and raiment, not because these things are unworthy of their concern, but because their own faith in the Divine Fatherhood ought to assure them that their Father in heaven knows that they have need of all these things (Mt $6^{31ff.}$). St. Paul, who in his larger and more inspired moods breaks away from the limitations of his lingering asceticism, puts into a sentence the whole matter of the harmony in Christian experience between the earthly and the heavenly blessings, as having their common source in the Divine love, when he exclaims, 'For all things are yours . . . and ye are Christ's, and Christ is God's' (1 Co $3^{21ff.}$; cf. Ro 8^{32}).

3. Christian blessedness is *a present reality.* To the seers and prophets of the OT the day of Messianic gladness had been a far-off vision. To the men of Christ's own time it was a prospect near at hand. But to both, the Kingdom with all its blessings still lay in the future—a hope and a promise, but not an actual experience. Jesus declared that the Kingdom of God was come, that its blessedness was already present. 'Theirs is the kingdom of heaven' was the first word and the last in that great charter of beatitude which He announced to His disciples (Mt $5^{3, 10}$). And the Kingdom being come, its blessedness is come, for the substance of that blessedness, as follows from its spiritual nature already referred to, does not need to be postponed till the arrival of a millennium on earth or the entrance into a Paradise of bliss in the future world. At the heart of it there lies the present and immediate assurance of God's Fatherly love, blessing us with all spiritual blessings and daily loading us with earthly benefits as well (Mt 6^{33}). And if some much-desired blessings are withheld, as oftentimes they are, God's children know that it is He who withholds them, and that nothing can separate them from His love. The best gifts, at least those in which the very soul of blessedness lies, are not withheld from those who seek first the Kingdom of God. The Heavenly Father comforts all such in their sorrows (Mt 5^{4}), satisfies their hunger for righteousness (v.^{6}), crowns them with His mercy (v.^{7}), grants them the vision of His face (v.^{8}), calls them His children (v.^{9}). And when men know and realize that God is their Father and that they are His children, the light of the eternal strikes with a redeeming and transforming power upon all the

things of time, and even on earth the days of heaven begin.

4. But Christian blessedness has its eschatological aspect also, and *looks to the future world for its perfect consummation.* 'Great,' said Jesus in the last Beatitude, 'is your reward in heaven' (Mt 5^{12}, Lk 6^{23}); and probably the eschatological idea is the uppermost, though not the only one, in the second of the series, where future comfort is promised to those who mourn (Mt 5^{4}). We have seen that Jesus did not ignore earthly goods, or treat them as if they were not to be desired, and that He found place for them accordingly in His doctrine of blessedness. Similarly, He did not ignore earthly ills, or ask His followers to face them with a Stoical apathy or to profess that they were agreeable things. On the contrary, pain was always painful to Jesus and sorrow sorrowful, and His presentation of blessedness includes the promise of a state from which they shall at length be utterly excluded. They are to be borne, it is true, with a kind of solemn gladness for Christ's sake and for righteousness' sake (Mt 5^{12}), and their fruitful effects upon the development of character under earthly conditions are not to be lost sight of (Jn $15^{2.8}$). But the full and rounded idea of Christian blessedness implies a condition of existence from which they have disappeared. Bacon expressed a half-truth only when he named prosperity as the blessing of the Old Testament and adversity as the blessing of the New (*Essays*, v.). Adversity is not presented in the NT as a blessing in itself, but only as a means to an end—the end being a blessedness from which every element of adversity has been taken away. The joy which a Christian can feel in pain is a joy not in the pain itself, but in the experience of the Divine love working through it, and in the assurance of a heavenly compensation (cf. Ro 8^{18}, 2 Co 4^{17}, He 4^{9} $12^{22.23}$ 13^{14}). Aristotle found a more exact name for happiness in a certain unimpeded energy of the soul, and admits that this requires a perfect life as its condition (*Eth.* I. vi. 15, 16), and that calamities become disqualifications for that blessedness which constitutes happiness of the highest kind (I. xi. 14). Christianity assures us of true blessedness even here and now in a world of sorrow and pain; but it also has the promise of a 'perfect life' when no disturbing or depressing influences shall impede the energies of the soul, and when God 'shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain; for the former things are passed away' (Rev 21^{4}).

J. C. LAMBERT.

BLESSEDNESS (Muḥammadan).—In Islām, even more than in Christianity, theology and the religious attitude have become specifically mystical. Besides the knowledge of Divine things traditionally handed down (*naql*) from the teachings of the prophets, and revealed to them by inspiration (*waḥy*), there is also an almost universally accepted minor inspiration (*ilhām*) open to all mankind, and especially found in the *walīs*, the 'saints' (lit. 'friends, associates, of Allah'). It is called, broadly, 'unveiling' (*kashf*), and is a direct, individual perception of the unseen in ecstasy, the culmination of a series of psychological conditions arising in the soul without apparent effort or cause. These immediate, unreasoned, and underived states of consciousness are called, in Muslim theology, *aḥwāl*, 'states,' 'conditions,' and pass from mere feelings of joy or sorrow, elation or depression, through auditory and visual hallucinations to absolute ecstasy, where language fails and there comes a 'passing away' (*fanā*) from the self and a union with Allah, which some, but wrongly unless only a metaphor is meant, have called 'fusion of being' (*ḥulūl*), 'identification' (*ittiḥād*), and 'union' (*wuṣūl*). If these terms be used literally, they indicate a pantheistic position, but they can also be used carelessly as mere approximations to a description of the feeling of the moment, and, at most, as equivalent to *tawḥīd*, 'unifying,' *i.e.* perception of Allah's absolute unity.

The most general term for this ecstasy or state of religious emotion and bliss is *wajd*, which means literally a finding, perceiving, experiencing, either by the physical senses or by the intellect. Thus it can be applied to the reaching and perceiving of the Divine by the direct operation of the inner spiritual being. But *wajd* and words cognate to it have also derived meanings which greatly complicate the terminology and lead to various plays on their different senses, and even to theological positions based on these plays. Thus *wajd* means also 'loving' and 'grieving,' because these are fundamental emotions which are 'experienced.'

Further, from the idea of 'finding' has been developed the vocabulary of 'existence.' *Mawjūd* means 'that which is found,' and thence has become the normal word in Arabic for the existent, whether absolute or contingent; and *wujūd*, which, in the first instance, meant simply 'finding,' has become the abstract 'existence.'

Such double- and triple-meaninged sentences as the following thus became possible:—'*Wajd* [finding or ecstasy or love] is losing of *wujūd* [existence or finding] in the *mawjūd* [the existent or the found].' 'He is rested by means of his *wajd*, not by means of the *mawjūd* in his *wajd*.' 'He who in his *wajd* is in the presence of the *mawjūd* is absent through the *wujūd* of the *mawjūd* from his *wajd*, and his *wajd* becomes a case of *wujūd*.' 'Sometimes my *wajd* would move my emotion; then he who is *mawjūd* in my *wajd* would cause me to lose the sight of my *wajd*.' '*Wajd* moves to emotion him whose rest is in *wajd*; but *wajd* is lost in the presence of the Real' (*al-ḥaqq*; see *Dictionary of Technical Terms used in the Sciences of the Musulmans*, p. 1454 f.). The reality and nature, for the Muslims, of this religious ecstasy, and the bliss therein experienced, will be made far more clear by the narrations and descriptions in Macdonald's 'Emotional Religion in Islam,' in *JRAS* for 1901, pp. 195–252, 705–748, and for 1902, pp. 1–28, and his *The Religious Attitude and Life in Islam* (Chicago, 1909), ch. vi. to end.

For the place and handling of these ideas in the system of Muslim theology the following brief abstract of the 6th Book of the 4th Division of al-Ghazālī's *Iḥyā* will probably suffice. (The Division is that of 'Saving Matters,' and the Book 'The Book of Love and Longing and Friendliness and being Well Pleased,' in vol. ix. p. 544 to end, ed. of the *Iḥyā* with the commentary of the Sayyid Murtaḍà, Cairo, 1311.)

After a preface explaining how Allah keeps the minds of His saints from the tinsel of this world, and, uncovering His glories to them at one time, and veiling them at another, keeps them between ecstasy and despair, acceptance and rejection, plunged in the sea of the knowledge of Him, and consumed in the fire of the love of Him, love of Allah is stated to be the last and loftiest of the stages of the spiritual life. There is nothing beyond it except what is its fruit, or before it except what is an introduction to it. Yet some divines, because it, as they assert, occurs so seldom, deny its existence, and say that it means only perseverance in obedience to God, and that love in itself is impossible except between beings of the same kind or likeness. These deny also all the companions and sequents of love.

But the whole Muslim community believes that the love of Allah is an absolute duty (*farḍ*). How, then, can it be non-existent or explained away

as meaning obedience? Obedience rather follows love. Further, the Qur'ān (ii. 60, v. 59) speaks of love of and by Allah, and in tradition the Prophet defines faith as loving Allah and His apostle more than aught else. Many other traditions and sayings of the saints follow to the same effect. He who loves Allah has no thought for heaven or hell. At the Last Day, when the peoples are summoned, each in the name of its prophet, the lovers of Allah will be summoned thus: 'Hither unto Allah, O ye Saints of His!' They will not be delayed for any judgment. 'When the believer knows his Lord, he loves Him, and when he loves Him he turns to Him; he looks not on the world with the eye of lust, nor on the world to come with the eye of carelessness; that sweetness occupies him in this world, and soothes him in that to come.'

But what is the essence of love, and what are its causes and conditions? Especially, what is the meaning of the love of the creature for Allah? Love is a natural turning to an object which gives pleasure. It springs from perceptions and varies with them, being either from sense-perception, or, in man alone, from that spiritual perception whose seat is in the heart. The pleasure through it is the most complete and absolute. Some have held that it is unthinkable that any one should love another than himself for the sake of that other, and without any happiness accruing to the lover apart from the perception of the beloved. That, however, is an error; it is both thinkable and takes place. A man loves by nature, first, himself for the continuance and perfection of his self; then he loves another than himself, because that other serves the same purpose and benefits him. Thirdly, he loves a thing for its own sake, not for any happiness that it brings; but the thing itself is his happiness, like the love of beauty, simply for itself. So, if it stands fast that Allah is beautiful, He must certainly be loved by him to whom His beauty is revealed. Beauty is of different kinds, and is not sensuous only: beauty of mental and moral qualities can be loved. But, lastly, there is often a secret relationship of souls between the lover and the beloved, and it suffices. It follows, then, that the Being worthy of love, in the absolute sense, is Allah only. If any one loves another than Allah, and does not do so because of a relationship of that beloved to Allah, his love can only imply defective knowledge of Allah on his part. When the Prophet is loved, or the pious, that is because these are beloved and lovers of Allah. The previously stated causes of love all meet in Allah, and are not joined in other than Him. As to the soul-relationship, the Prophet said: 'Souls are armies divided into bands: those which know one another agree, and those which do not, disagree.' Such an inner kinship of ideas exists between the soul and Allah. Part of this relationship can be expressed in words and learned from books, and consists in travelling on the path, and making the self over in the Divine likeness and imitating the Divine qualities. But another part, peculiar to mankind, cannot be so taught, and is only hinted at in various phrases in the Qur'ān and traditions. Thus in Qur'ān xvii. 87, 'They will ask thee about the spirit (*rūḥ*), say, "The spirit is my Lord's affair."' Also (xv. 29, xxxviii. 72), 'Then when I had formed him and blown into him of my spirit . . .'; therefore the angels worshipped Adam. Also (xxxviii. 25), 'We have made thee [David] a representative (*ḫalīfa*) in the earth.' So, too, in a tradition from the Prophet, 'Allah created Adam in his own form (*ṣūra*),' which certainly does not mean external form. So, too, in another tradition Allah says to Moses, 'I was sick, and thou didst not visit me'; to which Moses, 'O my Lord, how was that?' And Allah replies, 'My creature, so and so, was sick, and thou didst not visit him: hadst thou done so, thou wouldst have found me with him.' This kinship comes to the surface only through supererogatory acts of devotion (*nawāfil*). Allah has said in a tradition: 'When a creature does not cease drawing near to me through supererogatory acts of devotion, I love him; and when I love him, I become his hearing by which he hears, and his seeing by which he sees, and his tongue by which he speaks.' But here it is time to draw the rein of the pen. At this point men divide, and some see only an external resemblance, while others speak of 'identification' (*ittiḥād*) and 'fusion of being' (*ḥulūl*)—both views being false. The kinship is real, not metaphorical, but can be known only by experience.

In the human heart there is a property of apprehension, named variously 'the Divine light,' 'reason,' 'the inner insight,' 'the light of faith.' Its nature impels it to apprehend the essences of all things; and in that is its delight, even as the other human apprehensions have their delight in exercising their functions. But, as the things apprehended rise in the scale,—the external senses, the inner apprehension, etc.,—so does the delight in them. Of necessity, then, the knowledge of Allah is the greatest delight of all. How great it is can be known only by experience, although the stories are many of the ecstasies of His saints. It pre-occupies them so that neither the fear of the Fire nor the hope of Paradise has any weight. Their entire desire is to know Him in this world, and to behold His face in that to come, which is the great felicity. Yet, even in this world, some have so purified their hearts that they have become partakers, in the flesh, of these unspeakable joys. Such are called by men mad and unbelieving, for their speech passes the limit of reason.

Two things strengthen this love of Allah. First, that the ties of the world be cut from the heart, and the love of any other thing be taken out of it; and, secondly, that the knowledge of Allah and the spread of that knowledge in the heart, and its rule over the heart, be strengthened. Thus can men differ in the love of Allah and the consequent felicity.

But though Allah is the most conspicuous and manifest of beings, and though knowledge of Him might be expected before any other knowledge, yet we find that exactly the opposite is the case. There are two reasons for this: first, His invisibility, and, secondly, His too great conspicuousness. His is the case of the sun and its light; men are confused by it like bats. If the sun never set, and darkness never covered the earth, we should never know that light is. So man is, as it were, confused by all creation crying out with Allah. In a homely parallel, he is like the dullard who was riding upon his ass and looking for it at the same time.

Again, that men have a longing (*shauq*) for Allah is a proof that there is love of Allah. Love goes before longing. Longing is seeking for that which is loved, and which is thus perceived in one way but not in another. In the case of human beings, this may be because the beloved is remembered in absence, or, being present, is incompletely perceived. Both these reasons hold of Allah. Even by the most experienced saint the veil can never be entirely removed in this world, and even in the world to come Allah can never be entirely known. The stories in the lives of saints about this love-longing and its joys and sorrows are very many.

But what is meant by the love of Allah for His creatures? That He does love them is plain from divers passages in the Qur'ān (*e.g.* ii. 160, 222, v. 21, 59, lxi. 4) and many traditions. 'Love' is a word applied first to human relationships, and

secondly to Allah. But when words are so transformed, the meaning is always changed. They can never mean the same thing in man and in Allah. In man, love is an inclination of the soul to something that suits it, that is lacking in it, and from the gaining of which it expects profit and pleasure. All that is impossible in Allah, the Perfect, the Unchanging, who can contemplate nothing but Himself and His own acts, as there is nothing else in existence. Love, then, in Allah means: (1) the removal of the veil from the heart of the creature that he may see Allah; (2) the giving of power to the creature to draw near to Allah; and (3) Allah's willing this from all eternity. For Allah's love of a creature is from eternity, inasmuch as it is related to His eternal will, which requires that the creature in question should be given the power to follow the path that brings him near to Allah. But His love is, in time, in relation to the action which draws away the veil. So there is no change in Allah, or drawing near by Allah, or supplying of a lack in Allah. These terms apply only to the creature. And the signs of Allah's love are the trials which come upon creatures. If any one loves Allah and is sorely tried, he may know that Allah loves him, and is drawing him near through these trials.

And whether a creature, on the other hand, really loves Allah can be told by the fruits of love, which show themselves in his heart, and on his tongue, and in his limbs. He should be in love with death, for the lover does not shrink from the journey to the beloved. He should joy to be killed in the path of Allah. Yet, sometimes, love of family and children brings dislike of death, although there is also in one's heart some love of Allah. Or he may desire to remain longer in the world, in order to prepare himself to meet Allah. There is no weakness of love in that. Even with moral weaknesses there may be love of Allah in the heart. But sure signs of that love are delight in the thought (*dhikr*) of Allah, in prayer, and in the Qur'ān. So the lover loves everything connected with the beloved, even to the dogs of her tribe. And a sign of weakness in such love is delight in companionship with others than Allah.

'So friendliness (*ins*), fear (*khauf*), and longing (*shauq*) are among the effects of love; only, these effects differ in the lover according to his contemplation, and according to what is predominant in him at the time. Whenever gazing at the Extreme Beauty from behind the veil of the Unseen predominates, and the lover fears that he may fall short of reaching the Pinnacle of Majesty, then his heart is aroused to search, and is disquieted and hastens. That state of disquietude is called "longing," and is related to a thing which is absent. But when there predominates in the lover joy in nearness and witnessing of things present, through what has resulted from unveiling, and his contemplation is limited to examining the beauty thus present and unveiled, not turning to what he does not perceive, thereafter his heart rejoices in what it observes, and its rejoicing is called "friendliness." But if his contemplation be of the Divine qualities of might and self-sufficing and lack of solicitude, and if the possibility of discontinuance and distance present itself, then his heart is pained with this apprehension, and his pain is called "fear." So these states follow these observations, and the observations are due to causes which necessitate them, and they cannot be prevented.'

'Friendliness,' then, is this rejoicing of the heart in the contemplation of Divine beauty. It sometimes reaches the point of delight where there is no trace left of longing or of fear of change. The lover, then, is intimate with Allah, but strange with all others. He is alone when in company, and accompanied when alone. Yet some have denied all these things, and have said that they would involve that Allah is like to man (*tashbīh*). They have even said that there could be no approval (*riḍā*) of Allah on the part of man; there could only be patience. All which is mere ignorance and a taking of the shell for the kernel.

When this friendly intercourse is unclouded by absence or fear, it sometimes produces a confidentiality which reaches so far that the lover makes merry and plays with Allah (*inbisāṭ, idlāl*). Yet if the unworthy attempt this, it leads them straight to destruction.

A story is added of a certain unknown negro saint, Barḥ, in the time of Moses. When rain failed the children of Israel for seven years and no one could move Allah to send it, he—discovered to Moses by inspiration—procured it at once by a prayer full of familiarity and daring. Allah then explained to Moses 'He makes me laugh thrice every day.' It all depends upon who does a thing, and how and in what mind he does it.

Next, being well pleased (*riḍā*) with Allah's decrees is the loftiest of the stages of the spiritual life. Yet to most it is obscure, and to him only who is taught of Allah is the veil removed from it. Some have denied that there can be *riḍā* in anything which opposes the sensual inclination, or in the different trials of the soul. There man cannot pass beyond patience. Others contended that *riḍā* should apply to everything, even to crimes, sins, and unbelief, for everything was the action of Allah. Others, again, contended that perfect *riḍā* meant to abandon prayer and to keep silent as to sins, not exposing them or rebuking them.

But many passages in the Qur'ān (v. 19, ix. 73, 101, lv. 60, lviii. 22, xcviii. 8) speak of Allah as being well pleased with His creatures, and His creatures with Him; and the blessedness of His creatures in His being well pleased with them is reckoned better than Paradise itself. So, too, there are many traditions of the blessedness of those who are well pleased with Allah. The meaning of Allah's being well pleased with His creatures is somewhat like the meaning of Allah's loving His creatures; but created things cannot comprehend its real essence.

That this state of being well pleased with Allah enables men to overcome trials is because the state is a result of love, and the blow of the beloved does not hurt. Or the pain may be felt, but recognized as necessary, and to be welcomed and accepted, like the wound inflicted by a surgeon, or the toil of a merchant who travels in search of gain. And even as mortal love enables the lover to bear and rejoice and have pleasure in anything, however painful, so with the love of Allah.

One said: 'If He were to make me a bridge over Hell, that the creatures might pass over me into Paradise, and if He were then to fill Hell with me in expiation of His oath* and in exchange for the creation, I would love that as proceeding from His judgment and be well pleased with it as coming from His oath. That is the stage I have reached of being well pleased with Him.' Of such stories and expressions there are many.

Nor does prayer (*du'ā*) to Allah mean that the creature is not well pleased with what His Lord does. Prayer, although petition, is an act of devotion and an assumption of an attitude of need and dependence before Allah. He has praised it in the Qur'ān, *e.g.* xxi. 90. Similarly, it is right to blame evil deeds, those who commit them, and the causers of them. Those who are well pleased with such things are blamed in the Qur'ān (ix. 88, 94, x. 7). Indeed, believers are expressly warned not to take as friends evil-doers and unbelievers, Jews and Christians (Qur. iii. 27, iv. 143, v. 56, ix. 23, lx. 1). Allah has covenanted with the believer that he should hate the hypocrite (*munāfiq*), and with the hypocrite that he should hate the believer; and whom a man loves and accompanies, with them will he be raised at the Last Day.

The confusion on this point has arisen entirely from not distinguishing between the part in actions which belongs to Allah and the part which belongs to man. There are these two aspects in every action. The action is of Allah, but the man who is the agent accepts it and makes it his own. Thus we can view it with favour and with dislike at once. When one who is our enemy and the enemy of our enemy dies, our feeling is similarly

* An allusion to several passages in the Qur'ān (vii. 17, xi. 120, xxxii. 13, xxxviii. 85) in which Allah threatens to fill Hell with His creatures.

mixed. This is al-Ash'arī's doctrine of *iktisāb*, 'acceptance.' Al-Ghazālī then attempts to clarify this hopeless problem with a long illustration which need not be reproduced here. It belongs only very indirectly to this rubric. His final point is that when the Prophet forbade to leave a town in which the plague had appeared, that did not mean that a believer, in fleeing from a place of gross sin, was showing lack of pleasure in and acceptance of the will of Allah. Such was not the point of the Prophet's prohibition. It was meant rather to prevent all the healthy people from leaving the sick to perish. And flight from the possibility of sin is not away from Allah's will, but proceeds from it. It is a moot point among the learned as to who is the most excellent—the man who loves death that he may go to Allah, or the man who would rather live that he may serve his Master, or the man who says that he has no choice, but will be well pleased with that which Allah chooses for him.

LITERATURE.—All books on Ṣūfiism contain some material for this subject. Scattered through *The 1001 Nights* are stories of Saints, etc., also to the purpose. The following are more special references (but the only satisfactory materials are still in Arabic alone): Asin, *La Psicología según Mohidin Aben-arabi*, Paris, 1906 (extract from vol. iii. of *Actes du xive Cong. Intern. d. Orient.*); also 'Psicología del éxtasis en dos grandes misticos musulmanes,' in *Cultura Española*, Feb. 1906; Carra de Vaux, *Gazali*, Paris, 1902, p. 218 ff.; *DI* under 'Love' and 'Sufi'; Margoliouth, 'Contributions to the Biography of Abd al-Kadir of Jilan,' in *JRAS*, for April, 1907, p. 267 ff.; Merx, *Idee u. Grundlinien einer allgemeinen Gesch. der Mystik*, Heidelberg, 1893; Nicholson, 'Historical Enquiry concerning. . . . Sūfiism,' in *JRAS* for April, 1906, p. 303 ff.; Palmer, *Oriental Mysticism*, Cambridge, 1867; Weir, *Shaikhs of Morocco*, Edinburgh, 1904; also the two treatises of the present writer referred to above.

BLEST, ABODE OF THE (Primitive and Savage).—I. Introduction.—The idea of the future life entertained by many peoples is frequently a complex one; in other words, various conceptions are held simultaneously. Thus among one people it may be thought that the spirit lingers round or re-visits its old haunts, that it passes to another region, and that it transmigrates into an animal or is re-born. This, while due in part to the fluidity of primitive belief and the apparent lack of any perception of contradictory ideas, may also result from the fact that it is often thought that a man possesses several souls, to each of which a different *rôle* is assigned after death. Sometimes, however, these concurrent ideas are less contradictory. The soul leaves the other world to return for a time to the grave or the village, while transmigration occurs only after a sojourn, longer or shorter, in the spirit-world. The conception of the future state will be discussed in a separate article (see STATE OF THE DEAD); here we shall confine ourselves to the idea of it as a blissful region, or to the conception of a region of happiness open to a few favoured mortals. Such ideas have not been universal; while, again, when the belief in a future life is lacking or is vague, the Elysium idea naturally is also vague or lacking. The simplest idea of the life of the spirit in another region after death is that of a mere continuance of the earthly life without change. This conception prevails among several peoples. It is to such a continuance theory that we must trace the idea of life beyond the grave as fuller and ampler than life on earth or of an Elysium state. Such a fuller life is, of course, generally expressed among savages in terms of savage life—there will be better hunting and fishing, and plenty of food; the huts will be larger, and all bodily desires will be amply fulfilled. What caused this transition can only be suggested. Since, in the continuance theory, the chief was still a chief, the slave a slave, and all who possessed wealth or power or tribal lore still retained these, this would naturally lead to the idea that for some at least—the chief, the medicine-man or priest, the wealthy—things would be better than on earth. Again, it may have been thought that the gods would be kinder to those who had observed their cult and ritual more carefully, or that those who had distinguished themselves on earth as warriors or by great bravery would be rewarded. Here we approach the dawn of more strictly retributive ideas. Such qualities as are approved among savages—bravery as opposed to cowardice, observance of tribal laws, and the like—have an ethical tinge; while even among savages, though morality may be lax from our point of view, certain moral ideas are inculcated, and they who observe them are said to be approved by the gods. This does not necessarily mean that the 'good' man, from the savage point of view, is always rewarded after death, but in many cases this belief is entertained, while the 'bad' are supposed to be punished. Hence, though in some cases the influence of a higher religion with a retributive system may have affected savage eschatology, there are others in which the development of such a system has proceeded spontaneously and apart from outside influence. When we add to all this the fact that greater powers are generally attributed to the spirit after death, it will easily be seen that men might readily come to believe that the spirit's opportunities of exercising them would be greater, and its surroundings, along with its capacity of enjoyment, would be more ample. While, then, the continuance state is often deemed a better one than earthly life, one in which different lots are assigned to different classes of men, there arises the idea of different states or places of existence, some perfectly happy, some no better than on earth or even more miserable.

Other ideas may quite well have produced the conception that life after death was blissful. Man's experience of the miseries of this world and his instinctive desire for happiness may have suggested a blissful other-world as an offset to this earth. The same experience led him to form myths of a Golden Age in the past, in which we occasionally meet with the idea that gods and men lived together or had free intercourse with each other. These may have suggested the idea that such a state still existed, and that it would be restored to man after death. Here the belief is sometimes expressed, that men will be with the gods after death, or will return to the region subterranean

or heavenly, whence they originally came. There is also the belief (expressed in many myths of the origin of death) that man is naturally immortal, and that pain, unhappiness, hunger, and thirst are unnatural. Hence they will no longer exist beyond the grave (see AGES OF THE WORLD, FALL). But such a state of the blest, especially when it is the abode of gods or immortals, is often reserved only for a few, while these sometimes pass thither without dying. It may also be believed in as a state apart from the ordinary abode of the dead, whether that is blissful or otherwise, though occasionally it is a mere region of the other world.

The continuance theory does not always develop in these directions, and sometimes it is held that life after death is for all a tame copy of earthly life, a dim, poor, shadowy replica of the present. This is common among West African tribes, and is found also among the Greeks and Semites, though with all these there is usually the idea of a blissful abode of divine beings.

The locality of the blissful region varies. Sometimes, probably as a result of inhumation or cave-burial, it is an underground region. Or, again, it is simply another distant part of the earth—frequently the east or west—or an island, perhaps because men believe that after death they will go to the region whence their ancestors migrated, or because the sun is supposed to pass through the place of the dead. Or it is on a mountain, probably because mountains are thought to support the sky, above which, in turn, the blissful abode is also located. Hence men are sometimes buried on mountains, while the custom of cremation may mark the change to the conception of a heavenly world whither the spirit floated when set free by the fire. Or, again, the planets, sun, moon, and stars, are held to be the abode of the blest, while many primitive folk believe that stars are the dead transformed.

In many cases the blissful region, like the world of the dead generally, is reached only after a long and toilsome journey, over mountains and rivers, over the bridge of death, while many obstacles and dangers are met with, and various supernatural enemies are encountered. Occasionally these dangers and obstacles are intended to try the worth of the spirit, and if it fails to surmount them, it cannot reach the blissful abode. Possibly, however, these trials and dangers are reminiscences of similar experiences in the old migrations of a tribe, traditionally handed down and made part of the experience of the dead where they were supposed to return to some former dwelling-place of the tribe.

Whatever ideas are held concerning the abode of the dead are strengthened and amplified by dreams, in which the soul is thought to have visited it; or when the medicine-man claims the power of going thither, and returns with a vivid description of its character; or by myths telling of visits of the living to that land, their sojourn there, and their return (see § 7).

2. The lowest peoples.—We know nothing of the exact nature of the eschatology of pre-historic man. But from the funeral *mobilier* of interments in the Stone Age, and from the elaborate customs of sepulture in its later periods, we may be certain that some continuance theory existed, whether of the body or of the spirit, in the grave or in another region. Whether it was blissful or not cannot now be known (see MacCulloch, *ExpT* xvii. [1906] 489). On the beliefs of the lowest peoples surviving now or within recent times, our information is more extensive, and, though it has been surmised that some of their eschatological ideas have been assimilated from Christian sources, there is little reason to doubt that on the whole they are original. The belief of the **Tasmanians** was vague, yet they looked forward to a happier life in which they would untiredly and with constant success pursue the chase, and for ever enjoy the pleasures which they coveted on earth. Contact with the white man suggested to them that they would 'jump up white men' on an island in the Straits (H. Ling Roth, *Aborr. of Tas.* 1890, p. 69). The religious ideas of the **Australian** tribes have sometimes been exaggerated by uncritical observers, but there is no doubt that among many of them a belief in a happy other-world was found. Of the tribes of West Australia little is known, while among the central and northern tribes a belief in perpetual re-incarnation existed universally (Spencer-Gillen[b], 491); but among those scattered over the south-east region the belief in a future happy life 'beyond the great water' or in the sky is generally found (Howitt, 438).

This is a land like the earth, and is sometimes called 'the gum-tree country,' but is more fertile, well watered, and abundantly supplied with game, while everything is better than in this world; and the spirits live there as they did on earth. Considerable freedom is ascribed to them, and they can also wander freely about the earth. Sometimes, as the Ngarigo and Wolgal believe, the spirit is met by the *quasi*-divinity Daramulun, who lives with the ghosts. The path to sky-land is by the rays of the setting sun or by the Milky Way, sometimes itself the dwelling of the ghosts (tribes on the Herbert River) and regarded as a water-course with fruit-groves and all desirable things; and there are many legends regarding its former accessibility by a tree or other means (Howitt, 434 ff., 474; *JAI* ii. 269, xiii. 187 ff., 194). The tribes around the Gulf region believe in a happy life in *Yalairy*, and a spirit above who looks after them there. Yalairy is reached by the Milky Way and is 'a good land, a nice place, full of beautiful, shady trees,' with plenty of water and abundance of game. It is usually thought of vaguely as beyond the stars, and the natives have no dread of going there (Palmer, *JAI* xiii. 291).

Something corresponding to the division caused elsewhere by rank, ritual observances, etc., is found among a few tribes. The Wakelbura thought that right-handed men went to the sky, left-handed men underground, while the island paradise of certain tribes round Maryborough is reached only by the 'good,' and those who show excellence in hunting, fishing, etc. (Howitt, 473, 498). Among the Gulf tribes the custom of knocking out two front teeth is connected with their entry to the sky-world. Those who have submitted to this custom will have bright, clear water to drink, others will have dirty or muddy water (*JAI* xiii. 291). Such beliefs may explain the retributive ideas ascribed to some of the tribes, though the fact that the great Being believed in by all these groups is supposed to be a kind of moral governor may have occasionally led to a retributive eschatology (see ABORIGINES, § x; Howitt, 504; *JAI* ii. 268–9). Thus the Baiame of certain tribes lives in Bullemah, the land of rest, a floral paradise of beauty and of plenty, where good spirits go, and can save from Eleänbah-wundah, the abode of the wicked (Parker, *More Aust. Legendary Tales*, London, 1898, 96, and cf. Lang's *Introd.* p. xxi).

The **Andaman Islanders** believe that beneath the earth is a jungle world (*chaitan*), where the *spirits* of the dead dwell and hunt the spirits of animals and birds. Between earth and sky is a cane bridge, over which the *souls* of the dead go to paradise, while the souls of those who have committed such sins as murder go to a cold region called *jereglar-mugu*. But all souls will finally be re-united with their spirits, and will live permanently on a new earth in the prime of life. Sickness and death will be unknown (Man, *JAI* xii. 161–2; but cf. Temple, *Census of India*, Calcutta, 1903, iii. 62).

Among the primitive pagan tribes of the **Malay** peninsula, **Semang**, **Sakai**, and **Jakun**, there is a considerable belief in retribution; the wicked, often identified with those who fear to meet the terrible beings of the soul-bridge, are condemned to a wretched existence, though sometimes they are submitted to a process of purification and permitted to enter Paradise. Paradise is a place for all others; it is situated in the firmament, and entered from the west. It is 'a glorified "Avilion," an "Island of Fruits," from which all that was noxious and distressing to man had been eliminated' (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, 1906, i. 13).

The Semang and Jakun divide the firmament into three tiers; the two upper tiers are the Paradise of the blest, filled with wild fruit-trees. Some of the tribes make the moon the 'Island of Fruits,' which, in some songs, is preceded by a 'Garden of Flowers.' The choicest heaven is reserved for the old and wise.

Among the western Semang the island of fruit-trees is reserved for souls of *B'lians* ('medicine-men'); all others, save the wicked, go across the sea to a land of screw-pines and thatch-palms (*ib.* 186–7, 207–8). All souls, according to the Sakai, are purified in the infernal regions by 'Granny Langut,' after which they cross a great chopper over boiling water. The wicked fall in; the good finally proceed to the island of fruit-trees (*ib.* 239 ff.). Among the Jakun, the Blandas think that in the Island of Fruits souls of the old become young; there is no pain or sickness there, and plenty of well-water. The Besisi locate it in the moon; it contains every kind of fruit-tree; there is perpetual feasting, and souls lie in idleness, or play musical instruments. The good alone are admitted to it. According to the Mantra, souls pass to Fruit Island in the west and live in harmony and enjoyment, feasting on its delicious fruits, marrying and having children. Pain, disease, and death are unknown. Souls of men who have died a bloody death go to Red Land, a desolate region, but obtain food from Fruit Island (*ib.* 293, 298, 321; *Jour. Ind. Archip.* i. 325).

The burial rites, especially of chiefs, among the Bushmen of S. Africa show a belief in the continuance of life; but their ideas are scantily recorded. Of the tribes living on the banks of the Gariep there is a myth of a paradise called *Too'ga* whither all go after death, and a safe journey is ensured by cutting off a finger-joint (Clow, *Nat. Races of S.A.*, 1905, i. 129). Equally vague are the notions of the Hottentots, who believe that there is a land above the sky-vault where things go on as on earth. Their divinity Tsui-goam lives in a beautiful heaven. Spirits of the dead exercise power over men and have a better insight into all matters; but whether they live in the land beyond the sky does not appear, though stars are the souls or eyes of the dead. The rites of interment also show a strong belief in the soul's continuance (Hahn, *Tsuni-goam*, 1881, pp. 23, 85, 105, 112 ff.; Fritsch, *Eingeborenen Süd-Afrikas*, Breslau, 1872, p. 338).

Among the Eskimos of Greenland the general belief was that there were two regions: (1) in a cold sky or over-world, with hills and valleys and a heaven; the souls dwelt in tents on the shore of a lake with plenty of fish and fowl, though it is also said to have been a place of cold and famine; (2) in an underground domain of the god Torngarsuk, a blissful place with sunshine and perpetual summer, with water, fish, and fowl in plenty, while seals and reindeer were caught without trouble or found boiling alive in a great kettle.

Various accounts ascribe different causes for the presence of souls in either region. Thus the upper region is said to be for witches and the wicked, or again for all souls except those of great and heroic men, of those who had suffered much on earth, perished at sea, or died in childbirth. On the other hand, the destiny of the soul depended on the treatment of the body. If it was laid on the ground before death, it went downwards; if not, upwards. A terrible journey to the underground region had to be undertaken, and some souls perished on the way (Nansen, *Eskimo Life*, 1893, p. 233 ff.; Crantz, *Grönland*, 1765, p. 258; Rink, *Tales and Trad. of the Eskimo*, 1875, pp. 37, 42).

3. **Polynesia.**—In Polynesia, while occasionally an abode of bliss for all is met with, as in the Mitchell Group, Niutao, and Nanumanga, in the heavens, or in Nukupetau, underground (Tia [Turner, *Samoa*, 1884, pp. 281, 286, 288]), in general there were different states allotted according to conditions of rank or class, while some were retributive, depending, however, upon ritual obedience rather than upon moral considerations. A subterranean other-world is frequently met with, while at the same time an abode in the heavens, the moon, in the west, or on an island is allotted to certain persons. In Samoa, Pulotu was under the sea, where the spirits bathed in 'the water of life' and became lively and bright, with no trace of infirmity, while the aged became young. This region was a replica of earth, but chiefs became pillars in the house of Saveasiuleo, its lord—an honour proudly anticipated by them before death. There was also a belief that chiefs and grandees went to the heavens, which opened to receive them (Turner, 257 ff.; Gill, *Myths and Songs of S. Pacific*, 1876, p. 168). In the Hervey Group Avaiki was a hollow underground region whither all who died a natural death went to be eaten and annihilated by Miru. Warriors, after being swallowed by Rongo, climbed a mountain and thence went to a cheerful abode in the heavens, where, dowered with immortality and decked with flowers, they danced and enjoyed themselves, looking down with contempt on the wretches in Avaiki. This Elysium of the brave consisted of 10 successive heavens, and was the home of Tangaroa, the god of day. But in Raratonga warriors lived with Tiki underground, in a beautiful region with shrubs and flowers of undying fragrance, eating, drinking, dancing, and sleeping. Their admission here depended on their having brought a suitable offering (Gill, 18, 152 ff., 170). In the Society Islands, while the people descended to Po, members of the Areoi society, chiefs, and those whose families could afford sufficient offerings, went to the aerial paradise of perfumed Rohutu, where, amid beautiful scenes, every sensuous enjoyment was open to them. Neglect of certain rites and offerings might, however, debar them from it (Ellis, *Polynesian Researches*[2], 1832, i. 245, 352, 397, 403). The Sandwich Islanders thought that souls went to Po, the place of night, where they were eaten, though some became immortal spirits by this process. A few went to the underground paradise of Miru and Akea, while chiefs were led by a god to the heavens. This underground paradise was level and beautiful, and everything grew of itself. In Miru's part, souls amused themselves with noisy games; in Akea's there reigned a solemn peace (Ratzel, *Hist. of Mankind*, 1897, i. 315; Ellis, i. 366; Jones, *Sandwich Is.*, Boston, 1843, p. 42). For the spirits of the dead in Savage Island there was an underground region called Maui, but their favourite place was the land of Sina in the skies (Turner, 306). Another account says that the virtuous passed to *Ahonoa*, Everlasting Light, the virtues being chastity, theft from another tribe, and slaughter of enemies (Thomson, *JAI* xxxi. [1901] 139). In Bowditch Island the common people went to a distant region of delights full of fruits and flowers, where they enjoyed feasting and dancing. Kings, priests, and their families went to the moon and enjoyed all sorts of pleasures, the moon itself being their food (*JAI* xxi. [1891–2] 51; Turner, 273). *Bolotu* was the Elysium of the Tonga Islanders, an island of gods and spirits of chiefs and men of rank. Flowers and fruits when plucked were immediately replaced; and dogs, when killed, came to life again. This exquisite region was not open to the people, whose souls died with their bodies. The Maori subterranean Hades, *Po* or the *Reinga*, is variously described. Sometimes it is regarded as a gloomy state with disgusting food, again as an excellent land like earth, visited by the sun, with rivers, good food, and many villages and people. It was also thought to be divided into several compartments, the lowest being the worst. Thither went all of lesser rank. Po was personified as a goddess, and in it was the living fountain in which the sun and moon bathed and were renewed. Great chiefs and heroes went to one of the heavens after death, or became stars. There was, however, some uncertainty as to whether the spirit went up or down, or remained near the body. *Karakias*, or prayers, aided its ascent. Reinga is described by one writer, probably confusing it with the sky-abode of chiefs, as a beautiful heaven where all things were abundant, with constant calm, perpetual sunshine and gladness (Nicholls, *JAI* xv. [1885], 200; see also Shortland, *Traditions of N.Z.*, 1854, ch. 7, *Maori Rel. and Myth*, 1882, pp. 45, 52; *JAI* xix. [1890] 118–9; Taylor, *Te Ika a Maui*, 1855, pp. 103, 186, and *passim*).

Retribution was not strictly ethical, but ritual and ceremonial, as some of the above cases have shown. When the friend of a dead man in Nanumea gave a great funeral feast, the deceased was admitted to a heavenly land of light and clear waters; if not, he was sent to darkness and mud (Turner, 292). Entrance to *Mane*, the western paradise of Tamana, with its clear streams and abundant food, depended on an even number resulting when pebbles were thrown by the dead man's relatives. An odd number caused the spirit to be annihilated (*ib.* 294). In Pukapuka of the Hervey Group, Vaerua ate spirits which had committed ceremonial offences; all others went westwards to the house of Reva, where they passed a blissful existence. In Aitutaki, spirits which were provided with a coco-nut escaped by a ruse from being eaten by Miru, and went to the pleasant abode of Iva, where they feasted on the richest food and the finest sugar-cane (Gill, 171, 175). In Netherland Island, however, 'souls of the honest, kind, and gentle went and lived in light in Heaven. The thief, the cruel, and the ill-tongued went to a prison of darkness under the earth' (Turner, 301).

4. Dayaks, Papuans, and Melanesians.—The Dayaks exhibit a great diversity of beliefs, and the general disposition towards a retributive view, as well as the minute divisions of the future state, may owe something to Hindu or Muhammadan influences. More purely native beliefs are seen in the occasional idea that the other-world is a copy of this, or is open to all, or that a better fate awaits those who die a violent death or women dying in childbirth.

The Sea Dayaks of Sarawak believe in simple continuance. The dead build houses and make paddy fields; they are subject to the same inequalities as the living. But they can bestow on the living amulets and medicines of magical power (Ling Roth, *Natives of Sarawak and Borneo*, 1896, i. 213). Others, like the Sibuyows, think that six states are passed through, the wicked—thieves and great criminals—being punished in the first. Eventually the final heavenly state—beautiful, peaceful, and happy—is reached. The streets are clean and regular, the houses perfectly formed. There are lakes and rivers, gardens with fruit-trees and flowers, and the people are happy and rich. This place is enclosed by a great wall, while at a distance the souls of Malays have a *Kampong* (Brooke, *Ten Years in Sarawak*, 1866, i. 55). The Dusuns, the Idaans, and other tribes place paradise at or near the top of a mountain which all souls ascend, and which is guarded by a fiery dog or some other monster. The wicked try unsuccessfully to ascend it (Pryer, *JAI* xvi. [1886] 283; Ling Roth, i. 220). The tribes of the Barito, Kapuas, and Kahaian river-basins have a similar belief. The entrance to the other-world is on a mountain peak. It has rivers rich in fish; in its midst is a sea surrounding an island on which grows a tree with pearls for fruit, golden blossoms, and fine cloth for leaves. It also furnishes the Water of Life, which the souls drink to become youthful (this is also effected by bathing in the sea). While the souls retain the positions of this world, all are free from care, every desire is followed by abundant fulfilment, and there are all kinds of enjoyments and rich gems and gold. Souls, however, eventually die, returning to the earth and entering a fruit or leaf, etc. Thieves, unjust chiefs, and those who turned a good into a bad cause are excluded from these enjoyments (Grabowsky, *Inter. AE*, ii. 184 ff.; Ling Roth, citing Schwaner, ii. pp. clxx ff., cc). The Malanaus made the other-world resemble this, with seas, rivers, and sago plantations; but those who had died a violent death had a separate paradise from those who had died a natural death. Souls finally died, to reappear as worms, etc. (de Crespigny, *JAI* v. 35). Various places were allotted to the souls in the belief of the Kayans, according to the manner of their death. Those who died a violent death and women dying in childbed mated in *Long Julan*, where they had all their wants supplied, did no work, and all became rich. Those who were drowned went to *Ling Yang*, a land of plenty below the rivers, where all property lost in the waters became theirs. A place of wretchedness was reserved for suicides (Hose, in Ling Roth, i. 220).

Among the Papuans of New Guinea and the adjacent islands there is a general belief in a future state, shown by the elaborate funeral ceremonies and by explicit beliefs. But these beliefs vary in different regions, and the other-world is located now on an island, now in the sky, now underground. Sometimes it is open to all, sometimes to those only who comply with various ritual observances; or, again, there are various places according to the manner of death. It is conceived as a region of light and happiness; friends are reunited; hunger is unknown, and the souls enjoy an existence of hunting, fishing, and feasting.

In the Woodlarks all souls whose bodies have been tatued go to the island of *Watum* by way of a serpent bridge, and enjoy to the full all the pleasures of life, the women cultivating and cooking food for their idle lords (Thomson, *British N.G.*, 1892, p. 184; Haddon, *FL*, 1894, p. 318). In the western islands of Torres Straits the abode of the dead was in a mythic island called *Kibu*, where ghosts sat twittering on the tree-tops; but those of the best men, greatest warriors and skull-hunters, were better off (Haddon, *JAI* xix. [1890] 318). In the eastern islands the spirit went under the sea to *Beg*, and eventually to the island of *Boigu*, being conducted thither by Terer, the first man from whose body the skin was scraped off. Here every one was happy and bright, had plenty of food, and did no work. The death ceremonies comforted the mourners, and gave them assurance of immortality (Hunt, *JAI* xxviii. [1899] 8; *Rep. Cambridge Exp. to Torres St.*, Cambridge, vi. [1908] 45, 128, 252–3). The Elema tribes of the Papuan Gulf, New Guinea, thought that those who died fighting went to the sky-land of the god of war, and could also roam about and annoy their enemies. Various localities were assigned to those dying a natural death, while those who were murdered or killed by crocodiles or snakes became wandering spirits (Holmes, *JAI* xxxii. [1902] 428). Other tribes entertain different ideas. Some think that all spirits live in *Tauru*, a glorious place where the souls welcome the newcomer, and where hunger is unknown. A similar western paradise called *Raka*, the place of plenty, is believed in by the Motu-motu people; but here only those whose noses are pierced enter it (Chalmers, *Pioneering in N.G.*, 1883, p. 169). In other districts the soul, or *möhs*, goes underground, and must cross a great water by a ladder. Here it meets a spirit which demands its earring and armband. If the soul has not these the ladder is tripped up, and the *möhs* falls into the water, whence there is no return. Otherwise it is met by two *möhs*, which conduct it to the subterranean villages where the ghosts dwell. They can re-visit their former home and bring good or ill luck (*Inter. AE*, xiii. 47).

Throughout Melanesia, while future life is a reflexion of life on earth, there is a general disposition to ascribe greater happiness to chiefs and warriors, and a greater amount of power to the disembodied spirits. But here also attention to ritual obtains a special reward, and there is an approximation to retribution. The place of the dead is an island (Solomon and Loyalty Islands) or underground (New Britain, Santa Cruz, New Hebrides, Fiji). Sometimes there are different places for different classes, or according to the manner of life or death, and in general all these regions of the dead are reached with difficulty.

The people in the north of New Britain believe that souls which have enough shell-money to offer to the god can enter a desirable paradise called *Tingenalabaran*, but those which have not are sent to a bleak region. The Sultkas of the south coast have a subterranean paradise, *Mlol*, to which those only who can prove their life to have been satisfactory are admitted (Pullen-Burry, *Trans. 3rd Cong. Hist. Rel.* i. 84).

In the Solomon Islands the island of the dead is easily reached by ghosts which have their noses pierced (Florida), or have their hands marked with a conventional design, lacking which they are annihilated (Ysabel). There are houses, gardens, and canoes in these island abodes; the ghosts bathe, and their laughter is heard. In some cases the common ghosts turn into white ants' nests and are eaten by more vigorous ghosts, who also at last undergo the same transformation (Codrington, *Melanesians*, Oxford, 1891, 256 ff.). Similar beliefs are held in other islands of the group.

An underground world is believed in from the Torres Group to Fiji: and its usual name from Torres Islands to New Hebrides is *Panoi*. The Banks Islanders think there are divisions in *Panoi* for different classes of ghosts, *e.g.* youths dying in the flower of their age inhabit a more pleasant region with flowers and scented plants in abundance; or, according to the manner of death, there are places set apart for the souls. Sometimes murderers, sorcerers, and adulterers are excluded from the better *Panoi*, a good place where ghosts enjoy life and live in harmony. *Panoi* contains villages, houses, and trees with red leaves, and is a beautiful place. A great and bright feast on earth is compared to the ordinary life there. Men dance, sing, and talk, but there is no fighting. Life is happy if empty; there is no pain, sickness, or work. In some islands ritual observances determine the nature of existence there—a man with unpierced ears cannot drink water, the untatued cannot eat good food (Codrington, 273–288). In Aneiteum (New Hebrides), the place of spirits, Umatmas, has two divisions, 'for good and for bad,' the bad being thieves, murderers, and liars. The former division is characterized by plenty of good food (Turner, 326).

In Fiji the way to the place of souls, *Mbulu*, was long and dangerous, and ritual and ceremonial observances decided the lot of the dead. Ghosts of bachelors were annihilated; all other ghosts had to be approved by Ndengei, great warriors especially gaining his favour. In *Mbulu* punishments were

awarded to those who displeased the gods, those who had not their ears bored or were not tatued, or had not slain an enemy. Those who lied about themselves were struck down; some were eaten by the gods. Hence there were divisions in *Mbulu*, and of these *Mburotu* was the most Elysian. Here scented groves and pleasant glades and an unclouded sky were found, and an abundance of all that was most desirable to a native. Its delights were such that the word was commonly used to describe any great joy. A native song says, 'Death is easy . . . death is rest' (Williams, *Fiji*, 1858, i. 243 ff.). Mention is also made of a paradise of the gods, to which certain mortals were admitted by privilege (*ib.* i. 114).

5. **Africa.**—An Elysium conception is but slightly developed among the peoples of Africa, partly because some tribes have a vague idea of a future life, some, like the Dinka and Bari, believing in utter extinction (Hollis, *The Masai*, Oxford, 1905, p. 307), partly because with many others the belief in transmigration and re-incarnation is very strong. The cult of ancestors is, however, general, and shows that some kind of future existence is commonly believed in, though it is not definitely outlined, and many profess ignorance of its nature. But as the spirits of the dead are so often the gods of the living, and are adored as great spirits, this must argue that their lot, or that of the more important of them, is better than on earth, though expression of this is rare. Where a future state is described, it is most usually a heavenly or subterranean place where all go, and where the distinctions of rank, etc., still continue.

Thus, among the Nilotic Negroes, the Ja-luo hold that the spirits go up to the sky (Johnston, *Uganda*, 1902, ii. 779). Among the Nandi it is held that all, good and bad, go underground (Hollis, *Trans. 3rd Cong. Hist. Rel.*, Oxford, 1908, i. 87). With the Gallas, wood that has been burning a little is put on the grave, and if it grows, this denotes that the spirit is happy in the other-world (Macdonald, *Africana*, 1882, i. 229). The general belief of the West African Negroes is in an underground shadow world where the king is still king, the slave a slave, and the conditions and occupations of earth are continued in a ghostly form. The sun shines there when it sets here, and there are mountains, forests, rivers, plants, animals, villages, etc. There are pleasures and pains, but every one there grows backward or forward into the prime of life, and there is no diminution of strength or bodily waste. Among the Yoruba-speaking peoples it is called *Ipo-oku*, 'The Land of the Dead'; among the Tshi, *Srahmandazi*, 'The Land of Ghosts'; and the general opinion of it is summed up in the proverb, 'One day in this world is worth a year in *Srahmandazi*' (Kingsley, *Travels in W.A.*, 1897, pp. 488, 578; Ellis, *Tshi-speaking Peoples*, 1887, p. 157 f., *Yoruba-speaking Peoples*, 1894, p. 127; Burton, *Dahome*, 1864, ii. 156). These ideas are also found among the Bantu tribes of W. Africa, though their notion of the locality of the spirit-world is vaguer—it is underground or all around. It is free from certain bodily limitations, and the rich or persons of rank form a special class of spirits, the *awiri*. Probably since contact with white men a belief has arisen in 'white man's land' beneath the sea, whither some of the dead go and find a happy future, becoming white (Nassau, *Fetichism in W.A.*, 1904, pp. 56 ff., 237; Kingsley, 519; *JAI* xiii. [1884] 475). Much the same may be said of the Eastern Bantus. All spirits live, but how employed or where no one knows (*JAI*, 1892–3, xxii. 116). The spirit-world is peopled in much the same way as this, but we hear in some tribes of Mulungu assigning their places to the dead, though there is no idea of retribution (but cf. Waitz, *Anthrop.*, Leipzig, 1860, ii. 425 [souls of good men go to Mulungu, among the Ba-Ngindo]), and that the spirits 'go on high.' Among the Bondei the souls go to Mlinga, a divine mountain, entering by a brass door. There is recognition beyond the grave, and the spirit lives with its dead relatives. Spirits are worshipped as gods, and have great influence on earthly affairs, while sometimes the ghost of a dead chief will have a mountain as his residence (Macdonald, i. 60, 67–9, 108, 297; Dale, *JAI* xxv. 232). A more definite Elysium conception appears with the Kimbunda of S.W. Africa, in whose *Kalunga*, or world of the dead, there are feasting, plenty of women, hunting and dancing, while life goes better than in this world (Magyar, cited by Tylor[2], ii. 77). The conceptions of the southern Bantus are also vague, though some hold that the spirit ascends to heaven or 'goes home' (Macdonald, *JAI* xx. [1891] 120–1). With the Zulus, while there is much doubt as to the position of the spirit-world, there are clear references to an underground region of spirits where Unkulunkulu is. Stories tell of visits paid by the living there, and of its landscapes like those of this world, its villages, cattle, etc. This belief is now much mingled with the idea that the *amatongo*, or spirits, appear on earth as snakes. Even in this the differences of rank are continued, chiefs appearing as poisonous, common people as harmless, snakes (Callaway, *Rel. of the Amazulu*, 1884, *passim*, *Nursery Tales . . . of the Zulus*, 1868, i. 316 ff.). The Basutos also locate the spirit-world underground. Some say that it has green valleys and immortal speckled cattle—an Elysium idea—but generally it is thought that the shades wander calmly and silently, without joy and without grief. There is no idea of retribution, though this may have existed formerly (Casalis, *Les Bassoutos*, Paris, 1859, pp. 261, 268).

The idea of rank, etc., determining the state of spirits is curiously held among the Masai. Souls of common people are annihilated, but those of the rich or medicine-men become sacred snakes, while spirits of certain great people go to heaven (Johnston, *op. cit.* ii. 832; Hollis, 307–8). Merker, however, states that the good are admitted to a paradise full of all beautiful and glorious things. Luxuriant grazing-grounds with cattle, alternate with seas, rivers, and cool groves, whose trees are hung with the rarest fruits. Souls live without trouble, pain, or labour, re-united to their departed relatives. Evil-doers are sent to a waterless waste (*ZE* xxxv. [1903] 735).

Retributive ideas are said to exist among some Negro tribes, though the evidence must be received with caution. Souls of good men ascend to heaven, sometimes by the Milky Way, the path of the ghosts, in the belief of the Krus, Scherbros, and Odschi, the evil being punished (Waitz, ii. 191). But Bosman's account of the beliefs of the Guinea Negroes on this subject shows what 'goodness' means here. There is a judgment of souls after death: the good, viz. those who have strictly observed ceremonial and religious laws, and thus have not offended the gods, are sent to a happy and pleasant Paradise; offending souls are slain or drowned (Pinkerton, *Voyages*, xvi. 401). Among the Agni also, souls of the good begin a new life analogous to this after death (*L'Anthropologie*, Paris, iv. [1893] 434), and this is said to be true of some of the tribes on the Upper Congo, who think that *Longa*, the nether world, is tenanted by souls of the good (Weeks, *FL* xii. [1901] 184). It is not improbable that a belief in a future judgment is taught in the Secret Societies of W. Africa.

6. **North American Indians.**—While the tribes of North America occasionally represented the future life as a mere copy of this, *e.g.* the Maricopas, the more general conception was that it opened out a richer, fuller, and happier state to all, or to warriors, men of rank, the rich, etc., or to the good; for more than among other savage races the American tribes had developed the idea of future retribution on ethical grounds. In some cases the division between good and bad shows a Christian colouring, and the native belief may simply have been that certain souls alone could enter the happy state, others being debarred, *i.e.* those who died a violent death, those who were too feeble to encounter the dangers of the soul-journey, cowards, or those for whom sufficient offerings had not been made at their tomb. But in other cases those who are debarred or are sent to a gloomy region are wicked, they have committed offences against tribal law, and are a plague to society, as among the Delawares, Blackfeet, and Ojibwas.

Where a state common to all was believed in, it was thought to continue all the pursuits of earthly life under absolutely untrammelled conditions. Hunting and fishing were pursued without difficulty, and always with success. There would be neither want nor sorrow. The woods, lakes, streams, and plains would not only be more beautiful, but would swarm with every desirable creature. The 'happy hunting grounds' were the natural paradise of hunting tribes, and there they dwelt with the chief divinity or 'great spirit' in supreme felicity. Many poetical and sensuous descriptions of this land are to be found in the myths of various tribes, but all things in it were as incorporeal as the spirit itself, 'the hunter and the deer a shade.' Generally it was thought to be in heaven, the Milky Way forming the way thither, as with the Clallams, some N. Californian tribes, the Iroquois, and the Winnibagoes (*NR* iii. 522; Macfie, *Vancouver Island*, 1865, p. 448; Morgan, *League of the Iroquois*, 1851, p. 176; Schoolcraft, *Ind. Tribes*, Philad., 1853–6, iv. 240). Or it was in the region of the rising sun, or on a mountain (the Mojaves, *NR* iii. 526). The Navahos thought it was below the earth, whence men had once come forth. There all things grew luxuriously, and the spirits enjoyed peace and plenty (*NR* iii. 528).

Among many tribes bravery in war as well as rank earned for men the abode of bliss, while the medicine-men taught that it was a recompense for success in life (Copeway, *Ojibwa Nation*, 1847, p. 32). Cowards and common people were debarred or might enter Elysium only after a long period of

suffering. With the Ahts, chiefs and warriors went to the beautiful heaven of Quawteaht, untroubled by storms and frost, revelling in sunshine and abundance of game. All others went to the subterranean kingdom of Chayher (Sproat, 209). The western paradise of the Ojibwas and the southern of the Chinooks were open only to brave hunters and warriors. The Ojibwas thought of it as a great village in a fine country, with continual amusements and dances, and plenty of food. War was unknown; the hunter obtained his prey without the fatigue of pursuit (Jones, *Ojebway Inds.*, 1861, p. 104). Chiefs and medicine-men among the Virginian tribes went to a western paradise of perpetual happiness, where they smoked, danced, and sang with their forefathers; all others were annihilated (Pinkerton, *Voyages*, xiii. 14, 41). The Natchez, the Tensas, and the Apalaches held that chiefs and warriors went to reside in the glorious land of the sun (Müller, *Amer. Urreligionen*, Basel, 1855, p. 66 ff.). Far more elaborate in such divisions was the eschatology of the ancient Mexicans, who assigned the dead to three regions. The emperor, nobles, and fallen warriors were borne eastwards to the paradise of Huitzilopochtli, where honeyed flowers and luscious fruits abounded in shady groves, and rich hunting parks awaited the happy spirit. They accompanied the sun daily in triumph to the zenith, and then returned to their blissful Elysium. Finally, they were transformed into birds with golden plumage. Women dying in childbed were also admitted to this paradise, and, dressed as warriors, escorted the sun from the zenith. An earthly paradise free from sorrow, and abounding in every kind of fruit and vegetable, was open to those dying of certain diseases, to the drowned, and to sacrificial victims. This was the perpetual summer land of Tlalocan. Mictlan, a gloomy underground or northern region, was assigned to all who died from any other cause (Reville, *Rel. of Mexico and Peru*, 1884; Sahagun, *Hist. Gen.*, *passim*).

In some of these instances bravery and cowardice determine the fate of the soul. This approaches to an ethical distinction according to the native moral standard, and doubtless underlies many of the instances usually cited of more strictly retributive justice. Thus, with the Nez Percés and some Haidah tribes, the wicked and those who had not died the warrior's death were sent for a time to a desolate region before being admitted to the land of light, the paradise of slain warriors in the heavens, with its gift of perpetual youth, its cedar and shell houses, its delicious fruits, its repose (*JAI* xxi. [1891] 17; Macfie, *Vancouver Is.* 457). Again, ritual goodness rather than ethical must often be understood, as among the Nicaraguans, whose paradise of slain warriors, the blissful abode of the gods in the East, was open also to those who had obeyed the gods (*NR* iii. 543). But sometimes offences against morality are particularly mentioned as debarring men from bliss. Women guilty of infanticide and murderers of a fellow-tribesman were excluded from the Blackfeet paradise (Richardson in Franklin, *Second Expedition*, London, 1828), while the thief and murderer among the Okinagans, cowards, adulterers, thieves, the greedy, the idle, and liars among the Ojibwas, liars and thieves among the Delawares, were excluded from the abode of bliss (*NR* iii. 519; Jones, 102–3; Brainerd, *Life and Journal*, Edin. 1908, p. 503). We hear also among the Chippewas of the soul being examined, those with whom good predominated being borne to the enchanted island paradise, while others sank for ever in the waters (Dunn, *Oregon*, 1844, p. 104). Such a discrimination between good and bad is found among the Eurocs, Yumas, Choctaws, Pawnees, New England tribes, and Mayas, and the character of their Elysium is described with much monotony of language.

To the Eurocs it is a region of bright rivers, sunny slopes, and green forests, beyond the earth, the chasm being crossed by a pole from which the wicked fall (*NR* iii. 524). The Yumas placed it in a happy valley hidden in the Colorado (*ib.* 527). The beautiful paradise of the Choctaws lay behind a dark river in the west (Catlin, *N. Am. Ind.* 1842, ii. 127). More unique was the Mayan paradise, where the good lay in tranquil repose under the beautiful *yaxche* tree, eating and drinking voluptuously (*NR* iii. 541). But most typical of the Indian paradise is the description found in an Algonquin myth of a hunter who went to the land of souls in the south to recover his bride. The path became ever more beautiful as he went on. He reached a lodge, where he had to leave his body; his soul bounded through the shadow-world and crossed the lake where the spirits of the wicked met their fate. Now he reached the happy island of souls where there was never cold or tempest, or any need to labour, for the air itself nourished the souls, and where, amid eternal sunshine, they wandered through the blissful fields (Schoolcraft, i. 321). See also AMERICA.

7. South American Indians.—Of the numerous tribes of S. America, taken as a whole, it is difficult to generalize concerning their ideas of a happy other-world. The earlier beliefs of some of the Christianized tribes have not been recorded. Certain tribes simply believed in the soul hovering round the grave, others in transmigration; others, like the Abipones, were ignorant of the soul's status after death (Dobrizhoffer, *Abipones*, 1822, ii. 75, 269). We can speak only of a number of tribes concerning whom information is not lacking. Of these it may be said that, while the other-world life continued the conditions and circumstances of life here, and though it may occasionally have been regarded as disagreeable (Müller, 286), yet it was more frequently looked forward to as being happier and pleasanter (Spilsbury, *Trans. 3rd Cong. Hist. of Rel.* i. 94). Some tribes believed in a general place for all the dead; others in a separate place for chiefs, men of rank, or brave warriors. Retributive conceptions had scarcely arisen even in the higher tribes, or, where they have been alleged, they may be traced to missionary influence. The journey to the other-world was one of great danger and difficulty; its situation lay in the sky, in the west, or on the earth's surface, or was underground.

Among the tribes for whom the future life was one of bare continuance of the present for all alike, in a region where they hunted, fished, and rejoined their forefathers, may be mentioned the Matacos and Muyscas (in a region underground [Baldrich, *Las Camarcos Virgenes*, Buenos Ayres, 1890, p. 12; Reclus, *Univ. Geog.* xviii. 173]), the Bakairi, Calino, Yaguas, Ucuapes, Mbocobi, and Arawaks (Koch, *Inter. AE*, xiii. [Supp.] 120, 121, 122; D'Orbigny, *Voy. dans l'Amer. mérid*, Paris, 1839, iv. pt. 1 ['L'Homme Américain'], 233; Reclus, xix. 112).

The other-world was conceived of by numerous tribes as a happy Elysium. In Hayti the Indians thought that the spirits had as their place of sojourn the valleys of the western part of the island, dwelling in the clefts of the rocks by day, and coming out at night to enjoy the delightful fruits of the *mamey* trees. They rejoiced in the shady and flowery arbours of these beautiful valleys (Müller, 174). The Puri Indians placed Paradise in a pleasant wood full of *sapucaja* trees and game, where the soul was happy in company of all the deceased (Spix and Martius, *Travels in Brazil*, 1824, ii. 250). Many of the tribes of Chili placed their paradise across the sea towards the setting sun, and mythically described it in terms of their ideas of the highest bliss (Pöppig, *Reise in Chili*, Leipzig, 1835, p. 393). The Patagonians located it in vast underground caverns, where their deities dwelt, and whither they went to live with them. Abundance of cattle and liquor was found there, and the dead enjoyed an eternity of drunkenness (Falkner, *Patagonia*, Hereford, 1774, pp. 142–3). More usually a heavenly or a western paradise awaited the Indian.

In this place of all sensuous delights enjoyed to the full, they would take pleasure in everything which they had desired or possessed on earth. It was endowed with glorious hunting grounds and fishing streams and rich forests. Or they fed on rich fruits, which required no toil or labour of cultivation. Life there was restful and peaceful, without suffering or grief, and with the added delights of drinking, feasting, and dancing. There they met all their dead relatives, and their wives existed in beauty and youthfulness. Such were the beliefs of the Guarayos, Guaranis, Chiriguanos, Araucanians, Yuracaris, Ottomaken, Apiaca, Warraus, Bahairi, Guajiro, Pampas tribes, and others (D'Orbigny, 109–110, 164, 337, 342, 347; Molina, *Chili*, Leipzig, 1791, p. 72; Castelnau, *Expédition dans les parties centrales de l'Amér.*, Paris, 1850, ii. 314; Schomburgk, *Reisen*, Leipzig, 1847, ii. 446; *Ausland*, 1865, p. 338). The Saliva Indians placed their paradise in the moon, and thought of it as a place without mosquitoes (Tylor[3], ii. 70).

A division according to rank is met with among the Guaycuras, who thought that chiefs and medicine-men hovered round the moon and went to regions of pleasure and enjoyment (Martius, *Zur Ethnog. Amer.*, Leipzig, 1867, i. 233). More usually bravery, as opposed to cowardice, merited the abode of bliss. Among the Chiriguanos, brave warriors and good fathers went to an earthly paradise full of delight and feasting, with abundance of women and *chicha*, where they devoted themselves to singing and dancing (Koch, *op. cit.* 119). The Caribs of the Antilles believed that spirits of brave warriors dwelt in pleasant islands like those of their own land, abounding in delicious fruits. There all their wishes were fulfilled; they feasted and danced, and had their enemies as their slaves. Cowards, on the other hand, would become slaves to the Arawaks. It was also believed that warriors went to the sun or became stars. Im Thurn says that the present Caribs of the mainland think of the spirits as remaining near their present dwellings, while some hope to become white men or go to Sky-land, a copy of this world, whence their ancestors came (*Indians of Guiana*, 1883, p. 359 ff.; Rochefort, *Isles Antilles*, Rotterdam, 1681, p. 430). Some of the Pampas tribes believed that in the heavenly abode of Pillan warriors enjoyed eternal drunkenness, broken only by great hunts, in which they slew so many ostriches that their feathers, falling down, formed the clouds (Reclus, *Prim. Folk*, n.d., 105). Goodness and virtue are sometimes expressly mentioned as meriting paradise, but on examination this proves to mean savage bravery. Thus the Tupinamba thought that after death those who had lived virtuously, *i.e.* who had avenged themselves on and eaten many enemies, would go behind high mountains, where they would dance in beautiful gardens with their ancestors (Lery, *Voyage fait en la Terre du Bresil*, La Rochelle, 1578, p. 262). So, too, among the Chibchas, good men were those who fell in war, and they, with women dying in childbed, enjoyed a blissful future (Koch, 128). In the same way may be interpreted the respective beliefs of the Yaier, that those who 'lived well' went to heaven; of the Yaruros, that the good went to a place where they enjoyed divine food; and of the Wazanos, that, while the souls of common people went to heaven, the good attained to a superior region, where they found beautiful women, rich hunting grounds, and continuous feasts, and did no work, but spent the night in merry dances (Koch, 127). Among the ancient Peruvians there was no distinction between good and evil beyond the grave. While the bulk of the people went to a dreary underground region, a heavenly paradise was the lot of the higher classes. The Incas went to the dwelling of the Sun, their father; nobles and great warriors were received in the heavenly world of Haman Pacta, where their happiness consisted in perfect freedom from evil, in repose and peace, and they were waited on by the wives and slaves who had been put to death with them (Müller, 402–3; Prescott, *Peru*, 1890, p. 42).

8. **Sky-land.**—Among most of the peoples whose conceptions of an abode of the blest have been discussed, there is also frequently found a belief in a happy world of other beings, often divine, above the sky. Man peopled the upper region, of which the sky seemed to be the floor, with the creatures of his imagination. Especially was this the case when his world of the dead was situated elsewhere. Thus the Zulus, believing in an under world of spirits, thought that above the blue sky, conceived as a rock, was a heavenly country, the abode of a remote powerful being and of a nation of heavenly men (Callaway, *op. cit.* 63, 117 ff., 393 ff., *Nursery Tales*, i. 152, 316). Again, as the sky seemed to rest on earth at the horizon, or on lofty mountains, or even on high trees, so in many myths all these form means by which Sky-land can be reached. Or it rests on pillars, or may be reached by a bridge, a ladder, a rope, etc. There is little doubt that these ideas survive in tales of the Jack and the Beanstalk cycle (see *CF* 432; BLEST, ABODE OF THE [Slavonic]; BRIDGE). Medicine-men often claim to visit that land, either by some of these means or by a bodily or spirit flight, just as they also claim the power of visiting the world of the dead. This is a very common belief in Australia (Spencer-Gillen[b], 629; Howitt, 388, 391). In one case, when the flowers withered because Baiamai left the earth, the *wireenuns* ascended a mountain and were carried to the sky, where they were allowed to carry off the fadeless flowers of the heaven-land (Parker, *More Aust. Legend. Tales*, 84).

Legends of culture-heroes ascending to the sky-land, and returning thence with the elements of civilization or performing other feats, are of frequent occurrence in the lower culture.

In a Melanesian instance, the hero reaches the upper world and teaches the Sun's children to make fire and cook (Codrington, 366). An earthly son of Tui Langa, king of the sky, went thither by a magic tree, according to a Fiji legend, and learnt there how to slay the local gods (*FLJ* v. 256). In a Polynesian story, Losi ascends to the sky and compels its people to give him shoots of *taro*, *'ava*, and the coco-tree, hitherto unknown on earth (Turner, 105). *Si Jura*, in a Dayak myth, climbs to the Pleiades by a magic tree, and learns the secret of rice cultivation (Ling Roth, *op. cit.* i. 307). In other cases, of which there are many variants, the hero ascends above the sky and captures the sun, compelling it to go more slowly in its course (*CF* 439 ff.; Turner, 200). There are also many American Indian tales of visits paid to the land of the Sun above the solid rocky vault of heaven (*19 RBEW* 252, 436, 440).

Other heroes visit Sky-land to obtain a wife, or to regain her, or to dwell with her there.

In Samoa, Lu ascended to Tangaloa's beautiful place of rest in the sky, and was given his daughter as wife (Turner, 13). In many tales, when a mortal has captured a daughter of the sky who has descended to earth, she sometimes returns thither; but he follows her and regains her, sometimes remaining there. Of this there are Maori and other Polynesian, Melanesian, and Malay versions (Grey, *Polynes. Myth.*, 1908, p. 42, Codrington, 397; Tylor, *Early Hist. of Mankind*,[2] 1875, 346), while the idea recurs in European and other variants of the Swan-maiden cycle. There are also several versions of the story of a hero going to the sky to dwell with his immortal wife, or with some other relative, usually then becoming immortal (Grey, *op. cit.* 58; Farrer, *Primitive Manners and Customs*, 1879, p. 256 [Algonquin]; Cole, *IA*, 1875 [Santal]; Brett, *Legends . . . of British Guiana*, n.d., 29).

These stories may be compared with another large group in which visits to the world of the dead are paid to obtain a boon, to regain a lost wife, etc., or to a vague under world or fairy region (*CF* 45, 438).

Other myths tell of an earlier Golden Age when gods and men dwelt together on earth or in heaven, or how the ascent to the sky was easily accomplished by some of the means already mentioned. But this at last came to an end, and the means of intercourse was broken off (see FALL, § ii. 3 and 18).

Thus the Eskimos, the Voguls, and the Hurons have myths of the peopling of the earth by a pair from heaven (Nanson, *op. cit.*

259 ff.; Lang[2], i. 181). Many myths of the Algonquin tribes tell of a woman cast out of heaven, from whom men are descended (Brinton, *American Hero-Myths*, Philad. 1882, p. 54). In other cases those who come to earth from the sky lose their immortality (*Tongan* [Mariner, ii. 115] *Cingalese* [Forbes-Leslie, *Early Races*, Edin. 1866, i. 177]; *Uganda* [Johnston, ii. 704]; *Fanti* [Smith, *Nouveau Voyage de Guinée*, 1744, ii. 176]), or can never return thither because of some accident (*Negroes* [Ratzel, ii. 354]; *Caribs*, etc. [Im Thurn, 377; Brett, 103, 107]). These are akin to another group, mainly S. African and American Indian, in which men ascend to earth from an under world (Casalis, 254, 261; *M* i. 225; Knortz, *Aus dem Wigwam*; *CF*, p. 447; *9 RBEW*, p. 16). This upper or under world is occasionally the paradise where men hope to go after death. Intercourse with the sky-land being broken off through the destruction of the means of ascent or descent is exemplified in myths from Australia, Polynesia, and Fernando Po (Spencer-Gillen[b], 628; Turner, 199; Kingsley, *op. cit.* 507). Cf. also a Kirghiz legend of former intercourse with the people of a mountain, where fruit trees bear all the year round, flowers never wither, women are always beautiful and young, death, cold, and darkness are unknown, and all are happy, whereas men on earth are now miserable (Sven Hedin, *Through Asia*, 1898, i. 221). A funeral chant among the Basutos suggests the existence of a bright and happy sky-land, whither men cannot go (Casalis, 256).

9. Reviewing these primitive notions of a state of the blest, we see that, even where they suggest a reward for goodness, the delights of Paradise are mainly sensual, or at least sensuous. A suggestion of more spiritual conceptions may be seen, perhaps, in the thought that the blest now dwell with a god or gods, or in the poetical descriptions of the beauty of the land. But any true spiritual outlook is generally wanting, and the ethical conception of this Elysium as a reward for righteousness is not found in such religions as those of Mexico and Peru, where the belief in sin as an offence against the gods was comparatively well developed.

LITERATURE.—In addition to the works cited, see Tylor[3], chs. 12, 13; R. M. Dorman, *Origin of Primitive Superstitions*, Philadelphia, 1881: Koch, *Inter. AE*, Supplement, Leyden, xiii. [1900], 'Zum Animismus der Südamerikanischen Indianer'; E. L. Moon Conard, *RHR* xlii. [1900] 244 ff., 'Idées des Indiens Algonquins relatives à la vie d'outre-tombe.'

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Buddhist).—From an orthodox Buddhist point of view * it must be said that the only 'blessed' are the saints who have entered absolute nirvāṇa. Owing to their approximation to this goal, the epithet may be applied, by anticipation or metaphor, (1) to the saints who are to enter nirvāṇa at the end of this present life (*i.e.* who possess nirvāṇa-on-earth [see artt. ARHAT † and JĪVANMUKTA])—this is Little Vehicle; (2) to those who have taken the 'vow' of becoming Buddhas, and meantime enjoy the joy of 'giving' and of saving creatures—a joy more pleasing than is the savour of nirvāṇa itself (see art. BODHISATTVA)—that is Great Vehicle. Nevertheless, there is place in both Vehicles for categories or abodes of the Blessed.

I. Little Vehicle.—The 'heavens' of the Little Vehicle have been, for the greater part, adopted and adapted from Brāhmanic or Hindu belief. To understand the exact position of the Buddhist thinkers, the following is of importance.

The fundamental characteristic of the True Law, its historical and dogmatic ground and root, is the conviction (intuition or belief) that no 'existence' whatever can be *absolutely* happy. Such, it appears to the present writer, is the real significance of the Buddhist pessimism—a topic open from every side to serious mistakes (see art. PESSIMISM).

Like Aupanishadic Brahmans, Buddhists (*i.e.* Buddhist monks, *bhikṣus*, not laymen, *upāsakas*) aim at perfect and eternal happiness; they feel, or profess to feel, disgust for any sort of transitory happiness, and without consideration for sensual joys, here or hereafter, they press on the road (*mārga*, *pratipad*) that leads to nirvāṇa, to eternal refreshment. But there is certainly some sort of happiness in the world of becoming, in the 'wheel of transmigrations' (*bhavachakra*). The brute creation itself is not devoid of agreeable sensations; men are sometimes at ease; gods are by definition the possessors of bliss.

No adherent of the Buddhist teaching ventures to doubt the happiness and the power of the gods. Monks (*bhikṣus*) think that they have to strive for something far better than paradises (*svarga*); nevertheless, as is clear from Aśoka's lapidary sermons, as well as from many passages of the Pāli canon of Scriptures, Buddha and Buddhists (monks and laymen) lay great stress on the retribution of deeds in a further life. The Master commended the doing of good actions (in order to be re-born as a happy man or as a god), avoiding bad actions (in order to avoid unhappy human existences, animal births, or hell); and, for the wise, the avoiding of both good and bad actions: abstinence from desire and from action (the latter for producing and securing the former) being necessary to holiness, to nirvāṇa. Birth in heaven often appears as a progress towards emancipation, although, as will be seen, men alone, not gods, can enter the path of release.

It must be borne in mind that (1) human happiness is always mixed with suffering (as human birth is produced by mixed actions, 'black' and 'white'); (2) sensual pleasures always turn to suffering; (3) every pleasure is an obstacle to supreme beatitude, as it enforces clinging to existence. Therefore no one who has seen the truths (*i.e.* who has entered the stream of release, *srotaāpanna*) can strive after transitory and ambiguous rewards.

1. Amongst men, two categories are worth noticing: (*a*) the inhabitants of the Northern continent (Uttarakurudvipa, Auttarakaurava [see art. HYPERBOREANS]);* (*b*) the 'wheel-kings,'† or universal monarchs (*Chakravartin*), who embody the Indian ideal of earthly sovereignty. Men indeed, —as it is forcibly said by the scholiasts,—but possessing supernatural faculties and powers, although they live on earth, they feel themselves at home in the atmospheric or heavenly regions. Their body is characterized by the 'marks' (*lakṣaṇa*) of the 'great beings' (*mahāpuruṣa*, 'great man,' 'great male'—a name of Viṣṇu); they conquer one, two, three, or the four continents,‡ have successful wars with goblins of all kinds and even with gods, enjoy the possession of the 'seven treasures' (elephant-treasure, wife-treasure, etc.); they reign with justice, but not without kingly pride. Nevertheless, like ordinary men, they are susceptible of becoming disgusted with transitory life (although they live for centuries!) and of

* The reader is aware that this expression always involves subjective appreciation.

† Arhats are styled *visuddhideva*, 'purity-gods'; contrasted with kings, *sammutideva*, 'opinion-gods,' and gods, *upapattideva*, 'born gods' (*Vibhaṅga*, p. 422).

* The analogy between the Hyperboreans and the 'men of the Northern continent' has been pointed out by Sp. Hardy (*Manual of Budhism*, p. 14), who gives a brief description of this continent. We may observe that, amongst many characteristics (longevity, everlasting youth, no premature death, no death in embryonic state, living from the Desire-Tree, re-birth as god or as man, etc.), the Auttarakauravas are 'moral by nature' (*prakṛtiśīla*); they 'have all things in common, and have no private rights'; they do not commit bad actions (*akuśalakarmapatha*), but do not free themselves from 'thirst relative to agreeable objects' (*kāmāvacharī tṛṣṇā*); there is no 'restraint' (*saṁvara*), because there is no 'rule' (*śāsana*). Therefore there is no entrance on the Path of release; and Bodhisattvas are not born there (*Abhidharmakośavyākhyā*, *Ātānāṭiya suttanta* [Grimblot, p. 335]; *Mahāvastu*, i. 103; Wassilieff, *Buddhismus*, p. 248).

† On the Chakravartins see *Mahāsudassanasutta*, tr. by Rhys Davids, *SBE* xi. 238; Senart, *Essai sur la légende du Buddha*; *Divyāvadāna*, pp. 210–224: the standard text (Chinese sources) is named by Takakusu, *JPTS*, 1905, p. 117. The Chakravartins have a place in the scholastic theory of the 'stages of a Bodhisattva' (see art. BODHISATTVA) [the *Śikṣāsamuchchaya* states that they 'save the beings' (p. 175, 10)]. W. Hopkins, like Ed. Hardy and others, believes that the idea of an universal monarch is post-Aśokan (*Great Epic of India*, New York, 1901, p. 396, n. 2).

‡ But, like Buddhas, two Chakravartins cannot coexist. Like Bodhisattvas, they enter their mother's womb with full consciousness.

entering the path of salvation.* Such is not the case with the Hyperboreans and the gods.

2. The various schools differ, however, on this last point,—conflicts of scholastic views are the crux of Buddhist dogma,—but the common opinion is that there is no *brahmacharya* ('chastity,' 'life of holiness') amongst gods.† Heavenly beings do not forget that they owe their actual 'promotion to godship' to former good deeds, and their 'morality' is therefore strongly established against sinful delusions.‡ But, being re-born for joy, they cannot, as it seems, fully or profitably realize the truth of suffering—which is the root of the Buddhist holiness. Gods, we say, are possessors of bliss, but (it is not an easy task to reconcile these contradictions) they know that their happiness will come to an end when the treasure of merits shall be exhausted; and they are therefore troubled by anxiety (*pariṇāmaduḥkhatā*) §—the more so that, owing to the mysterious law of retribution, a god may be re-born as a beast or as an inhabitant of hell (see art. KARMA).

Gods are of different kinds. Without attempting a general survey of the matter, we must distinguish: (1) Sensual heavens (*kāmadhātu*), where sexual pleasure exists. But sexual union, in the celestial spheres, is not what Buddhists call *grāmadharma*, 'rural practice,' 'secular practice.' Gods enjoy pleasure and beget by simple contact, touching the hands, looking or smiling at one another, etc.‖ On the cosmical disposition of these blissful realms, see art. COSMOLOGY (Buddhist). (2) Material heavens (*rūpadhātu*), inhabited by gods liberated from sexual enjoyment; sensations of taste and smell are also absent, sometimes consciousness too. (3) Non-material heavens (*arūpyadhātu*), with four stages of perfection; it is difficult to say if they ought to be understood as 'abodes' (since there is no matter) or 'subjective states' (since they are depicted as successive storeys). Their common characteristic seems to be the gradual loss of consciousness. Like the 'material heavens,' they are truly Buddhist combinations or fancies, being inhabited by saints who have not realized in the inferior stages the absolute freedom from thought and desire necessary to release, and who must wait for some centuries in the happy and transitory unconsciousness of the 'non-material' worlds, before merging into the happier and definitive freedom of nirvāṇa. Heavens above sensual realms—which have only been 'Buddhized' a little—are no more than prolonged trances, analogous, but for their limits, to the trances of the holy life (see art. DHYĀNA).

II. Great Vehicle.—The piety of the so-called 'new' Buddhism has evolved paradises very like the Christian or the Vaiṣṇavite abodes ¶ of the Blessed. The happiness is now of a purely spiritual nature (in contrast with the *svargas*, inhabited by sensual gods and nymphs), and essentially devotional (in contrast with the self-culture and unconscious blissfulness which are the chief elements of the 'orthodox' Buddhist meditations). Such a paradise is the *Tuṣita*-heaven (the realm inhabited by the gods *Tuṣitas*, 'the satisfied ones'), the regular abode of the future Buddhas of our world during their last existence but one. There reigned Śākyamuni, then named Śvetaketu, before his last birth; there now reigns and preaches Maitreya, the future saviour.* But, as a rule, 'paradises' are not a part of our world (*lokadhātu*), as is the *Tuṣita*, but special realms, ruled by excellent Buddhas who have at last realized their 'vow' of creating worlds free from suffering. Their number is, of course, infinite (see art. COSMOGONY [Buddhist]),† but in the 'compound of cosmos' which we inhabit (*sahālokadhātu*) the most celebrated are: (1) the paradise of the East, under the rule of the Buddha Bhaiṣajyaguru (the 'Master of remedies,' the 'Healing Teacher');‡ and especially (2) the 'Happy [universe],' *Sukhāvatī* [*lokadhātu*], of the West, where, from every quarter of the worlds, blissful creatures are born from lotuses before the Buddha Amitābha and the Bodhisattvas Mahāsthāmaprāpta and Avalokiteśvara (see art. AVALOKITEŚVARA). To be accurate, the 'Happy universe' is not an everlasting paradise. The Blessed who there enjoy the privilege of seeing the radiant body of the Buddha, and of hearing his preaching, are candidates for Buddhahood; Amitābha's heaven is a blissful purgatory and a school, not only a place of retribution. But, from a practical and historical point of view, the *Sukhāvatī*, as said before, is the exact counterpart of the Vaiṣṇavite paradise.§

We have few Indian documents dealing with the devotional practices arising from such a conception of everlasting life in Amitābha's presence. But Chinese and Japanese sources, ancient and modern,

* See *Mahāsudassanasutta*.

† See *Kathāvatthu*, i. 3, iii. 10; Rockhill, *Life of Buddha*, p. 191; Wassilieff, *Buddhismus*, pp. 247, 255; *Abhidharmakośa*; cf. *Milinda*, tr. by Rhys Davids, *SBE* xxxv. p. 31. A future Buddha is never re-born in one of the highest heavens (*Majjhima*, i. 82), as their inhabitants are 'fixed' (*niyata*) for the 'nirvāṇa of Arhata.' On the salvation of gods, cf. 'Vedânta,' *SBE* xxxviii. 457.

‡ Literally: 'The roots of merit cannot be broken, as it happens, for men,' because they are firm believers in *kārma*.

§ On the 'suffering' peculiar to gods, see, for instance, Nāgārjuna's *Friendly Epistle*, tr. by Wenzel, *JPTS*, 1886, p. 27, and *Karuṇāpuṇḍarika* (*BTS*), p. 24 ff.

‖ A good summary will be found in Sp. Hardy, *Manual*; Beal, *Catena*, p. 68. It is worth observing that such gods as the Thirty-three (a category of sensual gods inherited from Vedic times) have now for sovereign the mother of Śākyamuni, re-born as a male deity. It would be impious to suppose that his retinue indulge in sensual pleasures!

¶ Amongst Vaiṣṇavite paradises, the Cow-world (*goloka*) and the *Vaikuṇṭha*—a kingdom in the Northern Ocean (compare the Hyperboreans) or on the eastern peak of mount Meru (compare the heaven of Indra and the Thirty-three)—are more celebrated in later times than the *Śvetadvipa*, 'the white island'—'a sort of Atlantis situated in the extreme North, beyond the Sea of Milk' (Barth, *Religions*, p. 193), well known from the *Mahābhārata*, inhabited by monotheistic saints very like the future Bodhisattvas of Amitābha's paradise. In all these peaceful abodes the Blessed enjoy the vision and the actual presence of their god, and the successive degrees or savours (*rasa*) of devotion, friendship, filial affection, ecstatic susceptibility (Barth, *op. cit.* p. 225). It is not difficult to be re-born there (see Barth, p. 228, and cf. art. AVALOKITEŚVARA and MAHAYANA).

* Mention of Maitreya as the next Buddha, the Buddha to come, who will make many converts, whereas Śākyamuni had only a small retinue, occurs in the Pāli Canon of Scriptures (see Oldenberg's *Buddha*, 5th Germ. ed., p. 164)—a fact hitherto ignored. It is quite natural that Buddhists, *i.e.* 'orthodox Buddhists,' aspire to be born in his kingdom, before having the good fortune to hear his forthcoming announcement of the Law (5000 *Anno Buddhæ*). Both forms of Maitreya's worship are frequent in Chinese sources (Pilgrims; the later is canonic in ecclesiastical professions: 'to hear the preaching under the Dragon-Flower-Tree,' Chavannes, *JA*, 1908, i. 505), and, together with iconographic evidences (images of Maitreya; see Grünwedel-Burgess, *Buddhist Art*), show that special regard was paid to the Tuṣita heaven. See Julien, *Vie et voyages de Hiouen-Thsang*, p. 345 (wanting in Beal's *Records*, but see his *Buddhism in China*, p. 112, London, S.P.C.K. 1884); I-Tsing, *Religieux éminents*, tr. Chavannes, p. 72, Paris, 1894; Foucher, *Art gréco-bouddhique du Gandhāra*, i. 285 (tuṣitakāya = varabhavana = 'the best abode'), Paris, 1905.

† Every future Buddha aims at possessing (*i.e.* creating by his exertion) a Happy Universe, 'free from bad destinies,' *i.e.* inhabited by saints, gods, and men; see *Aṣṭasāhasrikā*, p. 382 (*apāyaparisuddhi*).

‡ See Edkins, *Chinese Buddhism*, p. 235 (London, 1880).

§ The earliest documents are the *Sukhāvatīvyūha*, the *Sūtra of Amitāyus* (*SBE*, vol. xlix.), and the *Saddharmapuṇḍarika* (see art. AVALOKITEŚVARA, p. 258[b] note * and note ‡‡; also Beal, *Catena*, p. 378). Nāgārjuna (Nanjio, 1180, and Watters, *On Yuan Chwang*, ii. p. 205) and Aśvaghoṣa (Suzuki, *Awakening of Faith*, Chicago, 1900, p. 146) teach re-birth in Sukhāvatī. There is no reference to this paradise in the books of the Little Vehicle: the mention in *Mahāvastu*, iii. 462, 10, is from the colophon; see Rhys Davids, *JRAS*, 1898, p. 423. A Japanese picture is found in Grünwedel-Burgess, *Buddhist Art*, p. 176; see p. 195, l. 4, and Grünwedel, *Mythologie der Buddhismus* (Leipzig, 1900), p. 118. Sukhāvatī (also Sukhākara [*Lotus*, *SBE*, vol. xxi. ch. xxiv. 30]) has been compared with the Western paradises of the Brahmanic literature (Sukhā, Nimlocanī), by Max Müller (*SBE*, vol. xlix. p. xxii), and with the *Insulæ Fortunatæ* and the Gardens of the Hesperides, by Kern (*Lotus*, *loc. cit.*).

have much to say about Amitābha's sects, monks and laymen; the pious death of the adepts, led to the West by angels or Bodhisattvas; the prayers for the dead, etc.*

LITERATURE.—The literature is contained in the article.

LOUIS DE LA VALLÉE POUSSIN.

BLEST, ABODE OF THE (Celtic).—The Celtic doctrine of the future life is discussed elsewhere (see CELTS, § xvi.). This article deals with the Celtic belief in a happy Other-world, or Elysium, which, as will be seen, was not necessarily the abode of the dead.

1. Names of the Celtic Elysium.—These names are sometimes of a general character, sometimes they particularize the situation of this happy land. Of the former are Mag Mor, 'the Great Plain'; Mag Mell, 'the Pleasant Plain'; Tír n' Áill, 'the Other World'; Tír na nÓg, 'the Land of Youth'; Tír Sorcha, 'the Shining Land'; Tír na mBeo, 'the Land of the Living'; Tír Tairngiri, 'the Land of Promise' (perhaps a Christian derivative). Of the latter are Tír fa Tonn, 'Land under Waves,' I-Bresail, 'the Land of Bresal,' and 'the Isle of the Men of Falga,' which denote Elysium as an isle beyond the sea. Falga is an old name for the Isle of Man ('Rennes Dindsenchas,' *RCel* xv. 449), which was connected with the god Manannan, who appears as lord of the over-sea Elysium. If the Goidels occupied Britain before passing to Ireland, they may have regarded Man as '*par excellence* the Western Isle, the home of the Lord of the Other-world' (Meyer and Nutt, *Voyage of Bran*, London, 1895, i. 213). To this period may belong the tales of Cúchulainn's raid upon Falga (considered as the Other-world), which were afterwards carried to Ireland (see § 6*f*).

2. Various aspects of the Irish Celtic Elysium.—Some of these titles show that Elysium was regarded from different points of view; it was beyond the seas, or it was under the waves. But an examination of the tales which refer to it shows that there were at least two other aspects: it might be located in the *sid* or the hollow hills, or it might be a mysterious land revealing itself suddenly on the earth's surface and entered through a mist. Reserving a consideration of these different localities till later, we shall here summarize the more important tales in which the Other-world appears. These tales mainly describe the visit of mortals to that land. Some of them belong to the Mythological, some to the Cúchulainn, some to the Ossianic cycle. The MSS in which they are found are frequently among the earliest known to Irish palæography, but there is no doubt that many of the tales are of a greater antiquity, and that all of them, if not actually composed in pagan times, are based upon pagan ideas, upon story-germs current before the rise of Christianity.

(*a*) The *Island Elysium* conception is found in several tales, and is also current in existing folk-lore. The story of the 'Voyage of Bran' (found fragmentarily in the 11th cent. *Book of the Dun Cow* [= *LU*], and complete in 14th–16th cent. MSS [Meyer and Nutt, *Voy. of Bran*]) tells how Bran hears mysterious music and falls asleep. On waking he finds a silver branch with white blossoms. Next day, as he is sitting with his men, a mysterious woman appears singing the glory of the land over seas, its beauty, its freedom from pain and death, its music, its wonderful tree. It is one of thrice fifty islands to the west of Erin, and there she dwells with thousands of 'motley women.' Before she disappears, the branch leaps into her hand. The poem then describes Bran's sailing with his comrades, his meeting with Manannan mac Lir, crossing the sea in a chariot, his arrival at the Island of Joy where one of his men remained, his coming to the Land of Women, the welcome they received, the dreamlike lapse of time, the food and drink which had for each the taste he desired. Finally, it recounts their home-sickness, the warning from the queen not to set foot on Erin, how one of them leapt ashore there and became a heap of ashes, how Bran from his boat told of his wanderings, and then disappeared for ever (the tale of 'Oisin in Tír na nÓg' [see FEINN CYCLE, § 5] has several points of resemblance to 'Bran,' especially in the fate which overtook Oisin when he set foot on Erin).

In the Cúchulainn cycle the story of 'Cúchulainn's Sickness' (found in *LU*) relates the temporary union of the hero with the goddess Fand, deserted by her consort Manannan. She will become his mistress if he will help her sister's husband Labraid against his enemies in Mag Mell. Cúchulainn's charioteer Laeg visits the place, and it is from his report that we learn the nature of the Other-world, where Labraid lives in an island frequented by troops of women, its different trees with marvellously nourishing fruits, its inexhaustible vat of mead. It is reached with magic speed in a boat of bronze. Thither goes Cúchulainn, vanquishes Labraid's enemies, and remains a month with Fand. Then he returns without hurt to Ireland, where he has arranged a meeting with Fand. At that meeting his wife Emer is present, and mortal and goddess strive to retain his love. The difficulty is solved by the sudden appearance of Manannan, for whom Fand's love returns (*LU* 43 ff.; Windisch, *Irische Texte*, Leipzig, 1880, i. 205 ff.; Leahy, *Heroic Romances*, London, 1905, i.; D'Arbois, *Cours de Litt. Celt.*, Paris, 1892, v. 170 f.). Here Labraid, Liban, and Fand, though dwellers in an island Elysium, are called *sid*-folk, *i.e.* they are of the *sid*, or Underworld. The two regions are partially confused, but not wholly, since Manannan is described as coming from his own land (*i.e.* the true island Elysium) to woo Fand. Apparently Labraid (who, though called chief of the *side*, is described in terms which leave little doubt that he is a war-god) is at enmity with Manannan's hosts, who suffer defeat at Cúchulainn's hands.

In the Ossianic cycle, besides the story of Oisin (see above), there is a description of the Land of Promise over sea, where Diarmaid had been nurtured by Manannan himself, in the story of the 'Gilla Dacker' (see Joyce, *Old Celt. Romances*, London, 1894, 222).

Of greater importance is the tale called 'Echtra Condla' (*LU* 120[a]; Windisch, *Irische Gram.*, Leipzig, 1879, 120; D'Arbois, v. 384). Connla, son of Conn, king of Ireland (A.D. 122–157), is visited by a goddess from the immortal land of Mag Mell. Her people dwell in a *sid*, or mound, and are called *Aes side*, 'men of the mound.' Thither she invites him to come, and departs leaving him an apple which supports him for a month without growing less. In a month she returns and tells Connla, who has been filled with desire of her, that the immortals invite him to join them. She bids him step into her crystal boat and come with her to the Land of Joy where dwell only women. He does so, and in a moment disappears for ever from the sight of his father and his druid who has vainly tried to exercise his spells against the woman. Here again, we note a confusion between the Underground and the Over-sea Elysium.

(*b*) *Tír fa Tonn*, 'Land under Waves,' occurs with greatest distinctness in the tale of Laegaire mac Crimthainn (*Book of Lismore*, 15th cent., O'Grady, *Silva Gadelica*, 290). Fiachra of the

* See J. J. M. de Groot, *Sectarianism and Religious Persecution in China* (Amsterdam, 1904). The *Kāraṇḍavyūha* has some fine theories on the death of the pious (see art. ADIBUDDHA).

men of the *síd* appears among the men of Connaught assembled at Loch Naneane, and implores their help against his enemies, whose chief Goll has abducted his wife. Laegaire and 50 men dive into the Loch with him, and reach a wonderful land, with marvellous music, and where the rain is ale. They and the *síd*-folk attack the fort of Mag Mell, and defeat Goll. As reward they each obtain a woman of the *síde*, and remain in the land for a year. Then they yearn to return, but are warned not to descend from horseback on Erin. Arrived among their own people, they describe the wonders of Tír fa Tonn, and in spite of being implored to remain, they return thither, and are seen no more. Here, too, the Underworld and Tír fa Tonn are scarcely distinguished, and its divine hosts, as in the tale of Cúchulainn, are at war (see for another account of Tír fa Tonn, entered from a well on an island over-sea, the 'Gilla Dacker' in Joyce, 253).

(*c*) *The síd world* pure and simple is described in the Story of Mider and Etain, found in the 11th cent. MS *LU*. Mider, having discovered his divine consort Etain in her re-birth as a mortal, married to king Eochaid, appears to her and tries to regain her by describing Mag Mór, the great plain, the immortal land, its music, its beauty, its heady ale, its deathless folk, its eternal youth. Ultimately Etain, who has no recollection of this land, flies away with Mider, both in the form of birds. Eochaid's druid finally discovers Mider's underground *síd*. Eochaid captures it, and takes away his wife (*LU* 129; *Ir. Texte*, i. 113 ff.). This tale amply illustrates the belief that the gods, the Tuatha Dé Danann, were living in underground *síd*, in which they finally became the fairies of popular lore, to whose mounds, exactly like Mider's *síd*, mortals often paid visits. These *síd* were simply Elysium localized in definite places on Irish soil.

(*d*) 'The Adventures of Cormac mac Airt' (found in 14th and 15th cent. MSS, but probably connected with a tale of the same title mentioned in the old epic list) well describes the fourth conception of the Other-world. A divine visitant, with a branch bearing nine apples of gold which, when shaken, made sweetest music, appeared to Cormac. He at once asked for this branch whose music dispelled all sorrow, but for it he had to give up wife, son, and daughter. In a year he desired to see them, and set out to seek them. As he journeyed he found himself enveloped in a mist, through which he came to a house where a strange pair offered him hospitality. These proved to be Manannan and his consort. The god then brought in a pig, each quarter of which was cooked in the telling of a true tale. While the third quarter was cooking, Cormac told of the loss of his wife and children; whereupon Manannan, after sending Cormac to sleep, opened a door and they appeared. Finally he produced a cup which broke in pieces when a lie was told, but became whole again when a true word was spoken. To prove this, Manannan said that Cormac's wife had now a new husband. The cup fell in pieces. Then the goddess declared that Manannan had lied, and it was restored. Next morning all had disappeared, and Cormac and his family found themselves in his own palace with cup and branch by his side (D'Arbois, ii. 326; Windisch, *Ir. Texte*, iii. 1, 183). Cf. also 'Baile an Scail' (O'Curry, *MS Mat.*, Dublin, 1861, p. 388), where out of a mist a mysterious horseman appears to Conn and leads him to a palace in a plain where he reveals himself as the god Lug, and where appears also a woman called 'the Sovereignty of Erin.' Beside the palace is a golden tree. This magic mist, from which appears a supernatural being or which encloses a supernatural dwelling, recurs in many other tales, and it was in a mist that the Tuatha Dé Danann first appeared in Ireland.

3. **Various aspects of the Brythonic Elysium.**—A certain correspondence to these Goidelic beliefs is found in Brythonic story, but here the Elysium conception has been considerably influenced by later Christian ideas. The name given to Elysium is *Annwfn*, which means 'an abyss,' 'the state of the dead,' 'hell,' etc. (Silvan Evans, *Welsh Dict. s.v.*). But in the texts relating to Elysium, *Annwfn* does not bear any likeness to these meanings of the word, save in so far as it has been confused by redactors of the tales with the Christian hell, *uffern*. In these tales it appears as a region on the earth's surface or an over- or under-sea world, in which several of the characteristics of the Irish Elysium are found—a cauldron, a well of drink sweeter than wine, animals greatly desired by mortals, which they steal (see § 7), while it is of great beauty, and its people are not subject to death or disease. Hence the name *Annwfn* has probably taken the place of some earlier pagan name of Elysium.

(*a*) Annwfn in the tale of Pwyll, which forms the earliest reference to it in Welsh literature (Loth, *Mabinog.*, Paris, 1889, i. 27), is ruled by a king, Arawn, who is at war with his rival Hafgan, and obtains the assistance of Pwyll, who defeats Hafgan, by exchanging kingdoms with him for a year. It is a delightful land, where merriment and feasting on the choicest food and drink go on continually, and it has no subterranean character, but appears to be conceived of as a province adjoining Pwyll's kingdom.

(*b*) Annwfn is also the name of a Land under Waves or Over Sea, called also *Caer Sidi* ('the revolving castle,' cf. the *Ille Tournoiont* of the Graal romances, and the revolving house in Celtic saga and *Märchen*), about which are 'ocean's streams,' and which is reached by a long voyage. It is 'known to Manawydan (Manannan) and Pryderi,' just as the Irish Elysium was ruled by Manannan (Skene, *Four Ancient Books of Wales*, Edin. 1868, i. 276). Another 'Caer of Defence' is beneath 'the ocean's wave' (Skene, i. 285). Hence the two ideas were probably interchangeable. The people of this land are free from death and sickness, and in it is 'an abundant well, sweeter than white wine the drink in it' (Skene, i. 276). There also is a cauldron, 'the cauldron of the chief of Annwfn,' that is, of the lord of Elysium, like that of the Dagda, which is stolen away by Arthur and his men. A similar cauldron is the property of the people of a water-world in the *Mabinogion* (see § 6 *f*).

(*c*) Finally, the description of the mysterious island of Avallon, even though this was later identified with Glastonbury, whither Arthur was carried to be healed of his wounds, completes the identification with the Goidelic Elysium. No tempest, no excess of heat or cold, no noxious animal troubles it; it is blessed with eternal spring, and with fruit and flowers which require no husbandman's labour; it is the land of eternal youth unvisited by death or disease. It possesses a *regia virgo*, more beautiful than her beautiful maiden attendants; she cured Arthur of his wounds, hence she may be identified with the Morgen of other tales, while she and her maidens resemble the divine women of the Irish isle of women (Chrétien, *Erec*, 1933–1939; Geoffrey, *Vita Merlini*, 41; San Marte, *Geoffrey*, 425).

The identification of Avallon with Glastonbury is probably post-pagan (Loth, ii. 215, 264, 360), while the names applied to Glastonbury—Avallon, *Insula Pomonum*, *Insula vitrea*—may be primitive names of the island Elysium. William of Malmesbury (*de Ant. Glaston. Eccl.*) says that *Insula Pomonum* is a translation of a native name. *Insula Avalloniae*, which he connects with the Brythonic *avalla*, 'apples,' because Glastenig

found an apple tree there. The name might therefore have been connected with marvellous apple trees, similar to those of the Irish Elysium. But he also suggests that it may have been derived from a certain Avalloc, who lived there with his daughters. This Avalloc is evidently the same as the Rex Avallon (Avallach) to whose palace Arthur was brought and healed by the *regia virgo* (San Marte, 425). He may therefore have been a mythical lord of the Other-world, and his daughters would correspond to the maidens of the isle (see Rhys, *Arth. Legend*, 336). He also derives Glastonbury from an eponymous founder Glastenig, or from its native name Ynesuuitron ('Glass-island'). This name re-appears in the passage cited from Chrétien, in the form, 'l'isle de voirre.' Giraldus (*Spec. Eccles.* ii. 9) explains the name from the glassy waters which surrounded Glastonbury, but we may see in it an early name of Elysium (cf. Merlin's glass house, *Triads*, iii. 10; the glass fortress attacked by Arthur, *Merlin*, 680, and by the Milesians, Nennius, § 13; the glass bower of Etain (CELTS, § 5), and the glass mountains of Teutonicmy thology and folk-tale).

4. Origin of the Celtic Elysium conception.—Most mythologies tell of a Golden Age in the remote past, when men were happy and when the gods lived with them (see AGES OF THE WORLD, FALL). Man's imaginative faculties as well as his acute sense of the misery of his earthly existence may have led him to believe that this happy state still existed somewhere in distant space as did the Golden Age in distant time. Wherever it was, it held endless joys; it was in a special sense the land of the gods or of some gods; thither some favoured mortals might penetrate. This was the germ of the Elysium conception as we find it in many mythologies as well as the Celtic; but with the Celtic people, poetic, imaginative, sensuous, yet spiritual, it took forms of great beauty. In some mythologies this Elysium is simply the world of the dead; but it is extremely doubtful whether it is so in Celtic mythology. Perhaps the Celtic myth of man's early intercourse with the gods may have taken a twofold development. In the one instance the land to which he hoped to go after death was that lost land, conceived as a subterranean region. In the other it was no more recoverable; men would not go there after death; but favoured mortals might be invited thither during life. It was thus clearly distinguished from the land of the dead, however joyful that might be. But this question requires separate consideration (see § 5). In Ireland it was held that after the conquest of the Tuatha Dé Danann, the gods, by the Milesians, they had retired within the hills or mounds (*sid*). But it agrees with the more primitive aspects of Celtic religion, as an agricultural cult, to suppose that some at least of the divinities, the fruitful Earth-divinities, had their abode beneath the earth, which, as the home of the gods, would be conceived in the loftiest terms. Thence man had perhaps originally come, and thither he would return after death. To this extent, therefore, the Underworld of the Earth-divinities was also the place of the dead. The later association of the gods with hollow hills and mounds was but a continuation of the belief in this divine Underworld, only it seems obvious from the tales that these hollow hills, or *sid*, had become simply an Elysium state, not a state of the dead. These were, on the whole, still conceived as going to some region under the earth. There are no data to show when the conception of a distant Elysium arose among the Celts. It may have been first suggested to them, while still on the Continent, by the setting sun: far off there was also a divine land where the sun-god sank to a blissful rest. On reaching the coast it was inevitable that they should imagine this divine land to be over seas, in some happy island such as they saw on the horizon. That island might be still associated with the sun-god, but it was more naturally connected with the god of the sea. Hence the position of Manannan in these Elysium tales. The under-world Elysium and the over-sea Elysium were conceived in identical terms, and the same set of names applied indifferently to either. Perhaps the locating of Elysium in the *sid* may simply be due to the tendency to give a local habitation and a name to every mysterious region as time goes on. To this identity also may be assigned the mingling of the *sid*-folk with the over-sea Elysium in certain tales already noted.

The idea of a world beneath the waters is common to many mythologies, and, generally speaking, it owes its origin to the animistic belief that every part of nature has its indwelling spirits. Hence the spirits or gods of the waters were thought of as dwelling far below the surface under a divine king or chief. Tales of supernatural beings appearing out of the waters, the custom of throwing sacrifices therein, the belief that human beings were inveigled into the waters or could live with these beings beneath the waves, all are connected with this primitive animistic idea. Among the Celts, however, that water-world assumed the aspects of Elysium; it was a divine land like the over-sea Elysium. Hence in later story it became a fairy world. It is visited by mortals, who find there precisely the same sensuous joys as in the island paradise; it also has names in common with it. Tír fa Tonn is also Mag Mell. Hence in many popular tales it is hardly differentiated from the island Elysium; over-sea and under-waves have become practically synonymous. Hence, too, the belief that such water-worlds as the Irish I Bresail, or the Welsh fairy-lands, or sunken cities off the Breton coast, rise periodically to the surface and would remain there permanently, like an island Elysium, if some mortal could fulfil certain conditions (Girald. Camb. ii. 12; Hardiman, *Irish Min.*, London, 1831, i. 367; Rhys, *Celt. Folklore*, Oxford, 1901, i. 170; Sébillot, *Folk-lore de France*, Paris, 1904, ii. 56 ff.).

The Celtic belief in Tír fa Tonn is closely connected with the current belief in submerged towns or countries, which is perhaps found with greatest detail on the Breton coast. Here there are legends of several such towns, but most prominent are those which tell of the city of Is, which was submerged with all its people and still exists beneath the sea, where (or occasionally on the surface of the waves) it may still be seen. It was submerged as a punishment, because of the wickedness of its people or of Dahut, its king's daughter, who sometimes still seeks the love of mortals (Sébillot, ii. 41 ff.). Elsewhere in Celtic regions precisely similar legends are found, and the submersion is the result of a curse, or of the breaking of a tabu, or of neglect to cover a sacred well. The best example is that of the town covered by the waters of Lough Neagh (see Girald. Camb. *Top. Hib.* ii. 9; Rhys, *Celt. Folk-lore*; Kennedy, *Legend. Fictions*, London, 1866, 282). There is little doubt that one important fact lies behind these various legends, viz. the tradition of actual cataclysms or inroads of the sea, such as the Celts encountered on the coast of Holland. Once formed, it was inevitable that these legends should intermingle with those of the divine water-world.

The idea that the Other-world is on the same plane as this world, or temporarily locates itself there, and is hidden in a mist, is probably due to the belief in the magic power of the gods. One of the commonest pieces of druidic magic was the causing of a mist to effect concealment, and it was natural to believe that the gods could do the same. Behind that mist, for some definite purpose, the divine Elysium was temporarily located, with all its marvellous properties, as in the story of Cormac (and also in folk-tales where fairyland is thus revealed to mortals; see *RCel* vii. 289; Kennedy, 108, 179), or from such a mist supernatural beings frequently emerged to meet mortals. In such

cases the mist may simply have concealed the *sid* of the gods, from which the messenger emerged, or to which the mortal, misled by the mist, was introduced. Such appearances from a mist often occurred on a hill (Loth, *Mab.* i. 38; Campbell, *West Highland Tales*, Edin. 1890, Nos. 38, 52; *Scott. Celt. Rev.*, Paisley, 1885, i. 70). On the other hand, there may have been an existing belief that the divine world was invisibly co-extensive with this world, since in recent Welsh and Irish belief fairyland is on the same plane as this earth and interpenetrates it; men may interfere unwittingly with it, or have it suddenly revealed to them, or be carried into it and made invisible (Rhys, i. 230; Curtin, *Tales of the Fairies*, 158).

5. **Was the Celtic Elysium the land of the dead?**—In most of the tales Elysium is a land where there is neither grief nor death, a land of immortal youth and peace, filled with every kind of sensuous delight. In a few tales, however (the Mabinogi of Pwyll, Sick-bed of Cúchulainn, Laegaire mac Crimthainn, Doel Diarmaid, Diarmaid in Tír fa Tonn), while the sensuous delights are still the same, the inhabitants are at war with each other, invite the help of mortals, and are sometimes slain in battle. But in both these groups Elysium is the land of the gods, of supernatural beings, a land to which a few favoured mortals are admitted while still in life. It is never described as the world of the dead, nor do its people ever appear to be the dead. These two conceptions of Elysium, (1) a land of peace and deathlessness, (2) a land where war and death occur, may be both equally primitive. The second may simply have been formed by transferring to the divine world the actions of the world of mortals, as a direct result of anthropomorphism. It would also be on a parallel with the conception of the world of the dead, which was likewise a replica of the life of mortals in this world. But men may early have felt that the gods were not as themselves, that their land was a state of peace and immortality. Hence the creation of the legend of the peaceful Elysium. The two conceptions may have existed side by side, but apparently the more peaceful one found most favour with the people. Mr. Nutt (*Bran*, i. 159) thinks that the other conception may be due to Scandinavian influence acting on existing tales of the peaceful, deathless Elysium; but from the fact that the wars of divine beings occupy a prominent part in the mythological and Ossianic cycles of the Irish Celts, this is doubtful. Or again, the peaceful Elysium may have been the product of the Celts as an agricultural people, since it is 'a familiar, cultivated land,' where the fruits of the earth are produced without men's labour, where there are no violent storms or excess of heat or cold—precisely the fancies which would appeal to a toiling, agricultural people, while the more warlike Elysium may have been produced among the Celts as a warlike people, appealing to their warrior instincts. What is certain is that the inhabitants of Elysium are supernatural beings; chief among them are the well-known figures of Celtic mythology, but the others have every trace of divinity. D'Arbois, Rhys, and others, however, maintain that the Celtic Elysium is the world of the dead. Elsewhere will be found reasons for the belief that the *orbis alius* (Lucan, *Phar.* i. 457), whither the dead went, was not necessarily an island, but a subterranean region. Or, if it was an island, it was not the island Elysium (see CELTS, § xvi.).

D'Arbois' theory of Elysium as the state of the dead rests mainly upon a difficult passage in *Echtra Condla*, which is interpreted by him in a way which seems somewhat wide of its true meaning. The sense of the passage seems to be: 'The Ever Living Ones claim thee. Thou art a champion to Tethra's people. They see thee every day in the assemblies of thy fatherland, among thy familiar loved ones.' D'Arbois assumes that Tethra, the Fomorian king, is ruler of Elysium, and that after his defeat by the Tuatha Déa, he, like Cronus, took refuge in Elysium, where he now reigns as god of the dead; while by translating *ar-dot-chiat* ('they see thee,' 3rd plur. pres. ind.) 'On t'y verra,' he maintains that Connla, by going to Elysium, will be seen among the gatherings of his dead kinsfolk (D'Arbois, *Cours de Litt. Celt.* ii. 119, 192, vi. 197, 219, *Les Druides*, Paris, 1906, 121; *RCel* xxvi. 173). But it is impossible to take 'Thou art a champion to Tethra's people' as meaning that Tethra is a god of the dead. It appears to mean simply that Connla is a mighty warrior, one of those whom Tethra, a Fomorian war-god (*LU* 50*a*; Cormac, *Gloss. s.v.* 'Tethra'), would have approved, while 'Tethra's mighty men' used elsewhere ('Dialogue of the Sages,' *RCel* xxvi. 27 ff.) seems to be a conventional phrase for warriors. The rest of the goddess's words imply either that the immortals from afar, or Tethra's mighty men, see Connla in the assemblies of his fatherland in Erin, among his familiar friends. Dread death awaits them, she has just said, but the Immortals desire Connla to escape that by coming to Elysium. Her words do not imply that Connla will meet his dead ancestors there; moreover, if the dead went to Elysium, there would be little reason for inviting a mortal there while still alive. Thus this tale, like all other Elysium tales, gives no ground for the contention that Elysium is the place of the dead. Moreover, the rulers of Elysium are the Tuatha Déa or the *sid*-folk, never a Fomorian like Tethra. ('Tethra' is glossed as *muir*, 'sea,' by O'Cleary [Stokes' *Cormac*, *s.v.* 'Tethra'], and Cúchulainn speaks of the sea as 'the plain of Tethra' [*Arch. Rev.* i. 152], but we cannot infer from these that he was ruler of an over-sea Elysium, and the passages are probably derived from the association of the Fomorians with hostile sea-powers (see under CELTS, § v.).

D'Arbois' assumption that 'Spain' in Nennius' account of the invasions of Ireland (*Hist. Brit.* § 13), and in the Irish texts generally, means the land of the dead, and that it was introduced in place of some such title as Mag Mór or Mag Mell by 'the euhemerizing process of the Irish Christians' (ii. 35, 134, 231) is equally groundless. In other documents which have been subject to euhemerization these titles remain unchanged; nor is there any proof that a document, now lost according to D'Arbois, said that the invader came from or returned to Mag Mór. Once, indeed, Tailtiu is called daughter of Mag Mór, king of Spain (*Book of Leinster* [= *LL*] 8. 2); but here a person is intended. It is much more probable that there was a connexion between Ireland and Spain from early times, both racial and commercial (Reinach, *RCel* xxi. 18; Siret, *Les Premiers Ages du Metal dans le Sud-Est de l'Espagne*, Antwerp, 1887), while perhaps some of the Goidelic invaders reached Ireland from Spain or Gaul. This connexion, traditionally remembered, would be sufficient to account for these references to Spain. It was further supported by the fact that early maps and geographers made Ireland and Spain contiguous (Orosius, i. 2. 71); hence in an Irish tale Ireland is visible from a tower in Spain (*LL* 11. 2). The word 'Spain' was used vaguely, but it does not appear to have meant Elysium or the land of the dead.

6. **Characteristics of the Celtic Elysium.**—(*a*) Nothing can exceed the romantic beauty of this land as described in the tales, and in nearly every one this is insisted on by the messengers who come from it to mortals. The beauty of its landscapes, —hills, cliffs, valleys, sea and shore, lakes and rivers,—of its trees, of its inhabitants, of its birds, is obviously the product of the imagination of a people keenly alive to natural beauty. And borrowed from the delight which the Celt took in music is the recurring reference to the marvellous music which everywhere swells in Elysium. It sounds from birds on every tree, from the branches of the trees which lull to forgetfulness the favoured mortals invited thither, from marvellous stones, from the harps of divine musicians. In Elysium, as the visitant says to Bran, 'there is nothing rough or harsh, but sweet music striking on the ear.' Probably no other race than the Celtic has, in describing the joys of the other world, so spiritualized the sensuous joys of sight and hearing, or imagined anything so exquisitely beautiful.

(*b*) Certain of the tales which deal with an island Elysium make it evident that it was composed not of one but of several islands, 'thrice fifty' in number, according to the *Voyage of Bran*, though this may be a later conception. One of these is frequently described as 'the island of women' or 'of ever-living women,' though in some instances there appear to be other inhabitants also. These women give their favours to Bran and his men, or to Maelduin and his company ('Voyage of Maelduin,' *RCel* x. 63), and in both these cases the number of women exactly equals that of the mortal visitors. Similar 'islands of women' occur in *Märchen* still

current among Celtic peoples, and actual islands were or are still called by that name—Eigg in the W. Highlands (Martin, *West Isles*, London, 1716, 277), Groagez off the Breton coast (Sébillot, ii. 76). Similar islands of women are known to Chinese, Japanese, and Ainu folklore (Burton, *Thousand Nights*, Benares, 1885 ff., x. 239; Chamberlain, *Aino Folk Tales*, London, 1888, 38), to Greek mythology (Circe's and Calypso's islands, cf. the land of the Amazons), and to ancient Egyptian conceptions of the future life (Maspero, *Hist. anc. des peuples de l'Orient*, Paris, 1895, i. 183). They were also known elsewhere, and we may therefore assume that in making such an island a part of their Elysium, the Celts were simply making use of something common to universal folk-belief. It may, however, owe something to the memory of a time when women performed their rites in seclusion, a seclusion which is perhaps hinted at in the references to the mysterious nature of the island, its inaccessibility, and its disappearance once the mortals leave it; to these rites men may have been admitted by favour. We know that Celtic women performed such rites on islands (Strabo, IV. iv. 6; cf. Ploss, *Das Weib*, Leipzig, 1885, ii. 70, artt. BIRTH [Celtic]), and CELTS, xiii. 1).

This may have originated the idea of an island of divine women as part of the Elysium belief, while it would also heighten the sensuous aspects of that Elysium. Love-making, in effect, had a considerable place in the Elysium tales. Its divine inhabitants sought the love of mortals, goddesses of men, gods of women (cf. the tales of Bran, Connla, Oisin, etc., of Manannan seeking the love of Tuag [*RCel* xvi. 152]; Mider, that of Etain). The mortal desired to visit Elysium because of the enticements of the divine visitant, regarded by later Christian redactors of the tales as a demon (see 'Cúchulainn's Sick-bed,' D'Arbois, v. 216). On the other hand, the love-making which goes on among the people of Elysium, even in documents edited by Christian scribes, is said to be 'without sin, without crime' (*Bran*, § 41).

(*c*) Besides their beauty, the characteristic of the inhabitants of Elysium which is emphasized in most of the tales is that they are immortal, or ever-living. Elysium is *Tír na mBéo*, 'the land of the living'; its people 'look for neither decay nor death'; they are eternally youthful. The general belief among primitive races is that death is an accident befalling men who were naturally immortal; hence freedom from that accident naturally characterizes the people of the divine world. But, as in many mythologies that immortality is more or less dependent on the eating or drinking of some food or drink of immortality, so it is in certain Celtic tales. Manannan, in the tale of Cormac, had immortal swine, which, killed one day, came to life the next; and with the flesh of these he is said to have conferred immortality on the Tuatha Dé Danann. This was also conferred by the drinking of Goibnui's ale, which either by itself or with the flesh of swine formed his immortal feast (O'Grady, *Silva Gadel.* ii. 385; O'Curry, *Atlantis*, iii. 389). Besides conferring immortality, the food of the Other-world was inexhaustible, and whoever ate it found it to have precisely that taste which he preferred. The fruit of certain trees of Elysium was also believed to confer immortality and other qualities. Cúchulainn's servant, Laeg, tells of 150 trees which he saw growing in Mag Mell; their nuts fed 300 people (D'Arbois, v. 170 ff.). The apple given by the goddess to Connla was inexhaustible, and he was still eating it with her when another favoured mortal visited Elysium—Teigue, son of Cian. 'When once they had partaken of it, nor age nor dimness could affect them' (D'Arbois, v. 384; O'Grady, ii. 385). Apples, crimson nuts, and rowan berries are specifically said to be the food of the gods in the 'Pursuit of Diarmaid and Grainne' (Joyce, 314). Through carelessness one of the berries was dropped on earth, and from it grew a tree, three of whose berries eaten by a man of a hundred years made him a young man. To keep mortals from touching it they set a Fomorian giant to guard it. With this may be compared the dragon-guarded rowan tree in the tale of Fraoch (Leahy, *Heroic Romances*, i. 36, with many variants elsewhere); its berries had the virtue of nine meals, added a year to a man's life, and healed the sick. At the source of all Irish rivers were supposed to grow hazel trees with crimson nuts, which fell into the water and were eaten by salmon. If these salmon were caught and eaten, the eater would obtain knowledge and wisdom (O'Curry, *Manners and Customs*, ii. 143). But the stories in which these hazels are mentioned show that they grew in Elysium, and their berries were the food of the gods, which a mortal might not eat without incurring danger (*RCel* xv. 457; Windisch, *Irische Texte*, iii. 213). In other cases the trees of Elysium are much more marvellous; they have silver branches (*Bran*); they have golden apples (*Cormac*); they produce wonderful music, which sometimes causes sleep and oblivion.

(*d*) As these various nuts and fruits were prized in Ireland as food, and in some cases, perhaps, were used to produce an intoxicant, it is obvious that they were, primarily, a magnified form of earthly trees. But all such trees were doubtless objects of a cult before their produce was generally eaten; they may have been totem trees, and their fruit eaten only occasionally and sacramentally. If so, this would explain why they grew in the Other-world, and why their fruit was the food of the gods. Whatever man eats or drinks is generally supposed to have been first used by the gods, like the Hindu *soma*. Miss Hull points out that, in some tales, the branch of a divine tree becomes a talisman leading the mortal to Elysium; in this resembling the golden bough plucked by Æneas before descending to the under world (*FL* xii. 931). But this is not the primary function of the tree. On the other hand, Mr. A. B. Cook is of opinion that the branch is derived from the branch borne by early Celtic kings of the wood or representatives of the Sun-god, while the tree is an imaginative form of the trees which incarnated a vegetation spirit (*FL* xvii. 158). But, again, it is the fruit of the trees as the food of the gods on which the greatest stress is laid in all the tales. When mortals eat it, it has the effect of conferring immortality upon them; in other words, it makes them of like nature with the gods, and this is doubtless derived from the primitive idea that the eating of food given by a stranger produces kinship with him. Hence to eat the food of gods, of ghosts, of fairies, binds the mortal to them, and he cannot leave their land. When Connla ate the apple, he desired to go to the Other-world, and could not leave it once he was there: he had become akin to its people. In the stories of Bran and Oisin, they are not said to have eaten the divine food, but the primitive form of the tales may have contained this incident, and it would explain why they could not set foot on earth unscathed.

(*e*) The inhabitants of Elysium are also invisible at will—a true mark of their divinity. They make themselves visible to one person only out of many present with him. Thus Connla alone sees the goddess, his father and the druid with him do not see her; and, when Manannan comes to recall Fand, he is invisible to Cúchulainn and those with him. This agrees with what Mider says to Etain:

'We behold, and are not beheld' (Windisch, i. 133).

(*f*) In most of the tales of Elysium, and in other stories about the gods, a magical cauldron has a prominent place, as it also has in tales of semi-historical personages. Such a vessel was the inexhaustible cauldron of the god Dagda, which came from Murias, probably some over-sea world (*RCel* xii. 57), or the vat of inexhaustible mead described in 'Cúchulainn's Sick-bed.' Whatever was put into such vessels satisfied every one, no matter how numerous the company might be (O'Donovan, *Battle of Mag Rath*, Dublin, 1892, 50). Such a cauldron was stolen by Cúchulainn from Mider, lord of the isle of Falga (the over-sea Elysium), along with several cows (*LL* 169*b*); and in what is perhaps another version of this tale he obtains an inexhaustible cauldron from the daughter of the king of Scath (Hull, *Cuch. Saga*, 284). Similarly, in the Welsh poem called 'The Spoils of Annwfn,' Arthur steals a cauldron from Annwfn; its rim was encrusted with pearls, voices issued from it, it was kept boiling by the breath of nine maidens, it would not boil a coward's food (Skene, *Four Ancient Books of Wales*, i. 265). In the Welsh story of Taliessin we learn how Tegid Voel and Cerridwen lived in the midst of lake Tegid (*i.e.* 'the Land under Waves'). Their son was so ugly that Cerridwen resolved to boil a cauldron of science and inspiration for him. For a year and a day it must boil till 'three drops of the grace of inspiration' were yielded by it. Gwion was set to stir it, and by accident obtained the inspiration himself (Guest's *Mabinogion*, London, 1838, iii. 321 f.). Finally, in the story of Branwen, daughter of Llyr, her brother Bran gave to the king of Ireland a cauldron into which if any slain man were thrown, he would be restored to life the next day. The cauldron had been given to Bran by two beings, a man and woman, who came out of a lake ('Land under Waves') (Loth's *Mabin.* i. 65). The three properties of the cauldron—inexhaustibility, inspiration, regeneration—may be summed up in one word, fertility; and it is significant that the god with whom such a cauldron is expressly associated, Dagda, should be a god of fertility (see, further, CELTS, § v.). But we have just seen it associated, directly or indirectly, with goddesses,—Cerridwen, Branwen, the woman of the lake,—and perhaps this may point to an earlier cult of fertility associated with goddesses, and later transferred to a god. The cauldron as a regenerator would be significantly connected with a goddess, since woman as the fruitful mother early suggested to man the idea of the fruitful Earth-mother, who was also frequently a goddess of love. Elton had already concluded that Branwen was a goddess of love (*Origins of English History*, London, 1882, p. 291). The cult of fertility was usually associated with orgiastic and indiscriminate love-making, and it is not impossible that the cauldron may have symbolized fertility, like the Hindu *yoni*. Again, the slaughter and cooking of animals were usually regarded as sacred acts in primitive life. The animals were cooked in enormous cauldrons, which were found as an invariable part of the furniture of every large Celtic house (Athen. iv. 34; Diod. Sic. v. 28; Joyce, *Soc. Hist.*, London, 1903, ii. 124). The quantities of meat which they contained may have suggested magical inexhaustibility to people to whom the cauldron was already a symbol of fertility. Thus the symbolic cauldron of a fertility cult was merged with the cauldron used in the religious slaughter and cooking of animal food. The cauldron was used in other ritual acts, sacrifice, divination, etc. Strabo, vii. 2. 1, referring to the Cimri, but this may also have been a Celtic usage; *Brehon Laws*, i. 195; Jullian, *Recherches sur la rel. gaul.*, Bordeaux, 1903, 44). Like the food of men which became the food of the gods, the cauldron of this world became the marvellous cauldron of the other world; and, as it then became necessary to explain the presence of such cauldrons on earth, myths arose, telling of how they had been stolen from the divine land by mortals. In other cases, however, its place is taken by an equally magic vessel or cup stolen from supernatural beings by the heroes of the Feinn saga or the heroes of *Märchen*. Here, too, it may be noted that the Graal of Arthurian romance has affinities with the Celtic cauldron. In the 'Conte du Graal' of pseudo-Chrétien, a cup comes in of itself and serves all present with food. This is a simple conception of the Graal; in other poems its sacrosanct character is heightened, until at last it became the chalice in which Christ instituted the Holy Sacrament. But in certain of its qualities it presents an unmistakable likeness to the Celtic cauldron—it supplies the food which the eater prefers, it gives perpetual youth. There is little doubt that the Graal is simply a fusion of the pagan Celtic cauldron and the chalice of our Lord's blood (see Villemarqué, *Contes populaires des anciens Bretons*, Paris, 1842; Nutt, *Legend of the Holy Grail*, London, 1888).

(*g*) Sensuous as are many of these characteristics, they yet have a spiritual aspect which must not be overlooked. Thus the emphasis placed on the beauty of the land, its music, its rest, its peace, its oblivion, is more spiritual than sensual, while the dwelling of favoured mortals there with divine beings is suggestive of that union with the divine which is of the essence of all religion. Though some who are lured there seek to leave it, others do not return, while Cúchulainn's charioteer Laeg says that he would prefer it to the kingship of all Ireland (Windisch, i. 219), and his words are elsewhere re-echoed by Laegaire mac Crimthainn. On the whole, then, it may be said that, of whatever elements it was composed, the conception of the Celtic Elysium was the imaginative shaping of man's instinctive longing for peace and rest. He hardly expected to obtain these beyond the grave, for there life went on as here, although that future state was one which had no terrors for him. A few great personages might reach Elysium after death, as an obscure passage in Plutarch (*de Defectu Orac.* 18) may hint (see under CELTS, § xvi. 5), but it was shut to all save a few favoured mortals who might be carried there in life. And possibly the hope that he might be so favoured of the gods buoyed up the Celt as he dreamed over this distant Elysium.

7. The Celtic Elysium and the gifts of civilization.—In the opinion of the Celts, as of many other peoples, wisdom and culture belonged first of all to the gods, by whom they were given to, or from whom they were stolen by, man. Examples of this have already been found in the tales in which a mysterious cauldron is stolen from the Otherworld (§ 6). It is also hinted at in the tales of divine trees guarded from mortals, and in the belief in the hazels of wisdom which endowed mortals with supernatural wisdom and knowledge. But when men came to domesticate animals, it was believed in course of time that the knowledge of domestication or, more usually, the animals themselves had come from the gods; only, in this case, the animals were of a magical, supernatural character. Such a belief underlies the stories, already referred to, in which cows are stolen from their divine owners by Cúchulainn. In the tale of 'Nera's Adventures in the Other-world' (*RCel* x. 226), Nera obtains a wife and several kine from the *sid* of Cruachan; and similarly Tulchine, who took a wife from the Land of Promise, obtained

her favourite calf also by interceding with the goddess Morrigan (Stokes, *RCel* xvi. 62). In the *Mabinogion* (Loth, i. 122 ff.) the swine given to Pryderi by Arawn, king of Annwfn, and hitherto unknown to man, are stolen from him by Gwydion, Pryderi being the son of Pwyll, a temporary king of Annwfn (§ 3), and therefore, perhaps, originally one of the lords of Elysium. But though this raid was successful, the poem of 'The Spoils of Annwfn' says, 'Stout was the prison of Gweir in Caer Sidi, Through the spite of Pwyll and Pryderi, No one before him went into it.' Gweir is probably identical with Gwydion (Rhys, *Hib. Lect.* 250), and this poem may then refer to another version of the myth in which the hero was unsuccessful, and was detained a prisoner in Elysium, to which imprisonment the later blending of Annwfn with Hades gave a doleful character. In the *Triads* (Loth, ii. 215), Gweir is one of the three paramount prisoners of Britain. There is also reference in a late Welsh MS to a white roebuck and a puppy (in the *Triads* [Loth, ii. 259] a bitch, a roebuck, and a lapwing), which were stolen by Amathaon from Annwfn, and which led to the battle of Godeu between Arawn and Gwydion. In this battle Bran, fighting on the side of Arawn, could not be vanquished until Gwydion had guessed his name (*Myvyrian Arch.*, London, 1801, i. 167). The introduction of the name-tabu proves the story to be archaic. In some of these tales the animals are transferred to earth by a divine or semi-divine being, in whom we may see an early Celtic culture-hero. The tales themselves are attenuated forms of an earlier series of myths, which probably showed how all domestic animals were at first the property of the gods. An echo of these is still preserved in *Märchen* describing the theft of magical cattle from fairies. In the most primitive form of the myths the theft was doubtless from the under world of the gods of fertility, which was also connected with the place whither the dead went. But when the gods were also located in a distant Elysium, it was inevitable that some tales should tell how the theft was connected with that far-off land rather than with the land of under-earth divinities. But in neither case was the theft from gods of death, but from gods of life and fertility with whom all man's blessings were. So far as the Irish and Welsh tales are concerned, the thefts seem to be mainly from Elysium.

8. **The lords of Elysium.**—In Irish accounts of the *síd* world, the god Dagda appears to have the supremacy, which was wrested from him later by the Mac Oc. But in a probably later version we learn that, Dagda being dead, Bodb Dearg divided the *síd* among the gods, and Manannan gave them the gift of immortality (see CELTS). But in tales of the *síd* world, each owner of a *síd* is accounted lord of that particular *síd*, which for the time being eclipses all others. The one great under world of gods of fertility has now become a world of many underground *síd*. In Welsh tradition the lord of Annwfn, wherever it is situated, is Arawn, but his claims are contested by a rival. In Irish tradition Manannan mac Lir is associated with the over-sea world or with the 'Land of Promise,' while Elysium itself is called 'the land of Manannan' in the *Voyage of Bran*. Manannan was probably a god of the sea, and it was easy to associate the over-sea world, 'around which sea-horses (*i.e.* the waves, the god's mythic steeds) glisten,' with him. But, again, as this land lay towards the setting sun, and in some of its aspects may have been suggested by the glories of the sunset, the sun-god Lug was also associated with it. But he hardly takes the place of Manannan; he comes from Manannan's land, with Manannan's sons and ramed with his weapons, to aid the gods, but Manannan still remains lord of Elysium (Joyce, *Old Celt. Romances*, 37).

9. **Elysium and Paradise.** — While the tales already dealt with are mainly re-mouldings of earlier pagan originals, which may have been handed down orally, or are based upon the materials of pagan belief, they have in many ways been influenced by Christian ideas, although their main incidents are purely pagan. But in another class of tales, which may have had pagan originals, the Elysium conception recurs, and finally ends in becoming the Christian paradise or Heaven. These are the *Imrama*, or 'Voyages,' of which that of Maelduin, found partly in the 11th cent. *Lebor na hUidre*, and in complete form in 14th to 16th cent. MSS, still moves in a pagan atmosphere. Here the voyage is undertaken for the purpose of revenge; but the travellers reach a number of strange islands unpeopled, or peopled by men and women, by animals, or by monsters. One island closely resembles the Isle of Women in the pagan Elysium. Besides the Isle of Laughter, found also in *Bran*, there is an Isle of Weeping, and in this we approach the idea of a place of penitence. Another island, guarded by a fiery rampart, is peopled by beautiful human beings feasting and singing—an approach to the Christian paradise. The Isles of Weeping and Laughter are also found in the *Imram hua Corra*, where also is the island of the Miller of Hell, mentioned simply as a miller in *Maelduin*. Thus, even in *Maelduin* the use of the pagan materials is indeterminate, and the Elysium conceptions have become vague. Elsewhere, as in the *Voyage of Snedgus and Mac Riagla*, the journey is undertaken as a pilgrimage, and the Christian atmosphere is more pronounced. One island has become a kind of intermediate state, and in it dwell Elijah and Enoch and a multitude of others 'without sin, without wickedness,' waiting for the day of judgment. Another island is nothing less than the Christian Heaven viewed from an ecclesiastical standpoint. Finally, in the *Voyage of Brandan* the pagan elements have practically disappeared: there is an island of Hell and an island which is the Christian paradise or Heaven. In these *Imrama*, the number of islands visited may be compared to the thrice fifty islands of *Bran*, whether this be a later conception of the pagan Elysium or not; the old idea of a mortal lured thither by a goddess has disappeared, and the voyage is undertaken for a specific purpose—revenge or a pilgrimage. Another series of tales, in which a visit is paid to Hell and Heaven in a vision (*Adamnan's Vision*, *The Tidings of Doomsday*, etc.), are purely Christian products, but it is remarkable that the joys of heaven are described in terms of the pagan Elysium. There is unimaginable beauty, music, absence of sickness, of pain, of death; there is no age, decay, or labour. The whole description of heaven has a sensuous, material aspect which reflects that of the old pagan stories. In the latter text there are two hells; besides heaven there is a place for the *boni non valde* which corresponds to the island where dwell Enoch and Elijah in the *Voyage of Snedgus*. The conception of this island, which is not heaven, may be borrowed directly from the pagan paradise. The connexion of the pagan Elysium with the Christian paradise is also seen in the title of *Tír Tairngiri*, 'the Land of Promise,' which is applied to the heavenly kingdom or to the land flowing with milk and honey, as in glosses (7th or 8th cent.) on He 6^{15}, where *regnum coelorum* is explained as *tír tairngiri*, or He 4^{4}, where Canaan is so called, and notably on 1 Co 10^{4}, where the heavenly land is called *tír tairngiri inna mbéo*, 'the land of promise of the living ones': thus apparently equalling it with the *tír na mbéo* of

'Connla's Voyage.' If *tír tairngiri* was not already a title of the pagan Elysium, it was now applied to it in several instances through the influence of this identification.

See Zimmer, 'Brendan's Meerfahrt,' *ZDA* xxxiii. The *Imrama* of Snedgus, Maelduin, and Ua Corra are edited and translated by Stokes in *RCel* ix., x., xiv. *Adamnan's Vision* is edited and translated by Stokes, Calcutta, 1866; cf. C. S. Boswell, *Irish Precursor of Dante*, London, 1908; the *Tidings of Doomsday* is in *RCel* iv. 243. Cf. also chs. 4 and 8 of Nutt's *Bran*.

10. Elysium in later folklore.—Most of the aspects of the pagan Elysium re-appear in folk belief almost unchanged. The under or *síd* world is now fairyland; mounds, forts, and raths are fairy-dwellings into which mortals are sometimes inveigled, and where all the characteristics of the earlier divine world are found—magic lapse of time, marvellous beauty, magical properties. Similarly a marvellous over-sea land is still a commonplace of Celtic *Märchen* and Celtic belief. Tír na nÓg is still a living reality to the Celt. Within that fabled land are the mystic and magic things of folk-tale—the fountain of youth, healing balsams, life-giving fruits. It is peopled by marvellously beautiful women, or it is connected with fairy folk. Sometimes it is visible only to favoured persons, or it is sunk beneath the waves, and comes to the surface only at intervals. But in whatever form it is found, it is obviously linked on to the actual Elysium of the pagan Celtic world.

In the 11th cent. Irish documents, from which our knowledge of Elysium is mainly drawn, and which, of course, imply a remote antiquity for the material of the tales, the *síd* world is still the world of divine beings, though these are beginning to assume the traits of fairy folk. But probably among the people themselves the change had already been made, and the *síd* world was simply fairyland. In Wales the same change had early taken place, as is witnessed by the story of Elidorus enticed by two small people into a subterranean fairyland. This is fully told by Giraldus Cambrensis (*Itin. Camb.* i. 8). For the over-sea fairyland see J. F. Campbell, *Popular Tales of the West Highlands*, London, 1860–62; MacDougall, *Folk and Hero Tales*, London, 1891; Howells, *Cambrian Superstitions*, Tipton, 1831; Sébillot, *Folk-Lore de France*, Paris, 1904, ii.; Kennedy, *Legendary Fictions*, London, 1866; or any collection of Celtic *Märchen*.

LITERATURE.—Translations or epitomes of most of the texts relating to the Other-world will be found in Windisch and Stokes, *Irische Texte*, Leipzig, 1880–1900; D'Arbois de Jubainville, *Cours de Littérature Celt.* ii., Paris, 1884; S. H. O'Grady, *Silva Gadelica*, 1892; Joyce, *Old Celtic Romances*[2], London, 1894; A. Nutt and K. Meyer, *Voyage of Bran*, London, 1895; Rhys, *Celtic Heathendom*, London, 1888, *Arthurian Legend*, Oxford, 1891; A. H. Leahy, *Heroic Romances of Ireland*, London, 1905; E. Hull, 'The Idea of Hades in Irish Literature,' *FL* xviii. 1907.

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Greek and Roman).—i. Greek.—In the Homeric poems the gods alone are immortal. Nowhere in the older strata of the poems is immortality an attribute of man. Complete life for him exists only on earth and in the light of the sun, and only with the complete union of soul and body. When separated from the body, the soul passes out of this world into a shadowy, powerless existence, which is nowhere expressly stated to be eternal. The idea of an earthly paradise, *i.e.* an abode of bliss upon earth, where life is continued in full vigour without the sharp severance between soul and body which death requires, is an attempt to find a more comforting solution of the problem of an after-life. A solution so naive does not long remain an article of belief in Greece except among the ignorant vulgar. In the history of religion the idea is absorbed by the belief in immortality, which was soon fostered in Greece under the influence of imported mystical tenets and of philosophic systems founded upon them. The earthly bliss, which at best could be attained only by the favoured few, is transmuted into the heavenly bliss, which is promised after death to all who have lived uprightly. In the history of literature the idea survives as a beautiful fancy which is cherished by poets and often serves in later times as a basis for the romantic reconstructions of human society in which the Greeks found a melancholy consolation for some of the darkest periods in their national life.

1. *Homer, Hesiod, and the Epic cycle.*—In Homer, as the gods alone are immortal, so they alone can confer immortality. Their favourite heroes, always of divine descent, have such immortality conferred upon them by the drinking of nectar or the eating of ambrosia, and are thereupon translated either to heaven or to an earthly paradise such as the Elysian plain. The most striking instance of such an earthly translation is to be seen in *Od.* iv. 561, where Proteus prophesies to Menelaus:

'But it is not thy destiny, O Menelaus, *child of Zeus*, to die and meet thy fate in horse-pasturing Argos. The immortal gods will send thee to the Elysian plain and the verge of the world where fair-haired Rhadamanthys dwells, where life is easiest for man. No snow falls there, nor any violent storm, nor rain at any time; but Ocean ever sends forth the clear, shrill blast of the West wind to refresh mankind; *because thou hast Helen to wife and they count thee to be son-in-law to Zeus.*' (Cf. Eur. *Hel.* 1676 ff.).

Here it should be noted that Elysium is on earth and not in Hades. It is the counterpart of Olympus, the mountain-home of the gods, described in almost the same words in *Od.* vi. 43–45. Further, Menelaus is not beatified as a reward for his merits. Like Rhadamanthys, he is of kin to Zeus. The blissful existence in Elysium which is conferred by the gods upon their kin is an exceptional privilege, exactly parallel to the eternity of pain which they inflict upon their enemies in Erebos (*Od.* xi. 576 ff.). The conception of Elysium in Homer is poetical rather than religious. The heroes who have passed thither exert no influence upon the world of men that they have left behind. The gods transfer to them none of their own prerogatives save immortality. The conception is an extension of the other ideals of blissful, though mortal, existence that are found in Homer—chiefly in the *Odyssey*, which is permeated by a peaceful spirit characteristic of men who have enjoyed undisturbed quiet long enough to value it, and foreign to the martial temper of the *Iliad*. Of such ideals the most noteworthy are the idyllic lands of Phæacia (*Od.* vii. 81), of the island of Syrie, the home of Eumæus (*Od.* xv. 403), and idyllic peoples such as the Abioi (*Il.* xiii. 6) and Ethiopians (*Il.* i. 423).

This enchanting fancy of an earthly paradise became an integral part of Greek thought once it had been incorporated in the Homeric poems. The common people of Greece were accustomed to the idea of 'translation' in the worships of such heroes as Amphiaraos and Trophonios, who had passed, while yet alive, to a life below the earth. The 'translation' of heroes, so rare in Homer, is of common occurrence in the post-Homeric Epic. In the *Cypria*, Iphigeneia is rescued by Artemis, carried to the land of the Tauri and rendered immortal (Proclus in *Epicorum Graec. Frag.*, ed. Kinkel, p. 19). In the *Æthiopis*, Memnon is translated by his mother Eos to her home in the East and made immortal by Zeus at her request (*ib.* p. 33). In the same poem, Achilles is saved from death by Thetis and conveyed to the magic island of Leuke (*ib.* p. 34). In the *Telegoneia*, the latest of such Epics, Telegonus, the son of Odysseus and Circe, brings the bodies of Penelope, Odysseus, and Telemachus to his mother, who confers immortality upon them in her home in Ææa (*ib.* p. 58).

Thus far the idea of an earthly paradise is developed at the will of each particular poet. The fortunate heroes have no common home, but are transferred to magic lands which are alike in nothing else save that they are beyond mortal ken. The various strands of fancy are woven together into a consistent whole by Hesiod, in whose poems we meet with the expression 'The Isles of the Blest' for the first time. In *Op. et Di.* 170 ff., after

the description of the three races of Gold, of Silver, and of Bronze, follows a fourth race better than the race of Bronze—the heroes or demigods who fought at Thebes and at Troy. Of these, some died, others were settled by Zeus at the world's end in the Islands of the Blest, 'where the earth produces sweet fruit for them thrice in the year.' As in Homer, they are completely severed from the world of men, and have no influence upon it. In Hesiod, further, they are heroes of the past, their tale is numbered, and no accessions to their ranks can come from the fifth degenerate race that is now on earth.

2. Pindar is far removed from the simple theological standpoint of Homer and Hesiod, but he is far too great a poet and prophet to reject a beautiful religious idea. He renders it wider and deeper. Whether from personal convictions, which had grown upon him during his repeated visits to Sicily since 477, or from a desire to satisfy his Sicilian patrons such as Gelo, Hiero, and Theron, who were hierophants of chthonic worships, he accepts a number of the dogmas of Orphic and Pythagorean mysticism, among which he finds a place for the popular belief in the Islands of the Blest. Pindar, on the one hand, represents the traditional belief that a full immortality can come only from the continued union of soul with body, a union to be secured only by Divine intervention (*e.g.* Ganymede, *Ol.* i. 44, x. 104; Amphiaraos, *Ol.* vi. 14, *Nem.* ix. 24 ff.); but he has also absorbed the belief that the soul is no mere *Doppelgänger* of the body but is Divine in origin (frag. 131, 'the likeness of eternity is left: for that alone comes from Heaven'). It is immortal, but confined in a mortal body, owing to the 'ancient sin' (frag. 133, *παλαιὸν πένθος*). After the death of the body it is judged in Hades for its deeds on earth. The wicked are condemned to Tartarus; the good pass to the home of the pious (*χῶρος εὐσεβῶν*). Only after three lives of purity have been completed on earth (*Ol.* ii. 68 ff.) is the ancient sin atoned for. Thereupon, in the ninth year after its last arrival in Hades (see Rohde, *Psyche*[2], ii. 211), the soul ascends to the world above for the last time, to become incorporate in kings, heroes, and wise men. Such souls are then freed from the trammels of the earth and find a home in the Island of the Blest, where under the rule of Kronos they live in communion with the earlier heroes, such as Peleus, Cadmus, and Achilles (*Ol.* ii. 86; frag. 133). Here the life of bliss is no longer an earthly paradise in the earlier sense. The Island is in Ocean, it is true, but can be reached only through death and through lives of purity lived upon earth.

3. There are scattered references to the belief in its original form found in later writers. Cadmus and Harmonia are transferred to the Land of the Blest (*μακάρων ἐς αἶαν*), in Eur. *Bacch.* 1339 ff.; Achilles and Diomedes live in the Island of the Blest, according to the scholion on Harmodios (Bergk, *Carm. pop. fr.* 10). According to Plato (*Symp.* 179 E), Achilles is in the Isles of the Blest. Others find his home on the Elysian plain (Apoll. Rhod. *Arg.* iv. 811) or in Leuke (see below), where he has Medea to wife, according to Ibycus the melic poet of the 6th cent. (*schol.* Apoll. Rhod. iv. 814), or, according to others, Iphigeneia (Antoninus Liberalis, 37) or Helen (Pausanias, iii. 19. 11–13). For further references see Rohde, *Psyche*[2], ii. 369, note 2.

A naive belief that it was possible to discover these fortunate lands long continued. The most striking instance is the resolve of Sertorius to sail for the Atlantic isles in the search for happiness (Plut. *Sert.* 8. 9; Sallust, *Hist.* i. frag. 102, Maurenbrecher). Geographers often placed them in the unknown, and therefore mysterious, West, where (akin to them in idea) was the garden of the Hesperides, with its golden apples of immortality (cf. Wilamowitz-Moellendorff, *Herakles*[1], ii. 129; Eur. *Hippol.* 732 ff.). They are in West Africa, according to Strabo, i. 3, iii. 150, and Plin. *HN* vi. 202 ff. Others placed them in the centre of Libya (Herod. iii. 26) or in the Antipodes (cf. Serv. *Æn.* vi. 532). The home of Diomedes was found in the Tremiti islands in the Adriatic (Strabo, vi. 283, 284). Leuke, the isle of Achilles, was placed in the Euxine (Alcæus, *Fr.* 48[b]; Pind. *Nem.* iv. 49; Eur. *Andr.* 1232 ff., *Iph. T.* 420), at the mouth of the Danube (Paus. iii. 19. 11), and was counted as one of the Isles of the Blest (cf. Plin. *HN* iv. 93, 'Insula Achillea, eadem Leuce et Macaron dicta'). Similar legendary lands are placed near the Indian Ocean (cf. Aristophanes, *Av.* 144; Æsch. frag. 192, Nauck). For further attempts see Hesychius *s.v.* 'Lesbos,' and Suidas *s.v.* 'Rhodos.' A parody of the belief will be found in Lucian's *Vera Historia*, ii. 6 ff. The inscriptions containing references to the Elysian plain and the Isles of the Blest may be consulted most conveniently in G. Kaibel's *Epigrammata Graeca, ex lapidibus collecta*, Berlin, 1878. But here it is no question of earthly bliss. The Blessed Isles (*Ep.* 649. 2), the Elysian plain (*Ep.* 414. 8), the *χῶρος εὐσεβέων* (*Ins. Gr. mar. Æg.* i. 141), are not of this world, but only testify to a life beyond the grave to which the righteous can aspire. The Epigram on Regilla, the wife of Herodes Atticus (1046. 8), *μεθ' ἡρῴῃσι νέναται ἐν μακάρων νήσοισιν ἵνα Κρόνος ἐνβασιλεύει*, is merely a literary adaptation of the older belief.

4. *The Romance writers.*—The best account of these will be found in Rohde's *Griechische Roman*[2], pp. 178–260). The political downfall of Greece, which began in the 4th cent. B.C., and the widespread disasters which accompanied it, led men to seek relief from the hopelessness of present affairs in the freedom of fanciful speculations. Social reformers, whether politicians or philosophers, embodied their ideas in sentimental romances—a branch of literature which developed naturally out of the old sagas (*e.g.* the tale of the Argonauts) and the stories of fabulous adventure and ethnographical curiosities which had long been popular in Greece. As early as Solon we find a comic description of a land of good things (Bergk, *Poetae Lyrici*[4], frag. 38). But the first serious philosophical romance comes from Plato, who portrays his ideal of earthly perfection in the State of 'Atlantis.' The ground-plan of this is sketched in the *Timaeus* (cf. esp. 20 D–25 E), and was to be completed in the *Critias*. Theopompus (*c.* 333 B.C.) made a similar attempt. In the eighth book of his *Philippica* he introduced a description of an ideal country called 'Meropis' with its cities *Machimos* and *Eusebes*—the first a town of warriors, the second the abode of peace and justice. A more philosophic work was 'The Hyperboreans' of Hecatæus of Abdera, a philosopher at the court of Ptolemy I., and a pupil of the sceptic Pyrrho. Pyrrho's philosophy was less a theory of doubt than a conviction that the whole world of things was unworkable, and that a calm indifference was the only feasible rule of conduct. His pupil's romance on the Hyperboreans, who live in the island of Helixoia, in the Northern Ocean, seems to have been prompted by similar views. Amometus, a contemporary of the first and second Ptolemys, travelled outside the range of native mythology, and based his romance of the Attacori (Plin. *HN* vi. 17, § 55) upon the Indian legend of the happy land of Uttarakuru, north of the Himalayas (cf. Lassen, *WZKM* ii. 63, 64). Euhemerus of Messana, the friend of king Cassander (*c.* 306 B.C.), finds his Utopia in the island of Panchaia in the Indian Ocean. Iambulus (of uncertain date, but earlier than the age of Augustus) finds an Island

of the Blest near the equator. The popularity of such romances is sufficiently shown by the travesty of them given by Lucian in his *Vera Historia*. Their influence extended beyond Greece, since the description of the Essenes in Josephus (*BJ* II. viii. 11) is held to show traces of Greek colour.

ii. Roman.—The idea of an earthly paradise was never native to Roman thought. A belief in immortality was always an integral part of the Roman religion. With the assurance of an after-life in the world of spirits, colourless though it might be, the practical Roman had no need of such a conception. Such references to the belief as are found in Latin literature are importations from the Greek: *e.g.* Plautus, *Trin.* 549: 'Fortunatorum memorant insulas, Quo cuncti qui aetatem egerint caste suam, Conveniant.' The beautiful description in Horace, *Epodes*, xvi. 39 ff., is suggested in all probability by the story of Sertorius mentioned above. See also STATE OF THE DEAD (Greek and Roman).

LITERATURE.—E. Rohde, *Psyche*[2], 2 vols., Freiburg, 1898, and *Der Griechische Roman*[2], Leipzig, 1900; L. Preller, *Griechische Mythologie*[4], ed. C. Robert, Berlin, 1887-94; Dieterich, *Nekyia*, Leipzig, 1893. F. W. HALL.

BLEST, ABODE OF THE (Hindu).—The Hindus believe that there was, and is still, a place of bliss on earth, a kind of earthly paradise, inaccessible to men, and far far away from our part of the earth. But the idea, frequent among many savage tribes and some civilized peoples, that the brave and the virtuous go to such a place on their decease, seems not to have been current in ancient India. For already in the Rigveda the abode of the dead who in life have done pious deeds is said to be in heaven above, and, according to the Atharvaveda, the wicked receive their punishment in the hell below.* And in later Sanskrit literature heavens were multiplied to such an extent that the souls of the deceased were amply provided for, and required no dwelling place on earth such as the Islands of the Blessed of the ancients. The Indian belief in a place of bliss cannot therefore have developed from an earlier one in a heaven on earth; but we shall postpone our inquiry into the probable origin of this belief till we have described it in all its details. We must, however, define this place of bliss more accurately as one believed to be still in existence, in order to distinguish it from the state of bliss which obtained in the Golden Age, when the whole earth, newly come into existence, was, as it were, all one abode of the Blessed.† In the Sanskrit epics, the Purāṇas, and the classical literature the *Uttarakurus* are regarded as the Blessed, and their land as an earthly paradise which is localized in the far North.

1. **Site of Uttarakuru.**—It will be convenient first to set forth the Pauranic opinion on the site of Uttarakuru, since it is the most explicit one. According to the Purāṇas, the earth, of which India forms part, is a circular island, or rather insular continent, of enormous dimensions, called Jambūdvīpa. There are six more such islands, Śākadvīpa etc., which, however, are not connected with our present subject. In the centre of Jambūdvīpa rises Mount Meru, 84,000 *yojanas* above the surface of the earth. The whole continent is divided by six parallel mountain ranges, running due east and west, three south of Meru and three north of it. The southernmost range is the Himālaya, and the segment of the disc of the earth lying to the south of it is Bharatavarṣa, or India, and some countries known to the Indians. The counterpart of Bharatavarṣa, *i.e.* the segment to the north of the northernmost range, Śṛṅgin, is Uttarakuru. It may be mentioned that the other *varṣas*, or strips of land between the several mountain ranges, are also inhabited by fabulous people; the model of them all seems to have been the Uttarakurus. From the position of the country of the latter it is clear that they were regarded as the antipodes of men, if it be allowed to apply this term to an earth figured as a disc.

In the *Bhīṣma Parvan*, adhy. v. and vi., in a part of the *Mahābhārata* of a decidedly Pauranic character, we meet with a somewhat different description of the earth, called here Sudarśana instead of Jambūdvīpa. The number, arrangement, and names of the mountain ranges is the same as in the Purāṇas, but the names of some of the *varṣas* are different, and those of the two most northern ones are omitted. In viii. 10, however, the most northern segment is called Airāvata, not Uttarakuru, which, by the way, is also the case with the Jains; yet the excellence of the country and the happiness of the inhabitants of Airāvata are exactly like those of the Uttarakurus as described in a preceding chapter. In this account (vi. 13) the land of the Uttarakurus is stated to lie at the northern side of Meru, or near the centre of the disc of the earth. Round Meru, we are told, are grouped four *dvīpas*, lit. 'islands,' but, according to the commentary, countries surrounded by a broad river; these islands are Uttarakuru N., Bhadrāśva E., Jambūdvīpa S., Ketumāla W. Here we must distinguish, it seems, two accounts: the Pauranic account, which is made the basis of the description of the earth; and, combined with it, an older one, which places Meru in the ocean, and the four insular continents round it.* Here, too, Jambūdvīpa is the abode of men, and Uttarakuru that of the Siddhas.

What the present writer considers the earlier of these two accounts is actually the idea underlying the Buddhist system of geography. There Meru rises from the ocean, round it are seven concentric circular mountain ranges separated from each other by ring-shaped seas, and beyond them, in the vast ocean known to men, are four insular continents—Jambūdvīpa S., Pūrvavideha E., Uttarakuru N., and Aparagodāna W. Jambūdvīpa, the abode of men, is of a triangular shape, and Uttarakuru, the abode of the Blessed who live 1000 years, forms a square.†

The Jains, whose geography has been developed on the same lines as that of the Purāṇas,‡ also place the Uttarakurus near the centre of the Jambūdvīpa, between Gandhamādana and Mālyavat, two spurs of Mount Meru running N.W. and N.E.§

In such parts of the epics as do not yet exhibit the fully established system of Pauranic geography, the Uttarakurus are placed in the extreme North, in the borderland of the inhabited or known earth. In the *Digvijayaparvan* of the *Sabhāparvan* of the *Mahābhārata* (ii. 28), Arjuna's conquest of the northern countries is related. After having passed the Himālaya and the fabulous mountains Niṣkuṭa and Śvetaparvata, and having vanquished many mythical people, Arjuna reaches the north of the country Harivarṣa. There he is warned not to proceed further, because the region beyond

† See art. AGES OF THE WORLD (Indian) in vol. i. p. 200 ff.

* The Purāṇas also mention those four countries, substituting, however, Bhārata for Jambūdvīpa, and likening them to the petals of a lotus whose pericarp is Mount Meru. Sometimes they seem to be regarded as countries in Ilāvṛta or the middle *varṣa*, sometimes as islands lying off the coast of Jambūdvīpa in the great ocean. The efforts of the Purāṇas to explain result in worse confusion.

is that of the Uttarakurus: 'he that entereth it, if human, is sure to perish.' In the *Rāmāyaṇa* (iv. 43) we meet with a description of the North where the monkeys are despatched in search of Sītā. There many fabulous mountains and places, which do not form part of the Pauranic system of geography, are mentioned. In the North sun and moon cease to shed light, and even farther north live the Uttarakurus.* Their country is bounded by the Northern Ocean, in which rises Mount Somagiri, scarcely accessible even to gods.

Notwithstanding the prevalence of Pauranic geography during the classical period and some centuries before it, some faint knowledge of an actual tribe of Uttarakurus, somewhere on the slopes of the Himālayas, seems to have continued even then. Lassen † has drawn attention to some notices in the Epics and classical writers where the Uttarakurus are not regarded as a fabulous people. Important in this regard seems to be a passage in the *Vanaparvan* of the *Mahābhārata*, iii. 145, where the Uttarakurus are placed south of Kailāsa. Mr. Pargiter, commenting on a passage in the *Mārkaṇḍeya Purāṇa* ‡ where the (Uttara) Kurus are mentioned among the people 'who rest against the Mountains,' has the following note which sums up the whole question under discussion:

'They seem to have been the stock from which the Kurus of Madhyadeśa separated off, for the period when Dhṛtarāṣṭra and Paṇḍu were born is described as a Golden Age, in which both branches of the Kurus engaged in happy rivalry (Ādi-P. cix. 4337–46); but the wistful recollections of their ancient home idealized it afterwards into a blissful land, where fancy gave itself free scope (Rāmāy., Kiṣk. xliv. 82–115). They seem to have occupied the uppermost valley of the Indus near its sources, with Kailāsa lying beyond (Vana-P. cxlv. 71025–35); and fervid imagination also placed them close to Mount Meru on its north side (Bhīṣma-P. vi. 207–8, and vii. 254), or in the region Harivarṣa, and declared men could not enter their sacred land (Sabhā-P. xxvii. 1054–8). They are described as living in primitive happiness, and women had the utmost freedom there (722, 4719–23; and Rāmāy. *loc. cit.*).'

The first mention of the Uttarakurus is contained in the *Aitareya Brāhmaṇa*. In viii. 14 we read: 'hence all people living in northern countries, such as the Uttarakurus, Uttaramadras, are inaugurated for living without a king (*vairājyam*), and called Virāj, *i.e.* "without king."' § Here the Uttarakurus seem to be a real people, *i.e.* one with which the Indians, at the time of the *Aitareya Brāhmaṇa*, were actually acquainted, or, at least, of which they had some kind of positive knowledge; for the very name *Northern Kurus*, and the fact that they are mentioned jointly with the Northern Madras, proves that these peoples of the North were regarded as related by kinship to the well-known Indian tribes of the Kurus and Madras. But the Uttarakurus were already looked upon as superior beings, for in the same *Brāhmaṇa* (viii. 23) it is declared that Uttarakuru 'is the land of the gods, no mortal can conquer it.' ‖

It must be added that Ptolemy (vi. 16) mentions a mountain, people, and town of the name of *Ottorokorra*, which obviously stands for Uttarakuru; but he places Ottorokorra in Serica or China. Whatever may have been his reason for doing so, he apparently regarded them as a real, not a mythical people. And so did Pliny (vi. 20), who mentions them under the name of *Attacori*, and places them near the Phruri and Tochari. On the other hand, many fables seem to have been told of them. For Pliny says: 'de iis privatim condidit volumen Amometus, sicut Hecataeus de Hyperboreis.' Megasthenes seems to intend the Uttarakurus by his Hyperborei * who live 1000 years, for this is the length of life of the Uttarakurus according to the Buddhists.

2. Description of Uttarakuru.—The classical passages about the land and the inhabitants of Uttarakuru are *Rāmāyaṇa* iv. 43 and *Mahābhārata* vi. 7, of which we subjoin a translation:

In *Rāmāyaṇa* iv. 43 it is said that in the farthest North sun and moon at last cease to shine; and if you still proceed you come to the river Śailodā, whose water, according to the Bengal redaction of the text, turns into stone the man who touches it. 'On either bank of that river grow reeds, called *kichaka*, which carry the Blessed (*Siddhas*) to the opposite bank and back. There is Uttarakuru, the abode of the pious, watered by lakes with golden lotuses. There are rivers by thousands, full of leaves of the colour of sapphire and lapis lazuli, and the lakes, resplendent like the morning sun, are adorned by golden beds of red lotus. The country all round is covered with costly jewels and precious stones, with gay beds of blue lotuses of golden petals. Instead of sand, round pearls, costly jewels, and gold form the banks of the rivers, which are covered with trees of precious stones, trees of gold shining like fire. The trees always bear flowers and fruits, they swarm with birds, they are of a heavenly smell and touch, and yield all desires; other trees bring forth clothes of various shapes. [Here we omit four verses pronounced spurious by the Commentator.] All the inhabitants do pious deeds, all are given to love, all, dwelling together with their wives, have their desires fulfilled. There one always hears the sound of song and music mixed with gay laughter, pleasant to all creatures. There is none who does not rejoice, none whose desires are not fulfilled; and every day those pleasant qualities grow brighter.' The text of the Bengal redaction is much more detailed, and contains some additions which are out of place there, but on the whole it is in the same strain. Besides the items given above, there are mentioned rivers flowing with milk which form a deposit of boiled rice, and trees on which grow beautiful maidens hanging down from their branches.

The description of Uttarakuru in *Mahābhārata* vi. 7 runs thus in Protap Chandra Roy's translation: 'On the south of the Nīla mountain and the northern side of Meru are the sacred Northern Kurus, which are the residence of the Siddhas. The trees there bear sweet fruits, and are always covered with fruits and flowers. All the flowers (there) are fragrant, and the fruits of excellent taste. Some of the trees, again, yield fruits according to the will (of the plucker). There are, again, some other trees that are called milk-yielding. These always yield milk and six different kinds of food of the taste of Amṛta itself. Those trees also yield clothes, and in their fruits are ornaments (for the use of man). The entire land abounds with fine golden sands. A portion of the region there, extremely delightful, is seen to be possessed of the radiance of the ruby, or of the lapis lazuli, or other jewels and gems. All the seasons there are agreeable, and nowhere does the land become miry. The tanks are charming, delicious, and full of crystal water. The men born there are dropped from the world of the celestials. All are of pure birth, and all are handsome in appearance. There twins (of opposite sexes) are born, and the women resemble Apsaras in beauty. They drink the milk, sweet as *amṛta*, of those milk-yielding trees (already mentioned). And the twins born there (of opposite sexes) grow up equally. Both possessed of equal beauty, both endued with similar virtues, and both equally dressed, both grow up in love like a couple of *chakravākas*. The people of that country are free from illness, and are always cheerful. Ten thousand and ten hundred years they live, and never abandon one another. A class of birds called *bhāruṇḍa*, furnished with sharp beaks and possessed of great strength, take them up when dead and throw them into mountain caves. One more item must be added. In the following chapter it is narrated that on the south of Mount Meru there grows the gigantic Jambū tree Sudarśana, from which the name of *Jambūdvīpa* is derived. It touches the very skies, and bears fruits of 1115 cubits circumference. 'In falling upon the earth these fruits make a loud noise, and then pour out a silvery juice on the ground. That juice of the Jambū, becoming a river, and passing circuitously round Mount Meru, cometh to (the region of) the Northern Kurus. If the juice of that fruit is quaffed, it conduces to peace of mind. No thirst is felt ever after; decrepitude never weakens them.'

Most Purāṇas give no detailed descriptions of the Uttarakurus, for the number of fabulous peoples inhabiting the other *varṣas* beyond the Himālaya is very great in the Purāṇas, and all these peoples live in a state of happiness denied to the human race.† They were in some degree the equals of the Uttarakurus who, though still regarded as the blessed race, lost something of the interest originally attached to them. There is, however, a description of Uttarakuru in the *Mārkaṇḍeya Purāṇa* ‡ which is apparently based

* Even in later Pauranic myths we meet with the belief that the sun does not shine in the land of the Uttarakurus; *e.g.* Saṇjñā, the wife of the Sun, escaped in the shape of a mare in order that her husband might not discover her (*Harivaṁśa*, 561 ff.; *Mārkaṇḍeya Purāṇa*, ch. 77).

† *Zeitschr. für die Kunde des Morgenlandes*, vol. ii. p. 65 ff.

‡ See his translation of that Purāṇa in the *Bibliotheca Indica*, Calcutta, 1904, p. 345.

on that contained in the passage of the *Mahābhārata* given above; some details added to it are of no importance.

The principal points in the above accounts of the Uttarakurus seem to be the following. They are a race of superior beings, called *Siddhas*, neither gods nor men. Exempt from suffering, caused by illness or old age, through the juice of the miraculous Jambū tree, they lead a long life of happiness and sensual pleasures, and after death their corpses are removed by miraculous birds to mountain caves. Their country is situated far north, at the border of the known world, and it is made inaccessible to man either by its own virtues or by the petrifying river Śailodā which encircles it. To this picture the *Mahābhārata* adds some traits borrowed from the description of the Golden Age given in the Purānas.* For the Uttarakurus are said to feed on the juice of milk-yielding trees, and to be born as twins, of opposite sexes, who form a couple, just as was the case with primitive men in the first *kṛtayuga*. A similar tendency to ascribe to the Uttarakurus the condition of primitive mankind may be discovered in another passage of the *Mahābhārata*,† where it is stated that originally all women had sexual intercourse with whomsoever they pleased, and that this state of things still prevails in Uttarakuru.

Now assuming, as we are entitled to do, that there was in early times a race of Kurus, related to their famous namesakes in Madhyadeśa, but living outside the limits of India proper, it is easy to imagine how they came to be regarded as the Blessed and their country as a place of bliss. For people look with a kind of awe on neighbouring tribes of whom they have but slight knowledge, and they are wont to ascribe to them superior magical powers, as the Finns do to the Lapps; hence the Uttarakurus, probably, have come to be regarded as *Siddhas*, which term originally denotes one who has acquired *siddhi*, i.e. perfection or magical power, by means of *yoga*. But there was also another factor at work: almost everything connected with the Himālaya seems to partake, in some degree, of the sanctity and even divine character which the Hindus attribute to that gigantic mountain range. When, therefore, the Uttarakurus, whose memory was kept alive and heightened by the fame of their powerful relations, the Kurus of Madhyadeśa, came to be looked upon as superior to common men, their country, situated in the sacred Himālaya and hallowed by it, naturally was imagined as a kind of earthly paradise, full of wonders and free from ills, where the happiness of primitive mankind lingered on to the present day.

This theory of the origin of the belief discussed in this article appears to the present writer preferable to the older opinion, viz. that Uttarakuru was the original home of the Kurus of Madhyadeśa, and that 'the wistful recollections of it idealized it afterwards into a blissful land, where fancy gave itself free scope.' For the belief in question was not restricted to the Kurus, but was common to all Indians; and, besides, such recollections of their ancient home presuppose an intense love of their country, which seems inconsistent with the nature of half-nomadic tribes. At least no such recollections can be instanced from any other of the numerous Indian tribes who all, in some remote past, migrated to India from beyond its borders. See also STATE OF THE DEAD (Hindu).

BLEST, ABODE OF THE (Japanese).—**1.** The ancient native religion of Japan, Shinto, had little to say regarding a future life, and the old records or sacred books are practically silent on the subject. The clearest reference to the state of the dead occurs in the *Nihongi* (*Trans. Jap. Soc.* Supp. I. i. 296, London, 1896), where the dead Tamichi appears from his tomb as a serpent and kills his enemies. 'Therefore the men of that time said, "Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge?"' Shinto, in its later developments, has been influenced by Buddhism regarding the future state of the dead. The earlier texts frequently refer to an under world called *Yomi* ('darkness'), the Root-country (*Ne no kuni*), or Bottom-land (*Soko no kuni*). This neutral-tinted Hades is called 'a hideous and polluted land' (*Nihongi*, i. 24), and one prayer invokes protection against 'the unfriendly and savage beings of the Root-country' (Aston, *Shinto*, London, 1905, p. 187). But, though it is not stated to be the region of the dead, the word *yomi* appears to have been used metaphorically for the grave or the state of the dead. There are gods in Yomi, and some of them descended there after death, like Izanami, whom her husband, Izanagi, tried to rescue, according to a myth resembling that of Orpheus and Eurydice (Chamberlain, *Ko-ji-ki*, Yokohama, 1883, p. 36; *Nihongi*, i. 24; for other tales of descents to Yomi, see Aston, 106, 181; Joly, *Legend in Japanese Art*, London, 1908, p. 11). This myth may simply be a reflexion of the belief that mortals, when they died, went to Yomi. Native writers on Shinto have identified Yomi with the state or place of the dead (Dazai Jun [1680–1747], *Trans. Third Inter. Cong. Hist. Rel.*, Oxford, 1908, i. 163; Motoöri [1730–1801]; Aston, 55), but the question is obscure. Generally the gods of Yomi are divinities of death, disease, pestilence, and poverty, and in a *Norito*, or Ritual, offences are described as sent to Yomi by the god Ibuki-do nushi (Aston, 302). In later times, Yomi is regarded as a place of punishment, and is identified with the Buddhist Jigoku, or hell (Joly, 117; Aston, 54, 367).

2. Heaven.—As in most primitive forms of eschatology a difference is made between the future state of men of rank, power, and wealth, and that of the masses of the people, so it was probably in Japan. Izanagi, who was not immortal, after his futile attempt to regain Izanami, died, and went, according to one account, to an island; but, according to another, to heaven, and dwelt in the palace of the Sun. The 'plain of high heaven' is also the place where great men, heroes, mikados, and the like are said to go, there to dwell with the gods. This is in accordance with the later deification of men, whether living or dead (mikados, wise, virtuous, and heroic men), who would then be associated with the heavenly deities, as a class of lesser gods. Later Shintoism, adopting Chinese views of the soul, maintains that, at death, the *kon*, the positive spirit or *yang*, goes to heaven (Aston, 52). *Ame*, or heaven, where the gods dwell, is minutely described in the early records. It lay just over the earth, and was connected with it by the 'floating bridge of heaven' (perhaps the rainbow), and supported by a pillar, though the wind-gods are also described as the pillars of heaven. The tranquil river of heaven is the milky way, where the gods assemble. It has mountains, caves, valleys, streams, groves, fields, trees, and flowers, and all kinds of grain. The rock-cave of heaven, whither the sun-goddess on one occasion retired, is particularly referred to, as well as the rare jewels, the marvellous mirror, and the splendid robes hung on the sacred *sakaki*

tree to tempt her forth. The scenery of the 'plain of high heaven' is that of earth on a more beautiful and extensive scale. (For these details, see *Ko-ji-ki* and *Nihongi*.) Tales of mortals ascending to the sky and remaining there, either through magical powers or by divine favour, are common (Joly, 163, 295).

3. The Eternal Land.—*Toko-yo no kuni*, the Eternal Land, is sometimes spoken of as the place whither certain persons go after death, *e.g.* the god Sukunabikona and a brother of Jimmu, the first Mikado (Aston, 54, 117). This Eternal Land is sometimes identified with Korea or China. From it Tajima Mori brought a fragrant fruit, the orange. The land lay across the sea and took ten years to reach, and on his return he said, 'This Eternal Land is no other than the mysterious realm of gods and genii, to which mortals cannot attain' (*Nihongi*, i. 186–7). In a well-known popular tale the Eternal Land is identified with the palace beneath the waves of the Dragon King of the Sea.

Urashima, having rescued the king's daughter, went thither with her and remained for three years. At the end of that time he left, promising to return, and was given a box which his wife forbade him to open. Having reached his home, he found that over 300 years had elapsed and he was thought to be dead. Forgetting the injunction he opened the box, when a light puff of smoke came from it. This was his soul, and he fell dead (Joly, 382; Aston, 52).

The Eternal Land is also identified with Hōraisan, an island paradise of which Japanese legend and art have much to tell. Hōraisan is the land of everlasting life, where stands Fusan, the mountain of immortality. On it grows a wonderful tree with roots of silver, a trunk of gold, and fruits of rare jewels. The finest flowers and fruits, all unfading, grow there; eternal spring reigns; the air is always sweet, the sky always blue. The place is rarely found by mortals, though many have sought it, for it is visible only for a moment afar off.

One favourite story tells how Wasobiowe reached it after long voyaging and was met there by Jofuku, another mortal visitor, who had fled from a tyrannical emperor under pretence of seeking the herb of immortality, and had found life so pleasant in Hōraisan that he had no wish to return. Wasobiowe also remained there for two hundred years, which lapsed away as in a dream. All things remained as in a perpetual present; there was neither birth, sickness, decay, nor death. The island was peopled by wise men and beautiful women, the elect of the gods, and with them he passed the years with laughter, music, and song. But he tired of this unvarying sweetness and calm, and longed for death or escape. Finding no means of dying, for death was impossible there, he trained a giant stork to carry him, and at last fled away on its back. After many other wanderings he returned to Japan to tell of the wonders of Hōraisan (Brauns, *Jap. Märchen*, Leipzig, 1885, 146; Rinder, *Old-World Japan*, London, 1895, 79; Joly, 126, 239, 386).

4. Western Paradise of Japanese Buddhists.—Several influential sects of Buddhism in Japan, though their teaching is rejected by many other Japanese Buddhists, owe their popularity to their doctrine of the Western Paradise of Amida. This doctrine of Northern Buddhism was first introduced into Japan in definite form by the Jō-dō Shu, or 'Sect of the Pure Land,' and it is plainly expressed in one of the books of the Northern Buddhist canon, honoured and widely read by these sects, the *Hok-ké-kiō*, the Japanese name for the *Saddharma Puṇḍarīka*, an extremely rhetorical and imaginative work. The founder of the Jō-dō sect in Japan was the Buddhist saint, Hōnen (1133–1211), the fundamental tenet of his teaching being belief in the power of the saviour Amida, Lord of Sukhāvatī, the land of purity and bliss in the West. This teaching was based on that of the Chinese founder of the sect, Zendō. Entrance to the pure land of Amida after death was made to depend upon belief in, and repetition of, prayer to Amida; and this simple doctrine, easily understood, at once became popular. According to Hōnen,

'Perfect bliss Amita would not have till he knew that all who would invoke him might be saved. This is his primal vow. Every sentient being has the chance of being saved, since he is living in enlightenment. Whoever calls earnestly upon his name, will enter that realm of purity. Amita Buddha, as in a vision, he shall see coming to him, and at death he shall welcome him with all his saints; nor shall obstacles nor demons keep him back' (Anesaki, 'Hōnen, the Pietist Saint,' *Trans. Third Inter. Cong. Hist. of Rel.*, Oxford, 1908, i. 124 f.).

Even more emphatically is faith in Amida alone taught by the Shin-shiu, or 'True Sect,' which also holds out the reward of the Western Paradise, painting its delights in more attractive colours, while it teaches that not merely at death does Amida take the believer under his protection to conduct him to paradise, but even now, immediately upon his profession of belief. The Nichiren Sect, on the other hand, teaches that a man must work out his own salvation. Amida dwells in this blissful Western Paradise or Pure Land, called Sukhāvatī, as ruler of the blessed dead. In it, said Hōnen,

'There shall be no distinction, no regard to male or female, good or bad, exalted or lowly; none shall fail to have Pure Life, after having called, with complete desire, on Amita. Just as a great stone, if on a ship, may complete a voyage of myriads of miles over the great waters, and yet not sink; so we, though our sins are heavy as giant boulders, are borne to the other shore by Amita's primal vows, not sinking in the sea of birth and death' (Anesaki, i. 125).

The Pure Land is open to all who wish to be re-born there, and this blissful existence is thus made easy for all to whom the necessary discipline for the final attainment of Nirvāna presents endless difficulties, while it has taken the place of Nirvāṇa in practical thought. The Pure Land is thus described in the *Saddharma Puṇḍarīka*:

'There no women are to be found; there sexual intercourse is absolutely unknown; there the sons of Gina, on springing into existence by apparitional birth, are sitting in the undefiled cups of lotuses. And the Chief Amitābha himself is seated on a throne in the pure and nice cup of a lotus, and shines as the Sāla-king' (Kern, *SBE* xxi. 417).

The same work also states that any female, after reading and learning its twenty-second chapter ('Ancient Devotion')

'will, after disappearing from earth, be re-born in the world Sukhāvatī, where the Lord Amitāyas, the Tathāgata dwells, exists, lives, surrounded by a host of Bodhisattvas. There will he (who formerly was a female) appear seated on a throne consisting of the interior of a lotus; no affection, no hatred, no infatuation, no pride, no envy, no wrath, no malignity will vex him.' He becomes a Bodhisattva, his equal is not to be found in the world, including the gods, with the only exception of the Tathāgata (*ib.* 389 ff.; cf. 251–254).

Again, those who write and keep this Sutra

'shall, when they disappear from this world, be re-born in the company of the gods of paradise, and at that birth shall eighty-four thousand heavenly nymphs immediately come near them. Adorned with a high crown, they shall as angels dwell amongst those nymphs' (*ib.* 435).

Vivid descriptions of the Western Paradise abound in the larger and smaller *Sukhāvatīvyūha*, works which are of authority to the Pure Land and Shin-shiu sects (*SBE* xlix. pt. ii., Oxford, 1894). In the smaller work, birth in the Land of Bliss occurs if the name of Buddha Amitābha is merely repeated for a few nights before death; and it asserts that birth there is not a reward and result of good works in earthly life (*op. cit.* 98 f.). But in the larger work the doctrine of merit is not thus neglected. According to both works, the Happy or Blissful Land is a state where there is neither mental nor bodily pain, for pleasure is universal; the name of hell is unknown, and the length of life there is immeasurable. It is adorned with terraces, and enclosed on every side with the four gems, gold, silver, beryl, and crystal. It contains lotus lakes adorned with gems, on their banks grow trees of gems, in their waters float lotus flowers of various colours. There are great rivers of different kinds, with waters of different sweet odours, bearing up flowers of different perfumes and adorned with different gems. The dwellers there bathe in the waters, which rise exactly to the height they desire, and are exactly of the temperature they prefer. Exquisite music is

caused by the flowing of the rivers, by the trees and bells, by innumerable birds singing in concert. Every one born in that land is endowed with strength, dominion, and accumulation of virtue, and obtains dress, ornaments, gardens, palaces, and every enjoyment of touch, taste, smell, and sound. Whatever food they desire they enjoy without even tasting it. Or if they desire musical instruments, or ornaments, or a palace, these appear before them; and in such palaces they dwell and enjoy themselves, surrounded by myriads of Apsarases. Language and metaphor are exhausted in these two works to set forth the bliss of this glorious, fertile, and beautiful Paradise. Probably the original source of the conception of the Land of Bliss was the Brāhmanic teaching regarding the city of Varuna in the west, sometimes called *Sukhā*, or 'the Happy' (Max Müller, introd. *SBE* xlix. pt. ii. p. xxii). Many Japanese works have been composed on the Western Paradise of Amitābha.

See, further, Buddhist section of this article, p. 687[a].

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Persian).—The Persian tradition concerning an abode of the blest on earth has given rise to much confusion through its wide-spread interpretation as a Flood legend, an additional element of complication being the divergent theories regarding the original character of its hero, the Indo-Iranian Yama-Yima. In view of this confusion it seems best to give first, without comment, the data of the Avesta and Pahlavi literatures, then the spread of the belief to other religious systems and its possible parallel in Norse mythology, and finally to discuss the meaning of the legend.

1. Data of the Avesta, etc.—The earliest source for the Iranian legend of the abode of the blest on earth is the second part of *Vendīdād* ii., which falls into two parts, 1–20 treating of Yima and his Golden Age, and 21–43 devoted to Yima's *vara*, or enclosure, which will here be considered as constituting the abode of the blest.

This chapter may be summarized as follows (cf. also the analysis on the basis of textual criticism and the tr. by Geldner in Kuhn's *Zeitschrift*, xxv. 179–192). Yima was the first of mortals, excepting Zoroaster, to whom Ahura Mazda taught his religion (1–2); but on his confession that he was 'neither formed nor learned to remember and to sustain the faith,' Ahura Mazda urged him 'to further creatures, to increase creatures, and be the protector, guardian, and overseer of creatures,' to all of which Yima agreed, declaring that 'in my kingdom there shall be neither cold wind nor hot, neither disease nor death' (3–6). In the first 300 years of Yima's reign 'the earth was full of cattle small and great, of men, and dogs, and birds, and fires red and blazing,' so that he was compelled to go further south and enlarge the earth by a third (8–11). In 600 years he was forced to enlarge the earth by two-thirds, and in 900 years by three-thirds, still proceeding southward (12–20). Here ends the first section of the chapter. In the second part, which here concerns us more immediately, Ahura Mazda and the 'spiritual angels' meet Yima and the 'best men' in the holy region of Airyanam Vaējō, which may perhaps be identified with Azarbaijan (Jackson, *Zoroaster*, New York, 1899, pp. 193–197),* and here the Deity warns Yima (21–24) of the coming of terrible winters (on the translation of this difficult passage see Bartholomae, *Zum altiran. Wörterb.*, Strassburg, 1906, p. 98 f.). Yima is accordingly commanded to make a *vara* a *čaretu* (according to the tradition, 2 miles) square, which should serve as an abode for men and cattle, and in which should be running water in a course a *hāðra* (according to the tradition, 1 mile) long, with birds along its banks. To this *vara*, moreover, should be taken the germs of cattle, human beings, dogs, birds, fires, all animals, all plants, and all foods, and these germs should be in pairs (*miθwaire*) and undecaying 'all the time that these men shall be in the *varas*' (*vareṣva*, possibly, however, only a *plurale majestatis*); while no sort of deformity, disease, or iniquity should here be found (25–29). In the upper part of the *vara* were to be nine streets (*pereθwō*), in the middle six, and in the lower three, the first containing 1000 germs of human beings, the second 600, and the lower 300; and the *vara* was also to have 'a shining door, having its own light on the inner side' (30) as well as 'houses, and a cellar, and a forecourt, and a bastian, and a circumvallation' (26). This *vara*, which was to be constructed by being 'stamped apart with the heels and dug asunder with the hands' (31), was accordingly made by Yima (32–38). The illumination of the *vara* was from 'lights self-determined and world-determined (*i.e.* eternal and transitory). Only once (each year) does one behold the setting and the rising stars, and moon, and sun; and they think that what is a year is (but) a day. When 40 years have elapsed, from two human beings are born two human beings, twins, both male and female; so (also) of them that are of animal kind. And these human beings, who are in the *vara* that Yima made, live with most happy life' (40–41). The religion of Ahura Mazda was brought to the *vara* by the bird Karshiptar (the spiritual lord of all birds and acquainted with speech; cf. *Bundahišn* xix. 16, xxiv. 11), and the temporal and spiritual lords are Urvatat-nara (one of the three earthly sons of Zoroaster and the head of the agricultural class; cf. *Bundahišn* xxix. 5, xxxii. 5) and Zoroaster himself (42–43).

The remaining Avesta material of relevance in the present connexion adds little to the main source just summarized. Airyanam Vaējō is described as the first country created by Ahura Mazda (*Vendīdād* i. 2), and in it, as a region pre-eminently holy, sacrifice was offered by Zoroaster (*Yašt* v. 104–106, ix. 25–27, xvii. 45–47; see also Jackson, *loc. cit.*), and even by Ahura Mazda (*Yašt* v. 17–19, xv. 2–4); and there are a number of allusions to the Golden Age of Yima's reign, though the first section of *Vendīdād* ii. shows that this Golden Age is a tradition separate originally from that of the *vara*, to which it forms a *quasi*-prelude (see *Yasna* ix. 4–5; *Yašt* ix. 8–11, xv. 15–16, xvii. 28–31, xix. 32–33; *Aogemadaēčā*, 94–95; cf. also the Pahlavi *Jāmāspī-Nāmak*, ed. and tr. Modi, Bombay, 1903, p. 113 f.).

The Pahlavi literature adds considerable information to our knowledge of the Persian abode of the blest on earth. The account given in *Vendīdād* ii. is summed up briefly in *Dīnkarṭ* VII. i. 20–24. *Būndahišn* xxix. 14, states that '[the enclosure] formed by Yim is in the middle of Pārs, in Sruvā; thus, they say that what Yim formed is below Mount Yimakān' (see West, *SBE* v. 120, note 5, and Justi, *Bundehesh*, Leipzig, 1868, p. 143); but *Dīnā-ī Māīnōg-ī Khraṭ* lxvi. 15–19, says that 'the enclosure formed by Yim is constructed in Aīrān-vējō, below the earth'* (so also *Būndahišn* xxxii. 5, and the Persian *Rivāyat*, ed. and tr. Sachau, *JRAS*, 1868, p. 229 ff., esp. p. 253), adding that there men lived 300 years. The same treatise describes the blessedness of Airyanam Vaējō (xxiv. 17–35), where, despite the evils of many serpents and ten months of winter, men live 300 years, with one child every 40 years, keeping the primitive faith, and virtuous.

The real *crux* in the interpretation of the *vara* is constituted by the passages *Dāṭistān-ī Dēnīk* xxxvii. 94–95; *Dīnā-ī Māīnōg-ī Khraṭ* xxxvii. 27–31; *Bahman Yašt* iii. 55 (and its Persian paraphrase; cf. West, *SBE* v. p. lix); *Dīnkarṭ* VII. ix. 1–4, and *Jāmāspī-Nāmak*, tr. Modi, p. 118.

The most complete of these passages, with which all the rest agree, is *Dāṭistān-ī Dēnīk* xxxvii. 94–95 (tr. West, *SBE* xviii. 109 f.): 'One (of the proofs of the ultimate triumph of Ahura Mazda over Ahriman) is this, that is, even that prodigious devastation of which it is declared that it happens through the rain of Malkôsh, when, through snow, immoderate cold, and the unproductiveness of the world, most mortals die; and even

* Airyanam Vaējō is also identified by Darmesteter (*Le Zend-Avesta*, Paris, 1892–93, ii. 5–6) with Arrān, the modern Karabagh in Trans-Caucasia, and by Marquart (*Ērānšahr*, Berlin, 1901, p. 155) with Chorasmia; but, as Bartholomae very pertinently remarks (*Altiran. Wörterb.*, Strassburg, 1904, col. 1314), 'es ist nicht zu bestimmen, wohin man es verlegt hat.'

* West (*SBE* xxiv. 109, note 8) takes this to imply 'that its position could no longer be discovered on earth.' The passage *Vendīdād* ii. 31–32 should, however, be considered in this connexion.

the things attainable by mortals are attended with threatenings of scarcity. Afterwards—as among the all-wise, preconcerted remedies of the beneficent spirit such a remedy was established that there is one of the species of lands that is called "the enclosure formed by Yim," through which, by orders issued by Yim, the splendid and rich in flocks, the son of Vivangha, the world is again filled—men of the best races, animals of good breeds, the loftiest trees, and most savoury foods, in that manner came back miraculously for the restoration of the world; which new men are substituted for the former created beings, which is an upraising of the dead.'

The tables of Zoroastrian chronology drawn up by West *SBE* xlvii. 28–31) show that the accession of Yima took place *anno ante religionem* 2717=3347 B.C., that he was slain *anno ante religionem* 2000=2630 B.C., and that the winter of Malkôsh (Avesta Mahrkûša) was to take place in the century *anno religionis* 1400–1500=A.D. 770–870, so that the *vara* of Yima would have lasted over 3500 years.

2. In other religious systems.—The legend of Yima's *vara* was borrowed by Mandæanism, and has also been claimed to exist in Judæo-Christian apocalyptic literature. In the former system, according to oral traditions collected by Petermann and Siouffi (Brandt, *Mandäische Religion*, Leipzig, 1889, p. 154), the earth, after the depopulating catastrophes of the end of the world, will be re-peopled from משונית כושמא, a mysterious and invisible, but transitory, locality upon the earth, where dwell perfectly righteous, religious, and happy men who die without pain. Other sources locate this mystic world either beyond the northern mountain range, or, as in the scanty and late allusions in the *Genzâ* (r. 29, 18; 302, 18; 338 ult. –339, 5), regard it as floating in the clouds (Brandt, *op. cit.* pp. 37 f., 53, 60 f.). In this Mandæan משונית כושמא Brandt (*op. cit.* p. 154) sees, probably rightly, a reminiscence of Yima's *vara*. As regards the Judæo-Christian borrowing, it will be sufficient to refer to Böklen, *Verwandtschaft der jüd.-christl. mit der pars. Eschatologie*, Göttingen, 1902, pp. 136–144, who mentions Commodian's *Instructiones*, II. i. 20 ff., and *Carmen apologeticum*, 941 ff., the *Narratio Zosimi*, ch. 10, as well as the *Ethiopic Conflicts of the Holy Apostles*, even though it seems to the present writer that the resemblances here noted by Böklen are too general in character, and too near akin to what would naturally occur to one describing a place of ideal bliss, to be positively claimed as borrowed from Iranian belief. An analogue to the legend of Yima's *vara* has been sought, as common property of the Indo-Germanic peoples, by Rydberg (*Teutonic Mythology*, Eng. tr., London, 1906, pp. 306–390, esp. pp. 379–388) in Norse mythology. With the *vara* he compares the Norse *Jörð lifanda manna* ('earth of living men'), or *Ódáinsakr* ('acre of the not-dead'), a land either subterranean or on the surface of the earth, but in either case almost impossible for living men to reach. In this realm, which was ruled by Gudmund (Mimir) and enclosed by bulwarks that no disease, death, or age could surmount, and where none could die, men lived many generations (cf. also Meyer, *German. Mythol.*, Berlin, 1891, pp. 126 f., 134 f.). Furthermore, the final cataclysm will be preceded by the *fimbolvetr*, a three years' winter with no summer, during which Lif and Lifthrasir ('Life' and 'Immortality') conceal themselves in Hoddmimer's grove, whence, after all the rest of mankind have been destroyed, they will emerge and re-people the earth (Söderblom, *La Vie future d'après le mazdéisme*, Paris, 1901, pp. 204–221; de la Saussaye, *Religion of the Teutons*, 1902, p. 351 f.; see also below, p. 709 f.). While Christian elements have almost certainly been incorporated in this Norse account (de la Saussaye, *loc. cit.*; Meyer, *op. cit.* p. 163), and though it would be, in the present writer's opinion, a scarcely warranted assumption to suppose that the Norse and Iranian traditions form part of an Indo-Germanic religion, it may be, nevertheless, that the two legends of an earthly abode of the blest serve to illustrate each other. Arising independently and under different conditions, they might yet be parallel in their psychological development.

The most important question of parallelism, however, is with India. Yima, as is well known, is an Indo-Iranian figure, finding his counterpart in the Indian Yama (cf. Spiegel, *Arische Periode*, Leipzig, 1887, pp. 243–256). The original nature of Yama has been the subject of much speculation (cf. the data and references in Macdonell, *Vedic Mythology*, Strassburg, 1897, pp. 171–174); but, in the writer's opinion, it may be regarded as admitting of little doubt that, whatever theosophical and even astro-mythological attributes were given him, he was, primarily, as the *Atharvaveda* (XVIII. iii. 13) says, 'he who of mortals was the first to die' (*yo mamâra prathamo mârtyânâm*). He is thus the king of the dead (*Rigveda*, IX. cxiii. 7 ff., x. 14), for whom 'may Yama there mete out abodes' (*'trâ yamaḥ sâdanâ te minotu*, X. xviii. 13), 'there' obviously being his realm in 'the inmost recess of the sky' (*avarodhanaṁ divaḥ*, IX. xiii. 8). But this realm of 'King Yama' is not the *vara* of Yima, the one being celestial, and the other, as we have seen, terrestrial. The two have in common only the one point, that Yama-Yima is their king, the nexus evidently being that, to the Indian, Yama, as the first mortal, is king of all who later die; while, to the Iranian, Yima, as the primeval man, fittingly was king in the Golden Age, and so ruler of the abode of the blest as well.

The *vara* of Yima has, however, been brought into direct connexion with Indian legend by Reinaud (*Mémoire sur l'Inde*, Paris, 1849, pp. 346–350), who identifies it with the mythical city of Yamakoṭi ('Yama's Castle'), mentioned in late Sanskrit astronomical works. This material is summarized by al-Bîrûnî (*India*, tr. Sachau, London, 1888, i. 267 f.), who states, on the basis of the Hindu astronomers, that 'in the four cardinal directions with relation to this line [which divides the earth into dry and wet halves] there are four great cities: Yamakoṭi in the east, Romaka [Rûm, Byzantium] in the west, Laṅkâ [usually identified with Ceylon] in the south, Siddhapura [a mythical "City of the Blest"] in the north. . . . When the sun rises over the line which passes both through Meru and Laṅkâ, that moment is noon to Yamakoṭi, midnight to the Greeks, and evening to Siddhapura. . . . A man in Yamakoṭi observes one identical star rising above the western horizon, whilst a man in Rûm at the same time observes it rising above the eastern horizon.' Yamakoṭi is the antipodal point to Rûm (*ib.* pp. 272, 303), and 'is,' according to Ya'qûb and al-Fazârî, 'the country where is the city Târa [Reinaud would read Bârah (=Vâra) for Târaḥ, *i.e.* بارة for تارة] within a sea. . . As *koṭi* means "castle" and Yama is the angel of death, the word reminds me of Kangdiz, which, according to the Persians, had been built by Kai Kâ'ûs or Jam [Yima] in the most remote east, behind the sea, . . . for *diz* means in Persian "castle," as *koṭi* in the Indian language' (*ib.*, p. 303 f.). Kangdiz (the Kanha of *Yašt* v. 54) is, however, distinctly described as separate from Airân-vêj, so closely associated with the *vara* (*Bûndahišn* xxix. 4 f., xxxii. 5; *Dînâ-i Mâînôg-i Khraṭ* lxii. 12–15; *Sad Dar* x. 7), and as 'in the direction of the east, at many leagues from the bed of the wide-formed ocean towards that side' (*Bûndahišn* xxix. 10). Hyde (*Hist. religionis veterum Persarum*, Oxford, 1700, p. 173) records, from a manuscript of the *Almagest*, a mythical city of Jamgard ('City of Yama=Yima') on the equator to the extreme east; and Abul Fidâ describes Jamkût, or, as the Persians called it, Jamgard, as on the equator, to the extreme east, and antipodal to the (classical) Islands of the Blest (Reinaud, p. 350). Yamakoṭi seems to the present writer to be a specifically Indian development. At all events, the data do not appear to him to warrant any real connexion or kinship between Yamakoṭi and Yima's *vara*—the location is too different, the chronological difficulties in any hypothesis of connexion are too great, and the development of Yama and Yima in India and Iran is too divergent from the Indo-Iranian period onward to render plausible the theory of actual relationship of the two mythical places, which, after all, can no more be localized than can the 'seacoast of Bohemia.'

3. Meaning of the legend.—The view is widely current that the story of Yima and his *vara* is a legend of the Deluge—a theory defended with much learning by Kohut (*ZDMG* xxv. 61–68), Usener (*Die Sintflutsagen*, Bonn, 1899, pp. 208–212), Geldner (Kuhn's *Zeitschrift*, *loc. cit.*), Winternitz, ('Flutsagen des Alterthums und der Naturvölker,' in *Mittheilungen der anthropol. Gesellschaft in*

Wien, xxxi. 328 f.), Darmesteter (*op. cit.* ii. 19 f., iii. pp. lviii–lx), and Lindner ('Die iran. Flutsage,' in *Festgruss an Rudolf von Roth*, Stuttgart, 1893, pp. 213–216). This hypothesis is untenable, as has been shown by Bishop Casartelli (*Philosophy of the Mazdayasnian Religion under the Sassanids*, Eng. tr., Bombay, 1889, p. 198 f.), and especially by Söderblom (*op. cit.* pp. 167–222, where will be found a rich collection of parallels and full citation of authorities on both sides). Not only is the *vara* of Yima eschatological in purpose, and existing for centuries, but certain other chosen heroes, as Windischmann observes (*Zoroastr. Studien*, Berlin, 1863, pp. 244–249), are also immortal on this earth (*Bundahišn* xxix. 5 f.), though their domains do not constitute, merely because of their personal immortality, any abode of the blest.

The Iranian legend of Yima, who is far more real than his Indian counterpart, is, in the present writer's opinion, more primitive than the Vedic view itself, even though the Iranian records are, in their present form, of a late period, probably a round millennium posterior to those portions of the *Rigveda* which deal with the apotheosized Yama. The Iranian tradition may also be of more than eschatological significance, for it would seem to be a blending of two *motifs*, the Golden Age and the Abode of the Blest, plus a migration tradition of distinct value. The first two *motifs* have already been sufficiently discussed, but a brief note may be appended on the story as a migration legend. Airyanam Vaējō, the scene of the Golden Age of Yima (see above, p. 702[b]), was, despite its sanctity and beauty, a land where, as the *Vendīdād* states (i. 3), 'there are ten winter months, two summer months. . . . There is the centre of winter, there the heart of winter.' From this region, according to *Vendīdād* ii., Yima, after 600 years, was forced by increase of population to go southward, and to repeat the process after 900 years. This can be explained only as the southward migration of the Iranians (very probably, indeed, of the Indo-Iranians), and it would seem as though the tradition which locates the *vara* in 'the middle of Pārs' marks this place as the centre of the Iranian peoples when they ceased their wandering. At the same time Airyanam Vaējō was retained in memory as the realm of the Golden Age, and in it, by a transfer of thought which would not be unnatural, was localized the *vara*, the abode of the blest. The migration thus suggested would serve to confirm the theory, now so generally held, of the wandering of the Indo-Iranian stock from the early home of the Indo-Germanic races in Europe through Armenia into north-western Persia, and so south through the mountain passes leading to the Panjāb. This wandering, too, accounts for the fame of Yima as a builder of cities, among them Sārū or Hāmadān, Ctesiphon, and the ruin still known as the Taḳt-i Jamšīd, or 'Throne of Jamshīd,' at Persepolis (Justi, *Iran. Namenbuch*, Marburg, 1895, p. 144; Windischmann, *op. cit.* p. 36; Mirkhond, *Hist. of the Early Kings of Persia*, tr. Shea, London, 1832, p. 104 f.; Jackson, *Persia Past and Present*, New York, 1906, p. 310).

LITERATURE.—This has been given in detail in the article.

LOUIS H. GRAY.

BLEST, ABODE OF THE (Semitic).—In the earliest period known to us the dead were all thought to go irrevocably into the under world, and to remain there perpetually. The life of the under world was most gloomy and unattractive, and it was shared alike by all, regardless of their conduct in this life. Among the Semites this view prevailed until within a century or two of the Christian era. While this conception was entertained, the 'blest' were believed to be those happy primitive men who had lived in the Golden Age, when there was no sin or misery, and when the gods had been on familiar terms with men. Men had then dwelt in the abode of the gods.

The earliest literary expression of this view is found in Gn 2 and 3, a part of the J document (9th cent. B.C.). Some of the material of this document is, however, far older, and reflects as its still recognizable original the picture of a primitive Semitic oasis in Arabia. The garden is the oasis. It is known to be the dwelling of deity by the striking contrast between its luxurious vegetable life and the surrounding desert. The tree of knowledge and of life grows in its midst. This is the palm.* God comes and walks there as in a park; there man and woman dwell without labour or suffering. God, men, and animals form one primitive community, and each talks with the others. Men have not yet begun to beget children or to wear clothing. In other words, the state of blessedness here pictured is thought to be anterior to the dawn of civilization. There are many reasons for believing that this conception is a half-distorted recollection from primitive Semitic days. It corresponds with the main features of that primitive Semitic civilization in which a cult peculiarly Semitic was evolved. Traces of this cult are found in every Semitic nation.† Some of the conceptions of this primitive paradise are also traceable in widely separated Semitic sources. The conceptions just described are found in the earlier stratum of the Biblical story (for there are two strata, one by J^1 and the other by J^2). This older stratum consists of Gn $2^{4b-9.\ 15-25}$ $3^{1-19.\ 21.\ 23}$. In this form of the narrative there was but one tree, and the only indication in this portion that the story had anything to do with Babylonia is the fact that the garden is called 'Eden,' a word evidently identical with *edennu*, the Bab. word for alluvial plain. In the portion afterward added by J^2 (Gn 2^{10-14} $3^{22.\ 24}$), the garden is definitely located in the region of Babylonia by the mention of the Tigris and Euphrates rivers.‡

Although the Babylonian literature thus far recovered contains no complete story parallel to this one, many of the elements of this narrative are found in Bab. poetry and art. Thus in the Gilgamesh epic there is a story of a primitive man, Eabani, who was made, like Adam, of a bit of earth or clay, and who lived a primitive life, without clothing, among the animals until he was enticed away by a woman (cf. *KB* vi. 121–129). The palm as the sacred tree appears in various forms, sometimes naturally drawn, and sometimes greatly conventionalized, in all periods of Bab. and Assyr. art, from archaic seals to late palace decorations. From Eridu, where there was a sacred palm tree, comes the story of Adapa, who was defrauded of food which would have made him like a god (cf. *KB* vi. 93–101). The cherubim, which in Genesis guard the entrance to Eden, have their counterpart in the winged lion and bull deities which in Mesopotamia guarded the entrance to palaces and temples. It is clear, therefore, that the elements of this primitive story were known in Babylonia. Perhaps the original story reached the Hebrews by way of that country,

* See Barton, *Semitic Origins*, 93–96.

† See Barton, *op. cit.* chs. iii.–vii.

‡ As to the identity of Gihon and Pison, views diverge. Delitzsch (*Wo lag das Paradies?*) identified these with two canals, one of which was near Babylon, holding that Cush was the Kassite country to the east of the Persian Gulf. Haupt (*Ueber Land und Meer*, 1894–1895, No. 15) identified the Pison with the Red Sea and the Gihon with the Nile, regarding Cush as Nubia. Hommel (*Aufsätze und Abhandlungen*, 326–340) identifies all the rivers except the Euphrates with wadys in Arabia. Gunkel holds all the rivers to be heavenly rivers suggested by the Milky Way (*Genesis*, p. 33).

for the primitive oasis is changed into a garden, the name of which is Babylonian.

It seems that a form of this story was naturalized at Tyre—a form in which Tyre, or the temple there, was regarded as Paradise. Our witness to this is the prophet Ezekiel (28^{12-17} $31^{8, 9}$). As the story was preserved in Tyre, or at least as Ezekiel conceived it, Paradise was a garden, but it was situated on a mountain. Its tree was no longer a palm, but a cedar. In this garden were many precious stones, and, if we may connect with it Ezekiel's description of a holy mountain in ch. 47, a river flowed out of it. Ezekiel's picture modifies the primitive conception of the oasis still more than does the account in Genesis. It corresponds strikingly to the description of the sacred abode of Humbaba, the god of Elam, in the fifth tablet of the Gilgamesh epic. In connexion with that was a grove of sacred cedars. Out of the mountain on which it was situated a sacred river ran, and here divine voices were heard (cf. *KB* vi. 437, 441, 573). Cuneiform inscriptions recovered at Susa in recent years show that the sign for cedar tree was there a part of their deity's name. Probably this portion of the epic, or the story which lies behind it, had influenced the Tyrian conception of Paradise. This primitive paradise was thought by both Babylonians and Hebrews to have been lost by the dawn of civilization. In Genesis a serpent tempted woman to eat the fruit of the sacred tree, and she effectually tempted man. The motive is that they may become like gods, knowing good and evil. 'Knowing good and evil' in Dt 1^{39} is equivalent to having reached the age of puberty. The result of the sinful act of Adam and Eve is that they perceive that they are naked, *i.e.* become conscious of sex. Clothing is invented, and child-bearing begins.* It is clear, therefore, that this story connected the loss of the Golden Age with the dawning of the consciousness of sex. The Midrash Rabba, *Genesis*, § 20, holds that the serpent was an emblem of the sexual passion. Their sacred tree, the palm, was also bi-sexual, and its fertilization was a sacred act.† Whether the serpent and the tree were or were not consciously used because of symbolic significance, one element in the Biblical story—and it is the most important element—was the idea that primitive paradise was lost by the union of man and woman.‡ The story of Eabani, quoted above, shows that this conception was present in Babylonia also. Probably, therefore, this was the primitive Semitic view.

In Babylonia there was also another conception of the abode of the blest. It is found in a document much older than the J narrative, but it is culturally of a later origin than the story of Paradise. According to this conception the abode of the gods is an island in the sea. On this island Par-napishtim, the hero of the Bab. deluge, and his wife had been admitted to dwell, and thither Gilgamesh was permitted to make a journey, from which he returned. The road to this island was a long journey, in the course of which one came to a great pass in the mountains of *Mashu*. This was guarded by scorpion-men. After this pass came a long road of midnight darkness. At last one came out to a 'park of precious stones,' after which a bitter river had to be crossed. Next came the 'waters of death,' beyond which the divine island lay (*KB* vi. 211–229). It was formerly thought that the *Mashu* mountains were to be looked for in Arabia, as was the 'park of precious stones,' that the 'bitter river' was the Persian Gulf, that the 'waters of death' were the Arabian sea, and that the happy isle lay to the south-east of Babylonia (cf. *KB* vi. 467, 469. 473). Jensen, however, has proposed a different view. He now holds that the mountains of *Mashu* were the Lebanon and Anti-Lebanon ranges; that the 'park of precious stones' was on the Phœnician coast; the Mediterranean was the 'bitter river'; the 'waters of death' lay to the westward of the Straits of Gibraltar; and the abode of the gods was in the Atlantic Ocean (cf. *KB* vi. 575 ff. and *Gilgamesch-Epos in der Weltliteratur*, i. 24, 34, and Map ii.). This view has been accepted by Zimmern (*KAT*^{3} 573 ff.). One strong reason in Jensen's mind for this view is his belief that the Gilgamesh epic is based on a sun myth, and the sun travels from east to west. Gilgamesh was told, it is true, when he was desirous of crossing the dreadful waters, that only Shamash (the sun) crossed them. In favour of Jensen's view, too, is the fact that Ezekiel speaks of a garden in which are precious stones at Tyre. This would correspond to Jensen's location of the 'park of precious stones.' The conception of the abode of the blest just outlined is intermediate between that embodied in the story of the Garden of Eden and that which is described below. The story of primitive Paradise held that man once had a blest abode with the gods on earth, but had lost it. The Par-napishtim and Gilgamesh stories hold that it is still possible that one or two ancient heroes may have attained the happy isle, and found a blest abode with the gods.

A third view as to the abode of the blest on earth developed among the Jews in the two centuries before Christ, in connexion with the Messianic hope. It was believed that the Messianic kingdom would be established, but the living Israelites to enjoy it were but few in comparison with the great host that had died. The author of Is 26, therefore, writing about B.C. 334, declared that departed Israelites should be raised from Sheol (Is 26^{19}) to share in this kingdom. This reversed the time-honoured conception with reference to the dead, and was by no means universally accepted, as Ps 88^{10} and 115^{17} show. It was, however, accepted by the author of Enoch 1–36, who wrote B.C. 200–170, and who thought that dead Israelites would be raised to enjoy a Messianic kingdom of peace and justice. This kingdom on the earth would in itself be an abode of the blest. Its capital was to be at Jerusalem (25^6). Those who attained it would enjoy lives like the patriarchs (25^6), or everlasting lives (5^9), though 'everlasting' is elsewhere defined as five hundred years (10^{10}). (For later conceptions of the Messianic kingdom as an abode of the blest on earth, see MESSIAH and KINGDOM OF GOD.)

When the Messianic kingdom would come, however, was uncertain, and this writer accordingly conceived of another earthly abode for the blest until the resurrection should occur. In ch. 22 he gives an extended description of the under world. This he pictures as divided into four parts. One of these is for the very wicked, another for the less wicked, another for the good, and the last for the supremely good. There are thus thought to be two subterranean abodes of the blest in Sheol. All these dead, except the very wicked, are to be raised. Sheol is but a temporary abode for all except the most desperate; but while there the good enter in some degree upon their delights, and the wicked upon their torments. Although this elaborate

† Barton, *op. cit.* 78 ff., 92 ff.

‡ The word 'Paradise,' by which Eden is frequently called, is of Iranian origin. In Avesta it is *pairi-dažza*, 'encircling wall' (Vend. iii. 18). It passed into Neo-Babylonian, Aramaic, post-Exilic Hebrew, Neo-Hebrew, Armenian, Persian, Kurdish, Greek, and Arabic as a word for a park or splendid garden. In the OT it is found in Neh 2^8, Ca 4^{13}, Ec 2^5.

division of the under world into four parts is found in no later writer, the conception that the righteous, while waiting there, entered upon their anticipated enjoyments, appears in at least one later apocalypse (cf. 4 Ezr $7^{75\text{-}121}$).* This abode of the blest was, however, temporary; they occupied it only while awaiting the resurrection. In later Judaism, the abode of the blest is thought to be in a Messianic kingdom of so supernatural a character that it can hardly be called earthly, and it is often thought to be in heaven, while in the Qur'ān Paradise has become altogether heavenly. The conceptions of the Jewish heavenly abode combine elements from the earthly Garden of Eden with elements taken from the sacred city, Jerusalem, while the Muhammadan Paradise is a transfigured oasis.

Amid the tangle of conceptions met with in Egypt, where myths from the different nomes mingled inextricably after having kept their separate existence for many centuries, four conceptions as to the abode of the blest can be traced. None of these preserves, like the primitive Semitic story of Paradise, the memory of a far-off oasis. The people of each nome seem to have thought that their god created the world and mankind, and all thought of man as having always lived by the Nile (cf. Maspero, *Dawn of Civilization*, 156 ff., and Steindorff, *Religion of the Ancient Egyptians*, 35 ff.). In Egypt, however, there was thought to have been a Golden Age, when the gods lived on familiar terms with men, and men were happy and blest. This age of gods and demi-gods corresponds in general to the Semitic traditions of Paradise. Two other conceptions place that abode of the blest on earth, while the third puts it in the heavens. We are concerned here only with the earthly abodes.

According to the earliest of these, the dead lived in the cemeteries, which were for the most part on the edge of the desert to the west of the Nile, and were veritable cities of the dead. There they formed communities by themselves, each ruled over by a special spirit or deity. Life here was lived under the same conditions and the same form as life in the land of the living. Each needed his body, which was preserved by mummifying, and each needed food, drink, and the various utensils which had been of use in life. Death had, however, petrified all—the child remained a child; the man, a man; the greybeard, a greybeard. The same organization existed there which existed among the living—the man ruled the wife, was served by servants, performed the same duties and engaged in the same recreations as when alive. For the most part the dead remained in the narrow confines of their own city, but by day they might leave their narrow house to roam over the earth. They were then subject to the same dangers of attack from enemies, poisonous snakes, scorpions, and crocodiles as when alive. The dead grudged the living their happiness, and at times came back to interfere with them. Their great opportunity was sickness, when special charms were needed to ward off their influence.†

This conception made no distinction between the good and the wicked dead. It regarded all as going to one place. It corresponds with the non-ethical conception of the early Semites, except that the abode of the dead was placed in the western desert instead of in the under world. Another Egyptian conception, also non-ethical, regarded the abode of the dead as in the under world. Beneath the flat earth lay another region called *Duat*. By day this region was dark and gloomy; but at night, when the sun had set upon the earth, this nether land was illuminated by its rays. Like Egypt, it was characterized by the flowing of a long river through its midst, on either bank of which were deep caverns in which the dead dwelt. When the sun arrived in this land at night, there was thought to be great rejoicing. 'The departed who are in their halls, in their caverns, praise the sun; their eyes are opened, their heart is full of felicity when they behold the sun; they shout for joy when his body is over them.'* It was only as the Osiris myth transformed early Egyptian ideas of eschatology that an ethical element was introduced, and an abode of the blest, as distinguished from the wicked, was conceived. The idea of its location was, however, indistinct. It was sometimes placed vaguely in the West, but was more often thought to be in heaven.

GEORGE A. BARTON.

BLEST, ABODE OF THE (Slavonic).—The ideas of the pagan Slavs concerning the state of the dead are known to us only from indirect testimony and from the evidence of surviving folk-belief. While some mediæval chroniclers deny that the Slavs had any conception of a future life (which is unlikely), others freely assert it, and there is no reason to doubt the existence of definite beliefs on the subject (see Schafarik, *Slav. Alterthümer*, Leipzig, 1843, i. 538; ANCESTOR-WORSHIP [Slavonic]). Three existing words denote the abode of the dead—*Nav*, *Raj*, and *Peklo*. The two last now denote heaven and hell respectively, but *Raj* evidently denoted originally a pagan paradise. *Nav* denotes the place of the dead in one chronicler, who says that 'Krok went into the *Nav*,' while the god of the dead, or Pluto, is called *Nya* by the Polish chronicler Dlugosz, who says that the people ask him to carry them after death 'in meliores inferni sedes.' *Nav* may have denoted the abode of the dead in its general aspect. *Peklo*, though it now means hell, seems originally to have denoted a subterranean place of warmth. *Raj* is still known as the eastern home of the sun beyond the ocean, perhaps an island, where the souls of little children dwell, playing among the trees and gathering golden fruits. Spirits not yet embodied and spirits after their disembodiment also live there. It is the place where birds and insects go in autumn, and there are stored the types and seeds of all things on earth. No winter or cold winds are known there. These are the reflexion of earlier pagan ideas of paradise. Folk-belief also speaks of the Isle *Buyán*, itself synonymous with *Raj*. It also is the home of the sun, as well as of the mythological personifications of nature powers, of mythical animals, *e.g.* the snake older than all snakes, and of the divine maiden Zaryā, who sits under a dripping oak. Here is also the magic stone Alatuir, referred to in many charms, from beneath which flow mystic rivers with healing powers. A

sacred city hidden beneath deep waters, reached by 'Baty's road,' and inhabited by the Holy Elders (the dead), is spoken of.

But there must also have existed ideas of a mountain abode of the dead or a heavenly paradise reached by a mountain of glass or iron, difficult to climb. The nail-clippings of the dead man, or bear's claws, were buried with him to enable him to climb it. Among the Poles exists the belief that lost souls must climb it as a punishment; when they have reached the summit, they slip down again (Grimm, ii. 836). According to some forms of this myth, the glass mountain crowned with a golden palace stands in the midst of a great orchard in the paradise of souls, and they ascend it by means of the bear's claws (Mannhardt, *Germ. Mythen*, Berlin, 1858, p. 330). The mountain recurs in Slavonic and other European folk-tales, in which the hero rescues a princess, or gains the hand of a fair being from its summit (*CF*, p. 442).

Certain folk-tales, peculiar to the Slavs, speak of a mysterious land above the sky, wherein dwell beings or animals of supernatural character and magic power, while in this land are great wealth, many magical objects, and abundance of food. Thus one story describes it as possessing a mill which gives out pie, cake, and a pot of stewed grain; another, a hut with walls of pancakes, benches of white bread, and a stove of buttered curds. In another the stove is garnished with sucking pigs, geese, and pies, and everything which the soul can desire. This sky-land is visited by mortals who climb up a magical bean- or pea-stalk, or a great oak, as in our Jack and the Bean-stalk tales, and generally the visit is resented (Ralston, *Russ. Folk-Tales*, London, 1873, p. 291 ff.; *CF*, p. 435). This upper world of riches and plenty is not said to be an abode of the dead, but the tales may have been derived from pagan conceptions of an Elysium in the sky, where the gods and the blessed dwelt. This is also suggested by the belief, still current, that the soul must make a journey after death, across the sea, on foot, or by the rainbow or the Milky Way, to the region of the dead. The two last are obvious survivals from pagan beliefs regarding a journey to a heavenly paradise.

Rites in honour of the dead, still in use, include chants of a purely pagan character, in which the souls, having eaten and drunk, are begged to return to heaven. In pagan times the burial rites were all-important, as, until they were completed, the dead could not start on their long journey. Existing funeral songs and tales show that the beliefs regarding the state of the dead were of different character, or were perhaps held simultaneously. The dead continue to dwell in the grave (an idea which passes over into the vampire belief [see VAMPIRE]), or wander round their old home, or exist in a separate region. But, whatever beliefs were held, the state of the dead was apparently of a sensuous character. Married people continued to dwell together, and to a dead bachelor a maiden was allotted to be his wife in the other world. In such a case she was formerly put to death (cf. Schrader, *Totenhochzeit*, Jena, 1904, and see above, p. 22 f.).

The belief in a happy eastern region of perpetual warmth and light beyond the ocean in the place whence the sun came was widely current among the Slavs. Such a belief is still found; and this region is sometimes thought to be tenanted by the Rakhmane, who abstained from flesh, and led a holy life. The Rakhmane are obviously the Brāhmans, and the traditions may be derived from apocryphal writings.

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Teutonic).—1. Introduction.—The hints supplied by myth, folk-belief, and occasional passages of existing texts, suggest that, in earlier times and probably for a long period, the state of the dead was not definitely formulated in Teutonic belief. The funeral *mobilier* as well as statements in the texts regarding burial shows that life after death continued the life on earth. The dead may have been supposed to dwell in the tomb, and the soul to flit in the air or to frequent the grave, while souls of warriors continued to fight in the air. Conceptions of a more permanent sort may, however, have arisen quite early and ultimately gained ground. When the dead were committed to the waves, this suggests that their abode was over-sea, and the passage in Procopius (*de Bello Goth.* iv. 20) about fishermen, subject to the Franks, rowing souls over by night to Brittia, may be a reminiscence of such a belief. But we find also a more general belief in the dead living in their barrows or burial-mounds, or in hills—they 'die into the hills. There they feast in happiness, and occupy themselves with the good of their surviving kindred, and their presence in these howes, or hills, is a source of blessing to the neighbourhood (Vigfusson and Powell, *Corpus Poet. Boreale* [=*CPB*], Oxford, 1883, i. 415 ff.). Nor is it unlikely that some of the gods, *e.g.* Odin, had also their abode at first there, several mountains being sacred to Odin (Grimm, i. 152). Odin was especially the god of dead warriors, and their abode may at first have been with him in hills, since later tradition represents great heroes as slumbering in hills, sometimes, as in the case of King Charles, in the Odenberg, with Odin (Grimm, iii. 953 ff.). These heroes may represent the dead warriors of pagan belief, or the gods themselves considered as mountain-dwellers. Again, the souls of dead warriors are seen issuing from and returning to a mountain (*ib.* 954). Thus the warrior host in the mountain may be an earlier form of the warrior host in the heavenly Valhalla (Simrock, *Handb.* 189).

In the Elder and Younger Eddas the conceptions of Hel, the under world of the dead, and Valhalla, the warriors' heavenly abode, are met with. Both may have been developed from the belief that the dead lived a subterranean existence in the barrow or in hills. Hel, 'the hollow place,' would be an extension of the hollow hill or barrow, and a similar development of the under world from the grave is met with in Celtic belief (see CELTS), while the transition from a hill as the abode of warriors to a sky-Valhalla would easily be made, the sky being frequently supposed to rest on hills.

Vigfusson and Powell consider that the idea of Hel as the abode of the dead cannot be clearly reconciled with the early belief in the dead living in their barrows (*CPB* i. 420). Rydberg (*Teut. Mythol.*, London, 1889, p. 505) reconciles the two views by showing that, in Teutonic belief, man did not consist simply of body and soul, but of 'a combination of factors, which in death could be separated,' so that the dead could at the same time descend to Hel and inhabit the grave-mound. This is in accordance with primitive and even Egyptian ideas of man's personality, and of various regions or states for the different parts of his being after death. At the same time, the ideas of the barrow and of Hel seem rather to represent different strata of belief.

The subterranean region of Hel may at first have been considered as the abode of all the dead, not excluding warriors, even Balder going there when he was slain, and, as late as Widukind of Corvei, the poet exclaims after a battle, 'Where might there be a Hel so great as to contain such a multitude of the slain?' (Grimm, ii. 801). But side by side with this we find the idea, whether of later Viking origin or not, that warriors have a separate abode. They it was, perhaps, rather than all the dead, who were conceived as dwelling with Odin in the hill, or, as in the Edda, in the heavenly Valhalla.

2. Was Hel an abode of the blest?—Hel is usually

regarded as a dismal and gloomy abode; but it is only in the Younger Edda that this is definitely stated, and it is not improbable that the influence of Christian beliefs may be traced here. The references in this Edda are three in number, and they vary each from the other. All-father has given to man a soul which will live and never perish. Right-minded men will live with him in Víngólf; wicked men fare to Hel, and thence into Niflhel which is beneath in the ninth world (*Gylfaginning*, § 3). Víngólf is later described as the fair hall of goddesses, and it may be synonymous with Valhalla (§ 14; Grimm, ii. 820). Here the distinction is an ethical one, and Niflhel rather than Hel is the abode of the wicked. This corresponds, on the whole, with the description of the fate of men after the final catastrophe:

'Many abodes are there then good, and many bad: best is it to be in Gimlé in heaven with Surtr; and great store of good drink is there for them who drink with joy in the hall called Brimir; it stands also in heaven. That is also a good hall which stands on Nítha-fells wrought of red gold; it is called Sindri; in this hall shall abide good men and well-minded.' The wicked—murderers and perjurers—suffer fearful torments in Ná-strand (*Gylf.* § 52).

This description is borrowed from the Völuspa, where it is not clear whether it refers to a state of things after the catastrophe which two mysterious beings alone survive. The sibyl sings:

'I see a hall, brighter than the sun, shingled with gold, standing on Gimlé. The righteous shall dwell therein and live in bliss for ever. Northward on Nídavöllir stands a hall of gold for Sindri's people. On Okolnir stands another called Brimir, the giants' drinking-hall.' Ná-strand is here also the abode of the wicked (*CPB* i. 201; cf. ii. 627).

The third reference describes the goddess Hel as cast into Niflheim, with power over the nine worlds, and sharing those abodes of gloom and hunger with those who die of sickness or old age. Warriors, on the other hand, go to the blissful Valhalla (*Gylf.* § 34, 36 ff.). Here there is no ethical distinction.

The eschatological system set forth in Völuspa depends for its value on the views taken regarding that poem. Bugge's hypothesis of its dependence on Christian and classical sources is hardly tenable (*Studier over de nordiske Gude- og Heltesagns oprindelse*, tr. by Brenner, Munich, 1889). More probable is the view taken by Jónsson (*Den oldnorske og oldislandske Litteraturs Historie*, Copenhagen, 1894, 1901), that it is the product of a pagan poet using pagan myths, but, while combating Christianity, unconsciously writing under Christian influences. The better minds among the pagan Norse may already have felt their way to such eschatological ideas as he sets forth.

In the Elder Edda, *Vafthrúdnis-mál* and *Grímnismál* (*CPB* i. 67, 70) describe Valhalla, and the former says of Niflhel: 'hither die the men from Hel (a second death).' Thus Hel is not a place of punishment, though Niflhel may be. Nor is Hel definitely stated in the Elder Edda to be a place of gloom. Ná-strand and Niflhel, places of punishment, may thus be identical, and it is not impossible that the Younger Edda has confused Hel and Niflhel, while here and in the Völuspa Gimlé and the other halls of the righteous may be identical either with Valhalla or with Hel, considered as a place of bliss. In *Balder's Doom*, Odin rides through the under world along a road through grass-grown plains to the mighty hall of Hel, and finds there the walls decked with shields, the benches strewn with mail-coats, and the mead standing ready brewed for the hero (*CPB* i. 182). Nothing is said of the gloom of Hel here, or in the story of Hermódhr's visit there to rescue Balder, where he crosses a river over a golden bridge (*Gylf.* § 49). Again, since men die from Hel to Niflhel, it is obvious that the former is a better place than the latter. Niflhel is the Hel which is surrounded by fog and gloom; Hel itself therefore cannot be so surrounded. In *Skírnirs-mál*, Gerda is told that she will suffer misery within the Na-gates (corpse-gates), and will sit on Are's perch looking longingly Hel-wards (*CPB* i. 114)—a passage suggestive of Hel as a place of bliss. In *Sonatorrek* the poet describes his dead son as having entered 'the path of Bliss' and gone to 'the City of the Bees-ship' (*CPB* i. 278–9), or to 'the world of the gods' (God-heim). The references are obscure, but may point to the usual abode of the dead or Hel.

An examination of the passages referring to the Ash Yggdrasil and its roots is significant. In *Grímnis-mál* it is said that under one root dwells Hel, under a second the Frost-giants, under a third 'mennzkir menn' (mortal men, *CPB* i. 73). But in *Gylfaginning*, § 15, one root is with the Asa, and there is Urd's fountain; one is over where Ginunnga-gap was, and there is Mimir's spring; the third is over Niflheim, and under it is the fountain Hvergelmir. By an obvious misunderstanding, one root is placed with the Asa, *i.e.* in Heaven (cf. Simrock, 36). But, as all the roots are in the under world, this root may correspond to that which *Grímnis.* places in Hel, and here in consequence is Urd's fountain, guarded by the Norni, who sprinkle the tree with its holy water (*Gylf.* § 16; cf. *Völuspa*, *CPB* i. 195), so that it may not wither or rot. Urd is possibly the equivalent of the goddess Hel (Rydberg, 308; Simrock, 340). The third root is in Niflheim, the place of punishment; the second, in Ginunnga-gap, must be midway between the others. Beneath it is Mimir's spring of mead, giving inspiration, wisdom, and poetry. Mimir drinks it every day; from it Odin obtained wisdom; and with it the root is watered (*Gylf.* § 15, *CPB* ii. 623). Here, too, must be placed Mimir's or Hoddmimer's Grove, where two human beings, Líf and Lífthrasir, are hidden away during the Monster-winter which precedes Ragnarök. They are fed on the dews which drip from Yggdrasil, produced from its being watered by Urd's fountain. They alone survive the final catastrophe, and from them a new generation will spring to re-people the renewed earth (*Vafthr.*, *CPB* i. 67; *Gylf.* § 53). Hence these, rather than men on the surface of the earth, may be the 'mennzkir menn' dwelling under a root of the tree. Líf and Lífthrasir, progenitors of the new race which is to people the new earth, 'green and fair, whose fields increase with sowing,' while 'all sorrows shall be healed,' must be pure and sinless. But that forest-clad earth rising out of the deep may simply be Mimir's grove, the hidden and sinless paradise hitherto in the under world.

Hel may thus mean the whole under world, exclusive of Niflhel, and in this sense it appears by no means as a place of gloom. This is already suggested by the passages cited from the poems; but when we add to this the facts that in the under world are Mimir's fountain of immortal mead, his grove of sinless beings, afterwards to be the glorious renewed earth, Urd's fountain beneath the ever-green branches of the ash, its waters 'so holy that everything which comes into this spring becomes as white as the skin which lieth within and cleaveth to the egg-shell' (*Gylf.* 16), and that the hall of Hel is decked for Balder's coming and furnished with mead, the suggestion becomes well-nigh a certainty.

To Urd's well the gods ride over Bifröst bridge to a daily judgment (*Gylf.* § 15; cf. *Grímnis.*, *CPB* i. 73). According to *Gylf.* they ride upwards from Asgard to Heaven; but as Asgard is in Heaven, and, as we have seen, Urd's well is situated in the under world, they must ride downwards. This Thingstead is not that held in Asgard, and Rydberg (p. 330 ff.) has shown that the gods come down daily to judge the dead who arrive there daily, and appoint them their places in Valhalla, in Hel, or in Niflhel. From definite statements, we know what crimes were punished in the other world—offences against the gods and against kinsmen, murder, adultery, perjury. Thus among those who did not pass to Valhalla—those dying a natural or straw death, practisers of the

peaceful arts of life, women and children, all who had pleased the gods, all who had been true to the claims of kindred, all who had kept themselves free from those gross sins—must have been awarded the bliss of the under world. All such could, 'with a good will and without fear, await death,' knowing that their course of life would 'do them good when they are dead' (*Sonatorrek*, *CPB* i. 280; cf. i. 42, 279, ii. 628; *Gylf.* [Loke] § 50, 52). To them were allotted the blissful regions of the under world —the 'green realms of the gods' (*Hakonar-mál*, *CPB* i. 264; cf. Rydberg, 319), with their hidden grove, their holy fountains, their 'paths of bliss.' Probably, too, they were given a draught which made them forget sorrows and gave them strength, composed of the liquids of those fountains, and drunk from the horn whence Mimir quaffed the mead of his well (*CPB* i. 197; cf. the mead which awaits Balder, and the 'costly draughts' which the dead Helgi drinks, i. 143). The mysteriously engraved horn from which Grimhild makes Gudrun drink and forget her wrongs, may be a late reminiscence of this draught of oblivion. The draught was composed from Urd's strength, ice-cold sea water, and the liquor of the Son, and on the horn are engraved unreaped corn ears from 'the land of Hadding,' the under world (*CPB* i. 34). See, for this section, Rydberg, 218 ff.

3. **Valhalla.**—Though Valhalla may be 'simply a Wicking faith, lasting some three generations at most,' and opposed to the strong family affection of the Northern heathen (*CPB* i. Introd. ci, 421), yet it is also noted in old Teutonic belief, in the conception of dead warriors dwelling in Odin's mountain. Valhalla was one of the dwellings of Asgard, the heaven of the gods, situated in Gladsheimr 'where the gold-bright Valhalla towers' (*Grímnis.*, *CPB* i. 70). To it all brave warriors hoped to go, though later tradition suggests that warriors who had committed 'nithing' actions or lived wickedly were excluded (Rydberg, 349). They were conducted thither by the Valkyries, who also waited upon them there. Valhalla was entirely a warrior's paradise; its beatitude was not that of peace, but of war. There the dead warriors dwelt with Odin, who welcomed them, ordering the benches to be got ready, the goblets prepared, and the wine brought by the Valkyries (*Eiriks-mál*, *CPB* i. 260). Descriptions of Valhalla are found in *Grímnis-mál* and in the Younger Edda. It is raftered with spears, it is decked with shields, its benches are strewn with coats of mail. A wolf hangs before the western door, an eagle hovers over it. The goat Heiðrun bites at the branches of the tree Learad (perhaps Yggdrasil), and from her teats runs mead which fills a vat every day, enough to satisfy all the warriors. The hart Eikthirnir bites at the branches, and from her horns fall drops which form the rivers on earth. So great was Valhalla that it possessed five hundred and forty doors. Every day the warriors, fully armed, issued from the gates to amuse themselves in combat with each other, returning to feast and drink heavenly mead from the cups presented to them by the Valkyries. They ate the flesh of the boar Sæhrimni, which was sodden every day and became whole again at even. Beside Valhalla stood Vingólf, the Hall of Friends, the abode of the goddesses. Grimm (ii. 820) points out that Vingólf is, in one poem, used synonymously with Valhalla, while it is also the name given in the Younger Edda (*Gylf.* § 3) to the place where the good and right-minded shall dwell after death. With Odin is associated Freyja, whose dwelling is called Folk-vangr, and who chooses one half of the slain, Odin the other. Elsewhere, however, it is dead women who expect to join Freyja (*Egils saga*, ch. 78). With the goddess Gefjon, who resembles Freyja, dwelt all who died virgins (*Gylf.* § 35; for Valhalla, cf. § 36, 38 ff.; *Grímnis-mál*, *Eiriks-mál*, and *Hakonar-mál*, *CPB* i. 70 ff., 260, 262).

4. **Elysium in folk-belief and saga.**—The Glasberg, or glass mountain, of *Märchen* and poetry, which in Slavonic belief represents an earlier conception of a mountain paradise, may be derived from Slavonic sources, or may be a misunderstanding of *Gladsheim*, but it may also be a purely Teutonic belief, since the Norse *glêrhiminn*, 'glass heaven,' is a paradise to which heroes ride (Grimm, ii. 820), and the mountain abode of the dead has already been met with. Beautiful subterranean meadows, reached through a well where Frau Holle dwells, also occur in *Märchen*, and are associated mainly with elves and kindred beings. Popular belief describes souls of the dying fluttering as butterflies or birds in these meadows (Grimm, ii. 829). These are doubtless reminiscences of the under world place of the dead, and with them may be compared the Rosengarten of mediæval poetry, now churchyards, now a kind of paradise. A series of more elaborate tales, analyzed by Rydberg, are certainly reminiscent of earlier pagan belief, and preserve many of the aspects of the under world already met with. In these travellers set out to seek *Ódáinsakr* or *Jörð lifanda manna*, the Land of Living Men, situated in one tale in the east, but more usually in the north, and apparently underground.

These tales in their present form belong to the period between the 12th and 14th cent., and are mainly found in Saxo and in the sagas. Gudmund is ruler of the Glittering Plains, situated in the north or Jötunheim; he and his men are heathen, and of a vast age. After his death he was worshipped by his people as a god. Ódáinsakr is situated in his land, and is 'so healthy that sickness and age depart, and no one ever dies there' (*Hervararsaga*, Rydberg, 210–11).

(*a*) In the Flatey-book (14th cent.) Helge Thoreson is described as journeying to the north, where, lost in a forest, he met twelve maidens, one of them being Gudmund's daughter, Ingeborg. With them he stayed three days, and on leaving was given chests of gold and silver. Next Yule night he was carried from his home by two men, re-appearing a year later with them. The strangers gave king Olaf two golden horns as a gift from Gudmund. They were filled with wine and given to the strangers to drink, the wine having been previously blessed by a bishop. The heathen messengers cast the horns away, and disappeared with Helge amidst great confusion. One year later Helge re-appeared with his eyes plucked out. He had spent many days happily in Gudmund's realm, but king Olaf's prayers had made it impossible for Gudmund and Ingeborg to keep him. The latter plucked his eyes out, lest any mortal maiden should fall in love with him (Saxo Grammaticus, *Danish History*, London, 1894, Introd. lxviii; Rydberg, 210).

(*b*) Saxo relates that king Gorm set out to seek a mysterious treasure land in the north ruled by king Geirröd in the under world. After passing through many dangers, they were met by Geirröd's brother Gudmund, who led them along a river till they reached a golden bridge. This he warned them not to cross, as the region beyond was not open to mortals. Continuing up the river, they reached Gudmund's hall, where, warned by their pilot Thorkill, they refused to touch food or drink lest their memory should be lost, and they should have to remain with Gudmund's people for ever. Gorm also refused Gudmund's daughter in marriage. But four of his men fell victims to the charms of the women of this land, and became imbeciles. Gorm also refused the delicious fruits of Gudmund's garden. The party were now conducted across the river, and reached Geirröd's realm, a foul and evil place, full of miserable folk, some of them punished by Thor. Finally, they reached a place where they saw cisterns of mead, a vast decorated horn, and other treasures. Some of the party seized these treasures, which changed to swords and serpents and slew them. In another place, other treasures, including a rich mantle, were seen. Thorkill himself seized the mantle, when the place rang with shrieks, and the party was attacked by its inhabitants. Only twenty of them returned to the river and to Gudmund, who vainly tempted them to remain with him. They finally returned home in safety (Saxo, 344 ff.; Rydberg, 212).

(*c*) Saxo has also preserved the story of king Hadding. One winter's day he saw a woman rise out of the ground, with fresh herbs in her lap. Hadding desired to know where such plants could grow in winter. Wrapping him in her mantle, she drew him underground, through a region of fog and darkness, till they reached a river where spears and weapons were tossed about. On one side of it they met some noble beings, clad in rich robes.

Passing them, they reached a sunny region (the Glittering Plains), whence the woman had obtained the flowers. On the other side of the river, which was crossed by a bridge, were seen the souls of dead warriors playing at battle. Finally, they came to a mysterious place, surrounded by an impassable wall. This was the land of life. The woman wrung the neck of a bird and threw it over the wall, when it was at once restored to life (Saxo, 37; Rydberg, 216).

(*d*) A saga in Flatey-book tells of king Erik, who with a large company set out to seek Ódáinsakr in the far east. They finally reached a river, with a bridge guarded by a dragon. Erik and one of his men rushed at the dragon, and were swallowed by it. But they found themselves in a beautiful flowery plain, with rivers of honey, and full of sunlight. They travelled through, finding no inhabitants, and reached a tower suspended in the air, with a ladder leading up to it. They entered the tower, and found in it a room carpeted with velvet, a table with rich food in gold and silver dishes, and two beds. Convinced that they had reached Ódáinsakr, they ate and drank and slept. During his sleep Erik was visited by his guardian angel, who told him this was Ódáinsakr, or Jörð lifanda manna. This region lay near the Christian paradise, which was so glorious that, compared with it, Ódáinsakr seemed a desert. Here they were permitted to remain six days, and then they returned home.

Late as these stories are, they are yet so near to the pagan age of the north that, in spite of possible classical literary and Christian influences, they preserve much of the earlier eschatology. Ódáinsakr is clearly differentiated from the Christian paradise, while Gudmund and his people are pagan. The river with its golden bridge has already been met with in the pagan descriptions of the under world, and in these tales its further side seems to be tenanted by the souls of the dead, while in the Hadding story the dead warriors fighting suggest a reminiscence of Valhalla. The evil region in the story of Gorm may reflect the tortures of Niflhel, while the place with its cisterns of mead, the richly decorated horn, and the treasures, are reminiscent of the Eddaic descriptions of the blissful under world. Rydberg (228 ff.) also identifies Gudmund with Mimir, and shows reasons for believing that Ódáinsakr, within the Glittering Plains, the mysterious walled place in the Hadding story, and the tower in the Erik saga with its two beds, are the equivalents of Mimir's grove, where Líf and Lífthasir, progenitors of the new race of men, are preserved. To them would appropriately belong the title 'living men,' and to their hidden grove that of *Jörð lifanda manna*. 'In Gudmund's domain there is a splendid grove, an enclosed place, from which weaknesses, age, and death are banished—a Paradise of the peculiar kind that is not intended for the souls of the dead, but for certain *lifandi menn*, yet is inaccessible to people in general. In the myth concerning Mimir we also find such a grove' (Rydberg, 231). Thus, while this Elysian land of Gudmund's, with its deathless Ódáinsakr, is one of beauty and joy, to which daring mortals may penetrate and receive a welcome, it is closely connected with the realms of the dead—Hel, Valhalla, and Niflhel,—unlike the Celtic Elysium. Unlike the latter, too, it is not a land of the gods, but of a giant race, and is associated with Jötunheim; it is not an island Elysium, but a northern and subterranean one (cf. Nutt and Meyer, *Voyage of Bran*, 1895, i. 308; BLEST, ABODE OF THE [Celtic]). The idea that the food of this region is dangerous to mortals corresponds with the universal belief that to eat the food of the dead or of fairies is dangerous.

5. The divine Elysium.—In the Golden Age of the gods, before they lost their happy state through the Titan maids from Jötunheim, they dwelt in Iðavöllr, where they raised high places and temples, setting forges, fashioning treasures, shaping tongs, and making tools. 'They played at tables in the court and were happy, they lacked not gold' (*Völuspa*, *CPB* i. 194). But after the restoration they dwell in Iðavöllr once more, and it is said to be 'where Asgard was before' (*Völuspa*, *ib.* i. 201; *Gylf.* § 53).

BLINDNESS. — 1. Definitions. — 'Blindness' signifies inability to see, or absence of the sense of sight; hence, figuratively, want of discernment, or defective intellectual, moral, or spiritual sight. 'Word-blindness' is an acquired condition in which a person loses the power of reading written or printed words, although he can see objects; thus the letters on a printed page can be seen but are not recognized. 'Mind-blindness' is an acquired condition in which objects can be seen, but fail to be recognized by the sense of sight. 'Half-blindness' is a condition in which there is loss of one-half of the field of vision of one eye, or more commonly of both eyes.

2. Causes of blindness.—Blindness may be due to lesions of the eye, of the conducting path from the retina to the brain, or of the brain itself.

(1) *The eyes.*—Blindness may result from a loss of transparency of the cornea (nebula, leucoma), of the lens (cataract), of the vitreous humour; from effusion of blood or pus into the anterior or posterior chambers; from occlusion of the pupil; from various affections of the choroid and retina; from changes following increased intra-ocular tension (glaucoma). Destructive inflammation of one eye, such as often follows injury, is apt to be followed by a similar inflammation of the other eye (sympathetic inflammation). Ophthalmia neonatorum, an infectious inflammation contracted during birth, is the chief cause of blindness in early childhood.

(2) *The conducting paths.*—Inflammation of the optic nerve (optic neuritis) is an important cause of blindness. It commonly ends in atrophy (white atrophy) of the optic disc or beginning of the nerve within the eye. Grey atrophy of the disc, also a cause of blindness, is a primary degenerative condition, not resulting from inflammation.

The optic nerves pass back from the eyes and meet at the optic chiasma, at the base of the brain, where a re-arrangement of their fibres takes place in such a way that the fibres from the outer half of each retina pass into the optic tract of the same side, while the fibres from the inner half of each retina pass into the optic tract of the opposite side. The result of this is that, while a lesion destroying the continuity of one optic nerve causes total blindness of the corresponding eye, a lesion of one optic tract results in blindness of the corresponding half of each retina. Thus destruction of the right optic tract causes blindness of the outer (right) half of the right retina, and of the inner (right) half of the left retina. Blindness of the right half of each retina results in blindness of the left half of the field of vision, and this condition is called left-sided half-blindness or hemianopsia.

(3) *The brain.*—The fibres of the optic tract pass into the occipital lobe of the brain, and destruction of the visual centre in either occipital lobe produces hemianopsia just as in the case of the optic tract. Destruction of both visual centres would cause double hemianopsia, that is to say, complete blindness. Lesions of the left occipital lobe, but not of the right, may also be attended, according to their extent, by 'word-blindness,' or 'mind-blindness'—conditions which have already been defined. This difference between the effect of lesions of the left and of the right side of the brain is simply an example of the general fact that all the speech functions (speaking, reading, writing) have their special centres in the left side of the brain only. Apart from affections of the special centres for vision, gross lesions in any part of the brain may cause blindness by setting up optic neuritis.

3. Statistics of blindness.—The proportion of blind among the general population is much greater in tropical than in temperate regions. In temper-

ate regions generally the proportion is about 1 in 1000. In civilized countries the proportion of blind shows a steady decrease in recent years. Thus in the United Kingdom in 1851, 1 person was blind in every 979. The proportion has now fallen to 1 in 1285. Owing to occupation there are more males than females afflicted with blindness.

The following statistics are taken from the census tables of 1901, and refer to England and Wales:

		Males.	Females.
Persons	32,507,843	15,728,613	16,779,230
Blind	25,317	13,136	12,181
,, (1891)	23,467	12,281	11,186
Blind from childhood	4,621	2,468	2,153
,, (1891)	4,005	2,194	1,811
Blind, Deaf and Dumb	58	36	22
Blind and Dumb	23	14	9
Blind and Deaf	389	144	245

4. Psychology of the blind.—In comparing the blind with normal individuals, it must be remembered that the great majority of the blind lost their sight in adult life. In such persons we are not likely to find any special mental peculiarities, beyond their personal reactions to their misfortune. It is quite different when sight is lost in early childhood. The whole course of mental development must be profoundly modified in cases where the acquisition of knowledge, the training of the intellect, and the formation of tastes and habits must proceed without the faculty of vision playing any part in the process.

Perhaps one of the earliest peculiarities to be noticed in blind children is a tendency to bodily inaction. The blind child is often content to sit quite still for considerable periods of time, at an age when a normal child would not be still for an instant. The games of blind children are often lacking in animation. Of course there are many individual exceptions to this statement, but a tendency to inaction is general, and seems to be most marked in those whose blindness is total, so that the sense even of light is lacking. This sluggishness of body is usually ascribed to the absence of the stimulating effect of light. There is no doubt that light is a very powerful stimulus to the nervous system, and children who spend much time in imperfectly-lighted rooms are usually languid and feeble. Another factor in the case, however, may be the natural tendency of the guardians of a blind child to restrict its movements and anticipate its wants in case of its meeting with some injury if left to itself.

This tendency to muscular repose doubtless reacts upon the mental state. As an anonymous writer on this subject expresses it, the blind, as a class, are 'seldom characterized by that rapidity and intensity of mental action, that keenness of penetration, which pierces at once to the very heart of a matter,—that *vivida vis animi* which is the characteristic of the highest genius. Their intellects are in general cautious, calm, deliberative, slow, distinguished rather by soundness than by brilliancy. . . . The fact that their attachments are generally of a calm and equable kind, formed on judgment and "right reason" rather than upon those inexplicable attractions which so often bind others together; the infrequency with which they seem to give way to strong impulses of affection, and a certain want of geniality and expansiveness which has often been noted in them,—may also, no doubt, in fact be attributed to the same cause' (*National Review*, 1860, p. 92).

The blind depend upon the sense of touch to so large an extent for their knowledge of the outer world, that tactile sensibility becomes developed by constant practice to a very high degree of acuteness, and many astonishing things are related of the discriminative ability of some blind folks. Blind people have been able to play cards by means of small marks upon the cards which they were able to distinguish, but which escaped the eye and touch of those who saw. The sensibility of the fingers is greatly improved by practice, and blind people often take special care to keep the epidermis of the finger tips soft in order that their delicate susceptibility may be preserved. The lips and tip of the tongue, naturally more sensitive than the fingers, are often made use of by blind persons in cases where the fingers are unable to perceive sufficiently clearly. The skin of the face often becomes very sensitive to the proximity of solid bodies, and the tympanic membranes are credited with the power of rendering perceptible vibrations of the atmosphere too slight to be recognized as sound.

Mr. W. Hanks Levy, a blind writer, gives an interesting account of his own power of recognizing neighbouring objects. 'Whether within a house or in the open air,' he says, 'whether walking or standing still, I can tell, although quite blind, whether I am opposite an object, and can perceive whether it be tall or short, slender or bulky. I can also detect whether it be a solitary object or a continuous fence; whether it be a close fence or composed of open rails; and often whether it be a wooden fence, a brick or stone wall, or a quick-set hedge. I cannot usually perceive objects if much lower than my shoulder, but sometimes very low objects can be detected. . . . The only part of my body possessing this power is my face; this I have ascertained by suitable experiments. Stopping my ears does not interfere with it, but covering my face with a thick veil destroys it altogether' (*Blindness and the Blind*, London, 1872).

Some writers on the blind make the curious assertion that they have no sense of space, that they live only in time, that their little world is circumscribed by the narrow circle which they can span with their own arms. This assertion, however, seems to be altogether preposterous, and is sufficiently refuted by the facts quoted above from Mr. Levy. The delight blind people often take in travelling, especially with a companion who can describe the scenery passed by, is also opposed to the idea. Blind men may even enjoy mountaineering, and a blind man who had been to the top of Mont Blanc wrote to the papers recently stating that no one could have enjoyed the view more than he had done. There is no doubt, of course, that a blind man's conception of space must differ greatly from our own, but a conception of space derived from touch, from movement, and from sound, he certainly has.

Sounds, also, cannot fail to play an important part in giving to the blind a sense of the beyond; and where we think of an object getting smaller as it recedes in the distance, a blind man would think of the modification produced by distance in the sound. When a blind man is out walking, the variations and mutations of familiar sounds constitute a source of interest and pleasure. The distance of objects can often be gauged with wonderful accuracy, and a case is quoted of a blind gentleman who could practise archery with considerable expertness, his aim being directed by a bell placed behind the target.

Conversation is naturally a source of great pleasure to the blind, and, indeed, it means even more to them than to us, because they rely upon their auditory impressions to furnish that commentary upon the speaker's words which we find in the play of expression. It is a curious trait in the blind that they seem to take a special pleasure in descriptions of the visual appearance of things. In their conversation they make much use of visual imagery, and always speak of going to see places and things. No doubt the impressions from which they are necessarily for ever shut out have for that very reason a special attraction. A well-known teacher of the blind tells the writer that there is no subject in which his pupils manifest greater interest than the study of optics.

The general characteristic of the mind of the blind is rather curiously described as synthetical

by some writers, and as analytical by others. W. James, *e.g.*, writes (*Princ. of Psych.* ii. 203):

'The blind man's construction of real space differs from that of the seeing man most obviously in the larger part which synthesis plays in it, and the relative subordination of analysis. The seeing baby's eyes take in the whole room at once, and discriminative attention must arise in him before single objects are visually discerned. The blind child, on the contrary, must form his mental image of the room by the addition, piece to piece, of parts which he learns to know successively.'

On the other hand, M. Dufau speaks of the mind of the blind as characteristically analytical. If we compare the manner in which the seeing and the blind acquire a knowledge of some object, for example, a plant, we find that the former 'casts a glance upon it, envelops it with a look, and his task is done; he has a general idea of it with which he generally contents himself, because it is sufficient to enable him to recognize and to name the object. The blind man, on the contrary, is obliged to examine, to touch with the utmost care, the stalk, the branches, the leaves; to acquire, in short, a complete and detailed idea of the plant, without which it would be impossible for him to distinguish it from others. Thus it is that necessity makes analysis a habit to him, which retards his acquisition of knowledge, but at the same time renders it more positive and more certain' (Dufau, *Des Aveugles*, 1850, p. 43).

Although these two descriptions at first appear somewhat opposed to each other, it is obvious enough on consideration that both are true so far as they go. In building up his conception of the world about him, the blind man must analyze, and, having analyzed, he must put together. The two processes are carried out by him much more carefully and systematically than by the seeing, and the results are carefully pondered. It is doubtless owing to this natural tendency to analysis and re-construction that the blind owe their wonderful power of observation, and to the same tendency we may trace the fact that science seems to attract the educated blind much more strongly than imaginative literature or poetry.

Cases of blind persons recovering their sight in adult life are not numerous, and such as are known have naturally attracted a good deal of interest. This interest has to a great extent centred around what is known as Molyneux' problem. This was as follows:

'Suppose a man born blind, and now adult, and taught by his touch to distinguish between a cube and a sphere, . . . so as to tell, when he felt one and the other, which is the cube, which the sphere. Suppose then the cube and sphere placed on a table, and the blind man be made to see; query, whether by his sight, before he touched them, he could distinguish and tell which is the globe, which the cube?' (see Locke, *Essay*, II. ix. 8).

To this query Molyneux himself answered in the negative, and Locke agreed with him. A contrary opinion was expressed by Dr. Franz and Sir W. Hamilton, and the former had an opportunity not long afterwards of testing the soundness of his views. His patient when operated on was seventeen years of age, and he was familiar with geometrical figures. When some of the early confusion following the operation had passed off, he was shown a vertical and a horizontal line, and these he was able to name correctly; but on being asked to point out which was the horizontal line, he indicated the wrong one, afterwards correcting himself. This error evidently means that no association had yet been found between the senses of sight and touch. He was next shown an outline of a square, 6 inches in diameter, within which was a circle, and within this a triangle. He was asked to describe these figures, and after careful examination, he succeeded in doing so correctly.

A recent case of the same kind has been described by Dr. A. Maitland Ramsay of Glasgow. This was a young man of thirty, totally blind from birth, but able to distinguish day from night. For some days after the operation of removal of the lenses the patient appeared quite dazed, and could not realize that he was seeing. The size of everything in the ward seemed very much exaggerated, and on that account he had great difficulty in interpreting what he saw. When asked to distinguish between a ball and a brick, he looked at them attentively for a considerable time, his hands meanwhile moving nervously, as if he were trying to translate what he saw, by comparing it with an imaginary tactile impression, and then he named both correctly. He explained that he was so much in the habit of handling objects that he had come to have a 'notion in his mind' regarding the form of things.

5. The education and care of the blind.—The Jewish code contains special beneficent enactments regarding blind persons; such as, 'Thou shalt not . . . put a stumblingblock before the blind, but thou shalt fear thy God' (Lv 19^{14}). The idea, however, of making the care of the blind a public charge is quite modern, although as long ago as 1265 one institution for the blind was founded, the Hospice des Quinze Vingts, wherein St. Louis IX. provided for the needs of three hundred knights who had lost their eyesight in the Crusades.

The first idea of educating the blind by means of the sense of touch appears to have originated with Valentein Haüy, a native of Picardy, about the year 1783. Haüy's first pupil was a blind beggar, whom he paid to receive instruction. The practicability of teaching the blind to read from raised characters having been proved, public interest was aroused, and Haüy was able in 1785 to found the first 'School for the Young Blind.' Haüy afterwards visited St. Petersburg, at the invitation of the Government, to superintend the establishment in that city of a similar institution. The Liverpool School for the Blind was founded in 1791, and was followed two years later by the Edinburgh Blind Asylum, which became one of the most successful schools of the kind in the world. The success of these schools has led to the multiplication of such institutions all over the civilized world. The instruction given in most of them is of a mixed character, the pupils being taught to read from raised characters, and receiving lessons in the usual school subjects, while their future is kept in view, and instruction is provided in different trades, whereby they may maintain themselves in after life. A few schools provide an education of a more special kind, such as the Normal College and Academy for Music.

The method of teaching the blind to read has had an interesting evolution. Haüy originally made use of the script form of the Roman letter. Subsequently quite a number of forms of embossed type were introduced. The first of these was brought forward by James Gall, of Edinburgh, in 1827. He made use of the Roman letter, but for ease of recognition, all the curves were changed to angles. In this type there was published in 1834 the Gospel of St. John. The first Gospel was printed in raised type for the blind. Other modifications of the Roman letter were introduced by Howe, Alston, and Fry. Various stenographic and phonetic systems were also brought forward, but were discarded on the ground that they did not teach correct spelling.

To get over the difficulty sometimes experienced in passing from one line to the next, Frere introduced his ingenious return line. The finger travels along one line from left to right and is then guided by an embossed curve to the line below, which is read from right to left. On this lower line the characters are printed in the reverse way, in order that the finger, moving in the reverse direction, may meet them in the same order as when reading from left to right.

Moon's type, which became very popular, is a modification of the Roman character, but arbitrary signs are also made use of. Frere's return line is adopted, but the characters are not reversed in the return lines. Moon's type is still made use of to some extent, and the Gospel which blind men may be seen reading in the streets is commonly printed in it. It has, however, two great drawbacks. Books printed in this type are very expensive; and they are very bulky. A single Gospel, for example, fills a large volume.

This multiplicity of types was naturally attended by many inconveniences. A blind man who learned to read one type could not read books published in another, and a book printed in any of the embossed types could obtain a circulation only among the blind who were acquainted with that type. Accordingly, a number of gentlemen founded The British and Foreign Blind Association, and set themselves to find and bring into general use the type best adapted to the needs of the blind. This

they found in none of the varieties to which we have referred. Their researches resulted in the introduction into England in 1868 of a type which had been invented by a blind Frenchman forty years before. This type, which is now in general use, is called the Braille, after Louis Braille, its inventor. The advantages claimed for it are: that the letters are easily recognized; that they can be written by the blind themselves in such a way as to be legible to themselves or other people who know the characters; that books can be printed in much smaller bulk and at a much smaller cost than in the case of other types for the blind.

The principle of the Braille system is very simple. The letters are formed of raised dots of which the maximum number is six, arranged in three pairs

placed one above another— : : Any of these dots

may be omitted, the letters of the alphabet, punctuation marks, and a number of other signs being formed by one, two, three or more of the dots variously arranged, as may be seen in the alphabet printed below. It will be noticed that neither of the two dots constituting the lowest pair is present in any of the characters of the upper line; each of the characters of the second line resembles the character immediately above it, plus one of the lowest dots; while the characters of the third line differ from those above only in the presence of both dots of the lowest pair. This arrangement obviously greatly reduces the difficulty of learning the symbols.

The Braille characters have also been adopted for the printing of music, so that a blind musician can learn a new piece of music by following the score with one hand while he plays the keys with the other.

A large number of standard works have now been published in the Braille type, and are sold at a moderate price. At the Edinburgh School for the Blind, a monthly magazine, *Hora Jucunda*, has been published since 1893. It was started and edited by Mr. W. H. Illingworth, a former headmaster of the school. Each number contains sixty large pages of interesting and amusing matter, and a piece of music; and the price is one shilling. The British and Foreign Blind Association also publishes magazines in Braille.

Mr. J. W. M'Laren, of Edinburgh, recently invented a method whereby the printing of books in Braille type is greatly simplified, and the cost vastly reduced. The Braille Printing and Publishing Co., St. Giles Street, Edinburgh, was founded to print books by this new method, and for some time a magazine for the blind, the *Braille Weekly*, was published every Saturday at the price of one penny. Dr. John Brown's famous story, *Rab and his Friends*, printed by the new method, was issued at the price of sixpence. The story occupies fifty-two quarto pages. As books of this class naturally depend upon a very limited public for circulation, it would be a good thing if some central publishing company could not only stock all the books printed by this method, but control the class of books to be published, and prevent overlapping and the same book being printed by different people.

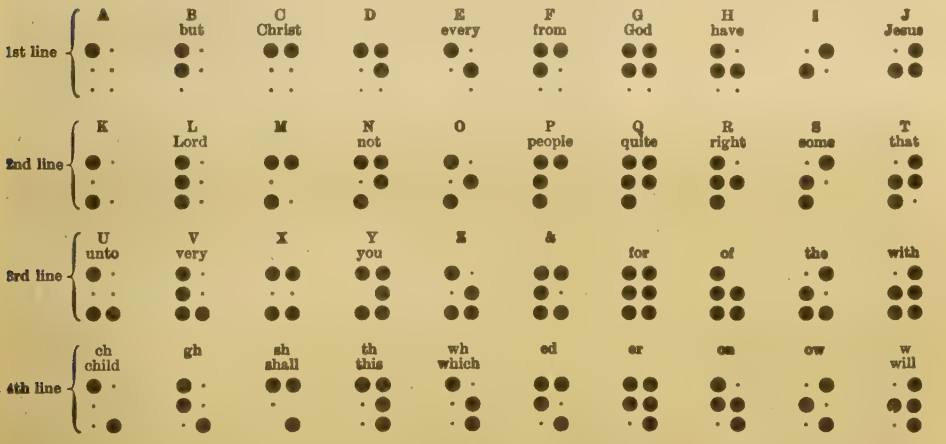
Writing in Braille characters is carried out by means of a writing frame. The paper is covered with a piece of brass containing a double row of oblong perforations. By means of a stylus, each letter is impressed upon the paper through one of the perforations. To read the writing the paper must be reversed, when the depressions produced by the stylus will be felt by the finger as raised dots.

When the blind wish to write so as to be read by the seeing, they may use a pencil and a guiding frame. Some blind persons who lost their sight in adult life have become very expert at this kind of writing, but for those who have been blind from childhood there is no doubt that the best plan is to use a typewriter. Here the expense may be an objection, but this has been got over by Mr. Illingworth, who recommends for the purpose a cheap form of typewriter which costs only a few shillings. In this instrument the rubber type projects from the under surface of a revolving disc, and, by placing on the upper surface above each letter the corresponding character in Braille, the blind pupil can easily find the letter he needs, bring it into place, and print it on the paper. It will be noticed that, by using a typewriter, the blind scribe actually writes in a character with which he may not be acquainted, and is thus saved the trouble of learning two totally distinct alphabets. It is curious to recall the fact that the Braille type was violently opposed on the ground that the letters were entirely arbitrary symbols, as if the characters of the Roman or Greek alphabets were anything else. Obviously, it is no more confusing for the blind to call a couple of dots the letter *b* than it is for the French to call a cabbage a *chou*.

Arithmetic is taught to the blind by means of a

The Braille Alphabet and some Contractions.

(The large dots represent the raised points of the Braille letters).



tablet containing rows of octagonal holes. A peg can be placed in any of these holes, in eight possible positions representing the numbers 1 to 8; to obtain 9 and 0, the peg is inverted and placed in positions 1 and 2. The two ends of the peg, of course, differ so as to be readily recognizable by touch.

A somewhat similar device is made use of for teaching algebra. Raised maps are used for geography, and models and natural objects are freely used for class purposes.

6. **The care of young blind children.**—When sight is lost in early childhood, a good deal can be done by judicious foresight to assist the teacher, when the child is old enough to go to school. Teachers of the blind complain that, when children come to them, they do not know how to use their hands; that they are lacking in confidence, and can do nothing for themselves; that their muscles are soft and weak; and that, in short, a great deal of time has to be given to exercises and gymnastics intended to train the muscles and the sense of touch before education, in the school sense, can be started. These faults depend very largely on the fact that the child's relatives, not unnaturally, have done everything for him. They have dressed him, washed him, and fed him. They have led him from place to place. They have perhaps never thought of giving him toys to play with. They have prevented him from going about by himself, for fear of accidents. In some cases they have even kept the child in bed for years, or taken him about only in a perambulator, in case he might hurt himself. Such treatment, although kindly meant, is really cruel to the child. The proper course of procedure is quite the opposite. The proper method of dealing with a young child who is blind may be expressed in a sentence: *Treat him exactly as if he could see.* The child should have toys to play with as soon as he can grasp. When he can creep about, he should be allowed to do so. He should be expected and encouraged to walk as soon as other infants. As soon as he can move about, he should be allowed to explore the room for himself, and discover the properties of the furniture it contains. While care should, of course, be taken to prevent any serious accidents (dangerous places such as stairs or fires being guarded), obstacles should not be taken out of the child's way, nor should he be warned if he is going to walk against something. No doubt, it is very difficult for any kindly person to see a blind child in the act of walking against a chair, without quickly stopping him or snatching the chair out of his way; but if the child is ever to gain confidence, and to be able to walk about freely without fear of running into walls and lamp-posts, he must learn by hard experience in his nursery days. So, also, as the child gets older, he should be encouraged to feed himself; to undress, and later to dress himself; to fold his clothes, and put them away; to put his toys away when he has finished playing with them, and to fetch them for himself when he wants them. He should be taught to use his hands in every possible way. Many of the kindergarten occupations are useful for this purpose, and the sorting and threading of beads is valuable as affording a training in sensitiveness to the finger tips. The handling of small beads is a useful preparation for the later study of Braille.

7. **Advice to those likely to lose their sight.**—When blindness occurs from disease in later years, the loss of sight is usually gradual, and, after it is known that ultimate blindness is inevitable, months, or even years, may elapse during which some sight remains. Persons so affected should be advised to set about training their other senses, and especially the sense of touch, without delay. The Braille alphabet can soon be learned, and, in practising reading, the sight which remains will be of great assistance. Braille writing should also be systematically practised. Various everyday tasks, such as dressing and undressing, should be practised with the eyes closed. When any real difficulty presents itself, of course, the eyes may be opened for a moment, but, as far as possible, the sufferer should try to accustom himself by degrees to the life he will before long have to live, so that, when the day of total darkness does come, it will not find him wholly unprepared.

BLISS.—See BLESSEDNESS and BLEST (ABODE).

BLOOD.—1. Physiological and Psychological.—Blood consists of a fluid portion, known as plasma, and of corpuscles (white, red, and 'platelets'), the latter forming its nutritive element. 'Average blood may be regarded as consisting of $\frac{2}{3}$ plasma and $\frac{1}{3}$ corpuscles' (Huxley, *Physiology*, p. 105). The inner function of the blood has been compared by physiologists with the outer function of the air and food supply. 'It is absolutely essential to the life of every part of the body that it should be in such relation with a current of blood that matters can pass freely from the blood to it, and from it to the blood, by transudation through the walls of the vessels in which the blood is contained' (*ib.* p. 116). Thus, the blood is literally the vehicle of life throughout the organism, and this function is discharged by means of its constant circulation from the left lower cavity of the heart through the arteries, and back through the veins to its right upper cavity. The nourishment of the blood itself is derived by absorption from the food which enters the intestines; the venous blood is changed into arterial blood by absorption of oxygen through the lungs, this second or pulmonary circulation being maintained from the right lower cavity of the heart to its left upper cavity. It is evident that the true function of the blood could not be understood until its circulation was demonstrated, as was done by Harvey in his *Exercitatio*, published in 1628 (Foster, *History of Physiology*, 1901, p. 42). Of this circulation the ancient world was ignorant, and consequently of the precise ministry of the blood to life. Aristotle (B.C. 384–322) 'knew only of its direct passage from the heart to the extremities, and of its movement to the brain and return. . . . The brain, being the coldest organ of the body, performed the function, Aristotle supposed, of reducing and regulating the temperature of the blood' (Hammond, *Aristotle's Psychology*, p. 227 n.). Galen (A.D. 130–*c.* 210) taught that the liver converts food into crude blood, giving it the 'natural spirits.' In the heart, some of this blood is mixed with air drawn from the lungs, and by the innate heat of the heart is laden with 'vital spirits' (Foster, *op. cit.* p. 12 f.). This was the accepted doctrine for thirteen centuries, until the dawn of modern physiology. The pulmonary circulation was described by Servetus in 1546, and, probably in dependence on him, by Realdus Columbus in 1559 (*ib.* p. 30 f.); whilst Cæsalpinus, a little later, 'recognized that the

flow of blood to the tissues took place by the arteries and by the arteries alone, and that the return of the blood from the tissues took place by the veins and not by the arteries (*ib.* p. 35). Fabricius described the valves of the veins in 1574 (*ib.* p. 36). But his pupil, William Harvey, was 'the first to demonstrate the circulation of the blood. . . . The essential feature of Harvey's new view was that the blood through the body was the same blood, coursing again and again through the body, passing from arteries to veins in the tissues, and from veins to arteries through the lungs, heart, suffering changes in the substance and pores of the tissues, changes in the substance and pores of the lungs' (*ib.* p. 47). Thus, the long-established doctrine of 'spirits' was discredited, and the study of physiology separated from that of pseudo-psychology.

But primitive man did not need to wait for Harvey in order to be taught the significance of blood in relation to life. However ignorant he might be of the precise relation, common observation showed the dependence of life on the blood within the body of man or animal. Loss of blood meant loss of strength, and a man's life seemed to drain away with the blood from a mortal wound. Thus Homer can speak either of the soul (*ψυχή*, *Il.* xiv. 518) or of the blood (*αἷμα*, xvii. 86) as passing away through the inflicted wound (cf. Robinsohn, *Psychol. der Naturvölker*, p. 18; Gruppe, *Griech. Mythol. und Religionsgesch.* p. 728); the identity is affirmed explicitly, *e.g.*, amongst the Hebrews, in the phrase 'the blood is the life' (Dt 12^{23}, where 'life' is literally 'soul'); and even a thinker like Empedocles could regard blood as the seat of thought or perception (Rohde, *Psyche*[2], 1898, ii. 176; Burnet, *Early Greek Philosophy*[2], 1908, p. 288). For us, however, to repeat 'the blood is the life' means something quite different from the early usage, and the difference is of fundamental importance for the subject before us. By such a phrase we should imply that blood is essential to the living activity of the organism, and that life is not possible without blood. But primitive thought meant to assert that the life *is* the blood, and *vice versa*: when the blood left the body, *it carried the life with it*. Thus, in the Qur'ān, xcvi. 2, God is said to have created man from clotted blood; in Burma this is kept and eaten on special occasions (Elworthy, *Evil Eye*, 1895, p. 112). This is the explanation of the numerous customs that illustrate the perils and powers of blood for the ancient mind; this is the key to many important institutions. To the modern mind, blood which has left its organism is no more than any other fluid, except for a certain amount of sentiment, which may be itself an inheritance from the past; but for the ancient mind, blood, even when shed, was still perilous and potent, full of latent life, and capable of working on persons or things in contact with it. The illustration of these ideas belongs to the following sections; here it remains to show, by instances selected from a very large material, the nature of the idea of a blood-soul. The Arabs used the word for 'soul,' *nafs*, cognate with the Heb. *nephesh*, in the sense of blood. 'When a man dies a natural death, his life departs through the nostrils . . . but when he is slain in battle "his life flows on the spear point"' (Robertson Smith, *Rel. Sem.*[3] p. 40 n.). Belief in the blood-soul explains their custom of not washing the slain, and of burying the Muslim 'martyrs' in their blood, according to Muhammad's commands at Uhud (Wellhausen, *Reste arab. Heidentums*[2], p. 178, n. 3). Robinsohn quotes a remarkable story of an Arab newly-married man attacked, when with his wife, by an overpowering force. He thereupon killed her, smeared himself with her blood, and fought till he fell, by this means uniting her soul with his own (*op. cit.* p. 25). Similarly, we may read of the Australian initiation custom, after circumcision: 'The boy was lifted up, and standing above the two Thungallum men, allowed some of the blood to drip down on to their backs, thus establishing a special friendly relationship between himself and them' (Spencer-Gillen[b], p. 372; further examples collected by Frazer, *GB*[3] i. 356). Or we find that the Caribs 'sprinkle a male infant with its father's blood to give him his father's courage' (H. Spencer, *Sociology*, i. 116). We even find that amongst the West African natives the skeletons of Ashanti kings are washed with the blood of human victims (Ellis, *The Tshi-speaking Peoples*, p. 168)—doubtless to impart soul-life to the dead. Another group of examples shows us the use of blood as a substitute for life (Tylor, ii. 402), and the wide-spread avoidance of blood as food is by some peoples explicitly traced to the identity of the soul and the blood (examples collected in Frazer, *op. cit.* i. 353). So natural, indeed, is it among primitive people for death to come by blood-shedding that 'it is always held uncanny in Africa if a person dies without shedding blood' (Kingsley, *Travels in West Africa*, p. 524); in other words, the blood is the normal and visible soul. What may be the precise relation of this blood-soul to other ideas of soul, such as its identification with breath or shadow, is probably left quite indeterminate in most cases. Skeat cites a curious Malay belief which connects the blood-soul with the shadow-soul through a small snail. 'Among the grass in the shadow of a grazing animal these creatures are to be discovered, and if one of them is crushed, it will be found to be full of blood, which has been drawn in a mysterious way from the veins of the animal through its shadow' (*Malay Magic*, p. 306).

2. The perils of blood are a natural result of that idea of the blood-soul which has just been indicated—'the almost universal belief that blood is a fluid in which inheres mysterious potency, no less dangerous when misused than efficacious when properly employed' (Moore, *EBi*, art. 'Sacrifice,' § 43). It is with the former aspect that we are first concerned, and its most obvious example is that tabu on blood as food with which the OT makes us familiar; cf. 1 S 14^{32-35}, where we see that the blood, which is too perilous and mysterious to be man's food (Smend, *AT. Rel.-gesch.*[2] p. 142), must be offered on the sacred stone to Jahweh before man can eat the flesh with impunity. The prohibition of blood as food meets us, as a definite law, in Dt $12^{16.\ 23-25}$ 15^{23}; here it is not offered in sacrifice, but when animals are slain for ordinary food it is to be poured out on the ground; for the same prohibition in the Priestly Code, cf. Gn 9^{4}, Lv 3^{17} $7^{26.\ 27}$ 17 *passim*, 19^{26}. Frazer cites examples of the same tabu from the customs of Esthonians, American Indians, Romans, Arabs, and Papuans (i. 353). Further, the perils of blood are well illustrated in the precautions taken by many peoples in killing men or animals. It is not the actual killing, but the literal shedding of blood which constitutes the danger, since blood actually shed means mysterious soul-power let loose. Consequently, the actual shedding of blood in killing is to be avoided, if possible; this is probably the explanation of many curious methods of judicial execution (Kingsley, *Travels in West Africa*, p. 525; Frazer, i. 354 f.; Jevons, *Introd. Hist. Rel.* p. 73 f.) which in themselves might seem simply refinements of cruelty. To remind us that the peril is in the actual blood shed, not in any moral element of guilt incurred, we find the same unwillingness to shed blood in the case of animals amongst the Wanika and Damaras of Africa (Frazer, i. 357),

with the result that cattle are stoned to death or suffocated. Where blood is actually shed, various means are used to draw the charge of the shell, so to speak, before it can explode. One has been indicated above in the practice of putting the blood on a sacred stone or altar, and reference will be made to it again when the place of blood in sacrifice is considered (p. 719a). Another plan is to cover the blood with earth or dust; Doughty met with an example of this, interesting because the blood was the man's own: 'Thâhir, cupped in the head, neck, and back, felt lightened; he covered the blood with a little heap of dust, and one who came in asking, "What is this heap?" he answered, "Blood which I have buried"' (*Arabia Deserta*, i. 492). Or the blood may be sucked, or else deposited in some special place; both are illustrated by one of the Australian rites of sub-incision, in which the boy is made to suck the blood on the knife, whilst the blood from the wound falls on a piece of paper bark. 'The blood was taken in the paper bark to the boy's mother, who buried it in the bank of a water pool so as once more to ensure the growth of the lilies' (Spencer-Gillen[b], p. 368). In other circumstances, the blood that has been shed may require expiation (cf. Dt 21^{1-9}), and the blood-stain may be cleansed away by the use of other blood (Lang, *Myth, Ritual, and Religion*, i. 275). Finally, the perils of blood, already seen in the prohibition of blood as food, and in avoidance of or precautions in blood-shedding, find a third group of illustrations in the elaborate rules affecting the blood of menstruation and childbirth. The fear of women's blood in these cases, no doubt because regarded as specially mysterious and potent, is wide-spread amongst primitive peoples (examples in Frazer, i. 361). Elaborate care is taken by the Arunta and Ilpirra tribes of Australia, for example, to dispose of the blood of the first menstruation (Spencer-Gillen[a], p. 460). Crawley (*The Mystic Rose*, p. 212), whilst admitting that the obvious vehicle of contagion in such cases is blood, questions the truth of making this central in the tabu of women; and it is frequently true that various ideas operate and concentrate in one primitive custom. But none can doubt that the perils of blood are illustrated by the wide-spread tabu on women at certain times.

3. The powers of blood have been implied already in its perils. But the same ideas which make men ordinarily shrink from contact with blood may evidently cause them to resort to it on extraordinary occasions, as a specially potent means of influence. They are willing to accept the risk for the sake of the end in view. Only a few representative cases can be given here: further illustrations may be found in the chief works on anthropology, or in Strack's *Das Blut*, which gives many examples and copious references. One of the most obvious ways in which the psychical energy of blood can be assimilated is by drinking it. 'Blood may be given by young men to old men of any degree of relationship and at any time with a view to strengthening the latter' (Spencer-Gillen[a], p. 461). Amongst the same Australian peoples, blood may be given also to the members of an avenging expedition; to secure unity of purpose and to exclude treachery, it may even be forcibly administered to an outsider (p. 462); special meetings of reconciliation are also accompanied by blood-drinking (*ib.*). Many primitive peoples drink the blood of enemies in order to secure their strength (Crawley, *The Mystic Rose*, p. 102; Robertson Smith, *Kinship*[1], p. 284 [ed. S. A. Cook, p. 296]; Trumbull, *The Blood Covenant*, pp. 126–134). Sometimes the special purpose of blood-drinking is religious inspiration (Trumbull, *op. cit.* pp. 139–142), especially in connexion with a sacrifice, when the fresh blood of the victim is drunk (Frazer, *op. cit.* i. 133 f.). The result is frequently seen in the usual phenomena of possession. The religious idea underlying this practice will be discussed when blood-covenants (see § 4) in general have been considered; here it is sufficient to name this wide-spread practice in illustration of the powers of blood. Another way of imparting these powers is by external application of the blood. 'It is a very common thing for a young man to open a vein in his arm and allow the blood to sprinkle over the body of an older man, the idea being to strengthen the latter' (Spencer-Gillen[b], p. 598). Among some primitive peoples, the blood of relatives is allowed to fall on a corpse, probably with the idea of reviving it or imparting life to it (cf. Howitt, p. 451). From such use of blood to promote physical or psychical strength, it is an easy transition to the use of blood as medicine. For example, amongst the people just named, 'it is a very common practice to give both men and women blood to drink when they are ill' (Spencer-Gillen[b], p. 599). From the time of the Romans down to our own time, there has been a wide-spread belief that epilepsy could be cured by drinking blood (Robinsohn, *op. cit.* p. 27). An established cure for leprosy, from ancient Egypt down into the Middle Ages, was the blood-bath (Trumbull, *The Blood Covenant*, p. 116 f.). Many curious examples are collected by Strack (pp. 27 f. and 36–40) of these and similar customs. The patient may even be given his own blood to drink (*op. cit.* pp. 40–43). We find also cases approximating to the use of charms, like the Chinese custom, in times of pestilence, of writing sentences in human blood to be fastened on the door-posts for protection against disease (Trumbull, *The Threshold Covenant*, p. 71). Not only human but also animal blood occurs frequently in the primitive pharmacopœia (Strack, pp. 55–57). It is, of course, difficult to separate ancient medicine from ancient magic. In regard to the magical uses of blood, some belong to it in common with hair, nail-parings, etc., as having been in close connexion with the body: thus 'ancient Peruvian sorcerers destroyed their victims by acting on blood taken from them' (H. Spencer, *Sociology*, i. 264). The use of blood at the various totem ceremonies of Australia is midway between the magical and religious uses. But special mention must be made of the use made of the blood of menstruation for both medicinal and magical purposes (Strack, pp. 28–32)—a use we might expect in view of the perils specially attaching to this blood. The further powers of blood are illustrated throughout this article, in regard both to human and to superhuman relationships, and underlie innumerable blood-rites and blood-sacrifices. One of the most striking of these is the blood-baptism of Mithraism (*q.v.*). Here it remains only to point out the extension of the powers of blood to many blood-like things. The tabu on blood extends to many blood-coloured objects (Jevons, p. 67: 'The savage believes that the same terrible consequences—whatever they may be—which ensue on contact with blood, do actually and really follow on contact with things which by their colour . . . remind him thereof'). So, amongst West African natives, 'every spot where the earth is of a red colour is believed to be, or to have been, the place of abode of a Sasabonsum; and the red colour is supposed to be caused by the blood of the victims destroyed by him' (Ellis, *op. cit.* p. 35; cf. Tylor, i. 406). We may trace the same range of thought in the ideas attaching to the red heifer (Nu 19^{2a}) or to the robin redbreast; and in the practice of smearing the body with red earth (Spencer-Gillen[a], p. 464). This last is probably a substitute for blood. For other

customs, especially the natural and frequent use of wine as the blood of the grape, cf. Trumbull, *The Blood Covenant*, p. 191 f.; Frazer, i. 359.

4. **Blood-covenants.** — The previous sections illustrate that primitive conception of blood on which all later ideas and institutions rest. We have now to notice some of the more important of these ethical and religious developments of the primitive idea. In the first place, there is the wide-spread practice of the blood-covenant between man and man. In its direct and primitive form, this is essentially the union of one life with another by actual exchange of blood, the exchange being made either by drinking or by transfusion. Many instances of this practice are collected by Trumbull in his elaborate monograph, *The Blood Covenant*; he draws examples from Africa, Asia, America, Europe, and Oceania, and claims that it is fundamental in all primitive life (p. 96). Certainly the practice is a natural development of the idea that blood is life. On its physical side, the practice is still retained in civilized communities in the medical operation of transfusion: 'men or dogs, bled to apparent death, may be at once and effectually revived by filling their veins with blood taken from another man or dog' (Huxley, *Physiol.* p. 117). The difference is that the primitive man did this, and still does it, not for physical only, but also for psychical ends, which he does not separate from the former. 'The inter-commingling of the blood of two organisms is, therefore, according to this view, equivalent to the inter-commingling of the lives, of the personalities, of the natures, thus brought together' (Trumbull, *op. cit.* p. 38). Both the primitive practice and the primitive idea may be modified in various directions. On the one hand, some substitute for blood, such as wine, may be introduced; on the other, the idea of life-union may appear in the weaker form of union in a particular oath or pledge (cf. Doughty, *Arabia Deserta*, ii. 41: 'sheykhly persons at Aneyza have told me that "el-Kahtân in el-Yémen do confirm their solemn swearing together by drinking human gore").' For a collection of such blood-oaths, cf. Strack, *Das Blut*, pp. 21–25. See, further, BROTHERHOOD (artificial).

5. **Kinship.** — It has seemed to many that the idea of union by blood through the blood-covenant is simply a particular case of the idea of union by blood as underlying kinship in general, the only difference being the substitution of artificial means for natural. Jevons, referring to the fact that Muslim women do not veil themselves in the presence of 'blood-brothers' any more than before other blood-relations, remarks: 'it faithfully preserves the primitive view that the blood-brotherhood thus established is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother is, or becomes, the brother of all my brethren; the blood which flows in the veins of either party to the blood-covenant flows in the veins of all his kin' (*op. cit.* p. 99; cf., however, p. 170). Benzinger, also referring to Semitic races, which so richly illustrate the ideas of blood, remarks: 'Relationship is participation in the common blood which flows with equal fulness in the veins of every member of that circle; on this idea rest all the rights and obligations between the individual and his clansmen' (*EBi*, col. 2672). Such an identity of kinship with blood-relationship is to us self-evident: the terms are convertible, for the life of the father and the life of the mother are combined in the child born from their physical union. But it is by no means so certain as is frequently assumed that the fundamental idea of kinship is blood-relationship. The whole range of birth ideas amongst primitive peoples often differs widely from our own. By various Australian tribes we find 'the idea firmly held that the child is not the direct result of intercourse, that it may come without this, which merely, as it were, prepares the mother for the reception and birth also of an already-formed spirit child who inhabits one of the local totem centres' (Spencer-Gillen[a], p. 265). In another part of the same country, a different view is held: 'The child comes from the man, and the woman only takes care of it' (Howitt, p. 255). Amongst the West Africans, 'the Awunas, an Eastern Ewe tribe, say that the lower jaw is the only part of the body which a child derives from its mother, all the rest being derived from the ancestral *luwoo* (the Tshi *kra*). The father furnishes nothing' (Ellis, *The Yoruba-speaking Peoples*, p. 131 n.). Westermarck (*Hum. Mar.* p. 106) cites from Carver the case of a North American tribe who ascribed the soul to the father and the body to the mother. These ideas, in their many varieties, at least remind us that the idea of blood-relationship has far less physiological support in the primitive mind than in our own. Further, we may ask whether the analysis of the idea of kinship into one of identity of blood is itself natural to the primitive mind, and does not belong to a somewhat later stage of development. Crawley argues that 'habitual proximity and contact is the strongest and most ordinary tie, and is earlier in thought than the tie of blood' (*The Mystic Rose*, p. 452); he further contends that 'the theory that the "blood covenant" and the similar marriage ceremony are intended to cause the blood of the tribe to flow in the veins of the new member is based on late legal fictions' (*ib.* p. 376). Westermarck, criticizing the hypothesis of an original promiscuity, shows reason to doubt that 'the denomination of children and the rules of succession really were in the first place dependent on ideas of consanguinity' (*op. cit.* p. 107). Even where blood-relationship is emphasized, as in Arabia, it may be significantly linked with parallel ideas, such as meal-communion. 'The Arabic community rests on a natural basis . . . those who belong together are connected in the first place through blood; in the second place, however, through the fact that they eat and drink, live and travel together; without this, blood would soon lose its power' (Wellhausen, *Reste arab. Heidentums*[2], p. 193). On the whole, it seems in accordance with primitive habits of thought to regard the idea of blood-relationship as a specialization of the general theory and practice of early kinship. See, further, BROTHERHOOD (artificial).

6. **Blood-revenge.**—At first sight it may seem difficult to explain the universal practice of blood-revenge, except from the standpoint of a primitive sense of the blood-tie underlying kinship. When the blood of a kinsman has been shed, it seems most natural to assume that the tie of blood impels his nearest relative to slay the slayer. But, in the light of what has been said, we may regard the motive which animates the avenger of blood as complex. There is, first, the fact that presents itself from the powers and perils of blood. Blood has been shed, perilous power has been liberated, and something has to be done if those in the vicinity are to escape the consequences. 'The principle that blood must be atoned for by blood has inspired in every part of the earth the endeavour to avenge a murdered kinsman' (Bastian, *Der Mensch in der Geschichte*, iii. 1; he collects many examples in pp. 2–36). There are, further, the natural obligations and feelings of those whose lives have been closely linked, which make a kinsman the most likely person to desire the 'wild justice' of revenge. The union of these two

motives, the psychical and the personal, as they may be called, issues in the familiar features of blood-responsibility, as presented in early forms of society. For example, amongst West African tribes, 'revenge, especially for bloodshed, is everywhere practised. It is a duty belonging first to the "ijawe" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). . . . Formerly it was indifferent who was killed in revenge, provided it was some member of the murderer's tribe. Naturally that tribe sought to retaliate, and the feud was carried back and forth, and would be finally settled only when an equal number had been killed on each side. . . . At present, blood is not always required, but formerly no money would have been accepted as a sufficient penalty' (Nassau, *Fetichism in West Africa*, pp. 19, 20). This example may be taken as the normal type. In course of time various modifications arose, tending to take vengeance out of the hands of the individual, and to put it in charge of the whole community, whilst various plans were adopted, such as the well-known 'cities of refuge' among the Hebrews, to differentiate the cases of wilful and accidental manslaughter (cf. Dt 19^6). The original entire lack of distinction between the two is significant of the attitude of the primitive mind to the whole matter; it is the actual shedding of blood that is in question, not the modern idea of abstract justice. The same attitude comes out even more significantly in the ideas held about blood-shedding in the case of animals. 'The primitive hunter who slays an animal believes himself exposed to the vengeance either of its disembodied spirit, or of all the other animals of the same species, whom he considers as knit together, like men, by the ties of kin and the obligations of the blood feud' (Frazer, ii. 389, where examples are given). Finally, we may see the whole principle which underlies blood-revenge well illustrated in some modern survivals. The following account is given by Curtiss from native information (*Primitive Semitic Religion To-day*, p. 191): 'In the neighbourhood of Nablus it is customary, when a reconciliation has been made between the murderer and the avenger of blood, for the murderer to kill a goat or a sheep. He then kneels before the avenger with a red handkerchief tied about his neck. Some of the blood of the animal slain is put on the palms of his hands. The avenger draws his sword and intimates that he could take his life from him, but that he gives it back to him.' See also BLOOD-FEUD.

7. **Blood and the spirit-world.**—In tracing the developments of the ideas of the powers and perils attaching to blood, as they are seen in blood-covenants, blood-relationship, and blood-revenge, we have considered those ideas as affecting the relation between man and man only. But it is evident, from the fact that the spirit-world is generally conceived on anthropomorphic lines, that this important group of ideas would be applied to the unseen world, and that blood would come to occupy an important place in religious as well as in social life. The remainder of this article is therefore concerned with the place of blood in religion. The natural starting-point is afforded by the thirst of departed souls for blood, of which the visit of Odysseus to Hades supplies the classical example (*Od.* xi. 34 f.): 'But when I had besought the tribes of the dead with vows and prayers, I took the sheep and cut their throats over the trench, and the dark blood flowed forth, and, lo, the spirits of the dead that be departed gathered them from out of Erebus. . . . I drew the sharp sword from my thigh and sat there, suffering not the strengthless heads of the dead to draw nigh the blood, ere I had word of Teiresias' (Butcher-Lang's tr., p. 173). This eagerness of the dead to revive their strength by drinking that blood which is life is the best explanation of the frequent practice of pouring blood into the grave or tomb by means of a tube or funnel (examples in Jevons, p. 51 f.), or of the various forms of blood-offering to the dead (p. 52 f.), which may take the form of more or less serious mutilations on the part of the mourners (p. 191). But other spirits than those of departed men are eager for blood on similar grounds. So we meet with belief in the vampire. 'Inasmuch as certain patients are seen becoming day by day, without apparent cause, thin, weak, and bloodless, savage animism is called upon to produce a satisfactory explanation, and does so in the doctrine that there exist certain demons which eat out the souls or hearts or suck the blood of their victims' (Tylor, ii. 191; he cites various examples, pp. 191–194; for some modern cases, cf. Strack, *Das Blut*, p. 65). As a particular example may be mentioned the Malay vampire known as the *Penanggalan*, 'which is believed to resemble a trunkless human head with the sac of the stomach attached to it, and which flies about seeking for an opportunity of sucking the blood of infants' (Skeat, *Malay Magic*, p. 320, cf. p. 328). But other temporarily or permanently disembodied spirits have the same tastes and powers. So the West African natives believe that witches live almost entirely on the blood which they suck from children at night (Kingsley, *Travels*, p. 490). It need hardly be said that the difficulty we feel in connecting an immaterial spirit with material blood does not exist for the primitive mind, which knows no such antithesis; indeed, spirits are sometimes thought to yield blood (Robinsohn, *op. cit.* p. 167).

From such general beliefs we may pass to the various practices by which the spirit-world is approached through blood. Perhaps the best and simplest example of contact with the spirit-world made by blood is afforded by its use in Australian totemistic ceremonies. In connexion with the Unjiamba flower-totem, the blood of one of the young men is sprinkled freely on a stone, which is supposed to represent a mass of Unjiamba flowers, after chants have been sung, 'the burden of which is a reiterated invitation to the Unjiamba tree to flower much, and to the blossoms to be full of honey' (Spencer-Gillen[a], p. 184). In connexion with the Okira or kangaroo-totem, a similar ceremony is performed to increase the number of kangaroos, after which the young men at once go out to hunt them (*ib.* p. 201). In this case, the stone 'represents the spot where a celebrated kangaroo of the Alcheringa (*q.v.*) went down into the earth, its spirit part remaining in the stone which arose to mark the place' (*ib.* p. 462). These blood ceremonies are specially instructive, because they show the potency of blood in making a vital connexion with the 'supernatural' world, quite apart from any of the theories of sacrifice developed at a later stage of religious thought. It is of importance to emphasize this, lest we misread primitive forms of 'sacrifice' such as that offered to the Yoruba god, Ogun, when a human victim is slain; 'the entrails are exposed before the image, and the body suspended from a tree. The victim is slain by having his head struck off upon the stool of Ogun, over which the blood is made to gush' (Ellis, *Yoruba-speaking Peoples*, p. 68). The relation of the blood to the god may be regarded as an extension of its relation to the departed spirit of a man; it is summed up in the address to one of the gods in the Egyptian pantheon: 'Hail, thou who dost consume blood' (*Book of the Dead*, CXXV. 13). In other cases, however, we meet with a less direct presentation of the blood to the deity. Thus Ellis

writes: 'In 1881 a slight earthquake shock threw down a portion of the wall of the king's residence in Coomassie. The king, Mensah, consulted the priests as to what should be done, and the latter declared that the damage was the act of Sasabonsum, and that the ruined portion must be rebuilt of mud (*swish*) moistened with the blood of virgins. Fifty young girls were accordingly slaughtered, and the wall was rebuilt with *swish* kneaded in their blood' (*The Tshi-speaking Peoples*, p. 36). This instance serves as a transitional case to a very large number of what may be called blood-beginnings. These are far too numerous to be noticed in any detail, but in general it may be said that primitive peoples begin anything new, a new work or building, a new relation, such as marriage, by the shedding of blood (cf. Trumbull, *The Threshold Covenant*, *passim*; Skeat, *Malay Magic*, 143, 232; and many books of travel, etc.). For example, to take the case of a single people, Doughty found such customs amongst the Arabs in connexion with new building, and the breaking of new soil: 'Malignity of the soil is . . . ascribed by the people of Arabia to the ground-demons, *jan*, *ahl el-ard*, or earth-folk. Therefore husbandmen in these parts use to sprinkle new break-land with the blood of a peace-offering: the like, when they build, they sprinkle upon the stones, lest by any evil accidents the workmen's lives should be endangered' (*Arabia Deserta*, i. 136; cf. ii. 100, of a new building; ii. 198, of a new well; i. 452, of new booty). It is of interest to find the old custom surviving even in modern Palestine. 'When the ground was broken for the railroad from Beirut to Damascus, ten sheep were placed in a row, their throats were cut, their blood flowed down upon the ground, and the flesh was given to the poor' (Curtiss, *Prim. Sem. Rel.* p. 184).

8. **Sacrifice.**—The important place of blood in man's connexion with the spiritual world is paralleled by its position in the sacrificial ritual of organized religion. The disposition of blood in the most primitive forms of sacrifice shows clearly its central significance, and no theory of sacrifice can be regarded as satisfactory which places blood at the circumference rather than at the centre. Moore, in his valuable article on 'Sacrifice' (*EBi*, col. 4217) summarizes his detailed survey of the OT system by saying: 'From first to last the utmost importance attaches to the disposition of the victim's blood. Indeed, it may be said that this is the one universal and indispensable constituent of sacrifice. . . . This use of sacrificial blood is older than the offering of part of the victim by fire, and is the necessary antecedent of the feast, its religious consecration. The offering or application of the blood cannot very well be regarded as a gift to God, or as a mere incident in the preparation for a communion meal.' It does not fall within the scope of the present article to offer a discussion of the rival theories of sacrifice (*q.v.*); but it may be pointed out that the argument of the previous sections, drawn from a wider field of anthropological evidence, fully supports the above statement. According to Tylor (ii. 375–410), 'sacrifice is a gift made to a deity as if he were a man. . . . The ruder conception that the deity takes and values the offering for itself, gives place on the one hand to the idea of mere homage expressed by a gift, and on the other to the negative view that the virtue lies in the worshipper depriving himself of something prized' (p. 376). That such views do arise in the history of sacrifice is, of course, undoubted, but there is grave reason to doubt whether they can be called in any sense a part of primitive culture. The gift-theory of sacrifice is criticized by Jevons on other grounds, as being of comparatively late application (*Introd. Hist. Rel.* pp. 223–225). Here we may note that the conception of blood as a gift itself involves some explanation of its selection, and forces us back to a more primitive standpoint. Amongst the Arabs, the chief form of sacrifice was the slaughtered animal (Wellhausen, *op. cit.* p. 114); and the genuine Arab ritual consists in pouring out the blood, or else smearing it on the sacred stone (p. 116). This special appropriation of the blood to the deity can be paralleled from many peoples. Thus the West Africans 'eat the meat of the sacrifice, that having nothing to do with the sacrifice to the spirits, which is the blood, for the blood is the life' (Kingsley, *Travels*, p. 451). 'In an expected great evil the gateway is sometimes sprinkled with the blood of a sacrificed goat or sheep. The flesh is not wasted; it is eaten by the villagers' (Nassau, *op. cit.* p. 93). The reason for this appropriation has been suggested in the previous sections of this article; it springs from the powers and perils of blood. On the one hand, we have already seen that blood is used as a vital link between man and the spirit-world—a usage with which various views of its precise potency might be connected; on the other hand, the very perils of blood, which so often cause its prohibition as food, and its tabu in other ways, suggest that the sacred stone will serve as a lightning-conductor does, by drawing off the latent peril. This view is practically that held by Moore in the article referred to: 'The common root of these diverse uses and restrictions is the almost universal belief that blood is a fluid in which inheres mysterious potency, no less dangerous when misused than efficacious when properly employed. In the outpouring of the blood at the sacrificial stone we may perhaps recognize the feeling that this is the safest disposition of it, as well as the belief of a somewhat more developed theology, that it belongs to the deity of right' (*EBi*, col. 4218). Such disposal of the blood, starting from a genuine and deep-rooted primitive motive, would form a nucleus round which the later usages and ideas would easily cluster. Ancient psychology draws no hard and fast line between the blood-soul of the animal and that of the man; totemistic ideas confirmed the identity of the man with the animal he offered, and the communion with the deity obtained by the blood which was the life would be a very real thing to the primitive worshipper. The later ideas of substitution depend on a deepening ethical experience; and they, too, equally with the idea of homage, can find a basis in the offered blood. All these are natural developments, interpreting the primitive rite anew to the needs of each age; nor do the perils and powers of blood become inoperative on human thought till men learn that the only perfect communion with God belongs to the perfectly obedient will, and that they who would worship the Father must worship in spirit and in truth. BLOOD-FEUD (Primitive).—One of the most wide-spread phenomena of primitive, and even of comparatively advanced, jurisprudence is the blood-feud. This, while subject to the most manifold gradations, may be defined, in its typical aspect, as that principle of ethnological jurisprudence whereby an entire family (more rarely clan or tribe) is made liable to retaliation and reprisals in kind by another family (or clan or tribe) against which a member of the former family (or clan or tribe) has committed a deadly offence (generally murder, less commonly rape or abduction). It is, in other words, the *lex talionis* exercised between families (more rarely clans or tribes), often including those connected with them by any form of blood-covenant; it is communal vengeance, as distinguished from individual revenge. Its ultimate foundation is, indeed, personal retaliation; but, in proportion as the family develops, the principle of the blood-feud grows in importance, until it reaches its climax in the modern tenet that an entire government is bound to require punishment for injury done to one of its citizens by another nation or by a member or members thereof. On the other hand, just as in the latter case concessions or pecuniary compensation normally take the place of demanding life for life, so in relatively primitive jurisprudence, murder, rape, and other grave offences may frequently be commuted in various ways; the blood-feud is replaced by the *wergeld* (see below).

The essentially communal nature of the blood-feud carries with it the corollary that, among many peoples, one unprotected by ties of family, clan, or tribe may be injured in person or possessions without risk of blood-vengeance, unless he has received artificial kinship by some form of blood-covenant or enjoys the status of guest, which in itself constitutes in great measure a temporary *quasi*-adoption into the family (very rarely into the clan or tribe) of his host. This explains the fact that many peoples rob or kill strangers with impunity and without any sense of wrong-doing, although among themselves they may have the highest regard for the possessions and lives of their fellows, as among the Polynesians, where the property of strangers was held to belong to the gods of the land, so that it could be seized and the owners killed with impunity by those among whom the strangers in question had come (Mariner, *Tonga Islands*, London, 1818, i. 308; Mathias G . . ., *Lettres sur les îles Marquises*, Paris, 1843, p. 106).

The blood-feud is, among many peoples, a sacred obligation, to which the kinsmen of the murdered man are in duty bound, as among the African Bakawiri (Leuschner, in Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903, p. 23). To such a degree is this concept carried that it is often believed that the soul of the murdered man finds no rest until blood-vengeance has been exacted, as among the Australians and Papuans (Kohler, in *ZVRW* vii. 363, 376), and the African Banaka, Bapuku, Diakite Sarrakolese, and Washambala (Steinmetz, *op. cit.* p. 51; Nicole, in Steinmetz, *op. cit.* p. 132; Lang, *ib.* p. 257). He who does not perform blood-vengeance when he should is despised, not as a coward, but as a recreant to the demands of religion and duty, as among the Negro Akka (Monrad, *Gemälde von der Küste von Guinea*, Weimar, 1824, p. 90 f.) and Felups (Park, *Reise in das Innere von Afrika*, Hamburg, 1779, p. 20), the South American Arawaks (Schomburgk, *Reise in Britisch Guiana*, Leipzig, 1847, i. 157), in Australia and New Guinea (Kohler, in *ZVRW* vii. 364, 376; Grey, *Journal of Two Expeditions in North-West and West Australia*, London, 1841, ii. 240), and in the Indonesian islands of Leti, Moa, and Lakor (Riedel, *De sluik- en kroesharige rassen tusschen Selebes en Papua*, The Hague, 1886, p. 370). In at least some cases the object of the blood-feud appears to have been sacrifice of the murderer or his kin to the *manes* of the victim, thus explaining the rule of the South American Tupi that the relatives of the murdered man should strangle the slayer on the very spot of his crime (Featherman, *Social History of the Races of Mankind*, London, 1887–90, iii. pt. 2, p. 340). This usage finds its antithetical parallel in the North American Indian adoption of the murderer in his victim's stead (see below, p. 722[b]). The women are often described as especially assiduous in demanding the inauguration of the blood-feud, as among the Iroquois, Florida Indians, Caribs, and Brazilians (Lafitau, *Mœurs des sauvages amériquains*, 16mo ed., Paris, 1724, iii. 149–151).

The degree of kinship involved in the duty of satisfying blood-vengeance varies widely. In its greatest extent any member of the family, clan, or tribe to which the murdered man belonged may kill any member of the family, clan, or tribe of the murderer, as in New Guinea, where the murderer himself is not killed (von Hasselt, in *ZE* viii. 193; cf. the Australian Dieri custom of killing the eldest brother of the offender rather than the offender himself [Howitt, p. 327]), and among the African Somali and Bakawiri (Haggenmacher, in *Petermann's Mittheilungen*, Erg. x. No. 47, p. 31; Leuschner, in Steinmetz, *op. cit.* p. 23). Elsewhere the feud may be restricted to totem-families, as among some Australians and the South American Goajiros (Kohler, in *ZVRW* vii. 364, 382). In its extremest form the blood-feud prevailed generally in Polynesia, especially in New Zealand (Angas, *Savage Life in Australia and New Zealand*, London, 1847, ii. 171; Thompson, *The Story of New Zealand*, London, 1859, i. 98). In Polynesia, if the offender escaped, his whole family paid the penalty in his stead (Wakefield, *Adventure in New Zealand*, London, 1845, ii. 108); in Tonga and Samoa, where wergeld was accepted only rarely, all kinsmen of the offender were killed if they could be found (Shortland, *Traditions and Superstitions of the New Zealanders*, London, 1854, p. 224); and in New Zealand the kinsmen of a murdered man often killed in revenge the first man on whom they chanced, whether friend or foe (Dieffenbach, *Travels in New Zealand*, London, 1843, ii. 127).

The blood-feud may, however, be restricted to certain members of the households of the murderer and the murdered—a system widely prevalent in Africa. Where the matriarchate is in force, only those related on the mother's side are involved, and where the patriarchal system has been developed, only those on the father's side. Accordingly, among the African Barea and Kunáma the son

avenges the death of a mother or uterine sister, the nephew his maternal uncle or aunt, and the maternal uncle his nephew or niece; but the son does not avenge his father, or the father his son. Among the Felups, on the other hand, as in Akkra, on the Gold Coast, the eldest son is the avenger of his father (Post, *Afrikan. Jurisprudenz*, Oldenburg, 1887, i. 61 f.). Similar rules prevail for the maternal side among the Goajiros and Australians (Kohler, in *ZVRW* vii. 382, 364; Bastian, in *ZE* vi. 305). If, however, the matriarchal and patriarchal systems are confused, these differentiations no longer hold, as among certain Brazilian tribes (Post, *Anfänge des Staats- und Rechtslebens*, Oldenburg, 1878, p. 182). An interesting sidelight on the primitive legal status of the wife is afforded by some of the laws of the blood-feud, which show whether she is regarded as having become the property of her husband or is held still to belong to her original family (cf. the twofold theory of the status of the individual in more highly developed polity, p. 723[b]). From the latter point of view she is avenged, among the Bakawiri and Washambala, by her own blood-kinsmen, not by her husband (Steinmetz, *op. cit.* p. 23; Lang, *ib.* p. 257), this being the reverse of Banaka, Bapuku, and pagan Bambara practice (*ib.* pp. 49, 89); while among the Diakite Sarrakolese of the French Sudan the husband may avenge his wife when duly authorized by the *ḳādī*, whereas if he does not request this privilege the duty devolves upon her kinsmen (Nicole, *ib.* p. 132). In West Africa the blood-feud 'is a duty belonging, first, to the "ijawe" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). The murdered man's own family takes the lead,—in case of a wife, her husband and his family, and the wife's family; sometimes the whole "ikaka"; finally, the "etomba"' (Nassau, *Fetichism in West Africa*, New York, 1904, p. 19). In the African Sansanding States the right of blood-revenge belongs to the agnates of the murdered man in the order of their inheritance (Fama Mademba, in Steinmetz, *op. cit.* p. 89). Among the African Washambala, the blood-feud, which they exact only for murder, is directed against the offender and his wife, while his children are enslaved and his property is plundered (Lang, *ib.* p. 256 f.); and among the American Shawnee, in case wergeld was refused and the murderer could not be seized, his nearest kinsman was slain in his stead by the kinsmen of the murdered man (Featherman, *op. cit.* iii. pt. 1, p. 183), this being a *quasi*-analogue to the Dieri practice of substitution, to which attention has already been drawn (for the very different principle of substituting the murderer for the victim, see below, p. 722).

An interesting example of what may be called a ceremonial blood-feud is afforded by the Australian *pinya* (the *atninga* of the Central Australians), a sort of *posse comitatus*, which may hunt down the murderer or (as already noted) his eldest brother. In lieu of actually killing a victim, however, the *pinya* may subject the murderer to a milder penalty. Thus, among the Mukjarawaint, in a case of blood-feud, a headman 'appointed a spot near at hand where the expiatory encounter should take place that afternoon, it being agreed that so soon as the offender had been struck by a spear the combat should cease. Then the offenders stood out, armed with shields, and received the spears thrown at them by the dead man's kindred, until at length one of them was wounded. The Headman of the Garchukas then threw a lighted piece of bark, which he held, into the air, and the fight ceased. If it had been continued there would have been a general fight between the two totems' (Howitt, p. 335). This practice is wide-spread in Australia (Howitt, p. 335 ff.).

Artificial kinship, as noted above (p. 720), is also frequently reckoned in satisfaction of the blood-feud. Thus, among the Polynesians, brothers artificially created by blood-covenant were bound to require blood-revenge if one was killed, even though he fell in battle, which normally abrogates the necessity of such vengeance (Ellis, *Polynesian Researches*[2], London, 1832, i. 290); and similar principles were observed among the Araucanian Pehuenche of South America (Post, *Grundlagen des Rechts*, Oldenburg, 1884, p. 69). The relation between host and guest often carries similar obligations with it, as among the African Barea and Kunáma (Munzinger, *Ostafr. Studien*, Schaffhausen, 1864, p. 477), as does that between patron and client, as among the Barea and Bogo (Munzinger, *op. cit.* p. 243, and *Ueber die Sitten und das Recht der Bogos*, Winterthur, 1859, p. 43); so that among the African Takue wergeld is readily accepted for a murdered kinsman, but blood-revenge is exacted for the killing of a guest or client (Munzinger, *Ostafr. Stud.* p. 208).

Certain limits are, however, normally observed in the blood-feud. Men in full vigour are usually alone concerned. Women are, for the most part, exempt, as are children and aged men, among the Indians of Brazil (Post, *Anfänge*, p. 175), although some peoples, as the Sudanese, spare children only until they are old enough to bear arms (Marno, *Reisen im Gebiete des blauen und weissen Nil*, Vienna, 1874, p. 200), the same practice prevailing among the Nissan Islanders of the Bismarck Archipelago (Sorge, in Steinmetz, *op. cit.* p. 418) and the Marshall Islanders (Senfft, *ib.* p. 449). Other tribes, as the Nuforese of New Guinea and the African Banaka and Bapuku, render even women and children liable (von Hasselt, in *ZE* viii. 93; Kohler, in *ZVRW* vii. 376; Steinmetz, *op. cit.* p. 49). In like fashion the Caribs mercilessly slaughtered children (Labat, *Voyage aux isles d'Amérique*, The Hague, 1724, ii. 109), and the South American Tupinimba even extended the blood-feud to the child begotten by a prisoner of war, who, before being killed, was made to consort for this very purpose with a woman of his captors' tribe, the offspring being brought up expressly for slaughter (Schmidt, in *ZVRW* xiii. 297, 317). Some peoples, as the Makassars, forbid blood-feud between those of different rank, the inferior being entitled only to blood-money (Wilken, *Het strafrecht bij de volken van het maleische ras*, The Hague, 1883, p. 7); while in the Sansanding States one superior in rank is not liable to blood-feud for the murder of his inferior, unless robbery was the motive for the offence (Fama Mademba, in Steinmetz, *op. cit.* p. 88 f.).

Within the family the blood-feud has no existence, punishment here being meted out by the authority of the head of the family—a principle also observed in the clan and tribe; although, as the sense of blood-kinship decays in the last two divisions, it naturally becomes increasingly difficult for an interclanal or intertribal blood-feud to arise.

The blood-feud is most generally begun, as has been noted, by murder, which may be entirely unintentional, as among the Australians, the Marshall Islanders, and in the Egyptian Sudan (Kohler, in *ZVRW* vii. 363, xiv. 443 f.; Marno, *op. cit.* p. 200), or committed in self-defence, as among the Bedawin (Kohler, in *ZVRW* viii. 254), or committed even by a person irresponsible for his acts, as among the African Ondonga and the Nissan Islanders of the Bismarck Archipelago (Rautanan, in Steinmetz, *op. cit.* p. 341; Sorge, *ib.* p. 418). The wide-spread belief in magic as the cause of death frequently leads to inquiry of the sorcerer as to the identity of the murderer and the consequent object of the blood-feud, as in Africa (Post, *Afr. Jur.* ii. 145 ff.), among the Nissan Islanders (Sorge, in Steinmetz, *op. cit.* p. 418), and the Dieri of South-East Australia (Howitt, p. 326), and in Central Australia generally (Spencer-Gillen[a], p. 490). The Bagobo of South Mindanao even made the medicine-man liable to the blood-feud on the ground that he had failed to avert death from the murdered man

(Schadenberg, in *ZE* xvii. 12). But, as the feeling of blood-kinship diminishes, a distinction is drawn between murder and manslaughter, the former still requiring blood-vengeance, while atonement may be made for the latter by a lesser penalty, or the offence may be commuted by wergeld, as in the Sansanding States and among the Diakite Sarrakolese of the French Sudan, the Washambala (Fama Mademba, in Steinmetz, *op. cit.* p. 89; Nicole, *ib.* p. 132; Lang, *ib.* p. 257), the Narrinyeri of South-East Australia (Howitt, p. 341), and the Papuans (Kohler, in *ZVRW* xiv. 380 f.). In case of offences other than murder, primitive jurisprudence varies extremely. Among the African Barea and Kunáma, and in Akkra, mere bodily injury does not render the offender liable to the blood-feud (Munzinger, *Ostafr. Stud.* p. 502; Monrad, *op. cit.* p. 98), as it does, for instance, in Montenegro (Wesnitsch, in *ZVRW* ix. 54; Miklosich, *Blutrache bei den Slaven*, Vienna, 1887, p. 21), while the African Bogo regard such injury as shedding half the blood of the injured part, so that half the price of blood-revenge is required (Munzinger, *Bogos*, p. 81). Sexual offences, as infringing property rights (see art. ADULTERY), are sometimes subject to the blood-feud, notably adultery (Post, *Studien zur Entwicklungsgesch. des Familienrechts*, Oldenburg, 1889, pp. 355–359), fornication (the African Takue, Marea, and Beni-Amer [Munzinger, *Ostafr. Stud.* pp. 208, 245, 322]), and abduction (New Caledonians and Samoans [Post, *Anfänge*, p. 214]).

Since a true blood-feud is a family, clanal, or tribal affair, it can, properly speaking, be ended only by a solemn agreement between the families, clans, or tribes concerned; so that, if these will not consent to peace, the feud may persist for generations until one of the parties to it is annihilated, as among the Bagobo (Schadenberg, in *ZE* xvii. 28), the Manyuema and Balégga (Post, *Afr. Jur.* i. 84; cf. *Anfänge*, p. 175f., *Geschlechtsgenossenschaft der Urzeit*, Oldenburg, 1875, pp. 159 ff.), and the Malagasy islands of Nossi-Bé and Mayotte (Walter, in Steinmetz, *op. cit.* p. 391). A war of fourteen years' duration was waged between the North American Indian Passamaquoddies and Micmacs because, while the two tribes were visiting each other, the son of the Passamaquoddy chief became enraged and killed the son of the Micmac chief, who refused every offer of reconciliation, even the life of the boy murderer (Leland and Prince, *Kulóskap the Master*, New York, 1902, p. 25 f.). Sometimes, however, as among the Australians, a blood-feud is satisfied if the offender be merely wounded (cf. above, p. 721[a]; Howitt, pp. 336, 342; Kohler, in *ZVRW* vii. 365).

For a typical example of the termination of the blood-feud the ceremonies of the African Barea and Kunáma may be cited (Post, *Afr. Jur.* i. 67, his account being based on Munzinger, *Ostafr. Stud.* pp. 501 ff.). When a day has been fixed for the settlement of the feud, the murderer chooses a protector in the hostile village, to whom he sends durra to make beer. On the day appointed, all the villagers, except the family of the murdered man, go out to meet the murderer, whom they safeguard in their midst until he reaches the house of his victim. He enters the house and slaughters a barren cow to the *manes* of the murdered man, whose brother meanwhile grasps the cow's head. The murderer and his victim's brother then drink beer out of the same horn and eat meat from the same platter; each gouges out an eye of the slaughtered cow; and they exchange clothing so long as they sit together. The blood-price is then paid, and the murderer is escorted to his protector's house, while the family of his victim gives half the slaughtered cow as a feast to the village. The murderer must still shun the village for a year, but at the expiration of this time he again visits the kinsfolk of his victim, and is henceforth their closest kinsman and friend. In computing the blood-price, the number of those slain on each side is reckoned, and equality is secured by the payment of any difference in money or its equivalent, as among the Bogo and Somali of Africa (Munzinger, *Bogos*, p. 79; von der Decken, *Reisen in Ost-Afrika*, Leipzig, 1869–71, ii. 330) and the Bauro of the Solomon Islands (Post, *Anfänge*, p. 182), while under such circumstances the Maori returned the heads and booty which they had taken (*ib.* p. 183). The treaty is often still further strengthened by marriages between the two parties, as among the Bogo and Beni-Amer (Munzinger, *Bogos*, p. 82 f., *Ostafr. Stud.* p. 322). Among the Banaka and Bapuku the blood-feud can cease only when an equal number have been killed on each side (Steinmetz, *op. cit.* p. 49).

The true blood-feud in its primitive form excludes all possibility of commutation by money or its equivalent. This extreme form is, however, comparatively rare, even the African Ondonga, who kill man for man, woman for woman, and child for child, having a fully developed system of wergeld (Rautanan, in Steinmetz, *op. cit.* p. 341). With the decline of the sense of blood-kinship and the concomitant decay of early family law, commutation of blood-revenge becomes increasingly easy. Many peoples, like the Ondonga just mentioned, hold that murder may be punished either by blood-feud or by wergeld, at the option of the injured party, as among the Haidah of the Pacific coast (*NR* i. 168), the Papuans and Marshall Islanders (Kohler, in *ZVRW* vii. 376, xiv. 446), the Malays (*Tijdschrift voor Nederlandsch-Indië*, 1851, ii. 15), and the African Bogo, Tuareg, Galla, Bakawiri, and Diakite Sarrakolese (Munzinger, *Bogos*, p. 80; Duveyrier, *Les Touaregs du nord*, Paris, 1864, p. 428; Cecchi, *Fünf Jahre in Ostafrika*, Leipzig, 1888, p. 79; Leuschner, in Steinmetz, *op. cit.* p. 23; Nicole, *ib.* p. 132). In the Sansanding States in Africa the murderer, who may not be harmed by any but the avenger of blood, is alone exposed to the blood-feud, although both he and his agnates are liable for wergeld (Fama Mademba, in Steinmetz, *op. cit.* p. 89). Among the Nissan Islanders of the Bismarck Archipelago the somewhat curious rule is observed that, after blood-revenge has been exacted, the party executing it pays the other party a wergeld to secure final settlement of the feud, thus obviating a series of reprisals on both sides (Sorge, in Steinmetz, *op. cit.* p. 418). Elsewhere, as among the Bantu (Kohler, in *ZVRW* xv. 56), acceptance of proffered wergeld is compulsory.

The supersession of the blood-feud by the wergeld is lucidly exemplified by the usage prevailing among the American Iroquois and Algonquins, which may be summarized as follows from Lafitau (*op. cit.* ii. 185–193). The people of each 'cabin' (i.e. *hodensote*, or 'long house') exercised jurisdiction over their own members, so that, if one killed another belonging to the same 'long house,' the village assumed that the deed had been done for good and sufficient reasons, and that in any case it was none of their business. If, on the other hand, the murder was committed by a member of another 'long house,' village, tribe, or stock, all those who had been connected with the slain man united to 're-make the spirit' [*refaire l'esprit (c'est leur expression)*] for the kinsmen of the deceased, while at the same time every effort was exerted to save the murderer's life and to protect his kin against the vengeance of the kin of the murdered man. One of the chiefs now offered 60 presents [cf. the similar Huron custom recorded in 1636 by Lejeune (*Jesuit Relations and Allied Documents*, Cincinnati, 1896–1901, x. 215–223, cf. also xxxiii. 239–249), 'the least of which,' according to Lejeune, 'must be of the value of a new beaver robe']. The first nine of these, which were for the immediate kinsmen of the deceased, were the most costly, each often being 1000 beads of wampum; and the remainder, which were displayed on a pole, represented all that the dead man had used while alive. If blood-vengeance had been executed before this wergeld had been proffered, it was the avengers who were bound to offer these presents, while the kinsmen of the murderer were released from all liability. At an earlier time the Huron had not only exacted the giving of presents, but had also required the murderer to remain beneath the putrefying corpse of his victim (which was elevated on poles) as long as the kinsmen of the murdered man desired. If the presents were not acceptable, the murderer himself was given, in addition to the wergeld, to the kinsmen of his victim, whose place he was to take. Although he was occasionally rejected, he usually came to be regarded exactly as the man whom he had slain; and Lafitau also adds, though without vouching for the statement, that further south the murderer was required to marry the wife and adopt the children of the slain man, thus clearly showing the substitution-motive in lieu of the sacrifice-motive (cf. p. 720[b]) in blood-revenge—a principle occasionally observed by the Algonquin Abenaki (Featherman, *op. cit.* iii. pt. 1, p. 96). Sometimes a murderer was even adopted as a son by the mother of his victim (Tanner, *Mémoirs*, Paris, 1835, ii. 227).

Where the parties concerned have their own option as to whether the blood-feud shall be terminated by wergeld or some other means, outside authorities may not interfere, as among the

Araucanians and Greenland Eskimos (Post, *Anfänge*, p. 174), and the African Bogo, Barea, Kunáma, and Marea (Munzinger, *Bogos*, p. 79, *Ostafr. Stud.* pp. 499, 242), and Msalala (Desoignies, in Steinmetz, *op. cit.* p. 280); but, if reconciliation proves impossible, the blood-feud remains in force. The offender often flees, a certain amount of start frequently being allowed him, this being 3½ days among the Bedawin (Post, *Studien*, p. 125; Kohler, in *ZVRW* viii. 253). He must then remain in exile, either until reconciliation has been effected, as among the Barea, Kunáma, and Teda (Munzinger, *Ostafr. Stud.* p. 501; Nachtigal, *Sahara und Sudan*, Berlin, 1879–89, i. 448), or until his offence has been outlawed by the lapse of a definite period of time, this being 5 years among the Felups (Bérenger-Féraud, *Les Peuples de la Sénégambie*, Paris, 1879, p. 293) and 1 year among the Californian Nishinam (Kohler, in *ZVRW* xii. 409). Here the blood-feud comes into immediate connexion with the jurisprudence governing the right of asylum (*q.v.*), but among some peoples, as many American Indian tribes, murder was the one and only offence that could never be outlawed (Loskiel, *Gesch. der Mission der evangel. Brüder unter den Indianern in Nord-Amerika*, Barby, 1789, p. 20; Morse, *Report to the Secretary of War on Indian Affairs*, New Haven, 1822, appendix, p. 99; Featherman, *op. cit.* iii. pt. 1, p. 440), so that the Creek harvest-festival in July or August brought amnesty for all offences except murder (Kohler, in *ZVRW* xii. 409).

By degrees the acceptance of proffered wergeld becomes compulsory, but if the offending party be unable to pay this, the blood-feud may, as primitive kinship-feeling decays, still be commuted in a variety of ways. Thus the offender may become the slave of the family, clan, or tribe that he has injured, as in Makassar, Saranglao, and Gorong (Wilken, *op. cit.* p. 24 f.; Riedel, *op. cit.* p. 156), and among the African Diagara (Hecquard, *Reise an der Küste und in das Innere von Westafrika*, Leipzig, 1854, p. 104); or he may become the slave of the chief of the tribe in question, as among the Malays of Menangkabau (Wilken, *op. cit.* p. 22); or of him who paid the blood-money, as in West Timor (Riedel, in *Deutsche geograph. Blätter*, x. 234). This form of punishment is also the penalty for many other offences (see SLAVERY). In Akkra, on the other hand, he who could not pay the wergeld was exposed to the extreme consequences of the blood-feud (Bosman, *Viaggio in Guinea*, Venice, 1752, ii. 91; Müller, *Die afr. auf der Goldküste gelegene Landschaft Fetu*, Hamburg, 1676, p. 116).

As soon as any mode of reconciliation or commutation becomes permissible between a murderer and the family, clan, or tribe of his victim, the decay of the blood-feud begins. It has already been seen that the commonest method of such reconciliation is by the payment of certain sums to the kinsfolk of the murdered man. Potent as is such wergeld in diminishing the scope and frequency of the blood-feud, other factors are still more powerful. With increasing civilization the predominance of the family and clan becomes less and less, while that of the tribe (and ultimately of the nation and State) becomes greater and greater. The blood-feud, which is at first absolutely essential if family is to be prevented from encroaching on family, is seen to be detrimental to the larger development of the embryo State, and measures of ever-increasing severity are taken to check and suppress the blood-feud, until at last it wholly disappears as a recognized institution. The struggle is, however, long and stubborn. The primitive State may hand the offender over to the kinsmen of his victim, that they may either execute blood-revenge or obtain reconciliation in any way they please, as among the Iroquois, Batak, Malays of Menangkabau, Pogghi Islanders, and African Bornu, Wadai, and Unyoro (Post, *Studien*, p. 128, *Anfänge*, p. 184); or the nearest kin of the murdered man may be appointed the official executioner of the murderer, as among the Galla (Cecchi, *op. cit.* p. 79) and Malays (Post, *Bausteine für eine allgemeine Rechtswissenschaft*, Oldenburg, 1880–81, i. 157), any anticipation of official sanction on the part of the avenger of blood being a punishable offence in the Sansanding States (Fama Mademba, in Steinmetz, *op. cit.* p. 89). In this way the place of the primitive avenger of blood is ultimately taken by a regular State executioner, as among the Malays of Nias (Wilken, *op. cit.* p. 22). Even in ancient Greece the State took cognizance of murder only when duly qualified kinsmen of the murdered man had lodged a formal complaint against the murderer.

Often there is a double system of punishment for murder and other grave offences—execution by officers of the State or blood-feud, as among the African Washambala (Lang, in Steinmetz, *op. cit.* p. 256); while, in case the system of commutation has come into effect, a certain amount of the wergeld may belong to the State, the remainder appertaining as damages to the kinsmen of the murdered man. On the other hand, the non-Muhammadans in the Sansanding States give the entire amount to the king, whereas Islāmitic law awards the whole wergeld to the injured family (Fama Mademba, in Steinmetz, *op. cit.* p. 89), thus showing in epitome the antithetical status of the individual as belonging, in the one case, to the State, and, in the other, to the family (cf. the twofold theory of the status of the wife, above, p. 721). A murderer may often escape the blood-feud by voluntarily surrendering himself to the State; but if he will not do this, the blood-feud is officially sanctioned. Increasing limitations are, however, imposed by the State. The blood-feud is restricted to a brief period: three days in Johor (Wilken, *op. cit.* p. 7), or *in flagrante delicto* among the Arabs of the Red Sea coast (Klemm, *Kulturgeschichte*, Leipzig, 1843–52, iv. 149); while, in Makassar, if a murderer succeeded in reaching the judge, he was safe from blood-feud, and had only to pay the wergeld (Wilken, *op. cit.* p. 6). Elsewhere, as in Johor, the avenger of blood must make formal declaration of his intention before the judge (Post, *Bausteine*, i. 150). An especially potent restriction on the blood-feud is found, as already noted, in the system of asylum; and finally, with the more perfect development of the State, aided by a higher concept of religion (though, as a matter of fact, Christianity alone has contributed to this end), the blood-feud itself becomes murder and a crime, instead of a sacred and praiseworthy duty, and so is suppressed and disappears, surviving only in such stagnant phases of civilization as are still revealed from time to time by Sicilian *vendettas* or the feuds of the 'mountain whites' of Kentucky and Tennessee.

LITERATURE.—Frauenstädt, *Blutrache und Totschlagsühne*, Leipzig, 1881; Kohler, *Zur Lehre von der Blutrache*, Würzburg, 1885; Steinmetz, *Ethnol. Studien zur ersten Entwicklung der Strafe*, Leyden, 1894, i. 361–406, and *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903; Post, *Geschlechtsgenossenschaft der Urzeit*, Oldenburg, 1875, p. 155 ff., *Ursprung des Rechts*, Oldenburg, 1879, p. 87 ff., *Anfänge des Staats- und Rechtslebens*, Oldenburg, 1878, p. 172 ff., *Bausteine für eine allgemeine Rechtswissenschaft auf vergleichend-ethnol. Basis*, Oldenburg, 1880–81, i. 142 ff., *Afr. Jurisprudenz*, Oldenburg, 1887, i. 57 ff., *Studien zur Entwicklungsgesch. des Familienrechts*, Oldenburg, 1889, pp. 133 ff., and *Grundriss der ethnol. Jurisprudenz*, Oldenburg, 1894–95, i. 226 ff., ii. 246 ff. On the last-named work the present art. is largely based. A large amount of source-material is contained in *ZVRW* (cf. the index to i.–xx., *s.v.* 'Blutrache,' and such artt. as Kohler's summary of the North American Indian blood-feud, xii. 405–411, and Schmidt's summary for South America, xiii. 315–318). Much

may also be gleaned from travels and such general works as Waitz-Gerland, *Anthropologie der Naturvölker*, 6 vols., Leipzig, 1860–77.

LOUIS H. GRAY.

BLOOD-FEUD (Aryan).—*Introduction.*—The institution of the blood-feud may still be traced among all Aryan peoples: first, as it exists up to the present day among the Afghans and the Albanians, in Corsica and Sardinia, and among the Southern Slavs; secondly, at least in the older tradition, where it is clearly preserved, among the Greeks, Teutons, Celts, and the Western and Eastern Slavs; thirdly, with only scanty traces, among the Indians of the Veda, the Iranians of the Avesta, and the Romans. Its primitive Aryan signification lies in the etymological correspondence of Av. *kaēnâ*, 'punishment,' 'revenge' (New Pers. *kîn*, 'enmity,' 'hate,' 'anger')=Gr. ποινή, 'blood-revenge' and '*wergeld*.' Probably it may also be connected with Ir. *cáin* (from **coini-**)='emenda,' *i.e.* 'damni reparatio,' 'satisfactio de iure læso vel de iniuria illata.' The verb which underlies these substantives is Skr. *chi*, *cháyate*, 'punish,' 'avenge'; Av. *či*; Gr. τίνομαι, τίνυμαι, τίνω, 'obtain compensation,' 'punish,' 'give compensation.' Compare also τίω, 'estimate a value,' 'honour.' The following characteristic features of the primitive Aryan period may be established from the identity of customs among individual tribes.

1. The obligation of blood-revenge is always attached to definite circles of relationship, which may be designated family or clan. Within this circle the blood-feud descends first of all from father to son.

For the Celts, cf. Giraldus, *Cambriae Descriptio*, cap. 17: 'Genus super omnia diligunt, et damna sanguinis atque decoris acriter ulciscuntur: vindicis enim animi sunt et irae cruentae, nec solum novas et recentes iniurias, verum etiam veteres et antiquas velut instantes vindicare parati'; and Walter Map, *De nugis curialium*, Dist. ii. cap. 22, § 96 (*ap.* Walter, *Das alte Wales*, p. 135, note 1): 'Ut moris est, vadem se offert pro iuvene tota cognatio, et cavere iudicio sisti.'—For the Teutons, see Tac. *German.* cap. 21: 'Suscipere tam inimicitias seu patris seu propinqui quam amicitias necesse est: nec implacabiles durant. Luitur enim etiam homicidium certo armentorum ac pecorum numero, recipitque satisfactionem universa domus, utiliter in publicum, quia periculosiores sunt inimicitiae iuxta libertatem.'—For the Russians, cf. *Russkaja Pravda of Jaroslav Volodimêrič* (1018–1054): *Judicium Jaroslavi, filii Vladimêri*: 'Si interfecerit vir virum, ulciscatur frater fratrem, vel pater vel filius vel fratris filius vel sororis filius. Si vero nemo est, qui eum ulciscatur, solvendae sunt pro capite octoginta grivnae, si est principis vir,' etc. See below, p. 734[a].

In Homer the sons and grandsons, father, brothers, and brothers' sons (ἀνεψιός) and the ἕται (ἑταῖ) are mentioned as avengers of blood: the last-named is an expression which probably belongs to the pronoun-stem *sve-*, *svo-*, and so means much the same as the Latin *sui*. Once we find in place of ἕται the word ἀοσσητῆρες (*Odyss.* xxiii. 119), from ἀοσσέω, 'help.' This in turn is derived from a word corresponding with the Latin *socius* (**svekjo-s*), namely, *ἀ-σFοκ-jo-ς=*a-ossco-* (ἀ as in ἄ-λοχος, 'bedfellow'), which is perhaps connected with *sve-*, *svo-*, *suus*, but is also capable of another derivation (cf. Walde, *Lat. Etymol. Wörterbuch*, p. 579).

2. As a result of this obligation to blood-revenge, we find a state of feeling between two families or clans which among West Teutons is technically called in Old High German *fêhida*, Anglo-Sax. *fæhð*, Mid. Lat. *faida* (O.H.G. *fêch*, Anglo-Sax. *fáh*, from **poiko-s*=Ir. *oech*, 'enemy'); in the Slavonic languages, Old Slav. *vražida* (Old Slav. *vragŭ*, 'enemy,' Old Pruss. *wargs*, 'bad'). The opposite conception to this in the Germanic languages is O.H.G. *fridu*, Anglo-Sax. *friðu*, Old Nor. *friðr*, **pritu-* (Skr. *priyá-*, 'dear,' Goth. *frijôn*, 'love'); in the Slavonic, Russ. *mirŭ*, 'peace' (Skr. *mi-trá-*, 'friend,' Lith. *mýlimas*, 'beloved,' Russ. *mí-lyj*, 'dear'). Fundamentally, therefore, peace and friendship (*i.e.* on the old view, relationship; cf. Schrader, *Reallex. s.v.* 'Freund und Feind') are identical conceptions. The Goth. *gafriþôn* and the Russ. *primiriti* both mean 'to restore to a state of peace' (O.H.G. *fridu*, Russ. *mirŭ*), 'to reconcile.' It is characteristic that *mirŭ* had already in Old Russ. acquired the meaning of 'community,' for the community (the tribe) composed of various clans is, in normal conditions, a sphere of peace and friendship which can only for a longer or shorter period be interrupted or broken by the *faida* or *vražida*. Conversely, it may be suggested that the Greek εἰρήνη, 'peace,' is to be derived from εἶρη, 'assembly,' 'place of assembly,' and that this word (from **vervâ*) is to be connected with Old Russ. *vervĭ*, 'community.' It is the community so designated that, according to the *Russkaja Pravda* of the 13th cent., is liable in certain cases for the payment of the *wergeld*, and thus perpetuates the solidarity of the old clan. The Greek εἰρήνη would thus be the (normal) condition of peace reigning in the community.

* A star before a word signifies that the form does not occur but is inferred.

According to this explanation of εἰρήνη, it must be admitted that the supposed initial *F* has not as yet been traced either in Homer or in the Greek dialects; but the latter are clearly influenced strongly by the Attic form of the word, which lacks the digamma. Moreover, **vervâ* (with prothetic vowel) may have become first **è-FερF*η and then εἰρη.

Hence the present writer is inclined to believe that the conception of peace among the Aryan peoples originated primarily in view of the internal condition of the community (the tribe), and not with reference to external foes, with whom, indeed, in olden times there was no regular peace, but merely a cessation of hostilities (cf. Schrader, *Reallex.*, *s.v.* 'Krieg und Frieden'). On Latin *pax* and Goth. *gawairþi*, 'peace,' see below (4). On the punishment of offences occurring *within* the family or clan see ARYAN RELIGION, above, p. 50.

3. The blood-feud was especially occasioned by the murder of an individual belonging to another clan, and, in a secondary degree, by bodily injury or insult. It is noteworthy in numerous old Aryan codes of law that the killing of a thief caught red-handed or of an adulterer detected *in flagrando* was exempt from punishment, *i.e.* in the language of primitive times it did not occasion a blood-feud (cf. Schrader, *Sprachvergleichung und Urgeschichte*, ii.[3] 406, and ARYAN RELIGION, above, p. 50).

4. There existed among all Aryan peoples the possibility of buying off the blood-feud by means of a *wergeld*, and thereby bringing it to a peaceful conclusion.

For the Greeks, *e.g.*, cf. Homer, *Il.* ix. 631:

καὶ μέν τίς τε κασιγνήτοιο φονῆος
ποινὴν ἢ οὐ παιδὸς ἐδέξατο τεθνηῶτος·
καί ῥ' ὁ μὲν ἐν δήμῳ μένει αὐτοῦ, πόλλ' ἀποτίσας,
τοῦ δέ τ' ἐρητύναι κραδίη καὶ θυμὸς ἀγήνωρ,
ποινὴν δεξαμένου.

For the Teutons see the passage from Tacitus, *Germania*, quoted above, 'nec implacabiles durant,' etc.

Proof that this possibility existed even in the most primitive Aryan period is to be found in the identity between the Old Indian term for the *wergeld*, namely, *vâira-*, *vâira-dêya-*, *vâirayâtana-*, and the Anglo-Sax. *wêre*, Mid.H.G. *were* (*weragelt*)—both being related to Skr. *vîrá-*, Lat. *vir*, Goth. *wair*, 'man.' Here the Old Russ. *vira*, 'wergeld,' must be mentioned, though the views of philologists waver as to whether it was originally related to the Indian and German words or borrowed from the latter (cf. L. von Schröder, 'Indogerman. Wergeld,' *Festgruss an Roth*, p. 49). The most probable supposition is that the Skr. *vâira-*, Anglo-Sax. *wêre*, and Old Russ. *vira*, exhibit various stages of change of the radical vowel of the original Aryan term for 'wergeld.' Moreover, the above cited equation, Av. *kaēnâ*=Gr. ποινή, no doubt indicates that in the primitive period, as among the Greeks, the custom existed of buying off blood-revenge by payment of a *wergeld*. Similarly, we find in Slavonic languages the above-mentioned *vražida*, 'hostility,' 'revenge,' used also to mean the compensation by which homicide was expiated. Cf. also Cymr. *galanas*,

originally 'hostility' (*gâl*, 'foe'), and then 'wergeld'; and the Mid. Gr. *φόνος*, properly 'murder.' Lat. *pœna*, 'compensation,' and then 'punishment,' probably exhibits a borrowing from the Gr. *ποινή*.

At an early date prices or rates of *wergeld*, more or less fixed, must have been evolved. So in Old Indian sources (cf. Schrader, *Reallex.* p. 102) we find a hundred cows mentioned as the rate of compensation for a man (*vâiram*); and Tacitus also, in the passage already cited, says: 'luitur homicidium *certo* armentorum ac pecorum numero.' 'From the rates stated, the general underlying principle emerges that the *wergeld* of bondsman, freeman, and noble were in the following proportion of ½ : 1 : 2; that is, 75 – 150 – 300 shillings or oxen' (Müllenhoff, *Deutsche Altertumskunde*, iv. 327). For the rates among the Slavs see below, p. 734. What was demanded for the murdered, wounded, or insulted man by the clan, or by himself, constituted his 'value' or 'price,' and the recovery of this price by his friends and the recognition of the same by his foes constituted his 'honour.' This evolution of ideas is clearly stamped upon the languages that concern us. The Gr. *τιμή*, derived from *τίνω* mentioned above, signifies primarily 'revenge' (*ἕβη Ἀγαμέμνονος εἵνεκα τιμῆς Ἴλιον εἰς εὔπωλον*, Hom. *Od.* xiv. 70, 117); then 'indemnity for injury,' 'compensation' (*ἄτιμος*, like *νήποινος*, denotes a person who may be slain without need for compensation); then 'honour.' Precisely similar is the development in the meaning of *cēna*, a word common to the Slavonic languages. The word corresponds exactly to the Gr. *ποινή* (**qoinâ*), and thus signifies in the first instance 'revenge' and 'wergeld.' Then it takes over the meaning of 'price' and 'honour' (Old Slav. *cēniti* exactly answers to the Gr. *τιμάω*; so Schrader's *Reallex.* p. 835 f., and now Berneker, *Slav. Etym. Wörterbuch*, p. 124). In this connexion we find also the explanation of the hitherto unintelligible Gothic word *gawairþi*, 'peace,' mentioned above. The word has nothing to do with *wairþan* (Germ. *werden*), but is connected with *waírþi*, 'value,' 'worth.' Consequently its proper meaning is 'general agreement about the worth or value of a person,' the union and the resulting state of peace between two clans. It is noteworthy also that the first instance of the word *paciscor*, which underlies the Lat. *pax*, 'peace,' occurs in that passage of the XII Tables (viii. 2) which is the clearest survival in Roman tradition of the system of blood-revenge which once prevailed in that quarter as well: 'Si membrum rupit, ni cum eo pacit (agree about the value), talio esto.'

Thus we see that two of the most important conceptions of civilization—peace and honour—are at least in part rooted in the ideas that centre in blood-revenge and its buying off by the *wergeld*.

5. Among most Aryan peoples we find it the custom for the murderer, after his bloody deed, to flee from the country for a longer or shorter period, presumably in order that in the interval the anger of the hostile clan might abate and the terms of reconciliation become easier. It still remains uncertain whether this custom is to be assumed as existing even in primitive times, when renunciation of tribal connexion was almost a matter of life and death (cf. Schrader's *Reallex.* p. 835).

6. The fighting out or the amicable settlement of the blood-feud is, as we have seen, from the beginning exclusively the affair of the two hostile clans. Notwithstanding, perhaps the realization of the danger incurred by the whole clan owing to feuds of long duration (cf. above, Tacitus, *Germ.* cap. 21: 'periculosiores sunt inimicitiae iuxta libertatem') may have at an early period ensured efforts upon the part of the race, in their assemblies under the direction of the king (Skr. *râj-* = Lat. *rex*, Ir. *rí*), towards the amicable settlement of clan feuds. A settlement of this description would naturally, even in primitive times, be accompanied by a long succession of solemn ceremonies. We have ample information on this point as regards especially the Slavonic world (see below, p. 734 f.). Everywhere in Europe two factors tended towards the restriction and ultimate eradication of the blood-feud: first, the *State*, that is, the absorption of the old clan and race-constitutions into the political composition of a State based on the principle of territory and no longer of consanguinity; and, secondly, the *Christian Church*, which offered sanctuary even to murderers. See art. ASYLUM.

LITERATURE.—The literature has been given in the article.

O. SCHRADER.

BLOOD-FEUD (Celtic).—1. **Terminology.**—The usual word in Old Irish is *fích* ('feud,' 'fight'), *fichim* ('I fight'), cognate with Lat. *vinco*, etc. In the *Acallam na Senórach* (Windisch, *Ir. Texte*, Leipzig, 1880–1905, iv. pt. i. p. 47), we learn that at the feast of Tara, which lasted six weeks, *nech fala ná frithfala do thabairt* ('neither feud nor cross-feud to be given'). The Irish *fala* is for *fola*, gen. of *fuil* ('blood'), perhaps connected with Welsh *gweli*, Cornish *goly*, Breton *gouli* ('wound'); but cf. Henry, *Lex. bret.*, Rennes, 1900, p. 139. For 'vengeance,' 'revenge,' we have the Irish *díguil*, Welsh *dial* ('vindicta,' 'ultio'), Cornish *dial*. The Irish *éric* ('composition') is probably for **er-icca*, **per-yecca* ('full payment,' 'perfect cure' [d'Arbois de Jubainville, *Études sur le droit celtique* = *Cours de litt. celt.* vii., Paris, 1895, p. 88]). Finally, the Irish *díre* ('duty'), in *coirp-díre*, is the same as the Welsh *dirwy*, *dirui* ('mulcta'), *dír* ('necessary'), Irish *dír* ('just,' 'due,' etc.) [Stokes, *Urkelt. Sprachschatz*, Göttingen, 1894, p. 148].

2. **History of the blood-feud among the Celts.**—That the institution of the blood-feud was in existence among the early Celts is obvious from the numerous references to it in ancient Irish literature. One of the best known instances is found in the *Fotha Catha Cnucha* ('Cause of the Battle of Cnucha').

Cumall, the royal warrior of Ireland, carried off Murni, daughter of the druid Tadg, because her father had refused him permission to marry her. Tadg complains to Cond, supreme king of Ireland, who, according to the *Annals of Ireland by the Four Masters* (ed. O'Donovan, Dublin, 1848–51, i. 102–121), reigned from 122 to 157 A.D. Cond, furious at the insulting words of Tadg, sends soldiers to take possession of the girl. Cumall refuses to surrender Murni, and is killed by Goll, son of Morna. In attempting to avenge Cumall, Luchet succeeds only in wounding Goll in the eye. Goll kills Luchet; and, to quote the Irish, *is desin robói fích bunaid eter maccu Morna ocus Find*, 'it is from that, then, that there was an hereditary feud between the sons of Morna (descendants of Goll) and Find (the son of Cumall).' Furthermore, after the death of Cumall, Tadg not only refuses to receive his daughter Murni, but orders her to be burned because she is pregnant. Accordingly she invokes the protection of Cond, and gives birth to a son, Find. When this son arrives at a suitable age, he offers to his grandfather, Tadg, the following: *cath no comrac oenfir . . . no lanéraic a athar do thabairt dó*, 'a battle or a duel or full *éric* (for the murder) of his father to be given to him.' Tadg accepts the last, and is obliged to give the castle and grounds in Almu to Find (*RCel* ii. 36, etc.).

Again, in the *Longes mac n-Usnig*, Conchobar, the great king of the first epic cycle—*i.e.* about the beginning of the Christian era (Hyde, *Lit. Hist. of Ireland*, London, 1899, p. 243)—has the three sons of Usnech treacherously murdered after having promised them protection. The three heroes, Fergus, Dubthach, and Cormac, who had guaranteed their safety, set to work to avenge their murder. First they murdered four of the immediate relatives of Conchobar, and, later, when attacked by him, killed three hundred of his men and their wives, and burned the royal palace at Emain. With 3000 men they sought refuge at the court of Ailill and Medb, king and queen of Connaught, and continued their feud against Conchobar for sixteen years (Windisch, *op. cit.* i. 75–77). Cinaeth hua Artacain, who died in 975 ('Annals of Tigernach,' *RCel* xvii. 259) had a more complete account of this story, which stated that Conchobar, in retaliation for the murder of his relatives, killed Gergenn, the son of Illad (Windisch, *op. cit.* ii. 2, p. 119). Numerous other

examples could be cited, such as *Aided Conroi*, in which the murder of Conroi is avenged by his sons (d'Arbois, *Epopée celtique en Irlande = Cours de litt. celt.* v., Paris, 1892, p. 327 f.); the death of Conchobar, where Mesgegra, king of Leinster, is avenged (O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History*, Dublin, 1878, p. 637 f.); *The Voyage of Mail Duin*, in which the hero is taunted for not avenging his father's death (Stokes, *RCel* ix. 459, etc.), etc.

In the *Ancient Laws of Ireland*, some of which, such as the *Senchus Mór*, date as early as the 7th century (Hyde, *op. cit.* p. 589), we find murder classed under two heads—necessary murder (*marbad dethbire*), and unnecessary murder (*marbad indethbire*). Necessary murder is unpremeditated, or, if premeditated, is accomplished through duty of vengeance. Unnecessary murder is for motives of gain (*Anc. Laws*, iii. 68, ll. 12–14; iv. 248, ll. 25–26). In the case of the first, no composition, or *éric*, was required if the murder was the result of vengeance. According to the *Ancient Laws* (iv. 252–4), 'when the murder of a member of the *derbfine* (*i.e.* of any relative of the *geilfine* or *derbfine*) is to be avenged by the death of the murderer, the family of the murdered has a right to the *coirp-díre* ("body-price") and the *enech-lann* ("honour-price"); if, however, it has received this *éric* before exercising vengeance, it must, after taking vengeance, make full restitution of this price.' The duty of vengeance was imposed upon the nearest relatives of the victim—upon the *geilfine* and *derbfine* (d'Arbois, *Droit celtique*, p. 186). To understand these terms, we must remember that the Irish family was divided into four groups, consisting of seventeen persons in all: *geilfine, derbfine, iarfine*, and *indfine* (*Anc. Laws*, i. 282, ll. 23, 27; p. 272, l. 23). To the *geilfine* belonged the father, son, grandson, and brother of the murdered; while to the *derbfine*, besides the above five, were added the grandfather, paternal uncle, nephew (son of the brother), and cousin-german (cousin to the fourth degree in the paternal line). In addition to the above eight persons, three others could take vengeance on the murderer. These three were the foster-father, whose *dalta*, or pupil, was murdered; the adoptive father, whose *mac faosma*, or adopted son, was killed; and the (maternal) uncle, when the son of his sister (*mic mna*) was the victim of the murderer (*Anc. Laws*, iv. 244, ll. 20–22). So, in ancient Ireland, the blood-feud was fostered by the duty of vengeance. We have indications of its existence as late as the 16th cent., in the celebrated feuds between the chief Manus O'Donell and his son, between the Earl of Thomond and his uncles, etc. (Moore, *Hist. of Ireland*, London, 1835–46, ii. 367). As in Scotland, the most usual causes and consequences of the later feuds were the destruction of crops and the driving-away or houghing of cattle belonging to persons occupying lands to which others alleged a claim. One of the most celebrated cattle-raids in Irish literature is the *Táin Bó Cualnge*, or the Cattle-Raid of Cooley (ed. Windisch, Leipzig, 1905). Sir Walter Scott in his *Waverley* (ch. xv.) describes a similar expedition undertaken by twelve Highlanders.

In Wales, where, as the testimony of Giraldus of Cambray and Walter Map shows (see above, p. 724a), the blood-feud once flourished, the Roman conquest brought about the suppression of both the duty of vengeance and the payment of *éric* for murder. The *Lex Cornelia de sicariis* of Sulla (B.C. 81) and the laws of Caesar and Augustus (*Lex Julia de vi publica* and *de vi privata*) imposed severe penalties upon those who went about bearing arms with the intention to kill (Rein, *Das Criminalrecht der Römer*, Leipzig, 1844, pp. 409–14, 752, etc.). On this account, no doubt, the Welsh *dirui* or *dirwy* changed its meaning from *éric* ('composition') to '*mulcta*' ('fine paid to the State'). After the departure of the Romans, while the *éric* was re-established, the duty of vengeance failed to assume its former force. This was in part due to the fact that the *cenedl*, or clan, was already to some extent disintegrated as early as the 10th cent. (Rhys and Brynmor-Jones, *The Welsh People*, London, 1900, p. 196). The feuds between the clans were largely superseded by the warfare between the petty kingdoms. But that the duty of vengeance was not looked upon unfavourably is manifest from several statements in the Dimetian Code, which was probably redacted under Howel in the 10th cent. (Rhys, *op. cit.* p. 181).

According to this code, 'if there is in a *cenedl* an ecclesiastic or an idiot, he is neither to pay nor to receive any part of the *galanas* ("body-price")'; and 'no vengeance is to be exercised against any one of these for *galanas*, neither are they to avenge a relation that is killed.' Furthermore, if a *cenedl* 'commences paying the *galanas* of a person killed, and the whole be not paid, and if on that account one of such kindred stock (*cenedl*) be murdered, the *galanas* for that individual is not to be paid; neither is anything to be restored of what had been paid on account of the first.' Finally, if 'an innocent person is accused of murder and neglects to seek justice, and if he be killed on account of it, nothing is to be paid for him' (*Anc. Laws of Wales*, London, 1841, i. ch. i. p. 199 f.; cf. also ii. ch. viii. p. 214, etc., for cases in which the law 'exonerates the avenging').

But it was especially among the Scots that the blood-feud raged with ferocity. From the 12th cent., when the *sept* or clan first appears as a distinct feature in the social organization of Scotland (Skene, *Celtic Scotland*[2], Edinburgh, 1890, ii. 303), until the 17th cent., there was no cessation of clan-feuds. When there were no sweeping feuds involving the most prominent families, such as Huntly against Argyll, or Stewart against Hamilton, the minor chiefs were fighting among themselves (Lang, *Hist. of Scotland*, Edinburgh, 1902, ii. 541, etc.). The usual method was for a laird or yeoman to gather his henchmen and make a raid on some estate to which he alleged a claim, or for other reasons sometimes very insignificant. They would trample down the crops, hough the cattle, and drag the women about by their hair, killing all who might resist (Lang, *loc. cit.*). Such cases were most frequent. In fact, the volume of the Privy Council Register for 1613 contains no fewer than 42 feuds then running, not including those in the Highlands and Islands. Even ministers of the gospel were sometimes so swayed by their passions that they took part in these ferocities.

One of the most noted of these feuds was that of the Colquhouns and the Macgregors, which culminated in the battle of Glenfruin in 1602. According to Birrell's diary (2nd Oct. 1603), sixty widows of the slain Colquhouns rode on white horses before the king at Stirling, each bearing in her hand a pike upon which was displayed the bloody shirt of her dead husband. A long and deadly feud was that between the Scotts and Kerrs, of which Sir Walter Scott speaks in his *Lay of the Last Minstrel*. This feud began with the battle of Melrose in 1526. As a consequence, Sir Walter Scott was assassinated in the streets of Edinburgh in 1552. In order to staunch this feud, which was sapping the life-blood of these two great families, a bond or contract was made between them in Edinburgh on 23rd March 1564, in which they agreed to cease hostilities (Pitcairn, *Criminal Trials in Scotland*, Edinburgh, 1833, iii. 390, etc.). But it accomplished nothing, for the feud was still raging in 1596 (cf. also Campbell, *Clan Traditions*, London, 1895).

3. **'Éric,' or composition.**—Cæsar attests the fact that the payment of *éric* was an established custom among the primitive Gauls. In speaking of the importance of the druids in ancient Gaul, he says: 'Nam fere de omnibus controversiis, publicis privatisque, constituunt; et, si quod est admissum facinus, si caedes facta, si de hereditate, si de finibus controversia est, iidem decernunt; praemia poenasque constituunt (*de Bell. Gall.* vi. 13). The earliest mention of this institution in Ireland is found in the *Confessio* of St. Patrick, where he says: 'censeo enim non minus quam pretium quindecim hominum distribui illis.' Tirechan, writing in the 7th cent., explains this statement of Patrick by adding 'animarum' after 'quindecim' (Stokes, *Tripartite Life*, London, 1887, ii. 310, 372). Furthermore, an Irish council of about the 7th

cent. decided that, in default of the family, the king himself might be held responsible for the payment of the *éric* (Wasserschleben, *Ir. Kanonenversammlung*[2], Leipzig, 1885, p. 170).

In Ireland, the *éric* was divided into two classes: the *coirp-díre*, or 'body-price,' and the *enech-lann*, or 'honour-price' (or *log-eneich*, lit. 'face-price,' Breton, *enep-uuert*; cf. Ernault, *Gloss. moyen-bret.*, Paris, 1895, p. 794). The *coirp-díre* was exacted in the case of unnecessary murder, or in necessary murder when not prompted by vengeance. The *enech-lann* was exacted in the case of bodily injury, insult, etc., and would, therefore, be necessarily included in the *coirp-díre*. In regard to the latter, the family had the choice of surrendering the criminal as property (*in féronn*) to the family of the murdered, or of giving land for his crime (*Anc. Laws of Ireland*, iv. 246, ll. 25–26). But, continue the *Ancient Laws*, 'each one dies for his premeditated crimes when he has not found the *éric*' (iv. 250, ll. 16–17). Thus, in the case of unnecessary murder the criminal was the sole debtor. But in necessary murder the criminal and his *geilfine* were held responsible for the payment of the *éric*. In default of the *geilfine*, the other three groups of the family found themselves involved (*ib.* i. 260, ll. 1–3; p. 274, ll. 12–13). The *coirp-díre* was fixed, consisting of *secht cumula*, 'seven female slaves' (iii. 70, ll. 7–8). The criminal was obliged to pay the *aithgin* ('slave of restitution'), and his share both of the six other slaves and of the *enech-lann*. If his *geilfine* could not supply the rest, the *derbfine* would pay three-fourths, and the *iarfine* and *indfine*, one fourth, *i.e.* three-fourths of a fourth by the *iarfine* and one-fourth of a fourth by the *indfine* (*ib.* iii. 330, l. 710; p. 68, ll. 15–18). In the later history of Ireland, the *éric* for murder became more variable, and was paid in cattle or other property. It was continued as late as the beginning of the 17th cent., notwithstanding the efforts of the English to stamp it out (Hayne, 'Observation on the State of Ireland in 1600,' in the *Irish Eccles. Record*, Dec. 1887; for a more complete study of the *éric*, cf. d'Arbois, *Droit celtique*).

As the *coirp-díre* required the *enech-lann* in Ireland, so, in Wales, the murderer was obliged to pay both the *galanas* ('body-price') and the *saraad* ('disgrace- or honour-price'). The *galanas* varied according to the rank of the person killed. Thus the *penkenedl*, or clan-chief, was valued at 189 cows; an *uchelwr*, or high man, noble, at 126 cows; a *penteulu*, 'man with a family without office,' at 84 cows; and so on down to the *caeth*, 'slave of the island,' at 1 lb. of silver and 4 cows. The *galanas* of a woman was always one-half of that of a man (Rhys, *op. cit.* p. 228 f.). In regard to the payment of the *galanas*, one-third fell upon the murderer and his father and mother, he paying twice as much as his parents. Furthermore, if he had children liable to pay, he paid two-thirds of his own share, and his children one-third. The remaining two-thirds of the whole *galanas* was paid by the relatives on the father's and mother's side, the father's kinsmen paying two-thirds and the mother's one-third. In regard to receiving the *galanas*, one-third fell to the lord for exacting it; one-third to the father and mother and their children and the children of the murdered; and one-third to the other kinsmen in the proportion as described above (*Anc. Laws of Wales*, i. 227, ii. 199–200, etc.).

In Scotland, according to the *Leges inter Brettos et Scottos*, which were codified under David I. (1124–53), the worth of the king's person is valued at 1000 cows; of the king's son or earl, 150 cows; of the earl's son or thane, 100 cows; of the thane's son, 66⅔ cows; of the thane's grandson or *ogtiern*, 44 cows and 21⅓ pence; while the *carle* or *villein* was valued at 16 cows (Robertson, *Hist. of Scotland*, 3 vols., London, 1831, App. ii.; Lang, *op. cit.* i. 81; Skene, *op. cit.* iii. 218, etc.).

4. Duel.—The duel was often the means of obtaining justice among the Celts. The canonical collection referred to above attributes to St. Patrick two decisions prohibiting the debtor from resorting to arms to prevent a creditor from levying a distress (d'Arbois, *Droit celtique*, p. 45 f.). But the individual could engage in a duel only with the knowledge and consent of his family and his chief. If he fought without their consent and was killed, the victor would be obliged to pay full *éric* to his family, unless he could prove that the murdered man had provoked him to fight (*Anc. Laws*, iii. 302, ll. 1–3; p. 296, ll. 19–21). So, on the Border of Scotland, trial by combat served often as a proof of guilt or innocence; and Sir Walter Scott notes a feud between Thomas Musgrave and Lancelot Carleton which was settled in this manner in 1603 (*Lay of Last Minstrel*, Note x.).

LITERATURE.—The literature has been given fully in the course of the article. JOHN LAWRENCE GERIG.

BLOOD-FEUD (Greek).—Blood-feud, or blood-revenge, is a widely diffused custom of primitive society, of which some instances still survive, as in the Corsican vendetta, and of which numerous traces are to be found in history and literature. It arises, as a rule, through a violation of rights practised by a member of one family against a member of another (A. H. Post, *Familienrecht*, p. 134). The breach of rights may take widely different forms, but its normal instance is that of murder, or at any rate homicide, and to this attention is confined in the present article. The parties primarily involved in such a feud are, on the one hand, the nearest kinsman of the slain man, and, on the other, the slayer; but the responsibility extends beyond these to the circle sometimes of their families, in a wider or narrower sense, sometimes of their entire respective clans (cf. *e.g. EBi*, *s.v.* 'Goel,' col. 1745). In many cases revenge can be satisfied only with the death of the slayer, or of one of his kin, but in others reconciliation is effected on the basis of compensation in money or kind. In every case vengeance is felt as a sacred duty. Its aim is largely, no doubt, to maintain the honour and integrity of the family or clan, and so far it has an ethical rather than a religious significance. But it is probable that blood-revenge has in every case, at least originally, been regarded also as a duty towards the spirit of the slain, and, as the tendance of the dead implies the recognition of spiritual beings and readily passes into worship, the blood-feud has to this extent a religious basis. By the Greeks certainly, in historic no less than in pre-historic times, vengeance on the murderer was regarded as a duty to the slain, and one of a religious kind. And probably the chief interest of the subject before us is the clear light which it sheds upon a whole world of thought and feeling which is in marked contrast with generally current conceptions about Greek religion.

1. Homer.—In Homer there are abundant traces of the custom. We read of Orestes avenging his father (*Od.* iii. 306), though this is the less usual case of blood-feud *within* the family, and of the understood right and duty of any man to avenge a brother or a son (*Il.* ix. 632; *Od.* xxiv. 434). In one instance (*Od.* xv. 273) the responsibility for vengeance falls also on the slain man's ἕται, who are usually understood to be his clansmen. This view is supported by the facts that ἕται are distinguished from cousins (ἀνεψιοί) in *Il.* ix. 464, and that in Attic law the duty of prosecuting a

murderer passed in case of need to any member of the murdered man's phratry (Rohde, *Psyche*, p. 260–261 n.). When an act of homicide has been committed, under whatever circumstances,—for these do not seem to have affected the issue in the society which Homer depicts,—its author is sometimes represented as fleeing into a strange land, where he seeks the protection of a man of influence. So Patroclus finds refuge in the house of Peleus, and Lycophron in that of Ajax (*Il.* xxiii. 85, xv. 431). In other cases the feud is ended by means of a recompense, or ποινή, mutually agreed on by the two parties. That this often happened is shown by the passage (*Il.* ix. 632 ff.) where Ajax, after trying in vain to disarm the resentment of Achilles against Agamemnon, continues, 'Why, even from the murderer of a brother, or for his own dead son, a man accepts, it may be, a ransom, and so he (the murderer) stays in his own town, after paying a large fine' (Paley's tr.). Of what took place on such occasions we have a vivid picture in *Il.* xviii. 498 ff. There, in a scene upon Achilles' shield, the two parties to a blood-feud first engage in a wrangle as to whether the amount agreed on has actually been paid, and afterwards bring their quarrel before a council of elders, while in the midst are placed two golden talents, which, at least on one interpretation, represent the ποινή, or fine claimed.

Among all these references to the blood-feud in Homer, nothing, it will be seen, is said about the spirit of the slain man, while the settlement by means of a fine is obviously treated as a matter in which the living only are concerned. And this is in harmony with the general view, which the Homeric poems present to us, of the state of the dead. Where the blood-feud is animated by a desire to appease the dead man's spirit, the latter is conceived as a powerful being bent on revenge, able and also ready to wreak his vengeance on the kinsman who neglects his interests. But the faith described in Homer is of a different order. Its dead are strengthless beings, ineffectual shadows of the living. There is, however, good reason to believe that this was not the oldest Greek faith. Even in Homer we meet once and again with what seem to be outcrops from an earlier stratum of belief. Thus at the funeral of Patroclus (*Il.* xxiii. 138 ff.), the hair which Achilles lays in his dead friend's hand, the jars of honey and oil, the slaughter of beasts and captives, and the burning of these together with the corpse, the night-long pouring of wine upon the earth, and the oft-repeated call to Patroclus, together with many other features of the story, all point to a vivid belief in the reality and nearness of the departed spirit which contrasts sharply with the usual Homeric representation; while, as Rohde observes (*Psyche*[2], p. 17), the whole series of offerings belongs entirely to the class which we may regard as oldest, and which meets us later in numerous instances of Greek ritual observed in the worship of under-world powers. The offerings which, in *Od.* xi. 49 ff. (the 'Nekuia'), Odysseus promises to the departed spirits point in the same direction. But, if such was the earliest Greek conception, the deepest motive of the blood-feud, in the Homeric age weakened or lost sight of, may well have been the slain man's demand for vengeance. And that this was actually the case is indirectly proved by the fact that in Homer the consequences seem to be the same for unintentional as for intentional homicide. The equalization of these two, says J. H. Lipsius (*Das attische Recht und Rechtsverfahren*, Introduction, p. 7), affords clear proof that the fundamental aim of the blood-feud was not punitive justice, but satisfaction to the slain.

2. Classic age.—When now we turn to the classic age, this aspect of the blood-feud occupies the forefront of the picture. Vengeance on the homicide is primarily reparation offered to the dead, and as such it is a religious act.

(1) *Poetry.*—In Æschylus' *Eumenides*, Orestes is pursued by no earthly avenger of blood, but by the Erinyes, who are representatives at once of the dead and of the old religious order. At first, in all probability, they were nothing but offended ghosts, the angry spirits of the slain, and hints of this original character are to be found in Æschylus (cf. *e.g.* J. E. Harrison, *Prolegomena to the Study of Greek Religion*, p. 223 ff.). In the main, however, as seen in his pages, they are rather the personified curses that attend the shedding of kindred blood. The personality of the slain is merged in that of the malignant demons who act as the ministers of his revenge. The same natural shifting of ideas, and the same fundamental conception of the slain man's enmity, are seen in the use of the word προστρόπαιος, which in the sense of an avenging power is applied by the orator Antiphon at one time to the dead man's spirit, at another to his ghostly champion, as in the phrase ὁ προστρόπαιος τοῦ ἀποθανόντος (*Tetr.* 3, β, 8). Sometimes, as in Sophocles (*Trach.* 1202) or Euripides (*Iphig. in T.* 778), the outraged spirit is described by the epithet ἀραῖος, a dealer of curses.

(2) *History.*—So far we have been dealing chiefly with the fancies of poets. But the same view of a slain man's enmity, and of his satisfaction as a religious act, is met with when we turn to the practice of the law courts and examine the developments of the blood-feud in historic times. When the clan develops into the State, the blood-feud inevitably passes under its control and is regulated in accordance with its interests. Greece was no exception to this rule, and we have evidence of laws relating to homicide in various Greek States. But while in the case of other States our information is only fragmentary, the procedure at Athens, though obscure in some points, is illustrated by copious references, especially in Plato, Aristotle, and the Attic orators. To enter at all fully into the Attic process would carry us beyond the limits of this article. But it will be sufficient to note its salient points. In the first place, the legal process meant a mitigation of the unreasoning vengeance of the primitive blood-feud. We have seen that originally the circumstances which led to homicide were immaterial. Its law is sufficiently expressed in what the chorus in Æschylus (*Choeph.* 310 ff.) characterize as 'a thrice hoary saying': 'Blood-stroke for blood-stroke must be paid. Doer of wrong must suffer.' But from time immemorial Athens had separate courts for the trial of wilful murder, of accidental, and of justifiable homicide. The tribunal for the trial of murder in the strict sense was the Council of the Areopagus, which exercised that function right onwards from the time of Solon, or, according to others (*e.g.* C. W. C. Oman, *Hist. of Greece*, p. 111), from the dawn of the Athenian constitution. Furthermore, a law of Draco (*c.* 620 B.C.) enacted that vengeance in certain cases, including adultery, should not be followed by a legal penalty (Pausan. IX. xxxvi. 8). But if from one point of view the law mitigated, from another it restored, the rigour of the ancient blood-feud. It did so by forbidding the ποινή, or money settlement, of which we have seen examples in the laxer practice of the Homeric age (cf. *e.g.* Demosth. *Aristocrat.* 28). This is by no means always the case when blood-revenge passes out of the hands of private persons (cf. *e.g.* Grote, *Hist. of Greece*, i. 484). It might, indeed, be thought that this strictness in the Attic law was due to the supposed interest of the State, but the true explanation is doubtless to be found in the view

advanced by Rohde, among others, that the State regulated the murder suits on the basis of the old family blood-feud, and that its chief object was the satisfaction, not of the State, but of the invisible powers. These positions we shall now proceed to illustrate.

That the State process grew out of the blood-feud is first of all indicated by the fact that it was the nearest relatives of the murdered man, and only in special cases more distant kinsmen, on whom devolved both the right and the obligation to prosecute. It was a duty for whose neglect in the case of wilful murder a man might be himself arraigned by a fellow-citizen (G. F. Schömann, *Antiq. of Greece*, p. 471, Eng. tr.). And this naturally arose from the fact that the duty to prosecute was regarded as also a duty to the dead, and thus as a religious duty, the neglect of which brought pollution upon the State and involved the risk of dearths and other calamities. For we have in the next place to note that the thought of the murdered man's vengeful spirit, and of other ghostly powers who jealously watched over his interest, was a living force in Athens even in historical times, shaping the course of justice, and moving the ordinary man to superstitious fear. To take the latter point first, the thought of the dead spirit's claim was a force to which the orator knew how to appeal in capital trials. So the relatives are said by Antiphon *βοηθεῖν τῷ τεθνεῶτι*, 'to succour the dead' (*Or.* i. 31; *Tetr.* 1, *β*, 13), and sentence on the murderer is described by him as *τιμωρία τῷ ἀδικηθέντι*, 'vengeance to the wronged' (*Or.* v. 58, vi. 6). In one of his speeches, composed for a fictitious case, he makes his clients address the jury: *ἀντὶ τοῦ παθόντος ἐπισκήπτομεν ὑμῖν*, 'we implore you on behalf of the dead' (*Tetr.* 3, *γ*, 7). In the next place the sense of a religious duty to the dead is apparent in the several steps of the judicial procedure. It is the archon-basileus who presides at the trial for homicide, the magistrate who inherited the peculiarly religious duties of the kingship; again, at the outset of the process, both parties have to swear by the Erinyes and other under-world powers to the justice of their cause. And lastly, we may note the procedure enjoined by law in the case of one condemned to temporary exile for an act of unpremeditated homicide. When the period of his exile had elapsed, and when he had been formally reconciled to the relatives of the slain, he had still to undergo a ritual purification from the stain of bloodshed ere he could share in the worship either of the State or of the family, and he had to make expiatory offerings to the spirit of the dead.

It will be seen that the conceptions here regarded as underlying the blood-feud, which have been attributed to the earliest Greek age and which are clearly reflected in classic times, contrast sharply with the picture of the Homeric age which lies between. The problem presented by this contrast can scarcely be ignored in dealing with the blood-feud, but it is one on which we can here only touch. It can probably be best explained by the composite racial elements that went to the making of the Greek nation. It is, of course, to be supposed that the feebler conception of the spirit-world reflected in Homer's pages, and the more untroubled gladness in life, were an actual feature of the age in which he lived. But they were the characteristics of a conquering Achæan stock, and not of the earlier population. The latter, who had no great poets to express the spirit of their religion, still clung to their local cults, and thought of the dead as mysterious powers, able to bless or curse the living. Even Homer, as already seen, is not without trace of this earlier belief. A similar hint may be found in Hesiod, whose 'daemons' are the souls of the men who lived in the earliest or golden age (*Works and Days*, 121). And Porphyry (*de Abstin.* 4. 22) records how Draco enjoined the Athenians to honour the dead heroes of their country *according to the custom of their fathers*. The old faith never died, and at last, owing especially to the teaching of the Delphic oracle, its gloomier views about the under world became, as we have seen, a dominant force in religion, and helped to shape judicial procedure.

There was, indeed, in Greek religion another and very different world from this, a realm of serene piety, radiant with images of the Olympian gods. But beneath it, in an opposition which paganism could not fully overcome, was a world of gloom and misgiving, haunted by the thought of evil, and of powers whose law was justice untempered with mercy. Of that world the study of the blood-feud, and of its reflexion in the thought and practice of the classic age, affords us impressive examples.

BLOOD-FEUD (Hindu).—Indian legislation had early reached the stage in which the right of private war, and the obligations arising from the blood tie everywhere recognized among the Teutonic tribes, had been superseded by the view that repression of murder and violence was a function of the State. The peace-preserving power of the king had become predominant, and we have to go back to Vedic literature if we would meet with some slight traces of the *wergeld*, or composition, once paid as a compensation for manslaughter to the relatives of the victim. It appears that a hundred cows were considered in Vedic times the ordinary amount of the *wergeld* to be paid for killing a man. The somewhat obscure hints in the Vedic *Saṁhitās* may be supplemented by the more explicit statements contained in the *Dharmasūtras* of Baudhāyana and Āpastamba, where the fines to be paid for manslaughter are declared to have the removal of hostility for their object. Cows and other cattle were, no doubt, the earliest kind of money in India, and the payment of a hundred cows for manslaughter corresponds to the bride-price, which likewise consists of a hundred cows. Gradually, as the priestly influence made itself more felt, the compensation to be paid to the family came to be converted into a money present to the Brāhmans. This is the standpoint of the more recent lawbooks of Manu, Yājñavalkya, and others. At the same time, the kings took cognizance of all crimes committed in their kingdoms. Punishment was personified as the protector of all creatures, formed of Brahman's glory (Manu, vii. 14), and that king only was said to attain to paradise in whose dominion there existed neither murderer nor thief nor other offender (*Viṣṇu*, v. 196). Nevertheless, the ancient custom of blood-revenge did not become entirely extinct, and various instances of it are recorded down to comparatively

recent times. Thus in Kolhapur, before it came under British superintendence, murderers were sometimes compelled to make compensation to the family of the victim. Land thus given in compensation was called *khunkat*. In Kāthiāwār, various forms of blood-revenge were known to occur even in the 19th cent.; *e.g.* the avenger abandoned the village and acted in a hostile manner against the whole community (*baharvatia*). In Rājputāna, Prince Jait Sing received 26 *bīghās* of land as a compensation, called *moond-kati* (blood-money), for the murder of some of his Rājputs. A landed proprietor in Mewār, whose father had been murdered, was given five villages belonging to the murderer. The inhabitants of certain border Districts in Gujarāt, between whom and their neighbours in Rājputāna an unceasing feud raged, used to have from time to time peaceable meetings with the latter, when the number of persons killed, women kidnapped, and cattle lifted on both sides, was ascertained, and a compensation in money paid for the surplus by the other party.

Magazine*, Westminster, 1893. J. JOLLY.

BLOOD-FEUD (Muslim).—Among the Arabs, as among the other Semitic races, the blood-feud (*qawad*), retaliation (*qiṣāṣ*), vengeance (*thār*), is a general institution. Attested by pre-Islāmic documents, confirmed by the Qur'ān (ii. 173 and iv. 94), and codified by the jurists, it is a living custom among the Bedawīn, and is practised in its primitive form. We get this information from the observations collected in Syria by several authors, especially Burckhardt and Jaussen; and it is to them that we must go to study our subject. In the written Muslim law the blood-feud is only a chapter of criminal law.

A man is killed; he must be avenged. At first, it seems to be for religious reasons: a human being who has died without having accomplished, in peace or war, certain rites of passage, could never find peace in the grave; the dead man's blood 'cries,' in the form of an owl which disturbs the repose of his family, and which cannot be appeased except by another's blood. Then it seems also for economic reasons: the family and tribe of the dead man are weakened in comparison with the family and tribe of the murderer; the injured social group demands compensation.

Sometimes vengeance is immediate: a murder is committed in an encampment; it is known who the murderer is; the men rush on his tents, kill everybody they meet, slaughter the animals, and burn or break everything belonging to the murderer. But these immediate reprisals are often impossible, and then, it appears, some rites which are not very definitely stated take place. The nearest relative of the victim dips his shirt-sleeve (*reden*) in the spilt blood and hoists it up at the top of a lance. During a space of three days the avenger has no communication with anybody. The pre-Islāmic heroes used to subject themselves to various tabus at this time: Imru'l Qais took an oath to drink no wine, to eat no food, neither to wash nor to anoint his head, and to have nothing to do with women, until the day when his vengeance would be complete. It seems very probable that this was not altogether a voluntary tabu, because Duraid ibn as-Sama acted in the very same way.

Vengeance is taken, as a rule, by the nearest relative of the victim; but all the male members of his family to the fifth generation have the right of vengeance on the murderer and his relatives to the fifth generation.

The murderer, however, obtains the protection of his tribe or of an influential *shaikh*; and if the family of the victim, supported by their tribe, follow up their vengeance, they become involved in an everlasting war, made up of isolated murders and renewed vengeance. It is not often that a murderer is left alone at the mercy of his enemies. Sometimes, however, a *shaikh* will refuse to protect a man whose repeated assassinations are an annoyance to the tribe, or who has committed a murder in dishonourable circumstances. In such cases, the *shaikh* makes proclamation through the whole tribe that he 'shakes his mantle' (*infirāṣ 'abatih*) against him. The outlaw may then be slain with impunity by any one, even by a member of his own tribe. Sometimes a Bedawī proclaims the *infirāṣ 'abatih* on himself. He makes a tour through the whole tribe with a stick in his hand and a white flag flying from the top of it. Determined to avenge himself for a personal injury by a murder, he is trying in this way to take measures beforehand to restrict the consequences of his action to his own head.

As a rule, the murderer, being protected by his tribe, escapes the immediate vengeance of the family of his victim; but he remains none the less under a constant dread of it, which disturbs the life of his tribe as well as his own. After a few weeks, he sends a representative to the victim's family to make proposals. These are rejected, because the family are in honour bound to get the blood that is to satisfy the dead. Some months pass. The two tribes are tired of a situation that trammels all their social relations. An interview is arranged in the *shaikh's* tent, at which the representative (*wakīl*) of the murderer appears in supplication before the principal family-chiefs. On his knees, he avows three times that he has the victim 'at his house.' Then the victim's nearest relative declares himself ready to make peace, but only on condition of receiving an enormous ransom (*diya*) of young girls, camels, mares, sheep, money, arms, etc. The *wakil* consents to everything, no matter how exaggerated and impossible of fulfilment the conditions enumerated by the avenger may be. Then the *shaikh* intervenes, and, calling on the names of various intercessors, asks for the reduction of the different elements of the *diya* in succession; the avenger consents to this more or less generously, and peace is concluded. Pardon (*'afu*) is, so to speak, exchanged for the *diya*. In certain tribes the *diya* always includes two young girls of the murderer's family or tribe; the avenger keeps them to himself, or gets them married at will. Lastly, peace is guaranteed by the nomination of two hostages (*kafīl*) for each side, and a white flag is hoisted on a stick. Sometimes they proceed to a final ceremony of burying the blood. When the family of the murderer are unable to pay the *diya*, they go into voluntary exile.

The amount of the *diya* is not usually the object of discussion except between tribes who live in close relations of kinship, or, at least, neighbourhood; for others there is a fixed amount (*mudda*). In ancient Arabia, the *diya* of a free man was a hundred camels, and that is the figure adopted by the *sunna*; the legal writings determine the lists of beasts to be chosen, in accordance with the ancient customs. For this *mudda*, which, in practice, can be applied only among nomads, has been substituted a sum of 1000 or 1200 drachmas, according to the country. Some people have preserved customary *muddas* which do not agree with the price fixed by the *sunna*: one allows fifty sheep and fifty *mejidi*; others, a thousand piastres along with the murderer's weapon and some sheep, two or three hundred *mejidi*, forty camels, etc.

The prescriptions of the Qur'ān (ii. 173), the

meaning of which, however, is difficult to settle, sanctioned a scale of values in accordance with the social importance of the victims—freemen, slaves, or infidels. Is it possible that Imru'l Qais, when claiming a hundred human lives for his father's blood, was conforming to an old *mudda* binding on chiefs? The *mudda* for a woman was fixed by the *sunna* at half of what was due for a man of the same social status. The Bedawī tribes of Syria, on the contrary, fix the *mudda* for a woman at four times that for a man: eight girls or their dowry, or sixty camels. For a pregnant woman, they add to her own *diya* the *diya* of the child.

The governments and jurists have set themselves to give a character of public right to private vengeance. The penalties are pronounced by a magistrate, according to written rules, in solemn forms of procedure in which the witnessing plays a preponderating part. Sentences are executed by public authority.

The modes of action are the same in the retaliation for wounds. This consists in inflicting a wound on the criminal identical with the wound he gave his victim. But here again the *diya* comes in; and the application by competent authority of the physical penalty or the money-fine is one of the most important matters of Arab criminal law.

GAUDEFROY-DEMOMBYNES.

BLOOD-FEUD (Roman).—That blood-feud existed in primitive times in Italy as elsewhere is certain both from analogy and from actual traces, but the latter are scanty compared with those found amongst the Greeks. The reason lies in the comparatively modern character of Roman civilization when it emerges into the light of history. Roman history is illustrated by no such authentic picture of a primitive age as is contained in Homer. And when we turn to the arrangements of Roman law, we find little or no such reflexion of primitive ideas relating to the blood-feud as in the law-courts of Athens. But both in law and tradition the traces, if not very abundant, are clear.

The legend recorded by Plutarch (*Rom.* 23, 24) about Titus Tatius and the envoys from Laurentum points unmistakably to the usage in question. Friends and kinsmen of Tatius slew the envoys when on their way to the king; and, on his refusing to deliver up the culprits, he was himself killed by the relatives of the murdered men. Soon afterwards the gods punished both Rome and Laurentum with a plague, which was stayed only when the murderers on both sides were surrendered and punished. The last statement suggests a public, indeed a legal execution, so that we may agree with the verdict of Mommsen (*Rom. Hist.* i. 158): 'This story looks very like a historical version of the abolition of blood-revenge.'

Another echo of the blood-feud comes to us in the tradition that Numa enjoined the offering of a ram (doubtless through the kinsmen to the *manes* of the slain) in cases of involuntary homicide. What Prof. Muirhead (*EBr*[9] xx. 680*b*) calls 'a re-enactment in illustrative language' of the same law appears in the words which, according to Cicero, occurred in the XII. Tables, 'si telum manu fugit magis quam jecit, arietem subicito.' In this case the object clearly is to stay a legal prosecution; but the original object of such a law, and that as late perhaps as the time of Numa, must have been to impose a limit on the blood-feud in the case of accidental homicide, while still in the case of wilful murder suffering it to proceed unchecked (*EBr*[9], *loc. cit.*). But a more direct reminiscence of the blood-feud is to be found in the part which the kinsman of a slain man was expected to take in the prosecution of the murderer. So stringent was the obligation to institute the trial, that failure to do so disqualified a man from inheriting any of the property of the deceased. Thus in Rome as in Athens, the judicial procedure reflects the family aspect of the original blood-feud. On the other hand, the legal treatment of homicide showed how completely among the Romans the claim of the State superseded that of the family to execute justice on the criminal. For homicide was dealt with, and that even earlier than the XII. Tables, as a breach of what the jurists called the public law, which dealt with offences against the State, while the private law dealt with matters directly affecting the interest of individuals.

A word may be added as to the earliest meaning of the word *poena*. It corresponds to the Greek ποινή, and occurs in a similar sense in the XII. Tables in the sentence 'si iniuriam faxit alteri, viginti quinque aeris poenae sunto.' *Poena* is here the equivalent in money of the revenge sought for, and it might be supposed to indicate the existence in earlier times of a manner of settling the blood-feud such as was customary in the Homeric age. That such a custom was also familiar to the Italians is from the nature of the case probable, but is not supported by the use of the word *poena*, which is simply borrowed from the Greek in the general sense of compensation. Moreover, the passage in the XII. Tables refers to compensation for personal injury, and has therefore no connexion with the blood-feud (for an interesting account of the relation between *poena* and ποινή see Karlowa, *Röm. Rechtsgeschichte*, ii. 790).

I. F. BURNS.

BLOOD-FEUD (Semitic).—The feeling of kinship is the basis of the tribal system of primitive Semitic societies; kinsmen are really 'brothers' through their participation in a common blood, and this social bond is enforced by the law of blood-revenge. Tribal blood has fallen to the earth with the killing of a member of the group. The necessity for revenge arises when any member has perished at the hand of one of another group; the sanctity of its blood has been invaded thereby. On the other hand, if one kinsman has slain another, it is not cause for blood-revenge; either he is outlawed, as Cain (Gn 4[10ff.]) from his kin (though here by Jahweh), or is put to death, originally without shedding of blood, by the whole kin, that it may rid itself of an impious member.

The custom was doubtless of a religious character. Its persistence may be taken to support this. The members are one kin with their god; they are of his blood. His rights are violated therefore by the murder of one of their number, and he requires of them that they seek vengeance, on pain of his displeasure and consequent withdrawal from communion with them, as signs of which they would interpret any physical calamities that might befall them. It is a sacred duty a man may not renounce. The voice of blood, too, cries out from the ground for vengeance. There is a familiar idea in Arab poetry that his spirit in the shape of a bird rises from the head of the unavenged and cries, 'Give me to drink' (viz. blood).

Only tribal life offers the necessary conditions for blood-revenge: (1) the solidarity of the tribe or family (a larger group than with us, which is explained later), in which each individual is answerable for the other; and (2) the autonomy of the tribe.

The religious motive is not always present, but

esprit de corps is so real that tribal honour is always alert in pursuit of vengeance. In many instances the slain man's kin retaliated till a manifold vengeance was obtained. The Song of Lamech (Gn $4^{23f.}$), that if Cain be avenged seven times Lamech shall be avenged seventy-seven times, may be taken as showing that the vendetta did not always stop at the person of the murderer. But the principle of blood-feud is 'a life for a life.'

A person who has shed other than kin-blood is not at all regarded as impious, for only the blood of kin is sacred. He has involved all his kinsmen in the consequences; but they, if possessed of true tribal instinct, will not yield him up to the avenger. Any member of the aggrieved group may retaliate upon any member of the other, and satisfaction be obtained. But such summary justice does not always conclude the matter, and retaliation may follow retaliation indefinitely.

1. **Responsibility within a narrower circle.**—The family, not in the minor dimensions that obtain with us, but embracing all the descendants of a great-great-grandfather, early began to enter as a unit into the reckoning, and family feeling, which eventually affected the structure of Semitic society, and gave it a set towards disintegration, assumed a first importance. Blood-revenge now becomes primarily the concern of the family, so that the nearest relative is he who should undertake it: the *gō'ēl*, therefore, in Israel. Among the Arabs the brother and the son in almost equal measure were obliged to avenge. The tribe (*ḥayy*) usually, however, in its narrower sense of an aggregate of families that move *en bloc* from place to place and bear the same name, assumes the duty only when the family cannot from its weakness obtain vengeance. This intention of asserting the honour of the tribe may draw into the field of battle the manslayer's tribe, and war may demand a heavy toll of lives. The passive solidarity of the tribe also weakened before this narrower principle of relationship; the avenger preferred to retaliate upon some person within the fifth degree of consanguinity—a usage still in force among the Bedawīn. Another consequence of this growth of the family-idea may be noted. Certain of these smaller social units, by reason of bravery or for other such cause, became a kind of aristocracy, and from this was chosen the chief of the tribe. Not every life was held to be compensation for one of this class; in early Arabia 'a nobleman for a nobleman' was the rule.

2. **Modifications.**—(1) *Protection.*—A man in fear of an avenger might flee for protection to a member or the chief of another tribe. Moses, *e.g.*, found refuge with Jethro (Ex $2^{15f.}$). In Arabia, by taking food or drink with a tribesman, or even by pitching his tent so that 'tent-rope touches tent-rope,' the fugitive secures for himself his protection, and, especially in earlier times, that of the whole tribe. In pre-Islāmic times this relationship between protector and protected varied: it might be temporary or permanent and hereditary, or promise might be made to protect against a definite enemy, or all his enemies, or against death itself, *i.e.*, if the stranger were slain while under his protection, the host would undertake to pay blood-money to the next-of-kin. The *jār*, or protégé, ceases to be under any obligation to his own tribe, and enjoys the same rights as any member of that to which he is now attached. It is the proud boast of a tribe that it is always able to defend its refugees; a weaker, however, under fear of attack from a stronger, may refuse to admit one to protection, or may refer him elsewhere. Sometimes the protector claimed the right to dismiss a *jār* at will.

(2) *Asylum.*—In Arabia a manslayer was unmolested by his pursuer within certain sacred areas, pre-eminently the *ḥaram* of Mecca, within the tent, or if he pitched his tent over the grave of an ancestor. In ancient Israel the altar afforded shelter to any one who had shed blood, but by the later time of the Book of the Covenant it availed only the unintentional homicide. Certain cities of refuge were provided for in the later law-codes, and these also are further distinguished from the asylums of the Arabs in that they secured from violence only, and not from justice. See ASYLUM.

(3) *Holy Seasons.*—During the four holy months blood-revenge and war were prohibited by the Arabs.

(4) *Oracle.*—The authority of the oracle, communicated through the lot, may originally have had considerable influence. That of Hubal in Mecca was famous; questions requiring 'yes' or 'no' might be settled, and it might also decide who was to undertake vengeance.

(5) *Oath.*—Through the *qasāma*, or 'oath of purgation,' among the Arabs proof was supplied where otherwise none could be offered. Helpers, usually fifty in number, in the oath must swear to the innocence of one accused of murder, or to his blood-guiltiness. The helpers need not have been eye-witnesses. The proper application of the *qasāma*, however, was when a man was found slain. The nearest community had to swear they were not the murderers. In Israel the nearest community professed its innocence through its elders, and made atonement for the blood which had been shed by laying the guilt upon an animal (Dt 21^{1-9}), for it was a fearful thought to the Hebrew that blood should go unavenged (Job 16^{18}).

(6) *Blood-wit.*—The principle of commuting the right of blood-revenge by a fine, which has been recognized by many peoples (Greek ποινή, Saxon *wergeld*), has not been universal among the Semites. The acceptance of a surrogate was forbidden to the Hebrews (Nu 35^{31})—a fact which is evidence of the increasing sense of personal worth under the growing social order. Arabs, with a fine instinct of tribal honour, reckoned it dishonourable to compromise in any degree the blood of a kinsman, but the consciousness of weakness might recommend such a course to a tribe. The material advantages to be gained by its acceptance also exercised some influence. Many tribes required, as a condition of such compromise, that the offender or a near relative should enter the tent of the avenger and place his life at his disposal, thus acknowledging the latter's ability to avenge if he wished. A person of repute, either an outsider or a member of one of the two tribes seeking a settlement, may be called in to arbitrate, but his authority is only moral. Certain tribes had a fixed tariff: that of a hundred female camels was common, is still in force among some Bedawīn, and was renewed by the Wahhābīs. But haggling is frequent. The *wergeld* may be paid by the manslayer; but often it exceeds his resources, and his near relatives or his friends may contribute, or an assessment may be levied on the whole tribe, or the chief may be called on; for, whereas in early time the booty was divided equally, a fourth came to be set aside later into a kind of State-treasury under him for the entertainment of guests, the support of widows and orphans, and the payment of blood-money. The recipients were the nearest relatives of the murdered man—the brother and the son, therefore, whose duty it had been to avenge him. If a *jār* were killed, his relatives, and not his protector, received the *wergeld*.

With the passage from nomadic to agricultural, settled life, local connexion begins to oust genea-

logical, the regional grouping gradually weakens the feeling of blood-community, and revenge for the slaying of kin, which is opposed to nomad custom, becomes possible (Gn 27^{42}, 2 S 14^{7}). Laws of social justice arise, and impartial tribunals of State-life are instituted which remove the infliction of penalties out of the individual's hands, and distinguish between murder and homicide. In Babylonia, courts for the punishment of offences were early set up; the *jus talionis*, but not blood-revenge, was admitted. The code of Ḥammurabi makes exception in favour of unintentional homicide (§ 207 f.). In course of time, after their settlement in Canaan, the Israelites lost their tribal organization, and during their subsequent history the laws of vengeance passed beyond the primitive state of blood-feud and acquired an ethical character. Their law-codes represent an intermediate stage between the nomadic custom of direct vengeance and the criminal proceedings of developed State-life. All three make the distinction (not found in Homer, though made later when the community took into its hands the right of the avenger), between murder and homicide, and provide for the unintentional homicide lest he should fall a victim to the avenger's hasty passion; he is secure from the *gō'ēl* at any altar of Jahweh (Ex $21^{13f.}$), or at the Cities of Refuge (Dt $19^{2ff.}$, Nu $35^{14ff.}$). Ancient custom is preserved in this, that the avenger, and not the State, must take the initiative in protecting the interests of the aggrieved by bringing the case before the elders (Deut.), or the congregation (P), and must carry out the death penalty. The Deuteronomic code indicates the growth of individual responsibility in stating that the criminal alone is responsible for his misdeeds (Dt 24^{16}). The *gō'ēl* was known in Israel certainly down to the time of David (2 S 14^{11}). To Jahwism is due much of the credit for modifying this custom, though it did not abolish it. Jahweh came to be regarded as the *gō'ēl* who had redeemed Israel from bondage, to whom blood cried out, and who avenged it through His representatives with the people, viz. elders, kings, and priests.

In Syria the Syro-Roman law-book of the 5th cent. A.D. (§ 74, Paris Manuscript) forbids the avenger to kill the manslayer, and requires that the accuser hand over the guilty person to the authorities.

Muḥammad found the principles of blood-revenge too deeply rooted to be overthrown, and it gained recognition under his theocratic régime (*Qur.* xvii. 35). The religious community had both active and passive solidarity, being obliged to avenge one of its members slain and to protect a Muslim manslayer against the unbeliever. Further, he made the manslayer alone responsible for his deed, and distinguished between murder, fatal assault, and unintentional homicide. In the case of the first the *talio* was allowed, but blood-money could be accepted; in the others it must be accepted (Ibn Hišām, pp. 341–343, 821, ed. Wüstenfeld; al-Wāqidī, 338, ed. Wellhausen). But the modern Bedawī has preserved the nomadic institutions of the tribal system and the blood-feud from the transforming influence Islām would otherwise have exercised. With him the laws of vengeance for murder and homicide are the same. There is no need to regard the blood-feud as an altogether barbarous practice with nothing beneficent. Travellers in the peninsula claim that it is a salutary institution which has prevented tribes from exterminating each other, that it stays the plunderer's hand from shedding blood, and permits the traveller to risk himself in the desert. It is likely to remain as long as nomad life is regulated by custom.

BLOOD-FEUD (Slavonic).—Among Slavonic peoples the institution of the blood-feud may still be traced in good authorities, throughout all its history, alike when it was in full force and in the varying stages of its gradual decay.

1. Slavonic terminology.—The art. BLOOD-FEUD (Aryan) has already discussed the three expressions—Old Slav. *vražida*, not only 'enmity,' 'blood-revenge,' but also 'compensation,' 'fine'; Old Russ. *vira*, 'wergeld,' then 'State-compensation'; and *mirŭ*, 'peace.' Here should be added Old Slav. *glava*, properly 'head,' and *krŭvi*, properly 'blood'—words which are used in numerous Slavonic tongues to signify the manslaughter (deed of blood) which is to be avenged by the blood-feud. The Russian expression for 'revenge' is *mĭsti*, *mesti*, *místiti*, *mstiti*, which may be assigned to the same category as Latin *mūto*, from **moito*,* 'change' (cf. in Sicilian Gr. *μοῖτος*, 'retaliation'), or perhaps also may be compared with Gr. *μῖσος*, 'hatred' (*μισεῖν*, 'hate,' **mits*-). An interesting designation of inter-tribal conflict is to be found in the Polish word *walka* (Czech *válka*, 'war,' White Russ. *valka*, 'struggle'). It is perhaps possible that the Lat. *ulciscor*, 'I avenge,' hitherto unexplained, should be connected with it (cf. Walde, *Lat. Etymol. Wörterbuch*). Finally, mention should be made of the Servian *vjera* (Old Slav. *vĕra*, cf. Lat. *vērus*), 'truce,' properly the pledge given to the hostile clan to undertake no hostile action against them during a specified period (Mid. Lat. *treuga*).

2. Instances of the blood-feud among particular Slavonic peoples (principally based on Miklosich, *loc. cit. infra*).—The latest survival of the blood-feud in full vigour was among the *Southern Slavs*, where it persisted longest in *Dalmatia* and *Montenegro*. In the last named it was not till the year 1855 that it was rooted out by the stringent measures taken by Prince Danilo. Till that date the blood-feud was looked on as the sole means of preserving order and justice. Its characteristics may be described as follows: Blood-revenge is resorted to in cases of murder, wounding, and insult, and is considered a religious and sacred duty to the murdered man. It is especially the women who give the stimulus to vengeance. The mother lays the infant in the cradle to sleep upon the blood-stained shirt of the murdered father, and, as the boy grows up, she ever and anon presents this ghastly object to his view. Every male member of the clan is under the obligation to avenge (*bratstvo*, properly 'brotherhood,' cf. Gr. *φρήτρη*, *φρατρία*, *φράτηρ*, 'brother'): first the eldest son; if there are no sons, the brother. If the man to be hunted down by the blood-feud dies, his liability is inherited by his nearest relative, so that sometimes it is the sons and grandsons who finally fight out the quarrels of their fathers and grandfathers. The chief object is to slay the murderer, or, if this is not possible, his next-of-kin—his brother, father, son, and so forth. Blood-feud also occurs inside the clan—a later and degenerate type of revenge. The woman, and, strangely enough, the man who has been taken under protection by a woman, are inviolable. In the earliest times the man flees after the murder to another district, or at least avoids meeting the hostile clan in the church or elsewhere. During the peril of war the clan-feud is allowed to rest; but, according to Rovinskij

* A star before a word signifies that the form does not occur, but is inferred.

(*op. cit. infra*, 63), it may happen that a clan living in deadly enmity with another clan forms an alliance with a national foe (the Turks or Arnaut): '*pleme* ("tribe" composed of several *bratstva*) and *rod* ("relationship") in this instance are rated higher than nationality and religious faith.' It is only by an expiation which includes the payment of the price of blood and a humiliating ceremony on the part of the guilty man (see below) that the blood-feud comes to a bloodless end. The duty of revenge extends to the whole clan; it is only the clan and not individual members of it that can conclude peace. In the assemblies of the people (*sbor, skupština*) a question often discussed is that of the settlement of feuds of many years' standing which threaten the general peace. On the expiation of the offence hostility is forgotten, and a man's honour is not wounded by virtue of his act of expiation. On the other hand, the law of Prince Danilo, mentioned above, decrees that the murderer cannot buy his pardon by any blood-payment, but is to be shot; if he flees, his property is to be confiscated; he is banished from the country, and, if in spite of this he returns, he may be killed with impunity by any Montenegrin.

When we turn to the *West Slavs*, it is in *Poland* that we find the longest persistence of the institutions of the blood-feud in full vigour. Even in the 14th cent. the Polish nobility (*šljachta*) was divided into a vast number of family-societies and brotherhoods for war which made use of an escutcheon common to all, and had a common battle-cry (*proclama*). These societies were based on an actual or symbolical relationship. The cohesion between members with one and the same escutcheon was exemplified: (1) in the right of the relatives of a murdered man to enforce the blood-payment from the murderer; (2) in the right to redeem patrimonial estates belonging to the family if they had been sold to a stranger without the express consent of the relatives of the seller (cf. Rovinskij, p. 141 note). But there is historical evidence of the existence of these family feuds (*walka*, see above) not only among the noble families, but also among the peasant classes subject to them.

Finally, in the case of the *East Slavs*, the *Russians*, we have at our disposal evidence very old and weighty, but, it must be admitted, very obscure in details.

The oldest and weightiest authorities are as follows: (1) *Chronica Nestoris*, ed. Fr. Miklosich, cap. xlv.: 'vivebat Vladimêrus (980–1015) in timore dei. Et multiplicata sunt homicidia, et dixerunt episcopi Vladimêro: ecce, multiplicati sunt homicidae, cur non punis (*kazniti*, used of the State penalty) eos? Ille vero dixit eis: timeo peccatum (*grěchů*, "sin": Vlad., like the people of Montenegro, holds the blood-feud to be a religious obligation). Illi vero dixerunt ei: tu constitutus es a deo ut punias malos et ut diligas bonos, oportet te punire homicidam, sed cum inquisitione (*sů ispytomů*, "by investigation"). Vladimêrus vero sublatis compositionibus (*otvergů viry*, "abolished the wergeld") coepit punire homicidas. Et dixerunt episcopi et seniores: bella multa, at si compositio (*vira*) permansura est, in armis et in equis fiat. Et dixit Vladimêrus: ita fiat. Et vivebat Vladimêrus secundum institutionem (*po ustrojenniu*, "according to the constitution") patris et avi.'—(2) *Russkaja Pravda of Jaroslav Volodimêrič* (1018–1054), cf. p. 724ᵃ, above. *Judicium Jaroslavi, filii Vladimêri*: 'Si interfecerit vir virum, ulciscatur (*mstiti*) frater fratrem vel pater vel filius vel fratris filius vel sororis filius. Si vero nemo est, qui eum ulciscatur, solvendae sunt pro capite octoginta grivnae, si est principis vel tiunus principis ("official"): si vero est russus vel satelles principis vel mercator vel *jabeshnikŭ* (also an official) vel *tiunus boljari* (*boyar* official) vel *mečnikŭ* ("sword-wearer") vel *izgoj* (a man attached to no class or rank) vel *slovennikŭ*, quadraginta grivnae solvendae sunt.'—(3) The *Pravda* of the 13th cent. (*ap.* Ewers, *Das älteste Recht der Russen*, p. 814): 'After Jaroslav, his sons Isjaslav, Swjatoslav, Wsewolod, and their men, namely, Kosnjatschko, Perenjeg, Nikifor, now came to an agreement and did away with the custom of head for head (*oshložiša ubijenie za golovu*; for the meaning of *golova* see above), replacing it by permission to buy off the penalty by martens (*kunami*, i.e. with marten-skins): but every other ordinance of Jaroslav was confirmed by his sons.' 'If any one kills a prince's man in an assault with violence, and the manslayer (*golovnikŭ*) is not discovered, then a *wergeld* of 80 *grivnae* is to be paid by the district (*verví*) in which the head of the murdered man is lying: on the other hand, if the victim is one of the (common) people (*ljudinŭ*), then 40 *grivnae*.'

The development of the custom, apart from special points, is on the whole clear. Until Vladimir's time there undoubtedly reigned a system of unrestricted blood-revenge in Russia, just as there did in Montenegro down to the time of Prince Danilo. Under the pressure of the clergy, Vladimir attempted to proceed against the murderer by means of State penalties (*kazna*), but he soon returned to the customs of his ancestors. The later chronicler did not see clearly the almost unmistakable meaning of this. Jaroslav was the first to impose a restriction upon blood-revenge by limiting it to certain spheres of kinship; and, if these could not produce an avenger, a compensation (*vira*, the old term for the *wergeld*, though the expression does not actually occur in this passage) of 80 or 40 *grivnae* was exacted — no doubt to the advantage of the princely exchequer. The sons of Jaroslav completed their father's work by enacting that every deed of blood might be redeemed by the payment of marten-skins, though it is not clear who received the skins — the Prince, the injured man, or both. If the murderer was unknown, the district (*verví*, see above) in which the head of the murdered man was found was responsible for the *virnoje* (formed from *vira*)—an arrangement which still clearly recalls the joint liability of the clan with regard to the *wergeld* (see above). From the various rates of penalty mentioned in the above and other passages of the *Russkaja Pravda*, the calculation has been held to be justified (cf. L. von Schröder, *Festgruss an Roth*, p. 50) that the *wergeld* for the murder of a free Russian (*ogniščaninŭ*, 'householder') would come to about the value of a hundred cows, and that in this respect, too, the customs of ancient India (see above, pp. 725, 729) and of ancient Russia coincided. But it must be admitted that the ground on which such a calculation is based is very insecure. (For the most ancient evidence for the existence of blood-revenge on Slavonic soil, see Mauricius, *Strateg.* xi. 5; cf. ARYAN RELIGION, above, p. 51ᵃ.)

3. Expiatory usages at the amicable settlement of a blood-feud.—When the hostility between two clans was to be terminated by payment of the *wergeld*, there was also a long series of solemn ceremonies of expiation, about which we have ample information for the Slavonic and especially the South Slavonic world (cf. Miklosich, *op. cit.* 176 f.). The *Archiv f. slav. Philologie*, xiv. 141 ff., contains a detailed account (not yet embodied in the work of Miklosich) of a ceremony of expiation among the South Dalmatian Slavs. Its characteristic features are as follows:

The two clans of the Bojkovići and Tujkovići in the extreme south of Dalmatia, where the blood-feud remains a living force down to the present day, have been on hostile terms for years, because in the year 1877 Ivo Bojković in a quarrel shot Stoj, a member of the Žeci family (of the clan of the Tujkovići). The murderer has long been dead, but there are two sons, Jovo Bojković and Jovo Zec, who now (in the year 1890) are sufficiently grown up to be able to fight out their fathers' quarrel. Matters, however, do not come to that pass. After long protracted negotiations the Bojkovići are induced to admit themselves to be in the wrong and to allow Jovo Zec the right of choosing twenty-four arbitrators (*Dobri-ljudi*, 'good people'). These lay down the following conditions of peace: Jovo Bojković is to pay Jovo Zec and his brother Niko a little over a hundred sequins as the price of blood for the murdered man. Here we must add (according to Jovanović, 'Montenegrinische Rechtsgeschichte,' in *Ztschr. f. vergleich. Rechtswissenschaft*, xv. 184) that the price of the victim is decided by the number of 'bleedings,' and that twelve 'bleedings' (estimated, as a rule, at twelve sequins) constitute a deathblow. Further, the arbitrators stipulate that Jovo Bojković shall provide a meal for Jovo Zec and his party up to the number of three hundred and offer him twelve 'sponsorships,' i.e. send him twelve children, to whom Zec and his people are to stand as godfathers or sponsors. Moreover, twelve great and twelve small 'brotherhoods' (*pobratimstvo*, 'artificial relationship') are to be established

between the two parties; and, lastly, the instrument of death is to be surrendered to Jovo Zec according to the established customs. The twenty-seventh of August is the day appointed for the fulfilment of all these provisions. The ceremonies to be performed on this day take place partly in front of the house of Zec, but chiefly in the common place of assembly. Above all, it is before or in the house of Zec that the matter of the twelve sponsorships is concluded. The women of the Bojkovići, conducted by two of the arbitrators, appear with cradles on their heads containing the children, and now twelve men of the family of Zec take up the position of godfather to these. A secondary object of the presence of the women may have been (see Jovanović, *op. cit.*) to touch the heart of the chieftain of the hostile clan by their weeping and wailing. The programme of that part of the expiation which is carried out in the common place of assembly is far more extensive. First, both parties take their stand, like two hostile armies, at a distance of about a hundred metres from each other. 'After a short, silent pause, a small group appears on the side of the Bojkovići. The son of the murderer, dressed in a white shirt, barefooted and without a cap, creeps forward on all fours, carrying across his neck a long musket, the instrument of death, which two arbitrators, also without head-covering, hold by its two ends. Thereupon Zec runs quickly to meet them in order to cut the humiliating spectacle short. He approaches Bojković rapidly to raise him to his feet, while at the same time the latter kisses his feet, chest, and arms.'

The formation of the stipulated twenty-four brotherhoods is followed by the banquet, with the guests seated in a strictly regulated order; but Jovo Zec and the twelve men who have assumed the duties of sponsor touch neither food nor drink—to show that the reconciliation is not yet quite complete. It is not until the end of the meal that the payment of the debt is made in coins carefully wrapped in paper and laid on a dish. But still the arbitrators declare that the payment is not yet complete, and, amid the deep wails of the women, the Bojkovići must gradually place all their costly weapons on a large metal dish in front of Zec. At length Zec summons his new kinsman, and says: 'I give back to thee everything (in the first instance the weapons are meant): may the death of my father be pardoned to thee, and all that has happened be forgotten; in future may there be between us brotherhood, peace, and love! I will not retain thy blood-money, nor will I take from the table the white rags (the money wrapped in paper), I return to thee this also.' In this instance, then (though of course not in all), the whole material side of the blood-expiation evinces itself as only a symbolic action. Especially with regard to the weapons there was no doubt a certainty from the first that they would be given back. At the close of the proceedings one of the arbitrators mounts the table and reads the decision of the twenty-four judges aloud; he then hands it over to Zec, who in turn gives it to Bojković.

LITERATURE.—F. Miklosich, 'Die Blutrache bei den Slaven,' *Denkschriften der kais. Ak. der Wissensch.* philos.-hist. Kl. xxxvi. 1, Vienna, 1887 (with copious bibliography); cf. also Rovinskij (Russ.), 'Montenegro Past and Present,' ii., *Sbornik of the St. Petersburg Acad. of Sciences*, 1897, vol. lxiii. (cf. esp. chs. 1 and 2, *passim*). Rovinskij is also our authority for the foregoing description of the South Dalmatian expiation, of which he was an eye-witness. See, further, S. Ciszewski (Polish), *Wróżda i Pojednanie* ('Blood-feud and Duel'), Warsaw, 1900 (also contains an extensive bibliography).

O. SCHRADER.

BLOOD-FEUD (Teutonic).—Early Teutonic law made no provision for punishment in the modern sense of the word. The function of avenging crime belonged to the kindred of the person wronged, or else the tribe expelled the criminal from their league of peace, and declared him an outlaw, thereby depriving him of the common right of protection in life and property. 'Feud' is the name given to the hostile relations between two individuals, families, or tribes. The special case of the blood-feud emerged when any member of the social group was culpably slain or robbed of his honour. Here the cult of the dead came into play. It was a common superstition among the Teutons that the murdered man would find no rest, and would appear as a *genganger*, 'one who walks again,'* so long as his death was not avenged. If the slayer was caught red-handed, he might be put to death forthwith; but if he escaped for the time, it was frequently required that the sentence of outlawry should be pronounced in name of the tribe before the aggrieved family set forth to track the culprit. But, just as the kindred of the person killed held together for a common purpose, so did that of the criminal; and accordingly cases of individual blood-revenge often developed into family feuds, of which numerous instances are furnished by the Norwegian-Icelandic sources. Not infrequently these feuds ended in an act of combined incendiarism and massacre. The slayer was surprised in his own house by a night attack; his enemies surrounded the building with combustible materials, and set the whole on fire, so that he and his entire household perished in the flames. The extent to which the blood-feud might become a conflict between families is shown by the fact that sometimes one of the near relatives of the actual slayer was forced to fill the place of the latter as the object of retribution. As a rule, indeed, the policy of vengeance was not only carried out, but actually planned, by the tribe as a whole. The tribe also chose the leader or champion of the feud, and this step was at once followed by the public proclamation of the vendetta. The blood-feud was at length superseded by the imposition of a fine upon the guilty party, and in a case of killing this was known as the *wergeld*, or 'man-money,' by which the slayer redeemed himself from the sentence of outlawry. The completion of this expiatory compact was followed by the reconciliation of the warring groups, and the proclamation of the oath of peace which closed the feud. Many of the Teutonic peoples, however, and especially the Norse and North German tribes, maintained the practice of the blood-feud for certain crimes even after the principle of compensation had been introduced, and, indeed, till far on in the Middle Ages. This was particularly the case where the honour of a female of the tribe had been violated by adultery or rape. It was the introduction of the Roman penal code which in the end dislodged popular belief in the policy of the feud.

E. MOGK.

BOASTING.—Boasting is too extended and assertive a human failing to require defining. In quality it is simple, and appears even to require simplicity of character, of the type set forth in Proverbs, in which to flourish. Nevertheless, it has a history and a literature of its own; it is an interesting and instructive psychological phenomenon; it has grave moral aspects and extensive moral ramifications; it has a bearing on religion strangely subtle for a defect of character which is apparently so direct and blatant.

1. **Historical.**—That boasting began early, continued late, and drew attention to itself among all races in all times, language alone would suffice to prove. Few languages are satisfied with terms merely descriptive, unless—like Lat. *glorior*, Ger. *prahlen*, or Eng. 'self-glorification'—they be large-sounding, resonant words. Most languages are more concrete and figurative. Loudness of speech produces the Heb. תה, Gr. *καυχάομαι*, and probably our 'brag'; and spaciousness of speech the Gr. *μεγαλαυχέω*, and our 'tall-talk.' To good lungs is added the noisiest of musical instruments, 'to blow one's own trumpet,' and Fr. *fanfaronnade*. The idea

of scattering words at large seems to have produced the Lat. *jacto*, as well as our slang expression 'throwing the hatchet.' The names of persons with special gifts in this direction have been annexed, as Gr. ἀλαζών, a 'landlouper,' and Fr. *gasconnade*. Most of these words suggest that, at some period of their history, they have passed through the stage of being slang, and it is still slang which is busy coining words to express new gifts and new developments in boasting. John Bull, judging by his reputation in Europe, had small need of assistance; yet, as an artist both in the thing itself and the power to describe it, he is thought to have been outstripped by his cousin Jonathan. As the result of their partnership, no language is richer than English, so that we have almost as many terms for a boaster as Arabic for a lion. 'Spread-eagle,' 'bounder,' 'cock-a-hoop,' and others equally forcible and picturesque, show that boasting still exists and flourishes, and still attracts attention.

Nor is language the only record of boasting. There may be few matters of our civilization in which it had no hand, but on *dress* in particular its influence is perennial. The motives of comfort and decency are still only superinduced upon the primitive motive of display. That is only a visual boast—an assertion of our own superiority and the resources we can command, though, when the display was in war-paint, the braggadocio was less diluted. The boast which clothes itself in satin is more complex than that which wears only scalps, but at bottom it may be still the old naked assertion of power to subject other people, and it may be at the same sacrifice of better things. This more subtle combination of boasting with other elements constitutes its whole subsequent history.

A still greater triumph than dress boasting can claim. Without undue use of its own gifts, it may claim to have created *literature*. One of the most ancient jewels embedded in the OT is the Song of Lamech (Gn $4^{23f.}$), which is nothing but sheer, blatant bragging. Lamech, by the skill of his son Tubal-cain, is the first of men equipped with a slaughtering tool. He brandishes his weapon and calls on his womenkind to attend to him—a fundamental and primitive element in self-glorification:

> 'Adah and Zillah, hear my voice;
> Ye wives of Lamech, hearken unto my speech:
> For I slay a man for wounding me,
> And a young man for bruising me:
> If Cain shall be avenged sevenfold,
> Truly Lamech seventy and sevenfold.'

This is the beginning of songs, and it contains all the primitive elements of boasting—arming of the male, bluffing of one's foes, joy in seeing oneself reflected in the mirror of one's own praise. Then what are the Babylonian and Assyrian, and in scarcely a less degree the Egyptian, monuments, if not boasting? A devout ascription to the god does not hinder it from being very human bragging, even to the extent of developing into what much boasting has been since—namely, lies. When it is truth, it is carefully edited truth. The same primitive motives for boasting as appear in the war-paint of the savage and the Song of Lamech, unblushingly and loudly proclaim themselves on the monuments. The refrain is always, 'I am an irresistible, death-dealing person, good to follow, terrible to oppose.'

Perhaps all conquest is simply a boast in this power to destroy. Hence the justification of Pascal's saying, that Alexander might be excused for swaggering about the world conquering, on account of his youth, but a middle-aged person like Cæsar ought to have had more sense. In any case the ancient motives are still modern, for they never were stronger than in Napoleon, some of whose despatches have scarce more reserve than an Assyrian monument.

Yet in matters of taste, if not of modesty, the progress of time has effected some change. A speech by Cicero to-day would still not ignore the speaker, but its self-praise would not be quite so direct and open-hearted. Boasting is no longer what Montaigne calls 'an inconsiderate affection with which we flatter ourselves.' The restraint upon it by ceremony of which he complains still prevails. 'We are nothing but ceremony: ceremony carries us away, and we leave the substance of things: we hold by the branches and quit the trunk. Ceremony forbids us to do things that are lawful and natural, and we obey it: reason forbids us to do things unlawful and ill, and nobody obeys it. I find myself here fettered by the laws of ceremony; for it neither permits a man to speak well of himself nor ill.' As he proposes to speak of himself, in spite of ceremony, he says, 'We will leave her here for this time.' And with that view of the case many still agree, whensoever they find it expedient to be their own trumpeter. Self-praise may be no honour, but it may be great profit, if effectively done. Many will agree with Tristram Shandy that it is a very unpleasant thing to have to praise oneself, but it is better than doing a good deed and getting no praise for it at all. As the Assyrian added Ashshur to his name and then was free to boast of his prowess as he chose, so the modern adds '& Co.,' after which it is quite correct to proclaim his integrity, his possessions, his pre-eminence in his own department of things above all his fellow-mortals. And the same is sometimes true when, in partnership, he vends his wisdom or his religion. This boasting in company and boasting in the name of Ashshur are less different than might at first be supposed. Ashshur was the tribal god, and tribal boasting in every age has had special licence and esteem. The predatory instinct, or at least the instinct of self-defence, showing itself in the sense that, if other people brandish their weapons, we must do it still better, is manifest in both. With this may be taken the most extended and calamitous of all modern forms of boasting—social rivalry. It is the supreme attempt to gain the kingdom of heaven by commercial boasting in partnership, the usual result being, as Peabody expresses it, to supply 'the soil in which the malaria of domestic infelicity most easily spreads' (*Jesus Christ and the Social Question*, 1901, p. 178 f.).

2. **Psychological.**—Boasting, being an exaggerating and placarding of one's own worth, is a very simple outcome of vainglory. Nevertheless, the vainglory does not always work in the same way, and is by no means always the same psychological phenomenon. Shakespeare has put two finished braggarts into Henry IV.,—Falstaff and Glendower,—but, except in the mere fact that both boast loudly, they have no real kinship even in their boasting. Falstaff's boasts are 'like the father that begets them: gross as a mountain, open, palpable.' Partly his boasting is the habit of a loud, ungirt nature, disguising its consciousness of unworth by inflated self-praise, and partly it is sheer love of the art of exaggeration and decoration. When he describes himself in the character of the ideal counsellor as 'a goodly portly man i' faith,' he is not greatly disturbed or perhaps astonished to have it turned into 'a devil haunts thee in the likeness of an old fat man.' Glendower, on the other hand, takes himself with utter seriousness:

> 'These signs have marked me extraordinary,
> And all the courses of my life do show
> I am not in the roll of common men.'

Falstaff delights to blow his own trumpet, not out of any respect for himself, but because he is on the

easiest terms with himself. Glendower's ego, on the other hand, lives in state, and suffers no familiarities even with himself. His boasting, therefore, is not so much an enjoyment as a duty. This difference in boasting shows that we are no more all on the same terms with ourselves than we are with other people, which separation of ourselves from ourselves, even in the very act of sounding our own praise, deserves more consideration than psychology has yet given it.

Another psychological difference indicated by Falstaff and Glendower is that some men turn in upon themselves to boast, while others go as far afield as possible. Glendower illustrates the former. Nothing interests him which does not touch himself directly, and a thing is great simply because it is his. He is the sort of person who in modern life thinks that what he does not know is not knowledge. Falstaff, on the other hand, is ready to associate himself with anything with which he can invent the most shadowy association. While Glendower sheds his glory upon the outward world, Falstaff is ready to shed all the glory of the outward world upon himself. Here, then, are two amazing qualities in human nature —one the power to boast without requiring anything but ourselves to boast about, and the other the power to drag everything into some relation to ourselves which will glorify us. Prof. James (*Psychology*, i. 329) puts vainglory in the middle of the manifestations of social self-estimation which belong to the empirical self. That is to say, it has to do with the 'fame which in broad rumour lies,' and with the self which has things and does things, and transacts its business in the eyes of men. The phenomenon of boasting reminds us how this ego can withdraw itself or expand itself, —how it can be all the circumference or the mere centre. A man may scorn all worthy things, and boast in the rest simply because they are his; or he may, though the puniest citizen, feel himself embodied in the skill and daring of his general. The person who claimed an interest in Germany because his cousin played the German concertina is scarcely an exaggeration of what goes on in sober earnest every day. Both types of boasting are caricatures of the genuine power of the ego, of that which ought to create in us wonder and reverence —its presence in all experience, its possession of all experience, its power to isolate itself from what does not interest it, its value to itself above all it possesses and knows. Boasting is only a misuse and perversion of the true greatness and range of the soul. Egotism, after all, must not be neglected when we study the ego. Hume complains that he never can catch himself without a perception (*Treatise on Human Nature*, ed. Green and Grose, vol. i. p. 534); he never, that is, can catch himself unoccupied and alone. Had he attended to the inflating of all experience in the might of the ego, he might have discovered the still more wonderful fact that he never could catch a perception without himself, and he might have been led to see, as Kant did, that it manifests itself to us by a more direct interest than if it allowed itself to be seen keeping house at home and quite solitary.

Finally, boasting is a phenomenon which sheds light on the relation of our personality to other personalities. It is a curiously mixed relationship. Every boaster would shrivel if he did not think his boast woke some response in the minds of other people. He will boast of anything if only he thinks some one will admire him for it. Moreover, it shows a curious trust that minds around him are like his own, and yet that they are not like. If the boaster thought others quite like himself, he would not expect them to be interested in him, but in themselves; yet, being prepossessed by himself, he is unable to allow for this change of perspective. Thus boasting is curiously social and anti-social, curiously interested in one's neighbour while ignoring him for himself.

The relation of a man to his own mind and to his neighbour's is still more curiously illustrated by a third type of boasting. Though the most vainglorious of all, its motive is not vainglory or any form of vanity, but simply fear. According to Prof. James's classification of the self, it would belong, not to social self-estimation or even to personal vanity, but to another order of things altogether—to material self-seeking. No motive is simpler or more self-regarding than fear. Nevertheless, the boasting which springs from it illuminates in a singular way the complex relations, both with a man's own self and with his neighbour, which may accompany the simplest and most selfish motives. In relation to oneself it is a form of auto-suggestion, and nothing shows better what that form of legerdemain can and what it can not do. It is crowing to keep one's courage up, and, so long as it can crow without feeling danger at its windpipe, it succeeds. After that it exaggerates the danger, not the courage. In relation to one's neighbour it is bluff. The hypothesis it goes on is that other people are as easily terrified as the braggart himself. The hypothesis, when applied to the proper cases, works efficiently; but when, as frequently happens, it is applied to the wrong cases, boasting, like cursing, comes home to roost. All this Shakespeare has embodied in ancient Pistol, in whom the very boy observes 'a killing tongue and a quiet sword.' When his courage is lowest his boast is loudest. If Fortune allows him to meet another coward, he brags a ransom into his pocket; but if she cheats him with the appearance of simplicity and he foolishly encounters a lion, boasting only brings cudgels on his back and raw leeks into his stomach.

3. Moral.—That boasting is a perversion of what is great in human nature becomes plainer when we estimate it in relation to moral values. By way of caricature, boasting is a sort of double of the moral personality. Boasting may, of course, be of mere prowess, as when the Assyrian king boasts of the number of his fellow-men he has impaled, or the German student of the rapidity with which he can empty glasses of beer. Even so, however, it proceeds in some way on the belief that worth lies in the will. Just because a due estimate of ourselves ought to be moral, and boasting can turn the attention from the use of the powers to the mere possession of them, it has always been confusing to the moral judgment. Nay, boasting may be a direct attempt to surprise and corrupt the moral judgment into a false verdict. Hence it has in all ages been one of the greatest defences of a debased and impenitent conscience. Could the Assyrian kings have continued to be so cruel if they had never gloried in it on stone? Would the Restoration have been so corrupt if licentiousness had never been a matter to boast of? Would the French Revolution have lost so readily its hope of peace and brotherhood had Napoleon possessed less genius for military swaggering?

No man who boasts much can well hearken to duty at all. Words of boasting, above all other words, do 'give too cold a breath to action.' Why should one toil to cover himself with the painful garment of virtue if he can do it easily and far more spaciously with the garment of self-praise? Moreover, when one has boasted much, it is usual to perform little, and, when the real battle begins, to be, like Falstaff, 'a coward on instinct.'

That is the rule, yet there are many and great exceptions, as the example of Napoleon may remind us. There are men who, like the great showman,

'advertise well, and come up to their advertisement.' This raises the question where boasting ends and right self-trust begins. Would great swelling words not be boasting if afterwards they were turned into deed? Is there no boasting till our self-praise is baseless? Is it only immoral when it is empty? Is Montaigne right when he says: If a man be Cæsar, let him boldly think himself the greatest captain in the world? Is he also to proclaim it as well as think it? Napoleon did so, and we cannot deny that even his saying what he thought of himself may have contributed to his success. Are we to regard valid boasting as simply part of Emerson's advice: 'Trust thyself: every heart vibrates to that iron string'?

The ancient Greek ethics would probably have said, Yes. The 'magnanimous man' of Aristotle's *Ethics* is not quite free from a certain moral swagger as he walks about among his less fortunate fellows. Moreover, much of our modern ethic has returned in theory, as it has long done in practice, nearer to the Greek ideal than to the Christian. Is not the essence of the new ethic to glory in our nature and carry our head high on our shoulders?

The question is whether this attitude shows knowledge either of morality or of human nature. Cæsar's case may be doubtful; but if a man were Shakespeare, would he proclaim himself the greatest poet in the world? Instead, we find him desiring

> 'this man's style and that man's scope,
> With what I most enjoy contented least.'

He knows well enough his powers, but his imagination ranges so far beyond them that he never dreams of making them a boast. Is he not the greater that his greatness reacts thus upon his opinion of himself? Boasting indicates a shrivelled imagination as well as a shrivelled conscience. Hence only the destroyer can boast largely. Did Napoleon ever boast of himself as a great legislator, as he did of being a great conqueror? The creative mind must ever be too conscious of the limitation of its powers in comparison with the greatness of its aim. Were it only because of his knowledge of human nature, therefore, we cannot think of Shakespeare boasting. Moreover, the man who knows the human mind will know too well the bias of one's good opinion of oneself to put even his modest thoughts of himself into words. This self-restraint in expression is no hypocrisy, but a very important part of the task of seeking a just judgment of ourselves—one which shall make due allowance, as it were, for the adjustment of our compasses. As a matter of experience, until a man has made this adjustment, there is small likelihood that he will find his true sphere and walk steadfastly and bravely in it. Boasting is in too great haste to succeed; its confidence lacks reality; as social pretence it is destructive of all real geniality. It is, in short, a poor inflated, deceptive, and, at bottom, terror-stricken pursuit of things which are of no real and abiding value, to the detriment of all that is most sacred and most blessed in life.

Just as the claim of self-assertion in the name of genius only requires sufficient genius to set it at nought, so its claim in the name of morality only requires sufficient morality to exclude boasting. Imitation, Kant says, has no place in morals. Conscience, in Emerson's words, should be no conformist, no sycophant. It must be autonomous, or it is corrupt. But, like the greatest of poets, the true moral man withdraws, by that very obedience to the Divine within him, into a sanctuary where loud words of boasting would be mere desecration, and where he can only bow his head and adore. Not till self is taken up into this higher reverence does it begin to be admirable, and then it has other things to admire besides itself. The moral law thus takes the place of the poet's imagination, and shows man such high demands that he who contemplates it can see himself only as an unprofitable servant.

4. Religious.—Boasting, like other elements in human nature, may be studied in relation either to man's primitive struggle or to his ultimate goal. Seen from the latter point of view, it would appear to be simply a confusion of spiritual values, and, as such, an enemy of all true religion. Yet it is a foe which is often of religion's own household. It may be an attempt by auto-suggestion to create for us an image of ourselves which shall serve us in place of God. By that device it enables us to ignore the fundamental problems of religion—our utter feebleness and our utter dependence. Religion is also a self-valuation, but it is a valuation in face of the things which boasting is a device to ignore. Yet there is sufficient kinship between the two to have developed in all religions a self-satisfied Pharisaism, which thinks its own self-esteem must be the measure of God's approval; and boasting would not be so irreligious, were it not for this kinship with the elements in man which religion meets.

According to Ritschl, the very essence of religion is a transcendent estimate of spirit as measurable by no extent and no duration. Faith in God lives by the experience that a thing so weak as the human spirit can be made mighty against time and chance and the bigness of the world. And there is something in the humblest religious man which corresponds to that estimate. Sainte-Beuve (*Port Royal*) says something like this:—There is a hope and a self-esteem in the humility of the Christian which makes pale the pride and ambition of Alexander. But the point is that they are held in humility, in remembrance of God, in the knowledge that we have nothing we have not received, that by the grace of God we are what we are. Thus, and thus only, can men say with the Apostle, 'Where is boasting then? It is excluded' (Ro 3^{27}). The task of all true religion is to effect this exclusion. If, however, it should fail, man turns God Himself into the long shadow of his own self-praise, and that is the culmination and acme of all boasting.

The strange element in genius which Goethe has called 'the demonic' stands in a suggestive way between the trust of humility and the trust of vainglory. Take as examples: 'You carry Cæsar and his fortunes,' and Napoleon's saying, 'The world still turns for us.' They are too self-reliant to be religious, too reliant upon destiny to be boastful. A change in the proportion, and they would be the sayings of braggarts or of saints. Yet Cæsar's and Napoleon's confidence, in face of success and backed by armies, is a small thing compared with the confidence of the humblest of the prophets, faced by disaster and backed by nothing but the Unseen. 'See, I have this day set thee over the nations and over the kingdoms, to pluck up, and to break down, and to destroy, and to overthrow; to build, and to plant' (Jer 1^{10}). All that religion seeks is this change of proportion. Boasting is excluded, and yet the world still turns for us, for all things work together for good to them that love God (Ro 8^{28}); the frailest vessel carries us and our fortunes, for neither life, nor death, nor any created thing can separate us from the love of God; we can trust ourselves and be neither 'mendicant nor sycophantic,' for he that is spiritual judgeth all things (1 Co 2^{15}). Above all, the end of Christianity is to make goodness the goal of all ambition and the measure of all worth, and yet to save men from degrading merit into a boast, or giving it any place at all as merit between us and God.

LITERATURE.—In the OT boasting is regarded as the fruit of ignorance of God and of one's own soul. In 1 K 20^{11}, 2 Ch 25^{19}, Ps 49^{6} 52^{1} 94^{4} 97^{7}, Pr 25^{14} 27^{1} its folly, danger, and impiety are set forth. In James the OT way of treating the evil re-appears, esp. in 4^{6}; but in the rest of the NT, and especially by St. Paul, it is opposed on religious rather than on moral grounds, as the opposite of that humble trust in God's grace which is the only assurance of safety and peace. The Greeks were almost as much alive as the Hebrews to the danger and impiety of boasting. Perhaps it belonged to the Greek temperament that, under the temptation of prosperity, *hybris*, 'insolence,' readily appeared and speedily expressed itself in vaunting. In *The Makers of Hellas*, by E. E. G., 1903, this point is touched on in various connexions, most fully under 'Pindar,' pp. 349–353. On the advertising element in Greek rhetoric, see Hatch, *The Influence of Greek Ideas on the Christian Church*[5], 1895. Besides the essay of Montaigne referred to in the text, and more important, is Bacon's essay, *Of Vainglory*, wherein with much worldly wisdom the advantages of boasting have full justice done them. 'Glorious men are the scorn of wise men, the admiration of fools, the idols of parasites, and the slaves of their own vaunts.' Modern writers, for the most part, deal with vanity and self-exaltation as an inward feeling only, either not seeing that every feeling is changed by passing into utterance or taking it for granted that, in this age of publicity and education, good taste and the fear of man would prevent it. The boaster has therefore been left almost exclusively to the novelist, who has made free use of the picturesque braggart. Those who occur to the mind most readily are Scott's creations, nearly all of whom display their art on a background of rather hypocritical religion. All Psychologies attend to the phenomenon of self-assertion, but rarely realize its tendency to display itself in speech. In the *Principles of Psychology*, by William James (2 vols., London, 1891), self-satisfaction as a primitive emotion is discussed in the section on 'Self-feeling,' i. 305. Paulsen (*A System of Ethics*, London, 1899) distinguishes between pride, which wishes to be somebody, and vanity, which wishes only to appear somebody. In several books, *e.g. A Manual of Psychology*, by G. F. Stout (1899), the relation of boasting to the pathology of the mind is recognized, but nothing is made of it, and the matter ends purely physiologically. The older Evangelical preachers dealt frequently with such subjects as salvation without boasting; *e.g.* in Simeon's *Works* (1832) there are three such sermons: iii. 423, xvi. 603, xvii. 297. Modern sermons tend to deal more with motives, but F. W. Robertson's Sermon (iii. 1) on 'The Tongue' is interesting, because it indicates the relation of boasting to slander and persecution. Cf. also *Cathedral and University Sermons*, by R. W. Church (1892) [in Serm. 4, a discussion of the modern equivalent of the Greek *hybris*]; and suggestions in Newman's *Parochial and Plain Sermons*, 1868 (i. 162: 'Profession without Ostentation,' and viii. 17: 'Vanity of Human Glory').

BODHISATTVA (in Sanskrit literature).—

Introduction: (1) Etymology, (2) Little Vehicle.
I. Principles conducive to Buddhahood.
II. Controversy (Little Vehicle): Is a Bodhisattva a supernatural being?
III. Stages in the career of a Bodhisattva.
IV. Spiritual life of a candidate for Buddhahood.

INTRODUCTION.—(1) *Etymology.*—*Bodhisattva* is usually translated 'one whose essence is perfect knowledge' (*sattva* = 'essence,' 'own nature,' *svabhāva*). It is very possible that this was the original meaning of the word; historically, however, *bodhisattva* = 'one who is on the way to the attainment of perfect knowledge' (Monier-Williams, *Dict. s.v.*), *i.e.* 'a future Buddha.' As a matter of fact, according to the native Lexx., *sattva* = *chitta*, 'thought,' *vyavasāya*, 'decision,' 'determination'; and a Buddhist commentator explains it as an equivalent of *abhiprāya*, 'intention,' 'purpose'; thus we should have *bodhisattva* = 'one whose intentions (or wishes) are fixed on perfect knowledge.' *

This last translation is correct so far as (1) the Bodhisattvas of the Little Vehicle, and (2) the inferior Bodhisattvas of the Great Vehicle are concerned. But we shall see that there are also Bodhisattvas 'whose essence is perfect knowledge.' The *Prajñāpāramitā* in 2500 articles supports this view, and furnishes us with the curious equation: *rjes-su rtogs-pai sems-dpa* = *anubuddhasattva*, contrasted with *skye-bai sems-dpa* = *utpannasattva* and *abhisaṁskārasattva* (see *Madhyamakāvat.* xiv. 10).

There are a few analogous formations, but they seem to be exclusively Buddhist: (a) *Jñānasattva*, 'one whose essence is knowledge' or 'intelligence'—an epithet of Mañjuśrī, and in Mysticism a common appellation of very great magicians or ascetics; (b) *Vajrasattva*, 'one whose essence is diamond' or 'thunderbolt' (see vol. i. p. 99, and art. TANTRAS); (c) *Śrībodhisattvas*, 'holy' or 'sacred Bodhisattvas,' the honorific prefix being added to make a distinction between the Bodhisattvas of certain mystical categories; (d) *Vajrabodhisattvas*, with the same significance (see art. TANTRAS); (e) although the usual Tibetan translation is *byaṅ-chub sems-dpa*, the reading *rdzogspai byaṅ-chub sems-dpa* (*Madhyamakāvat.* p. 79. 3) is sometimes found, which points to an original *sambodhisattva*.

(2) *Little Vehicle.*—According to the doctrines of the Little Vehicle, there have been only a few Buddhas. The Pāli sources enumerate thirty-four previous to Śākyamuni, but the last six names alone occur in the Nikāyas and agree with the Sanskrit lists. Although plurality of Buddhas is certainly an ancient dogma, attested not only by this coincidence of both traditions, but also by epigraphic evidence (Bhārhut [*q.v.*]), there is no indication in the oldest literature that Śākyamuni or his immediate disciples called upon the faithful to follow in the steps of former Buddhas, and themselves to become Buddhas. Śākyamuni is the Master or the god; he is not, properly speaking, a model. The faithful ought to become *arhats*, i.e. to quench the passions by abstinence, to subdue the fire of thought by the exercise of the four ecstasies (*dhyānas*), and thus to destroy the seed of re-birth (see art. ARHAT). Thenceforward speculation on the character and career of the future Buddhas has no very marked practical interest; its value for religion consists only in the light which it throws on the transcendent virtues of the Buddha.

Let us recall the essential characteristics of the most ancient theory. It is found almost complete in the biography of Śākyamuni.* Four *asaṅkhyeyas* (incalculable periods, see art. AGES OF THE WORLD [Bud.]) and a hundred thousand ages (*kalpas*) have passed since the future Śākyamuni, who then bore the name of Sumedha, discovered the way to nirvāṇa through the attainment of arhat-ship; but at the sight of the Buddha Dīpaṅkara, then 'reigning,' he renounced immediate nirvāṇa in order to become a Buddha, and thenceforward he was a Bodhisattva. This is his vow (*praṇidhāna*) or supplication (*prārthanā*, *abhinirhāra*). Dīpaṅkara proceeds to ascertain whether the vow will be fulfilled, and announces that in the distant future Sumedha will be the perfect Buddha Śākyamuni. This is the prophecy (*vyākaraṇa*).† Sumedha now knows that he is a seed of Buddha (*buddhabīja*), a young shoot of Buddha (*buddhāṅkura*), and with firm resolution he seeks and practises the ten virtues (*pāramitā*)‡ that make a Buddha. His 'career' or 'course' (*charyā*) continues through numerous re-births, animal, human, and divine. At last the future Śākyamuni is re-born in a high heaven, as king of the Tuṣita gods; and it is there that, a hundred thousand years before the attainment of the Bodhi, an acclamation (*halāhala*) of the gods arises foretelling the sure success of the future Buddha.§ Leaving the throne of the Tuṣitas,

* See *Bodhicharyāvatārap.* p. 421, 15 (*tatra* [*bodhau*] *sattvam abhiprāyo 'syeti bodhisattvaḥ*); *Madhyamakāvatāra*, p. 182, 18 f., *bodhisattva* = *bodhiniyatasattva*; other etymologies, *Sūtrālaṅkāra*, xix. 76 f.

* The chief source is very late. It is the *Introduction to the Jātaka* (5th cent. A.D., ed. Fausböll, tr. Rhys Davids, *Buddhist Birth Stories*, 1880, and Chalmers, 1895). See Rockhill, *JAOS* 18, i. 1; Spence Hardy, *Manual*, p. 88; and Kern, *Manual*, p. 65.

† *i.e.* the *Dīpaṅkarajātaka*, so famous in the literature, the Chinese records, and the sculptures. See Foucher, *Art gréco-bouddhique*, i. 278. In the *Mahāvastu*, the future Śākyamuni is called Megha; in the *Divyāvadāna*, Sumati. When the future Buddha has been *vyākṛta*, he cannot turn backward; he is *niyata*, 'definitely assured of becoming Buddha.' In the Great Vehicle, mention is made of the 'appointment,' 'qualification' to Buddhahood given to the candidate by the Buddhas. Such a 'qualified' man possesses 'causes of success' (*pūrvajinakṛtādhikāra* = *hetusampanna bodhisattva*); and such 'qualification' can be styled 'benediction' (*adhiṣṭhāna*). There is a second *vyākaraṇa*, styled 'great,' in the eighth stage (see *Sūtrālaṅkāra*, xix. 35).

‡ See below, p. 740.

§ There are therefore three stages: the vow (*abhinirhāra*), the prophecy (*vyākaraṇa*), and the acclamation (*halāhala*). According to Sp. Hardy (*apud* Kern), the stages are: intention (*manas*), vow (*praṇidhāna*), pronouncing that vow (*vākpranidhāna*), revelation (*vivaraṇa*). On the systems of the *Mahāvastu* and the Great Vehicle, see p. 744 ff.

he is born in the womb of Māyādevī,* and lives, in human form, his last existence; under the Tree he attains to Bodhi; at Bodh Gayā he enters nirvāṇa.

We must not, however, overlook the important fact that the schools of the Little Vehicle, not only in Ceylon but also in India proper (Sautrāntikas, Vaibhāṣikas, etc.), have survived the rise of the Great Vehicle, and naturally they have profited by the advance of speculation. The *Abhidharmakośavyākhyā* (MS of the Asiatic Society, fol. 263) expresses itself as follows, concerning Arhats as compared with Bodhisattvas: 'Having expelled self-love from the series of *saṃskāras* that constitutes their pseudo-individuality, they develop an interest in the affairs of others, an interest born of compassion, and they destroy all pain. The ordinary man (*madhya*), i.e. the Pratyekabuddha, and the Śrāvaka (candidate for arhat-ship) desire merely deliverance, that is to say, an end of suffering, and not happiness during the existences of the *saṃsāra*; because this temporal happiness is an abode of suffering. The superior man (*śreṣṭha*), i.e. the Bodhisattva, wishes, at the cost of personal sufferings, temporal happiness (*ābhyudayika*) for others, and the definite end of suffering, which is supreme happiness (*niḥśreyasasvabhāva*); or he desires for others supreme and temporal happiness (*sukham ābhyudayikanaiḥśreyasikam*), and for himself the definite end of suffering, *i.e.* Buddhahood, as a means of realizing this service of others.'

The modifications or improvements introduced into the above doctrines either by different schools of the Little Vehicle or by the Great Vehicle are of several kinds. They may be grouped under four heads, the discussion of which will complete the present article: (1) accurate determination of the elements of Buddhahood, *i.e.* principles conducive to Buddhahood (*buddhakāraka dharma*); (2) determination of the character of the Bodhisattva—is he a 'hyperphysical' being? can he retrace his course?; (3) determination of the successive stages in the career of the future Buddha; and (4) practical organization of the life of a disciple regarded as a candidate for Buddhahood.

I. PRINCIPLES CONDUCIVE TO BUDDHAHOOD.—The Bodhi,† Enlightenment, Perfect Knowledge, is not the exclusive possession of Buddhas.‡ All beings who achieve deliverance, whether as Pratyekabuddhas or as Arhats, can accomplish their aim only if the 'sight of the truth' has destroyed in them the conception of the ego, the idea of existence and non-existence, the desire for existence and for non-existence, etc. But the *bodhi* of the Buddhas, or *samyaksambodhi*, includes not only the possession of the truth indispensable to salvation, but also omniscience (*sarvajñatva*), universal knowledge (*sarvākārajñatva*), and consequently omnipotence. The Perfect Buddha owes these unique prerogatives to his prolonged meditations (which have given him insight into the principles of everything, with power to subject them to his will), and to his infinite merits of charity, patience, etc.

In ancient Buddhism, the Buddha seems to differ from the Arhats especially in that he has discovered the true way of salvation, while the Arhats learn it from his lips; and from the Pratyekabuddhas in that he undertakes to teach this truth. The difference, however, is more fundamental, as will be seen below in the study of the *lokottara* doctrines (see below, p. 741). The ten virtues ascribed to the future Buddha, or perfect virtues, are in the Little Vehicle: (1) almsgiving, (2) morality, (3) renunciation of the world (*nekkhamma*), (4) wisdom or knowledge, (5) energy, (6) forbearance or patience, (7) truthfulness (*sachcha*), (8) resolution (*adhiṭṭhāna*), (9) charity or benevolence (*mettā*), (10) indifference, equanimity (*upekkhā*).* That there is nothing systematic here is evident. It is different in the Great Vehicle.

The Bodhisattva, or future Buddha, who would attain Bodhi, must therefore practise the six 'transcendent' virtues or *pāramitās*.† By this word is to be understood, properly speaking, *prajñā*, 'knowledge,' or 'wisdom.' *Pāramitā*, taken as an adjective, means 'arrived at the other side' of transmigration, *i.e.* at nirvāṇa. Knowledge alone, however, or insight into the truth, allows the destruction of the germ of existence. The other *pāramitās*, or the virtues of charity (*dāna*), morality (*śīla*), and patience (*kṣānti*) deserve the name only as their merit is applied to the attainment of Buddhahood. They are called natural (*laukika*) when they are not illuminated by knowledge, for example, when the charitable man believes in the substantial reality 'of the mendicant, the alms, and the donor'; they are said to be supernatural (*lokottara*) when knowledge becomes their guide, 'just as a man possessed of sight leads a group of the blind to the desired place.' It is essential, for instance, that charity be practised without any idea of the substantial reality of the three elements of almsgiving (giver, alms, mendicant), or rather, without even admitting the momentary reality of these three elements (*trikoṭipariśuddhā maitrī*).

There is another classification given: *karuṇā* (pity) or *maitrī* benevolence) directed towards (1) creatures (*sattvālambana*), or (2) the 'dharmas' (*dharmālambana*), or (3) without object (*anālambana*) [*Śikṣās*. 212. 12]. It may be assumed that, etymologically at least, the second stage is practised by a man who has recognized the nothingness of the ego (*pudgalanairātmya*), but still believes in the reality of the elements constituting this apparent ego (*dharmasvabhāva*). The books of the Prajñā draw a distinction between the Bodhisattva 'who perceives things' (*aupalambika*) and the Bodhisattva who does not perceive them, thus discarding the second stage (see art. MAHĀYĀNA).

The virtues of charity, morality, and patience constitute the equipment of merit (*puṇyasambhāra*) of the future Buddha. They are sustained by the virtue of energy (*vīrya*). They bear fruit, more and more excellent in the course of time, and at last realize what is called the 'material body' (*rūpakāya*) of a Buddha, whether it be the body adorned with the thirty-two signs, etc., exhibited by Śākyamuni (see below, p. 742[b]), or rather the so-called beatific body (*saṃbhogakāya*, 'body of enjoyment') which the Buddhas exhibit in paradises to the hosts of Bodhisattvas worshipping them.

The virtue of knowledge (*prajñā*) is sustained by energy and nourished by the virtue of meditation or contemplation (*dhyāna, samādhi*). We have seen that it illuminates and guides the so-called virtues of merit (*puṇya*). On the other hand, it cannot exist without these virtues. In fact, not only does knowledge require a pure 'field' wherein to be born and develop, but it also requires practical exercise. The abstract theoretical view of the nothingness of the ego (*pudgala*) and of the nothingness of things (*dharmas*) cannot destroy the illusion which makes us believe in the ego and things, unless the growing exercise of charity teaches us to sacrifice our goods, our bodies, and our lives. Science constitutes the equipment of knowledge (*jñānasambhāra*), which is the real cause of what is called the 'body of law of a Buddha' (*dharmakāya*; see artt. ĀDIBUDDHA, MAHĀYĀNA), that is to say, 'a series of perfectly pure principles' (*anāsravadharmasantāna*), 'empti-

* On this descent and the miracles of the uterine life, see Windisch, *Buddhas Geburt*, p. 110 f.

† Authorities: *Madhyamakāvatāra*, *Bodhisattvacharyāvatāra*, *Lalitavistara* [list of the 100 *dharmālokamukhas*, p. 31 ff., tr. by Kern, *Gesch.* I. 405; this will probably be thought less systematic than the arrangement in the texts cited above. It will be observed (35. 2) that the four *sambhāras* were later reduced to two]. The scholastic explanation of the problem would lead us too far. A summary of it will be found in Kern, *Manual*, pp. 62 and 67. On the development of the theory of the Bodhipakkhiyas within the Little Vehicle from the ancient sūtras to Buddhaghoṣa, see C. A. F. Rhys Davids, *Vibhaṅga*, p. xiv f.

‡ See, Kern, *Manual*, 61, n. 4; Oldenberg, *Buddha*[2], 321. In the art. MAHĀYĀNA the question will be discussed whether it is possible to arrive at deliverance by way of arhat-ship, and, incidentally, whether all beings are destined to become Buddhas.

* See Kern, *Manual*, p. 66; Childers, p. 335. Each of these ten virtues has three degrees: *upapāramitā, pāramitā, paramatthapāramitā*, e.g. with regard to almsgiving: (1) giving of external goods, (2) sacrifice of limbs, (3) sacrifice of life. One of the canonical books (*Chariyāpiṭaka*), not one of the oldest, 'containing thirty-four short Jātakas turned into verse' (Rhys Davids, *Buddhist India*, p. 176), gives examples showing how Śākyamuni practised all these virtues.

† See F. W. Thomas, *JRAS*, 1904, p. 547; *Madhyamakāvatāra*, p. 30; and *Muséon*, 1907, p. 278. A cognate form is *pāramī*; and there is also *paramatā*, 'excellence,' which forms a sort of play upon words. On the system of the ten *pāramitās* in the Great Vehicle, see below, p. 748.

ness devoid of support' (*nirālambā śūnyatā*), in other words, empty aimless thought, the quiescence of intelligence which is nirvāṇa.*

Each of the *pāramitās* bears fruits relative to the Bodhisattva and to creatures. Giving endues the Bodhisattva with a Buddha body and 'causes to ripen' (=converts) avaricious beings; morality causes him to escape evil destinies and converts immoral beings; patience suppresses all wickedness, all selfishness, all pride, and converts wicked creatures, etc. (*Lal.* 34 ff.).

The *pāramitās*, however, are often regarded as having for chief, nay for only, aim to 'mature the qualities of a Buddha' in the Bodhisattva who practises them. But we must not overlook the important fact that a future Buddha acquires the quality of Buddha not for himself but solely for the good of creatures. If he accumulates so much merit, knowledge, and sovereignty, it is in order to put them at the service of beings, as much in a direct way, by his own activity when he is a 'Bodhisattva become Tathāgata,' as in an indirect way, by the efficacy of his 'vows' after he has entered nirvāṇa. It is expedient, however, that henceforth the future Buddha should labour in the service of beings, that he should be engaged in 'maturing beings,' anticipating the task which later on he will perfectly accomplish. This is the part played by the four *saṅgrahavastus*, or 'topics leading to the sympathy of creatures'; which are: giving, kindly address (*priyavāditā*), putting into practice rules of altruism (*arthacharyā*), practising ourselves the virtues we recommend to our neighbours (*samānārthatā*).† This charitable activity is so important that the Bodhisattva is worthy of the name for the simple reason that he devotes himself to it.

From the preceding definitions there follows, as we shall see, the whole system of the career of the Bodhisattva (*bodhisattvacharyā*). The thought of illumination, or *bodhichitta*, that is to say, 'the thought of becoming Buddha for the salvation of creatures,' is its primary cause and basis. This thought has, of course, antecedents: in the first place, the practice of good from selfish motives, either for the sake of temporal rewards (*i.e.* in celestial re-births, etc.) or with a view to nirvāṇa; and then, the desire of the good of others for their own sake, which already distinguishes the future Bodhisattva (however great his faults otherwise) from the future Arhats.

This thought is essentially born of compassion (*karuṇā*) and emptiness (*śūnyatā*). If there were no compassion, as in the Little Vehicle, we should have to do merely with an egotistical saint. If there were no recognition of emptiness, the compassion would be much more shallow and liable to change, for where belief in the 'ego' exists, how can any one prefer his neighbour to himself? He may perhaps in a moment of exaltation, but not permanently. But the teaching of the Buddhas is there placed providentially within reach of the 'good' (*sādhu*), and they produce thoughts of compassion, however imperfect these may be. This teaching then purifies and enlarges the compassion by giving it an aim, viz. the acquirement of the Bodhi, and a support, viz. the recognition of emptiness and the explanation of the world which it implies.

The Bodhisattva studies, cultivates, conquers, ripens, takes hold of the highest 'concentrations' of Voidness, of Wisdom, but he does not 'realize' them (*na sākṣātkaroti*); otherwise he would obtain nirvāṇa as a Śrāvaka or as a Pratyekabuddha (see *Aṣṭasāhasrikā*, ch. xx.).

II. CONTROVERSY OF THE LOKOTTARAVĀDA.—The controversy on the metaphysical character of the Bodhisattva certainly goes back to one of the most ancient periods of Buddhist speculation. We are acquainted with it only in so far as we are informed concerning this speculation itself at its beginning, that is to say, our knowledge is very imperfect. One of the most ancient schisms (*bheda*, as the Buddhists call it) was connected, according to unanimous tradition, with the question whether the Buddha is *lokottara*, *i.e.* 'superior to the world,' 'supernatural,' 'hyperphysical.'

* It is in this way that the Buddhists have endeavoured to assure the stability of their system, and to reconcile the serious antinomy of the two dogmas: 'Nothing exists,' and 'We must work, labour, suffer for our neighbour.' It is certain, says a Mādhyamika philosopher, that our neighbour does not exist; but the Bodhisattva cherishes within himself this illusion (*moha*) that he must become Buddha for the salvation of creatures; if not the only way, yet it is the best way to destroy the illusion of the ego and of suffering (see artt. MAHĀYĀNA, MĀDHYAMIKAS, VIJÑĀNAVĀDINS).

† This explanation of these words is borrowed from the *Bodhisattvabhūmi*; for variations in the wording and definitions, see Kern, *Manual*, p. 67, n. 6; Burnouf, *Lotus*, p. 405; Minayeff, *Recherches*, p. 278, and below, p. 750[a].

The meaning of the word *lokottara* (Pāli *lokuttara*) in this connexion can be ascertained. As a rule, in the current language of theology, 'superior to the world' in contrast to *laukika*, 'worldly,' refers to what leads to nirvāṇa, what belongs to the Buddhist saints as such; it is a question of meditation, ecstasies, merit, etc. [The Bodhisattva is said to enter the *lokottara gati* when he reaches his first 'stage.'] It is most probable that the word has a distinct signification here, susceptible of shades of meaning, not admitting of definite determination, but which would certainly be unfairly pressed, if, in harmony with certain views of the Great Vehicle, we were to understand it to mean 'superior to the triple world of concupiscence, of material beings without concupiscence, of beings free from matter,' 'superior to the world of becoming,' escaped from the *saṃsāra*, or entering therein only by celestial magic, as the Kṛṣṇa of the *Bhagavadgītā* (see below). But it would be a much more serious mistake to give to the word *lokottara* the meaning attributed to it by Pāli scholars, that the Buddha is 'superior to the world' because, although of this world, he is not defiled by the vices of the world. The schools which are heretical from the orthodox Pāli standpoint meant quite a different thing by *lokottara*, otherwise the question of its significance would never have been raised, and it would be incomprehensible that a school should be characterized, or should describe itself, as 'affirming the Buddha's superiority to the world' (*lokottaravādin*).*

We ought to be cautious not to introduce too much exactness into the ancient views of the Order, and, to say the least of it, not to outrun the development of Buddhist doctrine. We may say that the traditional data and the earliest views regarding Śākyamuni, before as well as after the conquest of the Bodhi, were capable of being arranged, if not in two systems, yet on the lines of two opposing movements or tendencies. According to one of these, which we may call *rationalist*, and which manifests itself in the Vaibhajyavādin Schools, Pāli or Sanskrit, etc., Śākyamuni, born after the manner of men, became an Arhat by the conquest of truth, and his sole superiority consists in this conquest effected by his own power. Given the philosophical and atheistic antecedents of Buddhism, 'no metaphysical superiority over other beings could belong to the Buddha by virtue of his birth; only as being greater, more strenuous in his efforts, was it reserved to him to trace out that path wherein others have nothing to do but to follow. In a certain sense we may say that every disciple who is pressing on to holiness is also a Buddha equally with his Master.'† In reality this standpoint is not strictly maintained by any sect, and the Pāli canon, which otherwise represents rationalist doctrines, is far from exhibiting perfect euhemerism. But by the comparison of features scattered throughout this canon as well as elsewhere, we find traces of a very violent reaction against the tendency which we shall call *mythological* and *theological*.

One text says that the conception of Śākyamuni was not independent of the intercourse of his father and mother—a fact which contradicts a universally accepted doctrine.‡ There are set forth, as characteristic of the Mahāsāṅghika-Lokottaravādin School, the doctrines (1) of the Bodhisattva's descent into the maternal womb in the form of an elephant, (2) of the miracles of the uterine life (the Bodhisattva does not pass through the ordinary forms of the embryo, etc.), (3) of the birth through his mother's side: three doctrines which are admitted in the Pāli books (the first with certain modi-

* Buddhists naturally maintain that the doctrine was originally one, and that the 'heretical' views arose much later in the course of the centuries. This opinion, on other grounds, is far from being altogether mistaken (see artt. MAHĀYĀNA, SECTS [Bud.]). In the present case, we may reasonably hold that the conflicting doctrines are both very old, or, if we prefer, primitive. See the definition of *lokottara*, *Atthasālinī*, pp. 218-4; and on the confusion of Bodhisattva and Bhagavat, see Oldenberg, *Buddh. Stud.* 642.

† See Oldenberg, *Buddha*[5], 381.

‡ The only canonical Pāli texts that treat, with any detail, of the conception, the uterine life, and the birth of the Bodhisattva, are, if the writer is not mistaken, *Majjhima*, iii. 118, and *Digha*, ii. 12; see also *Aṅguttara*, ii. 130 (Kern, *Man.* 13, n. 2). In all the texts the Bodhisattva is *aupapāduka*, that is to say, he becomes incarnate by his own wish, and without regard to the ordinary laws of conception (to deny the existence of such beings is a great heresy, *Digha*, i. 55). The only exceptions are (1) the Tibetan *Abhiniṣkramaṇasūtra*, where the Bodhisattva *seems* to choose the moment of the loves of Śuddhodana and Māyādevī to study the country, the caste, and the woman in whom he is to become incarnate [see Foucaux, tr. of *Lalita.*, 1848, p. xxi; references to *Dulva*, iii. 449, where Rockhill's interpretation (*Life*, p. 15) seems less correct; see also *Milinda*, p. 75, which is not so explicit]; (2) *Lalita*, p. 87, where unbelievers are condemned; and (3) such texts as collected by Windisch, *Buddhas Geburt*, p. 142. The Bodhisattva chooses Śuddhodana as his father, let us say as his 'putative' father, because Sumitra 'is too old, not able to beget children, and he already has too many sons.' That such statements prove nothing is evident from the fact that they occur in the *Lalitavistara*. On the other hand, it is only in the *Mahāvastu* that the virginity of the mother of Buddha is asserted.

fications),* but which must have been disputed, or the Mahāsāṅghikas would not have given them such an important place. We are told elsewhere that it is a great mistake 'not to give Buddha the highest praise, to teach that the perfect Buddhas have nothing that differentiates them from the world, and not to proclaim that the perfect Buddhas are superior to the world.'†

To these negative evidences must be added the well-known biographical facts that the future Buddha left his home only under the pressure of external influences, that he gave himself up to the guidance of ignorant teachers, and became addicted to useless austerities; further, that, after having become Buddha, he did not resolve to preach the Law until he was entreated by Brahmā, that he was, in part at least, under the influence of former sin,‡ that at first he wished to preach the Law to some friends who were already dead, and that he died at last from the abuse he had made of pork.§ Some venture to say that his premature death is the punishment of an ancient murder (according to the *Suvarnaprabhāsa*). But, on the other hand, we have express declarations of the Master, showing that he is superior to the world: 'I am not a man, a god. . . . Know, O Brāhman, that I am a Buddha'; and again: 'Born in the world, brought up in the world, I have risen, and I dwell above the world.' Whence it follows that Śākyamuni, born as a man, has, by the conquest of the Bodhi, obtained a transformation of his nature; he is no longer a man, he is not an Arhat, he is a Buddha.

Neither of these texts—the second (*Saṁyutta*, iii. 140 and elsewhere) is quoted by the Vetulyakas to support their docetic views (*Kathāvatthu*, xviii. 1, see below, p. 743[a]), the first (*Aṅguttara*, ii. 88) is mentioned by Kern (*Manual*, p. 64)—is, of course, altogether conclusive. Neither the author of the *Kathāvatthu* nor Prof. Oldenberg would admit the *lokottara* interpretation. Oldenberg says in so many words that Kern has misunderstood the meaning of the saying, 'I am not a man . . . I am a Buddha.' The present writer believes that, whatever may be its genuine meaning, it could lead to the conclusion that Buddha's humanity is apparent only. It is a dogma of the Little Vehicle that Śākyamuni, since he became a Buddha, possesses 'nirvāṇa-with-residue' (*sopadhiśeṣanirvāṇa*); he is *parinirvṛta*, that is to say, altogether passionless, *ergo* not a man. Such is the interpretation of Buddhaghoṣa (Oldenberg). But a Buddha is not only free from passion, he is free from thought, the Bodhi being, as well said by M. Oltramare, 'hyperconsciousness' or 'non-consciousness' (*prajñāpāramitā*). Therefore the visible frame, the audible words, the whole of the personality that we call a Buddha, is only a show contrived by the compassionate resolution formed by the future Buddha. We shall not say that the author of the saying, 'I am not a man . . .' foresaw such a development of the *lokottara* Buddhology; but he opened the door to it, and, in any case, his testimony destroys the hypothesis of a primitive Buddhism altogether euhemerist.

Reference may be made (1) to the faculty that Śākyamuni possesses of living for many centuries down to the end of the age of the world (*Dīgha*, ii. 118); (2) to his 'transfiguration' (*ib.* p. 134); and especially (3) to his power of assuming the aspect of his auditors: 'When I used to enter into an assembly of many hundred nobles [or *brahmans*, householders, gods, Māra-gods, Brahma-gods], before I had seated myself there . . . I used to become in colour like unto their colour, and in voice like unto their voice. . . . But they knew me not when I spoke, and would say, "Who may this be who thus speaks? a man or a god?" Then having instructed them, . . . I would vanish away. But they knew me not even when I vanished away; and would say, ". . . a man or a god?"' (*ib.* p. 109; Rhys Davids, *SBE* xi. 48). The Buddha Śākyamuni is neither a man nor a god; he *appears* as a man or as a god; he is a Buddha; he is above and outside of existence.

Śākyamuni, then, was born as a man. It is, in fact, an ancient belief that every future Buddha, in his last existence (*charamabhavika bodhisattva*) must assume human form, at one time as a Kṣatriya, at another as a Brāhman.* He is, however, a very extraordinary man. And the question arises, To what extent has he taken possession of the exceptional prerogatives of the Buddhas, before the conquest of the Bodhi?

From the time of his birth Śākyamuni possesses the thirty-two marks (*lakṣaṇa*, *lakkhana*) of the 'great man' (*mahāpuruṣa*), and the eighty secondary signs (*anuvyañjana*). [Sanskrit authorities in *Dharmasaṅgraha*, p. 53 f.; *Mahāvastu*, ii. 29, 213 f.; *Bodhisattvabhūmi*, III. v.; Pāli authorities in *Majjhima*, ii. 136; *Dīgha*, ii. 17.] These marks, to which E. Senart has devoted very careful study (*Légende du Buddha*), whatever may be their historical, mythological, or dogmatic explanation, establish mysterious relations between the Buddha and Viṣṇu. Although the name *mahāpuruṣa*, which is the current designation of Viṣṇu, is applied, in Buddhism, to the eight classes of Āryas (*srotaāpattiphalapratipannaka*, etc., *Madhyamakavṛtti*, xxiv.; cf. *Chullavagga*, xii. 2, 5), the marks are ascribed only to universal sovereigns (*chakravartins*), and to Bodhisattvas in their last existence. To an experienced eye, however, the marks of the former are quite distinct from those of the latter (see *Lalitavistara*, ed. Lefmann, 106, 6; *Rgya-cher-rol-pa*, 93, l. 19, and the emendation proposed, mistakenly, in the present writer's opinion, by E. Senart, *Légende*, 88 n.).

[It must be added that, if Buddhas alone possess the 'marks' in their perfection, the future Buddhas possess the same in germ-state and 'ripen' them for centuries; see *Lotus*, viii. 18; *Bodhicharyāvatāra*, vii. 44; *Bodhisattvabhūmi*, III. v.; *Abhidharmakośa*, Soc. As. 219*b*.]

But if Śākyamuni, before the Bodhi, is a very extraordinary man, universal sovereigns, and especially those who reign over the four continents (*chāturdvīpaka*), are no less superhuman; they are nevertheless men. It remains to be seen whether the body that Śākyamuni showed to gods and men on this earth was a real body or an illusion. This question now demands an answer so far as possible.

One of the schools, the Lokottaravādin Mahāsāṅghikas of the Madhyadeśa† (a half-Sanskritizing sect of the Little Vehicle), teaches not only that the Buddhas have nothing in common with the world (*lokena samam*), that everything about them is supernatural (*lokottaram*), that, if they seem to think, speak, act, and suffer like us, it is merely by condescension, in order to conform outwardly to our weakness (*lokānuvartana*),‡ but also that the Bodhisattvas are in no way born from father and mother, that they are produced by their own powers (*svaguṇanirvṛtta*), that their mothers (and their wives also) are virgins, and that, if they come forth from their mothers' right side without injuring her, it is because their form (*rūpa*), i.e. their body, is entirely spiritual (*manomaya*, 'made of mind'), *i.e. quasi*-immaterial. And a sect, the Ekavyavahārikas, closely connected with the Lokottaravādins of the *Mahāvastu*, maintain that there is no matter (*rūpa*) in the Buddha.§

It is evident, therefore, that the manifestation in this world of the marvellous being who reigned among the Tuṣita gods was not in reality what it seemed to be. The Bodhisattva, after all, assumed merely an empty appearance of humanity in condescension to the ways of the world (*lokānuvar-*

* It is generally said that the mother of Buddha *dreamt* that a white elephant with six tusks entered her womb (*Jātaka*, p. 50; Rockhill, *Life*, p. 15; also *Abhidharmakośavyākhyā*, fol. 219); in the *Lalita*, p. 55, the Bodhisattva is transformed into an elephant. On the Bhārhut medallion representing the 'descent of Bhagavat' (Plate xxviii.), see Minayeff, *Recherches*, p. 146; Oldenberg, *Buddh. Studien*, p. 642; Foucher, *Art gréco-bouddhique*, i. 291.

† *Mahāvastu*, i. 96.

‡ On this point, which is open to dispute, see *Milinda*, 134; Rhys Davids, i. 190; cf. *Mahāvastu*, i. 169, 6. It is certain that the 'Pāli' Buddha is not free from suffering.

§ With regard to this obscure subject see Fleet, *JRAS*, 1906, p 881.

* *Lalita* (p. 88) explains that, if the Wheel of the Law were to be moved by a god, i.e. if Buddha were to appear as a god, men would feel discouragement.

† This sect, which we shall discuss presently (see below, p. 744), is comparatively well known to us through the *Mahāvastu*, one of its canonical books, edited by E. Senart (see A. Barth, *Journal des Savants*, Aug.–Oct. 1899, from which we borrow freely), and also through the *Kathāvatthu* and the works of Vasumitra and Bhavya on the sects (see Wassilieff, *Buddhismus*; Rockhill, *Life*).

The Buddhist *Madhyadeśa*, 'central region,' lies to the East of the Madhyadeśa properly so called. It is in reality the *Prāgdeśa*. For the boundaries see *Mahāvagga*, v. 13, 12 (in Kern, *Man.* 13, n. 3).

‡ *Mahāvastu*, i. 167, 15 ff. The same formula (*eṣā lokānuvartanā*) is familiar to the Pūrvaśailas who apply it to the contradictory doctrines taught by the Buddha. It is in order to put himself into touch with the faithful that he preaches doctrines serviceable (*pudgala*, *skandha*, etc.), but in reality false (see *Madhyamakāvatāra*, p. 814).

§ Rockhill, *Life*, p. 188. On the mind-made body, see the discussion in Poussin, *Opinions sur l'histoire de la dogmatique bouddhique*, Paris, 1909, p. 258.

tana). The body which he shows to men and gods conceals its true nature from the 'worldly' mind. One may go further, and say that this body is only an illusion. Certain heretics of the *Kathāvatthu* (xvii. 1),* forerunning the Great Vehicle, say that it is not true that Śākyamuni descended in person into the womb of Māyā; he merely sent down to this world a double of his person, or, rather, a phantom. According to the *Daśabhūmika*, and also (a fact which has not been sufficiently noted) the *Lalitavistara* (p. 36) the Bodhisattva does not come down to the earth; he does no more than 'show' (*sandarśayati*) his descent, his sojourn in the womb of Māyā, his conquest of the Bodhi, and nirvāṇa.† In the *Lotus of the True Law* and in later systems the Buddha thus manifests himself on several occasions, appearing as a 'Bodhisattva in his last birth' (see artt. LOTUS OF THE TRUE LAW, ĀDIBUDDHA, etc.). This theory of the apparent descents, *avatāras* of the *quasi*-eternal Tathāgata, is the last phase of the *lokottaravāda*. According to *Sūtrālaṅkāra*, Śākyamuni, even in the Tuṣita-heaven, is a phantom, a 'contrived body' (*nirmāṇa*).

According to another theory, less categorical, the Law has been preached by Ānanda (*Kathāvatthu*, xviii. 1). This means that Śākyamuni, although he was a real man, flesh and bones, nevertheless remained, since the Enlightenment, in a definite state of concentration or trance (*samādhi*, *dhyāna*); and can a being in *dhyāna*-state speak? We know from *Kathāvatthu* and from Bhavya that schools were at a loss to settle this question. Doctors who deny the power of speaking to the 'concentrated' saints assume that Buddha caused Ānanda or even the walls of the preaching-room to preach the Law (Kumārila in *Tantravārttika* has good jokes on this strange hypothesis; according to the Great Vehicle such wall-preaching is a case of *nairmāṇikī ṛddhi*). Elsewhere the organ of preaching is the smile of Śākyamuni, or the light that arises from his *ūrṇā* (white hair between the eyebrows). Elsewhere Śākyamuni is credited with having uttered a few words: each disciple heard them with the developments his own disposition allowed.

Together with the problem whose various solutions have just been expounded, and which centres round the Buddha and the Bodhisattva 'arrived at his last existence' (*sannikṛṣṭa bodhisattva*), there is another, almost as important, concerning the Bodhisattva during the course of his long career. Is he a 'saint' or an 'ordinary man'? Legend supplies contradictory and confused answers.

According to the Introduction to the *Jātaka*, it is only after having acquired arhat-ship, i.e. the right of entering nirvāṇa at his next death, that Sumedha (the future Śākyamuni) conceives the idea of becoming Buddha. The quality of Bodhisattva is in his case somehow grafted on to the quality of Arhat. Without examining how far this is compatible with the conquest of arhat-ship which Śākyamuni, born as an ordinary mortal, will once more make under the Bodhi tree, we see that Buddhists inquired if all the accounts concerning the previous existences of Śākyamuni are compatible with the possession of sainthood. Assuming that the concept of Bodhisattva ought to be brought within the framework of the doctrine of the path to sainthood, Buddhists further asked whether a Bodhisattva is necessarily a saint (*ārya*), or whether he remains, at least at the beginning of his career, an ordinary man (*pṛthagjana*), what grade he occupies in sainthood, *srotaāpatti*, the first, or arhat-ship, the fourth grade, and at what time he attains to those grades.

The Great Vehicle has answers to these questions, and to many others subsidiary to them (see III.). The Little Vehicle, besides the evidence of the Mahāsāṅghikas (see *ib.*) supplies only a few documents sufficiently detailed on the nature of the future Buddhas, but they are late. All the Bodhisattvas who have taken the vow to become Buddhas 'are exempt from births in the *avīchi*, with the ghosts (*pretas*), among the lower animals; in their human births they possess all the organs of the senses; they are neither women nor eunuchs; they are never guilty of mortal sin; they do not lose sight of the doctrine of action and its fruits; in their divine births they are never insentient gods, etc.; bent upon renunciation, with no attachment to existence or non-existence, they walk as acting for the world's welfare, fulfilling all the perfect virtues.'‡

This passage denies that the Bodhisattvas who have taken the vow can be guilty of mortal sin,* or that they can deny the law of the retribution of actions, and thus destroy their 'root of merit'; but it admits that they can be guilty of sins entailing evil destinies, *e.g.* re-birth into the wombs of higher animals, and probably into certain kinds of hells.† The same impression is given us by the short and contradictory notices which we possess concerning the Haimavatas.‡ They hold that the Bodhisattvas are *pṛthagjanas* whose most notable characteristic is freedom from the spirit of malice or wickedness (*abhidhyāchitta*); but are not exempt from error (*moha*) or desire (*rāga*). The Sautrāntikas were undoubtedly of the same opinion (Wass. 276, *ad finem*). Tradition, in fact, was very clear about the animal existences of the Bodhisattva and the various sins he had committed during the course of his existences.§ These, it is true, may be explained without admitting the idea of any imperfection. This is undoubtedly what is done by the Mahāsāṅghikas. 'The Bodhisattvas,' they say, 'are free from desire and malice (*vyāpāda*, *vihethana*); whenever they choose, they are born in lower forms of existence for the benefit of creatures' (Wass. 237 [260]; cf. Rockhill, 188). The climax of this method of interpretation with a religious tendency is found in the Mahāyāna literature. There we see the Bodhisattvas 'rushing into the Avīchi like swans into a lotus pond.'‖ And why? To save creatures; because the future Buddhas in the fervour of their compassion have taken upon themselves 'the whole burden of the suffering of all creatures'; because they have declared, 'I am taking upon my body the heap of sorrows which their deeds have accumulated, in order to bear it in the regions of hell. Would that all creatures who dwell there might escape.'¶

It is not difficult, however, to reconcile these antinomies. All that is needed is the recognition of two kinds of Bodhisattvas. The legends in which the future Buddha appears in an animal form, etc., belong to the initial stage of his career. The lofty deeds of generosity, the sacrifice of life, etc., belong to a period during which he heroically practised the virtues. Finally, when Bodhisattvas are described as playing the part of a universal providence, and reigning in Paradise, like Avalokita (see art. AVALOKITEŚVARA), the reference is to future Buddhas who have almost attained Bodhi and have gained very high 'spheres' or 'stages.'

III. BHŪMIS, OR STAGES IN THE CAREER OF THE BODHISATTVA.**—The scheme of the Bodhisattva's career is modelled on that of the career of the *śrāvaka*, or disciple of the Little Vehicle.

We are expressly informed about this in various sources.†† The Śrāvaka, after receiving instruction from the Buddha, labours long before attaining, after sixteen successive victories over the passions, the first stage or first 'storey' (*bhūmi*)‡‡ of the way (*mārga*), namely, the position of *srotaāpanna* (=he who has entered the course). Thence he ascends to the states of *sakṛdāgāmin*, *anāgāmin*, and lastly *arhat*. According to another account, there are eight stages: the *srotaāpanna* who possesses the 'fruit' of entrance into the course is distinguished from the *pratipannaka*, or candidate qualified for this fruit,

* These heretics are, according to the commentary, the Vetulyakas. Minayeff has noticed that this sect is much later than the traditional but disputable date of the *Kathāvatthu* (B.C. 246). On Vetulyakas and the Great Vehicle, see *JRAS*, 1907, p. 482.

† See p. 745[a].

‡ *Jātaka*, Introd. vv. 252–258, quoted by Kern, *Man.* 67, n. 2.

* The Mahāsāṅghikas assert the same thing of the *srotaāpanna*, Wassilieff, 240 (264).

† See *Madhyamakāvatāra*, 39, 7, on animal births, births in hell, etc., of persons who practise charity but violate the 'Pentalogue.' Cf. below, p. 744[b].

‡ According to Vasumitra (Wass. 278); Bhavya ascribes different doctrines to them (Rockhill, 190).

§ On the animal births of the Bodhisattva, from the dogmatic point of view, see *Kathāvatthu*, xxiii. 3, *Jātakamālā*, xxxiii. 3, and sources quoted by Hopkins, *JAOS*, 1906, p. 464; Wassilieff, p. 168. According to *Sūtrālaṅkara*, as long as the future Buddha has not acquired a 'stage' (see below, p. 746[a]), his re-births are fixed by his acts, good or bad (*kammavasena*). Afterwards he is re-born according to his 'vows' (*praṇidhāna*) for the welfare of beings. At the end, his re-births are only apparent (*vibhutvādhipatyena . . . upapatti*). In Grünwedel, *Myth.* p. 199, statistics will be found of the various re-births of the Bodhisattva Śākyamuni according to the *Jātakas*. He was three times a Chaṇḍāla, once a dice-player, once a jackal, etc. A Bodhisattva cannot be a woman: 'At the same instant . . . the female sex of the daughter of Śāgara disappeared; the male sex appeared and she manifested herself as a Bodhisattva' (*Lotus*, Kern, p. 253; but see p. 257; *Si-do-in-dzou*, p. 123, etc.). In the Pāli Jātaka, the Bodhisattva is never a female; but that this rule is modern is proved by the sculptures of Bhārhut (see Foucher, *Les représentations des Jātakas*, p. 38).

‖ *Bodhicharyāvatārapañjikā*, p. 340, 13 (viii. 107), *Śikṣāsamuchchaya*, p. 360, 8.

¶ *Śikṣās.* p. 280.

** *Bhūmi* = 'stage,' or 'storey' (of a house), or 'category' (for instance, *Divyāvadāna*, p. 230. 28). The *Lotus* has once *dhāraṇi* = *bhūmi*, xvi. 3, see Kern, *ad loc.*, and the *Aṣṭasāhasrikā*, *dhātu*, *avinivartanīyadhātu*.

†† *Madhyamakāvatāra*, 13, 6; *Bodhisattvabhūmi*, II. iv.

‡‡ The term *bhūmi* is used in the Pāli *Abhidhamma* (see C. A. F. Rhys Davids, *Buddhist Psychology*, p. 82) as equivalent to *magga*, 'way.'

and so on. Consequently there are eight noble individuals (*āryapudgalas* or *mahāpuruṣapudgalas*). Moreover, scholastics regard the future *śrāvakas*, who are not yet qualified for the possession of fruit (let us style them *pratipannakas* to *srotaāpattipratipannakatva*, 'candidates for the first candidateship'), as belonging to a preliminary stage or *gotrabhūmi*. Although the Schools disagree on this point, the general opinion is that not only the *arhat* but also the *srotaāpanna* cannot fall from the stage which he occupies.*

The most ancient systematic doctrines concerning the career of the Bodhisattva seem to have been the following:—

There is a preliminary stage, during which he still, properly speaking, is only a 'future Bodhisattva,' and this is succeeded by three other stages.

(1) The preliminary stage is called *Prakṛticaryā*,† 'the period during which the innate qualities show themselves,' and which begins when the future Bodhisattva plants the roots of merit which later he will apply to the conquest of the Bodhi.

(2) The second stage is that of the Bodhisattva who for the first time conceives the thought of Bodhi (*prathamachittotpādika*), or 'who merely steps into the Vehicle' (of the Bodhisattvas; *prathamayānasamprasthita*), or again 'the beginner' (*ādikarmika*), 'who is eager to start on his journey' (*gantukāma*), but who has not yet set out.‡

(3) The Bodhisattva 'who follows out the practice or career of the Bodhisattvas' (*bodhisattvacharyāñ charan*), who adopts a career 'in conformity with the vow' (*anulomacharyā*), 'who is on the march' (*gantṛ*), 'who is endowed with practice' (*charyāpratipanna*).

(4) The Bodhisattva who dwells 'in the stage from which there is no return'§ (*avinivartanīyā bhūmi*). It was at the beginning of this period (*anivartanacharyā*) that the future Śākyamuni received the prediction (*vyākaraṇa*) from Dīpaṅkara (*Mahāvastu*).‖

These and similar divisions, although they are known chiefly through the works of the Great Vehicle, contain nothing that is opposed to ancient ideas; they constitute merely an advance upon the views expounded by the commentator of the *Jātaka* (see above, p. 739). It seems to be otherwise with the 'stages of the Bodhisattva' as understood afterwards.¶ On the one hand, the teachers of the Great Vehicle sometimes regarded the doctrine of the *bhūmis* as their special right (*Madhyamakāvatāra*, p. 23); on the other, the Hīnayānists reproached their opponents with having invented the ten *bhūmis*. The latter, a Tibetan writer tells us, replied that a sect of the Little Vehicle, the Mahāsāṅghikas, possessed a book, the *Mahāvastu*, in which was set forth a theory of the ten *bhūmis* (Wass. 262 f.). On this point, as on several others, the School 'of the Great Assembly' seems to have become separated from the ancient sects and to mark the transition between the two Vehicles. Its *bhūmis*, however, are not the same as those of the Mahāyāna [all of which, being exempt from return, should be put under (4) of the above enumeration]. So far as we can judge, they present this characteristic, that the first seven are only a subdivision of '*charyās*' (2) and (3) of the preceding enumeration, the last three alone being exempt from 'return.'

The account of the *bhūmis* in the *Mahāvastu** seems to be independent of the authorities of the Great Vehicle, although it has some points of contact with the *Daśabhūmaka* and the *Lalitavistara*. Unfortunately, this account is confused, fragmentary, and perhaps contradictory. We possess on this point information supplied by Chandrakīrti, who, as we shall see, complicates rather than illuminates the problem. Reference should be made to E. Senart's analysis, from which we sometimes venture to differ.

The [future] Bodhisattva, who has not yet conceived the thought of the vow of Bodhi (*praṇidhichitta*), possesses the privilege that his sins are punished only during seven births, pain in the end being reduced to headache (*śīrṣaparitāpa*; cf. *Bodhicharyāv.* i. 21] (i. 104, 5). The first *bhūmi* is produced by the thought of Bodhi: 'May we become perfect Buddhas' (80, 5). This thought immediately destroys previous sins, literally, 'covers' them (104, 3; cf. *Bodhicharyāv.* i. 13). Nevertheless, the Bodhisattva of this stage and of the six following is an 'ordinary man' (102, 13 and 78, 11). He is regarded as an Ārya (*prāptaphala*), because his vow is not that of ordinary men (*prākṛtapuruṣa* = *pṛthagjana*, 80, 15);† but his works are mixed with good and evil (102, 9). In theory he does not encounter evil destinies; murder, theft, etc., do not lead him to hell. Nevertheless, should he deny the existence of the Āryas (*āryāpavāda*;‡ here it is chiefly Buddhas and Bodhisattvas that are concerned), he will be re-born in a 'particular hell' (*pratyekanaraka*) instead of being re-born in the Avīchi, in a Preta with a small body (as opposed to the Pretas with large bodies, who accordingly suffer more from hunger), or among the higher animals (as opposed to the *kṣudratiryagyoni*).§ He will never be an asura, or a woman, or a eunuch. But if he commits a mortal sin, the murder of a Bodhisattva, of a Śrāvaka (= Arhat), of a Srotaāpanna, or of a Pratyekabuddha, he will go to hell (102, 12–104, 3).

It is said that, for scholastically expounded reasons, such and such a Bodhisattva will never be able to pass from one *bhūmi* to the next. The Bodhisattvas destined to proceed uninterruptedly (*avaivartikadharma*) seem to be distinguished from the others, and perhaps the above-mentioned privileges are reserved for them.

From the beginning, however, of the eighth *bhūmi*,‖ the works of the Bodhisattvas are perfectly pure. 'They must be honoured with the worship rendered to the perfect Buddhas, they must be regarded as perfect Buddhas' (105, 13), for from this moment they cannot fall (*anivartiya*). They are Chakravartin kings; they teach the Law (107, 8). It is a curious fact that, whereas the names of the first seven *bhūmis* remain without any point of connexion in the literature, for the eighth we find *janmanideśa* (?), which recalls the *janmabhūmi*, 'birth-stage' of the *Daśabhūmaka* (*i.e.* where one chooses his birthplace); then, *yauvarājyabhūmi* (stage of the prince associated with the reigning sovereign), which is attested by the

* This is the most complicated problem of Buddhist scholasticism (see *Saṃyutta*, v. 360). Here it may be mentioned that the *Lotus* states that some Bodhisattvas will obtain Buddhahood after four, three, two births, or after one birth (xvi. 5 f., and Kern, *ad loc.*; there is confusion of the Bodhisattvas with the Śrāvakas).

† A term, derived from the *Mahāvastu*, corresponding to *gotrabhūmi* (see below, 745).

‡ According to the texts of the Great Vehicle quoted in *Śikṣāsamuchchaya*, 212, 12 and 313, 19; this stage corresponds to the *praṇidhānacharyā* of the *Mahāvastu*, and to the *adhimuktichāryābhūmi* of *Bodhisattvabhūmi* and *Sūtrālaṅkāra*.

§ See especially *Aṣṭasāhasrikā prajñāpāramitā*, ch. xxii.

‖ Instead of 'career,' or 'stage without return,' the text, *Śikṣās.* 212, 12, has 'Bodhisattva possessing the *anutpattikadharmakṣānti*.' We shall see that it is necessary to attain the eighth *bhūmi* in order to possess this *kṣānti*, while all the *bhūmis* (including the first) are 'without return,' at least according to modern authorities (see below, 745[a] and 747).

¶ The idea which is contradictory to the Little Vehicle is not the subdivision of the Bodhisattva's career into several periods, but (1) the practical meaning of this teaching: everybody has to become a Bodhisattva; and (2) the nature attributed to the Bodhisattva 'dwelling in the *bhūmis*,' a kind of God-Providence, multiplying his various manifestations of form in all the universes, etc. The Bodhisattvas of the *Mahāvastu* do not appear to have this nature, even in the higher worlds (see next col., n. †, and p. 748[a]).

* See E. Senart's Introduction to the edition of the text (i. xxv f.), and A. Barth, *Journal des Savants*, 1899.

† The sentence, i. 78, 11, is very complicated: *prathamāyāṁ bhūmau bodhisattvāḥ pṛthagjanā iti prāptaphalā bhavanti iti dakṣiṇīyāś cha lokānāṁ virochenti*. E. Senart translates (p. 437): 'The Bodhisattvas who are in the first *bhūmi*, ordinary men though they were, secure the acquisition of fruits, and on that account become the object of the reverence of all people . . .' But he sums up (p. xxvii): 'The Bodhisattvas at this stage are still ordinary men.' And, with regard to the Bodhisattvas of the seventh *bhūmi*, we have (p. 102, 3) *sāmante pṛthagjanatāye*, which the present writer, like E. Senart (p. 457), understands to mean 'in consequence of their position as *pṛthagjanas*.' It would be necessary, therefore, to interpret the first passage (78, 11) thus: 'The Bodhisattvas are ordinary men, but they are worthy of the world's respect as if they were saints.' Unfortunately, Chandrakīrti (*Madhyamakavṛtti*, xxiv. 5) informs us that 'the scholars of the Madhyadeśa, following the arrangement of stages taught in the *Mahāvastu*, claim that the Bodhisattva dwelling in the first stage possesses the *darśanamārga*,' that is to say, has obtained the fruit of the *srotaāpatti*.

‡ The formula of the *Abhidharmakośa* is as follows: 'There are no Arhats in this world.' It implies a rejection of the True Law (*saddharmapratikṣepa*), and seems inseparable from the denial of the morality of actions and of their fruit: *nāsti dattam . . .* etc. See *Dīgha*, i. 55.

§ Cf. above, p. 748[a].

‖ We are told (i. 105, 4) that the Jātakas, and the heroic charities too, refer to the eighth and following *bhūmis*. This is very strange.

Madhyamakāvatāra; and, finally, *abhiṣekabhūmi* (royal unction), examples of which are very numerous.*

The final attainment (*paripūraṇa*) of the tenth *bhūmi* results in the descent of the Bodhisattva, who now desires to become man (which will open to him the way to Buddhahood), into his mother's womb, and the prosecution of the well-known human career.

The close parallelism should be noticed between *Mahāvastu*, i. 142, and *Lalitavistara*, 36, 1–4. The remarkable difference is that, according to the latter text, the anointing allows the saint to 'show'† (*sandarśanatā*) his descent, birth, entrance into religion, . . . and the great nirvāṇa; whereas these nine exploits of the Buddha are regarded as real, and not apparent in the *Mahāvastu*, however *lokottaravādin* it claims to be.

In the system of the Mahāyāna or of the Pāramitās (*pāramitānaya*) ‡ there is a very clear distinction between the first seven stages and the last three, but this distinction does not seem to be based on the same principle as that of the *Mahāvastu*. From the first '*bhūmi* of the Bodhisattvas' the future Buddha is assured of final success.§ Yet it seems almost certain that the Mahāyāna began with the conception of the *Mahāvastu* or one similar, for the eighth world in it bears the name of *Achalā* (immovable), 'because it cannot be removed,' or again (*Bodhisattvabhūmi*) that of *Niyatabhūmi*, 'world in which the faithful will surely (attain the state of Buddha).' Various notices lead us to believe that the possession of the *anutpattikakṣānti*,‖ which is the essence of the eighth stage, and produces the 'prediction' (*vyākaraṇa*), is not separable from the *avaivartikabhūmi* or *avinivartanīya*°, the 'stage without return.'¶

We are now able to follow the 'stages' in detail, as understood by the teachers of the Great Vehicle. The material may be subdivided into three heads: the future Bodhisattva, the first seven stages, and the last three stages.**

1. First Period: *The future Bodhisattva.*—We have seen that, according to the Introduction to the *Jātaka*, the future Śākyamuni was almost ripe for arhat-ship, when the sight of the Buddha Dīpaṅkara caused the thought of becoming Buddha to arise within him. It is after taking the vow of Bodhi that he examines the virtues necessary to a Buddha. All this is rather poor psychology; for nothing is more opposed to the career of the Bodhisattva than the state of mind of an Arhat, isolated from everything, from his neighbour as from himself. The future Buddhas, let us rather say, are recruited from men who have not entered the path of the Arhats, and whose spiritual temperament is not yet determined (*aniyatagotra*).††

These men do not, however, immediately decide, for the sake of the welfare of creatures, for their temporal happiness and their salvation in nirvāṇa, to make the very great sacrifices that the career of a Bodhisattva entails. Therefore, before taking the vow of Bodhi, a period unduly called a '*bhūmi*' passes, which is preparatory (*parikarma*°, *upacārabhūmi*) to the Bodhisattvabhūmis, and is subdivided into *gotrabhūmi* and *adhimuktichāryābhūmi*.*

(1) *Gotrabhūmi*† is a stage of preparation (*Laṅkāv.* 68, 8). Just as, even in the egg, the embryo which is to become the wonderful bird Garuda differs from all other birds in the embryonic state, so the future Bodhisattva (*bhaviṣyad*°) belongs, even before his spiritual birth, to the family (*gotra*) of the Bodhisattvas. He possesses a certain 'disposition' which predisposes him to the vow of Bodhi. He possesses certain innate (*i.e.* acquired during the course of former existences) qualities (*prakṛti*°) which incline him to compassion; for compassion is the essential element in the vow of Bodhi. He is kind and good (*bhadra*). Incapable of committing a mortal sin (for these are, above all, sins of hatred),‡ he avoids also the heresies which would condemn him for eternity;§ but he commits sins of love (*rāga*). Everyday experience, in fact, shows numerous examples of good and generous men forgetting themselves, *e.g.* in passion. These men, although ignorant and guilty, belong to the race of Bodhisattvas.

(2) *Adhimuktichāryābhūmi.*—The dispositions of which we have been speaking bear their natural fruits in the Buddhist disciple. His enthusiasm is not for the egotistical calm of the Arhat, but for the generous goodness of the Buddha. In him are born 'aspirations' (*adhimuktī*) towards the state of Buddha. In him, if we prefer to put it thus, is born the thought of Bodhi (*bodhichittotpāda*); but this thought is only in germ, in the state of seed, of cause (*hetubhūta*); there is nothing to show that it will ripen. Among a thousand persons who possess it at this state, says the *Aṣṭasāhasrikā* (61, 9), are there two, is there even a single one, who will carry it to maturity? A person thinks of becoming Buddha (*a*) because some preacher invites him, or (*b*) because he hears Buddhahood praised, or (*c*) because he thinks of the miraculous body of Buddha, or (*d*) because he has compassion for creatures (*Śikṣās.* 8, 8). This last motive alone is pure; but, even when it is predominant, it is one thing to begin the vow of Bodhi, another to carry it out (*ārabdha, pratilabdha*). The good thoughts (*adhimukti, adhimokṣa, adhyāśaya*) of the disciple are like arrows shot forth in the darkness, which have very little chance of hitting the mark. His good works are few in number (*parittakarin*), full of omissions and imperfections (*chhidrakarin*), casual and unregulated (*aniyatakarin*). He has to reflect and wish (*pratisaṅkhyāna*) in order to do good. He is called 'Bodhisattva mounted on a chariot drawn by oxen' (*paśurathagatika*), to indicate the slowness and uncertainty of his success (*Śikṣās.* 7, 1). His unconstrained love is given to himself; it is only by reflexion that he cares for the welfare of others. His nature leaves him at the mercy of his inclinations. His knowledge of truth (*prajñā*) is slight, and derived entirely from listening to the Law and from reflexion: the direct penetrating sight of meditation (*bhāvanā*) is entirely wanting in him. Nevertheless, by the repetition of 'aspirations,' and by more and more studious practice of the good works which they involve, the disciple, during three periods, succeeds in purifying these very aspirations (which will henceforth be called *adhyāśayas*), and, when they are pure, he rises from the *adhimuktichāryā* stage to enter the stage 'where aspirations are pure' (*śuddhādhyāśaya*).‖ See, however, p. 747ᵃ.

2. Second Period: *The first seven stages of the Bodhisattvas.*—The stage called *śuddhāśayabhūmi* (or *śuddhādhyāśaya*°), and more commonly the 'Joyful' (*pramuditā*), is, properly speaking, the first *bhūmi* of the Bodhisattvas. (Until now the disciple was only a future Bodhisattva.) It is also the first in the classical list of the ten *bhūmis*. We shall see that it does not

* This consecration evidently takes place in the Tuṣita heaven, for there are certain qualities which the Bodhisattva does not possess until 'after the Tuṣita' (see *Mahāvastu*, i. p. xxxvi).

† See above, p. 743ᵃ, and below, p. 747ᵃ, n. ‡.

‡ Also in the Tantras (*mantranaya* in contrast to *pāramitānaya*).

§ The Bodhisattva 'who has attained a stage' is contrasted with the one who is tossed about in the *saṃsāra*, lifted up by the thought of Bodhi, held down by his sins (*Bodhicharyāv.* iv. 11). Nevertheless Chandrakīrti (*Madhyamakāvatāra*, 51) seems to foresee that a predestined Bodhisattva (*niyata*, see p. 739ᵇ, n. †) may indulge in an angry thought. In the present writer's opinion the passage should be interpreted thus: 'And if, *to suppose what is against all probability*, a predestined bodhisattva should happen to produce an angry thought.'

‖ See p. 744ᵃ, n. ‖.

¶ *Lalitavistara*, 35, l. 21, and *Śikṣās.* 318, 19, compared with *Aṣṭasāhasrikā*, 60.

** Authorities.—(1) *Aṣṭasāhasrikā prajñāpāramitā*, xvii ff. (2) *Daśabhūmaka*, or *Daśabhūmika sūtra*, of which there exists a recension, augmented by Prākrit verses, called the *Daśabhūmiśvara*, one of the nine Dharmas of the Nepālese literature. Numerous quotations by Śāntideva (*Śikṣās.*), Prajñākaramati, etc., show the importance of this book, which seems to have been translated into Chinese A.D. 205–316. [See Nanjio, 105, 110.] It is utilized by (3) the *Bodhisattvabhūmi*, a text-book of the Yogāchāra (or Vijñānavādin) school, (4) the *Madhyamakāvatāra*, a work of Chandrakīrti the Mādhyamika teacher (see p. 748), (5) the *Sūtrālaṅkāra* of Maitreya-Asaṅga.

†† See *Aṣṭasāhasrikā prajñāpāramitā*, p. 33, 17, *ye to avakrāntāḥ samyaktvaniyāmaṃ na te bhavyā anuttarāyāṃ samyaksambodhau chittam utpādayitum*, 'Persons who have entered "ascertainment to arhat-ship" [more accurately "the state undoubtedly leading to *srotaāpatti*"] cannot produce the thought of becoming Buddhas; . . . nevertheless I joyfully approve them if they come to produce such thought.' It is noteworthy that the *Prajñāpāramitā* uses the phrase *samyaktvaniyāma* just as the Nikāyas do (see *Saṃyutta*, Index, p. 54), and contrasts it with *bodhisattvaniyāma* (p. 322, 5). On *niyāma*, see p. 746ᵃ, n. *, p. 747ᵇ, n. *, and Wogihara on Bodhisattvabhūmi.

* This is the account of the *Bodhisattvabhūmi*, but there is no doubt that the Mādhyamikas recognized these distinctions. See *Śikṣāsamuchchaya*, vii. 8, viii. 8; *Madhyamakāvatāra*, 13. 12.

† The Little Vehicle also knows of a *śrāvakagotra*, 'having the disposition of a future arhat.' Here *gotrabhūmi*=*bodhisattva-gotrabhūmi*.

‡ Cf. below, p. 751ᵇ. The *Mahāvastu* seems to admit mortal sin in the Bodhisattva; see p. 744ᵇ.

§ Heresy which destroys the root of merit, the denial of the fruit of actions (see art. KARMA). See p. 744ᵇ, n. ‡.

‖ To complete this description it would be necessary interpret and comment *Mahāvyutpatti*, § 32.

differ from the *anivartanīyabhūmi*, 'the stage from which there is no "return,"' which was discussed above. It is in the 'Joyful stage,' according to a prediction of Buddha, that Ānanda is to be re-born under the name of Nāgārjuna, the founder of the Great Vehicle.

The 'Joyful stage' corresponds to what is called in the Little Vehicle the 'first fruit': the disciple is now no longer an 'ordinary man' (*pṛthagjana, prākṛtapuruṣa*) but a saint (*ārya*), one of the elect (*niyāmāvakrānta*);* for, having brought 'worldly' (*laukika*) meditations (*dhyāna*) to their perfection, he has entered the 'supernatural' career (*lokottaragati*). He is a 'graded Bodhisattva' (*bhūmisthita*), or, more correctly, he is a true Bodhisattva (*paramārthabodhisattva*), and he will certainly become a Buddha. He already possesses in a high degree all the qualities which will develop in the subsequent periods.

The description of this first stage, borrowed by the *Bodhisattvabhūmi* from the *Daśabhūmikasūtra*, is developed according to a scheme which recurs in all the succeeding stages. We give it in detail so that its scholastic character may be noted.

(1) The 'stage' is produced, in a soul whose intentions or aspirations are pure, by the 'formation of the thought of Bodhi' (*chittotpāda*)—a thought which is the pure expression of charity (*dānapāramitā*) or of compassion (*karuṇā*). The thought of Bodhi is here 'absolutely fixed,' and is thus distinguished from the thought as it exists in the preparatory stage. Entirely personal and sincere, the result of meditation (*bhāvanā*), *i.e.* resting on an intuitive view of truth, it consists of the vow of the Bodhisattvas in all the fullness of disinterested generosity—a vow which will never be abandoned or altered under any circumstances, and which will have Bodhi as its end, embracing as it does all the intellectual qualities of the Perfect Buddhas and all the works which they are to accomplish.

Destined to Buddhahood (*sambodhiparāyaṇa*),† the disciple realizes that he is 'born into the family of the Buddha,' and his joy knows no bounds; joy of affection for the Buddhas who have begotten him to this spiritual birth, joy in the feeling that he is devoting himself to the realization of the task of the future Buddhas, and joy in his goodwill towards all creatures.

For him the five terrors (*bhaya*)—terror relative to the necessities of life, to an evil reputation, to death, to unhappy re-births, and to the 'assemblies'—disappear. As he has 'produced' the vow that the sins of all creatures should 'ripen' in him (*ātmavaipākya*), *i.e.* wishing to bear the burden of the sins of others in the hells and elsewhere, he is henceforward free from all evil re-birth. Knowing that there is no one better than he in this world, no one who is even his equal, why should he be afraid of meeting any 'assembly' whatever?

(2) He binds himself by the 'great resolves,' which are independent of limitations of time or space (*mahāpraṇidhāna*),‡ and purifies them: to render homage to the Buddhas; to preserve and preach their Law; to ascend to the 'great nirvāna,' after having performed all the works of a Buddha since his descent from the Tuṣita; to produce thoughts for the purification of all the 'stages' and the fulfilment of all the perfect virtues in order to that end; to ripen all creatures for Buddhahood; to pass through all the universes for the purpose of listening to the Buddhas there; to purify all the 'fields of Buddha' (that is to say, to make of them so many Sukhāvatīs); to enter the Great Vehicle; to act and preach for the salvation of beings with full success and without error; without abandoning for an instant his own path, to exhibit the birth as a *pṛthagjana*, the entrance into the religious life, the miracles, the conquest of Bodhi, the putting of the law into motion, and the great complete nirvāna.*

(3)–(4) The disciple possesses ten qualities 'which purify the stage in which he dwells,' and 'which purify the ten stages.' Becoming more and more perfect, they enable him to ascend from stage to stage: faith, compassion, affection or goodwill, generosity or disinterestedness, indefatigability, acquaintance with the doctrinal books (worldly and Buddhist), knowledge of the world (or of men), modesty in a two-fold form (reverence for self and reverence for others), power and endurance, and the worship of the Buddhas.

(5) Enjoying the sight of the Buddhas described in the *Bodhisattvapiṭaka* (see MAHĀYĀNA), and, in general, of all the Buddhas of every region,—this because of (*a*) the strength of his loving faith, and (*b*) the resolution, made by these Buddhas when they were Bodhisattvas, that they would be visible—he worships these Buddhas, listens to the Law, practises the Law, applies his merits to the acquisition of Buddhahood, and 'ripens' creatures for Bodhi by means of the 'elements of popularity' (*saṅgrahavastu*, see pp. 741[a], 750[a]). All his actions are called 'purifiers of the roots of merit.'

(6) While he dwells in this stage the Bodhisattva is, in all his births, a 'sovereign king of a continent.' Deprived of all egoism, he frees all creatures from egoism.†

(7) Power.‡—Whatever act he undertakes, it is in order to reconcile creatures to himself, and always with thoughts connected with the Buddha, his Law, and his Order; it is always with the thought: 'May I become the first of beings (*i.e.* a Buddha), in order that every creature may have recourse to me for every good.' And all his undertakings succeed. He has the energy required § to leave wife and belongings, to enter on the religious path, and, having entered,§ to conquer a hundred Bodhisattva-trances every second, to perceive a

* The murder of a *niyāmāvakrānta* is a capital sin (*ānantarya*); see *Mahāvyutpatti*, 123. 3: *niyatabhūmisthitasya bodhisattvasya māraṇam*, and cf. on the same topic *Abhidharmakośav.* which has *niyatipatita bodhisattva* (MS. As. Soc. fol. 331*a*). As observed on p. 745[a], the eighth stage is sometimes called *niyatabhūmi*; but, according to the gloss, the reference is to the third *niyati* (see p. 747[b], n. *). Discrepancies in sacred books as to the stage which confers *niyāma* (*niyati*), 'predestination to Buddhahood,' led the scholastics to specify different kinds of 'assured psychological progresses.' The *niyāma* of the 8th stage confers assurance of obtaining and never losing *anābhogatā* and *anutpattikadharmakṣānti* (see below, p. 747[b]); it is the 6th *niyatipāta* of *Sūtrālaṅkāra*, xix. 88.

† This phrase occurs in the Nikāyas (see *Saṅyutta*, Index) and in Aśoka's edicts (see Senart, i. 132, 186, ii. 223). Here, as observed by Prof. Rhys Davids, *Dialogues*, i. 190, *sambodhi* = arhat-ship, and nothing more. On the *vyākaraṇa*, 'prediction,' that the future Arhat gives to himself, see *Saṅyutta*, v. 359.

‡ The *praṇidhānas* are innumerable. They are summed up in the ten great ones (*mahā**), which are all included in the *samantabhadra**, 'universally propitious resolve.' On the *praṇidhāna*, its subdivisions and its virtues, see *Dharmasaṅgraha* cxii., *Bodhicharyāvatāra*, ix. 36.

* This somewhat incoherent list of 'resolves' is cited in *Śikṣās*. 291, 11 f., and summed up in the *Bodhisattvabhūmi*. The last 'resolve' shows that the Mahāyānists did not believe in the *reality* of the 'Bodhisattvas in their last existence.' If the present writer's interpretation of the text *Śikṣās*. 295, 5 is correct, it shows also that Śākyamuni was believed to have been born as a *bāla*, 'an ignorant person,' 'a fool.'

† In the subsequent stages the Bodhisattva is successively sovereign king of the four continents, Śakra, Suyāma, Santuṣita (a variant of the word Tuṣita, common in the ancient literature), Sunirmitavaśavartin. . . . To each stage corresponds a certain virtue which the Bodhisattva makes prevalent in the more and more wide-spread kingdom in which he reigns. These virtues are successively the *pāramitās* (see below, p. 748).

‡ The description of the *prabhāva*, or 'power,' of the Bodhisattva is the same in the succeeding worlds, except that the numbers increase. In the *Daśabhūmaka* we find the series 100, 1000, 100,000, 100 koṭis (koṭi = 10,000,000), 1000 koṭis, 100,000 koṭis, 100,000 nayutas of koṭis (nayuta = 100,000 koṭis of koṭis), the number of the atoms in a hundred thousand times ten great universes, etc. The *Bodhisattvabhūmi* is more moderate, but it gives numbers only for the first seven worlds, 100, 1000, 100,000, 10,000,000, or a koṭi, 100 koṭis, 1000 koṭis, 100,000 koṭis.

§ This clause is wanting in the description of the higher *bhūmis*.

hundred Buddhas, to know the magical beings that these Buddhas animate and the blessing they shower on the Bodhisattvas, to make a hundred universes tremble, to go to these in his bodily form or to enlighten them by his brilliance, to display them to creatures, to ripen a hundred creatures for Bodhi (by means of a hundred magical beings),* to live for 100 *kalpas*, or ages of the world (if he chooses),* to know a hundred *kalpas* in the past and the future, to comprehend (or accumulate, *pravichinoti*) a 'hundred mouths of the Law' (*dharmamukha*),† and to show a hundred bodies ‡ (magical bodies of Buddhas), each of them surrounded by a hundred Bodhisattvas.

This last description, which the technical literature of the Yogâchâras (*Bodhisattvabhûmi*) borrows from the *Daśabhûmaka*, is represented in the *Madhyamakâvatâra* (a Mâdhyamika book) only by a single sentence: 'The Bodhisattva, in the first stage, can make a hundred universes tremble'; but this sentence implies the rest. According to the two schools of the Great Vehicle, every 'graded' Bodhisattva is a very great magician.

The passage from one *bhûmi* to the following (*bhûmer bhûmyantarasaṅkramaṇa*; see *Lalita*, 35, 22) takes place in accordance with a scheme which is always the same. Each 'stage' consists essentially in the development of ten certain qualities—the perfection, the complete realization (*paripûrṇatva, prakarṣagamana*) of which constitutes the beginning of the next stage, and gives rise to ten new qualities, at first very weak, whose perfect maturity will constitute a third stage, and so on.

For this reason, there are ten 'right dispositions' (*samyagâśayas*) in the first stage (1. not contradicting the teachers, *gurus*, etc., 2. living on good terms with the Bodhisattvas who are experiencing the same stage, 3. remaining master of one's thought by subduing passions and temptations, etc.) which, being infinitely pure, enable him to pass into the second stage, or rather constitute the second stage. The latter is termed 'the world of the Bodhisattvas whose dispositions are pure' (*śuddhâdhyâśaya*).

There are ten 'applications of the mind to the intellectual dispositions' (*chittâśayamanaskâra*) which realize the third world, ten 'entrances into the sight of *dharma*' (*dharmâlokapraveśa*; cf. the *dharmâlokamukha* of the *Lalita*) for the fourth, ten 'equalities of pure dispositions' (*viśuddhâśayasamatâ*) for the fifth, ten 'equalities of the Law' (*dharmasamatâ*) for the sixth, ten 'excellent beginnings of a new way nourished by learning and skill in the means' (*upâyaprajñâbhinirhṛtamârgântarârambhaviśeṣa*) which cause him to pass into the seventh, which consists in the culture of ten 'sciences introductory to the real truth' (*paramârthâvatârajñâna*).

But although these *bhûmis* are more and more rich in qualities and knowledge, they are all essentially the thought of Bodhi.

The first seven stages together constitute the 'active' career of the Bodhisattva, during which he exercises himself, and his acts imply movement and intellectual work (*prâyogikacharyâ, sâbhogaº, sâbhisaṁskâraº*). § The seventh marks the completion of this career, and the preparation for passing into the career which is free from movement and 'intellectuation,' the so-called career of knowledge and supernatural virtues (*jñânâbhijñâcharyâ*; cf. *Lalita*, 35, 5).

The *Bodhisattvabhûmi*, utilizing in other respects the data of the *Daśabhûmaka*, but organizing them according to a well-known scheme of the Little Vehicle (cf. the *Visuddhimagga*), establishes the following distribution: Stages i.–vii. constitute the *charyâpratipattibhûmi*, 'stage of exercise.'

Second stage. The Immaculate (*vimalâ*). Practice of Morality (*adhiśîla*).

Third stage. The Illuminating (*prabhâkarî*). Reflexion (*adhichitta*).

Fourth stage. The Radiant (*archiṣmatî*). Knowledge (*adhiprajñâ*), first part: cultivation (*i.e.* meditation) of the *bodhipakṣya dharmas*.

Fifth stage. The Invincible (*sudurjayâ*). Knowledge, second part: cultivation of the noble truths (*satya*).

Sixth stage. The Turned towards (*abhimukhî*). Knowledge, third part: cultivation of dependent origination (*pratîtyasamutpâda*).

Seventh stage. The Far-going (*dûraṅgamâ*), which sums up the six preceding stages, and includes especially the fruits of the sixth, the full development of the intelligence of the Bodhisattvas (*bodhisattvabuddhivichâra*), the complete absence of regard for the particular (*nirnimitta*), and the constant possession of meditation of annihilation (*nirodhasamâpatti*). Now the Bodhisattva dwells at the apex of existence (*bhûtakoṭivihâra*), but he does not realize annihilation (*nirodhaṁ sâkṣâtkaroti*). And yet, just as a Chakravartin king, although unsoiled by humanity, is nevertheless a man and not a god (Brahmâ), so he has not yet escaped from the domain of passion (*kleśa*). Desire, in connexion with the consciousness he has of his actions (*abhisaṁskâra*), and with 'the act of turning oneself' (*âbhoga*) towards an object, has not yet passed away. He is not subject to passion (*na saklešaḥ*) in the sense that any passion whatsoever would work in him; he is not free from passion (*na niḥkleśaḥ*) because he desires the knowledge of a Buddha, and because his intentions (of universal salvation) are not fulfilled.

Nevertheless, being in possession of the perfect qualities of Bodhisattvas, he is superior to the Arhats and the Pratyekabuddhas. Above him there are only the Bodhisattvas of higher worlds and the Perfect Buddhas.

The intentions or aspirations (*adhimukti*) of the Bodhisattva, even when he is only on the threshold of his course (*âdikarmika*), are pregnant with the Bodhi and the salvation of all beings. Therefore he is very much superior to the Arhats and the Pratyekabuddhas. These, however, are in enjoyment not only of freedom from desire (*vîtarâgatva*), but also of lofty intellectual attainments. Therefore, during the first six *bhûmis*, the Bodhisattva is inferior to them. From this point of view, he surpasses them only on entering the seventh stage. Such is the teaching of the *Maitreyavimokṣa* and the *Daśabhûmaka* (*Madhyamakâvatâra*, 18–20).

3. Third Period: *The last three stages of the Bodhisattvas.*—The eighth 'stage' is called the Steadfast, or rather the Immovable (*achalâ*).* Its characteristic is the possession of that supreme virtue called the *anutpattikadharmakṣânti* ('upholding the doctrine of the non-production of things'). †

The Bodhisattva is free not only from all *nimittagrahaṇa* ('particular and eager act of attention'), but also from all *âbhoga* ('turning towards, taking into consideration'). He is immovable. His actions, of body and of voice as much as of mind, are infinitely numerous, merciful, and fruitful, but are in a sense foreign to him, for the idea of duality, of being and non-being, of self and non-self, has perished for him; as also all movement (*samudâchâra*) connected with or belonging to the Buddhas, the Bodhisattvas, nirvâṇa, or the Arhats.

The Buddhas must also intervene to prevent such a Bodhisattva from entering nirvâṇa. They do so by virtue of the vow which they made formerly when they were Bodhisattvas, for since they have become Buddhas all activity has ceased for them. They remind the Bodhisattva of the eighth stage that his task is not accomplished, that he still needs many things in order to be a Buddha: 'Your "patience in the real truth" (*paramârthakṣânti*) in order to become Buddha is excellent; but you possess neither the ten powers

* The words in parentheses are wanting in the *Daśabhûmaka*.

† The same as the well-known *dharmâlokamukha* (*Lalita*, p. 31, Kern, i. 405). See next note.

‡ 'To show a hundred bodies,' the phrase of the *Daśabhûmaka*, is replaced in the *Bodhisattvabhûmi* by the words: *skandhadhâtvâyatanâdikânâm dharmamukhânâm kâyaśatam darśayati* (?).

§ The phrase *avabhâsabhûmi* (*Laṅkâvatâra*, 68. 6) possibly refers to the first seven stages.

* Other names are: stage of the royal prince (*kumâraº*), stage without return (*anivartya*), stage of nirvâṇa, 'settled' stage (*niyatabhûmi*: *tasyâm trîṇiyânyitipâtapatito bhavati*; see p. 745ª, and p. 746ª, n. *). In iconography, Bodhisattvas always appear with royal ornaments. The title of Mañjuśrî, *Kumâra*, is well known.

† On this *kṣânti*, also called *paramârthakṣânti*, see below p. 751.

nor the four abilities. . . . See how infinite are our bodies, our knowledge (*jñāna*), our kingdoms, our glory. You must acquire the same; you must appease those who are not appeased, convert those who are not converted,' etc.

It is for this reason that the Bodhisattva remains in existence. Without activity of body, voice, or mind, enjoying the ripe fruits of all his previous conduct, he develops marvellously. Formerly it was in his single body that he pursued the career of a Bodhisattva; now he multiplies (or divides) his body infinitely (*apramāṇakāyavibhakti*); he knows and surveys the whole universe.* He possesses the sovereignties (*vaśitā*), and ripens and blesses the creatures, etc.

The ninth stage, 'stage of the Good Ones' (*sādhumatī*), 'of the prince imperial' (*yauvarājya*),† is produced by the enthusiasm of the Bodhisattva, who is not content with the 'tranquil deliverances' (*śāntavimokṣāsantuṣṭi*), and who acquires the knowledge called *pratisaṁvid* (cf. *paṭisambhidā*), especially all that concerns the teaching of the Law (*pratibhāna*, see *Lalita*, 35, 19).

The tenth stage, 'Cloud of the Law,' is called also the 'stage of Consecration' (*abhiṣekabhūmi*) or 'stage of the Arrival at the End' (*niṣṭhāgamanabhūmi*). The Bodhisattva becomes worthy of the royalty of the Law, which will make him equal, or almost equal, with the Buddhas. He realizes the last of the *samādhis* ('contemplations'), that of 'the excellent consecration in omniscience' (*sarvajñānaviśeṣābhiṣeka*). The Buddhas consecrate him.‡ He acquires innumerable 'deliverances,' 'magical formulas,' or 'contemplations' (*dhāraṇīs*), supernatural powers. He receives the excellent rain of the True Law, and, having himself become a 'cloud of the Law,' he is sending upon creatures the good rain which lays the dust of passions and causes the growth of the harvest of merits; he is still a Bodhisattva, and renders homage to the Buddhas, as we see in the *Lotus of the True Law*; but, to use the strong expression of the *Bodhisattvabhūmi*, he is a Bodhisattva who has become Tathāgata (*tathāgatās tathāgatabhūtāś cha bodhisattvāḥ . . . dharmam deśayanti*).

A word must be said in conclusion with regard to the stage of the Buddhas (*buddhabhūmi*) or 'the universal splendour' (*samantaprabhā*), or 'stage of non-appearance' (*nirābhāsa*, *Laṅkāv.* 49), as opposed to the stages in which something is shown to the mind (*avabhāsa*°). It is beyond the scope of this article to examine the Buddhology of the Great Vehicle (see art. MAHĀYĀNA), but the question may be asked what is the difference between a Buddha and a Bodhisattva who has arrived at the end (*niṣṭhāgata*). We are assured that this difference is very great, but it is capable only of metaphorical expression. The knowledge of each of them is infinite in its aim and its methods, but the Buddha excels the Bodhisattva as a lamp of superlative brightness (*suviśuddha*) excels a bright lamp, as sight in broad daylight excels sight in semi-darkness, or even (and this seems to go further) as the newly-born child excels the embryo, etc. (*Bodhisattvabhūmi*, III. vi.).

The *Madhyamakāvatāra* of Chandrakīrti, the greatest Mādhyamika authority known to the present writer on this subject, gives a slightly different idea of the stages of the Bodhisattvas. Without claiming that the difference is a fundamental one—it is difficult to pass judgment upon such literature—we recapitulate here the information it contains, by way both of complement to, and of rectification of, the foregoing statement:

Chandrakīrti establishes an intimate connexion § between the *bhūmis* and the perfect virtues (*pāramitās*), which exist in all the 'stages,' but which assume predominance in turn.

(1) The Joyful stage (*pramuditā*) is the domain of charity (*dāna*)—charity, which, as we have seen, is not perfect until it is fertilized by knowledge of the void.

(2) The Immaculate stage (*vimalā*) is the domain of morality (*śīla*). The saint accumulates the 'ten good paths of action' infinitely pure—which is not the case in the preceding period. This purity consists especially in the absence of the conception of the ego. Belief in the ego, considering as real the abstention from murder, the person who abstains and the person who is not murdered, is the 'want of morality of those who practise morality.'

(3) In the Shining stage (*prabhākarī*) the Bodhisattva 'shines' by patience. Anger is the only evil that can in a moment destroy the merits accumulated during centuries. The saint acquires the four trances (*dhyāna*), the four 'immeasurables' (*apramāṇya*), and the five supernatural powers (*abhijñā*). He diminishes and reduces to nothing desire, hatred, and error, and triumphs over them in the world.

(4) The Radiant stage (*archiṣmatī*) is the domain of energy (*vīrya*) which helps towards the perfecting of good works, intellectual and moral, and especially towards application to the thirty-seven virtues connected with the Bodhi (*bodhipakṣikadharma*), and also the complete surrender of the idea of 'mine.'

(5) In the Invincible stage (*sudurjayā*) meditation or ecstasy (*samādhi*, *dhyāna*) predominates. The Bodhisattva, safe from demons, meditates on and understands the four noble truths (*ānulomikī kṣānti*), or, what comes to the same thing, relative truth and real truth (*saṁvṛti* and *paramārthasatya*) (see p. 751).

(6) The 'Turned towards' stage (*abhimukhī*), the domain in which *prajñā* (or knowledge) reigns, is thus named because the Bodhisattva, understanding 'dependent origination,' is turned towards the principles of the Perfect Buddhas. The *prajñā* predominates in him. He obtains the *nirodhasamāpatti* ('destruction-trance'), which was not possible before, on account of the non-predominance of the *prajñā* and the pre-eminence of charity, etc. Who then may be taught the profound doctrine of dependent origination, *i.e.* vacuity (*śūnyatā*), which alone gives a meaning to all other teaching? Those who, though they are 'ordinary men,' show sincere and profound enthusiasm on hearing of vacuity. In them there dwells in germ the intelligence of the Perfect Buddhas, and the love, which they will develop for this teaching that satisfies the mind so well, will be a pledge and a reason for morality, charity, patience, etc. The teaching will be imparted by a Bodhisattva arrived at the first stage, the Joyful world, or, more correctly, the teacher, in his interpretation of the Scripture, will be governed by the exegesis of Nāgārjuna, a Bodhisattva in the first stage.

(7) In the Far-going stage (*dūraṅgamā*), together with the perpetual 'ecstasy of annihilation,' there prevails the perfection of skill in the means (i.e. *upāyakauśalapāramitā*),* these means leading towards (i.) the acquisition of the Bodhi, (*a*) compassion, (*b*) knowledge of the elements of existence, (*c*) desire for Bodhi, (*d*) non-surrender of existence, (*e*) immaculate sojourn in existence, (*f*) burning energy; and (ii.) the 'ripening' of creatures, (*a*) making their insignificant roots of merit bear great fruit, (*b*) implanting in them great roots of merit, (*c*) removing all obstacles to the law of the Buddha, (*d*) enabling them to enter the Great Vehicle, (*e*) causing them to ripen in the Great Vehicle, and (*f*) leading them to deliverance.

(8) In the Immovable stage (*achalā*) predominates the virtue of resolves (*praṇidhānapāramitā*).† The Bodhisattva is no longer in the world of becoming (*saṁsāra*), but, by virtue of his sovereignty over things (*praṇidhānavaśitā*), he appears in the universe in various aspects. His resolves are perfectly pure, that is to say, the resolves which he has formed during the course of his active career all bear their fruit, as if he were really acting.

(9) In the Sādhumatī the Bodhisattva is called 'good' (*sādhu*). Development of the *balapāramitā* takes place, *i.e.* of the ten powers of a Buddha.

(10) In the 'Cloud of the Law' there is *jñānapāramitā*, excellence and predominance of the knowledge of a Buddha.

The *Sūtrālaṅkāra* (xviii. 47, see also xx. 10 f.) gives the following scheme:

(1) *Adhimuktichary-ābhūmi.*—*Sambhāra* (equipment, exertion, preparation) in order to enter a true *bhūmi*, to become a Bodhisattva.

(2) *Bhūmis* i.–vi.—*Sambhāra* towards *animittatva* (absence of particularized and eager attention), which is obtained in the

(3) viith *bhūmi*. There is *sambhāra* towards *anābhogatā* (absence of turning oneself), which is obtained in the

(4) viiith and ixth *bhūmis*. There is *sambhāra* towards *abhiṣeka* (consecration), which is obtained in the

(5) xth *bhūmi*. There is *sambhāra* to

(6) *Buddhabhūmi*, or *niṣṭhāgamana*, 'arriving at the goal.'

IV. SPIRITUAL LIFE OF THE BODHISATTVA, A FOLLOWER OF THE GREAT VEHICLE.—The question now presents itself: What is the connexion between the follower of the Great Vehicle who aspires to Buddhahood, but who is, properly speaking, only a future Bodhisattva residing in the *gotra* or *adhimukticharyā bhūmi*, and the real Bodhisattva in possession of one of the ten stages, and to what extent does the former participate in the 'perfect virtues'? The disciple, however humble he may be, must apply himself to the double task of merit

* Cf. the *adhikāriṇas* in *Vedānta*.

† And also *niyatacharyābhūmi*. *Yuvarāja*, 'heir-apparent associated with the reigning sovereign in the government' (Monier Williams).

‡ See vol. i. p. 96b. *Lalita* has *sarvajñajñānābhiṣeka*.

§ This connexion is pointed out in the *Daśabhūmaka*, but almost entirely neglected in the *Bodhisattvabhūmi*.

* The description is borrowed from the *Bodhisattvabhūmi*.

† See above, p. 743b, n. §.

and knowledge, in which are included all the virtues that make a Buddha. He participates directly and practically in the first seven 'stages,' being generous, moral, patient, energetic, meditative, studious of the doctrine, and skilled in the means to be employed in saving others. If the 'sovereignties' (*vaśitā*), the powers, and the knowledge of a Buddha are beyond his reach, he can always make a sort of imperfect imitation.

Śāntideva, a 7th century theologian, who is at the same time a writer of merit, has left a work entitled *Introduction to the Career of the Bodhi*, or *Introduction to the Practice of the Bodhisattvas*, in which, summing up some traditional doctrines and the speculations of his own time, he gives no place to ambitious theories, scholastic and mythological, regarding the 'stages.' Bodhisattvas in possession of stages, great Bodhisattvas (*bodhisattva mahāsattva* or *mahābodhisattva* or *daśabhūmīśvara bodhisattva*) intervene only as protecting and helpful saints. Grouped round the Buddha, they constitute the third 'jewel' (*ratna*), *i.e.* the Order (*saṅgha*) which, in the Little Vehicle, includes the whole of the monks. They are, therefore, closely associated with the Buddha and the Law, which are the first two 'jewels' in the formulas of homage and refuge. They fulfil an even more important part than the Buddha, being regarded as more merciful and more active. But, the more exalted they are, the less eager for the moment is the disciple to take his place beside them in the *bhūmis*. He is only a beginner (*ādikarmika*), subject to falls, uncertain of success, relying far more on the favour of the Buddhas and the Bodhisattvas than on his own powers and merits.

1. **Initiation or conception of the thought of Bodhi.**—Every disciple of the Mahāyāna aspires, by charity, to become a Buddha. He has to take the vow of Bodhi and assume the obligations and rule of life of the future Buddhas (*bodhisattvasaṁvara*). As if to mark more clearly the difference between the two Vehicles, he is not obliged, as are the followers of the Little Vehicle who are candidates for arhat-ship (*śrāvakayāna*), to enter monastic life. Legend informs us that the future Śākyamuni was often called 'householder' (*gṛhapati*), and Śākyamuni was in fact married. But there are Bodhisattvas who leave home (*pravrajita*) and add to the obligations of the Bodhisattvas the obligations of monks. These constitute a rule (*vinaya*), framed after the pattern of the Vinayas of the Little Vehicle, and will be discussed in art. MAHĀYĀNA (*bodhisattvaprātimokṣa*). Monks are more fit than the laity to practise certain virtues, less fit to practise certain others. Consequently the entrance into religion will depend upon the temperament and the merit acquired by the disciple. He must in some way have the 'vocation' in order to have the right to become a monk.

The disciple (1) reflects, either by himself or under the direction of a teacher, on the advantages of the vow of Bodhi, (2) performs pious works with a view to purifying his soul, and (3) undertakes the vow of Bodhi.

(1) 'The sin accumulated in my former existences, accumulated in all creatures, is infinite and omnipotent. By what power can it be conquered if not by the thought of Bodhi, by the desire to become Buddha for the salvation of men? This totally disinterested desire is infinitely sacred. It covers a multitude of sins. It assures happiness during the round of existences. It is a pledge of the supreme happiness of the Buddhas for one's self and one's neighbour. All honour to the Buddhas whom everybody quite naturally loves, and who have as their sole aim the salvation of men!'

(2) 'I worship the Buddhas and the Bodhisattvas in view of undertaking the vow of Bodhi (*vandanā*). Possessing nothing, by reason of my sins, how can I render unto them the worship (*pūjā*) which is their due? I beg them to accept this whole universe which I offer them in thought. But I am wrong, I do possess something, I give myself unreservedly, by pure affection, to the Buddhas and to their sons, the divine Bodhisattvas. I am their slave and, as such, have no more danger to fear. Of all dangers, the greatest is that which comes from my sins. I know how harmful these sins are, I deplore them, I acknowledge them (*pāpadeśanā*). I see and you see them as they are, pardon them!'

(3) 'But enough of myself. Let me belong entirely to the Buddhas and to creatures. I rejoice in the good actions which, among ordinary men, for a time prevent evil re-births. I rejoice in the deliverance gained by the arhats. I delight in the state of Buddha and Bodhisattva, possessed by the Protectors of the world (*puṇyanumodanā*). I entreat the Buddhas to preach the Law for the salvation of the world (*adhyeṣaṇā*). I entreat them to delay their entrance into nirvāṇa (*yāchanā*). All the merit acquired by my worship of the Buddhas, my taking of refuge, my confession of sins, etc., I apply to the good of creatures and to the attainment of the Bodhi. I wish to be bread for those who are hungry, drink for those who are thirsty (*pariṇāmanā*). I give myself, all that I am and shall be in my future existences, to creatures (*ātmabhāvapariṭyāga*). In the same dispositions as those in which the former Buddhas were when they undertook the vow of Bodhi, and just as they carried out the obligations of future Buddhas, practising in their order the perfect virtues, in these dispositions I conceive the thought of Bodhi for the salvation of the world, so also I shall practise in their order my obligations (*chittotpāda*, or vow, *praṇidhi*).'*

This, together with the necessary preliminaries, constitutes what is called the 'production of the thought' (*chittotpāda*, a shortened form of *bodhichittotpāda*). The *guru* solemnly declares, in presence of all the Buddhas and Bodhisattvas, that N. . . . has produced the thought and taken the vow. Now the disciple is a beginner (*ādikarmika*), a neophyte, 'a seed of Buddha,' 'a young shoot of Buddha' (*buddhabīja*, *buddhāṅkura*). Of course the 'production of thought' in question belongs to the domain of the *adhimuktichāryā* (see above, p. 745[b]), and is only an imitation or a reduction of the all-pure 'production of thought' which constitutes the so-called 'Joyous stage.'

The series of pious deeds (*bhadrachāryā* = 'auspicious practice') just mentioned (from 'adoration,' *vandanā*, to 'prayer,' *yāchanā*) forms not only 'the introduction to the path of the Bodhisattvas,' the entrance into the Vehicle which leads to Buddhahood, but also a daily ritual (*vidhi*), the daily food of the spiritual life, and, to express it technically, the triple element (*triskandha*)† which must be set in motion three times a day and three times a night: (1) confession of sins, with its preliminaries of adoration and worship, (2) acquiescence or rejoicing in good, and (3) prayer with a view to securing the preaching of the Law and delaying the entrance of the saints into nirvāṇa. The application of merits (*pariṇāmanā*) and the vow (*praṇidhi*) complete the ritual of worship (*pūjāvidhi*) which is called 'supreme worship' (*anuttarapūjā*), and is termed quintuple, sextuple, or decuple, according to the elements into which it is broken up.

2. **Protection, growth, and purification of the thought of Bodhi.**—The disciple has undertaken the thought of Bodhi; he must not lose it, but he must purify and increase it by exercise. He must add the practice (*charyā*) to the vow (*praṇidhi*). There is therefore a double duty which may be traced to a single principle: (*a*) vigilance on the thought of Bodhi (*bodhichittāpramāda*), and (*b*)

* These formulas of Śāntideva (*Bodhicharyāvatāra*) are well known. They recur in a more or less changed or abridged form in the *Dharmasaṅgraha* (see p. 3, note), in the *Svayambhūpurāṇa*, p. 117 f. (with some alterations in a monotheistic direction; see ADIBUDDHA), in some Tantras, e.g. *Chaṇḍamahāroṣaṇa*, iv. 5, in Nepalese manuals and anthologies like the *Ādikarmapradīpa* and the *Kriyāsamuchchaya* (MS Dev. 110, fol. 35; Foucher, *Iconographie*, ii. 8; see Poussin, *Études et Matériaux*, 106 and 226; and, on the Chinese authorities, Chavannes, 'Les Inscriptions chinoises de Bodh-Gayā,' *RHR* xxxvi. 1).

In the *Śikṣāsamuchchaya*, p. 280 f., Śāntideva gives information about his authorities, the most important being the *Bhadracharyā*, 'propitious practice,' a work in Gāthā dialect, which exists in the original, in Tibetan, and in Chinese (Nanjio, 1142; translated A.D. 746–771), then the *Akṣayamatisūtra* (Nanjio, 74; trans. A.D. 265–316), the *Ratnamegha* (A.D. 503), etc. It would be useful to trace in the literature of the Little Vehicle, at least the commentaries of Buddhaghoṣa on the 'taking of refuge' (*Sumaṅgalavil.* p. 231 f.), the first allurements of the Bhadracharyā. Apart from the thought of becoming Buddha, we find there what forms the essence of our ritual, viz. the offering of oneself to the Buddhas (*attasanniyyātana*). As regards confession of sins, the part it plays in ancient Buddhism is well known. In art. KARMA will be found an account of the part it takes in the remission of sins, according to the doctrines of the Great Vehicle.

† There are several works entitled *Triskandhaka*, 'work on the three elements.' One of them is devoted to the present subject (see Nanjio, 1090, trans. A.D. 590, *Bodhicharyāv.* v. 98–99, *Śikṣās.* 290, 1; Takakusu, *I-Tsing*, p. 75, note). Another treats of morality, devotion, and wisdom (cf. *Itivuttaka*, § 59, *Kandj. Mdo*, xxiii. 17). It is difficult to identify *Mahāvyut.* 65, 59.

continued watchfulness over mind and body (*samprajanya*).

(*a*) The Bodhisattva has bound himself by a formal promise in presence of the Buddhas and of all creatures. If he breaks this promise, he will lose himself, or, if he is saved, it is solely through the goodness of the Buddhas. Tossed about by the power of sin and by the thought of Bodhi, dragged downwards by the one, exalted by the other, he will require a long period before attaining to a Bodhisattva stage. Now is the time when he must make an effort, must avail himself of his birth as man, privileged, as by a miracle, to hear the preaching of the Law (which takes place in this world only at long intervals), endued with faith (*śraddhā*) which makes him able to exercise himself in well-doing, and possessed of a 'day of health' to enable him to avoid incurable diseases, *i.e.* sin. For the hells retain their prey a long time. If any one falls into them, as one continues to sin there, it is a miracle if he ever escapes. It is necessary, therefore, to fear hell (*saṁvega*), to wage a desperate warfare with the passions, and to observe the rules (*śikṣā*) of morality.

(*b*) But how can he keep the rules, if he does not keep watch over his fictile thought? Thought, like an elephant in rut, must be bound to the post of the Law by the memory of the Law (*smṛti*) and constant and careful watching (*samprajanya*). And the benefit of this mastery, of this taming of thought 'which goes where it is wished, and stops when it is wished,' is two-fold: not only will faults against morality be avoided, but power will be obtained to practise the perfect virtues, which are only thought, beginning with charity: the desire to give outweighs everything, even when no gift is actually possible, etc.

The disciple, being master of his thought, will be able to practise the perfect virtues (*pāramitā*), that is to say, the first six. Śāntideva does not concern himself with the virtues of *praṇidhāna*, *bala*, and *jñāna*, which belong actively only to the Bodhisattvas of the superior stages; his examination is restricted to generosity, morality, patience, energy, meditation, and knowledge.

The means or resource (*upāyakauśalya*) is nothing else than generosity, which aids the disciple to understand vacuity (*prajñā*), and the understanding of vacuity which helps him in the practice of giving, and enables him to conquer his passions. When he knows that nothing exists, he knows that sins are not sins. When he has the good of others in view, all sins are permissible (see *Śikṣās.*, 164, 16).

3. Virtue of giving (*dāna*) or compassion (*karuṇā*, *kṛpā*), or, if the term be preferred, of charity, is, as we have seen, the cardinal principle in the career of the Bodhisattva. If any one aspires to Buddhahood, and not to arhat-ship, it is because he thinks: 'My neighbour suffers his pain just as I suffer mine; why should I be anxious about myself, and not about him?'* The result is that the *dāna* whose highest expression is found in the 'production of the thought of Bodhi,' although it is the humblest of virtues,† is nevertheless the most important.‡

'The merciful man may commit sin, when, by the eye of knowledge, he perceives some advantage therein for his neighbour.' Not only ought meditation and the pious deeds of a meditative kind to be abandoned in order to practise charity; even the vow of chastity binding on monks, it is said, was violated by a certain Bodhisattva in his compassion for a woman. Compassion is therefore the great resource (*upāya*) in the sense that, every consideration whatever being laid aside, it saves the Bodhisattva from all dangers, and atones for all the faults of which he may be guilty.§ It is also the supreme means (*upāya*) of conciliating creatures (*saṅgrahavastu*), expressing itself in liberality, almsgiving, affability, and obligingness, and sharing the joy and the sorrow of others.‖ It is because he possesses this benevolence (*maitrī*), because he makes use of it to convert the creatures, that the Bodhisattva deserves to be called by that name (*Bodhisattvabhūmi*, I. viii.). But whatever the virtue of generosity may be, it must not stand in the way of its aim, must not be unreasonable or excessive (*atityāga*). It is especially after he has conquered a stage that the Bodhisattva is able to be useful to creatures, and his charities must not form an obstacle to his spiritual career, unless it be to help some Bodhisattva more capable of benefiting beings than he is himself. Moreover, there is a gradation among gifts: to give one's flesh is good, but to give spiritual food, to preach the Law (*dharmadāna*), is certainly better. It is not necessary to follow Śākyamuni's example and allow one's self to be devoured by a tigress, when safety (*abhayadāna*) can be otherwise won for men, and they may be ripened for Bodhi.*

4. Morality or virtue (*śīla*).—The essence of *śīla* is self-preservation (*ātmabhāvarakṣā*) for the sole purpose of benefiting creatures. Neither a *preta* nor one condemned to re-birth in hell can be of service to others. It is necessary, therefore, to make sure of good re-births, in order to undertake the career of a Bodhisattva. For this purpose, morality must be practised. It is no less necessary to avoid scandal. Every future Buddha, however great his sins, must be revered by men: if they despise him, as a fire covered with ashes, they run the risk of hell. By inquiring after the preachers of the Law, by never forsaking 'spiritual friends,' by keeping constant watch over the state of soul and body, he succeeds in avoiding all harmful actions (*anarthavivarjana*) and fruitless motion (*niṣphalaspandana*), and in preserving good deeds (*puṇyarakṣā*).

The Great Vehicle, however, distinguishes the virtue of abstention (*nivṛttiśīla*), which was the whole *śīla* of ancient Buddhism, from positive virtue (*pravṛtti°*); and it does not set apart the *pāramitās*, which have no practical existence the one without the other. The following account, which is offered as a specimen (according to *Bodhisattvabhūmi*, I. ix.), ignoring a host of scholastic details, will give an idea of moral theology, as the Yogāchāras understood it. It will be noticed that all the 'perfect virtues' are examined according to the same subdivision.

i. What is morality or virtue (*śīlasvabhāva*)? Not to violate the rule. It has four elements: (1) shame (*apatrāpya*) with regard to others, (2) purity of intention and modesty (*hrī*) with regard to one's self, (3) reformation after transgression, and (4) regard for the Law (*ādara*), which keeps the Law ever present in the mind (*smṛti*).

ii. Morality in general (*sarvaśīla*) has two aspects: as regards householders (*gṛhipakṣagata*) and monks (*pravrajitapakṣagata*). It has three elements: (1) observance of the rules of life (*prātimokṣasaṁvara*), which apply to seven categories of persons, monks, nuns, catechumens (*śikṣamāṇa*), novices (*śrāmaṇera*), and the laity of both sexes; showing disregard for the pains and pleasures of the world, like a king undismayed by the loss of his kingdom (as a monk, the Bodhisattva does not take delight even in honours duly conferred on him; he loves solitude even in the midst of the clergy, is severe towards his own faults, lenient towards others, etc.); (2) accumulation of salutary principles (*kuśaladharmasaṅgraha*) with a view to enlightenment, devotion to study, reflexion and meditation, respect for the teacher, ministry to the sick, confession in presence of the Buddhas, the Bodhisattvas and the brethren (*sahadhārmika*), patience, etc.; (3) morality applied to the conquest and consequently to the conversion of one's neighbour; association with neighbours in their good and useful undertakings, and in their troubles and sicknesses, giving them right teaching, advice, and exhortation concerning worldly and supernatural things, gratitude and requital for help received, deliverance from fear, soothing the pain that results from want of enjoyments, bestowing the necessaries of life on the destitute, gathering dis-

* See *Bodhicharyāv.* vii. 90 *f.*

† Because, in principle at least, it is tainted with error and passion. It presupposes the belief in the existence of the person who has pity, of the person to whom something is given, and, lastly, of alms (see above, p. 740b). It also includes emotion and desire. From another point of view, generosity does not save a man from hell, as morality does, but it 'qualifies' re-birth. A 'moral' miser will be re-born as a man, but as a man miserable indeed; a generous sinner will be re-born as an animal, but as a noble animal, as an infernal being, but in a special and tolerable hell, etc.

‡ Pity is the only virtue to which he must apply himself. The others will follow of themselves. See *Āryadharmasaṅgīti*, quoted *ad Bodhicharyāv.* ix. 76.

§ See the important texts cited in *Śikṣāsamuchchaya*, 164, 8 *f.*

‖ See Kern, *Manual*, p. 67, and above, p. 741a and n. †.

* For some interesting details see *Bodhicharyāv.* v. 83–87. On the giving of flesh, cf. *Mahāvagga*, vi. 23, and Takakusu, *I-Tsing*, p. 198. The gift of the Bodhisattva is thus defined in *Abhidharmakośa: samyak sambodhyarthaṁ sarvasattvārthaṁ cha*, in opposition to the gift of gratitude, of hope, to the gift made with a view to heaven, to reputation, to the 'ornament of thought,' etc. On the legends of the charity of the Bodhisattva see *Jātakamālā*, ix. and *passim*.

ciples by generosity, etc., behaving according to the rules laid down (on drinking, etc.) when there is no trouble, compliance with the thoughts of men who need conversion (*chittānuvartanā*), having recourse when necessary to punishments, by mystical wonders giving them visions of hell, causing Vajrapāṇi or some other mighty Yakṣa to appear when some listener ventures to doubt his word, or showing portents, multiplying his personality, passing through walls, rocks, etc.

Casuistry offers some curious details, logically deduced from the definition of the Bodhisattva. There are certain acts, wicked in themselves (*prakṛtisāvadya*), which, committed with good intention by a Bodhisattva 'skilled in the means,' not only are not culpable, but are even highly meritorious. When he sees a robber given to murder, and not shrinking even from the murder of Śrāvakas or Bodhisattvas, the saint will kill him, thinking at the same time: 'It matters little if I am condemned to hell, but may this sinner avoid hell.' [In the same way, wicked kings may be dethroned; those who take the property of the Buddhist church or violate *stūpas* may be deprived of the fruit of their robberies, lest in their pride of possession they increase their sin still more. Directors also (*vaiyāpṛtyakara, ārāmika*) who waste the property of the Order must be set aside.] For the same reason unchastity is permissible when due to compassion, in order to prevent a woman conceiving hatred—but not in the case of a married woman; nor does this rule apply to monks. Similar exceptions are allowed on all the other commandments of morality.*

iii. Difficult virtue (*duṣkara*) is practised (1) when a man leaves high estate, sovereignty, or pleasures, to take the vows of a Bodhisattva; (2) when he is in poverty and distress, and yet takes them; and (3) when he practises such a high degree of watchfulness and care that he hardly ever commits even a small sin.

iv. All-round virtue (*sarvatomukha*). From this point of view morality is quadruple: (1) acquired (*samātta*), in so far as the vows taken are of three kinds (ii. 1–3); (2) natural (*prakṛti°*), in virtue of which the Bodhisattva, by the very excellence of his character, acts purely in thought, word, and deed; (3) practised; the virtue practised in former births endows him with the power to resist evil and to love good; (4) associated with the expedients, *i.e.* with the four 'elements of popularity.'

v. Virtue of a good man (*satpuruṣa°*): (1) he is virtuous, (2) he inspires others with virtue, (3) he praises virtue, (4) he shows sympathy for those like-minded, (5) when he falls into sin he makes due restitution.

vi. Omni-form virtue (*sarvākāra*) is of thirteen classes, divided into two groups of six and seven respectively: (1) turned towards enlightenment, (2) clear through assuming all the precepts, (3) placed in sinless joy because free from the two extremes of luxury and asceticism, (4) perpetual, (5) firm, (6) possessed of virtue's ornament and itself the ornament of virtue; and (1) negative virtue (*nivṛtti°*) in abstaining from murder, etc., (2) positive (*pravṛtti*), by the accumulation of merits with a compassionate aim, (3) watchfulness in guarding both the negative and the positive, (4) 'ripening' the marks of a Great Man (*i.e.* of a Buddha), (5) reflexion (*adhicchitta*), (6) fortunate re-births, (7) the welfare of others.

vii. Abstaining from all action hurtful to others, having regard to the principle, 'Do not to others what you would not have others do to you' (*vighātārthikaśīla*).

viii. Virtue as pleasant in this world as in the next. It includes four kinds of pure actions: (1) forbidding to men what ought to be forbidden them, (2) allowing what ought to be allowed, (3) gaining the sympathy of others, and (4) reproving them—the virtue of morality associated with generosity, patience, energy, contemplation, and knowledge.

ix. Purified virtue is ten-fold; it is especially 'well-taken,' for the monastic vow is taken in order to obtain the Bodhi and not to secure sustenance; it is attentive, surrounded by good aspirations (for there is no question of meriting heaven), orthodox (conforming to Buddhist rules), free from exaggeration, looseness, or asceticism, and leads to nirvāṇa. It confers various blessings: grace and acceptance by the Buddhas (*Buddhaiḥ samanvāhriyate*), death in serene joy, re-birth among Bodhisattvas equal or superior in merit, still more perfect morality in the future, etc.

5. Patience (*kṣānti*).—Patience is three-fold: endurance of suffering (*duḥkhādhivāsanākṣānti*), of injuries (*parāpakāramarṣaṇa°*), of insight into the law (*dharmanidhyāna°*; cf. *Majjh.* ii. 175). This last heading (=*dharmeṣu samyakṣantīraṇa°, Bodhisattvabhūmi*, I. vi.) is divided in the books of the Great Vehicle into three stages: *ghoṣānugā, anulomikī, anutpattikadharmākṣānti*.

The Pāli *Abhidharma* (*Vibhaṅga*, 325 and 328) shows (1) that *kṣānti*† is equivalent to *diṭṭhi* (*θεωρία*), *ruchi* ('pleasant adhesion'), *mati* ('understanding'); (2) that *dharmanidhyānakṣānti* is the same as [*satya*] *anulomikakṣānti*, that is, regarding all things as fragile, grievous, and insubstantial, in conformity with the four noble truths; and (3) that this *kṣānti* is produced either by teaching (which corresponds to the *ghoṣānugā kṣānti*), or by reflexion (which is, properly speaking, the *ānulomikī kṣānti* of the Skr. texts). There remains the *anutpattikadharmakṣānti*,* of which no trace is to be found in the Pāli *Abhidharma*, and which consists in supporting the view that 'things are not produced,' that they not only have no substantial reality, but that even their production by causes is only an illusion.†

The name of patience applied to 'insight into the law' is justified from a double point of view: (1) resistance and resignation of mind are necessary to the acceptance of the doctrine of the non-existence of things: those who do not 'uphold the profound teaching' (*gambhīradharmakṣānti*) are numerous; (2) this estimate of the reality of things is an essential element of patience in the ordinary sense.

Śāntideva, however, pays little heed to scholastic distinctions. He summarizes, in an eloquent but hardly systematic account, the reasons that justify patience from the philosophical point of view, and make it an essential element of the spiritual life.

Impatience or anger is the greatest of sins, especially for a Bodhisattva, who, by definition, is a 'being of goodness.' It destroys all merits. Even during the earthly life it causes great unhappiness. Anger must be destroyed, and the discontent, born of desire or of dislike, that nourishes it. What is the use of discontent?

Suffering is the common lot of men; there is plenty of occasion to get accustomed to it, and it loses, by custom, all its bitterness; it is very useful, as it arouses pious fear of sin, pity for sufferers, love for Buddhas who deliver from it, disgust for existence, both perishable and penible

Anger, again, is not aroused by physical suffering, because we know that it is caused by the trouble of the bodily humours (cf. the medical theory of the Greeks). It is also foolish to be angry with men who injure us, for (1) they are acting merely under the influence of causes, and (2) in the first rank of these causes are the wicked deeds of our previous existences. 'My enemy takes a stick to beat me and I have assumed this body, liable to be wounded, and destined to be beaten. Far from being angry with my enemy, I ought to consider him almost as beneficial as the Buddhas, for he affords me the opportunity of practising patience, and forgiveness of wrongs, which blots out my sins. Am I to make this principle of salvation the cause of my condemnation? Let us rather pity our enemies who ruin themselves by their anger, and let us think of means of saving them in spite of themselves, as the Buddhas do. As for anger provoked by slander, loss of property, etc., it is particularly absurd; so also is anger against the enemies of our religion, iconoclasts,' etc.‡

Envy requires special attention, for the envious man makes use of clever artifices to throw a veil of honesty over his selfish feelings. We must also get rid of the gross illusion that inspires the words, 'My enemy is an obstacle to my good works.' Is there a more meritorious work than patience? What does it matter if my enemy tries to injure me? He is none the less my benefactor. How can we have our sins pardoned by the Buddhas, how can we please the Buddhas, except by loving the creatures, and by doing good to our most cruel enemies? So long as creatures are suffering there is no joy for the compassionate Buddhas. They identify themselves with creatures. It is the Buddhas themselves who appear to us in human form.

6. Energy (*vīrya*).—The virtue of energy or 'effort for good' (*kuśalotsāha*) is necessary for the acquirement of merit and knowledge. Its enemies are (1) weakness (or incapacity of body or thought), (2) attachment to the pleasures of this world, and (3) discouragement (or want of resolution) and its result, self-contempt.

To conquer these enemies it is necessary (1) to meditate on the dangers to which we are exposed. 'I am in the

* See art. MAHĀYĀNA on the *Prātimokṣa* of the Bodhisattvas, which is entirely devoted to these regulations.

† It would be going beyond the limits of this article to detail the various *kṣāntis* in the path of the *srotaāpannas*, and of the *kṣāntis* regarded as high states of abstraction belonging to 'worldly' (*laukika*) meditation.

* See p. 744ᵃ, n. 1, and p. 747ᵇ.

† See artt. MĀDHYAMIKAS and MAHĀYĀNA.

‡ Cf. de Groot, *Code du Mahāyāna*, p. 109, which commands men to defend with arms the Buddhas, the Church, and the State; and preceding column.

power of the passions, like a fish in the hands of the fisherman, for I am in the net of re-births, threatened by death and by the guardians of the hells. Thou hast boarded this vessel, which is the human state; cross the river of suffering; thou fool, this is no time to sleep; when and at what cost wilt thou find this vessel again?' (2) To despise pleasures, which come to fruition in suffering, and to taste the excellent joy of good works. (3) To remember what Śākyamuni said: 'These supreme Buddhas, Śākyamuni, Dīpaṅkara, etc., were insects, flies, and little worms; it was by exerting themselves that they acquired the illumination of a Buddha, so difficult to obtain.' 'Now I have already gained the human estate; the most difficult part is accomplished! The task of the Bodhisattvas is distressful, but the hells are far more distressful. After all, however, is it really distressful? The Buddha is a clever physician; by degrees he accustoms us to making the greatest sacrifices with ease, and besides "the future Buddha is free from all bodily pain, for he has cast sin aside, and he is free from sorrow, for he realizes the truth of the nothingness of the ego." * By his good works the Bodhisattva tastes ever-increasing joys, superior to those of the Buddha entering nirvāṇa. He arrives at nirvāṇa more quickly than the future arhats (*śrāvakas*).' †

To increase his 'energy' (*vīryavardhana*) the Bodhisattva manœuvres his 'armies,' which are:

(1) Desire (*chhanda* or *śubhachchhanda*), the root of all merit: 'What a sublime task I have undertaken in the destruction of all my vices, all the vices of the world, and the endowment of myself and my neighbour with every good quality! . . . Those whose works are all good are re-born in the Paradise of Amitābha.' (2) Pride (*māna*), (*a*) the pride of work, 'it is upon me that all difficult and mean works devolve; let every creature cast his burden of work upon me'; (*b*) pride against the passions: 'Son of the Lion of Conquerors, shall I be the slave of the passions (*upakleśa*)? The most humiliating and most exacting of the passions is pride'; (*c*) pride of power or endurance (*śakti*): the Bodhisattva is inaccessible to the passions (*saṅkleśa*). ‡ (3) Joy (*rati*), by virtue of which, when he has finished one task, he plunges into another, like the elephant, under the midday sun, into the lake. 'He whose happiness is in action itself' seeks in action nothing but action. (4) Abandonment (*muktī*): he must measure his powers before undertaking a task, and stop when his powers fail. (5) Exclusive application (*tātparya*), especially in all that concerns the means of avoiding the blows of those clever adversaries, the passions. It is a duel, in which the Bodhisattva is armed with the memory of the law of Buddha. If he happens to get wounded (for what fight is without wounds?) he grieves, and reflects: 'What shall I do to prevent this occurring again?' (6) Self-mastery (*ātmavidheyatā*): 'Never does he forget the Buddha's sermon on attention (*apramāda*). He keeps his mind and his body alert and easily managed, so that he may be ready at any time and for any thing even before it is necessary to begin. As the seed of the cotton-plant obeys the wind, coming and going under its impulse, so, in body and thought, the Bodhisattva directs himself according to his will. It is thus that magical powers are obtained, and all happiness.'

7. Contemplation (*samādhi*) or meditation (*dhyāna*).—Contemplation or concentration of thought, which, as we shall see, is indispensable to merit and knowledge, presupposes the simultaneous action of two factors: isolation of the body (*kāyaviveka*), *i.e.* life in retirement; § and isolation of thought (*chittaviveka*), *i.e.* indifference to all worldly desires.

These are theories very favourable to literary development, and have always prevailed widely among Buddhists. Śāntideva deserves great praise for treating them with much eloquence, and especially for being satisfied with sixteen verses to describe the dangers and penalties of a worldly life 'in the midst of fools,' ten verses to exalt the life in the forest 'with the trees which are good naturally, and whose sympathies are easily gained'; but he requires thirty-eight to deter us from love, the source of so much shame and sin, which can be explained only by an aberration of mind, a sickly passion for impurity.

All the meditations here recommended to the Bodhisattva are merely the putting into action of the meditations on impurity (*aśubhabhāvanā*, *kāyasmṛtyupasthāna*), on cemeteries, etc., which belong to the Little Vehicle. But the Great Vehicle adds a note which is peculiar to it: 'What painful efforts have been needed from the beginning of time for this body, ordained to an inevitable re-death, so mean in comparison with the spiritual body of the Bodhisattvas, and doomed to tortures in hell! Not the millionth part of these efforts and sufferings are necessary to attain Buddhahood. The sufferings of those who are subject to desire are immeasurable and barren.'

The mind is therefore absorbed in contemplation, being detached (*vivikta*). It is able to penetrate the ideas to which it is about to be applied, and to be deeply penetrated by them. This is, properly speaking, *dhyāna* ('meditation,' 'ecstasy'). The Buddhists have constructed a very large number of systems of meditation, which all aim at leading to the possession of knowledge or wisdom (*prajñā*). None of them is foreign to the rule of the Bodhisattvas. By 'perfection of contemplation' may be meant (1) practice of the *dhyānas* and the *samāpattis* of ancient Buddhism; (2) study of the four truths, and of the two truths (relative and absolute); this is the theory of Chandrakīrti in the *Madhyamakāvatāra*; (3) meditation on impurity in order to destroy the vice of passion, on kindness to destroy hatred, on dependent origination to destroy error, or, further, on four 'subjects of mindful reflexion' (*smṛtyupasthāna*), or, in general, on all the doctrines of the *prajñā*, that is to say, which relate to the true nature of things. *

In the *Bodhicharyāvatāra* Śāntideva adopts the very original plan of subordinating the virtue of meditation to the active virtues of charity, humility, and patience. On this subject, usually so dry and wearisome to Europeans, he displays all the heat and emotion appropriate to a homily. There was, however, no better way of introduction into the Vehicle of the Bodhisattvas. Although meditation on the nothingness of the ego, etc., seems to result, and in the Little Vehicle really does result, in apathy and nirvāṇa, by destroying the activity of the mind bent on the objects of knowledge (*jñeyāvaraṇa*), Śāntideva maintains that it begins by putting itself at the disposal of the active virtues which destroy passion (*kleśāvaraṇa*). The nothingness of the ego does not warrant us in remaining inactive; we find in it a reason for sacrificing ourselves for our neighbour. And soon, by a just compensation, this practice of abnegation, destructive of attachment and hatred (*rāga*, *dveṣa*), results, much more surely than selfish meditation pursued for its own sake, in purging the mind of error (*moha*); that is to say, since every idea, as such, is erroneous, abnegation 'purifies' the mind by emptying it (*moha=jñeyāvaraṇa*, *śuddha=śūnya*).

Śāntideva's plan is so 'orthodox,' and at the same time, so far as can be judged, so original, that it will be well to give a detailed analysis of this part of his book, in which there is much to be commended.

The disciple must practise (1) the *parātmasamatā*, the equality of self and neighbour; (2) the *parātmaparivartana*, the substitution of neighbour for self. Each includes a clear insight into the real nature of things, and, if the energy (*vīrya*) is strong enough to ensure their perfect practice, they include, in addition, all the merits of a Bodhisattva.

(1) *Parātmasamatā*, making no difference between self and neighbour, is the essence of the obligations of a future Buddha (*bodhisattvasaṁvara*). (*a*) As the body is composed of different parts united together so that the hand takes care to protect the foot, in the same way, in this manifold world of living beings, joy and sorrow are common to all. What joy means for me, it means the same for others. It is the same with suffering. I must do for others what I do for myself. I must destroy my neighbour's sorrow, just because it is sorrow like my own. I must serve my neighbour, because he is a living being as I am. (*b*) If any one should object, 'My neighbour's sorrow is his sorrow, not mine,' the reply is, 'What you call *your* sorrow is such only by an illusion; there is no permanent ego in you, but a series of intellectual phenomena (which series does not exist in itself, any more than a row of ants), or an aggregate of phenomena with no individual unit. There is

* Properly speaking, the saint is free from suffering only when he has attained the 'suppression of all attachment' (*vītarāgatva*). The consequences of sin make themselves felt in two ways: (1) grief (*vipākaphala*), which produces increase of compassion for others; (2) tendency to sin (*niṣyandaphala*), which is destroyed by patience (see *Madhyamakāvatāra*, 29, 10 and 50, 1).

† See Mahāyāna.

‡ Pride, *māna*, *mananā*, *manyanā*, *abhimāna* (to believe wrongly that one is destined to Buddhahood, to rely on ascetic practices and despise others) is a capital sin, worse than murder, etc. Māra endeavours by all means to produce such delusion in the 'beginning' Bodhisattva (*achirayānasamprasthita*).

§ It must be borne in mind that the 'isolation of the body' is not the true 'isolation'; that solitary life involves many spiritual dangers, namely, pride, absence of 'spiritual friends' (*kalyāṇamitra*); that living in the village is more fit for the charitable Bodhisattva than the forest, the natural abode of the *Pratyekabuddha* (*Aṣṭasāhasrikā*, p. 891, 11).

* See Śāntideva, *Śikṣāsamuchchaya*, xii-xiv.

therefore no existing being to whom we can attribute sorrow, of whom we can say "*his* sorrow," or who can say "*my* sorrow."' Why then contend with suffering, if there is no sufferer? Because all the schools agree on this point. If it is necessary to contend with it, contend with it, whatever its nature; if it is not necessary, do not make distinction, and occupy yourself exclusively with your own. (*c*) But why undertake the painful duty of a future Buddha? This duty is not painful, but if it were, yet, should the suffering of one individual put an end to the suffering of several, it is a duty to undertake. It is for this reason that the future Buddhas, whose spirits are fortified in the 'equivalence of the self and the neighbour,' and for whom personal joy is nothing but sadness when their neighbours are suffering, plunge into the Avīchi hell to take the place of the condemned there. The deliverance of creatures causes the river of their thoughts to overflow into an ocean of joy. Their cup of happiness is full. Nirvāṇa, in comparison with this, is insipid. If, therefore, you do good to your neighbour, do not boast about it, or admire yourself, or expect a reward; you are only doing what is quite natural.

(2) *Parātmaparivartana.*—It is owing to the influence of false judgments, repeated during the course of existences, that we attach the illusory notion of self to this product of heterogeneous elements called the body. Why not rather consider our neighbour as our 'self,' and, as far as the body is concerned, regard it as foreign to ourselves? It is really very simple. The disciple treats his neighbour as people of the world treat their 'self'; he treats his 'self' as they are accustomed to treat their neighbours. Śāntideva develops this argument with real eloquence and sincere humility. He says: 'I shall regard myself as a stranger, and I shall find my real self first among the most humble. Then I shall practise pride, for the sake of others, and I shall envy without shortcoming or hesitation. How honoured, I shall say, is this self, and I am not; he is rich, praised, happy; I am poor, despised, unhappy; it is evidently because he is great in this world, and I am small, destitute of good qualities. But have I really no good qualities? If I have not, should not he toil to cure me of my vices? If he is unable to cure me, why does he despise me? Because of his excellent virtues? What matters it to me if he is holy only for his own sake? Has he compassion only for the unfortunates who are about to be overcome by evil destinies? And yet, in the pride of his virtues, he claims to excel among the saints.' In this way the Bodhisattva energetically voices the complaints of the sinful and wretched poor whom a monk is only too apt to despise; and, while excusing his neighbour, he eagerly seeks every occasion to humble himself. Thus our only enemy is our selfish 'ego'; 'Renounce, O my thought, the foolish hope that I have still a special interest in you. I have given you to my neighbour, thinking nothing of your sufferings. For if I were so foolish as not to give you over to the creatures, there is no doubt that you would deliver me to the demons, the guardians of hell. How often, indeed, have you not handed me over to those wretches, and for what long tortures! I remember your long enmity, and I crush you, O self, the slave of your own interests. If I really love myself, I must not love myself. If I wish to preserve myself, I must not preserve myself.'*

8. Knowledge, or *wisdom,* as it is usually called by Europeans (*prajñāpāramitā*),† is the supreme virtue. It is the application of the mind to the knowledge of the truth, to the knowledge of what is (*tattva*). By a direct effort it destroys false views concerning self and nature, and its complete possession is identical with nirvāna. Only Buddhas possess it at the state of fruit (*phalabhūtā*); Bodhisattvas cultivate its germ (*hetubhūtā prajñā, bījabhūtā*). As the *prajñā* of the Mahāyāna is strongly contrasted with the *prajñā* of the Little Vehicle, and as, on the other hand, it is differently understood by the two great Mahāyānist schools, it will be more conveniently examined in detail in artt. DEPENDENT ORIGINATION, MAHĀYĀNA, MĀDHYAMIKAS, VIJÑĀNAVĀDINS. For Bodhisattva in Pāli literature, see JĀTAKA.

* The *parātmasamatā* and the *parātmaparivartana*, which are practically no more than a translation of the doctrines of the *prajñā*, purity, according to the author referred to, the virtue of energy. They also purity generosity, morality, and patience.

† The definitions of the word *prajñāpāramitā* appear contradictory. The *prajñā*, being in a general way the exact knowledge of all things (*sarvadharmeṣu yathāvadvyavasthānajñāna*), is called *prajñāpāramitā* in so far as it bears on the real nature (*paramārthagrahaṇapravṛtta*), and *jñānapāramitā* in so far as it comprehends the world of appearances in its relative truth (*saṃvṛtigrahaṇa*). (See *Bodhisattvabhūmi*, III. iv.). [The Bodhisattvas acquire first *lokottara jñāna*, i.e. *prajñā* (which assures them of final nirvāṇa), then *laukika jñāna*, i.e. *jñāna* (which endows them with all the privileges of a Buddha in order to help fellow-beings); see *Sūtrālaṅkāra*, xiv. 42.] But our authors do not feel satisfied with this definition, and we find, *inter alia*, the following commentary: *prajñā* is (1) Buddhist philosophy (*adhyātmavidyā*), (2) dialectics (*hetuvidyā*), (3) medical art, (4) grammar, (5) technical arts (*śilpakarma*). (See *Bodhisattvabhūmi*, I. xiv.)

LITERATURE.—The literature has been given fully throughout the article. L. DE LA VALLÉE POUSSIN.

BODOS.—1. Name and language.—The generic term 'Bodo' is now, for convenience, applied to all peoples speaking the Tibeto-Burman group of languages. Ethnologically, the true Bodo race exists, in a more or less pure state, all over Assam proper (the Brahmaputra Valley), in Koch Bihār and Northern Bengal, and in the valley of the Surmā river, now part of Eastern Bengal. It is probable that the low semi-Hinduized caste of Chaṇḍāls or Nāmasūdras (now recognized as Hindus) are in fact of Bodo origin; but this cannot be settled till further ethnographical inquiries have been made. In the plains the Bodos have become largely Hinduized, and have intermarried freely with Āhoms (*q.v.*) and other races. But even in the plains, and mingled with Hinduized neighbours, there are large communities of Bodo people, still speaking their Tibeto-Burman language and preserving the simple animistic superstitions of their race. Those of them who live among the Bengalis of North Bengal are by them styled 'Mech' or 'Mleccha,' that is, 'Welsh' or 'barbarian.' But the name has long lost its contemptuous signification, and is placidly accepted by the people themselves as their tribal title. Their Mongolian type of feature and dark-blue clothes, not less than their language and religion, mark them off from their white-clad Hindu neighbours. Adjoining them are the Koch, now mostly Hinduized, and justly proud that, in the person of H.H. the Mahārājā of Koch Bihār, they are ruled over by a dynasty which once conquered nearly the whole of the ancient kingdom of Prāgjyotispur (see ASSAM). Beyond the Koch tribe, eastwards, come the true Bodos or 'plains Kachārīs' (as the English call them), who dwell in the *terai*, or submontane tract, under the hills of Bhutān, known as the Kachārī Dwārs or passes. It was from these people that B. H. Hodgson took the title of Bodo, for they call themselves Boṛo-nī-fisā, 'sons of Boṛo,'* or 'sons of the Man.' (It should be noticed that most of the aboriginal tribes of the N.E. frontier of India have no specific name for themselves. They are 'men.' Other races are Bengali-men, English-men, China-men, etc.) There are about 300,000 of these people still unabsorbed by Hinduism. Mixed with the true Bodos on the borders of Assam and Bengal are some 30,000 Rābhās, speaking a similar language, but holding themselves superior, apparently owing to a somewhat larger infusion of Western blood. These are a finer and stronger race, and at one time supplied recruits to the regiments formerly raised in Assam. In the central mountainous mass of Assam, between the Nāgās on the East and the Khāsis on the West, are about 16,000 people speaking a form of the Bodo language. This branch call themselves Dī-mā-sā.† They are now totally separated from the lowland Bodos; and Endle, the recognized authority, says that their speech now differs from that of the Boṛo-nī-fisā as widely as Italian differs from Spanish. This branch of the family once founded a powerful kingdom, first at Dimāpur in the Brahmaputra Valley, and, when driven thence

* The o in Boṛo is short, something like that in English 'hot,' or rather like that in 'dog.' The central ṛ is sometimes pronounced ḍ.

† The ancient appellation of the hills inhabited by the Dīmāsā in Sanskrit authors is *Hiḍimbā*; and it is probable that *Dimā* is the name of the former capital Dīmā-pur and in Dīmāsā is derived from (Hi)ḍimbā. 'Kachār' is properly the name of this hilly region. The portion of the valley of the Surmā now called Kachār did not form part of the dominions of the Kachārī Rājā till the 17th cent., when it was acquired by him as the dowry of a Tippera princess whom he married.—C. J. Lyall.

by the invading Āhoms (see ASSAM), at Maibang in the centre of the Hills, and afterwards at Khāspur in what is now the British District of Kachār.*

In the district of Nowgong and the adjoining hills are some 3000 Hojais whose name is probably derived from the Bodo word Hā-jō (*i.e.* 'earth-high,' 'mountain'), and means 'hill-folk.' They are very similar to their neighbours the Lālangs, about 40,000 in number, on the southern slope of the Gāro hills; and in the adjacent parts of the plains district of Mymensingh are about 8000 Haijongs—another name evidently derived from the word Hā-jō. Finally, there are two great isolated highland groups of Bodo people in the hills respectively called after them—those known to us as the Gāros and Tipperas. The former now constitute the British District known as the Gāro Hills, while the Tipperas are inhabitants of a semi-independent mediatized State ruled over by a Hinduized dynasty which intermarries with the royal family of the similar State of Manipur, which lies between Eastern Bengal and Upper Burma. The Gāros are 150,000 and the Tipperas about 105,000 in number. In Upper Assam are a few communities, small in numbers, such as the Chutiyas, Morāns, etc., whose speech, so far as they have not adopted Hinduism and Assamese, is of the Bodo type, that is, an agglutinative language which has learned inflexion from contact with the Indo-European Assamese. The verb is still modified by agglutinated infixes, but in other respects the language resembles Western languages in having acquired even such linguistic luxuries as adverbs, relative clauses, and a (rarely used) passive voice.

2. Origins.—Of all these peoples and their origins there is no written record. They totally lack the historical instinct so characteristic of their Āhom conquerors. Their physical aspect renders it likely that they came from beyond the mountains to the N.E. of the Assam Valley. The Morāns, the most easterly branch of the race, and perhaps the latest settlers in Assam, have indeed a tradition that they came from Maingkaing in the Hukong Valley on the upper reaches of the Chindwin river.

The story goes that there once dwelt there three brothers named Moylāng, Morān, and Moyrān. Moylāng, the oldest, remained in Upper Burma; Moyrān, the youngest, migrated into Nepāl, and was there lost; whilst Morān, the second brother, is said to have crossed the Pātkai pass, the route of many subsequent invasions, and to have settled on the Tiphuk or Diphuk river, where he became the ancestor of the tribe which bears his name.

Linguistic and ethnographical inquiries may some day trace some connexion between the Bodo-speaking peoples and one or other of the races in Upper Burma, but the link is still missing. It is certain, however, that some 2000 years ago or more, Bodo peoples must have covered the whole of the Assam Valley, the greater part of Northern Bengal, and the Surmā Valley. The most significant sign of their presence in this area is the Bodo element in the names of the rivers, such as Dikho, Diphlu, Dipru, Dibong, etc., also traceable in such names as the Tista, or Dista, near Darjiling, the Tiphuk in Upper Assam, and the Tipai, or Dipai, in Kachār. (The word *di* or *dŭi* in Bodo means 'water' or 'river.') Those of them who settled in the rich, soft, malarious plains underwent the degeneration which seems to have been the fate of all settlers in Eastern India, and were conquered by successive invasions from East and West. Those who took refuge in the mountains, such as the Dimāsā, Gāros, and Tipperas, became a scattered and half-savage race. The Gāros alone, so far as we know at present, adopted or carried with them the practices, common among the Nāgās, of internecine warfare and head-hunting. Under British rule, however (within the last forty years, that is), they have settled down to agriculture and commerce; and, owing to the efforts of American Baptist missionaries, a great part of the Gāro tribe is already converted to Christianity.

* The name Kachāri now generally given to the Bodos and Dimāsā by Hindus is derived from this kingdom of Kachār (see previous footnote).

3. Religion.—There is but little that can be said of the religious ideas of the Bodos as a whole, except that they are of the animistic type. All the branches of the Bodo family follow a religion of fear, and are haunted by many gods or spirits, who have to be propitiated by offerings of food, etc. Within historical times the Chutiyas of Upper Assam were wont to offer human sacrifices at their famous copper-roofed temple at Sadiya; but this habit may have been due to imitation of the sacrificial habits of Śāktist Hindus. The majority of the Bodos of the plains are singularly mild and inoffensive people; and though they are much given to making offerings of fowls and goats to various deities, especially, it is significant to note, on the occasion of harvest and other festivals, these are apparently excuses for feasting and merrymaking, occasions on which there is much consumption of boiled pork and rice-beer. There are indications of a now decaying belief in totems, and among the Bodos of Northern Assam there are septs, for instance, calling themselves Mosā-ārŭi, 'sons of the tiger,' who go into mourning for a whole day, fasting the while, if a tiger happens to be killed in their vicinity. So also there are those who belong to the clan of the sacred cactus, the Siju (the *Euphorbia*), and are proud to call themselves Siju-ārŭi. And there are many others. There seems to be no belief in a supreme deity or creator. Among the Western Bodos, gods are freely borrowed from the Hindu pantheon, one of the most popular of these being Kuvēra, the god of wealth. The plains Bodos are a simple, agricultural, and far from avaricious race, and the extent to which Kuvēra figures in their folk-tales and legends is certainly curious.

The matriarchate is unknown, and the father is an extremely good-natured and easy-going head of a contented and simple family. The tribes are mostly endogamous, if the expression can be used of people who marry very much as European peasants do. There is no child-marriage, and pre-nuptial chastity is the rule rather than the exception. There are signs to show that marriage by capture was once the rule; but nowadays marriages are the result of an elopement, followed by the payment of a fine to the girl's relatives, or of a definite arrangement between the parents of the young people, which results in a present offered to the bride's parents, or else a term of service on the bridegroom's part in his father-in-law's house.

Running rivers and water-courses are held in high respect and honour; and the dead are either buried or cremated (if their relatives can afford the necessary fuel) near streams. A woman is laid on seven layers of fuel, and has seven such layers placed over her. A man has only five such layers. So, when a male child is born, the umbilical cord is severed with five cuts with five separate bamboo knives. A female child is separated from its mother by seven cuts. Not enough is known of the superstitions of the people to enable us to offer any explanation of these mystical numbers. Like other animistic peoples, the Bodos are great believers in amulets, divination, and omens; and though they have no professional priests, they employ wise women, who work themselves into a frenzy, and when in that state are able to tell what gods ought to be propitiated in order to ward off or heal pestilence or failure of crops.

There is a crude belief in a future life. When a body is buried, a reed or bamboo tube is led from

the corpse's mouth to the outer air, so as to enable the spirit to breathe if he will, and the dead man's favourite food is placed for a time near his grave. Grown-up people will not touch these offerings, but children take them without scruple. Spirits, as in the case of many tribes in Eastern India, cannot cross water without help; and if a funeral party has to cross a river, a string is suspended across it to enable the spirit to follow the body or return if it desires to do so.

In short, the Bodos of the plains are a very simple and guileless race. They live on a soil which yields them rich reward for comparatively easy toil, and, as their wants are few, they lead a joyous and childish existence. Like other human children, they are occasionally given to fits of sulks, are very clannish, very obstinate, and somewhat suspicious of more intellectual and ingenious races. But they readily make friends with kindly and sympathetic Europeans; and, with the sole exception of the Gāros (now also rapidly coming under gentler influences), they have long ago lost the martial tendencies the race must once have possessed. They have much of the genial joviality of the Burmese, and are extremely addicted to feasts, junketings, and all manner of merrymaking. Their language has now been investigated with much thoroughness, but a systematic inquiry into their ethnographical position and their beliefs and customs still remains to be made.

BODY.—1. **Primitive ideas.**—Primitive ideas about the human body have an importance far greater than that which belongs to most other groups of anthropological data. They do not simply illustrate the attitude of the primitive thinker to the natural world and its invisible powers; they show us what he thought of himself. For the sharp distinction which modern thought, at least in its unreflective forms, is accustomed to draw between body and mind was quite foreign to his way of thinking. He did not think of body as the 'organ' of mind; his body was himself, possessing attributes of various kinds, which we have learnt to analyze into physical and mental groups, but which he learnt to class and explain from a different standpoint. All the mental states and physical activities of which he was conscious were part of himself, that is, the products of his body; even the soul, when it emerges as a distinct idea, is frequently identified with the breath or blood. This 'physiological psychology' is, of course, a special case of the general inability of the primitive thinker to reach abstractions, and of a general tendency to find concrete support for his thinking. But the tendency was developed and accentuated by that ignorance of anatomy and physiology which prevailed until the last few centuries. Not only primitive but ancient thought in general had no adequate knowledge of the nervous system and the psychical function of the brain; whilst ignorance of the function of the heart in the circulation of the blood (till 1628) made natural the ascription to it of such psychical attributes as its central and obviously important place might suggest. In fact, there can be few organs of the body which have not received at some time, and among some social group or other, credit for psychical activities.

The proof of these statements is cumulative, and can be gained only from the study of such collections of anthropological material as Tylor's *Primitive Culture* and Frazer's *Golden Bough* afford. Reference may be made, however, to the following groups of facts, as types of the evidence to be expected.

(1) *The custom of eating particular organs of animals, or of other men, in order that the special qualities supposed to be connected with these organs may pass into the eater.* Thus among certain African tribes: 'Whenever an enemy who has behaved with conspicuous bravery is killed, his liver, which is considered the seat of valour; his ears, which are supposed to be the seat of intelligence; the skin of his forehead, which is regarded as the seat of perseverance; his testicles, which are held to be the seat of strength; and other members, which are viewed as the seat of other virtues, are cut from his body and baked to cinders. The ashes are carefully kept in the horn of a bull, and, during the ceremonies observed at circumcision, are mixed with other ingredients into a kind of paste, which is administered by the tribal priest to the youths' (Frazer, *GB*[2] ii. 357, where a large number of similar cases is given).

(2) *The nature of certain ordeals and penalties, chosen in relation to the supposed hidden psychical qualities of certain parts of the body.* The history of witchcraft abounds in examples, but the field is much wider. Thus, Lady Anne Blunt reports concerning an Arab dispute as to the parentage of a child: 'The matter, as all such matters are in the desert, was referred to arbitration, and the mother's assertion was put to the test by a live coal being placed upon her tongue' (*A Pilgrimage to Nejd*, i. 10). A probable Biblical example is found in the jealousy ordeal of Nu 5, on which see Gray's 'Numbers' (in *ICC*), p. 48, for a note contributed by the present writer. As an example of the same principle applied to punishment, we may take Law 218 from the Code of Hammurabi: 'If the doctor has treated a gentleman for a severe wound with a lancet of bronze and has caused the gentleman to die, or has opened an abscess of the eye for a gentleman with the bronze lancet and has caused the loss of the gentleman's eye, one shall cut off his hands' (Johns' tr. p. 46). This is clearly not a case of *lex talionis*, or the doctor's eye would have been extracted; penalty is exacted from the hands whose inherent vice led them astray.

(3) *The physical qualifications for special offices and activities, especially when these consist in mutilations.* Thus, amongst certain tribes of Central Australia, the essential mark of the medicine-man is a perforation in his tongue, mysteriously caused in the ceremony of his initiation. If the hole closes up during his year of probation, he loses his professional status (Spencer-Gillen[2], pp. 523, 525). Since such perforation can serve no practical end, we must assume that the object is to set free, in some way deemed efficacious by primitive thought, the member which the medicine-man will need most for professional incantations. This is probably one out of many cases of mutilation which are to be explained as the partial dedication of certain organs to those invisible powers capable of resenting their use. Thus, circumcision admits of no explanation, *valid for primitive thought*, which does not apply to the closely related rite of sub-incision, both being connected with the period of puberty (*ib.* p. 251 f.); but both receive adequate explanation, *for primitive thought*, as a propitiatory preparation for the safe use of the organ. A parallel mutilation to that of the medicine-man is recorded by Howitt (p. 747): 'A mother amputates the little finger of the right hand of one of her female children as soon as it is born, in token of its appointment to the office of fisherwoman to the family.'

(4) *Beliefs of superstition and magic about particular organs.* One of the best known cases is that of the evil eye. How physical the influence was conceived to be is shown by the superstition reported as fact by Aristotle; 'When women look into a very clear mirror after their menstrual flow, the mirror's

surface becomes covered with a bloody cloud; and if the mirror is new the stain is hard to remove, but if it is old, the removal is easier' (*On Dreams*, p. 237 of Hammond's tr.). It is significant, also, for the present argument, that early medicine discusses the treatment of the separate parts of the body as though they were so many isolated units; see, for example, the Anglo-Saxon 'Leech-Book of Bald,' of which a summary is given by Payne (*English Medicine in the Anglo-Saxon Times*, p. 40). This corresponded to the popular idea of disease. Euting writes of present-day Bedawin: 'Every disease is located in a particular part of the body, and for every part of the body there is a special medicine, which the doctor requires only to take out of his chest and dispense. A special diagnosis of the disease, or the personal production of the patient, is not considered necessary' (*Tagbuch einer Reise in Inner-Arabien*). In this connexion should be named the well-known Babylonian belief in demonic influences, which is in accordance with the localization of psychical function in various physical organs (cf. also the theory of mutilations as outlined above). 'Almost every part of the body is threatened by an evil demon; the ashakku brings fever to the head, the namtar threatens the life with pestilence, the utukku affects the neck, the alu the breast, the ekimmu the hips, the gallu the hand, the rabissu the skin' (Jeremias, *Hölle und Paradies bei den Babyloniern*, p. 18).

Such illustrations, which might be multiplied to almost any extent, sufficiently prove the identity, for the primitive thinker, of the sciences we clearly distinguish as physiology and psychology. This confusion is of fundamental importance for the study of primitive and ancient ideas of personality, and is frequently neglected by those who undertake to interpret ancient thought, particularly by interpreters of the Old Testament. Its further examination belongs to the subject of ancient psychology. Here, we are concerned with the evolution of a distinct science of the body, and with its present problems for psychology and religion.

2. **Evolution of physiology.**—It is plain that a sound knowledge of anatomy was necessary before an accurate physiology could be reached; yet of this Sir William Turner remarks: 'Amidst the general obscurity in which the early history of anatomy is involved, only two leading facts may be admitted with certainty. The first is that previous to the time of Aristotle there was no accurate knowledge of anatomy; and the second, that all that was known was derived from the dissection of the lower animals only' (*EBr*[9], *s.v.* 'Anatomy'). The most notable name before Aristotle is that of Hippocrates (B.C. 460–377), who does not distinguish vein from artery, and nerve from sinew; 'he represents the brain as a gland, from which exudes a viscid fluid; that the heart is muscular and of pyramidal shape, and has two ventricles separated by a partition, the fountains of life—and two auricles, receptacles of air; that the lungs consist of five ash-coloured lobes, the substance of which is cellular and spongy, naturally dry, but refreshed by the air; and that the kidneys are glands, but possess an attractive faculty, by virtue of which the moisture of the drink is separated, and descends into the bladder. He distinguishes the bowels into colon and rectum' (*l.c.*). Aristotle (b. B.C. 384) has confused notions of the nerves, and, though he connects the blood-vessels with the heart, he has no idea of the circulation of the blood. He regards the brain as the organ of cooling (*On Sleep*, ch. iii.). 'The heart is at once the physiological and psychical centre of man. . . . To Aristotle the brain is merely a regulator for the temperature of the heart; the brain is bloodless and cool, and the blood and warm vapours from the heart rising to this are lowered in temperature' (*Psychology*, Hammond's tr., p. xxiv; for the reasons which led Aristotle astray, see Ogle, *On the Parts of Animals*, p. 168 n.). Galen (b. A.D. 130) is the first certain user of vivisection, and his writings are 'the common depository of the anatomical knowledge of the day' (an account of his physiology is given by Foster, *History of Physiology*, p. 12 f.). No work of great importance in physiology was done between Galen's time and the 16th cent., when the *Fabrica Humani Corporis* of Vesalius was 'the beginning not only of modern anatomy, but of modern physiology' (Foster, *op. cit.* p. 10, who traces the development of physiology through the 16th, 17th, and 18th centuries). In the 19th cent. that knowledge of the nervous system was elaborated from which the problems of the modern psychologist take their rise.

3. **Body and Mind.**—The problem of the relation of body to mind is of fundamental importance to a large group of sciences. 'Since the dawn of modern philosophy in the *Meditations* of Descartes, the question of the relation of body and mind has been continuously under discussion' (Ward, *Naturalism and Agnosticism*, ii. 4). The chief difference between ourselves and the primitive thinker is that we have narrowed the problem to the relation between the nervous system (more especially the cerebral cortex) and consciousness. The full discussion of this problem, however, belongs more properly to the articles on BRAIN AND MIND, MIND, and PSYCHOLOGY.

A summary review of the positions taken by some typical thinkers will serve to introduce the modern aspect of the problem. Descartes (1596–1650), starting from the existence of the self as the thinking thing, and arguing to the existence of body (in general) as the extended thing, maintained, though in marked contradiction to the general principles of his system and to his treatment of animal consciousness, the interaction of mind and body in man. He assigned their point of contact to the pineal gland—a small body about the size of a cherry-stone, which lies between the upper quadrigeminal bodies of the brain, and is connected with the optic thalami—since some such single organ seemed necessary in order to combine impressions from the double sense-organs (*Les Passions de l'âme*, art. xxxi. f.). Here, as the chief seat of the soul, he supposed mind to influence body, and body mind. Geulincx (1625–1669)—cf. Malebranche (1638–1715)—abandoned the theory of interaction for that of 'occasionalism,' which asserts that God causes the changes in the body corresponding with those in the mind, and *vice versa*. Leibniz (1646–1716) introduced the conception of 'pre-established harmony,' which rejects both interaction and occasionalism in favour of a Divinely created correspondence of mind and body, like that of two clocks keeping perfect time. Spinoza (1632–1677) made the problem more distinctly metaphysical by his treatment of thought and extension as simply different attributes of the one substance, God. This metaphysical monism asserts that 'mind and body are one and the same thing, conceived at one time under the attribute of thought, and at another under that of extension' (*Ethica*, pt. iii. prop. ii. Schol.). Hume (1711–1776) emphasized the mystery of the union of mind and body (*Inquiry concerning the Human Understanding*, vii. pt. i.), and argued against the alleged causality of mind in relation to body. Huxley (1825–1895) extended the hypothesis of Descartes as to animals into the realm of human consciousness. Whilst holding that 'all states of consciousness in us as in them are immediately caused by molecular changes of the brain-substance,' he considered that 'in men, as in brutes, there is no proof that any state of consciousness is the cause of change in the motion of the matter of the organism'; the consequence is that 'our mental conditions are simply the symbols in consciousness of the changes which take place automatically in the organism' (*Collected Essays*, i. 244).

Huxley's theory forms one of the various modern solutions of the problem; but a theory which reduces

conscious experience (including activity) to a series of epiphenomena or 'by-products' is not adequate to explain that experience; whilst the denial of mental causality is founded on the unproved assumption that the universe is mechanical. This is shown most ably by Ward (*Naturalism and Agnosticism*, Lects. xi. xii.), who in the same context discusses Clifford's 'mind-stuff' theory, and the Neo-Spinozism of the 'double-aspect' theory. The chief modern lines of explanation of the relation of mind and body are those of interactionism, automatism, and parallelism: 'interactionism, asserting that the causal influence runs in both directions—in sensation from the body to the mind, in volition from the mind to the body; automatism, maintaining that it runs in one direction only—always from the body to the mind; and parallelism, denying all causal influence and holding the relation to be of a different nature.'* It should be noted that psycho-physical parallelism is frequently a purely descriptive term, to denote the correlation of the phenomena of consciousness with physiological (nervous and cerebral) processes, together with the real distinction between the two series. In this sense, it is doubtless true to say that 'this is the most generally accepted view of the relation between mind and body at the present day' (Baldwin, ii. 258). The much larger metaphysical problem of the relation of mind and matter cannot be discussed on the narrow stage of the present article (see artt. on MIND and PHILOSOPHY). However completely we might show the dependence of consciousness on the mechanism of the cerebral cortex and the nervous system generally, there would remain the apparent fact that psychical and physical processes are disparate. We must not hastily assume that the laws of the one can be applied without question to the other. The principle of the conservation of energy, however important as a working formula in the physical sciences, has mathematical validity but not philosophical application. On the other hand, we are not at liberty to interpret the causality of mind as though it were the interference of a new *quasi*-physical force with the working of that particular part of the physical system which forms the human body. The problem is in miniature, therefore that of the relation of God to the universe, where we have also to reconcile the existence of natural law with real causality; its further consideration belongs to this larger arena. See, further, art. BODY AND MIND.

4. **Problems for religion.**—There remains to be noticed, however briefly, the group of problems, arising in connexion with the human body, for the student of religion, which receive fuller discussion in special articles. (1) The controversy as to man's place in nature (see art. ANTHROPOLOGY) is now chiefly of historical interest, so far, at least, as *the relation of man's body to the animal world* is concerned. The modern theologian is usually ready to accept the clear verdict of the scientist that, 'judged by his structure, Man is undoubtedly a vertebrate animal of the class Mammalia' (Duckworth, *Morphology and Anthropology*, p. 12). In exact zoological classification he forms the Family Hominidæ in the Sub-Order Anthropoidea in the Order Primates in the Section Eutheria of the Sub-Class Theria of the Class Mammalia. In point of structure, that is, his nearest relatives are the Gibbons, Orang-utans, Chimpanzees, and Gorillas. This does not mean that these animals actually belong to man's ancestry. 'It is practically certain that the modern Simiidæ did not themselves figure in the ancestry of Man, and that they are themselves specialized in a high degree, more specialized in many ways than the Hominidæ and more specialized than their own ancestors' (Duckworth, *op. cit.* p. 543). On Man, 'specialization of the cerebrum has conferred an altogether exceptional development of self-consciousness (*op. cit.* p. 545) . . . the future modification of the cerebrum will be largely dependent on its blood-supply, which in turn is related to the quality of the cardiac muscle and various physiological factors . . . on what may, in the widest sense, be termed hygienic conditions' (*op. cit.* p. 546). If we grant, however, this physical relationship of man with the lower animals, it seems hardly possible to deny the psychological. The close correlation of the extent to which brain and nerve are elaborated in them with the observed degree of their intelligence is found to continue upwards to man himself; if the series is more or less continuous on the anatomical and physiological side, it is natural to expect that the corresponding psychical series knows no hard and fast line. This expectation is confirmed by the study of comparative psychology: 'Throughout the range of the sense-experience, common to men and animals, their emotional states are of like nature with ours. . . . It is the framing of ideals, not merely as products of conceptual thought, but also as objects of appetence and desire ever beckoning him onwards and upwards towards their realization, that is distinctive of man as man' (Lloyd Morgan, *Introd. to Compar. Psychology*, pp. 365, 379). The practical bearing of this may be seen from the standpoint of biology. The balance of power between the activity of any organism and its control by the environment is continually altering in favour of the former. 'Increasingly we find the organism—be it bird or mammal or man—much more master of its fate, able to select its own environment in some measure, able to modify its surroundings as well as be modified by them' (J. A. Thomson, *Heredity*, p. 517). In the case of man, this fact has been strikingly expressed by a leading biologist, who calls him 'nature's insurgent son' (Ray Lankester, *The Kingdom of Man*, ch. i.). 'If we may for the purpose of analysis, as it were, extract man from the rest of Nature of which he is truly a product and part, then we may say that Man is Nature's rebel' (*op. cit.* p. 26). Such a conception of man, given, it should be noticed, from the purely scientific point of view, is an implicit recognition of the right of the psychologist and of the theologian to consider man apart from nature, and to claim for him that unique place in the universe which the higher religions, and especially Christianity, demand. We need hardly hesitate, then, to agree with what Huxley wrote in 1863:

'I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life' (*Man's Place in Nature*, ed. of 1894, p. 152).

(2) *The relation of the body to the conception of personality* obviously requires some re-statement in the light of the general acceptance of an evolutionary view of man. Hebrew thought in its earlier form was unable to conceive any continuance of personality apart from the body; even in the theology of the later Judaism the same idea survives in the characteristic insistence on the resurrection of the body as essential to life beyond death. Over against this stands the Platonic emphasis on the immortality of the soul, which assigns to the body a quite subordinate part. The attitude of St. Paul differs from both: while

* Strong, *Why the Mind has a Body*, p. 2 (an elaborate discussion of the problem from the standpoint of 'panpsychism'). In regard to the view that thought is a function of the brain, see below, 4 (2).

he conceives a body to be necessary to personality, he awaits deliverance from this present body in which sin and death reign, and the development of a spiritual or 'pneumatic' body, more suited to regenerated human personality (1 Co 15[44], 2 Co 5[1ff.]). In the early Christian Church, we gain light on the relation of 'soul' and body from the various doctrines as to the origin of the soul (see art. SOUL), viz. pre-existence (Origen), traducianism (Tertullian), which taught that the soul was begotten with the body, and creationism, which may be regarded as the final normal doctrine, holding that each soul was created by God at birth without any mediation. The second of these, viz. traducianism, has clearly the most contact with the conceptions of modern biology (though its naive distinction of soul and body is no longer possible). The subsequent nature of the individual man, physical and psychical, is now known to be conditioned by the chromosomes contributed by spermatozoon and ovum respectively in the process of fertilization. When we ask what this conditioning may imply, this genetic problem, like the purely psychological one noted above, brings us face to face with ultimate questions. It is useless to ask what the fertilized ovum may 'contain'; all we can say is that from this source, or through this channel, flows the whole life of man (see art. LIFE). The subsequent emergence of self-consciousness in the infant, with all that this implies, lifts the whole problem into a realm beyond the physical. This is the consideration with which we ought to approach the problem as it meets us in the outgoing of man's life. That his personality depends on the body for its present development and expression cannot carry with it any prejudice against the continuance of personality when the body has been resolved into its chemical elements—unless we have silently begged the whole question of the relation of mind and body. As James has urged so forcibly (*Human Immortality*, p. 24 f.), even though we say 'thought is a function of the brain,' it still remains open to us to maintain that the function is not productive, but permissive or transmissive; in other words, that consciousness finds an organ for its expression in the brain, and is limited rather than produced by its present physical conditions. In this connexion, it is attractive to follow St. Paul's line of thought, and to think of some other 'spiritual' body, which may express more adequately man's personality in that life beyond death, which the highest spiritual life here itself demands (see art. IMMORTALITY).

(3) *The conception of the human body in ethical thought and its treatment in practical morals* have given rise to a third important group of problems. It is easy for a dualistic conception of man's nature to carry the philosophic opposition of spirit and matter, soul and body, into the ethical sphere; so we may trace the transition from the Platonic view of the body as the prison-house of the soul* to Philo's conception of all matter as evil (cf. Pfleiderer, *Philosophy of Religion*, iv. 5), and to the well-known dualism of the Gnostics and the Manichæans. Such a view is brought home to the practical consciousness of men by the fact that the most intense moral conflicts, especially at the threshold of manhood, are often those between the natural passions of the body and the higher claims of reason and conscience. An evolutionary view of man would explain this conflict as part of the process of man's upward development from a purely animal life; but a dualistic philosophy also provides an explanation. As a practical consequence we have the principle of asceticism (*q.v.*), prominent in Oriental religions generally, especially in Buddhism, though not belonging to Judaism, except in the peculiar and late developments of the Essenes and the Therapeutæ. In certain forms of Greek philosophy, notably Pythagoreanism, and the later Neo-Platonism, asceticism was made the condition of deeper philosophic and religious meditation. In Christianity, its special developments are connected with Monasticism (*q.v.*). For the general doctrinal view of the body in relation to evil, see BODY (Christian), 3 (*a*), and SIN. In contrast with these applications of dualism, it may be urged that the scientific view of the body is also the truest from a religious standpoint: 'Our body is an integral part of our human personality' (Illingworth, *Christian Character*, p. 146).

* In practice, Plato insists on the proper cultivation of the body 'for the sake of the soul' (*Rep.* bk. iii. 410).

LITERATURE.—*ANTHROPOLOGY*: see list under article of that name, which should itself be consulted in regard to man's place in nature. *PHYSIOLOGY* (early history of): Turner, art. 'Anatomy,' in *EBr*[9]; Foster, *History of Physiology* (Cambridge, 1901). *PSYCHOLOGY*: the relation of mind and body is discussed in most of the general literature of the subject (see list under art. PSYCHOLOGY), but the following in particular may be named: Bain, *Mind and Body* (1873, London); Huxley, *Animal Automatism* (1874, in *Collected Essays*, Eversley series, 1904, London); Le Conte, *Evolution and its Relation to Religious Thought*[2], ch. iv. (1891, London); James, *Principles of Psychology*, chs. v. and vi. vol. i. (1891, London); Münsterberg, *Grundzüge der Psychologie* (1900, Leipzig); Royce, *The World and the Individual*, vol. ii. Lect. v. (1901, New York and London); Baldwin, art. 'Mind and Body,' in *Dict. of Philos. and Psychol.* vol. ii. (1902, New York and London); Villa, *Contemporary Psychology*, ch. iii. (Eng. tr. by Manacorda, 1903, London); Ward, *Naturalism and Agnosticism*[2], vol. ii. (1903, London); Strong, *Why the Mind has a Body* (1903, New York and London); Stout, *Manual of Psychology*[2], Introd. ch. iii. (1901, London); Calkins, *The Persistent Problems of Philosophy* (1907, New York and London).

H. WHEELER ROBINSON.

BODY (Buddhist).—The Buddhist attitude towards the body has been summed up as follows: (1) the body, whether of men or of higher beings, can never be the abode of anything but evil; (2) final deliverance from all bodily life, present and to come, is the greatest of all blessings, the highest of all boons, and the loftiest of all aims.[1]

The body is regarded as an 'impure thing and foul.' It is likened to a wound, a sore. It has to be borne about, but, because of its character, there must be no clinging to it. It is thus borne about 'for the sake of righteousness.'[2] The body is the 'old worn-out skin of a snake.'[3] It is a 'dressed-up lump, covered with wounds . . . wasted . . . full of sickness . . . a heap of corruption.'[4] All evil passions proceed from the body.[5] There is no pain like the body; hunger is the worst of diseases, the body the greatest of pains.[6] The weakness of the body is sometimes emphasized—it is fragile, like a jar; in death it will 'lie on the earth, despised, without understanding, like a useless log.'[7]

It is 'disgust' (*nibbidā*) for the body that is the motive for *pabbajja*—that is, the 'going forth' from house life into religious life—and also for the layman to sit loose to the things of the world. Gautama was led to 'go forth' for this reason.[8] He used to consider with himself the facts of age, disease, etc., until he determined to escape them. A later amplification of the same idea is the story of Gautama's driving through the town, and seeing an old man, a sick man, and a corpse. According to Buddhist teaching, the object most calculated to produce this 'disgust' is the human body itself, living as well as dead. The *Vijaya Sutta* is 'a reflection on the worthlessness of the human body'; a follower of Buddha sees the body only as it really is, and consequently goes to

nirvāṇa.[1] The noble Yasa left his house because he saw the female musicians asleep—'one would think it was a cemetery one had fallen into.'[2] Mental exercise of this description is frequently given as a specimen of right meditation. The idea of a 'corpse eaten up by worms,' etc., is to be kept before the mind when a good point of meditation occurs.[3] Yet bodily deformity, physical infirmity, or a maimed limb disqualified for *pabbajja* ordination.[4]

The idea of 'disgust' with the body is set forth in Gautama's 'burning' fire-sermon, delivered on a hill, Gayāsīsa, near Gaya:

'Everything, O monks, is burning. The eye is burning; visible things are burning. The sensation produced by contact with visible things is burning—burning with the fire of lust (desire), enmity, and delusion, with birth, decay, death, grief, lamentation, pain, dejection, and despair. The ear is burning, sounds are burning; the nose is burning, odours are burning; the tongue is burning, tastes are burning; the body is burning, objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body, weary of the mind. Becoming weary, he frees himself from passions and lusts. When free he realizes that his object is accomplished, that he has lived a life of restraint and chastity, that re-birth is ended.'[5]

One of the difficulties in the way of right thinking, without which nirvāṇa cannot be attained, is lack of training in the 'management of the body,' which, with lust, ill-will, delusion, wrong-doing, and lack of training in conduct, or thought, or wisdom, causes the thinking powers to be brought into play with difficulty, or to act slowly.[6] It is the 'eye of flesh' which prevents perfect insight, and only by its removal can the desired end be obtained.[7]

The body is the sphere of suffering:

'Now, this, O Bhikkus, is the noble truth concerning suffering: birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant, and any craving that is unsatisfied, that, too, is painful.'

It is also the body which is the origin of suffering. The 'noble truth' on this subject has been summed up by Professor Rhys Davids as 'the lust of the flesh, the lust of life, and the love of the present world.'[8]

According to the teaching of Buddha, suffering, subjectively, is desire, in all its varied forms. But desire originates from the body.

'Buddha said: "Passion and hatred have their origin from this (body); disgust, delight, and horror arise from this body; arising from this body, doubts vex the mind as boys vex a crow."[9] "For him whose greediness for name and form is wholly gone, O Brāhmana, for him there are no passions by which he might fall into the power of death."'[10]

Objectively, suffering lies in embodiment, or matter, and consequently the human body is looked upon as a contemptible thing.[11]

Complete release from suffering is possible only by emancipation from body and matter. Therefore the 'elements of existence' (*upadhi*) must be destroyed.

'Knowing the step (of the four truths), understanding the Dhamma, seeing clearly the abandonment of the passions, destroying all the elements of existence (*upadhi*), such an one will wander rightly in the world.'[12] 'The elements of existence (*upadhi*) are overcome by thee (Buddha).'[13] 'He who, being ignorant, creates *upadhi*, that fool again undergoes pain; therefore let not the wise man create *upadhi*, considering (that this is) the birth and origin of pain.'[14] 'Mettagû says: "I delight in these words of the great Isi; well expounded, O Gautama, is (by thee) freedom from *upadhi*."'[15]

Emancipation from bodily form is therefore the *summum bonum* of Buddhism, the ultimate goal of all aim and effort.

'Seeing others afflicted by the body, O Piṅgiya,' so said Bhagavat, '(seeing) heedless people suffer in their bodies, therefore, O Piṅgiya, shalt thou be heedful and leave the body behind, that thou mayest never come to exist again.'[1] 'Seeing men seized with desire, O Piṅgiya,' so said Bhagavat, 'tormented and overcome by decay, therefore thou, O Piṅgiya, shalt be heedful and leave desire behind, that thou mayest never come to exist again.'[2] 'As a flame blown about by violence of the wind, O Upasiva,' so said Bhagavat, 'goes out, cannot be reckoned (as existing), even so a Muni, delivered from name and body, disappears, and cannot be reckoned as existing.'[3] 'For him who has disappeared there is no form, O Upasiva,' so said Bhagavat, 'that by which they say he is, exists for him no longer; when all things (*dhamma*) have been cut off, all (kinds of) dispute are also cut off.'[4] 'By the noble the cessation of the existing body is regarded as pleasure.'[5] 'Through countless births have I wandered,' said Gautama, 'seeking but not discovering the maker of this my mortal dwelling-house, and still, again and again, have birth and life and pain returned. But now, at length, art thou discovered, thou builder of this house (of flesh). No longer shalt thou rear a house for me. Rafters and beams are shattered, and, with destruction of desire (*taṇhā*=thirst), deliverance from repeated life is gained at last.'[6]

Though the constant endeavour and ultimate hope of the Buddhist is to escape from corporeal existence, Gautama clearly teaches that the body is to be cared for. Desire for the pleasures, and the formation of good habits, which minister to the real self, are inculcated; and pursuit and conduct which contribute to this end are to be cultivated.

(1) Suicide is forbidden;[7] food is to be used in moderation;[8] the use of intoxicating liquors is prohibited;[9] no wrong has to be done with the body;[10] health is the greatest of gifts;[11] food is to be enjoyed;[12] the eating of flesh is no defilement;[13] every bodily act has to be carefully watched over, words measured, manner gentle, thought collected, rejoicing in heart.[14]

(2) Stress is continually laid upon self-control; the 'forest of lust' has to be cut down;[15] bodily anger and sins of the body have to be forsaken;[16] sensual pleasures must not be clung to;[17] they who 'suffer loss' are they who are fond of society, the lazy;[18] sloth is 'the taint of the body';[19] earnestness is the path of immortality;[20] sins of the body will work out their bitter fruit even in this life.[21]

(3) No living thing is to be killed; weapons and sticks must be laid down; no hurt is to be done to another;[22] neither the feeble nor any other being is to be despised;[23] there must not even be the wish to harm another;[24] the great law of love must influence the Buddhist in every relationship of life.[25] Even *pabbajja* is prohibited unless the permission of father and mother is obtained, for

'the love for a son cuts into the skin; having cut into the skin, it cuts into the hide; having cut into the hide, it cuts into the flesh; having cut into the flesh, it cuts into the ligaments; having cut into the ligaments, it cuts into the bones; having cut into the bones, it reaches the marrow, and abides in the marrow.'[26]

In the *Sutta Nipâta*, the *Âmagandha Sutta* contains an account of what defiles a man. It bears comparison with Mt 15[11, 17-20]. It is not the eating of flesh which defiles, but destroying living beings, stealing, falsehood, worthless reading, adultery, unrestrained enjoyment of sensual pleasures, mercilessness, illiberality, intimacy with the un-

just, etc. If this long category of sins against the body, and against others, characterizes the life,

'neither the flesh of fish, nor fasting, nor nakedness, nor tonsure, nor matted hair, nor dirt, nor rough skins, nor the worshipping of fire, nor the many penances in the world, nor hymns, nor oblations, nor sacrifice, nor observance of seasons, purify a mortal who has not overcome desire.' *

J. H. BATESON.

BODY (Christian).—1. The New Testament generally.—The New Testament ideas on the subject of the body are rooted firmly in the soil of Old Testament teaching (see Gn 2^7, Ps 63^1, Ezk $44^{7.9}$, Mic 6^7). From the minds of the writers anything like a dualistic antithesis, such as we find in Greek philosophy, between body and soul, matter and spirit, is far removed. As in the older Scriptures, the unity of the human personality is the fundamental feature in the conception of man. At the same time this unity is recognized as resting upon an underlying duality; man is conceived of as a complex being with a lower and a higher part, by one of which he is linked to the life of nature, and by the other to the Spirit of God.

In the Hebrew psychology 'flesh' (בָּשָׂר) was the prevailing name for man's earthly part, and 'spirit' (רוּחַ) for his heavenly part, while 'soul' (נֶפֶשׁ) was the union of the two in the living creature (see esp. Gn 2^7). There was no proper Heb. term for 'body,' precisely because the Hebrews, with their psycho-physical ideas of personality, did not feel the need for a special word to denote the bodily organism considered by itself. When we come to the NT we find a somewhat different order of terminology, which has come in through familiarity with the LXX version, and is thus indirectly due to Greek influences. 'Soul' (ψυχή) and 'spirit' (πνεῦμα) are now frequently used in senses that can hardly be distinguished, to express the whole inward or spiritual nature (*e.g.* Lk $1^{46.47}$, Ph 1^{27} [RV]). The term 'body' (σῶμα), again, has now come into general use, and is employed in connexions which make it practically synonymous with 'flesh' (σάρξ; cf. 1 Co 5^3 with Col 2^5, 2 Co 4^{10} with v.^{11}). But, even so, body and soul, flesh and spirit, are not used in the sharply antithetic fashion of the Greek philosophic dualism. If the terms are Greek, the ideas are still Hebrew. In the NT a soul ordinarily means an embodied soul, and a living body is always conceived of as an ensouled body. The emphasis within the idea of personality, it is true, now falls more emphatically on the inner and spiritual side; existence, and even a blessed existence, is consistent with separation from the body—St. Paul thinks of an absence from the body which is yet a presence with the Lord (2 Co 5^8). But the old Hebrew view of the essentiality of the body to human nature in its completeness is asserted afresh in the doctrine of the resurrection, which had become familiar to later Jewish thought, and asserted now more emphatically than before, through being carried over from the present world of things seen and temporal into the unseen and eternal realities of the world to come.

2. Christ and the Gospels.—When we descend to particulars, it may be said that there are two great lines of evidence which are of paramount importance for the NT doctrine of the body. The first comes from Christ and the Gospels. And here, as everywhere in the NT, the evidence points in two directions, one part of it serving to exalt more than heretofore the worth and dignity of man's physical nature, the other to show the subordination of that nature to the claims and uses of his spiritual being.

(1) In the first place, we find in the revelation of Christ and in the records of His teaching *a wonderful exaltation of the body.*—(*a*) The fundamental fact here is found in the Incarnation itself, in the Word made flesh (Jn 1^{14}), in the Son of God becoming the man Christ Jesus (Mt 11^{27} etc.). In the OT the flesh is dignified as being brought into a living unity with the spirit, the dust of the earth with the breath of life that comes from God (Gn 2^7). In the NT the flesh is raised to a dignity unspeakably higher, by the habitation in it and incorporation with it of the very Word of life (1 Jn $1^{1.2}$).—(*b*) The sinless life of Jesus is another illuminating truth. For this life without fault or stain, lived in the body, disposes at once and utterly of any idea that there is something essentially evil and degrading in the possession of a physical nature as such. It shows that body is not hostile to spirit, but that, on the contrary, the two may be joined together in a solidarity so true and harmonious as to become a perfect instrument for doing God's will upon earth.—(*c*) Very significant, too, is the fact of Christ's joy in living, and His freedom from that ascetic temper which is nothing else than dualism in one of its practical forms. He 'came eating and drinking,' and was so far removed from a false spiritualism, with its one-sided otherworldliness, that His enemies even accused Him of sensuality (Mt 11^{19}). He loved the scenes and shows of nature as they spread themselves before His eyes, and, so far from treating them, like some good men, as cunning traps for the unwary soul, saw in them tokens of God's presence and foreshadowings of the things of the Kingdom of heaven (Mt $6^{26ff.}$ 13 etc.).—(*d*) Parallel with this was His constant recognition in other men of the value and claims of the physical nature. He never sought to ignore or disparage what belongs to man's natural life; He came, as we read in the Fourth Gospel, not to kill or steal or destroy, but that we might have life, and might have it abundantly (Jn 10^{10}). The works of healing, which formed so large an element in His public ministry, are the standing proof of this attitude of Jesus to the physical life of man. Here, too, must be considered—as contradicting ideas which afterwards took possession of the mind of the Church—His vindication of marriage as forming a part of the Divinely appointed order of human society (Mt $19^{4ff.}$; cf. Jn $2^{1ff.}$); and further, as flowing from His approval of marriage and parenthood, His loving recognition of little children, and the place He assigned to them in the Kingdom of God (Mt $18^{1ff.}$ $19^{13ff.}$).—(*e*) The resurrection of Jesus Christ and His ascension to glory are the culminating proofs offered by the NT of the value and dignity of the human body. He not only partook on earth of our human frame, but, when He re-appeared on the further side of death, resumed a life of physical conditions (Mt 28^9 etc.), and carried the human body with Him to the right hand of God (Lk 24^{51}, Ac 1^9). For the Christian doctrine of the body this is the truth of highest significance—making the doctrine one that applies to both worlds—that, as on earth so also in heaven, as in His humiliation so also in His exaltation, Jesus Christ continues to live the life of the body as well as the life of the spirit.

(2) But, side by side with this exaltation of the body, the evidence which comes to us from Christ and the Gospels points always to (*a*) *the subordination of the body to the soul.* Although by word and deed, by the facts of His history and the very constitution of His Person, Christ asserted the worth of man's physical nature, it was a fundamental part of His teaching that what is highest in our personality must be sought in the inner nature, and that the body must be kept in a due subjection to the authority of the spirit. 'Fear not them,' He said, 'which kill the body, but are not able to kill the soul' (Mt 10^{28}; cf. Lk 12^4). And in some of His most solemn utterances He taught that the outward world, which makes so strong an appeal to our physical senses, is worth nothing whatever in comparison with those spiritual interests and possessions on which our truest life depends (Mt 16^{26}, Mk $8^{36f.}$, Lk 12^{15-21}). He was no teacher of asceticism, as has been said, but He declared, nevertheless, that God's Kingdom and righteousness were the first things which His disciples must seek (Mt 6^{33}), and that those who are engaged in this high quest may sometimes find it needful to pluck out the right eye or to cut off the right hand ($5^{29f.}$). And whatever further meaning lies enfolded in His agony in Gethsemane and His death upon the cross, they were at all events an affirmation

* *Sutta Nipâta*, pp. 238–248.

for all time of the truth that the life of the body must be freely yielded up whenever this becomes necessary to the fulfilment of the Divine purpose, and that the spirit must be willing even though the flesh is weak (Mt $26^{39ff.}$).—(*b*) Again, the evidence points to *the provisional character of the earthly body*. Christ sanctioned marriage, as we have seen, and declared it to be an ordinance of God's appointment; but when the Sadducees endeavoured to discredit the doctrine of the resurrection of the body by pointing out a perplexing situation to which it might lead under the Jewish marriage law, He declared that, 'when they shall rise from the dead, they neither marry, nor are given in marriage; but are as angels in heaven' (Mk 12^{25}). Clearly this was an announcement of a resurrection life very different from the present life in flesh and blood. It implies the possession of a body more spiritualized than the present one, and adapted to conditions far removed from those of our earthly life. And what was thus foreshadowed by Christ's words was ocularly proved to His disciples by His post-resurrection appearances. It was the same body they had laid in the tomb which now presented itself to them in living form, so that they could not fail to recognize their Lord (Ac 1^3 2^{32}). And yet it was a different body—freed from the familiar earthly limitations and possessed of new and higher capacities and powers (Lk $24^{31.\ 36.\ 51}$, Jn 20^{26}). The spiritual had so interpenetrated the natural and subdued it to its own uses, that the natural body of Jesus had become a spiritual body. The invisible world was now its proper home, and it was only when He chose to 'materialize' Himself (as a student of psychical research would say), to 'manifest Himself' (as the author of the Fourth Gospel expresses it, Jn $21^{1.\ 14}$), that His disciples were able to perceive Him by their natural senses. It was in this spiritual body that the risen Christ ascended to His Father. And it is this spiritual body of the risen and ascended Christ that becomes for His disciples the type of that glorious body which, in their case also, is to take the place of the present body of humiliation (Ph 3^{21}).

3. **The Pauline anthropology.**—The second great line of evidence comes from the Pauline anthropology. It is here that we find the great bulk of the direct NT teaching on which the Christian doctrine of the body is based. Now, in regard to St. Paul it has often been assumed that his anthropological ideas were determined by Hellenistic influences, and that he sets up a hard dualism between matter and spirit, between body and soul (cf. Holtzmann, *NT Theol.* ii. 14 f.). But so far is this from being a correct statement of his position, that it might rather be affirmed that the Apostle is nowhere more closely in line with the OT psychology than in his teaching on this very subject. For him, too, as for the other writers of the NT, human nature is not an irreconcilable antithesis of matter and spirit, but a psycho-physical unity of soul and body, in which, however, the body, as the part that links man to nature, takes a lower position than the soul or spirit, by which he comes into relation with heaven and God. St. Paul's doctrine will become apparent if we consider his utterances on the relation of the body to sin, to death, to holiness, and to the future life.

(*a*) *The body and sin.*—It is at this point that the argument for a positive dualism in the Pauline teaching, due to Greek influences, appears most plausible. There can be no question that the Apostle often speaks of the body and its members, not only as instruments of sin, but as a seat and fortress of its power (*e.g.* Ro $6^{12.\ 19}$ $7^{5.\ 23f.}$)—a way of speaking, however, which is neither Greek nor dualistic, but has its roots in OT teaching, and is the direct result of an acute ethical experience. But it has been further alleged that St. Paul recognizes in the body the very source and principle of sin (Pfleiderer, *Paulinismus*, 53 ff.). The argument depends on the interpretation given to the word 'flesh' (*σάρξ*) in those passages where the Apostle, passing beyond the ordinary non-ethical use of the word (Ro 2^{28}, 2 Co 4^{11}), employs it in an ethical sense in contrast with 'spirit' (*πνεῦμα*). According to this argument, *σάρξ* in such cases simply denotes the physical or sensuous part of man, in which St. Paul finds a substance utterly antagonistic to the life of the spirit, and one whose working makes sin inevitable. But the objections to this view are overwhelming. When St. Paul in Gal $5^{19ff.}$ gives a category of the 'works of the flesh,' the majority of the sins he enumerates—for instance, idolatry, hatred, heresies, envying—are spiritual, not physical or animal, in their nature. When he charges the Corinthians with being 'carnal' (*σαρκικοί*, 1 Co 3^3), it is not sensuality that he is condemning, but 'jealousy and strife.' His doctrine with regard to the sanctification of the body, as a member of Christ and the temple of the Holy Ghost ($6^{15.\ 19}$), would have been impossible if he had regarded the principle of sin as lying in man's corporeal nature; and equally impossible his belief in the absolute sinlessness (2 Co 5^{21}) of one who was born of a woman (Gal 4^4). Nor could he have given so high and constant a place, in his doctrine of the future life, to the hope of the resurrection, if he had conceived of the body as the *fons et origo* of evil in man. He would rather have been driven to long for its utter dissolution, and to centre his hopes for the eternal future in a bare doctrine of the immortality of the soul.

The Pauline antithesis of flesh and spirit, then, cannot be interpreted as amounting to a dualistic opposition between man's body and his soul, his material and his immaterial elements. Here, as everywhere else in Scripture, the real antithesis is between the earthly and the heavenly, the natural and the supernatural. The Apostle uses 'flesh' to denote man's sinful nature generally; and his reason for doing so, doubtless, lies in the fact that by the law of ordinary generation it is through his flesh that the individual is linked on to the life of a fallen and sinful race, and so comes to inherit a corrupt nature. St. Paul's teaching at this point is in line with the great saying of Jn 3^6, 'That which is born of the flesh is flesh; and that which is born of the Spirit is spirit' (cf. Laidlaw, *Bible Doctrine of Man*, 119). St. Paul's 'carnal' man is the same as his 'natural' man who receiveth not the things of the Spirit of God, and is thus distinguished from the 'spiritual' man in whom a supernatural and Divine principle has begun to operate (1 Co $2^{13ff.}$; cf. $3^{1.\ 3}$).

But while St. Paul does not find in the body the very principle of sin, he does regard it as in a special sense the lurking-place and instrument of evil. When he speaks of the old man being crucified with Christ that 'the body of sin' might be done away (Ro 6^6), when he longs for deliverance from the 'body of death' (7^{24}), when he refers to 'the law in our members' which wars against 'the law of our mind' (v.^{23}), it seems evident that he recognizes an abnormal development of the sensuous in fallen man, and regards sin as having in a special manner entrenched itself in the body, which becomes liable to death on this very account (Ro 6^{23} 7^{24}), and throughout man's earthly life is a constant source of weakness and liability to fall. Hence his determination to buffet his body and bring it into subjection (1 Co 9^{27}); his summons to Christ's people to mortify the deeds of the body (Ro 8^{13}, cf. Col

3[6]); his appeal to them not to allow sin to reign in their mortal bodies, but to present their members as instruments of righteousness unto God (Ro 6[12ff.]).

(*b*) *The body and death.*—It is in accordance with those dualistic conceptions which by and by entered into the Church through the influence of heathen philosophy, and which still colour Christian thought as well as Christian language, that death should be spoken of as if it were a liberation of the soul from its bondage to corporeal conditions, whereby it escapes into its natural element of pure spirituality. St. Paul, at all events, never speaks thus about death. His strong sense of the weakness of the flesh and its subjection to the powers of evil leads him, it is true, to describe the body as a tabernacle in which we groan, being burdened. But he immediately hastens to explain, 'not for that we would be unclothed, but that we would be clothed upon, that what is mortal may be swallowed up of life' (2 Co 5[4]). It is not deliverance from the body that he longs for, but the deliverance of the body from the constraint of evil, its complete redemption and transformation, and perfect adaptation in consequence to the life of the spirit. To the Apostle that separation of soul and body which we call death was not something natural, but something profoundly unnatural. According to his original nature, man was not made to die. It was not part of the Divine purpose in his creation that the solidarity of body and soul should ever be dissolved. But the entrance of sin into the world changed every human prospect; and death is the wages of sin (Ro 6[23]). But just as Christ, by His Spirit dwelling in us, can subdue the power of sin, so also can He gain the victory over death—the culminating demonstration of sin's power, and man's last enemy (1 Co 15[26]). In Christ we have the promise of a body not only raised from the grave, but redeemed from the power of evil, and thus capable of the great transfiguration from a natural body into a spiritual body (v.[44]), from 'the body of our humiliation' into a conformity to the body of Christ's glory (Ph 3[21]).

(*c*) *The body and holiness.*—St. Paul's view of the body as an essential part of the human personality is seen further in connexion with his teaching on the subject of holiness. In the Church at Corinth, whose members breathed an atmosphere saturated with heathen influences, there had sprung up the strange, perverted doctrine that, as the body is not a part of man's true personality, all bodily acts are of the nature of *adiaphora*, or things morally indifferent. Fornication stood on the same level as eating and drinking; it was a mere physical act, natural to man as an animal creature, but having no real bearing on the independent and higher life of the soul (1 Co 6[13ff.]). The idea is one that has appeared again and again in Christian history, for dualistic notions regarding the body tend almost as readily to sensualism on the one hand as to asceticism on the other (cf. the Ranters in the days of the Puritan revival; see R. M. Jones, *Studies in Mystical Religion* [1909], 477). The Apostle's answer to all such degrading views was to set up his doctrine of the bodily holiness of a Christian man. The body, he said, is for the Lord, and the Lord for the body (v.[13]); your bodies are the members of Christ (v.[15]); your body is a sanctuary of the Holy Spirit (v.[19]). In his view, the life of the human spirit, by which we are linked on to Christ Himself and to the Spirit of God, is joined indissolubly to that physical life which finds its manifestation in the bodily members. And so, when the Spirit of God takes up His abode in a man, the body of that man, as well as his spiritual nature, undergoes a process of sanctification, as day by day there pass

> 'Through all this fleshly dress
> Bright shoots of everlastingness.'

And yet this exalted view of the communion and fellowship of the body in the spiritual life of man, and its sensitiveness to the powers of sanctification, did not blind the Apostle to the fact, taught him by his own ethical experience, that in the fallen nature even of a Christian man the body is weak and tainted, and ready to become the instrument of temptation and an occasion of stumbling. In this temple of the Holy Ghost there are dark corners where evil spirits linger, and from which they can never be utterly expelled until in death the wages of sin have been paid. If ever there was a spiritually-minded man, St. Paul was one, but even he was deeply conscious of the infirmity of the flesh (Ro 6[19]), and felt the need of subduing his own body, lest, after all, he should become a castaway (1 Co 9[27]). And so, side by side with the truth that the body is a Divine sanctuary, he sets forth in his doctrine of holiness the demand that sin should not be allowed to reign in our mortal bodies that we should obey it in the lusts thereof (Ro 6[12]).

(*d*) *The body and the future life.*—Here, again, two lines of thought emerge in St. Paul's teaching—an overwhelming sense, on the one hand, of the worth of the body for the human personality; and, on the other, a clear recognition of its present limitations and unfitness in its earthly form to be a perfect spiritual organ. The proof of the first is seen in his faith in the resurrection of the body. The Pharisaic Judaism in which he was brought up had come to hold the hope of the resurrection of the dead (Ac 23[6ff.]), but that was a dim and pallid hope compared with the living and shining assurance which Jesus Christ had begotten in his heart. To him the resurrection of Christ was a fact of the most absolute certainty (Ro 1[4], 1 Co 15[3ff.]). And that fact carried with it the knowledge that the dead are raised (v.[13ff.]). When he writes of immortality (1 Co 15[35f.]), he does not mean, like Plato, the immortality of the soul (*Phædo*, liv. ff.), but the immortality of the whole man. He believed, no doubt, that the soul, as the centre of the personality, could survive the shock of separation from the body (2 Co 5[8]). But he thought of it as existing then in a condition of deprivation and incompleteness, for which he uses the figure of being 'unclothed'; and he does not regard it as attaining to the fullness of the life and blessedness of the future world until its 'nakedness' has been 'clothed upon' (v.[2ff.]). But, while he believed in the resurrection of the body, St. Paul did not believe in the resurrection of the present body of flesh and blood (1 Co 15[50]). He looked for a body in which corruption had given place to incorruption (v.[42]), in which weakness had been succeeded by power (v.[43]), in which what is mortal had been swallowed up of life (2 Co 5[4]), and humiliation had been changed into glory (Ph 3[21]). He was fully alive to the disabilities which the spirit has to suffer from its union with a body that is weak, earthy, and perishable, and his doctrine of the resurrection includes the assurance that when the dead in Christ are raised—of the physical resurrection of others he has little to tell us—it will not be in the old bodies of their earthly experience, but in new ones adapted to a heavenly condition of existence (1 Co 15[47ff.]), bodies that are no longer *psychical* merely, *i.e.* moving on the lines of man's natural experience in the world, but *pneumatical* (v.[44ff.]), because redeemed from every taint of evil and fitted to be the perfect organs of a spiritual and heavenly life.

4. **The Christian doctrine of the body.**—Taking

the NT as our source and norm, we thus find that the Christian doctrine of the body follows two main lines. (1) There is a recognition of the body as *an essential component of a complete human personality*. In the fullness of his being, man is conceived of not as a purely spiritual entity, but as an embodied spirit. This is the evidence of the Bible from beginning to end—from the story of the Creation in Genesis (2[7]) to the Apocalyptic vision of the sea giving up its dead that they may stand before God to be judged according to their works (Rev 20[13]). It is a doctrine that finds confirmation in the teachings of modern science, alike from the psychical and from the physiological side. For, if physiology has been compelled to admit the presence in man of a spiritual essence which lies beyond the range of its processes and tests, psychology has no less had to admit that the psychical, as we know it, stands in a close and constant relation to the physical. It is in keeping, therefore, with both Biblical and scientific truth that the Christian doctrine of the body should recognize and maintain the rights and dignities of man's physical being for the life we are now living, and should proclaim the great hope of the body for another life which is to come. The body is recognized as having its rights. Its natural instincts are to be treated, not as if they were implanted in us only that they might be suppressed and crushed, but as designed to lawful fulfilments on the lines of that great affirmation, 'All are yours; and ye are Christ's; and Christ is God's' (1 Co 3[22f.]). The world belongs to the Christian; and the joy of living in it and opening the heart through the senses to all its pure delights is part of his inheritance. Those natural relationships which lie at the foundation of our social existence, and which depend fundamentally upon our physical constitution—the love of husband and wife, of parent and child, of brother and sister—find a firm sanction in the Christian gospel of the body. And as the rights of the body are recognized, so also are its dignities. Even the present body of our humiliation, with all its weakness, its bias towards evil, its mortality, is sacred—sacred as being an essential part of that humanity which found in Jesus of Nazareth its pure and perfect expression, sacred in a more personal sense because the living Christ enters into it by His Spirit, makes it His temple, quickens it with His own life, and begins the work of subduing it to His own likeness. And the Christian doctrine of the body has also its promise for the future life. For, in the Christian view of the matter, the separation of body and soul at death is an unnatural condition. Without the body, the human soul is deprived of something that belongs to its true constitution, and is incapable of the highest activity and blessedness. From this limitation of his capacities and powers man is to be delivered by the 'redemption of the body' (Ro 8[23])—not its resurrection merely, but its complete redemption from all the defects of its earthly condition, involving a transformation and exaltation of its very substance.

There is no place in the Christian doctrine of the resurrection for those crude materialistic ideas, which were once so general, of a restoration of the selfsame particles of which the earthly body was composed. The spiritual body is to differ widely from the natural body (1 Co 15[37]). An inherent identity, it is true, must connect them, or we could not speak of a resurrection at all; but the identity will be one of vital principle and organic form, not of material substance, as St. Paul seeks to show by his figure of the grain of wheat which dies and springs up again to more abundant life (v.[36ff.]). The body of the risen and exalted Jesus is at once the promise and the type of the spiritual body in the case of His people (vv.[23. 49], Ph 3[21]).

(2) But with all its emphasis on the rights and dignities and glorious prospects of the body, the Christian doctrine fully recognizes that *man's physical nature is his lower part*, that it is subject to evil tendencies, that it needs to be steadily subordinated to that higher life of the spirit by which we are brought into conscious relation with God. The world, which appeals so mightily to man's senses, is of much less value to him than the life of his own soul. His natural relationships, however dear, the very life of the body itself, however precious to the self-preserving instinct—all must be surrendered to the higher claims of the Divine Kingdom. Of these great truths Jesus Christ was the solemn prophet; by these He shaped the steps of His own earthly career; His body nailed to the Cross of Calvary was the tremendous example of their reality. The body, in short, has its duties as well as its rights; and it is always its duty to be the servant of the spirit. In the interests of the body, Christianity has sometimes had to raise its testimony against the exaggerations of a one-sided spiritualism, but it is much more frequently called on to protest, in the interests of the soul, against a materialistic way of envisaging our life in the world. There was a time when monastic asceticism, with its contempt for the body, became a positive danger to the Church. The danger now lies rather in a cult of the body which threatens the very life of the soul, whether that takes the form of a craze for athleticism and games which leaves little room for the growth of intellectual and spiritual interests, or of an æstheticism absorbed in the culture of the finer senses and in a pursuit of 'art for art's sake,' or of that mere vulgar love of pleasure by which, in all ages, the heart has been drawn away from the love of God. The Christian doctrine never fails to remind us that the body needs to be watched and curbed, and sometimes to be subdued. It warns us that, even in the case of those in whom the work of bodily sanctification has begun, the day of bodily redemption still lies in the future. It is hardly so optimistic in its view of the present relation to each other of the two parts of human nature as to say with Browning, in 'Rabbi Ben Ezra': 'Nor soul helps flesh more, now, than flesh helps soul.' On the contrary, it recognizes the truth to ethical reality that lies in the teaching of Jesus Christ and of His great Apostle as to the soul's perpetual primacy, and the need for a constant and vigilant superintendence of the body's promptings. But it looks for a day of perfect reconciliation, when the two elements of human nature, now so often at variance, shall at last perfectly accord, and the redeemed body shall be the ready organ and the exact expression of the informing soul.

J. C. LAMBERT.

BODY (Egyptian).—1. Man.—1. What we understand by 'body' was to the Egyptians simply the last and heaviest of the material coverings which together form a human being. The flesh, *aufu* ('flesh' in the sense of the sum of the physical elements that compose the human body), was neither of a different nature nor of a different texture from the other elements contained within and completing the person. All the elements possessed weight and were perceptible, though in varying degrees; and if on ordinary occasions they were not all visible or palpable, that was simply a circumstantial detail and not due to any essential difference. Magic often enabled men to see and handle these elements.

The *ka*, or 'double,' for example, was only a second body enclosed within the *ǰait*, lighter, more subtle or more airy, but composed, piece by piece, of the same elements as the body proper. The texts that refer to the future life (see DEATH, etc. [Egyptian]) prove conclusively that the *ka* in the other world was constituted, in every detail, like the body of flesh which it had occupied on earth.

The *ḫaibit*, or 'shadow,' was also only a third kind of body, still more airy, still more subtle, yet of the very same structure as the first two elements of the series.

The *khu*, or 'ghost,' long misled Egyptologists, through their relying upon hymns or over-refining texts of the Theban period. Books of pure magic or of funeral magic show us that the *khu* was originally only a kind of body, still more agile perhaps than the other three, and practically similar to the body attributed to *jinn* and fairies in the wonderful literature of the Arabs, or to the body that the modern Bantus suppose to exist inside the body of flesh.

The list is not exhausted by these four names: the primitive Egyptians, like a number of modern uncivilized peoples, had a very complicated idea of the human body. A striving after simplicity came only as the slow result of very long periods of effort; and the point at which we first gain clear impressions of the notions cherished by the Egyptians is still, in spite of the antiquity of the texts concerned, far removed from the starting-point. Glimpses of the primitive notions are caught and they have been re-constructed, but there is no direct contact with them. By the time of the historical period several of the multiple bodies composing a single being had been eliminated by speculation or by experience; and it is hard to conjecture, for example, what the *sâhu* can have been. It is to no purpose that the theology of the Thebans (and with it several Egyptologists of our day) thinks to find in it a designation of the 'spiritual body,' opposed in eschatology to the double, the shadow, or the soul. There are also very distinct traces in the ancient texts of an earlier time when the *ḫaït* and the *sokhim* were two of the bodies of the living man. But as yet we do not know clearly what was their exact nature.

The conjunction of all these bodies made a human being. What we call death was only the sunderance of them, and was always ascribed, as among primitive peoples, to some violent cause, arising from the personal act of an evil being (see art. DEATH). What kept all these bodies together in a unity during life was something more subtle, lighter, more active than any of them, something which constituted, at least approximately, the *personality* or the *self*. There is no race that has not tried to penetrate more or less into the definition of the latter; and there is no inquiry that has given rise, in primitive religions, to speculations so strange and, sometimes, so painfully complicated. As for the Egyptian, he thought to find its nature and power in what he called the *ran*, which we translate so unsatisfactorily by the word 'name.' The 'name'—we must be content to use this very ambiguous equivalent—is quite different from the body, since the whole series given above is only, as has been said, a sort of 'gamut' of increasingly fluid bodies.

The nature of the 'name' in itself is too important to receive due treatment here incidentally. The theory of the 'name' is in reality the fundamental basis of more than half of the religious ideas of Egypt. It will be discussed fully under art. NAMES (Egyptian). Here we shall merely say as much regarding it as is necessary in order to understand the Egyptian 'body.'

As far at least as we can gather, 'names' were originally what we may call 'kernels' of energy, vibrating, perhaps luminous (of course, material), distinct from and incapable of dissolving into one another. They had their own peculiar vitality, in the midst of the great chaotic mass of primordial things. The solar theologies, such as that of Heliopolis, revised and corrected by that of Hermopolis and Amarna, regarded them as originally emanations, vital waves proceeding from the rising sun. These entities, distinct and irreducible, then 'clothed' themselves, so to speak, in more or less visible or weighty coverings, which are these bodies of which we have spoken, the heaviest and most material of the latter being what we moderns mean by the 'body.' How was this 'clothing' brought about? Was it by a kind of solidification of the cosmic dust which somehow condensed the materials of physiological life round the 'names'? If Egypt seems to have had a confused idea of some answer of this kind, she naturally could formulate it only haltingly, with incoherences and *lacunae*, like so many strange systems of primitive or uncivilized peoples in other parts of the world. The historical period tried to introduce some appearance of cohesion into the existing system. It got hold of the early legends about the cosmogonies and, amongst them, of the legend of the god Thôth. Thôth (= *Tahuti*, 'the Speaker') had 'proclaimed' the world. The sounds of his voice had attracted round about their groups of syllables coverings of flesh and bone, of wood, of stone, or of other substances; and the whole together had constituted the creation. Thus revised by theology, the nature of the 'name' became something less fantastically barbarous; on closer examination, the *ran*, or 'name,' was something like a bundle of energetic waves, 'rhythmic' waves, with their special characteristics—and particularly 'numbers,' which the voice can reproduce if there is 'attunement.' One cannot help remembering that, many centuries later, Pythagoras made 'numbers' the basis of his system, and it is only reasonable to wonder what part ancient Egypt played in this.

The theology of Hermopolis claimed that, after the creation organized by the 'names,' the world of bodies and beings thus set in progress continued and reproduced itself by its own activity. This theology is too indefinite for our taste. Perhaps this is due mainly to the fact that nine-tenths of the Egyptian religious writings that we possess to-day treat only of gods or of the other world. The information we get from such texts is enough, however, to let us see that the vital principle of the body, this *ran*, which constitutes the inmost essence and the personality, *pre-existed* before the body and its physiological elaboration by the parents of the new being. We do not know very well where it came from according to the idea of the Egyptians, or what it was before the existence of a body for it to inhabit. But we gradually arrive at an understanding, by studying the birth-ceremonies (or the ceremonies of the coronation of kings, which give them a new soul), and we get a glimpse of the combination of vital and celestial energies from which it apparently arose. Horoscopes, or the supposed relations between the condition of the world at the birth of an individual and his 'name'; the care taken to determine the pronunciation of the name conferred on a newborn child according to the natural phenomena in evidence at his appearance; the anxiety to connect the syllables, whose pronunciation thus makes his 'self,' with divine persons, with 'names' of gods—these things all enable us, if not to re-construct Egyptian thought as a whole, at least to imagine almost exactly what it was. At the birth of a child the Egyptian sought by every means to discover to which group of higher forces the 'name' belonged which had just formed the person of the new being. He aimed at reproducing with his voice its vibrations and pronunciation, so as to join it again, in incantations or prayers, to the higher beings whose protection must be obtained or whose destiny must be pursued.

And as the Egyptian tried to do this for his own children, so he also tried to get to know the 'names' of the gods or of formidable beings. The hermetical books, or the books connected with the treatment of the dead, taught these names; and those who knew them exercised indisputable power over those who bore them (see art. NAMES [Egyptian]).

The 'name' and the series of 'bodies' (the body of flesh, the double, the shadow, the ghost, and the *sâhu*) together constituted a complete being. These were not, however, enough to form a *living* being. As yet there was only a being capable of living, only the *possibility* of life. In these religious systems, what we shall call, for want of a better name, the 'exercise of life' does not result *ipso facto* from the junction of the body or bodies with the soul or what takes its place. It is the product of forces peculiar to the being to be animated, and it is enough if the being that these powers are going to animate is completely fitted to receive them. This is shown very clearly, moreover, by reference to the statues—those artificial bodies—fashioned by the hand of man, which are nevertheless treated in Egyptian religion precisely like real bodies. The most ancient rituals show us that it was usual to perform a series of magical operations to enable the eyes of a statue to see, its ears to

hear, its nose to breathe, its mouth to eat, and the other organs to fulfil their functions. And if the historical period has preserved only traces—though certain traces--of many of these old rituals, it has at least kept intact the long ceremonial of 'the opening of the mouth' (*uap-ro*). We need not study these rituals here, since they deal only with artificial bodies created by religion for the service of its gods, its kings, or its dead, or with bodies made by the magicians for the service of their 'magic spells': dolls or images of men and animals in wax, wood, earth, etc., made into 'living bodies' by the sorcerers, the thaumaturgists (cf. Rollin, Harris, Leyden, and Turin Papyri). But the way in which the Egyptians conceived the necessity of enabling a statue to use its organs, after making a soul enter into it, is nevertheless a proof of what it is of interest to keep in mind for our present study, viz. that the union of the animist principle, *ran*, with its coverings was not enough to initiate life.

Life itself (*aonkhu*) was the result of the entrance into the body of those vital breaths which exist in all Nature, and which the air carries and the breeze (*nifu*) wafts to the faces of beings. They enter by the nostrils, not by the mouth. Like the majority of African races at the present day, the Egyptians breathed through the nose; and in their language the breath of the nostrils was synonymous with life. It is always to the nose, and never to the lips, that the gods or kings in iconography hang the chains or bundles of 'handled crosses,' which are intended to signify, by a play of pictorial words, the breaths of life. Thus they penetrated within the coverings which constitute the body. It was supposed that there they mixed with the blood, in the form of a kind of gas or bubbles, and circulated by the blood-vessels through the whole human system. Under their beneficent influence, the 'vessels swelled up and worked regularly.' Life accordingly served to maintain the conjunction of the various bodies adjusted within each other and the 'name.' It was, therefore, as necessary to the 'name' as to the series of bodies.

We usually translate the Egyptian phrase *sonkhu ran* by 'give life to the name of. . . .' The translation is somewhat poetical and seems to be connected with ideas familiar to us. But it is only an approximation. The literal sense is 'make the *self* breathe the breaths,' and this leads us to conceptions far removed from ours.

2. Once we leave the medical point of view, Egypt has preserved very few details as to her ideas of the body during its existence on earth. For although we have from the point of view of medicine a veritable superfluity of documents (we need only note among others the Berlin, Ebers, and Amherst Papyri, and those found by Petrie in the Fayyūm), the other Egyptian writings have little to do with the *living* body. All the moral and religious literature is exclusively occupied with what happens to the body at its physical death, with whatever has a bearing on burial, funerals, or fate after death. The popular tales or the writings of pure magic remain as a relative source of information on the subject.

It could hardly be otherwise with a religious civilization which evolved the above-mentioned conception of life and of individuals. Bodies composed in the way described cannot, either in rituals or in treatises, be brought into connexion with subjects that bear on ethics, morals, or the respective values or opposition of the soul and the body. Theories like asceticism, for example, or systems of the type of metempsychosis, avoid by their very definition the Egyptian thought of the classical period. Hence the information as to the living body that we derive from the monuments and the religious texts of Egypt will be confined to specifications as to how the body may be affected by disease or cured (and this belongs to the domain of medicine); or how the body is to be adorned, clothed, or tatued (and this is almost exclusively a matter of archæology); or incidentally we shall find detailed information about such and such a part of the body, and about such and such a group of religious ideas or pure superstitions attached to a specified organ. Thus, in connexion with a special literary episode or magical operation, the texts tell us in passing what the Egyptian ideas were in regard to the various specified organs of the body; and these are the only particulars that are of any interest in our present study.

We need not attempt to give a full account here. Certain elements of the body are scarcely mentioned by the Egyptians outside of medical treatises. In the latter, on the other hand, we find long lists of 'the twenty-two vessels of the head, the two vessels of the breast,' etc. As regards the rest of the writings, when it is said of the *heart* (*hāti*, lit. 'the beater') that it is opposed in the economy to the *liver* (*nashmit*, lit. 'the motionless'), the entire subject is exhausted, or nearly so. Of other members or organs we know a little more. Thus, the *eyes* have a special magical power; they fascinate and overpower by the fluid they dart forth; they repel harm or evil spirits if they fix on them first; magic by philtres and spells can increase their keenness exceedingly—even to the extent of enabling its favoured ones to see what the eyes of mortals do not in ordinary circumstances distinguish: invisible spirits, characters written inside a sealed roll, and innumerable other things. The *mouth* is an ever possible entrance for demons, phantoms, and spirits, who are always prowling round people and trying to get into their bodies. The magic or cognate writings carefully note this constant danger, and it is undoubtedly one of the strongest reasons that led the Egyptian to breathe by the nose. It is well known that, amongst many uncivilized peoples, kings and chiefs have a great aversion to being seen during meals. A long time ago the true explanation was offered—an explanation based on primitive ideas, namely, the dread lest spirits and malignant influences might enter by the mouth. It is very probable that the Egyptians shared this fear; and if conjecture is right, although it cannot be proved formally for the kings, the idea is clearly seen in the anxiety displayed in the meal served almost secretly in the interior of the *naos* to the living bodies which are the statues of the gods.

Other parts of the system are the seats of more distinct manifestations or principles. The integrity and healthy state of the *bones* are apparently one of the conditions essential to the harmonious working of the vital functions. The Egyptians seem to have had a strange idea that the disorganization of the system attacked by illness or death began in the bony structure, the marrow of which constituted somehow or other a vital reserve of special force. But this special point has received little attention as yet, and what has just been said is suggested with the greatest reserve, pending more minute study of the ancient religious texts.

We are a little more certain, on the other hand, of the Egyptian idea that the *top of the vertebral column* was the precise point at which certain magic fluids or certain energies could penetrate into the body. The bestowal of the vital or healing fluid (*sā*) by the gods or their representatives laying their hands on this point of the neck, is a scene reproduced in thousands of examples in the Egyptian monuments; it is enough to mention it here. The *inside of the skull* is the chief *habitat*

of that sort of agile principle which the Egyptian calls *bâ*, and which is represented sometimes in the form of a lapwing or a wading-bird, sometimes in the likeness of a bird with a human head; it was thought sometimes to show itself in the form of a bee. We translate it by 'soul' (*q.v.*); but that is only a rough approximation, given only because it is necessary to have a translation. The *bâ* is neither one of man's bodies nor a kind of radio-active substance like the *ran*; we can hardly compare it to anything but those little genii or 'spirits,' sometimes one, sometimes several, that so many savage peoples locate in the nape of the neck of the human being. The primitive Egyptian believed also—and the texts have preserved the trace of it—that a man had several *bâ* (plur. *biu*) as he had several *ka*. At the historical period, this complicated privilege was reserved for the gods and their heirs. This 'soul,' moreover, was so material that dread gods could sometimes catch it and feed upon it.

All this is only approximate translation, and necessarily so, when we attempt to reproduce in our precise modern terminology material distinctions and ideas conceived according to information and initial data so different from ours. Thus it is usual to translate the Egyptian word *ab* by 'heart,' although the *ab* of the human body is quite a different thing. 'Inside' is a word with a distinctly less dignified sound; but it has the merit of being a more faithful rendering. The *ab* is something not well analyzed, but with exact enough limitations. It is, in short, the belly—meaning by that the stomach and the intestinal apparatus, and to a certain extent the heart, considered from the point of view of shocks which the emotions may cause in it. This 'inside' is the seat of another special kind of 'soul,' distinct from the *bâ* soul. It is an obscure soul, connected specially with all the manifestations of feeling and passions—impulsive, the generator of movements and of good or bad actions. What is certain is that it is a soul with its own peculiar existence and activity. Originally, at least, it existed on its own account—until the time when the progress of Egyptian thought and its striving after psychological unity made it a sort of appendix to the true 'self' (for more detail, see art. HEART). If the Egyptians had precise ideas on its origin, it would appear that the soul of the *ab* was believed to come from the vital substance of the mother (cf. *Book of the Dead*, ch. xxxvi.). The ancient texts published at the present time are not of sufficient number to give us an exact appreciation of the ideas attached to the *jasu* (vertebræ ?), the *bakasu* (kidneys ?), and the *samiu seiu* (viscera ?). We can only guess that some vital reserve force was located in these parts. It was chiefly conceived under the form of 'powers,' 'knowledge of magic names,' and other sensitive or mental manifestations, as material emanations and, to a certain extent, as a kind of special soul.

The rest of the individual is not marked by anything of special interest. The superstitions attaching to the hair, the ears, the teeth, the hands and feet, are only details, and do not bear so much upon the fundamental magic of the religious ideas as upon popular superstition, the contents of which are dissolved and re-fashioned at all periods. We should note only the continual care to protect the various parts of the body, as with magic armour, against the possible attacks of evil spirits: hence the customs relating to amulets, talismans, tatuing, etc., some of which are combined, in the period of civilization, with the taste for physical adornment, and give rise to the greater part of jewellery (necklaces, bracelets, rings, etc.) and perfumery (pastes, paints, unguents, etc.). Circumcision is connected with this group of ruling ideas, but it will be treated in a special article because of its importance (see art. CIRCUMCISION).

To complete our survey of ideas relating to the human body, we note the following: (*a*) The link between the various material bodies may be temporarily broken during the earthly life, under the influence of certain forces voluntarily employed or involuntarily submitted to by man. A magician, for example, can by means of set formulas send his 'ghost' or his 'double' far away to perform some deed or other. Or it may happen to an ordinary mortal—usually during his sleep—that his 'double' leaves his body and shows itself in some other place, in the form of a body of flesh and bones more or less visible and tangible. As among all peoples, dreams and apparitions are the pseudo-experimental proofs of these ideas, and the Egyptian notions about sleep, lethargy, and syncope differ very little from those found almost universally.

(*b*) During the whole of its terrestrial life the body is subject to whatever astral or natural influences prevailed on the day when it made its appearance in the world—and this independently of the influences to which the 'name' is submitted, and of which we have spoken. The calendar, the horoscopes, the thousand particulars noticed at the moment of birth, may serve to determine this influence and, to a certain extent, may make it possible to charm away ill-luck (cf. Sallier Papyrus). The study of them determines what precautions must be taken when the conjunction of evil influences proper to such and such a body shows itself anew.

(*c*) Both during the terrestrial life of the body of flesh and after it, the fragments taken from its substance, its perspiration or its excretions, retain to a certain degree the force of the vital fluid of the whole individual. In Egypt, therefore, as in so many nations, we find those beliefs in the virtues of nail-parings, hair- or beard-clippings, and of the cloth soaked in the perspiration of some individual, which played such an important part in magic and necromancy. The fluid emanation of the living body may even communicate something of the life and powers of an individual to the clothing he has worn, and especially to ornaments, arms or badges that he has had in his hands. This idea, which can be found among several African peoples, appears even more clearly in regard to objects connected with the king's attire. He communicates to them a sort of divine power similar, *e.g.*, to the power given by the king of Dahomey to his cane or his sceptre.

3. A last remark is necessary in connexion with these characteristics of the body among the ancient Egyptians. When investigating the idea cherished by any one of the non-civilized races as to the body, we are able to determine its characteristics accurately enough, because we have under our eyes a population in most cases restricted in number or area, and because, as a rule, we know it only at the very time when we are examining it. But we must not forget that, in the case of Egypt, we are dealing with a civilization which has, in time and space, had several different religions, each with its own evolution. These ideas of the body are distributed throughout a historically ascertained series of thirty-eight centuries, having behind it, according to the traditional texts, a pre-historic mass of documents impossible to evaluate, but certainly the product of a considerable number of centuries. Further, these ideas have never at any one period been the same in the whole of Egypt. The Heliopolitan did not form the same conception of the body as the Theban, the Hermopolitan, or the Mendesian. Consequently it is not the absolute

theory of the Egyptian ideas on the body that is given in this article. It is rather a general view, in which it is possible to shade off or accentuate details, according as one is trying to picture the ideas concerning the body of an Egyptian of the Ptolemaic period, a Saite, a Theban, a Memphite, a Thinite, or a man of the pre-Thinite period of some province in the Nile valley. But if we desire to gather from the whole the essential physiognomy, and to look for the distinct characteristics of the primary notions, we shall come very near an exact expression of the early Egyptian ideas on the body if we say that it is a confused conglomeration of substances similar in nature, but of different qualities, defined as independent of each other, but in fact continually united by the 'name.' The whole is set in motion by a multiplicity of 'spirits,' with no fixed mutual cohesion, and originally peculiar to a certain part or physical manifestation of the individual. Upon the whole, it is a body very similar to what is revealed to us by scientific inquiry (if not alike in every point, at least identical in the main) among the least civilized peoples of our times, such as some specimens of the non-Aryans of India, the Battaks, the Caribs, the most backward of the Bantu group, etc.

ii. **Animate creatures or inanimate objects.**—It would appear that, in a general way, without entering into exact details, the rest of the *bodies* in the sensible world were considered as having the same texture as the human body. This applies not only to animals, but also to vegetables, and even to such things as a stone, a rock, an expanse of water, or any object made by man. The religious, magic, and popular literatures present sure examples with reference to the 'double' or the 'name' of a tree, a pillar, or a staff—to mention only these cases. The only restriction that must be noted is that, since it was dealing with objects of less interest than men, theological speculation took less trouble to describe their nature accurately, and to reconcile the contradictory data of their origin. One thing is certain, viz. that there was no essential difference in the structure of all things in the material world—from the inanimate object to man. All are, *a priori*, of the same organization, down almost to the degrees of their qualities.

iii. **Gods.**—1. In a country like Egypt this same unity naturally applies to divine beings. In fact, there is no dogmatic definition marking off the deity. The gods originate, not owing to the possession of characteristics different from the rest of beings and things, but simply owing to more remarkable manifestations of the actions and forces common to them and these others.

The body of the gods was quite the same as that of men, both in its economy and in its peculiar characteristics. It might be larger, more resistant, more rapid in its movement, more durable, less vulnerable, and more difficult to catch sight of. It was not said to be imperishable, or endowed with ubiquity, or proof against sickness, pain, and wounds. Its substance had the same advantages and defects as the human substance. Its specific characteristics of weight, dimensions, colour, qualities of flesh and bone, do not form the subject of a group of formal theories in any of the Egyptian texts. But the literature and ritual mention innumerable particulars in passing, and these are ample compensation for the omission. The Pyramid texts, for example, or the hymns of the historical period, provide abundant stores of the material in question. On the other hand, contrary to the generally accepted idea, neither the popular tales nor the legendary lore merit any more confidence in this respect, as sources of information on the religious ideas, than would be inspired among us by the more or less entertaining tales that bring in the devil, the saints, or God the Father.

The 'Tale of the Two Brothers' does not clear up the Ennead; the statement of a magic papyrus, that Osiris was more than seven cubits in height, is not an article of faith; and upon the strength of the 'Story of the Old-age of Ra' we are not to believe that the body of the aged sun was made of precious metals, or that the sun-god 'shivered with cold and slobbered.' In the same way, the symbolism of the iconography is not to be taken literally, and gods like Osiris or Amon of Amentit, with black, blue, or green flesh, do not stand for a fact accepted by theology, but simply represent a means of expressing an idea. But this idea, it must be granted, was not always the same. Thus Osiris with the green flesh might, according to the period in view, stand for re-birth, re-verdure, or even for the decomposition of the flesh of dead gods. With this same symbolism, possessed of no absolute value, we may connect also the body of flesh (*aufu*) attributed to the Evening Sun, or the complex body of Osiris of Dendereh.

If we leave out of account all these appended or artificial elements, the body of the Egyptian gods seems, on the whole, to have been exactly the same as we have found the body of men to be. The gods have a body of flesh, and they have a shadow, though there is little mention of the latter in the texts (chiefly the shadow of Ra or of Aten). Above all, they have several 'doubles' (*kau*) and several 'bird-souls' (*biu*). It was even held, at a certain time, that they had seven 'bird-souls' and fourteen 'doubles'—this, from all accounts, because of the magic and mystical virtue of these numbers. Their manner of nourishment and of movement, and in general all the functions of their body, are just the same as those we know of for men (leaving out of count, of course, all that has to do with their artificial bodies or 'supports of the double'—their statues). Their extreme swiftness, the keenness of their senses, their absolute dimensions, and their resistance to death are differences of fact, as has just been said, but not of organization. Their longevity was, *de facto*, indefinite, but it was not held theoretically that they were eternal (see DEATH). It was generally thought, at least in Heliopolis, that they drew from 'the basin of the fluid *sâ*' one of the secrets of their resistance to death.

2. There remains, however, a problem ill solved, or, rather, ill stated. The human being necessarily possesses only one body of flesh—one single combination of bodies. But we see that the Egyptian god possessed several bodies simultaneously, each one of them animated by some of his 'souls,' and by a part, or rather an emanation, of his 'name.' On the other hand, other texts or pictorial representations seem to imply that the divine beings have only one single combination of bodies. This is an important matter, touching as it does upon questions like the original formation of the gods and totemism.

Historical examination of the religions of Egypt fails to discover any indication that the personality of such and such a god was originally distributed among several bodies. Still less was it distributed throughout the entire species of some animal or vegetable under the characteristics of which this god was represented. On the other hand, it follows from the initial data as to the nature of beings, that the possession of several bodies animated by one and the same 'self' is not at all impossible. The 'name' (*q.v.*), while still remaining *one and entire* in each specimen of a being, may locate itself in several bodies, and in each of them may be one of the momentary subjective 'aspects' of one and the same entity. This is confirmed, in the religious monuments of Egypt, by the various epithets added to the principal name of the god. Each one expresses the detailed, local energy or quality of a distinct body belonging to one and the same god.

Stated in this way, the question becomes above all a question of fact, to which it is not possible to

give one single reply, because the Egyptians themselves have given more than one. We must make distinctions according to the importance of each god, and according to the period in view. Thus the humblest and most ancient gods, restricted to a single manifestation of energy or charged with a single definite and limited act, have no need of more than one body. Such deities as Selkit the Scorpion and Marit-Soghru the Serpent, so far as we know, had only one body. On the other hand, when similar attributes fused two or more deities originally geographically independent into a single god, the new deity thus formed kept as many bodies as it had formerly for the separate gods of whom it was composed. A tree-goddess like Nuit, for example, had as many bodies as there had been tree-goddesses with the same character and same rôle, before the one single Nuit developed.

More important gods originally incarnated in separate persons led to the formation of a deity single in 'name,' but necessarily provided with several bodies. Thus Thōth, at once monkey and ibis, was able to live in several bodies. *A fortiori*, the gods with important national functions or with a cosmogonic rôle, being the product of syncretism, and being the combination of a great number of original gods, animated a sometimes very considerable number of bodies at the same time. An Amon-Ra, conceived as possessing simultaneously the attributes of the demiurge sun Minu, the hawk Harmakhis of Heliopolis, the ram and the gander of Thebes, could not but live a complete unity in each of these varieties of material body.

The series extends then, by previous definition, from the simple single body to the multiplicity that has no limitations. But it is a *historical* fact, and not the outcome of any religious theory. As a rule, there was at first only one body for every divine 'name.' Then the attributes ascribed to certain beings among those regarded as more specially divine grew in importance and brought about fusions. In cases where by elimination (or subordination of the secondary characteristics of the beings originally distinct) the new god completely annihilated the personality of those whom he absorbed, he continued to have only one body (*e.g.* Mihit Oirit). Where, on the other hand, it was impossible to fuse the characteristics of the original gods into a perfect amalgamation (as in the case of Hathor), the composite deity retained as many bodies as it preserved distinct aspects. To enumerate all the possible combinations, it would be necessary to re-construct the whole history of Egyptian mythology. All that it is possible or necessary to explain here is the mechanism; we need not go into all its practical applications.

There is a sort of counter-evidence that the above is the case, and that the possession of a plurality of bodies by the god is only a result of fact, and does not mark a superiority of nature attributed to them dogmatically. We refer to the series of ideal gods imagined by theology. When the latter created deities by systematic deduction or by personification of functions—deities conceived in human form, like Maat or, later, Imhotep—it gave them only one body. Created in a homogeneous manner, they do not require other bodies, no matter how complex or lofty their attributes. The cult of Aten at Amarna and that of Hapi the Nile-god, with apparent divergencies chiefly of a literary kind, belong to this scheme of formation.

In conclusion, the case of the divine animals worshipped in the temples does not conflict with the above view. On the contrary, it indirectly confirms it. It is known that the 'sacred' animals, which, by the way, are a relatively late introduction into Egypt, are not the bodies of the gods, but beings sharing by simple veneration the regard due to the gods. The animal-god worshipped in the sanctuary (*e.g.* Apis, Mnevis, Knumu of Elephantine, Sukhos [Crocodile] of Ombos, the Ram of Mendes) is the only copy, the only true body of the local god on earth—to the exclusion of similar animals. This does not mean that the Egyptians thought they had in the sanctuary the one and only body of the god, but that they had the one and only *duplicatum* of it. In fact, the world was supposed to be divided into two great halves, symmetrical in every part. Each of the great national gods (we need not take the trouble to reconcile so many contradictory data for the lesser gods) had his kingdom in the other world, and in this world possessed a part of Egypt that corresponded to that kingdom. His body dwelt in the other world; but his 'name' animated an exact replica of this body in this human world—a perishable temporary representation, which is the divine animal worshipped in the sanctuary. To the divine cow of Dendereh, to the ram of Elephantine, to the hawk of Ermonthis, *e.g.*, there corresponded in the kingdoms of the other world a cow, a ram, and a hawk really alive, really divine, with bodies fashioned alike, perhaps gigantic, though Egypt has given no precise information on this point. One thing is certain, viz., that they sometimes showed themselves to the eyes of mortals. As to the exact sojourn of the one body of the gods in the other world, it should be said that here again there has been a succession of beliefs. The most ancient of them show us the gods living sometimes in the other world, after the fashion of the world of men, sometimes in the celestial world. The assimilation of earlier and later beliefs in homogeneous groups has gone far in developing the multiplicity of bodies belonging to one and the same god; and the solar theories of Heliopolis, with the course of Ra in his bark, have given far greater importance to the stellar bodies of the divine beings.

LITERATURE.—If we exclude what belongs to medicine, eschatology, and the disposal of the dead, the data as to the Egyptian body are scattered all over the field of Egyptological literature, the *living* body never having been the object of a special monograph. Only a few parts of it have been studied separately, but without synthesis. We may mention specially: Amélineau, *Prolégomènes, à l'étude de la religion égyptienne*, Paris, 1908, p. 403 ff.; Birch, 'On the Shade or Shadow,' in *TSBA* viii. 386; Budge, *Gods of the Egyptians*, London, 1904; Le Page Renouf, 'On the true Sense,' etc., in *TSBA* vi. 494; and esp. Maspero, *Histoire* [tr. 1894–1900] i. 108, 112, 146, 212, 215, 217 (where there are notes giving the principal references); also the first two volumes of his 'Études de Mythologie et d'Archéologie,' in the *Bibliothèque égyptologique*, Paris, 1893.

GEORGE FOUCART.

BODY (Greek and Roman).—**1. Anthropological.**—(1) *Body and soul.*—Among the Greeks, as among most other races, the distinction between body and soul—the natural dualism of mankind—can be traced to a very remote antiquity. This distinction took shape in the primitive mind as a result of its experience of certain peculiar facts. It is maintained by H. Siebeck,* who on this point differs from such scholars as Rohde and Gomperz, that the most potent factor in the development of this dualism is that succession of inner and outer experience undergone by primitive man—as by the child of to-day—in connexion with his own body. To the undeveloped consciousness the body is at first simply a thing among things, precisely like a stone or a tree. It is only by degrees that the growing mind, in consequence of internal and external sensations, as, for instance, bodily pain or hunger, acquires the idea of the body as the medium between self-consciousness and the outer world. An important constituent of naive dualism, no

* *Gesch. d. Psychologie*, 1880, i. 6 ff., with reference to the facts of empirical psychology as discussed by Volkmann, *Lehrbuch d. Psychologie*, 1876, ii. § 106.

doubt, lies here; and so far Siebeck is right. But a number of other factors, which, to be sure, Siebeck does not ignore, must also be taken into account; as, for example, the ofttimes rapid transition from life to death, the experience of dreaming, or of fainting, 'possession,' sudden emotions and their resultant involuntary actions, and, finally, the ecstatic trance. These were also the facts which in the dawn of Greek history generated the idea of a possible *separation between body and soul*; thus the soul might well seem to be temporarily withdrawn from the body in the case of dreaming, swooning, or ecstasy, and permanently so in the case of death, when the body returns to its original elements.*

The distinction between the visible and corporeal man and his invisible indwelling *Doppelgänger*, the *ψυχή*, is presupposed also in the Homeric poems. Here, however, the ideas of body and soul have assumed a special complexion. All the activities, mental or other, of the human personality, such as feeling, thought, volition, exertion, are regarded as being possible only so long as body and soul are united; in fact, they are in the strictest sense functions of the body. *μένος*, *νόος*, *μῆτις*, *βουλή*, and *θυμός* also, are bodily faculties or powers, and although they can assert themselves only while the *psyche*, at once the 'second ego' of man and the principle of his animal life, remains within him, yet they are in no sense evolved from the inherent capacities of the soul as such, which has absolutely no share in the waking activities of man.† The spiritual and psychical faculties which are localized in the various organs, and especially in the diaphragm (*φρένες*) of the living person, appertain entirely to the body. The idea of a life apart from the body, *i.e.* independent of the union of body and soul, simply lay outside the range of Homeric thought. Here it is the body rather than the soul around which the supreme interest circles—a phenomenon quite intelligible in a naive and frankly sensuous age, free as yet from all reflexion about a possible closer relation between body and soul in a living and waking man. Hence even the lifeless body is repeatedly spoken of as the true self (*αὐτός*), and set in contrast with the *psyche*.‡ A well-known passage is *Iliad*, i. 3 f.: πολλὰς δ' ἰφθίμους ψυχὰς Ἄιδι προΐαψεν ἡρώων, αὐτοὺς δὲ ἑλώρια τεῦχε κυνέσσιν οἰωνοῖσί τε δαῖτα (cf. also xxiii. 65 f., 105 ff.). (Now and then, it is true, the *psyche* that is speeding towards Hades, or already dwelling there, is distinguished by the name of its erewhile living possessor, or, it may be, is even spoken of as if it were himself in person (cf. Rohde, i. 5 f.); but the latter idea is largely evanescent in the mind of the poet.)

(2) *The dead body.*—Of the cult of the dead which at one time prevailed throughout the Hellenic world, as elsewhere, the Homeric poems show isolated traces only; and it is one of the enduring triumphs of Rohde to have discovered these and set them in their proper light. The ideas underlying this cult, which, though but faintly recognizable in Homer, was universally diffused among the Greeks in the post-Homeric age, and in fact down to the end of the ancient period, invested even the *dead body* with a certain interest. The soul of the departed was supposed to be fettered to the resting-place of its former bodily integument. The worship of ancestor or hero had its seat in the place where his bones had been laid. There alone—with some special exceptions—did the soul continue in an active state.

According to Homer, however, whose notices regarding the cult of the dead are sporadic and imperfectly understood even by himself, the soul of the departed finds no rest (in Hades) till the corpse is burned. So long as this act is neglected, the soul still retains a consciousness of events upon the earth; while, once the body has been cremated, the soul is banished to the depths of Erebus. The original purpose of the practice of cremation, in fact, was to guard against the return of the released soul to the land of the living—an idea, however, which has become quite obscured in Homer. The paramount interests of the poet, indeed, lie with those who still enjoy the light of the sun, and not with the dead at all. In his unsophisticated mode of thought, he regards—all unconsciously—the living and waking man with his bodily and mental attributes as a single whole, and similarly all the spiritual and psychical activities of man are evolved from the *body*. So far, therefore, the Homeric point of view, as contrasted with that of the philosophers and theologians of a later age, may be called an unreflective monism.

2. **Religious and ethical.**—(1) *Orphism.*—Homeric views regarding body and soul, and their relation to each other, find their sharpest possible contrast in the ideas which, germinating in the ecstasy of the Dionysan cult and the psychical experiences evoked there, or, again, in the principles of *katharsis*, received their definitive form among the Orphic sects. According to the latter, there obtained not only an irreconcilable dualism between body and soul, but also a profound difference in value. The soul was no longer, as in Homer, the phantom counterpart of the man, making its influence felt in the acts of dreaming, swooning, or dying; it was now regarded as intrinsically of Divine origin, uncreated and imperishable, and as having been immured within the body in expiation of its guilt.

See Plato, *Cratyl.* 400 B C (Diels, *Frag.*[2] ii. 1. 473, No. 3; cf. Abel, *Orphica*, frag. 221): καὶ γὰρ σῆμά τινές φασιν αὐτὸ (the body) εἶναι τῆς ψυχῆς ὡς τεθαμμένης ἐν τῷ νῦν παρόντι· καὶ διότι αὖ τοῦτῳ σημαίνει, ἃ ἂν σημαίνῃ ἡ ψυχή, καὶ ταύτῃ σῆμα ὀρθῶς καλεῖσθαι· δοκοῦσι μέντοι μάλιστα θέσθαι οἱ ἀμφὶ Ὀρφέα τοῦτο τὸ ὄνομα, ὡς δίκην διδούσης τῆς ψυχῆς, ἕν δὴ ἕνεκα δίδωσιν, τοῦτον δὲ τὸν περίβολον ἔχειν, ἵνα σῴζηται δεσμωτηρίου εἰκόνα. Cf. *Phædo*, 62 B, and Diels, in reference to Philolaos, frag. 14 and 15. The body is accordingly the grave or prison-house of the soul, which in its present life is in a state analogous to death. It is therefore the aim of the Orphics χωρίζειν ὅτι μάλιστα ἀπὸ τοῦ σώματος τὴν ψυχὴν καὶ ἐθίσαι αὐτὴν καθ' αὑτὴν πανταχόθεν ἐκ τοῦ σώματος συναγείρεσθαί τε καὶ ἀθροίζεσθαι (*Phædo*, 67 C; cf. Diels on Heraclitus, frag. 115).

(2) *Pythagoreanism.*—In regard to the process by which such ideas, so alien, apparently, to the natural temperament of the Greeks, as of mankind in general, gained a footing in Greek thought, the reader may consult the art. ASCETICISM (Greek). It will be sufficient here to emphasize the fact that the ideas in question, wholly un-Hellenic as they may appear, exerted a profound influence upon many Greek philosophers, and even, as we may infer from what has been said (above, p. 81), upon early thinkers like Pythagoras and his disciples. Definite evidence of this influence, it is true, first emerges in the case of Philolaos (*c.* 440 B.C.), who, in referring to the Orphics, writes as follows: μαρτυρέονται δὲ καὶ οἱ παλαιοὶ θεολόγοι τε καὶ μάντιες ὡς διά τινος τιμωρίας ἃ ψυχὰ τῷ σώματι συνέζευκται καὶ καθάπερ ἐν σώματι τούτῳ τέθαπται (frag. 14; cf. the passages given by Diels in connexion with frags. 14 and 15). We need not be surprised, therefore, to find Archytas (*c.* 400–350 B.C.) making allusion to the battle against sensual pleasure (ἡδονή, the *voluptas corporis* of Cicero) (cf. Diels, *Frag.*[2] i. 252, 30 ff.), which the early Pythagoreans

* *Iliad*, vii. 99, xxiv. 54.

† Taken purely by itself, the soul has at best a shadowy existence, not worthy of the name of 'life' at all, and destitute even of the attribute of self-consciousness.

‡ It is a significant circumstance that Homer has no proper term for the *living* body. His usual word for it is δέμας, which, however, connotes only the figure, the outward visible form; cf. δέμας πυρός. In Homer σῶμα always denotes the *dead* body.

regarded as the worst of plagues, impeding the soul in its endeavours to reach its celestial home, and causing it to forget its high descent.*

That Empedocles likewise held a similar theory of the relation between body and soul may be inferred from what is said in ASCETICISM (Greek) (above, pp. 81[b], 82[a]) regarding his indebtedness to Orphism and Pythagoreanism. Direct reference to the point, however, is found only in a single fragment of his writings (126, cf. Diels): *σαρκῶν ἀλλόγνωτι περιστέλλουσα χιτῶνι.* We may well suppose that similar views were cherished by several other thinkers and poets who were more or less influenced by Orphic or Pythagorean doctrines. This was certainly the case with Pherecydes of Syros.† In Heraclitus also (frag. 4. 96) we may trace a certain disparagement of the body, though he does not, like the 'theologians,' regard body and soul as antagonistic to each other, but rather as subsisting in a state of constant interchange (frag. 36; cf. 76, 77). Adumbrations of this idea are also found in Pindar (frag. 131, Böckh).

(3) *Plato.*—It was a matter of vast significance, however, that the cardinal ideas of the Orphic-Pythagorean schools should have been assimilated by Plato, and wrought into the fabric of his philosophy. The way in which the founder of Western idealism interpreted the relation of the human body to the imperishable soul is known to every reader of the *Phædo*. As we have already given, in the art. ASCETICISM (Greek), a brief exposition of the leading ideas in Plato's system of philosophical and theological thought, we confine ourselves here to the most indispensable points.

The human soul occupies a peculiar position between the sensible and the supersensible world. Though itself uncreated, *i.e.* of Divine origin, it is drawn into the vortex of becoming. It does not rank as an Idea, but is at best 'most like' one, participating in the Idea of life. In the pre-mundane existence of the soul, while dwelling amongst gods and spirits like itself, it has beheld the 'super-celestial realm,' and the world of real being, but in consequence of a decline in its cognitive faculty, and an ascendancy in its impulses of desire, it has been drawn down to the earth, and has fallen into corporeality.‡ Particulars will be found in the famous allegory in *Phædrus*, 246 B ff. But although body and soul are fundamentally disparate in character, the body and its impulses exert a strong and persistent pressure upon the immortal sojourner within. By the time when the soul enters upon its earthly life, it has completely forgotten its pre-existence and the world of Ideas in which it formerly lived. Its knowledge of truth is now impeded by the illusory impressions of sense-perception, while the body, by means of its impulses, and the desires and affections to which they give rise, wields a most dangerous influence over the soul, deranging its capacity for thought, and wholly perverting its judgment regarding the true good.

Cf. *Phædo*, e.g. 64 ff., especially 66 B-D: . . . . *ἕως ἂν τὸ σῶμα ἔχωμεν καὶ συμπεφυρμένη ᾖ ἡμῶν ἡ ψυχὴ μετὰ τοιούτου κακοῦ οὐ μή ποτε κτησώμεθα ἱκανῶς οὗ ἐπιθυμοῦμεν· φαμὲν δὲ τοῦτο εἶναι τὸ ἀληθές. μυρίας μὲν γὰρ ἡμῖν ἀσχολίας παρέχει τὸ σῶμα διὰ τὴν ἀναγκαίαν τροφήν· ἔτι δὲ ἄν τινες νόσοι προσπέσωσιν, ἐμποδίζουσιν ἡμῶν τὴν τοῦ ὄντος θήραν· ἐρώτων δὲ καὶ ἐπιθυμιῶν καὶ φόβων καὶ εἰδώλων παντοδαπῶν καὶ φλυαρίας ἐμπίμπλησιν ἡμᾶς πολλῆς, ὥστε τὸ λεγόμενον ὡς ἀληθῶς τῷ ὄντι ὑπ' αὐτοῦ οὐδὲ φρονῆσαι ἡμῖν ἐγγίγνεται οὐδέποτε οὐδέν· καὶ γὰρ πολέμους καὶ στάσεις καὶ μάχας οὐδὲν ἄλλο παρέχει ἢ τὸ σῶμα καὶ αἱ τούτου ἐπιθυμίαι. διὰ γὰρ τὴν τῶν χρημάτων κτῆσιν πάντες οἱ πόλεμοι γίγνονται, τὰ δὲ χρήματα ἀναγκαζόμεθα κτᾶσθαι διὰ τὸ σῶμα, δουλεύοντες τῇ τούτου θεραπείᾳ, κ.τ.λ.* Cf. 83 B-D.

Irrationality, fierce passions, grave disorders of the soul, may in fact proceed from the body or from the conditions that at any time prevail therein (cf. especially *Timæus*, 86 B ff.). In sober truth, the body is the source of all that harms the soul. For although evil may be the soul's own act, she would have no promptings to evil-doing were she not imprisoned in the body (cf. Zeller, II. i. 871). Every misfortune, every guilty deed in human life, emanates in the last resort from the latter. As a result of her union with the body, the soul herself becomes polluted, and, in fact, unless she resists the propensities of the flesh, she may even assume a *quasi*-bodily character (*σωματοειδές*, cf. *Phædo*, 83 D), just as the sea-god Glaucus was deformed by wrack and shells to the point of unrecognizability. In this way the majority of mankind are drawn aside from their true end in life. For the fall into the corporeal state lays upon the soul the task—in reality her only task—of purging herself as effectually as possible, even in this life, from the contamination induced by her connexion with the body (*Phædo*, 67 C D), by overcoming and keeping permanently in subjection not alone the impulses of sense, but all appetites and affections whatever: she must, in a word, strive after an inward deliverance from the world of the flesh and the senses. Only so does she become free to apply herself to those imperishable treasures beside which the visible world dwindles to nothingness; only so can the soul yield herself to that philosophy which, by means of dialectic and in virtue of her 'reminiscence' of things aforetime seen, develops her faculty of cognizing the sphere of true being, of the Ideas, so leading her into the right way towards her proper home and at last to God Himself.

Such in outline is the doctrine of Plato—a harsh and rigid dualism: here, the world of illusion and illusive values, beneath which nothing permanent exists; and there, the goods which never fade away, and which constitute the whole aim and object of philosophy. This dualism was, it is true, somewhat mitigated in Plato's later life (see above, p. 83[a]), but again and again in innumerable passages of his works, even in the *Timæus*, where its presence involves a flagrant inconsistency, it breaks forth in triumph.

The speculations of Plato, aided as they were by the incomparable literary craftsmanship with which he gave them expression, had an enormous influence on subsequent thought. His dualism, and in particular his view of the body as the ultimate root of all, or at least of innumerable, evils in human life, as an enemy against which the soul must fight, and as an unclean and defiling thing from which she must rid herself as soon and as thoroughly as possible, produced a profound effect even upon such of the ancient thinkers as did not accept the Orphic-Pythagorean-Platonic

* Cf. Diels, *Frag.*[2] i. 252, 30 ff., 280, 44 ff., 288, 12 ff.—Sensual pleasure, by later writers frequently spoken of as *ἡδονὴ σωματική*, to distinguish it from spiritual pleasures, was vehemently repudiated, not only by the adherents of a rigidly dualistic anthropology, but also by the Cynics and the Stoics. The body being the source of pleasure, we find Xenophon (*Memorab.* i. 2. 23) insisting upon the necessity of constant exercise in *σωφροσύνη*. On the other hand, Aristippus, the founder of the Cyrenaic school, declared sensual pleasure to be a good, though with certain qualifications (Diog. Laert. ii. 90; Zeller, II. i. 356 ff.). The high value ascribed by Epicurus not merely to pleasure in general, but even—in spite of all his saving clauses—to bodily gratification, as the source of happiness, is tellingly shown in frags. 67, 70, 409 (Usener). His standpoint is far removed from that of Plato, and we need not wonder that Posidonius in particular so vigorously assailed his doctrine.

† Diels, *Frag.*[2] II. i. 505 f. No. 5; see also Gomperz, i. 71 f.

‡ Its entrance into the body is the result of an 'intellectual fall'; for, according to Plato's original view (in the *Phædrus*), the soul, even in its pre-mundane state, had three *εἴδη*, *i.e.*, not only the *λογιστικόν*, but also the *θυμοειδές* and the *ἐπιθυμητικόν*, of which the last two cramp the first, and, still clinging to the soul after death, are the cause of its attachment to the world of sense and its tendency to further incarnation (*Phædo*). On the other hand, according to the *Timæus*—a much later work—the entrance of the soul into the material realm takes place in pursuance of the Divine order, being designed to animate the world of the visible. On this interpretation the two inferior capacities of the soul arise out of its union with the body, ust as again they pass away with the latter at death.

doctrine of the soul. We may also venture to assume, notwithstanding the absence of positive testimony, that a theory regarding body and soul akin to that of Plato prevailed in the Old Academy. It is at all events certain that such a view was held by Xenocrates (frag. 20 H), as well as by Philip of Opus and Heracleides Ponticus, and probably even by Aristotle in his earlier years.

(4) *Aristotle.*—With riper experience, however, Aristotle abandoned his master's dualistic standpoint, save in regard to one important feature, and advanced to an entirely different conception of the relation between body and soul, a conception which stands in the closest connexion with his metaphysical teaching about the relations of matter (*ὕλη*) and form (*εἶδος*), of potentiality (*δύναμις*) and actuality (*ἐνέργεια, ἐντελέχεια*). Here we come upon the pregnant idea of the 'organic,' which Aristotle was the first to formulate. An object is said to be organic when its parts are 'instruments' (*ὄργανα*) for the realization of the end for which the nature of the object as a whole is designed. A whole of this character, however, is manifestly framed with a view to life or animation, and accordingly the organic and the animate are but different designations for the same thing. The human body, as indeed the body of any *ζῷον*, attains its realization only in virtue of the soul. The soul is the *εἶδος* (the principle of form working from within outwards) *σώματος φυσικοῦ ζωὴν ἔχοντος δυνάμει* (*de Anima*, ii. 1. 412 A, 20 ff.). The 'end' of the body is the soul, which realizes itself, and at the same time realizes life, in the body and its organs (*de Partibus Animalium*, i. 5. 645 B, 14 ff.). Apart from the soul the body is but a corpse. It is therefore the entelechy of the body . . . *οὐ τὸ σῶμά ἐστιν ἐντελέχεια ψυχῆς, ἀλλ' αὕτη σώματός τινος, καὶ διὰ τοῦτο καλῶς ὑπολαμβάνουσιν οἳς δοκεῖ μὴτ' ἄνευ σώματος εἶναι μήτε σῶμά τι ἡ ψυχή* (*de An.* ii. 2. 414 A, 14 ff.); cf. ii. 4. 415 B, 7, *ἔστι δὲ ἡ ψυχὴ τοῦ ζῶντος σώματος αἰτία καὶ ἀρχή*. Body and soul in a living man may well be distinguished as concepts, but they cannot be dissociated in actual fact. The two form an inseparable synthesis, like the material and the form of a ball of wax, or like the eye and the sense of sight. In the words of Eucken, 'the soul forms with the body a single life-process.' When man dies, his body is deprived of its function as a purposive organism.*

The idea of a dissonance between body and soul, as propounded by the theologians and Plato, is therefore quite foreign to the philosophy of Aristotle. It is true that the latter regards the *νοῦς*, the thinking spirit, as coming from without (*θύραθεν*) to the 'soul,' to that life-giving power which controls and conditions the organism, and combines within itself the physical and the psychical; and here no doubt we come upon an inconsistency in the Aristotelian psychology, a residue of theological and Platonic speculation. Nevertheless there is for Aristotle no opposition between the *νοῦς* and the living body, so that the presence of the former constitutes no end in human life relative to the body.†

(5) *Stoicism.*—Among the earlier Stoics, notwithstanding their monism, we find a certain leaning towards the dualistic theory of body and soul. A characteristic utterance is that of Cleanthes (*Stoicor. Veter. Fr.* i. fr. 529 [Arnim]), who speaks of man as a frail and fleeting thing, needing help at every turn

καθάπερ τροφῆς καὶ σκεπασμάτων καὶ τῆς ἄλλης τοῦ σώματος ἐπιμελείας, πικροῦ τινος τυράννου τρόπον ἐφεστῶτος ἡμῖν καὶ τὸν πρὸς ἡμέραν δασμὸν ἀπαιτοῦντος καὶ εἰ μὴ παρέχοιμεν ὥστε λούειν αὐτὸ καὶ ἀλείφειν καὶ περιβάλλειν καὶ τρέφειν νόσους καὶ θάνατον ἀπειργοῦντος.

The truly decisive step, however, was first taken by Posidonius (first half of the 1st cent. B.C.), the second leader of Middle Stoicism, upon whom the influence of Plato is once more clearly marked (cf. p. 85[a]). He holds that the body, that *inutilis caro* * *et fluida, receptandis tantum cibis habilis*, is an impediment to the heaven-born soul, pining in her prison-house for her ethereal home. To deliver the soul as far as possible from the body even in this life, to shun as the pestilence the lusts and appetites that originate in the body—this is the paramount task of mankind. The body acts as a clog upon the Divine capacity of knowledge possessed by the spirit, which, however, escapes its bonds and wins an ampler insight in dreams, when the body lies asleep as if dead, as also in ecstasy, when the soul forsakes the body, but fully and finally in death itself. At death the soul of the wise, no longer in thrall to the sensuous, will soar to the celestial sphere, and will gain a profound knowledge of the ultimate causes of all existence. On the other hand, the soul of one who has given a loose rein to the lusts of the body must after death long pursue a wandering course, and must undergo manifold pains and purgings. But the soul's conflict with 'this flesh' is protracted and sore, and calls for unflagging effort.†

The Platonic mysticism of Posidonius wrought with great effect upon Cicero, and with greater still upon Seneca. But although the writings of Seneca frequently reflect the dualistic theory of Posidonius, from whom in fact he borrows freely in numberless passages, his own view differs in some degree from that of the Greek thinker. Seneca's theory probably finds its best expression at the beginning of the 14th letter to Lucilius:

'Fateor insitam esse nobis corporis nostri caritatem. Fateor nos huius gerere tutelam. Non nego indulgendum illi: serviendum nego. Multis enim serviet qui corpori servit, qui pro illo nimium timet, qui ad illud omnia refert. Sic gerere nos debemus non tamquam propter corpus vivere debeamus, sed tamquam non possimus sine corpore. Huius nos nimius amor timoribus inquietat, sollicitudinibus onerat, contumeliis obicit. Honestum ei vile est, cui corpus nimis carum est. Agatur eius diligentissime cura, ita tamen, ut cum exiget ratio, cum dignitas, cum fides, mittendum in ignes sit.' Cf. *Ep.* 78. 10; 120. 14–18.

There is something very peculiar in the depreciation and contempt with which the human body is regarded by Epictetus, whose views of mankind in general, notwithstanding his Stoic principles, reveal a strong tinge of dualism. Over and over again the *Dissertations* reveal a curious scorn of the body, and, in fact, as we might expect, from the influence of Cynicism upon Epictetus, he often gives a crudely Cynic expression to the ideas promulgated by Plato and Posidonius. A telling instance of this is found in frag. 23. The body is by nature dead, mere clay and filth; irretrievably abandoned to innumerable vicissitudes, to all, indeed, that happens to be 'stronger'; it is a hindrance to our independence of the external; it does not belong to us, but is an *ἀλλότριον*. Man is

* The teleological point of view was first applied to the human body by Diogenes of Apollonia, through the influence of Anaxagoras. It is set forth in popular form by Socrates in Xenophon, *Memorab.* i. 4. 5 ff., and in a truly scientific style by Aristotle, *e.g.* in *de Partibus Animalium*, iv. 10. 686 A, 25 ff., 687 A, 7 ff. Popular views regarding it re-appear after the middle period of Stoicism; cf. Cicero, *Nat. Deorum*, ii. 134–146.

† As regards Aristotle's physiology, which we cannot deal with here, it may be noted that he regarded the activity of the soul as being connected with the natural heat of the body, this heat being combined with the blood as the animating breath or *πνεῦμα*. Aristotle placed the central organ of psychical life in the heart, while Alcmæon, Democritus, and Diogenes of Apollonia, like Plato, had identified it with the brain. The influence of Aristotle long prevailed to keep the earlier and correct view in the background.

* So Seneca (*Ep.* 92, 110) renders the Greek *σάρξ*, a word which seems to have been applied to the body in a disparaging sense first of all by the Orphics (cf. Empedocles, frag. 126; Wilamowitz on Euripid. *Herakl.* 1269). This usage is next found sporadically among the Tragedians; also in Plato and Platonizing thinkers.

† Cicero, *Tusc. Quæst.* i. 38, 44, 110, *de Leg.* i. 60, *de Div.* i., *de Rep.* vi.; Virgil, *Aen.* vi. 724 ff. (on this see Norden); Seneca, *Ep.* 65. 16 ff.; 92. 110; 102. 23 ff., *Quæst. Nat.* i. 3 f., iii. 18, *ad Marc.* 23 ff.; Galen, *de Plac. Hipp. et Plat.* v. 448 f. (Müller).

'a soul carrying a corpse.' To the wise man, indeed, his body is of no concern.* Above all, the body is a permanent obstacle to happiness, since it stands in the way of virtue, which is in reality the only good. Something more than the influence of Plato or Posidonius, or of the Stoa, is required to explain such hatred of, and disdain for, the body as we find in Epictetus; and it is possible that his experiences with his own decrepit frame may have given some bitterness to his sentiments.

To the high-souled Marcus Aurelius likewise, though, like Epictetus, he was a professed adherent of Stoicism, there exists a keen antagonism between body and soul, and he too speaks repeatedly of the body in tones of passionate scorn. He reprobates it especially as the source of carnal appetite, and as tending to inveigle the soul. He welcomes death because, among other reasons, the soul, whether she then 'is dispersed,' or becomes extinct, or is re-absorbed into the universal soul, is at least released from the body (Stich, 71, 4 ff.). A markedly dualistic tendency appears also in his general views regarding man, though he rejects the belief in a continued personal existence after death.

(6) *Neo-Pythagoreanism and Neo-Platonism.*—Another evidence of the persistent influence of Posidonius, and through him of Plato, upon a later age is to be seen in Neo-Pythagoreanism, which became widely diffused throughout the ancient world, especially in the first three centuries of our era. It has already been shown (above, p. 86) how in this school the Orphic-Pythagorean-Platonic conception of the body as the prison of the soul, conjoined with the notion of matter as the cause of all evil, was resuscitated in intensified form. Similarly, as regards Neo-Platonism (Plotinus), we would refer the reader to the account given on former pages (86[b], 87[a]), merely supplementing it here with an instructive passage regarding mankind from *Enneads*, 47. 10 K:

. . . διττὸν οὖν τὸ ἡμεῖς, ἢ συναριθμουμένου τοῦ θηρίου ἢ τὸ ὑπὲρ τοῦτο ἤδη· θηρίον δὲ ζωωθὲν τὸ σῶμα· ὁ δ' ἀληθὴς ἄνθρωπος ἄλλος ὁ καθαρὸς τούτου τὰς ἀρετὰς ἔχων τὰς ἐν νοήσει, αἳ δὴ ἐν αὐτῇ τῇ χωριζομένῃ ψυχῇ ἵδρυνται, χωριζομένῃ δὲ καὶ χωριστῇ ἔτι ἐνταῦθα οὔσῃ, κ.τ.λ.

(7) *Popular ideas.*—Popular notions about the relations of body and soul, and about the nature and functions of both — such ideas, namely, as actually took shape among classes of Greek and Roman society outside the influence of philosophy and theology—were practically identical with those of Homer, according to whose simple and unschooled thought the living man forms an undivided unity of matter and spirit. It was only in a later age that, among the Romans in particular, wider circles of society, especially in the large towns, came to be infected with Epicurean and materialistic views, holding that the soul, being but a more subtle matter diffused through the body, and forming the incorporating principle of life, perishes with the material frame. The harshly dualistic theory of human life, however, allied with the conviction that the body is a thing impure and obnoxious,—as enunciated by Plato and Posidonius, by Seneca and Plotinus,—had a potent influence upon ancient, and thence upon mediæval, Christianity, and indeed its effects persist even to the present day.

W. CAPELLE.

BODY (Hebrew).—To the Hebrew, man was a unity. 'Man's body was of the dust, whilst the breath of God was the principle of life within him; but man himself was the single product of these two factors' (F. C. Porter, 'The Yeçer Hara' in *Yale Bibl. and Sem. Studies*, 1901, pp. 91–156). Jewish theology never seriously admitted a dualism. Even when it adopted the doctrine of the 'two impulses,' the good and the evil *yetser* (יֵצֶר), the good impulse did not inhere in the soul, the bad in the body. 'The parallel between St. Paul's contrast of spirit and flesh, and the Rabbinic contrast of the good and evil impulses, is remote and insignificant' (*ib.*).

The same conception of unity is expressed in many ways. 'Three partners there are in the formation of man: God, father, mother' (Bab. *Niddah*, 31*a*). Even more significant is the well-known parable of the Blind and Lame:

'A human king had a beautiful garden, in which were some fine early figs. He set in it two watchmen, one lame and the other blind. Said the lame man to the blind, "I see some fine figs, carry me on your shoulders and we will get the fruit and eat it." After a time the owner of the garden came and asked after his figs. The lame man protested that he could not walk, the blind that he could not see. So the master put the lame man on the blind man's back and judged them together. So God brings the soul and casts it in the body [after death] and judges them together' (*Sanh.* 91*a–b*).

Body and soul thus form one whole, and the persistence in later Jewish thought of the belief in the bodily resurrection was in part, at least, due to the impossibility of separating body and soul, even in the aspect of immortality.

The wonderful structure of the body, its delicate adaptations to ends, was the subject of admiration as an expression of the Divine wisdom. This finds its analogue in the liturgy of the Synagogue in a remarkable benediction, which is recited daily in the morning prayers, and is repeated after the normal functions of the body:

'Blessed art thou, O Lord our God, King of the universe, who hast formed man in wisdom, and created in him many orifices and vessels. It is revealed and known before the throne of thy glory, that if one of these be opened, or one of those be closed, it would be impossible to exist and to stand before thee. Blessed art thou, O Lord, who healest all flesh and dost wondrously' (Singer, *Authorized Daily Prayer-Book*, p. 4. The benediction is Talmudic: *Berak.* 60*b*).

Though the Jews, especially from the Maccabæan period, were strongly opposed to the Greek games and culture of the body, and felt an especial aversion to nude exposure, they had a keen appreciation of physical beauty, not only in women, but in men. The stature of Judas Maccabæus was glorified, and the beauty of various Rabbis is specially recorded (especially Johanan b. Nappaha, *Berak.* 20*a*; cf. Emil G. Hirsch's remarks in *JE* ii. 617). In the mediæval Heb. poetry (imitating the language of the Song of Songs) there is at once a thorough-going eulogy of female beauty and an application of sensuous phraseology to the mystic relations between man and God.

The body was in the Rabbinic view originally a shapeless mass (*golem*); it was a-sexual, or rather bi-sexual, and only later became differentiated (see the early chapters of the Midrash, *Genesis Rabba*). The number of the limbs (or bones) was calculated as 248, and of nerves (including sinews and even blood-vessels) 365, corresponding to the affirmative and negative precepts of the Law (which were enumerated as 613). Adam's dust was taken from all quarters of the globe (*Sanh.* 38*a*), to express the unity of human nature

* For the sake of one's fellow-men, however, and on grounds of good taste, bodily cleanliness, in contrast to the slovenliness of the Cynic, is urgently insisted upon (iv. 11. 9 ff.).

The provision of food, drink, and attire was regarded as a religious duty (Maimonides, *Mischne Tora*, '*Deôth*' v.). Bodily cleanliness was similarly regarded; and as part of the 'Law of Holiness,' dietary restrictions and ablutions were prescribed. From the middle of the 2nd cent. A.D. hand-washing before meals became general. Washing in the early morning was older. During ablutions pietists would avert their eyes from their own bodies. The bodily secretions were not unclean until they separated from the body; in the latter case ablution was rigidly enforced. Special communal baths have always been provided in Jewish settlements. The Biblical conceptions as to the defilement caused by dead bodies were continued in later Judaism. But the great bulk of the early Rabbinic laws as to ritual purity applied only to priests or to Israelites about to participate in Temple rites. Maimonides sums up the Rabbinic rulings as follows (*ib.* '*Tumath Okhelim*' xvi. 9):

'It is permitted to every one to touch an unclean thing, and thereby to become unclean. For Scripture only forbids priests and Nazirites from becoming unclean by touching a dead body: hence it is inferred that everybody else may become unclean. And even the priests and Nazirites are only forbidden to become unclean through a *human* corpse. Every Israelite is enjoined to be clean at the time of the festivals, in order that he may be able to enter the temple, and eat holy food' (Montefiore, *Hibbert Lectures*, 1892, p. 476, note 4; Büchler, *Der Galiläische 'Amha'ares*, chs. i.–v.).

Some exalted ideas in relation to the body and its stature and proportion were derived from an anthropomorphic interpretation of the text that man was made in the image of God (Gn 1^{27}). The bodily sign of the covenant is discussed under CIRCUMCISION.

LITERATURE.—Besides sources already noted, see L. Löw, *Die Lebensalter in der jüd. Literatur*, 1875; M. Joseph, *Judaism as Creed and Life*, 1903, p. 364; art. 'Body in Jewish Theology,' in *JE* iii. 283.

I. ABRAHAMS.

BODY (Hindu).—The Sanskrit terms denoting the various parts of the body agree remarkably with those of the other Aryan languages—a circumstance which renders it probable that a certain knowledge of anatomy may have been part of the common heritage of Aryan nations. Their acquaintance with anatomy would seem to have extended to the internal organs, such as the heart, liver, lungs, bile, kidneys, etc. The ancient Hindu sages have improved and extended this traditional knowledge. Thus, in a hymn of the Atharvaveda (x. 2) on the creation of man, which is supposed to belong to the most ancient portion of that venerable collection, we have a careful and orderly enumeration of the several parts of the skeleton. The hymn consists of a series of questions, such as these:

By whom were fixed the two heels of man? By whom was the flesh constructed? By whom the two ankle-bones; by whom the slender digits; by whom the apertures; by whom the two sets of long bones in the middle? How did they (the *devas*, or gods) make the two ankle-bones of man below, and the two knee-caps above? How many *devas*, and who among them, contributed to build up the bones of the breast and the cartilages of the windpipe of man? How many disposed the ribs of the two breasts; who, the shoulder-blades? Who pierced the seven apertures in the head: the two ears, two nostrils, two eyes, the mouth? Whoever first constructed that brain of his, the brow, the facial bone, the cranium, and the structure of the jaws, and, having done so, ascended to heaven—who, of the many *devas*, was he?

The composition of this hymn is ascribed to a certain sage called Nārāyaṇa, the same to whom the famous Rigvedic hymn (x. 90) on the sacrifice of man (*puruṣasūkta*) is attributed, in which the four classes of priests, nobles, husbandmen, and serfs are declared to have sprung from the mouth, arms, thighs, and feet of the Primeval Male, or original source of the universe. Some ancient medical formulæ, which occur in some of the earliest Sanskrit tracts on medicine, are also supposed to have been proclaimed by this Nārāyaṇa.

Descending from the Vedas to those early pantheistic compositions, the Upaniṣads, we meet, in the *Garbha* (or *Embryo*) *Upaniṣad* with an interesting description of the constitution and growth of the human body, which is said to consist of the five elements—earth, water, fire, air, and space or ether. From cohabitation, a small compact mass is produced, which, within a month, becomes a solid lump of flesh. The head is formed after two months; the feet are developed after three months; the ankles, belly, and thighs, after four months; the spine, after five; mouth, nose, and eyes, after six months; the soul (*jīva*) enters the fœtus in the seventh month; it becomes altogether complete in the eighth month.

The later systems of philosophy assign to each person two bodies—an exterior or gross body (*sthūla-śarīra*), and an interior or subtle body (*sūkṣma-śarīra*, or *liṅga-śarīra*)—much as Pythagoras claimed a subtle ethereal clothing for the soul, apart from its grosser clothing when united with the body. Indian philosophers had to admit the existence of a subtle body, in order to make the process of migration after death intelligible, according to the Indian doctrine of metempsychosis. The subtle body is that which cleaves to the soul in its migration from existence to existence. According to the Vedānta system, this subtle body arises from the so-called *upādhis* ('conditions'), and consists of the senses of the body (*dehendriyas*), both perceptive (*buddhīndriyas*) and active (*karmendriyas*), and of mind (*manas*), intellect (*buddhi*), sensation (*vedanā*), implying beyond itself the *viṣayas*, or objects required for sensation. Its physical life is said to be dependent on the vital spirit (*mukhya prāṇa*), and on the five *prāṇas*, or specialized spirits. According to the Sāṅkhya system, the subtle or inner body, which is, of course, invisible, is formed of eighteen elements. The coarse material body consists either of the earth only, or of the four or five coarse elements, and is made up of six coverings—hair, blood, flesh, sinews, bones, and marrow. In some systems, each organ is connected with its own peculiar element, the nose with the earth, the tongue with water, etc.

The whole subject of anatomy is treated at great length in the vast medical literature of ancient India. The Indian theory of the skeleton, in particular, has been transmitted to us in three different systems, one of which, the anatomical system attributed to the mythical sage Ātreya, while agreeing in the main with the statements quoted above from the Atharvaveda, is also found in several later non-medical Sanskrit works, notably in the celebrated law-book of Yājñavalkya. In its original shape, as restored by the researches of Dr. Hoernle, this enumeration of human bones seems to have been made up of the following thirty items:—(1) 32 teeth (*danta*); (2) 32 sockets (*ulūkhala*) of the teeth; (3) 20 nails (*nakha*); (4) 60 phalanges (*aṅgulī*); (5) 20 long bones; (6) 4 bases of the long bones; (7) 2 heels; (8) 4 ankle-bones; (9) 4 wrist-bones; (10) 4 bones of the fore-arms; (11) 4 bones of the legs; (12) 2 knee-caps; (13) 2 elbow-pans; (14) 2 hollow bones of the thighs; (15) 2 hollow bones of the arms; (16) 2 shoulder-blades; (17) 2 collar-bones; (18) 2 hip-blades; (19) 1 pubic bone; (20) 45 back-bones; (21) 14 bones of the breast; (22*a*) 24 ribs; (22*b*) 24 sockets of the ribs; (22*c*) 24 tubercles fitting into the sockets; (23) 15 bones of the neck; (24) 1 windpipe; (25) 2 palatal cavities; (26) 1 lower jaw-bone or chin; (27) 2 basal tie-bones of the jaw; (28) 1 bone constituting nose, prominences of the cheeks, and brows; (29) 2 temples; (30) 4 cranial pan-shaped bones:—total, 360. The large excess of this number over the some 200 bones in the adult human skeleton, which are distinguished by modern anatomy, is principally due to the fact that, besides including

the teeth, nails, and cartilages in the category of bones, the Indian sages counted prominent parts of bones, such as are now known as processes or protuberances, as if they were separate bones. Allowing for these modifying causes, the views of the early Indian anatomists are surprisingly accurate, which seems to be due to the fact that they were acquainted with the practice of human dissection, allowing bodies to decompose in a river, and taking them out after decomposition had set in, when they were very slowly scrubbed with a whisk made of grass-roots, or hair, or bamboo, or bast, and every part of the body examined, as it became disclosed in the process of scrubbing.

Besides the bones, there are 210 joints (*sandhi*) in the body. The joints of the extremities, jaw, and vertebræ are movable (*chala*); all the rest are immovable (*sthira*). There are 900 ligaments (*snāyu*), *i.e.* sinews and nerves; 500 muscles (*peśī*); 700 veins (*sirā*). Besides the veins, there are other vessels or canals called *dhamanī* and *srotas*, all of which proceed from the navel, which resembles the root of a water-lily, and is the root of the vessels of all living animals. This notion seems to have been derived from the appearance of the vessels in their fœtal state. There are six principal limbs: the two arms, the two thighs, the head with the neck, and the trunk or middle portion. Attached to these are 56 minor limbs. The trunk contains 15 organs, such as the heart, the liver, the lungs, the spleen, the two breast-glands, the bladder, the smaller intestines, the larger and grosser intestines, the adeps-bearing duct, etc. There are in the body 10 *añjalis* (a certain measure consisting of two handfuls) of water, 9 *añjalis* of juice (*rasa*), 8 *añjalis* of blood, 7 *añjalis* of stools, 6 *añjalis* of phlegm, 5 *añjalis* of bile, 4 *añjalis* of urine, 3 *añjalis* of adeps, 2 *añjalis* of fat, 1 *añjali* of marrow, ½ *añjali* of brain, ½ *añjali* of the essence of phlegm, ½ *añjali* of semen. Of weak or sensitive parts (*marman*) in the body, which have to be avoided in operations, there are 107, which are accurately described. In some varieties of these, instant death ensues on their being wounded; in others, the person when wounded dies after a few days, or when the external substance has been extracted; in other varieties, lameness, or only pain, is produced. The seven essential parts or elements of the body (*dhātu*) are: chyle or juice (*rasa*), blood (*rakta*), flesh (*māṁsa*), fat (*medas*), bone (*asthi*), marrow (*majjā*), and semen (*śukra*). When there is inequality of proportions between these constituent elements of the body, the person becomes subject to pain or destruction. Hence that has to be regarded as the proper medicine which restores the elements simultaneously to their normal condition by diminishing the increased and increasing the diminished ones. For keeping up the harmony of the elements of a person in health, food is prescribed in various forms, endued with proper attributes. The three humours of the body—air (*vāyu*), bile (*pitta*), and phlegm (*kapha*)—are more important even than the seven elements for the preservation of a healthy and normal condition of the body. Of these humours (*doṣa*), air or wind is dry, cool, light, soft, and always flowing more or less quickly, so as to convey the elements or essential parts over the body; bile, which is situated principally in the stomach, is a hot, bitter, oily fluid, of a blue colour, and sour, and produces animal heat; phlegm is white, heavy, oleaginous, cooling, moist, sweet, and is conveyed by air through the vessels. Most diseases are due to an abnormal increase or decrease of one of the humours. There exists an unmistakable similarity between this Indian theory and the ancient Occidental theory of four humours in the human body. Blood (*rakta*) is sometimes mentioned as a fourth humour in India, as it is in Western medicine.

The supposed parallelism between the microcosm and the macrocosm is also to be found in Indian thought. Thus, as the universe consists of earth, water, heat, air, ether, and Brahman, which is unmanifest, even so Puruṣa, or the male, is said to be made up of six ingredients: the form is earth; the liquid secretions are water; the animal heat is heat; the life-breaths are air; the hollow places are ether; the inner self is Brahman. The self or soul is an emanation from God or the Universal Soul, from which it springs in the same manner as sparks do from a red-hot ball of iron.

J. JOLLY.

BODY AND MIND.—1. The problem of the relation between body and mind has occupied philosophers and scientists since the dawn of thought, and to many it appears no nearer to solution now than then. It has been named the central problem of all philosophy, fundamental alike in the theory of knowledge, in ethics, and in religion. Not less fundamental, however, is it for psychology and for physical science; for the point of view from which we regard mental development, the changing forms of nature, animal life and evolution, will be radically different according as we do, or do not, attribute to mind a controlling or directing part in the process of change and growth. The question of the *relation* between body and mind cannot be discussed apart from the question as to the *nature* of the two factors, and the difference between them. Both are really metaphysical questions; that is to say, the solution put forward will necessarily be incapable of scientific verification; but it should be such as to give a rational account of the possibilities of knowledge, of individual and race progress, of ethical and religious life.

2. Whether we are dealing with the special relation between the individual mind and the individual body, or with the general relation of finite mind to matter, there are three possible solutions of the problem:—(1) That matter or body is the 'real' or 'substantial' thing, while mind is its product, or in some way dependent upon it both for its existence and for its qualities—the solution of Materialism. (2) That mind alone is real or substantial, and that matter or body is its appearance, its manifestation, or in some other way dependent upon it for existence and quality—the solution of Idealism, and of Spiritualism. (3) That mind and matter are equally *real*, and independent entities; or equally *unreal*, as the two 'aspects,' 'appearances,' 'sides' of one and the same reality. The former is Dualism, the latter 'Scientific Monism' or the Philosophy of Identity. There are of course many shades of difference and many overlappings in the different views that have actually been held. The divergencies are especially apparent when a given principle is applied to the relation between the finite body and the finite mind. Thus, even when we regard body as unreal, it is clear that 'my' body is not the manifestation of 'my' mind, but is to a large extent at least independent of it; therefore one may quite well speak of 'my' body—meaning the mind of which the body is a manifestation,—as acting upon 'my' mind, and yet remain a spiritualist or idealist. Here then we have a second basis of division, the lines crossing

the former ones: the relation between finite mind and finite body may be either (*a*) that of *complete dependence*, as when the mind is regarded as the 'secretion of the brain,' or as an 'epiphenomenon,' a by-product of physical process; (*b*) that of *parallelism*, the two series, mental and bodily, corresponding step for step, element for element, with each other, but never acting upon each other; or (*c*) that of *reciprocity* or *interaction*, mental processes being the condition of bodily, bodily of mental processes. The last is the 'natural' standpoint. We regard ourselves as causing bodily movements by our will, and as receiving sensations and perceptions from physical objects which act upon our bodily organs. It is also the standpoint of Dualism on the one hand, and of several forms of Spiritualism or Idealism on the other.

3. It is necessary here to refer only to one of the many forms of Materialism, that in which the mental is regarded as an *effect* of physical processes, although in itself immaterial; or again as not strictly an effect, but as a by-result, an accidental accompaniment, of material processes. Matter—the physical universe—is upheld on this theory as the permanent, eternal, unchanging, over against which mind is as one of the changing and temporary phenomena, adding nothing to the whole, forming no essential part of it, existing merely, as it were, for the delectation of some imaginary spectator. (1) What is fatal to any such reduction of mind to a secondary place is the first principle of Epistemology, viz. that matter or body is given only as *idea* or *content of consciousness*; it cannot be the *source* of that which is a presupposition of its own existence. It is an actual inversion of the true order of things, therefore, to place matter first and mind second. Not only is it not a justifiable inference that matter may be the source of mind; it is not even a possible thought; it is a form of words without meaning. (2) The second difficulty the view has to face is that of the incomparability of mind and matter; they contain no common characteristic except that of change in time; in other respects, as the Cartesians pointed out, every attribute of mind may be denied of body, and *vice versa*. Thus matter occupies space, has form, resistance, etc., while mind is wholly non-spatial in itself, has neither place nor any other spatial determination. Applied to our present question, the disparateness of mind and body means that the one could not be a cause of the other, in the sense of its source or origin. It does not necessarily mean, however, that the one could not *act* upon the other. The objection applies on the materialist assumption that nothing is real but matter; if so, then the psychical must be a quality, or other determination, of body. It is this consequence that is inconsistent with the accepted disparity of bodily and mental processes.* (3) The view is also inconsistent, however, with a third characteristic of mental life, the 'unity of consciousness': no possible *physical* process or combination of processes can be pointed to which is an adequate explanation or ground for this fact. The Ego or Subject of mental states, as conscious of its impressions, and of the relations (of succession, etc.) between its impressions, is a presupposition of all knowledge, all perception, and even of all sensation. There is nothing in the nervous system, for example, to which so weighty a rôle can be attributed; there is not even a real unity in the organism at all. In itself, on the materialist's own theory, matter consists of infinite atoms (or other elements) in endless flux, and all unity or combination exists only (*a*) as a physical resultant of the movements of several atoms or groups of atoms acting together upon a single point, or (*b*) as a teleological conception in the mind of an observer. Even the animal organism is not in itself a unity as a physical congeries; it is a unity only by virtue of its sum of physical forces, or by virtue of its (ideal) tendency towards a purpose or end, the mere conception of which implies a mind. Hence there is no unity except for a mind; and any attempt to reduce mind to matter or to a mere effect of matter is self-contradictory.

4. The doctrine of Psycho-physical Parallelism is liable to the same objections. This view implies, as the idea underlying all its forms, that (1) the two series of events, mental and physical, run alongside of, but in independence of each other; there is no cross action from the one upon the other; (2) each moment or state of consciousness has a physical moment which 'corresponds to it'—its correlate in the bodily sphere. The theories of parallelism diverge, however, from this point. (*a*) To some *every* physical event or state has its mental correlate (universal animism), while to others the mental 'corresponds' only to certain specialized physical structures and processes, viz. those of a nervous system, and in particular those occurring in the cortical centres of the brain of the higher animals. The parallelism is to some limited, to others unlimited. (*b*) To some again, not every mode and characteristic of consciousness has its physical correlate, but only the elementary states—the sensations, feelings, etc.; while the syntheses, activities, and above all the *values*, norms, ideals, 'meanings' of mental life have no physical correlate. To others the parallelism is universal on this side also. (*c*) To some there is causal activity within each series, bodily producing or effecting bodily process, and mental mental, but body not affecting mind, nor mind body; while to others there is no causality in the *mental* series at all, changes of mind depending on the changes of body, with which they directly correspond.

5. A number of scientists and psychologists, including Wundt and Jodl, would limit the *extent* of parallelism. Mind is correlated with body, but only under certain conditions, or where a certain complexity of organic structure—a central nervous system like that of man—has been achieved in the course of evolution and development. Others, among whom are Fechner, Spencer, Haeckel, Höffding, and Paulsen, make the parallelism universal: mental life is the correlate of bodily life, mental change of bodily change, that is, of movement. Hence, wherever there is motion there is also mind, and wherever there is mind there is also physical motion. The two series, as Spinoza taught, are parallel throughout the whole extent of each; for every mental there exists a physical correlate, for every physical a mental; the motion of the atom or other physical element has, as its 'inner' side, a phase of feeling, of sensation, of will. The complexity of the human mental life is in direct correspondence with the complexity of the physical substratum, the nerve and brain organs and the processes that occur in them. There is unbroken continuity first of all in the 'evolution' of inorganic forms, next in that of plant and animal forms, and finally in the development of the individual organism; and this holds both of body and of mind. Thus in mind we pass from the simplest 'feeling,' the correlate of the atom-movement, to the highest thought or act of intelligence, the correlate of a process in the cortex of the hemispheres of man, without a change of kind. Causal relations nowhere exist, however, between the one series and the other.

6. There can be little doubt that for a parallelist theory the larger scheme is the more consistent. In *partial* parallelism we have continuity in the

* Dr. Ward and Professor Binet, from different points of view, have criticized the principle of the disparateness of mind and matter. See reference below.

physical series, where every event depends upon a previous physical event out of which it arises; on the mental side there is no such continuity, but while the psychical processes are occasionally connected with each other in continuous trains of thought, etc., there are on the other hand constant breaks or gaps in the series. In sleep or other forms of unconsciousness, in the animal life prior to the growth of the higher brain centres, in the transitions from one line of thought to another—in all these cases, there are stages of unconsciousness between, or prior to, the conscious moments. How, if we keep only to the mental series, are these gaps bridged—through what causal agency are the transitions made? The answer must be, either through the body, or through some constant supernatural agency or 'pre-established harmony.' The latter alternative will not readily be accepted by scientists, and as a matter of fact the former is frequently adopted, as by Huxley, for example, although it is inconsistent with the principle of parallelism. Wundt, on the other hand, although partial parallelism is put forward as a 'working hypothesis,' finds himself compelled, when in his Philosophy he attempts a *rationale* of mental life as a whole, to postulate continuity between the successive states of the individual mind, to postulate sensation, feeling, and will, not only in the lower organisms, but even in the inorganic world itself. If there is complete continuity on the one side, as Biology and Geology assume there is on the physical, there must be complete continuity also on the other side, the psychical.

7. We have seen that the question of *causality* on the psychical side is also a subject of difference between parallelists. It is admitted that there is relation of cause and effect between successive states of a material system, such as the bodily organism is. Is the same true of the mental series? It would seem that it must be, if parallelism is to hold, but there are heavy penalties to face for the admission. The chain of causes and effects on the physical side is a mechanical one, each link following its predecessor by a blind necessity which is quite regardless of the ideals, desires, or judgments of the mind connected with the body. If causality on the mental side holds, and if each link is attached to its corresponding link on the physical side, then the time-order must be the same in both; therefore the mental life, the course of development, the history of the soul must also be the subject of a blind mechanism; or, *per contra*, if the mind is self-determining, if it has spontaneity and originality of action, freedom to choose and to act according to norms or ideals of value, then the physical organism cannot be subject to the blind necessity that science assumes. Its laws are not inexorable, and the most confident expectations based on centuries of past experience may be suddenly disappointed. In other words, either mental life is wholly determined by an influence which governs it from the beginning of its history, or the attainment of scientific truth about the physical world is impossible.

8. From this dilemma some have sought to escape by denying that there is any causal link between mental states; there is 'transversal' causation, from body to mind, as well as 'longitudinal' causation from body to body, but there is neither longitudinal nor transversal causation in the other two directions, viz. from mind to mind, or from mind to body. In order to justify the very subordinate rôle attributed to the mind, it is argued that the principle of causation demands the experience of a uniform and invariable sequence between cause and effect, and that no such experience is possible with regard to the sequence of bodily upon mental states, or of mental upon mental. In reply it may be said (1) that the origin of the idea of causality is to be found in our direct experience of mental activity, and especially in activity directed outwards upon the body. The first idea of causality (and it remains at the root of the ideas of causality in modern science) is that causation is spiritual or mental; body, on the other hand, is dead inert matter, and has no spontaneity, no source of movement in itself. Accordingly some modern theories of science seek to dispense altogether with the idea of causation. But (2) 'transverse' causality, from body to mind, is inconsistent with parallelism, and means a return to Materialism; it makes mind a function of body.

9. Probably the most consistent form of parallelism is Monistic Parallelism, which regards the physical and the mental as two sides or aspects of one and the same reality. It is not always clear, either in Spinoza, its originator, or in his modern followers, whether by the one reality is meant an unknown x behind both body and mind, of which they are the diverse 'appearances' or 'manifestations,' or whether the reality is simply their identity, the same being which appears *to itself* as a conscious unity—a mind—appearing *to others* as an extended manifold—the body. In either case, as is almost inevitable, the primacy is found to be given to mind. Thus the unknown x becomes a conscious mind. After all we are conscious *both* of our 'own' minds, *and* (through sense-perception) of our 'own' bodies. But our cognition of the body is a mental process, and we become aware of the body only in and through such a process: the mind therefore is a presupposition of the body; the body is a mode or manifestation of mind. Similar reasoning applies to the second standpoint. The body stands in a two-fold relation to the mind: (1) it is the *object* of knowledge, or of a particular kind of knowledge, and (2) it is the accompaniment, the *condition*, apparently, of every case or instance of knowing, or of any other mental process. A given sense-perception has (*a*) its object in the physical world—say the flight of a bird through the air—and it has (*b*) a physiological process in the brain of the individual as its accompaniment and apparent condition. With which of the two is the mental process 'identical'? If with the brain process, then the possibility of knowledge remains wholly unaccountable. The 'knowing' of an external object by the mind is a mental act to which no physical parallel can be given, and therefore mind has a much wider reach than body. It has rarely been suggested that the mental process is identical with the perceived object, in this case the flight of the bird. Schuppe, indeed, attempts to combine both object and brain process with the mental process in an ingenious way: 'I see, because my eye sees, or because I am this seeing eye, so my motor nerve wills, because I will, because I am this motor nerve' (*Das Grundproblem der Psychologie*, p. 60). That is, both sensation and volition, being mental, are also bodily processes, the Ego or mind being identical with the body. I am therefore the same thing as the content of my perceptions, and the same thing as the object of my volitions. But if the connexion between eye and brain is cut, I no longer see, however healthy the eye itself remains; and, again, what I see almost always differs widely from the picture in the retina or in both retinæ. It is not the eye, but eye plus optic fibres plus optical brain centre, that is the 'organ' of sight. Now, whatever similarity there is between the picture on the retina and the seen object, there is none between the brain process and the seen object; hence the dualism between physical *object* of knowledge and physical *basis* of knowledge re-emerges; a mind

stands always in this double relation to body, and therefore cannot be regarded *simpliciter* as identical with the individual organism to which it 'belongs.'

10. Parallelism leads almost of necessity to an atomistic conception of consciousness. The apparent function of consciousness as the uniting and unifying bond of successive mental states or processes has no physical correlate, and therefore must be rejected as unreal. Neither the body nor the nervous system is a unity in itself; each consists of an aggregate of cells, molecules, atoms or other elements. Still less possible is a physical correlate for the freedom, spontaneity, originality, which the individual mind claims for itself; this also, therefore, must be denied. But psychological atomism — 'psychology without a subject' — and psychological mechanism alike fail to do justice to the most fundamental facts of consciousness. Consciousness appears neither as a *sum* nor as a *series* of states (cf. James, *Principles of Psychol.* i. 159 ff.; and Lotze, *Microcosmus*, i. 2. 1), but as the unity of such a sum or series—a unity also which is *in* each of the parts, and without which none of the parts or elements could exist. A series which is conscious of itself *as* a series is an absurdity (cf. T. H. Green's polemic against Mill and Hume). It is not necessary to go back to the old view of the Ego as the *source*, the principle or cause, of its own states: but even as the *subject of experience*, every conscious mind is something more than any or all of the 'states' or 'processes' of which it is conscious. In particular, the advance from 'lower' to 'higher' mental achievements, from simple to more complex mental life, as from sensation to perception and from perception to thought, is possible only on the assumption of a directive activity of the mind, an activity which cannot possibly inhere in, or belong to, the elementary states or simple processes themselves, out of which the higher forms are derived.

11. The chief advantage of Parallelism as a hypothesis is undoubtedly the same as that of the 'Twofold Truth' of an earlier philosophy; it enables its adherents to side with the materialists from one point of view, with the spiritualists from another. Both systems, it is held, may be true; each at least may present one aspect of the 'ultimate' or 'absolute' truth. On the one hand, all actions—the evolution, the growth, the adaptations of organisms to their environment—are determined by a blind mechanism, each phase succeeding each by a necessity which is absolute; that is to say, from each situation there is one and only one development possible, and that is the development which actually occurs. An action — a form of behaviour—is explained only in terms of physiological, that is, ultimately, physical and chemical processes. Design, selection, choice, feeling, desire, emotion play no part in the world's activity—*from this point of view*. On the other hand, seen from the inner side, this necessity becomes freedom and spontaneity; the mechanism of the atoms, the movement of the molecules, become desire and judgment, feeling and will: the organism is a personality, and determines its own ends, its own life. To the Cæsar of science are rendered the things which are Cæsar's—the conservation of energy, the reduction of the whole life of the universe to chemical, electrical, and mechanical processes; and to God the things that are God's—the spiritual life with its struggles and falls, its ideals and its redemptions. The question is not, however, whether there is any advantage in this theory; there certainly would be, if it were true: but is it even thinkable? Are we not using bare terms, without any meaning behind them, when we speak of the *same* reality as being at once determined from without, and self-determining? A man has an alternative of going abroad for a holiday or remaining at home for his work; he 'decides' for the latter. Now it has a perfectly clear meaning if we say that the man's 'choice' and action are really determined by his structure, as it has come to be through physical heredity and environment. It has also a perfectly good meaning to say that his choice is free, is an expression of his mental character, of the ideals by which he is attracted; but it has no meaning whatever to say that it is *both* determined *and* free. Whichever form of parallelism is adopted, a given bodily action has its mental correlate, which is either the same *in reality* as the bodily action, or is at least its necessary correspondent. Whatever laws govern the existence of the one must also govern the existence of the other: if a physical process c is a necessary sequent of a and b, then its corresponding mental process C must also be a necessary sequent, not merely of mental A and B, but *also* of the physical series a b.

The use of the term 'appearances' or 'aspects' is misleading. Aspects or appearances presuppose an observer; who is the observer in the case of body and mind? He must be some being who is neither mind nor body; yet, as a knowing being, he must be mind. Thus we come back to our starting-point: mind has priority over body; body is the appearance of mind. This, however, is *not* parallelism.

12. The alternative is *interaction*—the assumption that body acts upon mind, and mind upon body. Unfortunately, such a theory is subject to objections of great force from the points of view both of the physicist and of the spiritualist.

(1) If action of any kind takes place from the mental upon the physical world, or *vice versa*, then the principle of conservation of energy cannot be maintained. No means exists by which the amount of energy lost by the brain in effecting a sensation, or added to the brain in a volition, may be measured. *Some* energy must presumably be lost, however, when a physical process is the condition of a mental impression: there cannot remain the same quantity in the body, since, in fact, the action of the body is found to be different, according as there has or has not intervened a conscious process. Again, the same stimulus does or does not give rise to consciousness, according to its intensity, *i.e.* according to the force with which it acts upon the nerve-centres; in the case of subliminal stimuli we can only assume that the energy expended is not sufficient to effect the change in consciousness. The principle of conservation has two sides (cf. Wundt, *System der Philos.*[2] p. 483)—(α) that the total amount of energy in the physical universe remains always the same, and (β) that, when work is done by any *physical* system, the amount of energy lost must be fully compensated for (however different the form it takes—heat, electricity, light, motion, etc.) by the gain of the other physical systems affected by the work. The second part of the principle may be accepted apart from the first; it has, however, no bearing on the relation between mind and body. The first part is more purely hypothetical, and need not be admitted by psychology, if inconsistent with the facts of that science. It has been suggested (α) that the mind may alter or affect only the *direction* of energy or of its transformation, not its amount (von Hartmann, etc.). But in matters of energy and force the two things, quantity and direction, cannot be separated from each other. Again, (β) the balance may always be maintained between the amount taken away and the amount added in the various operations between mind and body. This, however, is again a recourse to miracle, or to some

mystical pre-established harmony. The only defence possible is to admit the charge, but to deny that the action complained of is a crime. The principle of conservation is a hypothesis formed to explain certain phenomena of the inorganic world, verified as far as experience has gone (although now being called in question) for these only; not verified at all for organic processes, such as growth and reproduction, still less for those physical actions which we ascribe to mental influence. It has also been suggested (by Stumpf, for example, and from another standpoint by Fechner) that we may regard mental activity as itself a form of *energy*; that the physical energy expended in the central nervous system is transformed into an equal quantity of mental energy, and *vice versa*. What we call mental energy certainly increases with physical health, and especially with the health of the brain; it decreases with the degeneration or decay of the brain. It is questionable, however, whether the term 'energy' in the two cases is really being used in the same sense, as it must if there is to be equivalence between the two kinds.*

(2) It may be said that the action of body upon mind is inconceivable; that the only forms of action given to us in experience are either (*a*) of body upon body, or (*b*) of the mind upon itself. The first we have from external, the second from internal perception. Berkeley and Hume, however, long ago disposed of the view that we ever directly experience the action of body upon body; and Hume also questioned the assumption that we are conscious of, or have any direct knowledge of our own mental activity. Causality may be a presupposition of experience; it is certainly not given *in* experience. On the other hand, the 'uniform succession' which we regard as the cue for the application of this category is found far more frequently between mental and bodily processes than between mental and mental, or between bodily and bodily. If causation is a mystery, it is as mysterious in the action of two bodies upon each other as in the action of the mind upon the body; if it is a 'fundamental principle' of thought, it may be applied in the latter case with more assurance than in the former.

(3) But how, it may be said, is mind to set about its action upon body. A 'voluntary' movement starts, let us say, in certain brain cells, and proceeds outwards to the muscles. How does the mind, an immaterial substance or subject, set this process going? Somewhere the push must be given, or the spark applied. How is it done? Here the difficulty of the disparity of mind and body presents itself with great, and for many, it appears, with overwhelming force. It is not, however, in principle any more curious or incomprehensible than that body should 'correspond' to mind, whatever may be taken as the meaning of that mysterious word; not more so than that one reality should appear as two totally disparate entities, as Monism assumes. Somewhere or other we must arrive at an unexplained and, perhaps, inexplicable fact of experience; and for interaction, this local action of mind upon body, with the converse qualitative action of body upon mind (as when a given, definitely localized, nerve process gives rise to a sensation of red, while another, differently localized, gives rise to a sensation of cold or of bitter), marks that point.

Body may 'ultimately' prove to be mind, and yet the relation between a finite body and 'its' mind be one of interaction. A system of this nature is contained in Professor Busse's critical and thorough study of the subject. We have seen that our own and all other bodies are given to us, and are known by us, only as contents of consciousness, as actual or possible sensation, perception or thought, while various social experiences forbid us to regard them as 'merely' our *individual* or *subjective* impressions. We may conclude, then, that our own body and other bodies, which we only gradually learn to distinguish from our own, are appearances to us of mental or spiritual realities—realities distinct from and independent of ourselves, yet akin to us; that these realities differ widely from each other, and from us, in the degree of mental development at which they have arrived, and of which they are capable; that they affect or influence us only through that entity or system of entities which appears to us as 'our' body, and that they in turn are influenced by us only through the same intermediary. Thus our body is not the 'manifestation' or 'outer aspect' of our mind, but is relatively independent of it, being the 'manifestation' of another, or other minds. On the other hand, our mind's development is bound up with that of the body, which is so intimately connected with it. What we may regard as in a special sense the growing-point of the body throughout life, namely, the brain, has its structure, its organization, in large part determined by the actions of our mind, by which it becomes a more and more perfect instrument for the realization of our desires and our ideals, whether high or low. It may be held also that the gradual failure of powers with old age or the temporary failure with illness or fatigue—failure which, though primarily physical, seems to reach to the very core of the mind's being—is defect not of the player, but of the instrument on which he plays, and through which alone his genius can find fitting expression. See BRAIN AND MIND, MIND, SOUL.

J. L. M'INTYRE.

BOEHME.—I. *LIFE.*—Jacob Boehme (sometimes spelt Behmen), called the 'Teutonic Theosopher,' was born in November 1575, in the village of Old Seidenburg, near Görlitz, in Upper Lusatia, which in his time seems to have belonged to Bohemia, though in 1635 it was transferred to Saxony, the Elector of which was Boehme's protector during the later part of his life. The parents of Boehme

* On the whole question of the validity of the principle of Conservation of Energy, and of its bearing on the problem of Mental Causality, see Ward's *Naturalism and Agnosticism*, especially Lect. vi.

were poor pious folk, who trained up their son in their own (the Lutheran) faith and in a knowledge of the Scriptures. The only education he got was of the most elementary character. At an early age he was put to tend cattle, with other children of the village, and, while thus employed, had his first remarkable experience. Having climbed (says Martensen) to the top of a mountain called the 'Land's Crown,' he saw 'a vaulted entrance composed of four red stones, and leading into a cavern. When he had toiled through the brushwood that surrounded the entrance, he beheld in the depths of the cave a vessel filled with money. He was seized with an inward panic, as at something diabolical, and ran away from the spot in alarm. Subsequently he often returned to the spot, accompanied by other boys. But entrance and cavern had vanished.'

After this, he was apprenticed to a shoemaker in Görlitz, and had another strange experience. While he was in charge of the shop during his master's absence, a stranger entered and priced a pair of boots. The lad, thinking he had no authority to sell, tried to get out of the difficulty by naming a prohibitive price; but the stranger paid it, and, after having gone out into the street, turned and called in a loud voice, 'Jacob, come forth!' Surprised that his name should be known, Jacob went out to him; when the stranger, fixing on him a penetrative gaze, said, 'Jacob, thou art yet little, but thou shalt become great, and the world shall wonder at thee. Therefore be pious and fear God, and especially read diligently the Holy Scriptures; for thou must endure much misery and poverty and persecution; but God loves and is gracious unto thee.' After this Jacob became still more serious and devout. Unable to endure the ribald and profane language of his mates in the shop, he felt obliged to reprove them, whereupon his master turned him out, saying he would have no 'house-preacher' to stir up strife. Jacob now entered upon his *Wanderjahr*. In the course of his travels he discovered into how many warring sects the Protestant party was split up, and how fierce and uncharitable were their contentions. They seemed to him as Babel, and he has much to say about this Babel in his writings.

At the end of his wanderings, he returned to Görlitz, and in 1599 married the daughter of a tradesman, with whom he lived happily for twenty years, and by whom he had four children. Now further visions came. When he was sitting one day in his room, his eye caught the reflexion of the sun's rays in a bright pewter dish. This threw him into an inward ecstasy, and it seemed to him that he beheld the inward properties of all things in nature opened to him. It was one of his ideas that the quality of everything is expressed by its shape, colour, scent (which he calls its 'signature') to such as have eyes to see. Ten years later, he had another 'opening' which went much further, and showed him the inwardness of all manifestation, how it arose, and its meaning and end. He felt an inward impulse to write down what had thus been revealed, not for publication—for he felt himself too simple to teach others—but (as he says) for a memorial to himself, so that, should the power of interior vision fail, he might have a record of what he had seen, and thus hold it permanently. The book he now wrote was the *Aurora, or Morning Redness*, and was the cause of the commencement of that persecution which for so many years embittered his life. The work was, of course, in manuscript. The written copy chanced to be seen by a nobleman, Carl von Endern, who had called on him. Being greatly pleased with it, the nobleman begged permission to borrow it for a short time, and then, without Boehme's consent, had some copies of it made. One of these happened to fall into the hands of the Pastor Primarius of Görlitz, Gregorius Richter, a violent man and inflated with the dignity of his office. He attacked Boehme in a sermon on 'False Prophets.' Boehme, who was in church, went to him afterwards and most meekly begged to know in what he was wrong. But Richter would not hear a word, and the next day went to the Town Council and demanded Boehme's expulsion, threatening them with the vengeance of God if they refused. A decree of banishment was passed, and no time was allowed him to wind up his affairs and make arrangements. Boehme meekly submitted, saying, 'Yes, dear Sirs, since it cannot be otherwise, it shall be done.' There is some difference of statement as to what happened after this. Martensen says that the next morning the Council sent to recall him, and told him he might continue to live in Görlitz if he would give up writing books and stick to his trade. This he undertook to do, and for five years abstained from writing, though much troubled in conscience as to whether he ought not to obey God rather than man. At the end of this time, conscience and the entreaties of friends triumphed, and he again began to write, and was then finally banished. Others say that the Council offered to revoke the sentence of banishment, but implored him—for the sake of the peace of the town—to remove away of his own accord, and that he did this.

It is certain that, when banished finally, he went, on a citation for heresy, to Dresden. Here the Elector appointed six learned doctors to examine him and report as to whether he ought to be protected or punished. His answers seem to have produced a striking effect on these men. One is reported to have said, 'I would not take the whole world, and condemn this man.' Another replied, 'How can we judge what we have not understood?' He seems to have returned to Görlitz, after this examination, under the protection of the Elector, against which even the rancour of Richter could do nothing. His fame as a man of interior wisdom drew to him many learned men and noblemen.

At the house of one of his noble friends, in Silesia, he fell into a fever which developed into gastric disease. He felt a premonition of his end, and asked to be carried back to Görlitz. Here he was attended by his old friend, Dr. Kober. After an illness of a fortnight he asked for the last Sacrament. Richter was dead, but the new minister held similar opinions, and refused to administer it unless Boehme would subscribe the Lutheran Confession of Faith. This he immediately did, and the Sacrament was administered. On the night of Sunday, Nov. 21st, 1624, he called his son, Tobias, and asked him whether he heard the sweet music. Tobias said he did not, and his father bade him open the door, when he must surely hear it. He asked the hour, and, being told it was after two o'clock, he said, 'My time is not yet: three hours hence is my time.' At six in the morning he bade them all farewell; and saying, 'Now I go hence to Paradise,' he quietly departed.

II. *Boehme's System.*—1. **His doctrine of origins.** — Boehme's system goes back to the beginning, to the time when the Divine Being first proceeded to manifestation. To attempt to go behind this, he says (*Three Principles*, xiv. 84), confuses the mind. He also says (*ib.* v. 19) that the origin of things ought not to be inquired into at all: yet since sin has now arisen, and we find ourselves fallen from the glory of God, we *must* know how sin arose, or we cannot know the remedy for it. And we cannot know how sin arose without opening the mystery of the process to manifestation, and the arising of the second, or contrary,

Will, and the seven Forms of Nature, and how the two eternal Principles—darkness and wrath of the first, and light and love of the second—arose, and this present world of the third Principle which stands between the two, and is qualified in good and evil. The ability to open this mystery is ours only when we are led by the guidance of the Holy Spirit; but as we are (in our deepest spirit) out of the Divine, we are able (in this spirit) to penetrate so far; for every spirit can see back into 'its own Mother,' but no further (*ib.* ii. 1).

Of the state before manifestation, all we can say is the following. The Supreme Spirit (whom we call 'God') was in a state which Boehme calls the 'Still Rest.' In Him was active one only Will, which, being one, did nothing but only BE, in one state and without any happening. All that afterwards came into manifestation through the process about to be described was in Him in a state inchoate and purely subjective. There was yet no creature to know Him and rejoice in the knowledge, and find the highest delight in the recognition of His Power and Goodness. All was yet pure potentiality; all were in Him as undifferentiated elements in the content of His Being, and knew not themselves or each other. In short, all was Essence in the simple Being of the Deity as a One Will, and there was no *existence*.

It is clear that such a statement as the above is derived as an impression from abstract considerations (arising in the nature of the case) as they must appear to our highest metaphysical perception. Boehme does not claim that such a presentation is a full and complete account of so stupendous and mysterious a matter, but only that it is the best we can yet see. To him it was probably presented in mystic vision; but we, lacking this, can only follow him with our best thought. It cannot really be as described, for we are obliged to think and speak in terms of time and space: and in God these are not. Boehme saw this fact clearly, and often warns us that, though he is compelled to speak in these terms, we must remember that the transcendent Fact is otherwise. If we think at all, we must think in these terms; and there is no harm in so doing so long as we bear in mind that the transcendent Fact is only feebly apprehended, and never in any way comprehended, by our thought. Therefore, while we have to speak of a time before manifestation, we must remember that this is only by a logical necessity, arising from our present limitation, and not a full presentment of the Fact.

When manifestation was to take place, the first necessity, says Boehme, was that a second and contrary Will should arise. This Will is not a new thing in God, for, as to His content, He changes not. It is again a logical necessity, because out of a one Will no 'manifoldness' can come, no conflict or strife or dramatic interest. So we must say that a second Will arose, and the immediate result of its arising was a darkening of the primal and, till now, universal light. Even light cannot be known consciously as such if there is nowhere any darkness. And as we know and appreciate only through experience of a contrary, and God has made us thus, the presumption may very well be that there is something in Him which answers (though in a far-off and exalted way) to this law of our minds to which we know no exception.

Immediately upon the darkening there arose the first Form of Nature, which Boehme calls *Harshness*.* This is the principle of hardness, close holding of itself to itself, and resistance to modification—a strongly conservative principle. The second Will must produce the contrary of the first—darkness, overshadowing, drawing together, hardening. Spiritually it is the power of self-centredness, self-satisfaction; of that inertia which resists conviction of sin, submission to the will of God, and love of the brethren.

Immediately on the arising of this Form, the first Will, disliking the darkness, seeks to turn back again to the light. But this it cannot do without reversing the Will to manifestation, which is impossible. Thereupon arises the second Form of Nature, *Attraction*. It is the reverse of the first. It seeks change and new combinations, and will let nothing alone—the principle of dissatisfaction and unrest. Spiritually, it is that which forces us into ceaseless activity, whereby we enter into experiences, and so (in the end) work out our *reductio ad absurdum*.

Out of the conflict of the first two Forms arises the third, *Bitterness*. It may be easier to catch the ideas of these first three Forms if we call them (in modern terminology) *Homogeneity*, *Heterogeneity*, and *Strain*. The Strain, or tension, arises from the contrariety and opposition of the first two. It is the bitterness of dissatisfaction which, as to the darkness, expresses itself in discontent and complaining, but, as to the light, becomes discontent with our own sin, sorrow for it, and tears of penitence.

Out of the Strain, as it increases in intensity, there arises the fourth Form, *Fire*. At this point, the operation being carried on reaches the degree at which a self-consciousness arises, with a sense of own will and choice. At this point also the evolution divides into two contrary directions, and it is within the power of the consciousness to decide which of the two it will take. The Fire at first is a cold, dark fire which can burn and hurt, but cannot purify—like an iron heated to just below redness. As it burns and the Strain increases, it grows in heat till it reaches redness, which is a light of low illuminating power, and shows things very dimly. Such is the light of the external man, and the light is the quality of the self-consciousness, which in this case is full of greed, wrath, and pride.

But if the evolution goes on in the right way, then the dull glow of the Fire grows stronger and stronger, until it passes into the fifth Form, *Light*. This is the true Divine Light, and 'makes manifest' things as they really are. When this Light arises, the Fire sinks down from its horrible raging, and becomes only a meek and pleasant warmth, giving all its power to the Light. Thereupon the first three Forms also change their character and become gentle and soft and harmonious. It is as though in the Light they first *see* their true function and purpose in the great work, and are content to fulfil it, and cease to express themselves as they are in themselves (in own self-will) without regard to the end they are there to produce. It is the change which (in modern terms) would be called the passing from self-consciousness to cosmic consciousness; when, instead of thinking of the universe as made for our self, we think of our self as made for the universe. Thus we rise to a higher grade of being and a truer joy than the self-fulfilment of our own small wishes and loves could ever give us.

The sixth Form of Nature Boehme calls *Sound*. The quality—first fixed towards good by the arising of the Light—now begins to express itself to perception. The manifold ways in which this expression is effected — by speech, cries, colours, scents, tastes, feeling, lightness, heaviness, and so on—are what he means by Sound.

The seventh and last Form of Nature he calls *Figure*. Here the whole 'thing,' thus having attained its being in Essence, now puts on a shape, a body, fit to be its full and perfect expression, and a mansion of the six Forms. Hence as the evolution has gone on in rightful order, arise all forms of beauty, all fair colours and sweet

* One of the difficulties in following Boehme arises from the fact that, in different passages, he calls these Forms of Nature by different names, according to different points of view. Thus he sometimes calls the first a *hard attracting*, though he calls the second *attraction*. He means that the first attracts so hard itself to itself that it attracts nothing else, while the second seeks to attract other things to itself, but does not attract itself to itself. The essential idea of the Forms will soon become clear upon patient study.

scents and pleasing sounds; and the creature stands marked with the 'signature' of God, a being to His honour and glory and its own indescribable delight.

But should the evolution proceed from the fourth Form in the false direction, that is, should the will elect to stand in self-will, and prefer might, power, anger, to meekness, humility, and love, then its light is but the dull, red glow of the fire; its sound is discordant and harsh, and its figure repulsive and monstrous. For the first three Forms are the real *bases* of Becoming, and originate the Essence which becomes substantial in the sixth, and embodied in the seventh. If these first three are not modified by the arising of the divine Light in the fifth, they must remain expressed in their own self-quality of fierce rage and fury, and the creature of which they form the basis will be of like nature and signature. It is in the fourth Form that the great choice has to be made whether the Fire shall be the fire of 'self,' which consumes, or the fire of 'love,' which illuminates.

It is absolutely necessary, says Boehme, that the first three Forms shall be there; without their presence no creature can come to being. They are the power to 'being' in every mineral, plant, and animal. But they should never be allowed so to be known or manifested as that their essential 'own self quality' should have any influence in determining the quality manifested. We know that Love is strong, the very strongest of all things; but in Love this strength is never on the surface. As soon as Love strives to 'force,' it ceases to be Love; when it keeps the strength in a hiddenness, and shows as its seen quality only meekness and gentleness, then the unseen base makes the meekness and gentleness strong. But should the creature despise the meekness, and resolve to compel and force others to love it, then the force, being shown, can no longer act as a base, and the supposed force becomes the weakest of all things, because devoid of its basal strength.

Nevertheless, it is in the power of all creatures, from human upwards, to open the first three Forms, and make this quality their quality. This Lucifer did. He was created a Throne-Angel, but allowed the might of the Fire to become dominant in him, and despised the meekness and self-surrender of the light of love. Hereupon his light went out, not, as afterwards happened to Adam, into a hiddenness, but into absolute extinction. The meek love of God, which alone could re-kindle it, *that* he has despised, and now stands in eternal rejection from the Light, shut up to the Fire he has chosen, and in which alone he is capable of finding joy. He is now God manifested as to the first Principle, as Jesus Christ is God manifested as to the second; for Christ is the true Light, and the Devil is the apparent Darkness. Each abides eternally in his own Principle.

Of these Principles, it is now time to speak. There are three: two eternal, and the third temporal. The first Principle is the dark world of the Anger, in which the first three Forms stand open and operative in giving quality, and the last three are hidden. The second Principle is the light world in the Love, where the first three Forms are not allowed to give quality, but remain practically hidden, while the last three alone qualify. Between these two stands the third Principle, this Present World—which had a beginning and will have an end. The first Principle is all evil; the second is all good; the third stands in good and evil. While man is in it, both the two eternal Principles seek to press into him; the dark world strives to draw him down into it, and the light world strives to lift him up into it. He stands between the two, and to whichever of them he here inclines his imagination, to that he will hereafter belong (Boehme says eternally). For there is no open way from the first Principle to the second save through the third, which stands open to both; and when this temporary world of the third Principle has passed away, no passage will remain, and the two will be so absolutely shut off from each other that each will seem *all that is* to itself, and be unconscious of any other.

2. Doctrine of Sin and of the Fall.—Sin, in Boehme's system, is really a false imagination. But, as our imagination defines the real for us, the concept is much stronger than it might sound. If the false imagination lasts eternally, we are eternally in Hell. If a true imagination lasts eternally, we are eternally in Heaven. For nothing short of the power of God, co-operating with the consenting will of man, can enable man to alter his imagination; that is, his consciousness of his state and surroundings, of what is real and of what is not.

The problem of the origin of Evil has long perplexed students of Divine wisdom. Boehme seems scarcely to be conscious of those aspects of the problem which press upon many hearts and minds at the present day. He simply throws the whole blame and responsibility on the perverted will of a creature (Lucifer), and this only removes the difficulty one step further back. Nevertheless, his system contains a remarkable suggestion of a solution.

He is careful to assure us that God (as He truly is, as He appears to an imagination formed in, and by, the Light) is never angry and never punishes. Seen by such an imagination, what looks to its opposite like punishment appears as loving warning and guidance. But the false imagination cannot but think of God as like itself; therefore it takes God's mercy for His wrath, and His guidance for revenge. All the six Forms of Nature have come out from God, and so the first three (which, when manifested, appear as wrath, anger, jealousy) are in Him, only in Him they are *never* manifested. Boehme commonly needs careful interpreting. He calls the first Principle the Principle of the Father, and the second that of the Son. But he adds that in reality the Father is never apart from the Son. We see, therefore, that what he really means is that, *if* the Father should (by a false imagination) be thought of as existing alone, and apart from the Son, He must (by such an imagination) be known as wrathful, angry, jealous. And, as such an imagination exists, He must speak to it in the terms of its own apprehension. But in Himself, as known by a true (because Divinely illuminated) imagination, He is all Love and Goodness.

Sin arises when the first three Forms are brought out of the hiddenness, not merely to look at (as will be explained further on), but to be tasted and *known*, and their own self-quality accepted as our quality. But as to the transcendent reality, they *are never thus brought out.* The transcendent reality is known to man only through his imagination. When illuminated by the Light, his imagination rightly pictures to him the reality; but when not so illuminated, the reality is wrongly pictured, and what he imagines to be the fact is the reverse of the fact. Therefore sin is possible only if a false imagination be possible; and can take on an appearance of reality only in such a false imagination. Thus at once sin is, and is not. When it is said, 'God cannot look upon sin,' the expression is more profoundly true than we suspect. He sees it, not as a positive thing Himself has made, but as the imagination of the thought of the heart of a creature who is unaware that the light in him is darkness. The fact is not

as the false imagination pictures it, and the thing pictured exists nowhere save in the false imagination. That gives it reality to the man whose imagination it is, but cannot make it actually real.

But however unreal the *content* of the false imagination may be, the false imagination itself is real. It was real to Boehme because he believed that, if not rectified in this life, it would eternally abide; for there is no better test of the real than the fact that it abides. If we might eliminate this idea of its eternity, the problem would be solved, for sin would then be but as a passing madness, and Hell and Earth but an episode in the eternity of Heaven.

Boehme lays down this clear principle (*Myst. Mag.* I. vi. 12), 'that the fullness of joy might know itself, the keen tartness of the Source [that is, of the first three Forms] must be a cause to the Joy; and the darkness, a manifestation of the Light; that so the Light might be manifestly known, which could not be in the One.' But how can this be, if the first three Forms are never to be explored? Here again Boehme offers us a key.

'The outward spirit and body was unto the inward as a *Wonder* of Divine manifestation, according to the Fire-dark and Light world, a mirror of the great Omnipotence and Omniscience of God, and the inward was given to it for a ruler and guide. As God plays with the time of this outward world, so likewise the inward, Divine man should play with the outward in the manifested wonders of God in this world, and open the Divine wisdom in all creatures, each according to his property; so likewise in the earth, in stones and metals, in which also there is a twofold Essence, viz. one from the original of the Fire-dark world, and one of the original of the holy Light world. All this was given him for his play' (*Myst. Mag.* I. xvi. 9–11).

Through the clumsy (and, to some, repellent) wording,* it is not hard to catch the suggestion here contained. The first three Forms are the sole causes of variety in the manifestations. As the first or second or third predominates—which is possible in an infinitely varying series of grades or degrees—so the variation arises. Thus out of these Forms arise the *wonders*. These may be looked into—by a will so set in the Will of God that it is in no danger of wanting to do more than look, never to taste or *know*—with perfect safety and propriety. We should *play* with them, as little children play at 'shop,' without ever dreaming of making it the serious business of the whole life. They play for the time, and then let it go, and so shut it up again. The harm is where the will is so unstable that from looking it passes to longing after, and from this to tasting and proving; so that the might of the Fire-world gains a hold, and moves the being to put his whole imagination into this 'play,' whereby from play it passes to earnest, and surrounds the whole life, and becomes its one desire. Then the true imagination becomes as dead, the spiritual perception closes, and the being lives henceforth in the world of its false imagination, and knows no other.

The consequence of sin, in Boehme's teaching, is a disturbance of the relations of the parts to the All. Man should be to the lower creatures what God should be to him. Over him God should have sole dominion, and over them he should have sole dominion. Thus, through all the infinite multiplicity of the external expressions of the Divine properties, one Will should be dominant—the will of man in whom God's Will is dominant. Thus God would be (virtually) *All in All*. All the creation would then be in true harmony and temperature, each would love and serve the rest, and no antagonistic will would arise to introduce strife and discord. The elements whence strife arises, and the strife itself, might be known as a *speculation* (in the old sense of 'looking into'), but never as an actualization. Such was the first world of the Temperature, before Lucifer's and Adam's fall.

The outer process whereby the Fall was effected was, as the first and initiatory step, the sin of Lucifer, who was pleased with the might of the Fire in the fourth Form, and rejected the meekness of the submission in the Divine Light, which would otherwise have qualified the might. Secondly and directly, it was the act of our first parents in eating of the forbidden fruit.

Only a hasty, general sketch of Boehme's teaching as to this can be given here. Adam was created out of the two Principles—he had an external out of the Ens of the Fire-source, and an internal from the Ens of the Light-source. The former is the masculine element, the latter the feminine. The two sex-elements were united in one form, which was that of a masculine Virgin. The Fall had a preparation and a culmination. The preparation was that the bi-une being, Adam, felt 'alone.' He should have 'propagated magically' through the union of the two elements in himself, for he was a two-in-one (*i.e.* both 'him' and 'them,' as he is called in Gn 1[27]). He would thus have 'multiplied' and found companionship. But this he proved unable to do. The true 'help meet for him' was *in* him, but he looked around instead of within. Therefore the woman-element must be externalized that he might become conscious of it. But this could not be done in the true, Divine imagination which was in full rapport with the transcendent Fact. He is therefore caused to fall into a 'deep sleep,' and in this lower grade of imagination finds the internal externalized. They are still in Paradise, but now in danger; and are warned of it. They are not to inquire into the nature of good and evil; for now, their imagination being in a degree false, they are likely to wish to do more than *speculate*; they may want to *know*. God alone may *know* good and evil (see Gn 3[22]). Thus the Tree of Life to the bi-une Adam becomes the Tree of Temptation to the divided Adam and Eve. The danger now was that they should desire after a *good* which they could understand from and in themselves and not from and in God, a *pleasure* which in this same way they could feel to be such, and a *wisdom* which would make them not submissive to the One Will but possessed of a will of their own, and an imagination arising from the sight of their own eyes. This false imagination instantly became operative, but not as they had hoped. The Divine perception went into a hiddenness and virtually died in them; and as they had known themselves only in this imagination, *they* virtually died and arose to *newness* of life, but as the change was downwards, it would be newness of *death* rather than of life. The body of the heavenly One Pure Element disappeared (if, indeed, it had not done so before in the falling into a deep sleep), and they have now a body of four elemental, corruptible matters, made (as science tells us) 'bone for bone, muscle for muscle, and nerve for nerve' like the beasts that perish. Instantly also the result reacts through nature. The Divine element, which before had budded through the earth and produced fruits wholly good, now withdraws into the hiddenness, and the earth bears 'thorns and thistles,' and only such grains and fruits as contain—with the good of nutriment for the animal body—the evil which through digestion and excretion has to be separated and cast out, the like of which could never be in heaven where no corruption can enter. Disease and sickness manifest themselves, poison manifests itself in certain plants, and a fierce and savage nature in some of the animals. Thus the Fall of man infected the whole 'dominion' he should have ruled as God's vicegerent; so that now 'the whole creation groaneth and travaileth in pain together,' in an own self-will which manifests *as it* will, and not in submission to the will of God.

3. Doctrine of Regeneration.—St. Paul declares that the creation was thus subjected to 'vanity' in hope that it should 'be delivered from the bondage of corruption into the liberty of the glory of the children of God' (Ro 8[21]). Lucifer's fall was beyond remedy, says Boehme; Adam's was not. Lucifer imagined into the first Principle (which is eternal); Adam only into the third. He desired to know good and evil; Lucifer had said, 'Evil, be thou my good.' Thus Adam introduced into his mind a false knowledge which yet did not entirely obliterate, but only obscured, the true, so that he yet can know evil as evil; while Lucifer knows evil as good. Therefore Adam died, not to the entire ability to know good, but only to the true, Divine perception which knows *only* good. But though he died to this, it did not die to him: it went into a hiddenness, but is still there as a latent potentiality in him, though at first he is so completely unaware of it that it is as if it were not in him at all. His state is rather a logical than an absolute death; it is practically absolute as far as his consciousness goes, but his consciousness does not embrace the whole content of reality.

* Boehme was an uneducated man, and often bemoans the fact, saying that he could have expressed himself better had he been better educated.

His natural life is a life in death, and if the dead life is to come to real life, it can only be through that whereby we come to this life—a birth; therefore (as our Lord said to Nicodemus) 'ye *must* be born anew' (δεῖ ὑμᾶς γεννηθῆναι ἄνωθεν).

The power to this New Birth is the power of God through the life and death of Christ who came down into our false imagination (but not into its dominance) to 're-tincture' the disappeared Divine nature that stood as dead, that it might again spring forth to newness of life. He brought the true imagination into the false, and showed it to us visibly in His life and character; whereby we may catch the idea that ours is not the true, and so come to desire the true. Then He leads us in the one way to the recovery of the true, by leading us to the Cross, whereon we must (in and with Him) crucify the false which lies over and obscures the true; then the true arises necessarily and becomes our new imagination, that is, our new 'self' and life.

The promise given to our first parents of the Treader on the Serpent, though not immediately fulfilled—not, indeed, till many centuries afterwards—availed to preserve the Divine nature in man from doing more than disappear, from actually abandoning him. It remained hidden and uncognized, but it was there; till the fullness of time, when Christ was born of a pure Virgin. The necessity for the Virgin-birth lies in this, that the male seed is from the Fire-source, and the female from the Light-source; so the special nature of the Fire—a hard-set selfhood—is less present in the female than in the male (*Myst. Mag.* I. xxiii. 43). Thus our Lord was born, not of 'bloods' (*i.e.* a divided parentage) nor of the will of the flesh, nor of the will of man, but of God; that is, of the heavenly Water and of the Spirit; and thus must we again be 'born anew.' All through His life He re-acted the part of Adam, only He stood where Adam fell. He stood in the forty days' fast, and refused to eat of the earthly substantiality (though it looked 'good for food'); refused to long after earthly adulation and worship (though it seemed 'pleasant to the eyes'); refused to act from the outer wisdom of the serpent (though it would have given Him the external dominion and glory of this world).

Thus He gained the power required. But, to avail ourselves of His salvation, we must enter into His death by utterly refusing the threefold temptations of the world, the flesh, and the Devil; that is, the lust of the flesh, the lust of the eyes, and the pride of life. Through His power we can now put the self-will again into the hiddenness, and so bring out of the hiddenness, and live in, the meekness in which He ever lived. Thus we regain what Adam lost—the high glory of being so one with God that He dwells in us as our will, and what He wills seems to be what we will. When this central Will is inoperative, myriads of conflicting wills arise, for men and all creatures do then 'what is right in their own eyes,' and all peace and harmony is destroyed. The world is plunged in conflict, everything is 'out of joint'; and all this for the sake of a false idea of *freedom*, the glamour of which seduces us, but which proves a more horrible bondage than 'His service,' which alone is 'perfect freedom.'

A powerful aid to the regeneration is found in 'Christ's Testaments,' Baptism and Holy Communion. In each it is not the outward element that profits, but the inward. If the new life has arisen in the soul, then it perceives the inward in the outward element, and it is the inward water which cleanses, and the inward sustenance which feeds, the inward man. In all earthly matter of the four elements the inward One Pure Element lies hidden from the outer man, but open to the inward, first through faith, afterwards actually.

Many other points in Boehme's system might be noticed, but enough has been said to give an idea of the general trend of his theosophy. His terminology constitutes the greatest difficulty in understanding him. Many of his learned friends were students of Alchemy, and one of them induced him to read the works of Paracelsus. He thus became acquainted with the terms of Alchemy, and uses them constantly, to the perplexity of his readers. For he saw in them a meaning beyond the outward, and no one will catch his real purport who cannot detect the spiritual allusion underlying the terms used. To him the *Magnum Opus* seemed a magnificent symbol of the 'maximum opus' of regeneration. The transmutation of the base metal into the perfect stands for the transmutation of the fallen, external nature into the unfallen internal in which man was originally created in the image and likeness of God. And the process through solution, purification, and re-fixation marvellously exemplifies the spiritual process, through putting the false imagination to death, purification through the Spirit, and the re-creation of the 'new man.'

III. *BOEHME'S IMPORTANCE AND INFLUENCE.*—The philosophical value of Boehme lies in his suggestion that in all 'things' as cognized by human apprehension there must exist a hidden and a manifested element. If both are explored, they can appear only as absolute contraries, evil and good. Yet what is required is not to annihilate one that the other may exist alone, but to unite the strength (without the quality) of the evil (which, without its quality, is not evil but strength) to the quality of the good, making the former the unseen, unmanifested, basal power of the latter. For, while evil is manifested as such, good lacks the basal might which would make it irresistible (as the very presence of the evil proves). What is wanted, therefore, is not the destruction of one of the two terms, but such a change of relation between the two as shall virtually reduce them to one. This is the Hegelian triad of Thesis, Antithesis, and Synthesis; and absolutely on all fours with this is Professor G. Boole's formula (*Laws of Thought*), 'Universe of thought equals Unity,' most graphically represented by his suggested expression, $x + \text{not } x = 1$.

The religious value of Boehme lies in his clear and unmistakable teaching as to the nature of true regeneration and the true Christian life. Many who will fail to understand his cosmology will find him lucid and most helpful here.

In England, Sir Isaac Newton, William Law, William Blake, and others have been students of Boehme; in France, Louis Claude de Saint-Martin; in Germany, Hegel, Schelling, Schopenhauer, J. G. Gichtel, and many others.

LITERATURE.—The principal edition in English of Boehme's works is a translation in 4 large quarto vols., of dates 1763, 1763, 1772, 1781. The chief works are: *The Aurora, or Morning Redness* (1612), *The Three Principles of the Divine Essence* (1619), *The Threefold Life of Man* (1620), *Answer to Forty Questions concerning the Soul* (1620), *Signatura Rerum* (1621), *Mysterium Magnum* (1623). Of these the last is, perhaps, the most important. There are a number of shorter writings, *e.g.* Apologies and Epistles. Of editions of Boehme's works in the original, the first issued is said to have been by the son of his old opponent Richter, in 8 vols. A more complete edition was published in 1675, and another by J. G. Gichtel, in 10 vols., in 1682. *Jacob Boehmes sämmtliche Werke, herausgegeben von K. W. Schiebler*, 6 vols., was issued at Leipzig in 1831–46, and another edition in 7 vols. in 1840–47. Of importance are also Hamberger's *Die Lehre des deutschen Philosophen Jacob Böhmen* (Munich, 1844); Claassen's *Jakob Böhme, sein Leben und seine theosophische Werke* (3 vols., Stuttgart, 1883–86). A new edition of Boehme's works, ed. C. J. Barker, has begun to appear (London, 1909).

Of modern works on Boehme's system may be noted: F. C. Baur, 'Zur Gesch. der prot. Mystik,' in *Theol. Jahrbb.* 1848–49; Peip, *Jakob Boehme* (Leipzig, 1860); von Harless, *Jakob*

Boehme und die Alchymisten (Berlin, 1870); Martensen, *J. Boehme: Theosophische Studien* (1882); Fuchs, 'Beiträge zu einer richtigen Würdigung J. B.'s,' in *Beweis des Glaubens* (1883); Schönwälder, *Lebensbeschreibung Jakob Böhme*, (Görlitz, 1897); A. J. Penny, *Introd. to the Study of J. B.'s Writings* (New York, 1901); A. Whyte, *Jacob Behmen: An Appreciation* (Edinburgh, 1895); 'Excerpts from Boehme,' with interpretative comments, in the present writer's magazine, *The Seeker*, *passim* (London).

G. W. ALLEN.

BOGOMILS.—The Bogomils were a sect of dualistic heretics whose doctrines clearly declare their kinship with the Paulicians and Euchites or Messalians (*q.v.*). Mainly to the former may be ascribed their peculiar form of Dualism, and to the latter their specifically ascetic element. Both these earlier movements took root in Thrace during the eighth, ninth, and tenth centuries—exotics from their native soil in the Eastern Byzantine provinces (Armenia, Mesopotamia, and N. Syria). They flourished most among the people of Slavic race, particularly the Bulgarians. Here they passed through a process of intermingling and local modification which issued in a system relatively new and strange,[1]—whose adherents increased rapidly though secretly, and are known to have been called Bogomils in the beginning of the 12th cent., if not from the middle of the 10th.

The origin of the name has been usually found in the frequent use by them of the two Slavic words *Bog milui*, 'Lord, have mercy.'[2] A more likely explanation derives it from *Bogumil*, 'Beloved of God,' in which case it may be taken to denote the idea of a pious community analogous to the (later) 'Friends of God' (*q.v.*) in Germany.[3] But not less probable is its derivation from a personal name. Two early Bulgarian MSS have been discovered which are confirmatory of each other in the common point that a 'pope' Bogomile was the first to promulgate the 'heresy' in the vulgar tongue under the Bulgarian Tsar Peter, who ruled from 927 to 968. This would seem to afford a surer clue to the name, and (if correct) puts back the active emergence of the movement to the middle of the 10th century.[4]

Euthymius Zigabenus (died after 1118) is the main source of what is known about the Bogomils. His account is given in titulus, or chapter, xxvii. of the work Πανοπλία Δογματική[5] which he devoted to the refutation of twenty-four different heresies. He was a favourite of the reigning Emperor Alexius Comnenus; and a story told[6] by Anna, daughter of the latter, shows how he came by his information. Alexius, having invited the physician Basilius, chief apostle of the sect, to Constantinople, induced him, under an affectation of sympathetic interest, to make a free statement of his doctrines; meanwhile a stenographer, hidden behind a curtain in the room, took down a verbatim report of the conversation, and at the end of the interview the curtain was raised. In this way Basilius found himself ensnared and self-accused. His doctrine thus craftily obtained is set out by Euthymius (*PG*, vol. cxxx.) under 52 heads, of which the main are as follows:—

(1) The Bogomils rejected all the Mosaic books of the OT, but accepted as canonical the Psalms and the Prophets. In addition, they accepted the four Gospels, the Acts of the Apostles, the Epistles, and the Apocalypse,[1] assigning a peculiar sacredness and authority to the Gospel of John. So far as Moses was used, it was as allegory to support their own views. A favourite book was the apocryphal 'Visio *or* Ascensio Isaiae.'

(2) While accepting the Gospel-history, they did so not altogether in its literal sense—Christ's history, *e.g.*, was regarded as a symbolical clothing of higher facts—and they held, moreover, that its meaning had been falsified by the Church. Chrysostom, in particular, seemed to them a falsifier.[2] Nor would they have anything to do with the 'grammarians,' whom they classed as scribes and Pharisees.

(3) They taught a Sabellian conception of the Trinity, saying that all three names—Father, Son, and Holy Spirit—apply to the Father; and that in the end, when Son and Spirit have done their work, they will flow back into the Father. God was represented as human in form, though not corporeal. They pictured the Father as the ancient of days (*ὡς γέροντα βαθυγένειον*), the Son as an adolescent youth (*ὡς ὑπηνήτην ἄνδρα*), and the Spirit as a beardless youth (*ὡς λειοπρόσωπον νεανίαν*).[3]

(4) God's first-born son was Satanael (the Satan of the NT), the highest of the spiritual beings, his Father's universal vicegerent. Tempted by his pride, however, he sought to set up an Empire of his own, and drew after him a great company of the angels. Cast down from heaven on this account, but not yet deprived of creative power, he made a new heaven and a new earth.[4] They held that Satanael also made man, but could not do more than fashion his body. For life or spirit he had to fall back upon God, whose help he besought and obtained on condition that from the human race the places of the fallen angels in heaven should be refilled. So God breathed into man's body the breath of life. But Satanael, moved by envy of man's glorious destiny, repented of his promise. He seduced Eve; and Cain, their offspring, became the principle of evil in humanity. This principle prevailed over the good principle represented by Abel, the child of Adam and Eve.[5] By its aid he imposed himself upon the Jews as the Supreme God. Moses unwittingly acted as his instrument, and the Law—which begat sin—was his fatal gift. Thus all men, save a few,[6] were led astray. Then the good God intervened. In the 5500th year after the creation of the world, a spirit called the Son of God, the Logos, the Archangel Michael, the angel of the Great Council (Is 9[6]), came forth from Him, entered the world in an ethereal body by the channel of Mary,[7] and proceeded to overturn his evil brother's kingdom. Satanael plotted and brought to pass his death—unaware that, being bodily in appearance merely, he could not be affected by any physical pains. When, therefore, Jesus showed himself after the resurrection in his true heavenly form, Satanael

[1] For a good analysis of the elements, traditional and original, which made up the system, see article by Zöckler on 'Die Neu-Manichäer,' in *PRE*[3], and Karl Müller of Giessen's review of Döllinger's *Beiträge zur Sectengeschichte des Mittelalters* in *ThLZ* (1890), No. 14.

[2] This is the Greek interpretation, and is given by Euthymius Zigabenus (titulus xxvii. of his Πανοπλία δογματική).

[3] Zöckler favours this, and says it is thus a 'wohl Spezialbezeichnung der Perfecti der Secte, die sich wohl gern "Freunde Gottes" (*θεόφιλοι*) nannten.' With this, too, would agree their own self-description as *Χριστιανοί*, *Χριστοπολῖται* (Euthymius Zigabenus, *contra Phundagiatas* [in Migne, *PG* cxxxi. col. 48]; Anna Comnena, *Alexias*, lib. xv. [*ib.* vol. cxxxi. col. 1177]).

[4] See 'L'hérésie des Bogomiles en Bosnie et en Bulgarie au moyen âge,' in *Revue des Questions historiques* (1870), essay by Louis Leger, pp. 479–517. Bogomile = Theophilus, and was (thinks M. Leger) the 'pope's' second (assumed), name, his first perhaps being Jeremiah. They were also spoken of as *Fundaitae* (*φουνδαΐται*), *i.e.* purse-bearers, from *funda*, 'purse' or 'bag,' with reference apparently to a habit of begging their way from place to place like the Friars (see Euthymius Zigabenus, *s. Phundagiatas* (in *PG*, vol. cxxxi. col. 47).

[5] *PG*, vol. cxxx.

[6] Anna Comnena, lib. xv. § 487 (*PG*, vol. cxxxi.).

[1] § 1. 'Sapientia enim, inquiunt, aedificavit sibi domum, septemque columnas substituit, *i.e.* (1) Psalterium, (2) sexdecim Prophetae, (3–6) quattuor Evangelia, (7) res ab Apostolis gestae, omnes epistolae, Apocalypsus.'

[2] Eth. Zig. *c. Phundagiatas* (*PG*, vol. cxxxi. col. 53).

[3] §§ 2, 3, 23.

[4] § 7. *εἶπε, Γενηθήτω στερέωμα, καὶ ἐγένετο. Γενηθήτω γῆ καὶ γῆδε, καὶ γεγόνασιν ἅπαντα.*

[5] §§ 6–10.

[6] § 8. 'Eos nimirum, qui in genealogiis Evangelii secundum Matthaeum et secundum Lucam recensentur.'

[7] § 8. 'per aurem Virginis dexteram.'

had to acknowledge defeat His divine power departed from him. He lost the angelic syllable (*El*) in his name, and became Satan only. Christ then ascended into heaven and took the seat of power once held by Satanael. His own place among men was hereupon taken by the Holy Spirit—produced by the Son as the Son by the Father.[1]

(5) The twelve Apostles were in a spiritual sense the first creation of the Spirit; and the true successors of these, in whom alone He continues to dwell, are the Bogomils and their converts. As habitations of the Spirit they spoke of themselves as parents of God.[2]

(6) People of the true faith cannot die, but may be said 'tanquam in somno transmutari.'[3]

(7) Their own place of assembly (*synagogam*) they called Bethlehem, because there Christ, or the Word of God, is truly born and the true faith preached.[4] All other so-called sacred temples are the home of demons.[5]

(8) Accordingly their attitude to the 'Church' was hostile throughout. Quoting Mt 4[13] ('and leaving Nazareth, he came and dwelt in Capernaum'), they applied the term 'Nazareth' to the 'Church,' reserving 'Capernaum' to themselves.[6] All the Beatitudes were spoken concerning them, not the 'Church';[7] and not to the latter has been given the power to cast out demons or do any wonderful work.[8] As to the Sacraments of the Church, its Baptism is that of John, not Jesus, of the water, not the Spirit; and those who come to it are Pharisees and Sadducees.[9] For John the Baptist was a servant of the Jewish God, Satanael. They despised also the Church's doctrine and practice of the Lord's Supper.[10] It seemed to them a sacrifice to evil spirits. Their own conception made the Supper merely symbolical of communion with Christ as the bread of life come down from heaven—a consistent outcome of their Docetism. Equally consistent was their protest against the worship of the Virgin Mary, of the Saints, and of images.[11] When the Church attempted to rebut the protest by appeal to the miracle-working virtue of relics, they did not deny the miracles, but ascribed them to the evil spirits which attended the so-called Saints in life,[12] and were permitted to go on working after their death. Similarly the power of the crucifix over the demoniacal world was not denied in some cases, but was set down to the fact that the crucifix is a symbol welcome to evil spirits, inasmuch as it was the cross by which they were fain to have compassed the death of Christ.[13]

(9) On the ground that the demons, under Satanael, possess a certain power for an appointed time,[14] and that it is permissible to secure safety from unjust treatment by doing them outward honour, they took part in Church worship.[15] But they had their own secret 'conventicles' and a definite mode of initiation. After the candidate had made ready by confession of sins, fasting and prayer, the president laid the Gospel of John on his head, and together with the brethren invoked the Holy Spirit and repeated the Lord's Prayer.[16] A probationary period of strict abstinence followed. Then, if approved, he came a second time into the assembly, when, with his face toward the east, the Gospel of John was again laid on his head, the brethren touched his head with their hands, and sang together a hymn of thanksgiving. It is admitted by their enemies that the moral ideal set before the candidates was a high one. They were to keep the precepts of the Gospel, and fast[1] and pray, and be pure in life and compassionate and humble and truthful and loving to one another, and without covetousness.[2] Nor is there any evidence that the charge of hypocrisy and secret vice had any foundation in fact. The Bogomil practice, as well as standard, seems to have been far above the average level, and to have had no small effect in attracting those whom the corruptions of the Church repelled.

(10) The monk and physician Basilius seems to have been the first martyr of the sect. He did not recant the confession obtained from him in the manner already described, and was led away to prison. This was about 1111, at which time he had governed the community of the Bogomils for 40 years. In 1119 he died at the stake.[3] Many others were 'ferreted out' by the combined zeal of Alexius the Emperor and Nicholas the Patriarch—especially (it is said) from among the laity and clergy of Constantinople. Some abjured their 'errors' under threat of punishment or promise of reward; some remained firm and went to lifelong imprisonment.[4] But the heresy lived on for centuries—the same in substance everywhere, though modified in detail here and there. A strong influence on its side was the monk Constantine Chrysomalus, whose writings were condemned by a synod at Constantinople in 1140. Another synod at Constantinople in 1143 deposed two Cappadocian bishops as Bogomils—a sign that the heresy had spread to Asia Minor. About 1230 the Patriarch Germanus complained of its wide-spread activity in the capital, and of the success with which its emissaries wormed themselves into private houses and made converts. In Bulgaria, most of all, it held its ground, and did so in the form of an organized Church-community. Distinct traces of this are met with as late as the second half of the 14th cent., and the smaller societies into which it separated are traceable to a much later time.

BOLDNESS (Christian).—'Boldness' (παρρησία) is used in the NT to describe the perfect confidence which the Christian, depending upon Christ and His work, has in his approach to, and in all his dealings with, God. Three passages may be cited as illustrating the idea: (i.) Heb. 4[16] 'Let us therefore draw near with boldness unto the throne of grace'; cf. Heb. 10[19], Eph. 3[12]. (ii.) Heb. 10[35] 'Cast not away therefore your boldness, which hath great recompense of reward'; cf. Heb. 3[6]. (iii.) 1 John 4[17] 'Herein is love made

1 § 5. Neander (*Church Hist.* viii. 855) makes them say that the Holy Spirit was an emanation from the Father.
2 § 22. 'Aiunt suos omnes in quibus Spiritus sanctus habitat, Dei parentes et esse (πάντας θεοτόκους καὶ εἶναι).'
3 § 23. 4 § 28. 5 § 18. 6 § 34.
7 § 35. 8 § 13. 9 §§ 16 and 31.
10 § 17. 'Mysticum, venerandum sacrificium contemnunt atque despiciunt.'
11 § 11. 12 § 12. 13 § 14.
14 Until the end of the 7000th year (the seventh secn).
15 § 20–21. (*a*) *The Lord said* (in one of their Apocryphal Gospels): 'Daemonia colite, non ut vobis prosint, sed ne obsint'; (*b*) 'omni ratione saluti vestrae consulite'; cf. § 25.
16 The 'Pater Noster' was the only prayer they thought it right to use (§ 19). They recited it 7 times daily and 5 times nightly.

1 The Bogomils fasted three times weekly—'secunda et quarta et sexta die' (§ 25).
2 § 26.
3 In the Hippodrome at Constantinople (see Anna Comnena, lib. xv. [*PG* cxxxi. coll. 1181–6]).
4 *Ib.*

perfect with us, that we may have boldness in the day of judgment'; cf. 1 John 3^{21}. In (i.) the 'boldness' denotes the perfect confidence with which the Christian approaches God in this present world; in (ii.) the confident expectation, or joyful and hopeful assurance, which he has with regard to his future relationship with God; in (iii.) the boldness, conceived as existing in the future, denotes the absence of fear, or the simple confidence, which the Christian will experience in the day of judgment. Of this boldness certain important facts require to be stated.

1. It was a new ingredient put into the religious consciousness by Christianity, and is a distinctive feature of the Christian faith. To come *boldly* to the throne of grace is a new and living way (Heb. 10^{19}). This can be seen by a comparison between the way in which man approaches God under the OT dispensation, and the way in which the Christian approaches Him under the new covenant. In the OT man approaches God with fear and trembling; he stands afar off 'at the nether part of the mount' (Ex 19^{17}); even 'Moses said, I exceedingly fear and quake' (Heb. 12^{21}); in the NT man approaches with boldness 'the city of the living God, the heavenly Jerusalem,' 'God the judge of all,' and 'Jesus the Mediator of a new covenant, and the blood of sprinkling' (Heb. 12^{22-24}).* It will be found, too, that in this matter of boldness the Christian religion is distinct, not only from the Hebrew, but from all other religions. Fear and shrinking rather than boldness and confidence are, universally, the concomitants of the natural man's approach to the Unseen and Eternal. The Christian alone has boldness of access to the throne of God.

2. The ground of Christian boldness is Christ, and especially His atoning work; it is not any virtue or grace which the Christian may have in himself or of himself; the virtue and grace of Christ constitute the sole ground of boldness. In Christ the Christian has a great High Priest with whom alone he can boldly approach the throne of grace (Heb. 4^{14-16}, Eph. 3^{12}; cf. Rom. $5^{1, 2}$); in Christ's blood he has a sacrifice for sin with which he can boldly enter the Holy Place (Heb. 10^{19}). In 1 John $4^{17, 18}$ the love of God is perfected in the Christian's boldness, and perfect love casts out all fear; but the perfect love of God is, according to this Epistle, embodied in Christ and His propitiatory work (1 John 4^{10}), so that 1 John falls into line with Hebrews and Paul in making Christ and His work the ground of Christian boldness. Whether the Christian had in Christ and Christ's work valid grounds for his spiritual confidence is a question whose discussion does not lie within the scope of this article, but it is a simple historical fact that on the ground of Christ and His work, and united to Christ and Christ's work by faith, the Christian found a new standing—one of confidence and joyful assurance—before God, and exhibited it to the world.

3. Christian boldness is not inconsistent with humility and reverence before God. The Christian is bold when he realizes the perfect and sufficient right which he has in Christ to approach God, but humble when he realizes that this right is not in himself at all but in Another. And for the grace which has given him such boldness and freedom of access he can feel nothing but grateful reverence. In the Christian consciousness, boldness and humility are met together, confidence and reverence have kissed each other.

4. Christian boldness must be distinguished from certain other forms of courage or audacity. (i.) From the audacity which defies all authority, which fears neither God nor man, and which leads a man to be and to do whatsoever he will. Such audacity is not boldness towards God (1 Jn 3^{21}); it leads away from God. It is irreligious and immoral in its tendency, and exercises itself in the sphere directly opposite and opposed to the sphere of Christian boldness. (ii.) From the courage or confidence which is due to an imperfect or incomplete conception of God. Where God is conceived as pure clemency or simple kindness, and as having a forgiveness so easy to grant that it amounts to an indifference to sin, He can be approached with a certain boldness, which, however, is but the courage of a moral ignorance and spiritual blindness as to the true character of God, and is very different in religious quality from the boldness of the man who holds God to be so holy that, apart from a perfect High Priest and a sufficient sacrifice, he dare not approach Him. (iii.) From courage in the face of difficulty, or danger or opposition in the world. From such natural courage the spiritual boldness of the Christian differs in several respects. The spheres of their exercise are different. Natural courage exercises itself in the world of phenomena, Christian boldness is towards God and exercises itself in the world of spiritual realities. Then natural courage requires for its exercise danger or difficulty, Christian boldness has no difficulty or danger to face, for all difficulty of approach to God has been removed by Christ. Natural courage takes risk, Christian boldness feels no risk; it has 'full assurance.'

5. But, while Christian boldness is in itself distinct from natural courage, it was doubtless the secret and source of the marvellous bravery which was shown by members of the Apostolic community in face of danger and death.* Perfect love casts out all fear, first the fear of God, and then of everything in God's world.

6. This article would not be complete without a reference to the boldness of Jesus. In the Fourth Gospel boldness is mentioned seven times as characteristic of the bearing and speech of Jesus (cf. Mk 8^{32}). Then it need only be mentioned that confidence and assurance were supremely evident in the attitude of Christ towards God. Notice His attitude at the grave of Lazarus, or as He draws near to the Cross.

For boldness in general sense, see COURAGE.

D. RUSSELL SCOTT.

BOMBAY.—The Presidency of Bombay, the most western of the provinces of India, takes its name from that of its capital city, which is believed to be derived from the title of the local goddess, Mumbā or Mambā Devī, interpreted to mean Mahā-Ambā, the great Mother-goddess of the non-Aryan population. Her shrine, which once stood on the site now occupied by the Esplanade at Bombay, was removed to the Bhendī Bāzār in the native city, where she still receives the offerings of her worshippers. The Presidency, as now constituted, consists of scattered groups of districts lying along the W. coast of the Peninsula, from lat. 13° 53′ to 28° 29′ N., and includes an area of 188,745 square miles, and a total population of 25,124,235.

The religious conditions of a great Indian province have been discussed in some detail in the case of Bengal (wh. see); and separate articles dealing with the more important divisions, sacred places, and castes in the Bombay Presidency illustrate so many phases of the local religious

* The passage He 12^{18-24} powerfully presents the contrast between the old (OT) and the new (NT) way of approach to God, though the actual word 'boldness' does not occur.

* παρρησία is used of the boldness which the Apostles showed in bearing and speech (Ac 4^{13}); παρρησιάζεσθαι is used frequently in the Acts of the fearless preaching of the gospel.

beliefs that it is unnecessary to discuss them in detail (see, for instance, AMARNĀTH, BARODA, DWĀRKA, ELEPHANTA, ELLORA, GIRNĀR, GODĀVARĪ, GOKARN, KISTNĀ, NARBADĀ, PALITĀNA, SOMNĀTH; and, for castes and tribes, BAIRĀGĪ, BANJĀRA, BHĪLS, DRAVIDIANS (North), MAHĀR, RĀJPUT, RĀMOSHI, YOGĪ). In this article, therefore, it is proposed merely to give a general sketch, historical and descriptive.

1. **Environment and its influence upon religion.**—In the case of Bombay, perhaps more clearly than in other provinces, the varied environment of the people has influenced their religion. The Presidency consists of several regions widely differing in climate, fertility, and accessibility to external influences, as well as in the ethnical origin, history, and character of their population.

(*a*) *Sind.*—Thus, beginning from the extreme west, we have the valley of the Indus, the climate of which, owing to its prevalent aridity and the absence of the monsoons—a condition relieved only by a great system of artificial irrigation—ranks among the hottest and most variable in India. By its situation it was specially exposed to the attacks of the Arabs from the west, which began early in the 8th cent. A.D., and rapidly reduced the delta to submission. The original population consisted of an Aryan race with a non-Aryan substratum, leavened by an important element derived from foreigners, including the Ephthalites or White Huns, whose incursions ceased not long before the armies of Islām appeared upon the scene. The permanent result of the Arab invasions has been that, at the present time, rather more than three-fourths of the population are Musalmāns.

(*b*) *Cutch, Kāthiāwār, and Gujarāt.*—Farther east come Cutch (Kachchh), Kāthiāwār, and Gujarāt: the first almost an island, severed from the mainland by the Rann, half desert, half morass; the second a peninsula, stretching westward to the Arabian Sea; the third a fertile plain, watered by the rivers Narbadā and Tāptī—the Garden of India, as it used to be called before its recent devastation by famine. This region was from the earliest times exposed to invasion from the north of India. The inscription of the Satrap Rudradāman, engraved on the rock of Girnār in Kāthiāwār, records the establishment, in A.D. 150, of the Śaka or Scythian dynasty, known as that of the Western Satraps. Kāthiāwār and Gujarāt seem to have been the most southerly tracts which came under the rule of these foreigners, and the theory advanced by Sir H. Risley (*Census Rep.* 1901, i. 514), that a well-marked Scythian element can be identified in the population of the Deccan, will not bear examination.

(*c*) *The Konkans.*—The remaining seaboard districts of the Presidency, included under the general name of the Konkans, are separated from the central region by the barrier of the western Ghāt range, which, until it was pierced by British road and railway engineers, formed a permanent obstacle to communication between the coast and the interior. This portion of the western seaboard was from the most ancient times the seat of a flourishing trade, and formed the centre of commercial and intellectual intercourse between India and the nations of the West. Perhaps as early as 1000 B.C. trade routes were established between its ports and those of the Red Sea. Communication with the Gulf of Persia and the cities in the Tigris-Euphrates valley certainly started not later than 750 B.C., and probably dates from a much earlier period. About the beginning of the Christian era, commerce was opened between Gujarāt and Rome; a colony of Jews from Yemen is believed to have reached Kolāba in the 6th cent. A.D.; the Parsis, driven from Persia by the advancing armies of Islām, landed at Sanjan in the Thāna district in A.D. 775. The long line of Christian missionaries to W. India begins with Pantænus (189–90);* and the seed planted by him and his successors continued to grow until the Portuguese, established in Goa in 1510, steadily undertook the conversion of the native races which fell under their control. This continuous intercourse between this part of India and the West must have profoundly affected the religious beliefs of the people. To it, with some measure of probability, has been attributed the growth of the conception of lively faith in a personal Godhead, which is a leading tenet of the Vaiṣnava sect. This, however, is strenuously denied by Hindu writers (see BHAKTI-MĀRGA).

(*d*) *The Deccan.*—In direct contrast to the seaboard is the scantily watered, comparatively unfertile, plateau known as the Deccan (Dakkhin, Skr. *Dakshiṇa*, 'that on the right hand,' 'southern'). While the barrier of the W. Ghāts divides it from the coast region, it is separated from N. India by the Vindhyan and Mahādeo ranges, and in ancient times was specially isolated by the tract of forest country known to the ancient Hindus as Daṇḍakāraṇya, which has been identified with Mahārāshṭra, the region now occupied by the Marhaṭa (Marāthā) people. This in early Hindu legends is said to have been occupied by fierce demons (Rākshasa), in other words, the non-Aryan tribes who resisted the pressure of the new civilization from the north, and were closely akin to races like the Kunbī, the predominant element in the present population. In the Deccan the sturdy peasantry were much less accessible to priestly control than the less manly races of the seaboard. In Gujarāt the preservation of the original Hindu beliefs was due chiefly to the Rājput aristocracy, largely recruited from Huns and Scythians admitted to Hinduism; the wealthy trading classes devoted themselves to the building and endowment of temples; even at present among the laity there is found a sectarian fervour absent in other parts of the Presidency. The condition of religious thought in the Deccan was and is very different. Here there is a lower general average of wealth, culture, and religious devotion. The population is more scattered, and is absorbed in the care of the precarious crops which alone the soil produces. Consequently, like the practically minded Jāṭ of Upper India, the Deccan Kunbī or Marhaṭa, *parcus deorum cultor et infrequens*, cares little for the Brāhman, whom 'the wider political education of the Deccan and the freedom from the competition of other literate classes have led to prefer the occupation of the layman to the segregation of his own fraternity in religious institutions' (Baines, *Census Rep.* 1881, i. 128). The Marhaṭas are of opinion that the spiritually-minded Brāhman should not interfere in secular affairs; and those 'who devote their lives to the study of what Hindoos conceive the divine ordinances are held in great esteem; but otherwise, in the Mahratta country, there is no veneration for the Bramin character' (Grant Duff, *Hist. of the Mahrattas*, 5). Śivājī, the founder of the Marhaṭa State, steadily pursued the policy of appointing Brāhmans to the highest civil posts in the administration; and the Peshwa, or Marhaṭa Mayor of the Palace, was always a Brāhman. Thus the modern Marhaṭa

* It is possible, however, that the 'India' of Pantænus was really S. Arabia (*PRE*[3] xiv. 627); cf. Servius, *ad Georg.* ii. 116 'sed Indiam omnem plagam Aethiopiae accipiamus,' and see Lipsius, *Apokryphe Apostelgeschichten und Apostellegenden*, II. ii. 63–65, 132–135; Möller, *Lehrb. der Kirchengesch.* i. 108. On the other hand, it is tolerably certain that Christianity entered India before 200; cf. Lassen, *Ind. Alterthumskunde*, ii.[2] 1118–1128; Aiken, *The Dhamma of Gotama the Buddha and the Gospel of Jesus the Christ*, 288–297; Hopkins, *India Old and New*, 140 f., 167; Bergh van Eysinga, *Ind. Invloeden op oude Christelijke Verhalen*, 118–120.

Brāhman is reared to cherish the tradition that his forefathers directed the policy of the last independent Hindu State in the Peninsula; and looks with jealousy on the Government which has replaced it. Poona has become a centre of restless intrigue, to which much of the recent disloyalty in Bengal, and in particular the modern deification and cult of Sivājī, can be clearly traced. Next to the Kāśmīrī, the Marhaṭa Brāhmans are perhaps the most capable Hindus in the Empire (T. C. Arthur [A. T. Crawford], *Our Troubles in Poona and the Deccan*, 1897, *Reminiscences of an Indian Police Official*, 1894).

2. Lingāyats.—The independence of Brāhman authority, which is characteristic of the Marhaṭa, was possibly one of the main causes of the growth of the remarkable Lingāyat sect, which will form the subject of a separate article. They have their own priests, and have long severed all connexion with the Brāhmans. But the old leaven is still working, and they now exhibit a tendency to revert to Brāhmanical Hinduism, with which they claim their creed to be coeval, and are attempting to apply the fourfold caste organization of Manu to their social divisions (Enthoven, *Census Rep.* 1901, i. 387).

3. Extension of Brāhman influence into S. India.—The process of bringing that portion of the Peninsula which lies S. of the Narbadā within the Brāhmanical fold probably began with the peaceful settlement of Brāhmans on the eastern and western coasts. This may have occurred at an early period, when the Aryans had worked their way into the Sind delta and Gujarāt on the one side, and down the lower Ganges valley on the other. In Bombay the movement further south was effected either by the sea route or along the western coast districts, where the mountain ranges diminish in altitude and melt into the alluvial plains of Gujarāt, the valleys of the Narbadā and the Tāptī. The advance into the Deccan was checked by the natural obstacles already referred to, and probably occurred at a period long subsequent to the movement along the coasts. Prof. Bhandarkar, by an examination of the early grammarians, has shown some reason for believing that the Aryans had acquired no knowledge of Southern India before the 7th cent. B.C.; that up to this time their advance had been along the coast districts; but that by B.C. 350 they had become acquainted with the country as far south as Tanjore and Madura (*BG* i. pt. ii. 141). These conclusions cannot be regarded as definitely established, and the view that the Brāhmanism of S. India is of comparatively recent origin has been disputed by Hindu writers. But the theory of a comparatively late introduction of Aryan culture fits in well with the existing facts, and it involved important consequences. Not only have the local Dravidian languages held their ground, but art and general culture have developed on original lines. Still more is this the case in the domains of religion and politics. The new-comers found well-organized communities and ancient kingdoms in occupation of the country. The forms of belief characteristic of the non-Aryan races retained their influence over the minds of the people. The early Tamil literature shows that the evolution of religion in the south took a shape very different from that which is, in the case of the northern races, more familiar to students of the development of Hinduism (V. Kanakasabhai, *The Tamils Eighteen Hundred Years Ago*, 1904, p. 227 ff.).

4. Buddhism.—The extension of Buddhism into the region south of the Vindhyan range was the work of Aśoka (*c.* B.C. 272–231; see AŚOKA). Two copies of his fourteen edicts have been found on the W. coast; one, fragmentary, at Sopāra or Sūrpāraka in the Thāna District, N. of Bombay the second, nearly complete, on the Girnār hill, E. of the town of Junāgarh in Kāthiāwār (Smith, *Asoka*, 103). The discovery of three copies of the minor Rock edicts in the Chitaldrūg District of Mysore shows that his authority extended as far south as that kingdom (Rice, *Mysore*[2], ii. 499).

The progress of the three rival faiths, Buddhism, Jainism, and Brāhmanism, is recorded in a series of monuments, the rock-cut halls and temples of W. India, of the greatest historical and religious importance.

'When their story is carefully examined, it appears that they are spread pretty evenly over more than a thousand years of the darkest, though most interesting, period of Indian history; and throw a light upon it as great or greater than can be derived from any other source. In addition to these claims to attention, the western caves afford the most vivid illustration of the rise and progress of the three great religions that prevailed in India in the early centuries of our era and before it. They show clearly how the Buddhist religion rose and spread, and how its form became afterwards corrupt and idolatrous. They explain how it consequently came to be superseded by the nearly cognate forms of Jainism and the antagonistic development of the revived religion of the Brāhmans. All this, too, is done in a manner more vivid and more authentic than can be obtained from any other mode of illustration now available' (Fergusson-Burgess, *Cave Temples*, 166).

More than nine-tenths of the caves at present known are found within the limits of the Bombay Presidency. The view once held, that they are in some way connected with the monuments of Egypt, is now rejected; and their abundance on the W. coast is due simply to the fact that the geological formation of that region, with horizontal strata of amygdaloid and other cognate trap-formations, generally of considerable thickness and uniformity of structure, and with their edges exposed in perpendicular cliffs, favoured the construction of such excavations to serve as halls, temples, or monasteries (Fergusson, *Hist. of Indian Arch.*, 1876, 107).

Many of these caves are described in separate articles (see AJANTA, KĀNHERI, ELLORA, NĀSIK); and therefore it is only necessary to say that, as a whole, they fall into two groups, though naturally the same site was occupied by successive builders, and accordingly the distinction of schools of Buddhist belief is not always rigidly observed. The first group represents the Hīnayāna school, the earlier form of Buddhism. This includes the caves at Junāgarh and other sites in Kāthiāwār, dating from B.C. 250 to the Christian era; those of the Konkans and Deccan, all S. of Bombay, dated between about B.C. 200 and A.D. 50; those E. of Bombay, in the range of the W. Ghāṭs, dated between B.C. 250 and A.D. 100; those at Junnar, Nāsik (wh. see), and the earliest of the Ajanta (wh. see) group, which are of various ages, ranging from B.C. 100, and including examples of the Mahāyāna, or later school, as late as the 7th cent. A.D.; those at Mārol and Kānheri (wh. see) near Bombay, between B.C. 100 and A.D. 150. The second group, that of the Mahāyāna school, extends from the 4th nearly to the 8th cent. A.D., and includes the hall at Junāgarh, the later specimens of the Ajanta series, and those at Aurangābād and Nāsik.

These monuments bear eloquent testimony to the religious fervour, generosity, and taste of the rulers, nobility, and merchant princes who provided funds for their excavation and decoration. Their endowments must have supported a large number of monks. The Buddhist pilgrim, Fa-hien, who began his travels in A.D. 399, gives a lively account of the monastery at Kānheri, and describes the magnificence of the festal decorations, the beauty of the relic-shrines, the nightly illuminations, the rich endowments of the community (Beal, *Fah-hian*, 55, 76, 178). Hiuen Tsiang, a later pilgrim, who in A.D. 641 visited the capital (probably Nāsik) of the great king Pulakeśin II.,

who came to the throne about A.D. 608, found some hundred religious establishments (*saṅgharāma*), containing about 5000 monks (Beal, *Si-yu-ki*, ii. 257). But even at this time Buddhism was in a stage of decay. Possibly the picture which the same writer gives of the famous establishment at Amarāvatī (wh. see) is true of other foundations of the same kind. 'For the last hundred years there have been no priests (*dwelling here*) in consequence of the spirit of the mountain changing his shape, and appearing sometimes as a wolf, sometimes as a monkey, and frightening the disciples; for this reason the place has become deserted and wild, with no priests to dwell there' (*ib.* ii. 223)—a metaphor possibly referring to the hostility to the faith which was then growing up among the forest tribes. Inscriptions of the Rāshṭrakūṭa period at Mālkhed show that in the 9th cent. A.D. Buddhism was still a living religion, favoured by the authorities in W. India; but that at that time its chief rival, Jainism, was contributing to that change of feeling which ultimately caused its downfall (Fleet, *BG* i. pt. ii. 406). It certainly existed in a weakened form in the Deccan as late as the first half of the 12th century.

5. Jainism.—The history of the rise of Jainism—a faith contemporary with the rise of, and resulting from the same causes that gave birth to, Buddhism—is comparatively obscure; and very little is known concerning the process by which it attained a high position in W. and S. India for several centuries. The Jains of the Bombay Presidency are at present represented by two classes: the first, comprising the merchants of Gujarāt, who are remarkable chiefly for their extreme tenderness to animal life, as is shown by the hospitals (*pinjrapol*) established in the chief cities for all sorts of creatures; and the Mārwārī Banyās of Mārwār in Rājputāna, who are generally money-lenders and immigrants into the Deccan. The second group includes a class of cultivators found chiefly in the Belgaum and Dhārwār districts of the Karṇāṭa or S. Marhaṭa country. The first division is connected with the northern centres of the faith, in Rājputāna and Gujarāt, such as Mount Ābū (wh. see) and Palitāna (wh. see). The second group, that of the southern Jains, represents the relics of a belief which was once the State religion of a large part of S. India. In Mysore, according to Rice (some of his conclusions have been disputed by Hultzsch), it seems to have preceded the teaching of Buddhism by the missionaries of Aśoka, and here it continued to be the official religion of certain dynasties and kings throughout the first ten centuries of the Christian era. Here the three rival faiths, Buddhism, Jainism, Brāhmanism, appear to have existed side by side. In the 8th and 9th centuries A.D. an active revival of Brāhmanism in the form of Liṅga-worship resulted from the missionary labours of Kumārila and Śaṅkarāchārya, which raised Śaivism to a position of superiority over its rivals. In like manner, in the 12th cent. the Vaiṣṇava sectarianism gained ground, and, through the teaching of the reformer Rāmānujāchārya, dealt a deathblow to Jainism. After this the adherents of the Vaiṣṇava and Śaiva doctrines seem to have effected some kind of compromise, of which the form Harihara, uniting the cult of Hari (Viṣṇu) and Hara (Śiva), was the outer symbol. The almost contemporaneous growth of the Liṅgāyat sect, which popularized the Śaiva cultus, led to the final decay of Jainism as a leading faith in this region, while the later forms of Vaiṣṇavism absorbed all that remained of Buddhism (Rice, *Mysore*[2], i. 459 f.).

6. Development of Brāhmanism.—It would be an error to suppose that Brāhmanism suffered a complete collapse during the ascendancy of Buddhism and Jainism. The excavators of many of the Buddhist caves bear names derived from Śaivism, and in the great cave at Bādāmī a Vaiṣṇava temple of the 6th cent. A.D. still survives. Some of the Śaiva caves go back to the 2nd century. But it is only in the 4th cent. that they become common, and nearly all the Hindu caves of later date belong to that sect. The work of Brāhmanical cave-excavation seems to have almost ceased in the 8th century. The methods by which the original Buddhist models were adapted to the Brāhmanical cultus are described by Fergusson-Burgess (*Cave Temples*, 399 f.). The next important architectural development was due to influence from S. India, and resulted in the construction of the remarkable Kailāsa rock-temple in the reign of the Rāshṭrakūṭa king Kṛishṇa (Kṛṣṇa) I. about A.D. 760 at Ellora (wh. see; Smith, *Early Hist.*[2] 386 f.). The Jains also undertook the excavation of cave-temples, but at a later date than those of the Buddhists or Brāhmans, none of these Jain works being apparently dated earlier than the 7th century. The most important are at Ellora (Fergusson-Burgess, 490 ff.).

7. Modern Hinduism.—At the Census of 1901 the Hindus numbered 19,916,438 (78·4 per cent of the total population). Here, as in other parts of India, the line between Animists and Hindus cannot be clearly drawn. The faith of the higher classes of Hindus shows the prevailing characteristics of Hinduism: a polytheism replaced by an enlightened pantheism, and that absence of dogma which is the best asset of Hinduism. This, however, applies only to the more intelligent classes. Apart from the forest tribes, whose creed is pure Animism, the lower stratum of the people still preserves its primitive animistic beliefs, obscured, and to some extent modified, by the veneer of Brāhmanism. Bathing in holy rivers and pilgrimages to the tombs of deified heroes and saints are the chief modes by which purification from tabu and spiritual advancement are believed to be attained. The sacred stone haunted by some spirit, the holy tree or other natural object, the abnormal shape of which indicates that it is occupied by a spirit, the ecstatic possession of the village seer or medicine-man, the various devices by which the spirits of the household dead are brought into communion with the living, or the malignant ghosts of the murderer or his victim, and of the man killed by a tiger or snake, are repelled or controlled—these are the chief elements of the popular cultus. The forces of evil are ever in conflict with those of good, and there is little or no trust in a benign, fatherly Providence.

Sectarianism is imperfectly recognized in the statistics. So far as the Census returns go, the Śaivas or Smārtas, with the kindred Pāśupati, Śaṅkarāchārya, and similar sects, number about 3 millions; while the Vaiṣṇava sects, such as those of the Rāmānuja, Vallabhāchārya, Mādhavāchārya, and Vīravaiṣṇava, number only half a million. In addition to these, affiliated to the Śaivas, come the Liṅgāyats, numbering 800,000. Many influences may have affected the accuracy of the returns; but, at any rate, the vast majority of the Hindu population were ignorant of the sect to which they belonged, or did not care to record it.

The most important and interesting development is that of the Vallabhāchārya sect of the Vaiṣṇava group, to which Kṛishṇa (Kṛṣṇa) is the chief object of worship. The immorality of the Mahārājās or heads of this community has attracted much attention since the notorious case decided by the High Court of Bombay ([Karsandas Mulji], *History of the Sect of the Maharajas*, 1865).

8. **Jains.**—Jains, who number 535,950 (2·1 per cent. of the total population) are here, as usual, divided into Digambaras, who worship naked idols and their spiritual preceptors (*gurus*); Śvetāmbaras, who dress and adorn their images; and Dhūndhiyas, who are opposed to the worship of idols, venerate their preceptors, and dress in white, wearing a linen mouth-band to prevent possible injury to animal life. In Gujarāt, the headquarters of the Jains, the Śvetāmbaras are in excess of the other sects.

9. **Animists.**—As has been already remarked (§ 7), the enumeration of Animists, who in 1901 numbered 94,845 (0·4 per cent. of the total population), is incomplete, and merely includes those members of some forest tribes who are most completely, in beliefs and cultus, separate from Hindus. Of these tribes the most numerically important are the Kolī, Bhīl, Varlī, Ṭhākur, Dublā, and Kāṭhkarī. They are most numerous in the Districts of Pānch Mahāls, Thar and Pārkar, Thāna, Surat, and Khāndesh. A full account of the Bhīl beliefs will be found in a separate article, and that on the Northern Dravidians gives a general sketch of the forms of Animism which prevail among these tribes.

10. **Muhammadans.**—Muhammadans in the whole Presidency number 4,567,295 (17·9 per cent. of the total population). Their numbers show a tendency to increase, not so much as the result of any special propaganda, but rather because they have been less exposed than Hindus to the stress of plague and famine. For the interesting class of Bohorās or Bohrās, see SECTS (Muhammadan). The Khojas (Pers. *Khwājah*, 'honourable') are remarkable as tracing their origin to Ḥasan Ṣabāḥ, who in the beginning of the 11th cent. A.D. founded the Order of the Fidawī or Fidāī, 'the devoted ones,' known to Europeans as the Assassins (Arab. *ḥasshāshīn*, 'eaters or smokers of the intoxicating hemp drug'), of whom and of their leader, known as Shaikh-ul-Jabal, 'The Old Man of the Mountain,' many marvellous tales are told (Marco Polo, ed. Yule[1], i. 132 ff.; *EBr*[9] ii. 722 ff.; art. ASSASSINS). Their spiritual leader is the Aghā Khān, the descendant of a refugee from Persia, who commands great influence among his followers. Except in Gujarāt and Sind the Shī'ite element is small, and in many districts is confined to the Bohorās and Khojas (for a full account of the origin, customs, and beliefs of the Khojas, see *BG* ix. pt. ii. 36 ff.). A more recent development is that of the Aḥmadīyah sect, followers of Mīrzā Ghulām 'Alī of Kadiān in the Gurdāspur district of the Panjāb. The founder repudiates the necessity of *jihād*, or war against the infidel; traces a parallel between himself, as Messiah or Imām, and the Founder of the Christian faith; claims that his advent was foretold, and that he is charged with the duty of laying the foundations of general goodwill and peace upon earth. On the whole, this sect supplies an interesting example of the influence of Christianity upon Islām (Enthoven, *Census Rep.* i. 69; Rose, *Census Rep. Panjāb*, i. 143).

11. **Jews.**—The Jewish colony in the Presidency numbers 10,860. Like those further south in Cochin, they are divided into a 'white' and a 'black' section. The former claim to be the descendants of the original colonists, whom Dr. J. Wilson, on the ground that none of their names is later than the Captivity, and that all their Scriptures are of early date, believed to represent the Lost Tribes. It is now generally supposed that they came from Yemen in the 6th cent. of our era. Their own traditions fix their exodus in the 2nd cent., while other accounts place it as late as the 15th. The 'white' Jews do not eat, drink, or intermarry with the 'black' section, who are believed to be later converts from Hinduism. The Bombay Jews call themselves Banū-Isrāīl, 'children of Israel,' in preference to Yahūdī, which is the general designation of the race in N. India. In their houses, on the upper part of the right door-post, is placed a box containing a parchment scroll inscribed with a verse from the OT, so fixed that through a hole the word 'The Almighty' (*El Shaddai*) can be read from the outside. Their synagogues contain parchment copies of the Pentateuch (*BG* xi. 85 f., xiii. 273 f.). See art. BENE-ISRAEL.

12. **Christians.**—Christians number 204,961 (1·11 per cent. of the total population). They fall into several groups. The most numerous are the Roman Catholic inhabitants of the old Portuguese settlements now included within British territory, who were originally converted from Hinduism by missionaries from Goa. Those of good birth were admitted to *connubium* by the Portuguese. Though the names of all the Christians of this description are Portuguese, it is only among the upper classes that there is any trace of foreign blood, and here, even, it is now rare. The name of Indo-Portuguese, which is sometimes given to them, is scarcely acknowledged among themselves; and though the higher families speak Portuguese as the home-language, the rest habitually use either Konkanī-Marāthī or English. The lower classes continue to follow the hereditary occupations of the castes to which their Hindu ancestors belonged, while the upper have taken to the learned and clerical professions.

'In spite of rumours that have occasionally been heard within the last half century, those who have lived amongst these classes give evidence of the reality of their adherence to the faith of their adoption. There is a very prevalent confusion between Christians of this description and those of Goa. Both are Roman Catholics by persuasion, and both bear Portuguese names, and are under the supervision of priests of that nation. Beyond this the likeness ceases. The Native Christians that come from Goa are mostly domestic servants, an occupation never undertaken by Christians from other districts' (Baines, *Census Rep.* i. 51).

Including recent converts, the Roman Catholics in 1901 numbered 106,655—not far short of half the total Christian population. The remainder are more recent adherents, whose adoption of the faith is the work of various missionary societies, those attached to the Anglican communion numbering 35,614. While the Roman Catholics have slightly fallen in numbers between the last two decennial enumerations, the total number of Christians has increased from 158,765 to 204,961, the rise being greatest in those districts where the pressure of famine has been most severe, an indication that their numbers have been largely recruited from famine waifs supported in missionary orphanages.

LITERATURE.—The best authorities are Sir J. Campbell, *Bombay Gazetteer*, 27 vols. (1873–1904), of which the most useful are those dealing with the general history (vol. i. pts. i. ii.) and those describing the population of Gujarāt (ix. pts. i. ii.); and the *Census Reports*: J. A. Baines, 1882; W. W. Drew, 1892; R. E. Enthoven, 1902. The following also deserve attention: J. Wilson, *Indian Caste* (1877), useful but fragmentary; Major E. J. Gunthorpe, *Notes on the Criminal Tribes of the Bombay Presidency* (1882); A. W. Hughes, *Gazetteer of Sind*[2] (1876); J. Forbes, *Oriental Memoirs* (1813, 2nd ed. 1834); A. K. Forbes, *Rās Mālā, or Hindoo Annals of the Province of Goozerat*[2] (1878); Dosabhai Framji Karaka, *History of the Parsis* (1884); Karsandas Mulji, *History of the Sect of the Maharajas* (1865). For the political history, see V. A. Smith, *Early History of India*[2] (1908); J. Grant Duff, *History of Mahrattas*[3] (1873). For the religious architecture, J. Fergusson and J. Burgess, *The Cave Temples of India* (1880), and numerous memoirs by the latter writer in collaboration with H. Cousens in the *Progress Reports of the Archæological Survey of W. India*. These *Progress Reports*, vols. i. to ix. in the Imperial Series, numbered i.-v., xxiii., xxiv., xxxii., xxxiii., extending to 1905, have practically superseded the older books, such as Sir T. C. Hope, *Surat, Bharoch, and other Cities of Gujarat* (1866); J. Fergusson and P. Meadows Taylor, *Architecture at Beejapoor*; *Architecture in Dharwar and Mysore* (1866). Among the early travellers, the following, published in the Hakluyt Society series, may be referred to (the dates are

those of publication, not of the voyages): D. Barbosa, *Coasts of E. Africa and Malabar in 16th cent.* (1866); P. della Valle, *Travels in India* (1892); J. H. van Linschoten, *Voyage to the E. Indies* (1885); *India in the XVth Cent.* (1857); F. Pyrard de Laval, *Voyage to the E. Indies*, (1887–90); L. Varthema, *Travels in Egypt, Syria, Persia, India, Ethiopia*, etc. (1863). Other useful travels are: J. Ovington, *Voyage to Suratt* (1696); J. Fryer, *New Account of E. India and Persia* (1698).

BON CHOS.—See TIBET.

BONES.—It may help us to understand the important place occupied by bones in primitive psychology and religion if we recall the nature of their development. 'Osseous tissue . . . consists essentially of an animal matter impregnated with calcium salts' (Huxley, *Physiology*[5], p. 307). 'At a certain period of embryonic life there is no bone in any part of the body. . . . Microscopic examination shows that the calcareous salts are deposited in the intercellular substance' (*ib.* p. 557). Minute passages in a bone allow of its permeation by nutritive fluid, so that 'throughout life, or at all events in early life, its tissue is the seat of an extremely active vital process' (*ib.* p. 311). These facts were, of course, unknown to primitive thought, but they are in some measure paralleled by the early ascription to bones of special psychical significance. Thus we find the words for 'soul' and 'bone' etymologically connected among the Iroquois (*esken*, 'bone,' *atisken*, 'soul'), and the Athapascans (*yani*, 'bone,' *iyune*, 'soul') (Arnett in *Amer. Jour. Psychol.* 1904, xv. 149). Every one is familiar with the frequent references to bones in the OT, where the ascription of sensation to them is not a mere figure, but springs from the definite idea of their inherent vitality, and of the *quasi*-consciousness diffused through them and the whole body (*e.g.* Job 4[14], Jer 23[9], Ps 35[10]). The story of Eve's origin, and the phrase 'bone and flesh,' used of relationship,* are also significant. Many popular beliefs witness to the same idea; 'the bones of a murdered man are said to have given out fresh blood when handled by a murderer as long as twenty years, or even fifty, after the murder' (Trumbull, *The Blood Covenant*, 1887, p. 146). Conversely, the life supposed to be still resident in bones can be renewed by anointing them with blood (Jevons, *Introd. Hist. Rel.*, 1896, p. 52). Tylor collects examples of the way in which bones of dead relatives are cared for, and talked to, as though still conscious (ii. 150 f.); he gives them as cases of the fetish-theory, but they are ultimately to be explained as products of primitive psychology.

Funeral customs in general usually yield illustrations, even though more or less obscure, of the same standpoint. A good example out of the great multitude available is afforded by the elaborate burial rites of certain Australian tribes (Spencer-Gillen[b], pp. 530–546). The body is left on a tree-platform until the flesh has disappeared from the bones.† The skeleton, except an arm-bone, is then buried, without being actually touched. The arm-bone, in which the spirit of the dead is supposed to be present, is wrapped up in paper-bark, and figures in various complicated ceremonies. These conclude with the breaking and burial of the arm-bone. 'When once this ceremony of breaking the bone, which they call *anbiringa-tjinta*, has been performed, and the bone deposited in its last resting-place, the spirit of the dead person, which they describe as being of about the size of a grain of sand, goes back to its camping-place in the Wingara, and remains there in company with the spirit parts of other members of its totem until such time as it undergoes reincarnation' (*ib.* p. 542). Here the elaborate ceremonial is performed in order that the bone may be broken and the spirit released, without injury to the living or the dead. With this we should compare such a custom as prevails in an African tribe of the Ogowe. 'With a very material idea of a spirit, they seek to disable it by beating the corpse until every bone is broken. The mangled mass is hung in a bag at the foot of a tree in the forest. Thus mutilated, the spirit is supposed to be unable to return to the village, to entice into its fellowship of death any of the survivors' (Nassau, *Fetichism in West Africa*, 1904, p. 234). We may trace a parallel belief in the title 'Crusher of bones,' applied to a member of the Egyptian pantheon (*Book of the Dead*, ch. cxxv.), though here we meet the idea that the bones must be preserved intact in order to ensure resurrection, and the crushing of the bones is conceived as a penalty for falsehood. An ordinary mummy is no more than 'skin and bones.' The preservation of the bones is the dominant practice,* we may say the universal one, where the relations with the dead include more than fear and shrinking. Thus the Carrier Indians (*q.v.*) obtain their name from the practice of their widows, 'who carry the charred bones of their dead husbands about with them in bundles' (Frazer, *GB*[2] iii. 227 n.[3]).† The practice may survive in a modified form, disguising itself as a simple desire to possess some memorial of the dead. Thus 'the Japanese, after taking a lock of hair, a finger-nail, or the *inkobo* (a bone in the throat), which they send back to relatives, burn their dead' (Fox, *Following the Sun-Flag*, 1905, p. 87). A further development is seen in the addition of the skeleton, or part of it, to the family fetish, where the fetish practices prevail (Nassau, p. 325). Bones so kept, and imagined to retain the psychical powers of the dead in a form available for use, claim a natural place in primitive medicine and magic. Australian aborigines use bones in working a magic spell on an enemy (Howitt, p. 359). The Tasmanians attached human bones to the parts of the body affected by disease (Crawley, *Mystic Rose*, 1902, p. 108). The miracle described as following the contact of a dead man with the bones of Elisha (2 K 13[21]) shows the same belief. Robertson Smith (*Rel. Sem.*[2], 1894, p. 448) refers to the custom of the heathen Arabs, which consisted in fastening unclean things, dead men's bones and menstruous rags, upon children, to avert the *jinn* and the evil eye; he remarks that 'when we find bones, and especially dead men's bones, used as charms, we must think primarily of the bones of sacrifices' (p. 382). Such bones would, of course, possess a special virtue for their users; but their sacrificial character is not essential to such a use, which is amply explained by the psychical theories of primitive thought.

A continuation of the magical theory of bones is seen in the veneration of relics of the saints. One of the earliest and best known examples is that

* The Tungusian word for 'family' is *sŏk*='bones' (Radloff, *Aus Sibirien*, ii. 32).

† For an African method of obtaining the bones rapidly, see Ellis, *Tshi-Speaking Peoples*, 1887, p. 268: 'The chief who falls in battle is lightly buried, and water is poured on his grave many times a day, for some weeks. The bones, thus becoming clean, are taken out and deposited in a chest.'

* On the other hand, Ashurbanipal enumerates the bones of an enemy among his spoil (Jastrow, *Bab.-Assyr. Rel.* p. 602); cf. Am 2[1].

† Bones play an important part in many folk-tales dealing with the renewal of life in the dismembered dead (*CF*, pp. 91–95, 100 f.), doubtless because, as MacCulloch says, 'the bones, as less subject to decay than the flesh, may have seemed to early men the basis of a renewed life.' While some of these tales declare that, if a single bone be lacking, the person revived will be correspondingly deficient, others express the belief that only a portion of the skeleton (especially the spine; cf. the Roman beliefs concerning the *os sacrum*) will be sufficient to restore the entire person to life. As early as the palæolithic age skeletons were carefully preserved in Gaul, where they were frequently coloured, either in whole or in part (especially the skull), with red pigment—a usage still observed by the Alfurus of Ceram, and by certain South American, Papuan, and Australian tribes (Renel, *Les Religions de la Gaule avant le Christianisme*, 1907, pp. 49–51, 53 f.).

of Lucilla of Carthage, who habitually kissed a martyr's bone before partaking of the Eucharist (cf. *DCB*, *s.v.* 'Lucilla'). Newman quotes Theodoret, with apparent approval of his theory of the virtue of the bodies of martyrs: 'And though each body be divided, the grace remains indivisible; and that small, that tiny particle is equal in power with the Martyr that hath never been dispersed about' (*Development of Chr. Doctrine*, p. 374). This may be accepted as a true statement of primitive theory, especially in regard to the bones, as being the parts most easy to preserve; it is paralleled in the devotion of Greek cities to the supposed bones of their respective heroes (Rohde, *Psyche*, i. 162). Primitive thought, however, applied the theory on a wider scale, and included animal as well as human bones. 'Among the Kalang of Java, whose totem is the red dog, bride and bridegroom before marriage are rubbed with the ashes of a red dog's bones' (Frazer, *Totemism*, p. 33). We frequently meet with the belief that the bones of animals slain in the chase must be carefully dealt with, to secure their resurrection and the future supply (Frazer, *GB*[2] ii. 415 f.). Sometimes the soul of the dead animal is thought to be aware of the fate of its bones, and the future success of the hunter depends on its proper propitiation (*ib.* p. 405).

From various customs in regard to bones, Frazer infers that 'it is a rule with savages not to let women handle the bones of animals during their monthly seclusions' (note on p. 221, vol. iii., where various customs are collected). On the other hand, among certain Indian tribes we find girls at puberty carrying bone implements, with which to scratch themselves, and with which to drink. The girl then drinks water through a tube made of the leg of a crane, a swan, or a goose (*ib.* p. 213). Here the virtue of the bone, no doubt, protects the supply of water from the perilous influence of her condition.

Amongst the many other usages in which bones figure may be mentioned the bonfire (originally 'bone-fire,' cf. Jevons, p. 150, and Skeat's *Dict. s.v.*), the practice of fastening the bone of a murdered man on to the spear that is to avenge him (Spencer-Gillen[b], p. 554), and even the use of a cleft bone as a token, noticed by Doughty (*Arabia Deserta*, 1888, ii. 360).

BOOK OF LIFE.—The science of the Semitic East was based upon the axiom that the constitution of this lower world corresponds to that of the heavens above, as seen in the cosmos and its cycle. The whole course of events upon the earth, it was believed, was prefigured in the cyclical phenomena of the higher spheres. On its mythological side, therefore, the doctrine could postulate the existence of celestial tablets on which were inscribed both the wisdom of heaven and the history of earth.

1. **The books (tablets) of wisdom.**—(1) *Babylonia.*—According to Babylonian science, the process of the world realizes itself in æons, which arise out of the primal sea; and this world-ocean, accordingly, is regarded as the seat of Divine creative wisdom. The mythical representative of the primal sea was, in the previous æon, Mummu (Damascius: Μουμις = νοητὸς κόσμος; cf. *bît mummu*, 'the house of wisdom' [Rawl. 5, 33*a*]); in the present æon he is called 'Lord of Water' (*i.e.* of the ocean, which was regarded as ZU-AB, 'house of wisdom'). He is therefore 'father of the gods,' 'creator of Adapa, the first man' (*zer amelûti*, 'seed of the human race'), who, as the 'sagacious one' (*Atrahasis*), receives from his creator wisdom, but not eternal life. The tutelary deity of all who are endowed with wisdom and art is Ea. He is 'the god of wisdom, of potters, smiths, singers, priests, of Kalû-mariners, jewellers, stone-cutters, metal-workers.' A Bab. text (*Cuneiform Texts*, xv. 50) speaks of the *šipru* (= Heb. סֵפֶר, 'book') of the god Ea, the duty of studying which falls specially upon the king. Ea is also the source of the wisdom of the priests, *e.g.* the 'secret of heaven and earth' which was acquired by Enmeduranki, the progenitor of the prophetic priests of Babylon; the 'secret of Ea' and the 'word from the ocean' are mentioned in the Bab. ritual-tablets (cf. also the table of commandments below, p. 793).

The myth of Ea has come down to us in legendary form from the χαλδαικὴ ἀρχαιολογία of Berosus, the priest of Marduk (*Fragm.*, ed. Lenormant, No. 1 from Alexander Polyhistor = *FHG*, ed. Müller, ii. 496, frag. 1, 3; Euseb. *Chron.* i., ed. Schoene, 13 f.). The present writer has reproduced the legend in Roscher, iii. 577 ff., as follows:

'It is recorded that a great multitude of the people of different races who inhabited Chaldæa were gathered together in Babylon, living the unruly life of beasts. In the first year there came forth from the Erythræan Sea, at the place where it touches Babylonia, a being endowed with reason and having the name Oannes. Its body was in all respects like that of a fish, but from beneath its fish's head protruded a second head, of human shape. It had also the feet of a man, these having been formed from its tail, and it had a human voice. An image of it had survived till that time. This creature, he continues, lived by day amongst human beings without taking food, and conveyed to them the knowledge of written characters, the sciences (μαθημάτων), and sundry arts; it taught them regarding the peopling of cities and the erection of temples, the introduction of laws and the measuring of land; it instructed them in the sowing and the ingathering of crops, and, in a word, in all that pertains to the satisfaction of men's daily needs (ἡμέρωσις). No further discovery in such matters has been made since that time. At sunset the creature sank once more in the sea, and spent the night in the water, for it was amphibious. Other beings of similar nature appeared at a later time (coming forth likewise from the Erythræan Sea, as is added by Syncellus in another report), regarding which Berosus purposes to write in his history of the kings. Oannes, however, also wrote a book (λόγος) dealing with origins and the formation of States, and this he delivered to mankind.'

The idea of such a book presents itself once more in the passage treating of the destruction of the world by the Flood, *i.e.* the return of things to their original condition in the primeval ocean, and the restoration of the world. Berosus narrates that Kronos commanded Xisuthros to frame a record, in written characters, of all things in their beginning, middle, and end, and to deposit this in Sippar, *i.e.* the 'book-city.' After the Flood the children and kinsmen of Xisuthros migrated to Babylonia, carried away the writings from Sippar, and at the command of their head disseminated them amongst mankind.

(2) *Egypt.*—The notion of a primordial Divine wisdom inscribed in books is found generally amongst the peoples of antiquity. In Egypt, as in Babylonia, the first age of the world was supposed to have been in a special sense the era of wisdom. The representative of the Divine wisdom, according to the Egyptians, was Thoth (corresponding to the Bab. Nabû [= Nebo], the Divine scribe of Marduk, who received wisdom from his father Ea), the amanuensis of the gods, and it was he who conferred the arts of speech and writing upon mankind. The texts of the Book of the Dead were regarded as the 'Books of Thoth.' In ch. 64 the text is traced back to a discovery in On (Heliopolis), where it had been transcribed 'in the very handwriting of the god' during the reign of King Menkara (Brugsch, *Rel. der Ägypter*, 20 f.). A Leyden papyrus (see Lange, *Berl. Akad. d. Wissensch.* [1903] 602 ff.), containing a prediction of a time of blessing and a time of curse, says that the latter will be ushered in by 'the opening of

the secret places, and the purloining of the books of the sanctuary.' The priests, as bearers of revelation, are called 'scribes of the book of God.' A memorial-stone in Abydos preserves a record of what Rameses IV. had learned in the house of life (cf. the Bab. name of a temple *E-ti-la*, 'the house of life') from his constant study of the books. The text of this contains the mystical teachings regarding Osiris. Here it is said that the majesty of Thoth stands beside Rê and Osiris for the purpose of executing their Divine commands (Erman, *Egyptian Religion*, p. 80; A. Jeremias, *Im Kampfe um den alten Orient*, i. 67). With this agree the statements of classical writers, who represent Thoth as the founder of theology and political economy, of the sciences and the arts. Clement of Alexandria enumerates forty-two 'Books of Thoth,' of which the first ten, or those of the prophet, treat of the law and of the gods, the following ten contain regulations regarding sacrifices and feasts, and the third ten the mystical cosmography; the next four embrace astronomy and the science of the calendar, two contain hymns about the gods and the kings of primeval times, while the last six deal with the science of medicine. Brugsch (*op. cit.* 449 f.) is of opinion that he can trace in part the titles of these books in a hieroglyphic text of the temple of Edfu.

(3) *Persia.*—The books of the Avesta also claim to constitute a Divine book, and it appears to the present writer that they may be brought under our present category. According to Haug, Avesta means 'knowledge,' *i.e.* Divine knowledge; its root, like that of Veda, being *vid*. Ahura Mazda together with Asha formed 'the word of bliss' by the agency of Vohu Manô (i.e. *logos*, corresponding to Marduk, the son of Ea), and revealed it to Zarathushtra, who diffused the Divine teaching amongst men (cf. *Gâthâ*, *Yasna* xxix.). According to *Vendîdâd* II., Yima, the first man, was chosen for the task of preserving the celestial truth upon the earth. The religious system of Zarathushtra purports to be an attack upon error, and a return to the truth and knowledge issuing from the original wisdom revealed by Ahura Mazda (cf. *Gâthâ*, *Yasna* li. 13, xliii. 3, liii. 2, xxxi. 2). In *Gâthâ*, *Yasna* xlviii., he who knows the secret doctrine is praised as a true teacher; possessing the power of Vohu Manô he is equal to Mazda himself in intelligence.

(4) *India.*—The early Aryan religion of India and the Indian systems of religion allied thereto consider the Veda ('knowledge') as the primal wisdom. True, such a statement merely expresses a theory, for the hymns of the Veda are partly of a secular character, and first acquired their religious significance from their association with sacrificial worship. It is an article of belief that the Vedas were composed by the ten *ṛṣis*, or wise men of the world's first age. Even the Upaniṣads ('secret doctrines'), the spirit of which is altogether characteristic of India, lay claim to a direct connexion with the primordial wisdom of the Vedas; while the Law-book of Manu (*Mânava Dharmaśâstra*) professes to be a revelation which the first man Manu received from the Deity. The doctrine of the ages of the world (*q.v.*) given in the *Mahâbhârata* and in the Law-book of Manu asserts that in the Golden Age the Veda existed in a perfect form, and that in each of the three succeeding ages one quarter of the Veda, and therewith one quarter of perfect righteousness, has been lost.

(5) *China.*—The State-religion of Confucius, as established by the Han dynasty (B.C. 206–A.D. 220) is based upon nine canonical works (five *king*, or 'webs' of wisdom, and four *shu*, 'books'), in which the primordial wisdom, from the period of the mythical emperors of the remote past, is believed to be codified. This is quite in accordance with the attitude of Kung-tse, the great reformer Confucius, who professed to be no more than 'the wooden clapper whom Heaven had made use of' to redeem the people from their degeneracy by resuscitating the institutions of ancient days.

(6) *Islâm.*—In Islâm, Muhammad is regarded as the 'Seal of the Prophets' (Qur'ân, xxxiii. 40), the last infallible messenger of Divine revelation. In the Muhammadan faith, therefore, the Qur'ân ranks as the book of heaven. The Mahdism prevalent among the sects looks to the coming Mahdis as prophets who will cleanse the truth of the original revelation from all error. Only in a few sects has the prophet lost the distinction of being 'the Seal of the Prophets,' and sunk to the level of a mere forerunner.

With this Oriental conception of the book of the primeval revelation of God is closely connected the tendency of the Jewish Synagogue towards the theory of the verbal inspiration of Scripture.

2. The book of destinies.—In Oriental science the analogue of the cosmos is the cycle. The conception of space is equivalent to that of time (cf. *'olâm*, 'æon'; Talmudic *'olâm*, 'world'). The revelation of the Deity in the cosmos and the cycle is seen in the starry sphere, and especially in the movement of the heavenly bodies. A Bab. name for these bodies is *ṣitir ṣamê*, *ṣitirtu ṣamê*, 'the writing of heaven.'

According to Seneca (*FHG* i. 510), Berosus says that in Chaldæan science 'all things take place in harmony with the movements of the stars.' Cf. Job 38[33] 'Knowest thou the *huḳḳôth* of the heavens?': the parallel clause, on the principle that the earthly is a reflex of the heavenly, reads, 'Or canst thou set their dominion upon the earth?' See also Qur'ân, xlv. 1–4: 'The revelation of the *Book* is from God . . . for in the heavens and on the earth are the signs for believers. Likewise in your own nature, and in all manner of beasts in every place . . . and in the succession of night and day, and in the supplies which God sends from heaven and with which He gives life to the earth when dead, and in the change of winds'; cf. xvi. 16: 'For by the stars are they guided.' Jewish literature, *e.g.*, *Mo'ed Qâṭon*, 28*a*, has it that 'long life, children, and food depend not upon merit, but upon the stars.'

In the teaching emanating from Babylon the heavenly bodies (sun, moon, and five planets) that move in the zodiac are in a special sense the interpreters of the Divine will. The zodiac forms the book of revelation proper, while the fixed stars, grouped in constellations which are regarded as 'correspondences' to the phenomena of the zodiac, are, so to speak, the commentary on the margin.

Cf. H. Winckler, *Forschungen*, iii. 198. In Arabic the constellations lying outside the zodiac are called *bayaniyyât*, *bayan* meaning a 'commentary' on the margin of a book. According to Qur'ân xv. 5 ff. the *mysteries of the Divine will* lie in the *zodiac*. With reference to the 'interpreters' (ἑρμηνεῖς), cf. Diodor. Sic. ii. 30, who reproduces the 'Chaldæan doctrine.' The name of the temple-tower *E-ur-imin-an-ki* would seem to signify 'House of the messengers of the commands of heaven and earth,' and in that case may apply to the planets; cf. A. Jeremias, 'Das Alter der babylonischen Astronomie' (*Im Kampf um den Alten Orient*, iii.[2]).

In the cosmic mythology of Babylon the revelation of heaven, which is made manifest in the cycle of the world, is known as *tup šimâti*, 'tables of destiny.' These are borne upon the breast of the ruler of the world's destiny. Hence we should probably assume the existence of *two* heavenly tablets; not only 'the commands of the gods,' but also 'the *life* of men' is written thereon. In the myths concerning the war against the chaos-dragon

and the restoration of the world, the victor and demiurge receives the tablets as his reward (see below, 'the book with seven seals' [Rev 4 f.], which the *ἀρνίον*, having won the battle, has power to open). In the Bab. Creation Epic they were, during a previous æon, in the possession of Kingu, the partner of Tiâmat. The narrative relates how Tiâmat delivers them to him with the words: 'Let not thy decree be changed; the word of the mouth stands firm.' Then Marduk receives them as the reward of conflict and victory. Elsewhere it is En-lil, the cosmic representative of the zodiac, who appears as the holder of the tablets of destiny. Or they are sometimes held by Nebo, the Divine recorder of destiny. In an exorcism-text (King, *Assyrian Magic*, No. 22) he is called 'the bearer of the tablets of fate,' and in other passages 'the writer of the All, who holds the style of the tablet of fate' (Rawl. 52). The day for the determination of destiny is New Year's Day. On this day is reconstituted the cycle of the year, which represents in miniature, as was believed, the cycle of the æons. The conqueror of the power of darkness is, as 'the one who determines destiny,' the possessor of the tablets of fate. In the *parak šimâti*, the chamber of destiny, from the 8th to the 11th of Nisan, the destinies of the year are determined with the assistance of the gods, whose statues are conveyed in wheel-barges to the sanctuary of Marduk. This mythical conception seems to have become matter of fact within historic times, in the act of casting lots by the king (the Assyrian king says: *puru akrur*, 'I cast the lot'), *i.e.* in a ceremonial inquiry regarding destiny.

The same notion survives in the practice of inquiring after one's destiny on New Year's eve, and also in that of taking the twelve holy nights (one for each month) as times for 'dreaming of one's destiny. The Bab. spirit of the idea is particularly preserved in the Talmudic conception (discussed in next col.) of the New Year's festival as the occasion on which the Divine determination of destiny is made.

In applying the doctrine of the celestial tablets of destiny to individuals, Bab. texts make mention of one particular tablet on which is inscribed the duration of life, the happiness of mankind (and on the other hand the curse, or shortening, of life). The construction of tablets of this kind is specially ascribed to Nabû, the Divine recorder in the chamber of destiny. Thus Ashurbanipal in a hymn (cf. Jeremias, art. 'Nebo,' in Roscher) says to Nebo: 'My life is written before thee.' His brother Šamešš̆umukîn speaks thus: 'May Nabû, the tablet-writer of E-sagil, write upon his tablet the days of the life of him [who honours my inscription] for long duration.' Nebuchadrezzar says: 'O Nabû, declare upon thy tablet, which fixes the *pulukku* of heaven and earth, the long duration of my days; write it for my posterity.' Antiochus Soter expresses himself thus: 'O Nabû, by thine august stylus, which establishes the *pulukku* of heaven and earth, may my salvation be made sure, through thy holy decree.'

The same conception has doubtless given rise to the 'tables of good works,' in which, according to IV R, 1118*b*, entries are made; also to the 'tables of sins' mentioned in ritual texts from Babylon, which are to be 'broken in pieces'; and to 'the tables of transgressions, misdeeds, anathemas and imprecations, which are to be cast into the water' (cf. H. Zimmern, *Beiträge zur Kenntnis der bab. Religion*, pp. 23, 125). We may also mention here a table (*Cun. Texts*, xiii. 29 f.) which contains injunctions regarding sacrifice, prayer, and friendship, though it perhaps belongs rather to the group of tablets of Divine wisdom dealt with above:

'In thy learning (?) look at the table:
The fear of God brings forth grace,
Sacrifice gives increase of life
And prayer [cancels] sin.'

The idea of a celestial process of reckoning in connexion with the most important festival of the calendar, viz., New Year's Day, which, as the inception of a new cycle, exhibits the renewal of the world on a small scale, had an influence upon Jewish religion after the Exile. Thus, in the tractate *'Arâkhîn*, 10, it is written:

'The ministering angels inquired thus of God, "Lord of the world, why do the Israelites, on New Year's Day and the Day of Atonement, utter no song of praise (הלל) before Thee?" God answered them, "When the king sits upon the throne and passes judgment, and the *Books of Life* and *of Death* are set open before Him, then may the Israelites feel themselves disposed to sing a song of praise before Me—at a time when it shall appear fitting for them to give themselves to repentance."'

In the New Year's tractate *Rôsh Hashshânâ*, 16*a*, it is said, 'Everything is decided on New Year's day, and the judgment is sealed on the Day of atonement.' In this case the 'judgment' signifies the fortunes of the year, as the context refers, amongst other things, to the fruits of the field.

Allied with the above in idea, though of a different character, is the conception of a reckoning kept in heaven of men's good and evil deeds, and of their lot in life and death. This may have been suggested by the public lists on which the names of citizens were enrolled. But we must not summarily dismiss the theory of a link with the book of destiny, for even the drawing up of such lists was brought into connexion with New Year's Day, the feast of destiny. According to Jerus. *Rôsh Hashshânâ*, Rabbi Johanan (*c.* 260 A.D.) knows of three registers—of the good, the bad, and the undecided, respectively—which are unrolled at New Year. Jubil. xxx. 20 (cf. xxx. 22) speaks thus: 'He is enrolled in the tables of heaven as a friend and a just man.' In the Book of Enoch the central figure appears as a 'heavenly recorder,' and shows to a nicety the very characteristics of the Nabû, the heavenly scribe of the Babylonians. He holds possession of the celestial tables, and reads what is written therein of the deeds of man. Cf. Enoch 47^3 104^1 'Your names are written down before the majesty of the exalted one'; 108^3 'the Book of Life and the Books of the Saints.'* The same thought is adopted in those Christian Apocalyptic writings which have been influenced by Judaism. According to the *Apocalypse of Sophonia*, the angels sit at the gate of heaven and write the deeds of men upon the rolls of a book; while *Apocal. Pauli*, 10, says that at the evening hour in heaven all things that men have done during the day are written down by the angels.

Within the canon of Scripture we find mention of the heavenly book, as the book of destiny, in the two outstanding apocalyptic writings, viz. Daniel and Revelation. In Dn $7^{9ff.}$ the seer beholds *the books opened* before the great council in heaven presided over by the Ancient of Days. In face of the assembly is fought out the battle against the beast which utters great words—a characteristic feature of the conflict with the dragon. The warrior and victor is the heavenly man. After his victory he is brought before the Ancient of Days, 'and there was given him dominion, and glory, and a kingdom, that all peoples, nations, and languages should serve him: his dominion is an everlasting dominion, which shall not pass away, and his kingdom that which shall not be destroyed.' The conqueror receives as his reward the sovereignty of the world in the new æon, and the power of determining destiny.† Here too, therefore, the books are books of destiny.

* Again, however, in ch. 89 f., Enoch appears as the recorder of the doings of the seventy shepherds of the people; and, in the *Ascensio Jesaiae*, of the registers of the heavenly Jerusalem.

† Such is the connexion to which the present writer desires once more to draw special attention (cf. his *Der AT im Lichte des alten Orients*, on this passage). The connexion with the

This comes out still more clearly in the companion picture of Revelation, where the conflict with and the victory over the power of darkness are transferred to the historical appearance of the crucified and risen Christ. It is He who has conquered the dragon, and who therefore sways the destinies of the world, and His *parousia* will bring about the final victory over the dragon, and usher in the new and glorified era of the world.

Rev $4^{1ff.}$ introduces us once more to the council in heaven.* God sits upon the throne, and to right and left, in two semicircles, sit the twenty-four elders, in priestly robes and with crowns on their heads. He that sits on the throne holds in His hand a *book-roll* having seven (pendent) seals, which indicate the seven sections of the roll.† 'Who is worthy to open the book, and to loose the seals thereof?' This simply means: 'Who is worthy to sway the destinies?' The Christ who is to be glorified comes forward. In this vision His victory and exaltation (Mt 28^{18} 11^{27} 2^{9}) are portrayed with the imagery and colouring of the ancient Oriental myth of the conflict and victory of the year-god, who as the reward of his success receives the book of destiny, *i.e.* the command of the world, and who is therefore loudly praised in the council of heaven (for details see Jeremias, *Babylonisches im NT*, 13 ff.): 'Worthy art thou to open the book, and to loose the seals thereof.' A similar signification attaches to Rev 21^{27}, where the *Book of Life* is in the possession of the Lamb. In $5^{9f.}$ we have the song of praise sung by the heavenly council. In its form the song resembles that accorded to Marduk, who after his victory over Tiamat received fifty names of honour (cf. 'the name above every name,' Ph 2^{9}), as also that given in the Egyptian myth to Horus in the hall of the gods after his victory over Set, the representative of the power of darkness: 'Welcome, Horus, son of Osiris, the courageous, the justified, son of Isis and heir of Osiris.'

Mention of a book of destiny in which are written the fortunes of the individual is made in Ps 139^{16} 'Thine eyes saw me when I was yet unformed, and there was written in thy book all the days that were still to be'; cf. also Ex 32^{32} 'Blot me out of the book which thou hast written'; and Ps 69^{28} 'Let them be blotted out of the book of the living, that they be not written with the righteous.' The last-mentioned passage might also come under a different heading, that, namely, of the heavenly list-making already touched upon (p. 794[b]); and it is this group to which we must refer Is 4^{3}, which speaks of those who in Jerusalem are 'written unto life,' as also Mal 3^{16} with its mention of a 'book of remembrance' before Jahweh, in which are written those that fear Jahweh and have respect to His name.

The two ideas of a heavenly book of life and a heavenly register of names find expression also in the NT. The book of life in which the destinies of men are inscribed is referred to, not only in Rev 5 and 21^{27}, as already noted, but also in Rev 13^{8} and 17^{8} 'the book of life' in which names are 'written from the foundation of the world'; cf. 3^{5} 'I will in no wise blot his name out of the book of life' (one of the seven variants of the promise given at the close of the messages to the Churches, to assure him that overcometh in the strife that he shall be saved in the transformation of the world).

The book of destinies, in miniature form, so to speak, is spoken of also in Ezk $3^{1ff.}$ and Rev $10^{8ff.}$ The two passages are essentially the same in character. Ezekiel must eat the roll of a book, and it was in his mouth as honey for sweetness. The roll contained the intimation of God's will, which the prophet is required to convey to the captives in Babylon, and the Spirit carries him thither through the air. In Rev $10^{8ff.}$ John is made to eat up the little book which the angel carried in his hand. It is to taste like honey in his mouth, but to cause pain within. In it are written the destinies 'concerning many peoples and nations and tongues and kings' which he is to proclaim.

The heavenly registers are suggested by Lk 10^{20} 'Rejoice that your names are written in heaven'; Ph 4^{3} 'the rest of my fellow-workers, whose names are in the book of life'; and He 12^{23} 'the general assembly and Church of the first-born who are enrolled in heaven.'

ALFRED JEREMIAS.

myth underlying the representation shows this quite clearly: the conqueror of the dragon receives power over the destinies and the dominion of the world.

* Cf. *Shemoth Rabbâ* on Ex 4^{22}, with a reference to Is 24^{23}: 'One day shall God assemble the elders of Israel as on a threshing-floor; He will sit at the head of them all as the president of the court, and administer justice to the peoples.'

† Cf. the seven tablets in the *Dionysiaca* of Nonnus, each of which bears the name of one of the seven planets.

BOURIGNIANISM.—See SECTS (Christian).

BOY.—See CHILDREN, INITIATION, PUBERTY.

BOYCOTTING.—This is a modern name for a practice as ancient as civilization itself. The name is derived from the experience of one Captain Boycott, a land agent in the employment of Lord Erne, an Irish landlord who in 1880 came into conflict with the agrarian societies in the district in which he lived, in County Mayo, Ireland. It is a method of social ostracism, informally applied by public opinion, and may be carried to almost any length. The term, which has been adopted in a wide sense into French (*boycotter*) and German (*boykottiren*), is used as implying any measure of avoidance of or holding aloof from those judged, by organized or unorganized public opinion, unworthy of social intercourse. It may vary from the schoolboy's 'sending to Coventry' to the extreme measures adopted in Ireland during the days of the land agitation. In so far as boycotting is the expression of individual aversion, the law can take no cognizance of it; but when it is decreed by an association, or organized body of men, it becomes a criminal offence under the law of conspiracy, and in Ireland has been treated as such. A boycotted person in Ireland was cut off from all intercourse with his fellows: no one could work for him, or rent land from him, or supply goods to him, associate with him, or help or assist him in any way, under penalty of being subjected to the same treatment; and this treatment was decreed for landlords and their agents who, in the opinion of the local agrarian association, had treated their tenants harshly.

The boycott, as has been said, is as ancient as civilization itself. The outcast or the outlaw from primitive social communities was simply subjected to the extreme form of boycotting, and had neither security of life nor chance of justice. *Ostracism* in the Greek world was a survival of primitive tribal law dressed up in a constitutional form. *Excommunication* by the Church in the Middle Ages, since it affected civil as well as ecclesiastical privileges, was a tremendously powerful weapon in the hands of the Church; but in modern times, with the separation of Church and State or the subordination of the Church to the State, ecclesiastical excommunication has been deprived of much of its terror, because it no longer affects civil rights. Excommunication, however, is the privilege of every society or association, which may expel or discipline those of its members it considers unworthy; and conflict with the State can arise only when civil rights are affected or the

victim is deprived of contract privileges. The State, which has uniformly set its face against all authorities which intervene between it and its subjects, has always regarded boycotting with suspicion; but in a modified form the right to boycott is inherent in the social nature of man. It is one of the forms in which public opinion expresses itself, and is liable to all the excesses and lack of uniformity to which public opinion itself is liable. Organized boycott alone is of sufficient importance to require State interference; or at least is alone sufficiently definite to permit of responsibility being brought home to individuals.

In the economic world the boycott has been extensively used by Trade Unionists (cf. the *Economic Journal*, vol. i. 'The Boycott as an Element in Trade Disputes'). When accompanied by violence, the boycott is a criminal offence at common law in the United States; and even where there is no violence or intimidation, many States hold that the boycott is criminal; and at the present time (1909) a case which will decide this question is pending in the United States Supreme Court. Efforts have been made by Consumers' Leagues in America and similar associations elsewhere to apply a partial boycott to the products of sweated industries, and to the establishments in the retail trade where the employer does not show sufficient consideration for the welfare of his hands.

JOHN DAVIDSON.

BOYS' BRIGADES.—Organizations of boys, military in form, moral in purpose. Their ultimate origin is remote. Boys have played at soldiers ever since fighting began, and have been moulded by their play. For many years, up to 1880, Mr. John Hope, an Edinburgh lawyer, carried on a corps of 'Cadets,' which regularly numbered some hundreds of boys. They had uniforms, arms, and a band. Mr. Hope's purpose was to enforce Protestant principles and abstinence from drink and tobacco, and generally to cultivate manliness. This pioneer corps deeply influenced many generations of boys.

The Boys' Brigade proper was instituted in Glasgow by Lieut.-Col. Sir W. A. Smith, of the Volunteer force there. He was a teacher in a mission school, where discipline was difficult, and hooliganism incipient. He adopted the military metaphor, as did General Booth, with some differences. In 1883 the first Company of thirty boys was formed, and drilled in martial exercises, and in the Bible. A red rosette was the first uniform, but caps, belts, haversacks, etc., were soon introduced, and dummy arms. So successful was the movement that before the end of 1908 there were, in the United Kingdom, between 1300 and 1400 such Companies, with 6,000 officers, and 60,000 boys. The world-figures, at the same time, were 2,300 Companies, including over 10,000 officers, and 100,000 boys. There are, besides, Episcopal, Roman Catholic, and Jewish adaptations of the idea, whose figures are not included here. The objects of the brigade are: 'the advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self-respect, and all that tends towards true manliness.' The Bible-class is central. Every boy must attend it, or lose membership in the Brigade. In many companies there is development in the direction of ambulance work, gymnastics, music, etc. The more fully organized corps have become many-sided Clubs for boys.

The Boy Scouts is a kindred organization. Lieut.-General Baden Powell, C.B., is its founder. Its beginning was practical, in 1889, in Mafeking, S. Africa. The town was under siege, General Baden Powell commanding the defence. That men might be released to strengthen the firing line, a corps of boys was enrolled. They kept look-out, acted as orderlies, and carried messages, often under fire. Very good reports are given of their usefulness and courage. The plan was acclimatized in Great Britain, for purposes of moral training. But it is 'peace-scouting' that is taught. Mr. E. Seton Thompson has floated successfully a similar organization in the United States, especially among the Indians. Now there may be seen in and around most towns groups of Scouts, marching, signalling, camping. Statistics are estimates; for the movement is elastic. When a 'patrol,' a squad of five or seven, is trained to efficiency, its members are encouraged to enlist patrols of their own. These are usually linked into 'troops,' but are sometimes independent. They may be connected with Churches or Boys' Brigades. The ideals held up are: 'to be loyal to God, and to the King; and to help other people at all times.' Observation of Nature, self-reliance, and chivalry are inculcated. The manual of the movement is *Scouting for Boys*, by the General. Its sub-title is 'A Handbook for Instruction in Good Citizenship,' which sufficiently describes its scope. The Scouts are put upon their honour to be clean and kind in language and in habits. Clubrooms in winter and camps in summer are used for the ends in view.

The Life Brigade is, in idea, an offshoot of the Boys' Brigade. Its aims are identical, and so are some of its modes. But it strongly opposes the militarism of the earlier body. It organizes girls as well as boys, but without the martial element. Like the other, it uses ambulance work, gymnastics, music, etc., to attach its members to itself, and for training in Christian principles and character. It thus provides bright, healthy nucleus-centres of good citizenship. It is extending, especially under those who hold strong views on the subject of peace. Its watchword is 'Life-saving.' Its president is Rev. Principal J. B. Paton, D.D., Nottingham.

The answer of the promoters of the earlier work to their critics is that the military element is formal, not essential; that there is less and less of it proportionally as the corps grow in the Club direction; and that what there is of it is 'in defence, not defiance.'

THOMAS TEMPLETON.

BRAHMĀ.—See BRĀHMANISM, p. 810.

BRAHMAN.—The philosophical system of the Vedānta adopts as its aim the search after Brahman, and makes this the central point of its teaching. The loftiest conception of Brāhman speculation is there set forth, and handed down from generation to generation. It is, however, only the climax of a long intellectual development, the beginning of which may be traced in the Rigveda, the most ancient poetry of early India. And for the religious and philosophical history of that country the word *brahman* possesses at least an equal significance with that of the term λόγος for Christianity. There is contained in it, as Roth says, the religious development of India during thirty centuries.

It is difficult to grasp the original meaning of the word; for as early as the Rigveda it appears endowed with various meanings, and cannot be identified precisely with any of our conceptions.

The Indian thought is hardly adequately expressed either in the definition of Roth, 'the devotion which manifests itself as longing and satisfaction of the soul, and reaches forth to the gods,' or in general, 'every pious utterance in the service of God'; or in that of Deussen, 'aspirations and cravings after the Divine.' It is Haug's merit to have made it clear that everything which recalls the Christian ideas of 'devotion' or 'prayer' is wholly foreign to the Indian *brahman*, and that the entire sacrificial act was no more than a kind of magic, which compelled the gods to gratify the wishes of their worshippers.

The word *brahman*, from which *brāhmaṇa* is etymologically derived, meets us as early as the time of the Rigveda. Accented on the first syllable (*bráhman*), it is neuter; oxytone, *i.e.* with an accented ultima (*brahmán*), it is masculine. The neuter denotes the object or the thing; the masculine the person who is endowed with or possesses the *bráhman*. With no little probability research inclines now to the view that the fundamental meaning of the word is neither 'devotion' nor 'prayer,' but 'magic'; and that its origin is to be sought in a primitive and rude stratum of human thought, from which it was gradually developed into an expression for the loftiest conception formulated by Hinduism. On the assumption that the word denotes 'magic,' 'witchcraft,' Osthoff has compared it, in his very able work, with the ancient Irish *bricht*, 'magic,' 'magical spell,' and has endeavoured to find the real fundamental idea in the meaning 'formula,' 'fixed mode of expression.' To these words the ancient Icelandic and ancient Norwegian *bragr*, 'poetry,' 'art of poetry,' is akin; and thus the Indian *bráhman*, or the Celtic *bricht*, may be the 'ceremonially conceived' word on which Jacob Grimm lays stress as the essential requisite of the magic, if it is to be effective.

The etymology of *brahman* is obscure. Besides the uncertain possibility of a derivation from the rare root *bṛh*, 'to speak,' earlier writers referred to the root *bṛh*, 'to grow,' from which *barhis* is taken, and thus connected *brahman* with the Iranian *baresma* (see BARSOM). But, as Osthoff shows, this combination is improbable, since words derived from the root *barh* on the European side exhibit an *l* (*e.g.* Prussian *po-balso*), and *brahman*, if derived from *barh*, could not be related to *bragr*.

Haug has collected the numerous explanations of Sāyaṇa. The latter interprets *brahman* as meaning: (*a*) food, food-offering; (*b*) the chant of the Sāma singer; (*c*) magical formula or text, mantra; (*d*) duly completed ceremonies; (*e*) the chant and sacrificial gift together; (*f*) the recitation of the *hotṛ* priest; (*g*) great. The first of these interpretations is not confirmed by the numerous verses of the Rigveda in which *bráhman* occurs, and must be abandoned as erroneous; while in favour of the others various arguments may be advanced.

As early as the Rigveda, *bráhman* appears not as a possession common to all men, but as the religious property of a narrow circle. It is still far from being exalted to a position of superiority over gods and priests. Rather it is to gods,* and to the chanters and *ṛṣis* of the ritual† that it owes its rise. It is 'new,' had 'hitherto not yet' existed, or comes into being from the fathers. It originates from the seat of the *ṛta*,‡ springs forth at the sound of the music of the sacrifice,§ begins really to exist when the Soma juice is pressed and the hymns are recited,‖ at the *savana* rite at the sacrifice, bearing the name *kṛta-brahman*,* and endures with the help of the gods even in battle;† Soma is its guardian.‡ Haug is therefore justified in his conjecture that 'in the Rigveda it denotes a mysterious power which can be called forth by various ceremonies,' and in the definition which he gives of it as 'the magical force which is derived from the orderly co-operation of the hymns, the chants, and the sacrificial gifts.' The pious *brahmakṛt* is contrasted with the *brahmadviṣ*, who has only blame for the performance of the *brahman*.§ It is a purely spiritual force, as may be inferred also from such verses as Rigv. viii. 3. 9: *tat tvā yāmi suvīryaṁ tad brahma pūrvachittaye*, 'I entreat thee for that power, for that brahman, in order that thereby I may discern beforehand'; ii. 2. 10: *brahmaṇā vā chitayemā janāñ ati*, 34. 7; vi. 75. 19, etc. It is exalted over *vāch*, 'speech,' which reaches as far as the *bráhman*.‖

It is altogether probable that in many individual instances *bráhman* denotes the hymns, religious formulæ, or chants themselves, which are the source of this magical power. But the present writer has found it impossible to establish this meaning with certainty in the particular verses. The verbs which are associated with the word *bráhman* are numerous: *arch*, 'to praise'; *īr*, 'to incite,' 'raise'; *taks*, 'to cut'; *kṛ*, 'to make'; *jinv*, 'to incite'; *pra bhar*, 'to deliver'; *ud yam*, 'to raise'; *yuj*, 'to yoke'; *śaṁs*, 'to recite'; *stu*, 'to praise'; *hu*, 'to sacrifice.' These describe the activity of *different* priests; while on the other hand *bráhman* in many instances is co-ordinated with *uktha*, *gir*, *dhī*, *mati*, *manman*, *stoma*, and other words. It is said in Rigv. vii. 43. 1, that 'the unequal *bráhmāṇi* of the pious spread abroad on all sides at the sacrifice like the branches of a tree.'

But even if *bráhman* should be found to be a frequent synonym for hymn, formula, and other products of the mental life, its application is from early times not limited to these. The Taittirīya Saṁhitā says that the hymns and the texts are limited, but the *bráhman* has no limits;¶ and it is therefore intelligible how, as early as the Upaniṣads, the word assumes a profound philosophical meaning in direct opposition to the purely liturgical part of Brāhmanism. *The bráhman frees itself* again from the mere externalities of the ritual, which have gradually gathered around the centre of magical power, and, released from all these fetters of the sacrifice, is developed into the loftiest conception of Hinduism, the central point of all thought, into *the* Brahman, which is essentially pure, unchangeable, and eternal, and in which all things have their issue and their end.

Vedic times conceived of a 'lord of *bráhman*,' the god *Bṛhaspati* or *Brahmaṇaspati*. In opposition to the older view, which saw in the latter a form of Agni, modern authorities, following Roth and Haug, prefer to regard him as a pure abstraction. In Haug's belief, Bṛhaspati is a 'paramount priest of the Brāhman theology'; Oldenberg describes him as 'the domestic priest (*purohita*) of the gods, the heavenly personification of the priesthood, in so far as the latter has the power and function of influencing the course of events by prayer and magical incantation.'** Pischel, again, has placed him by the side of Indra, who has in him his *purohita*, as in ancient India the earthly king had by his side his *brahmán-purohita*, the domestic priest skilled in magical art.†† These views, so far as they are based upon a pure abstraction, are

mistaken, inasmuch as they are opposed to an important passage of the Rigveda, — *bṛhaspatiṁ sadane sādayadhvaṁ . . . dama ā dīdivāṁsaṁ hiraṇyavarṇaṁ sapema*,*—which treats unmistakably of the establishment of a sacrificial fire on the hearth; and in the light of this passage, which in itself is entirely unexceptionable, and cannot be regarded as late, the question whether Bṛhaspati in the Rigveda is an abstraction or not must be answered in the negative. If Bṛhaspati is a name for the fire, the reference in every case into which magic enters can only be to the ancestral fire on the south of the place of sacrifice where the Brahmán sits. Sometimes, it is true, Indra and Bṛhaspati are brought into close connexion, the former as the king the latter as his *purohita*, but the inference is clearly that we are as little compelled to regard Bṛhaspati as an abstraction as Indra. Indra-Sūrya corresponds to the Kṣatra, the moon to the Brāhman. It is asserted in Rigv. x. 90. 13 that 'the moon is born from the *manas*,' and statements to the same effect are found in the Aitareya and Bṛhadāraṇyaka Upaniṣads.† We meet with the comparison in Dhammapada, No. 387, where *ādicco* corresponds to the *saṁnaddho khattiyo*, and *candimā* to the *jhāyī brāhmaṇo*, and similarly in Raghuvaṁśa, xi. 64. When, therefore, ethnography points to 'the dread wizard moon, pursuing its work in the darkness, continually changing its aspect,'‡ it is quite natural for the southern fire, which witnesses magical art and is usually represented as a half-moon, to receive the name of Bṛhaspati, and for the moon also as lord and divine patron of all magic. Haug's view that Bṛhaspati was 'a precursor of the god Gaṇeśa' cannot be established. In later times Bṛhaspati lost his original significance and became a name of the planet Juppiter, just as the name of the Aśvins, when their original meaning was forgotten, was transferred to a constellation.

Bṛhaspati is the heavenly *brahmán*, the prototype of the earthly. He arouses the gods by means of the sacrifice, and, according to one passage of the Śatapatha Brāhmaṇa, bears the sacrifice to men who had become faithless. An examination of all the passages in which the masculine *brahmán* is found shows that it denotes in general a distinct class, if not a caste, with their dependents, and is frequently used in direct contrast with the king. And the masculine also, like the neuter *bráhman*, is brought into close connexion with *vāch*.§ As early as the Rigveda those who undertake one or other of the priestly offices are termed Brāhmans, and only in a few instances are we to understand by *brahmán* a definite *class* of priests, co-ordinated with the hotṛ, adhvaryu, or udgātṛ.‖ In one passage only, where Agni is addressed as Brahman, who takes his seat on the seat of men, does the latter appear to rank higher than the hotṛ.¶ With these exceptions, however, no special statement is found in the Rigveda which would assign to the *brahmán* duties distinct from those of the hotṛ or adhvaryu. We read nothing either of a special priest of magic or of the *brahmán* of the later ritual, whose function it was to apply his superior knowledge to the superintendence of the sacrifice as a whole, and to make atonement for the mistakes of the individual priests. Thrice the word *vad* is used of his action. But just as the general practice of magic is older than the particular forms of sacrifice known to us, so the magician also is older than the other officials of the Indian ritual, which was raised above the sphere of ordinary magic without ever losing its association with it. There is no ground for supposing that the *brahmán* named in the few passages referred to, and co-ordinated with the hotṛ, adhvaryu, etc., is other than the precursor of the *brahmán* of later times. 'There is no doubt,' writes V. Henry (*La Magie*, p. 37), 'that the earliest brahma of India was nothing more than the sorcerer and medicine-man, the retailer of the remedies and charms of the Atharvaveda or Brahmaveda.' Here again, also, the conservative character of Indian development shows itself: it does not break with the past, but retains it even under changed conditions. Although the hotṛ, adhvaryu, and udgātṛ, with their higher literary or musical accomplishments, were placed in the forefront, and the artificial and dramatic routine of the sacrifice overshadowed the primitive magical rules of the *brahmán*, the ancient *pūjārī* of India was nevertheless not banished from the sacrificial ground, but retained his place as 'physician of the sacrifice,'* lingering in the neighbourhood in order to make good all its defects by virtue of his secret magical art. His mere presence, more than the hymns of the hotṛ or the chants of the udgātṛ, by means of the magical fluid with which he is endowed, preserves for the sacred rite the character of mystery, and maintains the sacrifice in effective order.

A later age credited him also with wider literary knowledge. There was provided for him a special book of ritual, and the Atharvaveda, the magical practices of which harmonized closely with his character, was devoted especially to him. It was even required that he should be acquainted with all the Vedas.† His position, moreover, south of the place of sacrifice,‡ near to the southern fire which was dedicated to the fathers and the demons and employed for magical practices, is a further indication of the original character of the pūjārī; and it was only gradually that there came to be assigned to him a higher literary rank.

All members of the Brāhman caste, according to their qualifications, were, as it seems, eligible to undertake the duties of a hotṛ, udgātṛ, adhvaryu, brahman, or purohita. Apparently, however, one or the other office was held by preference by certain families. We know that the office of the brahman was claimed in the most ancient times by the Vasiṣṭhas, and later by the Atharvans. It is said in the Śatapatha Brāhmaṇa, xii. 6. 1. 41, and Taitt. Saṁh. iii. 5. 2. 1 ff., that the Vasiṣṭhas were originally in sole possession of certain formulæ which were essential for the performance of the duty.§ It is worthy of notice that to the god Varuṇa, who is closely associated with the bráhman,‖ more numerous hymns are dedicated by the Vasiṣṭhas in their maṇḍala than by other poets. The pre-eminent efficiency of their bráhman is emphasized by the hymn Rigv. vii. 34, while in iii. 53. 12 the Viśvāmitras praise their bráhman as protecting the Bharatas. Bloomfield has attempted to show how the Atharvans came to put forward their especial claim to the office.¶

We recur now to the abstract form of the word. The attempt to find a unity behind the multiplicity of the Vedic gods, to discover an all-comprehending first principle, makes its appearance as early as the hymns of the Rigveda, and is there linked with the names of Prajāpati, Viśvakarman, and Puruṣa. It is first in the Śatapatha

Brāhmaṇa that we find the neuter brâhman exalted to the position of the supreme principle which is the moving force behind the gods. 'The thirty-three gods,' it is said in Śatap. Brāhm. xii. 8. 3. 29, 'have Bṛhaspati as Purohita, but Bṛhaspati is Brahman, therefore the meaning is, They have the Brahman as their Purohita.' Brahman is identified at one time with the wind, at another with the prāṇas (see BREATH), and at another with the sun. In a hymn, which has been preserved only in fragments, the epithet of 'born first in the east' is applied to him, and he is described at its close as creator and first principle of the universe, who brings the gods and the universe into being. Here, however, he is only the firstborn of creatures (*prathamaja*), not yet 'self-existent' (*svayambhu*). We recognize still the connexion with the view of the Rigveda in passages like Śatap. Brāhm. x. 2. 4. 6, which represents yonder sun as resting upon the seven-syllabled Brahman, and adds: 'the Brahman is seven-syllabled, ṛc is one syllable, yajus two syllables, sāman two syllables, and what is left over and above subsisting in Brahman that is two-syllabled; therefore this is the entire seven-syllabled Brahman.' And in another passage Brahman is identified with the syllable *om*, which is the essence of the whole Veda. In some parts of the Brāhmaṇa literature we still see clearly, as Deussen shows, Prajāpati holding a position above the Brahman of which he is creator, while in others Prajāpati, as 'Brahma Svayambhu,' creates this universe, and in a third series the mind (*manas*) which creates Prajāpati originates 'from the non-existent,' and is itself identified with Brahman. In the cosmogony of the later books of the Śatap. Brāhm., Brahman has been exalted to the position of the supreme first principle, which, itself without beginning, creates the universe: 'Brahman in truth was this universe at the beginning; it created these gods.'*

This thought was taken up by the Upaniṣads, which made it their aim to search out the Brahman, and to impart the knowledge of it. Here religion passes into the wide arena of that philosophy which, in the Vedānta system devoted to the *Brahmavidyā*, has consistently and fully expounded the doctrine of Brahman, and has taught the unity of Brahman and the universe.

By the side of the all-comprehending Brahman, which in its philosophically refined and abstract form became the central point of Indian thought, later times conceived of a personal Divine creator Brahmā. At the present day he appears to be a god of very secondary or theoretical importance, and plays no part in the popular life. Crooke points out that only one temple, that in Puṣkara, is sacred to him. His image has four faces,† and he holds a drinking-vessel in his hand; he is usually represented also with four arms. His wife is Sarasvatī, a logical result of the ancient connexion of *brâhman* and *vâch*. But though his personality is now obscured behind the more vividly conceived Viṣṇu and Śiva, the form of Brahmā is of great antiquity. Belief in him pervades the entire Mahābhārata, as Holtzmann shows, in its later as well as in its earlier portions. Brahmā is omniscient; he is acquainted with the past, present, and future, and with his counsel supports the gods, who turn to him in perplexity. He is creator, sustainer, and destroyer of the universe, which is by him continually produced anew. From him proceed the castes, the regular orders; and he is usually exalted above the gods, although there are not wanting passages which subordinate him to Viṣṇu or Śiva. He is a popular figure also in the Pāli texts. He appears, for example, before the Buddha in order to move him not to withhold from the world the knowledge he has won. He accompanies the latter's entrance into Nirvāṇa with moral reflexions, and occupies the position of a ministering attendant who, for example, holds the white sunshade over the Buddha. We meet, however, not seldom with more serious traits, which afford evident proof of his connexion with the conception of the Brāhmaṇas. The history of this connexion has not hitherto been investigated; and little therefore on the subject can here be advanced. In the Kevaddhasutta of the Dīgha Nikāya,‡ Brahmā is referred to as 'the great Brahman, the unsurpassed, the observer of all things, the lord of all, the father of all beings past and future,' etc., and he is described as the one who can answer the question as to the ultimate fate of the four elements. Brahmā draws near, and a bright light goes before him, announcing his approach. He is, however, obliged to explain to Kevaddha that the gods are mistaken in regarding him as omniscient, and that only the Buddha can answer that question. Here Buddhist assumptions necessitate his subordination to the Tathāgata; but in other passages, as in the Brahmajālasutta,* this subordination is not apparent, but the relation of the *nicco dhuvo sassato aviparināmadhammo brahmā* to the Brāhmaṇical conception is still more immediate. It would be worth while to examine these relations more closely, and to endeavour from the elaborate creations of Buddhism, with its numerous Brahma heavens and Brahma gods, to extract the ancient kernel which its wealth of fancy has thus luxuriantly overlaid and concealed from view.

A. HILLEBRANDT.

BRĀHMANISM.—I. *DEFINITION AND DIVISIONS.*—The word 'Brāhmanism' seems originally to have been used, and popularly still to be understood, to denote the religion of those inhabitants of India who adored Brahmā as their Supreme God, in contradistinction to those who professed Buddhism, and, in more recent times, Muhammadanism. But this is founded upon a misconception. Brahmā was never universally worshipped (cf. preceding col.); and his acknowledgment as the supreme God is not even a true, still less a prominent, characteristic of Brāhmanical religions and sects. The characteristic mark of Brāhmanism is the acknowledgment of the Veda as the Divine revelation.

In Brāhmanism thus defined we may distinguish two forms of religious development. The earlier one is the religion taught in the *Brāhmaṇas* (the ritualistic books forming the greater part of Vedic literature); it is, strictly speaking, a part of Vedic religion. The later forms of Brāhmanism are a new departure, and are only to a small extent developed from the religion of the *Brāhmaṇas*; they appeal to the Vedic Scriptures, more especially the *Upaniṣads* (perhaps even forging new ones), in order to build up a theosophy of their own, while in their cult they worship partly Vedic deities,—changed, however, in character,—partly deities of post-Vedic origin or growth. In these forms of Brāhmanism there is an important non-Vedic element, which, however, cannot be said to be non-Brāhmanical; for the beliefs and practices of which this new religion is made up were shared by Brāhmans and, to some extent at least, modelled by them. This element may be called 'Hinduistic.' When it became all-important, and when the influence of the Brāhmans on its formation grew less and less, Brāhmanism merged into Hinduism—by which term it has become customary to denote the modern phase of the religious development of India.

The religion of the *Brāhmaṇas* is but a continuation of that of the *Yajurveda Saṁhitā*, and thus comes under the head of Vedic religion (*q.v.*). We must take cognizance of it here, in so far as it influenced the growth and development of later

* Digh. Nik. i. 2. 3, p. 13.

Brāhmanism. The *Brāhmaṇas* are almost entirely concerned with sacrifice. Indeed, the most orthodox school of Vedic theologians, the Mīmāṁsakas, go the length of maintaining that the sole aim of revelation is to teach the doctrine of sacrifice (*karman*). The Mīmāṁsakas are the representatives of the *Karma-mārga* ('way of works'), the doctrine which declares that the highest end of man is to be realized by works, *i.e.* by sacrifices and other observances taught in the Veda. Theirs is an extreme view which, however, fairly well presents the meaning of the *Brāhmaṇas* themselves, or, to be more accurate, of the greater part of every *Brāhmaṇa*. But this does not apply to the last chapters of, or appendixes to, some *Brāhmaṇas* called *Āraṇyakas*, or to certain independent treatises with similar contents, called *Upaniṣads*, which are the latest works of Vedic literature. For these texts contain philosophical speculations which for the most part are entirely unconnected with sacrifice; and on these texts another school of Vedic theologians, the Vedāntins, have based their theosophical systems. The Vedāntins are the oldest representatives of the *Jñāna-mārga* ('way of knowledge'), or the doctrine which declares that the *summum bonum* is to be obtained through knowledge. There is a third 'way,' the *Bhakti-mārga* (*q.v.*), which declares that love of, or devotion to, God leads to the highest goal. This doctrine was developed later than the 'way of works' and the 'way of knowledge,' but it became the most important one for practical religion, especially in more recent times.

The Hindus themselves have divided their religions into these three classes, according to the three 'ways' explained above; it is therefore necessary that we too should take cognizance of their classification, which, on the whole, well presents the facts and the historical development of religious thought in India.

II. *RELIGIOUS AND PHILOSOPHICAL IDEAS.*—1. The first form of Brāhmanism, as already stated, is mainly a religion of ceremonies and observances; it is chiefly concerned with sacrifice, compared with which devotion and moral duties are of so little importance to the authors of the ritualistic books that they scarcely ever mention them. Of course, the religion of the priests belonged, strictly speaking, to that exclusive class only; it was not the religion of the people at large, or even that of the upper classes, though it was admitted by the latter, in theory at least (and is so generally down to recent times), to be the most sacred, the revealed religion. Its influence on the religious development in India should not be underrated; in order rightly to understand the latter, we must have a clear notion of the nature of the Vedic sacrifice. It is not offered to a god with the view of propitiating him or obtaining from him welfare on earth or bliss in heaven; these rewards are directly produced by the sacrifice itself, *i.e.* through the correct performance of complicated and interconnected ceremonies which constitute the sacrifice, and which are more of the nature of magic than of worship. Though in each sacrifice certain gods are invoked and receive offerings, the gods themselves are but instrumental in bringing about the sacrifice or in completing the course of mystical ceremonies composing it. Sacrifice is regarded as possessing a mystical potency, superior even to the gods, who, it is sometimes stated, attained to their Divine rank by means of sacrifice. In the *Brāhmaṇas* there are scattered many statements about this mystical potency—sacrifice in the abstract. The general notions contained in them have been combined by Martin Haug in a description of sacrifice which we shall transcribe from the introduction to his edition of the *Aitareya Brāhmaṇa* (Bombay, 1863), p. 73 f.:

'The sacrifice is regarded as the means for obtaining power over this and the other world, over visible as well as invisible beings, animate as well as inanimate creatures. He who knows its proper application, and has it duly performed, is in fact looked upon as the real master of the world; for any desire he may entertain, if it be even the most ambitious, can be gratified; any object he has in view can be obtained by means of it. The *yajña* (sacrifice) taken as a whole is conceived to be a kind of machinery, in which every piece must tally with the other, or a sort of great chain, in which no link is allowed to be wanting; or a staircase, by which one may ascend to heaven; or as a personage, endowed with all the characteristics of a human body. It exists from eternity, and proceeded from the Supreme Being (Prajāpati or Brahmā) along with the *Traividyā*, i.e. the three-fold sacred science (the *Ṛik* verses, the *Sāmans*, or chants, and the *Yajus*, or sacrificial formulas). The creation of the world itself was even regarded as the fruit of a sacrifice performed by the Supreme Being. The *Yajña* exists as an invisible thing at all times; it is like the latent power of electricity in an electric machine, requiring only the operation of a suitable apparatus in order to be elicited. It is supposed to extend, when unrolled, from the *Ahavanīya*, or sacrificial fire, into which all oblations are thrown, to heaven, forming thus a bridge or ladder, by means of which the sacrificer can communicate with the world of gods and spirits, and even ascend when alive to their abodes. The term for beginning the sacrificial operations is "to spread the sacrifice"; this means that the invisible thing, representing the ideal sacrifice which was lying dormant, as it were, is set in motion, in consequence of which its several parts or limbs unfold themselves, and thus the whole becomes extended. This ideal sacrifice stands in the closest relationship with all the sacrificial implements, the sacrificial place, and all the sacred verses and words spoken during its actual performance. The sacrifice being often represented as a kind of being with a body like that of men, certain ceremonies form his head, others his neck, others his eyes, etc. The most important element in a sacrifice is that all its several parts should tally, and that consequently there should be nothing in excess, and nothing deficient in it. This harmony of the several parts of the sacrifice constitutes its *rūpa*, i.e. form. The proper form is obtained, when the *mantras* which are repeated are in strictest accordance with the ceremony for which they are repeated, or (if the sacrifice lasts for several or many days) when they have the characteristics of the respective days. If the form be vitiated, the whole sacrifice is lost. Mistakes being unavoidable on account of the extremely complicated ritual, the sacrificer was to be attended by a physician in the person of the Brahma priest. Each mistake must be made good by a *prāyaśchitta*, i.e. penance, or propitiatory offering.'

It is obvious that the dignity of the gods could not but be lowered in the opinion of those who had such exaggerated notions about the nature and importance of sacrifice. And, as a matter of fact, the gods descended from the high position they once had held in the esteem of the Vedic poets, and came to occupy quite a subordinate rank. The degradation of the once popular gods is a marked feature of later Brāhmanism, and we can trace its effect on the development of Indian religion in many important facts, as will be explained in the sequel.

The religion of the period of the Rigveda did not lack germs which, duly developed, would have raised the conception of the Deity to a higher level. Not only, during its last stage, had a Father-god, Prajāpati, become the object of speculation and adoration, but even before that time it had become a habit of the poet-priest to ascribe the attributes, functions, and powers of several gods to that particular one whom he was for the time invoking. This tendency to identify many gods with one has been called by Max Müller 'henotheism' or 'kathenotheism.' It is conceivable that henotheism might, in the end, have led to monotheism, or at least to a purer form of religion than the old Vedic polytheism. But in the *Brāhmaṇa* period the priests cared less to exalt the personal gods than to emphasize the momentous dignity of the impersonal sacrifice. The conception of the Deity as embodied in the Vedic gods was first debased by the ritualistic preoccupation of the priests; and the degradation of the gods was consummated by the superstition of the vulgar. But the same cause which diminished the dignity of the ancient gods gave rise to a new idea of God as Controller and Lord of man and the universe. The constant occupation of the priests with sacrifice and the symbolical interpretation of the meaning of the rites and ceremonies produced those ideas,

described by Haug, about sacrifice as a paramount power, the essence, as it were, of the whole world; and such ideas prepared the Indian mind to admit a First Cause, a kind of impersonal God. This movement appears in full vigour in the *Āraṇyakas* and *Upaniṣads*; in these works we behold a spectacle unique in the history of religion, viz. the search for a Supreme God after the popular gods had proved to be false.

During the *Brāhmaṇa* period the theologians had always been searching for those cosmical, physical, and psychical phenomena and forces which, as they thought, were symbolized in the rites and appurtenances of sacrifice. Thus they arrived at a crude and unsystematical knowledge of these potencies, and a rough kind of estimate of their importance. The earliest parts of the *Āraṇyakas* and *Upaniṣads* contain several attempts at a systematic arrangement of the physical and psychical forces, first in connexion with some part of the ritual, and then in various other allegorical directions. There is a gradual advance in these fanciful attempts at classification; the several items are arranged according to their dependence upon one another, till that one is reached from which all others are believed to be derived.

It is impossible to sketch, even in outline, these attempts, which frequently contradict one another; but it may be remarked that the series of cosmical or physical phenomena and the psychical are often treated apart, and afterwards placed in parallelism. Thus we frequently meet with such symbolic equations as the following: body = earth, speech = fire (*agni*), eye = sun (*āditya*), breath (*i.e.* the principle of life, *prāṇa*) = wind (*vāyu*), ear = quarters of the heavens, mind = moon, etc. At the head of either series is placed that element or power which is regarded as the most subtle, the most sublime. Before the end of these speculations was definitely reached, 'breath' was usually placed at the top of the psychical series, while the same position in the cosmical series was occupied sometimes by 'wind,' sometimes by 'space.'

2. But speculation did not rest satisfied with such results; it postulated something more subtle still than anything we are cognizant of—the Real (*sat*), the Immortal, which is beyond the sun, where the Blessed go who no more return to the earth. The name given to this mysterious power is Brahman (*q.v.*), which originally may have meant 'prayer' [but see above, p. 797[a], near top], but already in the Atharva Veda and other Vedic texts (see Muir, *Original Sanskrit Texts*, iii. 378 ff.) it denotes the primitive deity, who is identified with the Supreme God, the Upholder of the world. Brahman is the infinite, the unchangeable, the eternal, the absolute; it is pure Being, on which all that exists depends, and from which it derives its reality. Brahman cannot be defined; it is expressly and repeatedly stated that all known attributes of things must be denied of Brahman, which therefore can be described only by negations (*neti neti*, 'no no'). In Brahman is reached the ultimate end of the series of cosmical and physical powers—its First Cause.

This advance in speculation seems to have proceeded step by step with another, concerning the series of psychical phenomena and powers, the ultimate member of which came to be designated as Ātman (*q.v.*). *Ātman* originally meant 'body' or 'person.' Being used also as a reflexive pronoun, it came to denote the Self, as the principle which constitutes the identity of an individual, that on which the whole of the physical and psychical functions of an individual depend, and from which they derive their reality. *Ātman* is therefore the transcendent Self or Soul. Frequently it is identified with the space within the heart. *Brahman* and *Ātman* mark the greatest heights which speculation reached; the one in the cosmical order of things, the other in the psychical. To comprehend their nature, and to investigate the relation subsisting between them, is the chief object, the ever-recurring theme, of the fully developed speculation of the *Upaniṣads*. Brahman is declared to be the innermost essence of all things, animate and inanimate; it abides in them unknown to them, and controls them from within; hence it is called *antaryāmin* ('controller from within'). Brahman, as immanent in us, is declared not to be different from our *ātman*. The *Upaniṣads* insist on the non-difference of the Brahman and Ātman; but it may be doubted whether thereby absolute identity is meant, so that the *ātman* would cease to exist individually when it has been joined to Brahman. On this point there is great diversity of opinion among the interpreters of the *Upaniṣads*—the Aupaniṣadas or Vedāntins.

These philosophers endeavoured to deduce from the *Upaniṣads* their true teachings, and to show that they formed a self-consistent system. The older view seems to have been that followed by Rāmānuja, viz., that souls, though essentially one with Brahman, still retain some kind of individuality of their own when joined to him, and that the world has the same relation to Brahman as the soul has to the body. The younger view expounded by Śaṅkara has, however, become the prevailing one among philosophers; it maintains that Brahman alone is real and everything else is an illusion (*māyā*), and that the souls on reaching Brahman are completely merged in him and cease to exist individually. The advocates of both views adduce passages in their favour from the *Upaniṣads* themselves. The truth seems to be that the authors of the *Upaniṣads* held various opinions on the points which form the basis of the different schools of Vedānta.

However this may be, the great achievement of the *Upaniṣads* is to have established the firm belief in a transcendent Cause of the world, an impersonal and un-moral God mysteriously identical with our Self. This new idea of a pantheistical Deity has nothing in common with, and cannot therefore have been developed from, the popular notions of the Divine nature as represented by the old Vedic gods. Brahman, in particular, is outside the category of good and bad; it is an unmoral deity as it is an impersonal one.

The theosophical movement, which found expression in the *Upaniṣads*, was not restricted to a school of philosophers, though one great sage, Yājñavalkya, had a great share in establishing the final doctrine of Brahman. Nor were these speculations the exclusive property of priests or Brāhmans; for kings are mentioned who 'knew the Brahman' and taught their knowledge to Brāhmans; and even women took part in the discussions about the nature of Brahman. It cannot be doubted that the ideas of Brahman and Ātman formed the principal interest of intellectual and religious life in India during the period of the *Upaniṣads*; they became one of the chief factors which brought about the new phase of Brāhmanical religion, for 'Brahmaism,' if we may adopt this term to denote the theosophical ideas taught in the *Upaniṣads*, has been made, by most founders of sects and religions in India, the philosophical basis of their teachings.

3. Another factor which greatly influenced religious life in India, and contributed in a high degree to give it its peculiar character, was asceticism (*q.v.*). The religion of the priests, being concerned chiefly with sacrifice and sacraments, cannot have satisfied the religious wants of the people, especially of men of strong religious feelings, who have always formed a numerous class in India. In sacrifice, hired priests played the active part, and the sacrificer but a passive one; but a religious man will always desire to exert himself for the attainment of perfection according to the light that is given him. There was a way open, a means of satisfying religious wants, known by the name of *tapas* and practised from time immemorial; for ascetic practices form already an important part of primitive religion, and are imposed as a duty on the shamans and medicine-men of uncivilized peoples. Already in the Rig Veda (x. 136) ascetics (*munis*) are mentioned who boast of their magical powers. And later, in the *Brāhmaṇas*, we meet with them under the name of *śramaṇas*, who are mentioned in conjunction with Brāhmans as their rivals (cf. Patañjali, *ad Pāṇini*, ii. 412. 2). We get a distinct view of these ascetics in much later times, when the ascetic practices had been refined and reduced to a kind of system. The principal methods were the following: silence, various postures of the body and of the limbs, fasting,

regulation of the breathing, self-mortification, and contemplation. By such means, which are denoted by the word *yoga* (*q.v.*), the ascetic (or *yogin*) strove to propitiate a god and to induce him to grant the boon he solicited (*varada*), or he attempted to gain superhuman powers. At all events he acquired merit by his *tapas*, and was looked upon by all as a saint. It deserves to be noted that in the Epics the *Ṛiṣis* of old are generally regarded as holy men, not so much on account of their offering sacrifices as on account of their severe penance; they are superhuman *yogins*, not deified priests. We see thereby that the religious ideal of the Epics was no longer that of the *Brāhmaṇas*.

This change will also become evident, if we consider the four *āśramas* (*q.v.*), or stages into which the religious career of the Hindus was divided about the end of the Vedic period. The first stage is that of the *brahmachārin*, or disciple, who learns the Veda; the second, that of the *gṛhastha*, or married householder; the third, that of the *vānaprastha*, or old man, who retires to the woods and lives there the life of a hermit; the last, that of the *bhikṣu* (*yati*, *sannyāsin*), or religious mendicant. Now the *bhikṣu* is an ascetic by profession, who is never to return to common life, but most of his ascetic practices he has in common with the *yogin*. The high value set on asceticism is acknowledged in principle when ascetic life is made the last stage of the religious career. During the period of the *Brāhmaṇas*, 'religious' men seem to have passed the last part of their life as hermits in the woods; for their use were destined, as the name indicates, the *Āraṇyakas* (*q.v.*), which formed the last chapters of, or were appendixes to, the *Brāhmaṇas*. In later times, however, the *āśrama* of the hermit fell into disuse, and now it is practically abolished; while at the same time the *āśrama* of the ascetic gained in importance, and was chosen by all those who adopted a religious life. This changed relation between the *āśramas* indicates that the ascetic ideal finally supplanted the older ideal represented by sacrifice.

There have always been two kinds of *yoga*. The one, now called *haṭhayoga*, is practised in order to obtain magical powers; the other, *rājayoga*, for the attainment of spiritual perfection. In the latter, the higher *yoga*, *dhyāna* ('contemplation') is regarded as the most effective means for attaining the desired ends, while the other ascetic practices are enjoined as a preparatory course only. By *dhyāna* is produced a kind of superhuman knowledge, intuition, we may call it, on the strength of which the wildest fancies have been accepted as truths. The Jaina Umāsvāti lays it down in his *Tattvārthādhigama Sūtra*, ix. 37, that by means of *dhyāna* the structure of the universe becomes known. But the chief use to which *dhyāna* was put was the discovery and comprehension of religious truths, and it is therefore regarded by orthodox as well as by heretical teachers as the noblest of all religious exercises.

The refined *yoga* gave rise to the first systematical philosophy, the *Sāṅkhya* of Kapila—a theory, if not invented for the purpose, at least well adapted to account for the efficacy of *yoga* in general, and of contemplation in particular. We might call it a system of natural religion; for it was regarded as a *Smṛti*—a title which is given to works of an authority inferior only to that of the Veda. Hence the *Sāṅkhya* theory of evolution, combined with the doctrine of the *Upaniṣads* on Brahman, has, ever since the *Mahābhārata* and the *Purāṇas*, been put in requisition to solve religious problems and to explain the relation between God and the world; it has thus exercised the greatest influence on later Brāhmanical theology.

In conclusion, the bearing of asceticism on ethics must be pointed out. In India, ethics is not regarded as an independent branch of philosophy or of religion, but as preparatory to the exercise of the highest religious practice, *dhyāna*, which leads to emancipation. It is therefore not to be wondered at that the fundamental moral precepts should have first been formulated in ascetic circles; for they are set forth as the five great vows binding on all *bhikṣus*. Four of these five vows, viz., not to kill, not to steal, not to lie, and not to commit adultery, are common to all orders of ascetics, orthodox as well as heretical. Whatever may have been the actual state of morality in India at the time under consideration, it is evident that the principal moral laws had been clearly grasped, notwithstanding the indifference of the priests to ethics.

The *summum bonum* is defined as emancipation (*mokṣa*, *mukti*, *nirvṛti*). In the *Upaniṣads*, emancipation, union with Brahman, is frequently mentioned and praised as the end to be desired; but it does not yet appear in the same light as in later times, as the only real good. In the *Upaniṣads* there is scarcely a trace of that pessimism which henceforward becomes the most characteristic and dominant feature of Indian philosophy and religion. Theoretical pessimism was first taught in Brāhmanical philosophy by Sāṅkhya-Yoga; it is also the keynote of Jainism and Buddhism—religions which have largely borrowed from Yoga. The logical outcome of pessimism, always associated with it, is the doctrine of liberation as the *summum bonum*. If mundane existence, this phenomenal world, the Saṁsāra, in which the soul is born again and again, is essentially bad, and if the soul fettered to the Saṁsāra experiences infinite pain and no happiness that is not vitiated with and inseparable from suffering, then indeed the true aim must be the definite release from the Saṁsāra, *i.e.* the reaching of a state subject to no change and suffering. This absolute state is reached in *mokṣa*, *mukti*, *nirvṛti*, or *nirvāṇa*. To teach the way to *mukti* is the aim of most of the philosophical and religious systems of India after the Vedic period; they profess to open a way to salvation for those who are wearied with the continual suffering produced by mundane existence.

III. *MYTHOLOGY*.—The religious and philosophical ideas, the rise of which has been sketched in the preceding part of this article, were at the same time so many factors in the forming of the mythology of the Brāhmanical period. This mythology is not the exclusive property of the priests or of the Brāhmans; it may be described as the sum of those myths and legends which were current among the Indians of higher culture, and which found expression in general Sanskrit literature, chiefly in the Epics and the *Purāṇas*. It inherited, from the preceding period of the Veda, the principal gods. Theoretically they remained what they had been believed to be before, but practically there was a marked change. Some of the deities invoked in the hymns of the Rig Veda were forgotten, and those who were retained generally lost much of their pristine dignity, owing to the exclusively sacrificial interests of the priest as explained above; only a few were promoted to a higher position. Besides these, some new gods were received into the Hindu pantheon. The majority of the Vedic gods lost their share in popular worship without ceasing to be considered powerful deities. This brought about a changed conception of these gods in two ways: (1) The anthropomorphic element in their character was greatly developed, since it was not to the priests, but to poets and legend-mongers that the care of mythology was now entrusted. (2) The gods generally became departmental divinities to a

much greater extent than before. This fact is most striking in some cases where gods have attributed to them definite functions with which in the Rig Veda they had but a very slight, if any, connexion. Thus Varuṇa became the ocean-god, while in the Rig Veda his connexion with water seems to be more of an accident. The Vedic Savitṛ is not a proper sun-god; in later mythology he is identical with Sūrya, and represents the heavenly luminary. Soma, whose character as moon-god in the Rig Veda is still controverted, is acknowledged as such in Brāhmanical mythology, and Yama in like manner appears as the ruler of the nether world. This tendency to distribute the departments of nature among the gods, clearly discernible in most cases, prevented the gods from becoming little more than holy names after they had ceased to be worshipped by the people.

The Vedic gods who continue to be generally acknowledged in the Brāhmanical period are Agni, Indra, Savitṛ, Soma, Vāyu, Varuṇa, Yama, and the Aśvins; and, in addition to them, Prajāpati, Viṣṇu, and Rudra. The three last named, who became the Supreme Gods, will be considered towards the end of this article; we shall treat first of the other gods borrowed from the Veda, and next of the principal new gods who originated or came to the front in post-Vedic times.

1. **Vedic gods.**—Agni is, in the Rig Veda, the personification of the sacrificial fire; he, therefore, was the god of the priests and the priest of the gods. The Vedic conceptions of Agni are partly retained and occasionally revive in later mythology. Thus he represents Brahmanhood just as Indra represents the *kṣatriya*, or warrior-class; he is the leader of the gods, who are therefore *agni-purogama*. The common synonyms of *agni*, 'fire,' in classical Sanskrit, viz. *vahni*, *hutavāhana*, *hutāśana*, are derived from Vedic conceptions of Agni. But, on the whole, the later Agni is simply a personification of the element fire. Therefore he is spoken of as having wind for his charioteer (*vātasārathi*), and smoke as a banner (*dhūmaketu*). The various aspects of fire occasionally appear as traits of Agni's character, as will be seen in the legends related of him. Some forms of fire, especially as the terrible and destructive element, seem to have been worshipped under other names. According to the *Śatapatha Brāhmaṇa*, Agni was called Bhava by the Vāhīkas, Śarva by the Eastern people. He was also called Paśūnām pati ('lord of beasts') and Rudra. This seems to indicate that the *popular* worship of Agni was early transferred to deities of the Rudra type. It may be questioned whether there were any temples of Agni, and whether he received worship except in Vedic sacrifices.

Agni is present in every fire; therefore it was possible to relate legends of many Agnis and to make out genealogies of them (*Mahābhārata*, iii. 219–222, and differently *Vāyu Purāṇa*, i. 29). This accounts also for the fact that contracts were made in the presence of fire; for thus Agni, the omniscient god, was a witness to the contract. Fire, in a mysterious way, resides in all creatures; it is recognized as the cause of digestion. Therefore Agni is an omniscient god. The following legends will give an idea of Agni's position in later mythology:

Agni was created by Brahmā, and invested by him with his functions. But Aṅgiras was, on account of his austerities, considered superior to Agni. Therefore the god wanted to lay down his office, but Aṅgiras dissuaded him from retiring, and was therefore adopted by him as his son (*Mahābhārata*, iii. 217). Aṅgiras' son was Bṛhaspati, from whom the race of Agnis, mentioned above, is derived.

In the Rig Veda, Bhṛgu, or the race of Bhṛgus, is said to have kindled Agni for the establishment and diffusion of fire on earth; but in the *Mahābhārata* the relation between Agni and Bhṛgu is strangely changed. Bhṛgu had been created by Brahmā from the fire at Varuṇa's sacrifice. His wife was Pulomā. While she was pregnant, the Rākṣasa Puloman visited her during her husband's absence, and falling in love with her wanted to carry her off. He asserted that he had been betrothed to her before she married Bhṛgu, and he called Agni to witness. The god declared that the Rākṣasa had, indeed, first chosen her, but that she had been bestowed by her father on Bhṛgu, who with Vedic rites made her his wife. Then the Rākṣasa, in the shape of a boar, carried her off. But during the flight Pulomā miscarried, and the child dropped from her womb; wherefore, he was called *Chyavana*. At the same time the Rākṣasa was reduced to ashes. Upon learning that Agni had made Pulomā known to the Rākṣasa, Bhṛgu pronounced on Agni as a curse that he should devour all things (become 'the all-eater,' *sarvabhakṣa*). Agni, out of resentment, now withdrew from all sacrifices, but was at last induced by the entreaties of the gods and Ṛṣis to make Bhṛgu's curse come true, and again to receive the offerings for the gods (*Mahābhārata*, i. 5 ff.; see, further, art. BHRIGU).

The retirement of Agni from the world, his hiding in the ocean, in the earth, in plants, especially the Śamī (used in fire-rubbing), is more than once spoken of in the *Mahābhārata*. Some animal always betrayed Agni to those who sought him, and he laid as a curse upon the betrayer some defect which characterizes the animal in question. But it may be doubted whether these speculations formed part of a general belief. The same may be said about his parentage, or rather origin, which is variously stated according to particular Vedic ideas. He is one of the eight Vasus, their leader, just as in later Vedic texts.

Agni's wife is Svāhā, daughter of Dakṣa. He jointly with Śiva was father of Skanda, as will be related below. We hear occasionally of other offspring of Agni, among which the best known name is that of the sage Agniveśa. In one case, however, he became connected with epic history through his relation to the dynasty of Māhiṣmatī on the Narmadā.

Duryodhana, king of Māhiṣmatī, had by Narmadā a beautiful daughter called Sudarśanā, with whom Agni fell in love. In the guise of a poor Brāhman he asked her in marriage. But, her father not consenting, he withdrew from the sacrificial fire. He then made himself known, and received the maiden on condition that he should always be near the king. Agni's son by Sudarśanā was Sudarśana, who as a householder vanquished Death (*Mahābhārata*, xiii. 2). In another place (*ib.* ii. 31) this story is told differently. Nīla, king of Māhiṣmatī, had a beautiful daughter who used to stand near the sacrificial fire and fan it. Thus Agni became enamoured of the damsel, and the fire would not burn unless agitated by the breath from her lips. One day the god, in the guise of a Brāhman, visited the girl, but he was discovered by the king and ordered to be executed. Then Agni revealed himself to him, and Nīla gave him his daughter in marriage. The god henceforth aided the king in battle, so that his troops became invincible. So it happened that Sahadeva the Pāṇḍava on his *digvijaya*, or conquest of the world, could not overcome Nīla till Agni allowed the king to submit.

Another local legend in which Agni plays the principal part is the burning of the Khāṇḍava forest. It is connected with the main story of the *Mahābhārata*, and is there (i. 222 ff.) told thus. Agni had feasted twelve years, during king Śvetaki's sacrifice, on butter, and he afterwards refused to eat the offerings of other men; he accordingly grew feeble, and complained about it to Brahmā, who advised him to burn the Khāṇḍava forest and to feed on the creatures dwelling in it, who were enemies of the gods. Agni in the guise of a Brāhman accosted Arjuna, who together with Kṛṣṇa was sitting on the bank of the Yamunā, and asked his permission to devour the Khāṇḍava forest, which was protected by Indra. He procured for Arjuna the bow *gāṇḍīva*, and gave Kṛṣṇa his discus. He then set the wood on fire, while Kṛṣṇa and Arjuna, posted at either end of the forest, hindered the animals from escaping and the gods from injuring Agni. Thus the whole forest was burned down, the fire lasting a fortnight. It is twice stated that Agni had once before burned down this forest. Probably this story has no mythological bearing; it seems to be a legendary account of the clearing of the forest when the city Khāṇḍavaprastha, which was selected as their capital by the Pāṇḍavas, was founded.

It may be mentioned that, in the *Mahābhārata*, Dhṛṣṭadyumna is regarded as an incarnation of Agni; as is Nīla, the monkey, in the *Rāmāyaṇa*.

Agni is one of the eight *lokapālas*, or guardians of the four cardinal and the four intermediate points of the compass, and presides over the south-east, which is accordingly called *Āgneyī diś*. He is usually represented in pictures as riding on a ram, but his epithets *chhāgaratha* and *chhāgavāhana* point to the he-goat instead of the ram. There seems to have been no definite idea about his figure except that he had seven tongues, the names of which are already given in the *Muṇḍaka Upaniṣad*, i. 2, 4. He has a great many names; indeed, all words for 'fire' may be used to designate Agni; the more common ones are *Hutabhuj*, *Hutavāhana*, *Vahni*,

Anala, Pāvaka, Kṛśānu, Vibhāvasu, Jātavedas, Hiranyaretas, etc. (*Amarakośa*, I. i. 1. 48 ff.). See, further, Adolf Holtzmann, *Agni nach den Vorstellungen des Mahābhārata*, 1878.

Indra (Śakra) in Brāhmanical mythology is the ruler of heaven, and represents the *kṣatriya*, or warrior-class. He is supposed in a passage of the *Nalopākhyāna* to receive visits from kings, his colleagues on earth. In another passage (*Mahābhārata*, i. 197) the office of Indra is stated not to be permanent; there were other Indras before him, and there will be after him. In Buddhist works he is frequently called *Sakko devānam indo*, 'Śakra, the Indra of the gods,' just as in classical Sanskrit *indra* at the end of a compound denotes a superior individual of its class. Indra is always in terror lest some saint should by severe austerities wrest his power from him; and when there is a danger of this kind, he sends one of the *apsaras*, or heavenly nymphs, to seduce the saint from his ascetic exercises. Still he is regarded as the powerful lord of heaven and the chief of the gods; but, in comparison with the Supreme Gods—Brahmā, Viṣṇu, and Śiva—he, like the remaining gods, occupies but a second rank. We may therefore assume that, before the rise of the Supreme Gods, Indra held the first rank in popular belief. There was a popular festival held in his honour—the erection of Indra's pole (*indradhvaja*)—which is described in the *Kauśikasūtra* and at a late period by Varāhamihira (*Bṛhatsaṁhitā*, ch. 43). Though there are no temples of Indra, at least in more modern times, his images and niches dedicated to him are met with in temples of other gods, and so he may be said to receive a kind of indirect worship. The same remark applies to other gods to whom no temples are dedicated.

Indra's weapon is the thunderbolt (*vajra*); the rainbow is called 'Indra's bow.' He rides on the elephant Airāvata, or in a heavenly car driven by his charioteer Mātali. His capital is Amarāvatī, his palace Vaijayanta; his park, situated on the north of Mount Meru, is Nandana; in it grows the Pārijāta tree (which was torn from it by Kṛṣṇa and planted in Satyabhāmā's garden). He is the regent of the East. Indra's wife is Indrāṇī, usually called Śachī or Paulomī, daughter of the Asura Puloman, whom he slew. His son is Jayanta.

Indra has a thousand eyes, which may be interpreted as the stars of the firmament; but in legendary mythology they are explained differently. Indra seduced Gautama's wife Ahalyā, and therefore the saint laid upon him the curse that his body should be covered with a thousand marks resembling the female organ; when Gautama relented, he changed these marks into eyes. According to another story, the thousand eyes originated when Indra was gazing on the heavenly nymph Tilottamā (*Mahābhārata*, i. 211).

Many stories are told of Indra, some of which have developed from Vedic myths. His most famous deed, the slaying of Vṛtra, is variously told. According to one version of the story (*Mahābhārata*, xii. 342), Viśvarūpa or Triśiras, Tvaṣṭṛ's son, was *purohita* of the gods, but he favoured also the Asuras, to whom he was related through his mother. Hiraṇyakaśipu, the leader of the Asuras, brought him over to his party, and dismissed his *hotṛ* Vasiṣṭha, who thereupon cursed him to the effect that he should be killed by a being hitherto not existing (Viṣnu in the shape of a man-lion). Triśiras, in order to aggrandize the Asuras, practised severe penance; but heavenly nymphs sent by Indra succeeded in seducing him from his austerities. This aroused him to great wrath, and he began to utter powerful spells, by virtue of which his size increased immensely. With one of his mouths he drank all the soma, with the second he devoured all the offerings, and with the third he drank up the energy of Indra and the gods. Reduced to weakness, the gods asked, on the advice of Brahmā, the Ṛṣi Dadhīchi for his bones, from which the thunderbolt was produced. With this weapon, which was pervaded by Viṣṇu's energy, Indra slew Triśiras. From the corpse rose a mighty Asura, named Vṛtra, who became Indra's enemy, but was at last killed by him with the thunderbolt (cf. Muir, *Original Sanskrit Texts*, v. 230 ff.).

According to another version of the same story (*Mahābhārata*, v. 10), Indra killed Vṛtra in the twilight with the froth of the sea. For the Brāhmans had conferred upon Vṛtra the boon that he might not be killed by any weapon, either by what was dry or what was wet, either in the daytime or at night. According to a third version (*ib.* iii. 100), Vṛtra is not connected with Tvaṣṭṛ; he is a mighty Asura who leads the Kāleyas against the gods. It is in this emergency that Dadhīchi yields up his bones, from which Tvaṣṭṛ forges the thunderbolt. According to a fourth version (*ib.* xii. 281 f.), the cause of Vṛtra's defeat was a dreadful fever, Śiva's energy, which entered the demon and weakened him.

By the killing of Vṛtra, Indra was polluted with the heinous sin of Brahmanicide (*brahmahatyā*), and he fled in great terror to the end of the world. There he entered water, and concealed himself in the fibre of a lotus. The gods then placed Nahuṣa, Āyus' son, on the throne of Indra. But Nahuṣa at last came to ruin through his inordinate desire of Śachī (see AGASTYA). The gods discovered Indra's retreat, and Bṛhaspati cleansed him by a horse-sacrifice from the *brahmahatyā*, which was distributed amongst women, plants, etc. Indra was then reinstated as ruler of the heavens (*Mahābhārata*, v. 11 ff.).

Indra slew many demons besides Vṛtra, such as Bala, Namuchi, Jambha, Pāka, etc. From the victory over these he derives some of his names—Balasūdana, Pākaśāsana, etc. An instance of his hostility to the Daityas is supplied by the following myth: When many sons of Diti had been slain, she asked her husband Kaśyapa for a son who should kill Indra, and Kaśyapa granted her request on condition that she should strictly preserve purity for a thousand years. Once, however, she slept in an impure position, with her feet upwards. Indra availed himself of this opportunity, and, entering Diti's womb, cut into seven pieces the child with which she was pregnant. Thus originated the seven Mārutas, or regents of the winds (*Rāmāyaṇa*, i. 46 *f.*).

A curious myth frequently alluded to in classical literature, but found already in the *Maitrāyaṇī Saṁhitā* (i. 10, 13), relates that Indra cut the wings of the mountains, which originally flew about like birds, but then were forced to settle down for ever. Only Maināka, son of Himālaya and Menā, escaped this fate; he concealed himself in the ocean, and was protected by Sāgara.

In some legends Indra appears as the opponent of other gods. When the Ṛṣi Chyavana was giving the Aśvins a share of the soma-libation as a reward for having made him young again, Indra tried to prevent him. But Chyavana paralyzed his arm and created a huge monster Mada (intoxication). In great fright Indra then yielded, and *mada* was distributed over women, wine, dice, and the chase. In the story of Mada a trait of the Vedic Indra survives, viz. his habit of getting drunk; in classical mythology the god who is given to drunkenness is Baladeva, brother of Kṛṣṇa. On Indra's rivalry with Kṛṣṇa turns the story of his deluging the land of the Vrajas. But Kṛṣna kept off the rain and protected the land by holding up on his finger Mount Govardhana. On another occasion Kṛṣṇa carried off the Pārijāta tree, which belonged to Śachī, and defeated Indra, who with his forces had come to hinder him. Indra, who is also called Meghavāhana, was defeated in battle by Rāvaṇa's son Meghanāda, who from this victory came to be named *Indrajit*.

Here we must make a remark of more general application. When the ancient gods ceased to appeal to the masses of the people in that form in which they were represented in the Veda, the same god under a particular aspect became in some cases popular, and was hence regarded as a separate god, demigod, or as a hero connected somehow with the original god. A popular godling, with functions similar to those of an ancient god, grew up as a kind of duplicate of the latter; or, if he was not accepted as a god proper, he came, by the anthropomorphic influence of epic poetry, to be regarded as a hero, whose resemblance to the ancient god was explained by the assumption that he was an incarnation of that deity. Such a process, inferred from the result, is assumed in a number of cases, which will be adverted to below.

Thus Arjuna is, according to the *Śatapatha Brāhmaṇa* (II. i. 2. 11), a mystical name of Indra; and he was, according to Pāṇini (iv. 3. 98), worshipped just as Vāsudeva was. But Arjuna is one of the principal heroes of the *Mahābhārata*, and is intimately connected with Indra; he stays five years in Indra's heaven, and there learns the use of the magical weapons (*Mahābhārata*, iii. 41 ff.). He is, however, not regarded as an incarnation of Indra, as his name *Aindri* would lead us to expect, but of Nara, a somewhat ill-defined deity. Arjuna is the enemy of Karṇa, a son of the Sun, and kills him. Similarly, in the story of the *Rāmāyaṇa*, Vālin, Indra's son, is the enemy of Sugriva, son of the Sun; but here he is killed by the latter (iv. 16 ff.). In popular belief there seems to have been a hostility between Indra and the sun-god: a trace of such a belief, though a very faint one, may perhaps be found in the Vedic reference to a conflict of Indra with Uṣas, the goddess of dawn (*Rigv.* IV. xxx. 8–11).

The sun-god (Āditya, Savitṛ, Sūrya, etc.).—In Vedic times there were several sun-gods; in later

times they are all merged in one, who is called indiscriminately by their names—Sūrya, Savitṛ, Mitra, Aryaman, Pūṣan,—besides bearing such names as Āditya, Vivasvat, Vikartana, etc. He continued to be a popular god even after the rise of the supreme gods: temples were dedicated to him, sects acknowledged him as the highest deity, and hymns were composed in his honour, of which the *Sūryaśataka* by Mayūra, Bāṇa's son-in-law, is a deservedly admired poem of classical Sanskrit literature. The enumeration of his 108 names in *Mahābhārata*, iii. 3, proves his popularity in the period of the great epic.

The sun originated in the beginning from the Veda; he contains the Veda, is the glory of the Veda, and is called the Supreme Soul. Mythologically he is the son of Aditi, Kaśyapa's wife. Aditi invoked the sun for a son who should vanquish the Asuras, and became pregnant through a ray of the sun. She brought forth, in due course, an egg which became the sun Mārtaṇḍa.

Viśvakarman, who is regarded as a Prajāpati, gave his daughter Saṃjñā to the Sun for wife. She bore him two sons, Manu Vaivasvata and Yama, and one daughter, Yamī or Yamunā, the river of that name. Now, the splendour of the sun was so great that Saṃjñā could not bear to look on him. She therefore substituted for herself Chhāyā, her shadow, and, thus deceiving her husband, she went to her father's; but, as Viśvakarman was determined to send her back to her husband, she fled in the shape of a mare to the Uttarakurus. Meanwhile Chhāyā bore to the Sun two sons, Sāvarṇi and the planet Saturn, and a daughter, the river-goddess Tapatī, afterwards mother of Kuru. Chhāyā preferred her own children to those of Saṃjñā, and thus the Sun detected the fraud committed by his wife. He went to Viśvakarman and asked him to reduce his splendour, so that Saṃjñā might bear his light. Viśvakarman therefore put him on his lathe and pared down the body of the sun by a sixteenth part. From the parings were formed Viṣṇu's disc, Śiva's trident, and other weapons of the gods. The Sun, learning from Viśvakarman the retreat of his wife, went in the shape of a horse to the land of the Uttarakurus. There he met Saṃjñā, who, not allowing him to approach her from behind, turned her head towards him. From the breath of their nostrils were produced the two Aśvins, hence called *Nāsatyas*, and from the semen of the horse was born Revanta, chief of the Guhyakas.

A well-known myth explains the eclipses of sun and moon. When, by the churning of the ocean, the *amṛta*, the drink of immortality, had been produced and was being drunk by the gods, an Asura named Rāhu, in the guise of a god, got hold of it. The sun and the moon perceiving it, informed Viṣṇu, who at once cut off the head of Rāhu before the *amṛta* had gone down his throat. Therefore the head only of Rāhu became immortal. Since that time Rāhu hates and pursues the sun and moon, and when he gets hold of them swallows them.

The sun-god plays an important part in epic history. His son Manu Vaivasvata became the progenitor of mankind, and his grandson Ikṣvāku was the founder of the Sūryavaṁśa or the solar race of kings, to which Rāma belongs, and which forms the subject of Kālidāsa's poem *Raghuvaṁśa*. Karṇa, the leader of the Kauravas and the antagonist of Arjuna in the *Mahābhārata*, is his son. For Kuntī before her marriage with Pāṇḍu invoked the sun-god and bore him a son, Karṇa, who was born with a golden coat of mail and golden earrings. Afterwards, Indra in the guise of a Brāhman induced him to exchange this miraculous armour for the never-erring spear with which he killed Ghaṭotkacha. At last he was killed by Arjuna. Karṇa was probably a local variety of Sūrya (perhaps as the sun doomed to die), and from a god became an epic hero. In the *Rāmāyaṇa* the monkey-king Sugrīva is a son of Sūrya; he was first exiled by his brother Vālin, son of Indra, but afterwards he vanquished Vālin, with the help of Rāma, who from an ambush pierced him with an arrow. This story also seems to be based on a myth in which Indra and Sūrya were presented as rivals. Sūrya rides in a car drawn by seven horses (*harit*); his charioteer is Aruṇa, the dawn, who tempers the excessive splendour of the god.

An ancient variant of the sun-god is Garuḍa, the divine king of birds, on whom Viṣṇu rides. The myth which relates the birth of Garuḍa is perhaps the most perspicuous of Indian nature-myths. It is thus related in the *Mahābhārata*, i. 16 ff.:

Kadrū and Vinatā (representing dark night and waning night), daughters of Dakṣa, were both married to Kaśyapa. Kadrū laid a thousand eggs, Vinatā two. After 500 years the eggs of Kadrū burst, and out came a thousand snakes (Nāgas). Then Vinatā grew impatient, and opened one of her eggs; it contained a bird whose upper part only was developed—*Aruṇa*, the dawn. He became the charioteer of Sūrya. After another 500 years the second egg of Vinatā burst, and yielded an enormous bird—*Garuḍa*, the devourer of snakes (*i.e.* darkness). He at once took to his wings to seek for the food assigned him by the ordainer of all. By this time Vinatā had become the slave of her sister Kadrū. For the sisters had wagered as to whether the divine horse Uchchaiḥśravas was white or black, and Kadrū by fraud had won the bet, which stipulated that the loser should become slave to the winner. Thus Garuḍa, too, became the servant of the snakes, and had to obey their commands. They promised, however, to set him free, if he brought them the *amṛta* (which in this account is confounded with the soma). After many adventures Garuḍa came to the place where the *amṛta* was kept, vanquished the guardian-gods, extinguished the fire which was burning round the *amṛta*, overcame all obstacles, and succeeded at last in carrying off the *amṛta*-soma. In vain Indra hurled his thunderbolt at him; it brought down only one feather of the bird. Indra then entered into friendship with him. Garuḍa placed the *amṛta* on the ground strewn with *kuśa* grass, and invited the snakes to partake of it. While they bathed, as is the custom to do before meals, Indra carried off the *amṛta*. Garuḍa was rewarded for his deed by Viṣṇu, who chose him for his service as the bird on which he rides, and assigned him his standard to rest upon.

This myth, the latter part of which can be traced back to the Rig Veda, leaves no doubt that the sun is meant by Garuḍa, and consequently darkness by the snakes, his food. Apparently Garuḍa was never regarded as the equal of Sūrya, who therefore engrossed the whole sun-worship; still Garuḍa's claim to worship was recognized by making him the servant and companion of Viṣṇu, who from being a solar deity had been promoted to the rank of a Supreme God. Garuḍa is also called *Suparṇa*, and it may be remarked that there is a class of Suparṇas, or bird-genii, who frequently figure on ancient sculptures. He is also identified with *Tārkṣya*, originally a distinct mythical being, figured either as a bird or as a horse, and apparently representing the sun. Garuḍa seems, therefore, to be a combination of different divine forms of the sun represented as a winged being.

Soma, the moon-god.—As a departmental god, Soma represents the moon; but since he is identified with the Vedic god Soma, who especially represents the sacred soma-juice, the functions of the latter are also ascribed to the moon-god. Hence he is the sovereign of the stars as well as of the plants and of the Brāhmans; and in poetry his rays are said to consist of *amṛta*. Though he was a deity of great holiness, he seems scarcely to have received popular worship as a separate god; at least no temples seem to have been dedicated to him. (The famous shrine at Somanātha was sacred to Śiva, and so was Somatīrtha in Śrīnagara; see Stein, *Kalhaṇa's Chronicle of Kaśmīr*, ii. 450.) The moon is said to have been produced either from the eye of Atri, son of Brahmā, or, together with other precious things, at the churning of the ocean. He married the 27 Nakṣatras, daughters of Dakṣa, *i.e.* the 27 mansions of the moon. But he preferred the beautiful Rohiṇī (Aldebaran), and neglected his remaining wives. Dakṣa fruitlessly blamed him for his neglect of duty towards them, and at last he cursed him to the effect that he should die of consumption. So the moon began to wane, and at the same time all creatures grew weaker and weaker. Then Dakṣa mitigated his curse to the effect that the moon should alternately wane and wax every month. At full moon only a trace of his illness remains; it is the dark spot on his disc in the shape of a hare. His cure was brought

about by bathing at Prabhāsa, where the Sarasvatī falls into the western ocean.

From Soma sprang the Somavaṁśa, or lunar race of kings. Soma carried off Tārā, the wife of Bṛhaspati, though Brahmā bade him restore her to her husband. Uśanas, the teacher of the Asuras and the enemy of Bṛhaspati, together with the Asuras sided with Soma in the conflict between them and the gods. At last Soma was compelled to give up Tārā. After some time she gave birth to a boy whose parentage was doubtful; and she declared, when coerced, that he was the son of Soma. The boy was named Budha (the planet Mercury), who afterwards married Ilā, daughter of Manu. Their son was Purūravas, with whom the lineage of lunar kings begins.

The moon plays an important part in the ancient belief about the life after death. The souls of the deceased are supposed to go to the moon, and assembling there cause her waxing. At full moon, the moon sends some spirits on to the world of Brahmā (*devayāna*), and sends the rest as rain down to the earth to be born again (*pitṛyāna*). Their stations on both paths are variously stated (see Deussen, *System der Vedānta*, 1883, pp. 392, 409, 475).

Vāyu (Vāta Māruta) is the divine personification of wind, the fourth element of the Indians, which, it should be noted, constitutes as breath the principle of life; Vāyu has therefore power also over the animal world. He presides over the North-west. Since the invisible element of wind does not easily lend itself to anthropomorphism, scarcely any myths are told of Vāyu; nor did the god receive popular worship. He was too much of an abstraction to appeal to the religious feelings of the people. But there were *popular* wind-gods, variants of Vāyu as it were, who in epic language were therefore styled sons of Vāyu or Māruta. One of them is Hanumat, the valorous monkey of the *Rāmāyaṇa*, who jumped the ocean and brought Rāma tidings from his bride Sītā; he is now the tutelary god of all village settlements. The writer of the present article believes that he is connected with the monsoon (Jacobi, *Rāmāyaṇa*, p. 132). Another son of Vāyu is Bhīma of the *Mahābhārata*, the second of the five Pāṇdava brothers. There are traces in his character which seem to indicate a demonic origin. He is frequently brought into relation with the Rākṣasas; he not only fights them, but he marries the Rākṣasī Hiḍimbā, by whom he has a son, the famous Ghaṭotkacha. He is a ravenous eater (*vṛkodara*), and is of great fierceness; he tears open the breast of his enemy Duḥśāsana and drinks his blood. He may have been a godling, a personification of the destructive power of the storm, before he became an epic hero.

There is a plurality of wind-gods—the Maruts, who formed seven tribes descended from the seven parts into which the embryo of Diti was split by Indra (see above), or into which the semen of the sage Maṅkaṇaka was divided (*Mahābhārata*, ix. 38). In the Rig Veda the Maruts are the companions of Indra, in later mythology of Vāyu; the word, however, may lose its special meaning and denote gods in general.

Varuṇa in Brāhmanical mythology is the ruler of the waters and the god of the ocean. He still carries the noose, and is called Prachetas, as in the hymns of the Rig Veda; but his Vedic characteristics, except those relating to water, are forgotten or only occasionally remembered. For instance, his association with Mitra comes out only in a legend relating the origin of Vasiṣṭha (Maitrāvaruṇa; see *Rāmāyaṇa*, vii. 56 f.). He resides in the ocean. But there is also a world of Varuṇa, the Varuṇaloka, situated somewhere below the earth; it is full of wonders, and in it reside Varuṇa, his son Puṣkara, and all his progeny. This Varuṇaloka would seem to suit the Vedic Varuṇa better than the later ocean-god. To the latter belongs the miraculous umbrella (*Mahābhārata*, v. 98). Mention is made of a bow of Varuṇa, from which originated the *gāṇḍiva*, the bow he gave to Arjuna. Wine (*surā*) is called *vāruṇī*, i.e. 'belonging to Varuṇa'; and the goddess of wine, Vāruṇī, who appeared at the churning of the ocean, is regarded as Varuṇa's daughter or his wife.*

There is, however, another god of the sea, Sāgara, distinct from Varuṇa. It was Sāgara, not Varuṇa, who appeared to Rāma when he wanted to force his passage through the sea; and in romantic tales of the Middle Ages the god of the sea is called Sāgara, not Varuṇa.

Yama, in the Rig Veda a deified hero, has become in Brāhmanical mythology the dreaded god of the nether world, the sovereign of the damned, and the regent of the South. He is the son of the sun-god Vivasvat, brother of Manu and Yamunā. His messengers fetch the souls of dying men and lead them to Yama's hall, where Chitragupta the recorder reads the account of their deeds, and the god sits in judgment upon them. Yaṃa is called also Mṛtyu, Kāla ('death'), Antaka, Kṛtānta ('maker of an end'), Pretarājā ('king of ghosts'), Pitṛpati ('lord of the manes'). He carries a rod (*daṇḍa*) or a noose (*pāśa*), and rides on a buffalo. Yama is frequently introduced in epic stories. The best known instance is his meeting with Sāvitrī, to whom he granted the restoration of her husband to life; the episode of the *Mahābhārata* which relates this event is reckoned one of the gems of the great Epic.

In a less awful aspect Yama appears as *Dharmarājā*, 'king of law.' As such he seems occasionally to have been confounded with the god Dharma, the personification of justice, the father of Yudhiṣṭhira.

The Aśvins have lost, in Brāhmanical mythology, whatever cosmical element they had in the hymns of the Rig Veda. They continue to be regarded as beautiful youths and physicians. Their names are now given as Nāsatya and Dasra—originally epithets applying to either of them. Their origin from the breath of Saṇjñā and Sūrya has been mentioned above (under 'sun-god').

The best known story related of them is their cure of Chyavana, the old husband of Sukanyā, the beautiful daughter of king Saryāta. They wanted to seduce Sukanyā, but she would not consent, and as a boon they consented to make her husband young again. The Aśvins were rewarded for this by being admitted to a share of the soma. The details of this legend differ in the *Śatapatha Brāhmaṇa* and the *Mahābhārata* (see Muir, *op. cit.* v. 250 ff.). Another cure wrought by the Aśvins is told in *Mahābhārata*, i. 3: they restored eyesight to Upamanyu, who had fallen into a well and there invoked them in an interesting hymn.

With epic history the Aśvins are connected in the *Mahābhārata* as the fathers of Sahadeva and Nakula, the twin sons of Mādrī; and in the *Rāmāyaṇa* they are the fathers of the monkeys Dvivida and Mainda.

Finally, we must mention Bṛhaspati, who, in the hymns of the Rig Veda, is invoked as a god, the impersonation of the power of devotion; in Brāhmanical mythology he is not a god in the proper sense of the word, but rather a divine sage. He is the teacher (*guru*) and household priest (*purohita*) of the gods; he is identified with Vāchaspati ('lord of speech'), and with the planet Juppiter. According to *Mahābhārata*, iii. 217 ff., he is the son of Aṅgiras, and from him is descended the family of Agnis. His wife is Tārā (see above under 'Soma'). Bṛhaspati's rival is Kāvya Uśanas or Śukra, teacher of the Asuras, who is identified with the planet Venus.

* An incident which is thought to show some resemblance between Neptune and Varuṇa is related in *Mahābhārata*, iii. 115. Varuṇa gave to the sage Richīka a thousand white horses, which Gādhi demanded of him as the price for his daughter Satyavatī.

Most of the gods treated of hitherto have this in common, that, though fully recognized in mythology, they lost more or less of their importance as popular gods. It was different with two old gods, *Viṣṇu* and *Rudra*, and with the youngest of Vedic deities, *Prajāpati*. They advanced to the position of Supreme Gods, and the first two became the highest objects of worship. Before we treat of the rise of these three gods, we must complete our description of the Indian pantheon. First we shall treat of the post-Vedic gods of similar rank to those inherited from the Vedic period, then of minor divine beings, and of saints.

2. Post-Vedic gods.—(*A*) *Those of high rank.*—To the post-Vedic period must be assigned **Kumāra**, the war-god (called also Skanda, Kārttikeya, Guha, Mahāsena, etc.). He is first mentioned in the *Chhāndogya Upaniṣad*, vii. 26. 2, where he seems to be identified with the sage Sanatkumāra. His origin, however, must be looked for in popular belief, which seems to have varied a good deal in details respecting the war-god, as will be seen in the sequel. Kumāra is regarded as the general (*senāpati*) of the gods. His introduction as a new god was probably due to a change in the government of Indian States. Originally the king was both ruler in peace and leader in war, but afterwards the office of general became distinct. When this institution had become generally recognized, it was thought necessary, as we may assume, that there should be in heaven too a *senāpati* as well as a king. And since the *senāpati* frequently succeeded in supplanting the king, and the latter was often justified in being jealous of the former, it is but natural that Indra should at first try to suppress Kumāra, as is told in the narrative of the latter's birth.

The myth of the birth of Kumāra is variously related (*Mahābhārata*, iii. 225 ff., ix. 44 f., xiii. 84 ff.; *Rāmāyaṇa*, i. 36 f.), his father being given both as Śiva and as Agni, his mother as Umā, Gaṅgā, and quite a number of minor deities. These rival claims to his parentage had to be settled, and this was effected by the assumption of a sort of joint parentage, and by making some of the female deities his nurses or adoptive mothers.

The most generally adopted account of Kumāra's birth is as follows: The gods were afraid that from the embrace of Śiva and Pārvatī a being would be produced whom the world would be unable to bear, and therefore they entreated Śiva not to discharge his vital seed. However, part of it had already come forth, and this was taken by Agni and thrown into the Gaṅgā. But the latter could not retain it, and threw it on the slope of the Himālaya into a thicket of reeds (*śaravaṇa*). There it was transformed into a fine boy, who was found by the six Kṛttikās (the Pleiades). As each of them desired him to be her own son, he assumed six faces, and sucked their breasts simultaneously. Hence he is called Kārttikeya and Ṣaṇmukha. [In point of fact, the name Kārttikeya seems to be derived from Kārttika, the first month of autumn, when, on the cessation of the monsoon, the roads became practicable, and kings were wont to set out on war expeditions.] According to another version, the Kṛttikās were formerly the wives of the seven Ṛṣis[2] (for the Indians knew that there was a seventh star in the Pleiades, though they usually counted but six). Agni fell in love with the wives of the Ṛṣis, and Svāhā, his own wife, becoming aware of it, assumed the form of one of these ladies, approached Agni, and cohabited with him; she then brought Agni's semen to a golden lake, and threw it therein. This she repeated five times, for she was unable to assume the form of Arundhatī, the faithful wife of Vasiṣṭha. The remaining six Ṛṣis forsook their wives, who were transferred to the sky as the Kṛttikās.

The feats of Kumāra which are most generally known are the killing of the Asura Tāraka, and the splitting of Mount Krauñcha in the Himālaya. When Tāraka had vanquished the gods and was oppressing them, they asked Brahmā for a leader, and were told by him that only from the seed of Śiva would be produced the future conqueror of the mighty Asura. Śiva, however, was still an anchorite, practising severe austerities in the Himālaya. Kāma, the god of love, was now called upon to cause Śiva to fall in love with Umā (or Pārvatī), the beautiful daughter of Himālaya. He succeeded in his undertaking, but was reduced to ashes by the fire issuing from the eye on the forehead of Śiva, who was in great wrath when he became aware that Kāma had dared to disturb him in his ascetic exercise. Śiva was, however, won by the graces and merits of Pārvatī, and finally married her. These incidents form the subject of Kālidāsa's famous poem, *Kumārasambhava*. The rest of the story, telling how Kumāra was born, has been given above. The new-born Kumāra was installed general of the gods, engaged in battle with Tāraka, and killed him.

On another occasion, the Daitya Bāṇa, son of Bali, attacked the gods from the mountain Krauñcha, but he took shelter in the mountain when Kumāra assailed him. The latter pierced the mountain with his javelin, split it in twain, and killed the demon. Thus an opening was effected for the geese and other birds on their passage to the north. The same incident is variously stated by different authorities (see Wilson, *Viṣṇu Purāṇa*, 1865, ii. 118 note).

The wife of Kumāra is Devasenā, a daughter of Brahmā. Her desire to get a husband superior in strength to the rest of the gods was, according to one account (*Mahābhārata*, iii. 224), the original cause of the birth of the war-god. Kumāra rides on the peacock, the son of Suparṇa.

The strange myth about the birth of Kumāra appears to be best interpreted on the assumption that in different parts of India there were several popular godlings of the war-god type, and that these have been combined into the one Kumāra, the war-god common to all Indians. But this process of amalgamation has left traces, which cannot be mistaken, elsewhere than in the strange myths related above. For there are three variants or alter-egos of Kumāra, viz. *Viśākha*, *Śākha*, and *Naigameya*. The first of these is known to have received popular worship (Patañjali, *ad Pāṇini*, v. 3. 99); he originated from a wound which Indra inflicted upon Kumāra, the new-born. From the same wound issued a great number of *kumāras*, and *kumārīs*, goblins, who spirit away little children (*Mahābhārata*, iii. 228, where two more brothers, Śiśu and the goat-faced Bhadraśākha, seem to be assigned to Kumāra). The war-god has a great retinue of monstrous followers, male and female, of whom long lists are given in *Mahābhārata*, ix. 45 f. He was probably in the beginning conceived as the representative of a whole class of uncanny spirits somehow connected with fire, and was afterwards promoted to the position of a war-god, equal in rank with the ancient gods. His worship seems once to have been fairly general; at present he is worshipped chiefly in the south, where he is known under the name of Subrahmaṇya.

Another son of Śiva, or rather of Pārvatī, is **Gaṇeśa**. Originally he seems to have been conceived as the 'remover of obstacles,' as his names *Vināyaka* and *Vighneśa* indicate. As such he is figured with an elephantine head; he carries in one of his hands (*paraśupāṇi*) an axe, or one of his tusks, which has been broken off; he rides on, or is attended by, the rat, the animal which finds its way to every place. As 'remover of obstacles,' he is invoked at the beginning of all books, and thus in a secondary way he became the god of learning, especially of pandits and clerks. He is the latest of all Brāhmanical gods, for he is not mentioned in the *Rāmāyaṇa* and some of the older *Purāṇas*; and he was absent from the original *Mahābhārata*. He is first mentioned in Yājñavalkya, i. 270, 289, 293, as a demon taking possession of men, and thus hindering their success, but furthering them when propitiated. The name *Gaṇeśa* or *Gaṇādhipa* designates him as the leader of the Gaṇas, or followers in the retinue of Śiva. Yet he is not, as a rule, represented as leading the Gaṇas, whose actual leader is Nandi. But there is a class of demons, Vināyakas (see *Petersburg Dict.*, *s.v.*), who probably were represented by the new god Gaṇeśa. It deserves to be noted in this connexion, that, in the Rig Veda (II. xxiii. 1), Bṛhaspati is addressed as *gaṇānāṁ gaṇapati*; and Bṛhaspati, who is identified with Vāchaspati, is something like a Vedic counterpart of Gaṇeśa as a god of learning.

Gaṇeśa is the son of Śiva and Pārvatī, or rather of the latter, for he was produced from the unguents with which the goddess

had anointed herself. With the water of her bath they were conveyed to the mouth of the Ganges, and were there imbibed by Mālinī, a goddess with the head of an elephant. She gave birth to a boy who had four arms and five heads of an elephant. Gaṅgā chose him for her son, but Śiva declared him to be the son of Pārvatī. He reduced his five heads to one, and enthroned him on Añjanagiri as the 'remover of obstacles.' These details are given in the 18th canto of the *Haracharita* by Jayadratha, a native of Kashmīr, in the 13th cent., who professes to have composed his work from older sources. In the *Brahma Vaivarta Purāṇa*, the third book of which contains an account of Gaṇeśa, it is narrated that Gaṇeśa's head fell off when Pārvatī in the pride of her heart invited the planet Saturn to look at her baby, and that Viṣṇu afterwards substituted for it the head of an elephant. Gaṇeśa is figured with one tusk only (*ekadanta*). The loss of the other is variously accounted for. It was cut off, according to the *Śiśupālavadha*, i. 60, by Rāvaṇa; according to the *Brahma Vaivarta Purāṇa*, iii. 40, by Paraśurāma; and he lost it, according to the *Haracharita*, xviii. 23, through a bet with Kumāra as to who should go most quickly round the earth. Besides the particulars of his figure mentioned already, he has an exceedingly big belly. In his four hands he carries, according to Jayadratha, a tusk, a rosary, an axe, and a sweetmeat; in some pictures he carries a manuscript in one hand.

Kubera or Vaiśravaṇa, the 'lord of treasures' (*vitteśa*), 'king of the Yakṣas,' and 'regent of the north,' is already mentioned in the Atharva Veda as chief of the 'good people' (*puṇyajana*), or 'other people' (*itarajana*), and as concerned with 'concealment' (through hidden treasures).*

In the *Śatapatha Brāhmaṇa* and in later Vedic texts he is mentioned as king of the Rakṣas, and in the *Taittirīya Āraṇyaka*, i. 31§, as lord of wishes and as possessor of a wonderful car (apparently the later Puṣpaka).

In later mythology he is the king of the Yakṣas as well as of the Kinnaras and Guhyakas, while the Rākṣasas are the subjects of his half-brother, Rāvaṇa. According to the *Rāmāyaṇa* (vii. 3 ff.), he is the son of Viśravas, and grandson of Pulastya, Prajāpati's son.

Viśravas had two wives, Devavarṇinī, daughter of Bharadvāja, and Kaikasī, daughter of Sumāli. By the former he had one son, Kubera; by the latter Rāvaṇa, Kumbhakarṇa, Vibhīṣaṇa, and Śūrpaṇakhā.† Viśravas gave Kubera for his residence the town Laṅkā, built by Viśvakarman on Mount Triḳūṭa in the southern ocean. But Rāvaṇa expelled him from Laṅkā, and made it his own capital. Kubera then, by the advice of Viśravas, took up his residence on Mount Kailāsa, and became the regent of the north. But his connexion with the south, to which the above legend refers, was perhaps suggested by the name of the southernmost river of India, the Kāveri; for *Kāveraka* or *Kāberaka* occurs already in the Atharva Veda as a patronymic derived from Kubera. In support of this conjecture it may be mentioned that the name of the town Trichinopoly is popularly explained as *Triśiraḥpalli*, according to Lassen (*Ind. Alterthumskunde*, 1873, i. 160)='town of Kubera,' for *Triśiras* is also a name of Kubera.

Kubera's town is Alakā, his park Chaitraratha; he has nine treasures (*nidhi*). He rides on a man (*naravāhana*); this curious item seems to indicate some near relation to men, and the same is suggested by his epithet or name *Ṛṇdharman*, which probably refers to his quality as bestower of riches (*śrīda*). His son is Nalakūbara, whose wife Rambhā was ravished by Rāvaṇa (*Rāmāyaṇa*, vii. 26). Kubera, as we have seen, was believed from very early times to preside over the guardians of treasures, who, it would seem, were originally called *rakṣas*, and later—to distinguish them from the devilish *rakṣas*, the disturbers of sacrifices—had been named *yakṣas*. As chief of the Yakṣas, he was supplanted, as far as popular worship is concerned, by Maṇibhadra, who is already mentioned in the *Rāmāyaṇa* (vii. 15), but who occurs chiefly in popular tales.

A god who is very frequently referred to in classical Sanskrit literature is the god of love, Kāma (Manmatha, Madana, Kandarpa, Smara, Ananga, etc.). Originally Kāma is 'desire,'—not of sexual enjoyment only, but of good things in general,—and as a personification of desire he is invoked in Atharva Veda ix. 2; but in another hymn of the same Veda (iii. 25) he is already conceived as the god of sexual love, in which function only he is known to later mythology. His parentage is variously stated, but usually he is regarded as the son of Dharma and Lakṣmī. His wife is Rati, the impersonation of sexual enjoyment; his friend and companion, Madhu, the first month of spring. Two sons of Kāma are occasionally mentioned, Harṣa and Yaśas.

The ideas entertained about Kāma may be gathered from his emblems and attributes. He carries a bow formed of flowers (*puṣpachāpa*); the string of this bow consists of bees, and the arrows of flowers (*kusumaśara*). There are five such arrows (*pañchabāṇa*), allegorically representing the infatuating powers of love (*śoṣaṇa*, *mohana*, etc.). He has on his banner the dolphin or a fish, denoting procreative power (*makara* or *matsya-ketu*); or he carries a flower in his hand (*puṣpaketana*). He is often spoken of as *ātmabhū* or *chittajanman*, 'born of the mind,' and was therefore called *anaṅga*, 'bodiless.' This latter quality is accounted for by a well-known myth mentioned above in connexion with the birth of the war-god.

Śiva reduced Kāma to ashes; he will get a new body, according to *Kumārasambhava*, 4, 42, at the wedding of Śiva and Pārvatī. But, according to the *Harivaṁśa* (9263 ff.), Kāma was re-born as Pradyumna, Kṛṣṇa's son. The baby had been stolen by Śambara, whose wife Māyāvatī brought him up. The latter, however, was Rati, who had assumed the form of Māyāvatī in order to deceive the Asura, and thus to cause his destruction by Pradyumna (*ib.* 9475 ff.). Apparently Pradyumna is but a variant of Kāma, or, to be more accurate, a god of love popular in those tracts of India where the worship of Kṛṣṇa prevailed. Kāma has also been identified with Māra, the tempter and devil of Buddhist legend: hence, in later Sanskrit, Māra becomes a synonym of Kāma.

Some of the *goddesses* of Brāhmanical mythology have already been mentioned in connexion with the gods whose consorts they are: Svāhā, wife of Agni, Śachī, wife of Indra, Saṁjñā, wife of Sūrya. The most important goddess, Pārvatī, will be considered when we come to treat of Rudra. Lakṣmī or Śrī is the consort of Viṣṇu; but she seems originally to have been an independent deity impersonating beauty and wealth. She rose from the ocean when the gods and demons churned it for the production of *amṛta*, and then she was made over to Viṣṇu. But we meet also with different statements: she is the daughter of Bhṛgu and Khyāti, or has been produced from the lotus which grew out of Viṣṇu's forehead; she is the wife of Prajāpati, or of Dattātreya, or of the sun-god, or of Dharma to whom she bore a son Kāma. As the goddess of beauty, she is intimately connected with the lotus, the most beautiful flower of India; she is called after it Padmā or Kamalā; she is enthroned on a lotus, and holds one in her hand. As Fortuna, she is the fickle goddess, who stays nowhere long; according to *Mahābhārata*, xii. 225, 228, she lived once with the Dānavas, then with the gods, and with Indra. From an abstraction Śrī seems to have become a deity, just as occasionally abstract nouns are used as names of gods or goddesses representing the abstract idea in question, *e.g.* Hrī, Dhṛti, Kīrti, etc.

The origin of Sarasvatī was different. From being a river-goddess in the Rig Veda she became the goddess of wisdom and eloquence, and as such she is most frequently invoked by the poets of classical Sanskrit literature. She has been identified with Vāch, 'speech,' and as such she is the wife of Brahmā; she is further identified with Bhāratī, a separate goddess invoked in Vedic hymns. She is also called Śāradā, whom the inhabitants of Kashmīr regard as the guardian of their country, hence called Śāradāmaṇḍala (Stein, *Kalhaṇa's Chronicle of Kaśmīr*, ii. p. 286). Poets speak of the hostility of Lakṣmī to Sarasvatī; for wealth and learning seldom go together.

The principal river-goddess of India is the Gaṅgā, who has lent her sanctity, as it were, to

* *Puṇyajana* in classical Sanskrit is synonymous with *yakṣa* and *rākṣasa* (Hemachandra's *Abhidhānakośa*, 187 and 194).

† The genealogy is stated somewhat differently in *Mahābhārata*, iii. 274 f.

many smaller rivers which are fabled to be miraculously connected or identical with her. The Gaṅgā flows in heaven as Viyadgaṅgā or Mandākinī (the milky way), on earth as the most sacred river, and in the lower world as the Pātālagaṅgā; she is therefore called *Tripathagā*, 'going in the three worlds.'

King Bhagīratha, the great-grandson of Sagara, induced the celestial Gaṅgā to come down from heaven to earth and from the earth to the lower regions, in order to purify the ashes of the 60,000 sons of Sagara burnt by Kapila; hence she is called *Bhāgīrathī*. Śiva caught the river up in his matted hair in order to check the impetus of her fall. The river then entered Jahnu's sacrificial enclosure and was drunk up by him; but at last he discharged her from his ear, wherefore she is regarded as his daughter and called *Jāhnavī*. These legends are told at length in the *Rāmāyaṇa*, i. 38–44; another account of her descent is given in the *Mārkaṇḍeya Purāṇa*, ch. 55. Gaṅgā is also said to come forth from the toe of Viṣṇu. In the *Mahābhārata* (i. 98 ff.) she is the first wife of King Śantanu and the mother of Bhīṣma. It has been said above that Kumāra is considered to be her son. Mythologically she is the eldest daughter of Himālaya and Menā.

In conclusion, it may be added that there are several other sacred rivers or river-goddesses; *e.g.* Yamunā (Kālindī) is the daughter of Sūrya, and so is the Tapatī (a younger sister of the goddess Sāvitrī); Narmadā (Revā) is a daughter of the moon.

The *enemies* of the gods are the **Asuras, Daityas, and Dānavas.** In the Rig Veda, *Asura* is an epithet of Varuṇa and other gods, which has been rendered 'mysterious being.' But in later times *asura* denotes the enemies of the gods (*sura*), and the word is derived from *sura* with *a* privative, while in point of fact the word *sura* is artificial, and has been abstracted from *asura*. The Asuras are the elder brothers of the gods, both being sons of Prajāpati. They continually waged war with the gods, and frequently got the better of them; some of them even acquired the sovereignty over the whole world, till at last they were slain by Indra, Viṣṇu (hence called *Daityāri*), or some other god. They dwell in the nether world, in magnificent palaces. As enemies of the gods, they are regarded as wicked demons; but, as mere rivals of the gods, they are not necessarily bad. So they have for their teacher and spiritual guide a great saint, Śukra, the son of Bhṛgu, who has been mentioned above in connexion with his antagonist Bṛhaspati, the teacher of the gods. The Asuras occasionally appear in a better light in epic stories, and still more frequently in popular tales. In popular belief they seem to have come to be looked upon simply as superhuman beings, very much like the Vidyādharas; *e.g.* there is a small romantic epic in the *Kathāsaritsāgara* (eighth book), in which they side with the hero of the story. In classical mythology there is no difference between Asuras, Daityas, and Dānavas, and these words are usually synonyms; but originally the Daityas and Dānavas are subdivisions of the Asuras, the former being the sons of Diti, the latter of Danū.

(*B*) We must now speak of *the different groups of divine beings who rank below the gods.* Some of them are, on the whole, not unfriendly to men, others are decidedly wicked, demons or devils. We shall treat first of the former. The most popular class seems to have been the **Nāgas** (Sarpas, Uragas), dragons or snake-gods; and snake-worship prevailed in India from the beginning of the classical period downwards. Nāgas are figured on numberless sculptures all over India, and in popular tales they and their beautiful daughters play an important part. They are, however, almost absent from Vedic literature. In epic and classical literature they are said to dwell in Pātāla, the nether world, which is imagined to be full of marvels; there is situated their city Bhogavatī. At the beginning of the *Mahābhārata* we have what may be called a snake-epos, which relates the destruction of the snakes through the sacrifice of Janamejaya; there are introduced Airāvata, Vāsuki, Takṣaka, Śeṣa and others well known in Sanskrit literature. Śeṣa (Ananta) has been promoted to a higher rank; he is represented as supporting the earth on his expanded hoods, and he has become a servant of Viṣṇu, who rests on him while sleeping on the ocean. Baladeva, the brother of Kṛṣṇa, is believed to be an incarnation of Śeṣa. The snakes are the sons of Kadrū, or of Surasā, one of the divine mothers. It has been related above (under 'sun-god') that Garuḍa is their enemy and devours them, whence it has been concluded that the Nāgas represent darkness which is dispelled by the sun. But there is another aspect of the Nāgas which was more important for the imagination of the people; they were probably regarded as guarding or possessing treasures, and assuming the shape of snakes. The Nāgas were held in awe and reverence, but they were not regarded as demons.

Older than the Nāgas are the **Gandharvas.** They are already known in the Rig Veda, where, however, usually but one Gandharva is mentioned. They are a class of superhuman beings fond of women, and possessing a mysterious power over them. In the *Mahābhārata* they frequently appear very much like the Yakṣas, and their king Aṅgāraparna or Chitraratha is a friend of Kubera (whose park is called *Chaitraratha*). But usually they are represented as divine musicians and as living in Indra's heaven; from them the Sanskrit name for 'music,' *gāndharva*, is derived. It may be mentioned that the *fata morgana* is called 'town of the Gandharvas' (*gandharvanagara*).

The mistresses of the Gandharvas are the **Apsarases,** heavenly nymphs of wonderful beauty. They too belong to the court of Indra, and they are employed by him to seduce saints when they become a danger to his sovereignty through their severe penance. The effect of their successful interference is usually the birth of some great man or woman; *e.g.* Menakā seduced Viśvāmitra and became mother of Śakuntalā. In other stories some Apsaras incurs the displeasure of some god, and by his curse is born on, or banished to, the earth, where she marries some great man. Thus Urvaśī became the wife of king Purūravas; their adventures form the story of Kālidāsa's play *Vikramorvaśī*. The most famous Apsarases are Tilottamā, Rambhā, Urvaśī, Ghṛtāchī, Menakā, and others, but there are millions of them, and they are held out as a reward to warriors who fall in battle.

The **Yakṣas, as a class of superhuman beings,** are of post-Vedic origin, though the word *yakṣá* as a neuter occurs in the Rig Veda (on its meaning see *Vedische Studien*, iii. 126 ff.). As *yakṣan* means 'magical power,' *yakṣá* probably means etymologically 'being possessed of magical power'; and this was without doubt the meaning of the feminine *yakṣiṇī*. The original conception of the Yakṣas would therefore be much the same as that of the later Vidyādharas—a word which etymologically and actually means 'possessing spells or witchcraft.' The Yakṣas are brought into close connexion with the Rākṣasas, as stated above under 'Kubera,' though the Yakṣas are generally not unfriendly to men, and the Rākṣasas are. (Still there are instances of wicked Yakṣas and of kind Rākṣasas.) Both Yakṣas and Rākṣasas are also called *puṇyajana*—a name of the subjects of Kubera in the Atharva Veda. It has been assumed above that there were originally two sorts of Rakṣas; the one, guardians of treasures, were identified with the Yakṣas, and the other are the well-known disturbers of sacrifice usually called Rākṣasas; thus the apparent confusion between Yakṣas and Rākṣasas would become intelligible.

Very much like the Yakṣas are the Guhyakas. They too are followers of Kubera; they guard treasures and live in mountain caves. Mythical beings of similar character are the Kinnaras, divine songsters, who have a human body and the head of a horse, while the Kimpuruṣas have the body of a horse and a human head. Both Kinnaras and Kimpuruṣas are followers of Kubera, and they are frequently identified with one another. The Kinnaras are occasionally confounded with the Gandharvas.

Other classes of mythical beings who are frequently mentioned, but not described in detail, are the Chāraṇas, divine panegyrists; the Siddhas, beneficent ghosts; and the Sādhyas.

The Vidyādharas deserve a fuller notice. In the older popular tales, especially in Pāli literature, the Yakṣas are the principal superhuman beings; in the younger popular literature (represented by the *Bṛhatkathā*) they are supplanted by the Vidyādharas, the most human-like of all inferior divine beings. They live under kings and emperors (*chakravartins*) of their own, in towns on the northern mountains, just like men, with whom they have much intercourse and even intermarry. Men can also be received into their community and acquire sovereignty over them. They possess superhuman powers, especially the faculty of moving through the air, and of assuming by their *vidyā*, or witchcraft, any shape at will (whence they are also called *Khechara*, and *Kāmarūpin*). The Vidyādharas seem to have been at the height of popularity during the early centuries of our era; there is a Prākrit poem by Vimalasūri, the *Padmacharita*, which belongs to that time; in it the Rākṣasas, the Yakṣas, the Monkeys, etc., of the *Rāmāyaṇa* are declared to be different tribes of Vidyādharas.

Among the malicious superhuman beings the Rākṣasas are the most prominent. In the Rig Veda they are mentioned in the neuter form *rakṣas* as fiends who disturb the sacrifice and injure the pious. They are possessed of enormous power, especially at night, when they prowl about (*rātriñchara*) and devour their victims (*kravyāda*, *kauṇapa*); they are of hideous appearance, but are able to assume different shapes. The Rig Veda seems to distinguish *rakṣas* ('evil spirits') and *yātudhānas* ('ghosts'), but in later language *Yātudhāna* is synonymous with *Rākṣasa*. Originally equal in rank to the Yakṣas, the Rākṣasas have become more conspicuous than in ancient mythology, apparently through the influence of epic poetry. For in the *Rāmāyaṇa* Rāvaṇa, the king of the Rākṣasas, his brothers, etc., are the powerful enemies of Rāma; thus the Rākṣasas were invested with a new personality which they retained in the imagination of the Hindus. In the *Mahābhārata*, Bhīma's son Ghaṭotkacha is a Rākṣasa who fights on the side of the Pāṇḍavas. He and Vibhīṣaṇa, the virtuous brother of Rāvaṇa, and his successor on the throne of Laṅkā, are instances which prove that the Rākṣasas, like the Asuras, were not always looked upon with unmitigated horror.

Piśāchas are not unlike, and occasionally are confounded with, the Rākṣasas; they are hideous and bloodthirsty monsters who haunt wild and desert places. In the Rig Veda there is once (I. cxxxiii. 5) mention of a Piśāchī, a spirit supposed to be connected with the will o' the wisp; the Piśāchas as wicked spirits frequently occur from the Atharva Veda downwards. It may be remarked that a Prakrit dialect, in which the original *Bṛhatkathā* was written, has been named after them Paiśāchī.*

Bhūta is the most general term for sprites; thus *Bhūtabhāṣa*, the 'language of the Bhūtas,' is synonymous with *Paiśāchī*. But frequently they are mentioned as a separate class, in juxtaposition with other classes of wicked spirits. Pretas are the ghosts of the deceased, who are not received among the *manes*. They play a more important part in Buddhist literature than in the Brāhmanical Sanskrit literature. In later times, especially in popular works, they seem to have been supplanted by the Vetālas, wicked goblins who haunt cemeteries and animate dead bodies; they belong to the last phase of the development of demonology, inaugurated by the *Bṛhatkathā*, in which the Vidyādharas are the leading figures.

(*C*) We shall now speak of *heroic men*. Most important figures in Brāhmanical mythology are the famous Ṛṣis of old, the traditional authors of the Vedic hymns, and ancestral founders of the Brāhmanical *gotras* or gentes. These holy men, saints or sages, were looked upon as possessing superhuman powers which made them almost equal, and in some cases even superior, to the gods. We may distinguish three classes of Ṛṣis: *devarṣis*, i.e. Ṛṣis of the gods or living among them, *e.g.* Nārada; *brahmarṣis*, i.e. priestly Ṛṣis, *e.g.* Vasiṣṭha, and indeed the greatest number of them; and *rājarṣis*, i.e. Ṛṣis of royal origin, *e.g.* Viśvāmitra. Besides, the Ṛṣis belong to different periods: some lived in the beginning of the world and took an active part in creation, as Dakṣa, Kaśyapa, Marīchi; others belong to a more recent period, as Manu, Vyāsa, Vālmīki, etc. An ancient group are the seven Ṛṣis (identified with the seven bright stars of Ursa major); but the names are differently given. The oldest list is: Gautama, Bharadvāja, Viśvāmitra, Jamadagni, Vasiṣṭha, Kaśyapa, and Atri. A common one is: Bhṛgu, Aṅgiras, Viśvāmitra, Vasiṣṭha, Kaśyapa, Atri, and Agastya. From the *Mahābhārata* we get a different list: Marīchi, Atri, Aṅgiras, Pulaha, Kratu, Pulastya, and Vasiṣṭha. The stories and legends of which the Ṛṣis are the heroes, or in which they play an important part, are very numerous, especially in the Epics and the *Purāṇas*, far outnumbering the myths told of the gods.

The ideas entertained about the Ṛṣis have changed considerably in the course of time in correspondence with the change of the religious ideal. Originally they owed their exalted position to the fact that they were believed to have revealed the sacred lore, the whole of Vedic religion, which, it will be remembered, is concerned chiefly with sacrifice. But in the epic period the sacrifice was no longer the religious ideal; it had been supplanted by *tapas* or *yoga*, 'asceticism,' in the opinion of the people at large. Therefore the Ṛṣis began to be regarded less as experts in the sacrificial art than as great ascetics, who by means of severe austerities and deep meditation had acquired superhuman power and such sanctity that their utterances were infallible and their curses must take effect. In popular opinion they are *yogins* rather than priests; they are saints and sorcerers at the same time; but, of course, elevated to the highest rank.

3. The three Supreme Gods—Brahmā, Viṣṇu, and Śiva—occupy a peculiar position in the Hindu pantheon, highly exalted above the rest of gods and divine beings. A detailed description of them would be out of place in the present article. In a sketch of Brāhmanical mythology only the causes and processes by which they were promoted to the highest rank can be dealt with.

Brahmā, the creator of the world, is the Prajāpati, Pitāmaha, Hiraṇyagarbha of the Vedas and *Brāhmaṇas*. He had his origin and basis in speculation rather than in popular cult, and therefore he did not appeal, in spite of his sublime character, to

* Pischel, 'Grammatik der Prakrit Sprachen,' *GIAP* i. 8, p. 37 f.; Lacôte, *Essai sur Guṇāḍhya et la Bṛhatkathā*, pp. 40–59.

the religious feelings of the masses. Hence the worship of Brahmā has become all but extinct, and the worshippers of Śiva or Viṣṇu, in whatever form they adore their favourite deity, form the overwhelming majority of the Hindus. Notwithstanding these sectarian tendencies, the three Supreme Gods are regarded, in principle, as of equal dignity and forming as such a kind of triad, which in the doctrine of the *Trimūrti* has been acknowledged since about the 5th cent. A.D. There were contradictory elements already in the conception of the Prajāpati of the *Brāhmaṇas*. For sometimes he is identified with the universe, and described as the source out of which creation evolved; sometimes he is regarded as a secondary deity subordinate to Brahman (Muir, *op. cit.* v. 391 ff.). The same holds good with the Brahmā of later mythology: Brahmā proceeded from Brahman, the First Cause; and, on the other hand, he is, in a vague way, identified with it, whence he is called *svayambhū* ('self-born') or *aja* ('unborn'). The generally received opinion, as given in Manu i. 5 ff., comes to this: Svayambhū rose from primeval darkness, created the waters, and deposited in them a seed; this became a golden egg, in which he himself was born as Brahmā or Hiraṇyagarbha. But, according to another opinion, contained already in the famous *Puruṣasūkta* of the Rig Veda (x. 90), the Puruṣa was in the beginning, and from him the world originated. The deity rising from this Puruṣa is called *Nārāyaṇa* (*i.e.* 'descended from Nara,' the primeval male)—a name which is also coupled with Puruṣa in the *Śatapatha Brāhmaṇa*. Thus Nārāyaṇa is identified with Brahmā (in the above quoted passage of Manu). But usually Nārāyaṇa is identified with Viṣṇu, and thereby Brahmā's claim to paramount superiority was contested. There was still another cause which detracted from Brahmā's significance as creator. For part of the creation, notably of men, gods, and divine beings, was transferred to secondary Prajāpatis: Dakṣa, Marīchi, Atri, and other Ṛṣis whose progeny is detailed in cosmogonic myths and legends of the Epics and the *Purāṇas*. Thus many causes were at work to reduce the importance and dignity of Brahmā and to deprive him of active devotion. The reason which the Hindus allege in explanation of this fact is Brahmā's incest with his daughter Vāch ('speech'), by which the creation was brought about. Still the idea of creation and of fate is personified in Brahmā, and in this character he is universally acknowledged by all classical writers down to modern times.

While Brahmā-Prajāpati retires step by step from the superiority over all gods accorded to him in the *Brāhmaṇas*, the reverse development obtains in the case of Viṣṇu. In the Rig Veda he is not one of the prominent gods; there he is chiefly extolled for the three steps with which he encompassed the universe. But it should be remarked that in the Rig Veda he is intimately associated with Indra as his friend and companion, while in classical mythology he is styled Indra's younger brother (*Indrānuja*). As this kind of relationship is little in keeping with Viṣṇu's paramount rank, it must be regarded as a relic of the preceding period, when Indra was still greatly superior to Viṣṇu; and, at the same time, it seems to indicate a dim consciousness of the fact that a part of Indra's character or functions had been transferred to Viṣṇu. For Viṣṇu becomes in classical mythology what Indra had been before, namely, the slayer of demons, the *Daityāri*. On the whole, however, Viṣṇu's position in the *Brāhmaṇas* is the same as before; he is regarded as the equal of the other gods, not yet their superior. But the *Brāhmaṇas* record only the views of the priests; popular opinion may have differed from theirs, although ignored by them as not worthy of notice (cf. Muir, *op. cit.* iv. 156 ff.). It should, however, be observed that in the *Brāhmaṇas* Viṣṇu is repeatedly identified with the sacrifice—an honour which he shares with Prajāpati. He seems gradually to have usurped some positions formerly occupied by Prajāpati, and thus to have arrogated to himself the superiority which Vedic speculation had assigned to his rival. Thus Nārāyaṇa is, according to Manu, identical with Brahmā, but afterwards Viṣṇu is Nārāyaṇa. In the *Śatapatha Brāhmaṇa* it is said that, 'having assumed the form of a tortoise, Prajāpati created offspring'; and, according to the *Taittirīya Brāhmaṇa*, Prajāpati in the form of a boar raised the earth from the bottom of the ocean (Muir, *op. cit.* pp. 27, 39, 52 f.). But common opinion ascribes these feats to Viṣṇu in his tortoise and boar *avatāras*.

Here we meet for the first time with the theory of incarnations, which in the course of time passed into a generally adopted doctrine, and enabled Vaiṣṇavism to absorb popular cults by declaring the objects of their worship to be *avatāras* of Viṣṇu. Probably the tortoise and the boar were originally popular theriomorphic deities worshipped by the masses (including Brāhmanic families), and were afterwards elevated by the same Brāhmans to a higher rank by assuming them to be forms of some recognized god. Traces of this process seem to be recognizable in the case of the boar and tortoise *avatāras* of Prajāpati. For in the *Taittirīya Brāhmaṇa*, as we have seen, Prajāpati assumed the form of a boar and raised the earth; but, in a passage of the *Śatapatha Brāhmaṇa*, it was the boar Emūṣa who raised the earth, and was then favoured by Prajāpati for his deed. Here we have two different attempts to connect a god worshipped under the shape of a boar with Prajāpati. Something similar occurs in the case of his tortoise *avatāra*; for it is first said that Prajāpati took the form of a tortoise, and then this tortoise *kachchhapa* is identified with Kaśyapa, one of the secondary creators. We observe in both cases a certain indecision: the theriomorphic god was at first *hesitatingly* identified by members of the priestly class with one of their great gods. Afterwards, when the theory of *avatāras* was firmly established, it furnished a ready means of legitimizing popular godlings and heroes. Thus the fish *avatāra* of Viṣṇu and that of the man-lion may be accounted for by the assumption that idols of such shapes had been the objects of popular worship.

The fifth *avatāra* of Viṣṇu as a dwarf (*Vāmana*) is of peculiar interest. For in this incarnation Viṣṇu conquered the world by three steps, for which feat he is chiefly extolled in the hymns of the Rig Veda, although neither there nor in the *Brāhmaṇas* is he said to have done this in the shape of a dwarf. That notion may have developed from the myth itself, for, compared with such *giant* steps, the body of the god may well have appeared *dwarfish*; or there may have been some popular god figured as a dwarf, with whom it was thought convenient to identify Viṣṇu. At any rate, the fact that the principal feat of Viṣṇu was not ascribed to the god himself in his own person, but to an incarnation of him, proves that at the time when this opinion became current Viṣṇu had been promoted to a much higher rank than belonged to the Vedic Viṣṇu who, strange to say, was then regarded as an incarnation (viz. the dwarf) of the Supreme Viṣṇu who was radically not different from him.

The next *avatāras*—Rāma Jāmadagnya, Rāma Dāśarathi, Kṛṣṇa, and Buddha—are of a different kind, and belong to the time when Vaiṣṇavism had become a dominant form of Indian religion, and when the universally received doctrine of incarnation made it possible to imprint on independent cults a Vaiṣṇavite stamp. Rāma Jāmadagnya is the hero of legendary story, the other Rāma of epic history. But it is a well-known fact that in the original part of the *Rāmāyaṇa*, i.e. in Books ii.–vi., Rāma is not yet conceived as connected in any way with Viṣṇu; but after he had become, through epic poetry, the favourite of the people, he was made the object of devotion and worship by being declared to be the incarnated Viṣṇu. In Kṛṣṇa, a Rājput hero has coalesced with a shepherd-god (Govinda) into a new deity; he appears first in the *Chhāndogya Upaniṣad* (iii. 17, 6)

as a human teacher who knew the Brahman; in the *Mahābhārata* he is already acknowledged as Viṣṇu in a human form, though frequently he is still described as a human hero. The worship of Kṛṣṇa-Vāsudeva must have been highly popular about the beginning of our era, for it gave rise to the curious Jaina doctrine of the 9 Vāsudevas, 9 Baladevas, and 9 Prativāsudevas, who play such an important part in the hagiology of the Jainas, even as early as some of their canonical books. And in later times the worship of Kṛṣṇa and that of Rāma are the two prevailing forms of Vaiṣṇavism. The recognition of Buddha as an *avatāra* of Viṣṇu is a proof of the popularity of Vaiṣṇavism and its assimilating energy even with regard to a hostile sect.

Most of the creeds which have been merged into Vaiṣṇavism were of un-Brāhmanical origin; *i.e.* they did not grow out of Brāhmanism, but were in the end brahmanized. The gods, godlings, or heroes, whose cult was the object of those creeds, were probably *gṛhadevatās*, or *iṣṭadevatās*, worshipped by families belonging to various castes and classes, inclusive of Brāhmans; their identification with Viṣṇu, which probably was due chiefly to Brāhmans, elevated them to a higher sphere and ennobled their cult. But what principally legitimized these Vaiṣṇavite forms of religion as Brāhmanical, or as in harmony with the Veda, was the adoption of Brāhmanical theosophy as their theological foundation. Viṣṇu (Nārāyaṇa, Vāsudeva) was declared to be one with the Supreme Spirit, the Brahman of the *Upaniṣads*; the creation and destruction of the world were explained in accordance with the Vedānta and Sāṅkhya philosophies. The ascetic ideal is still acknowledged, and knowledge continues to be regarded as an important means of reaching emancipation; but a new way of salvation is now proclaimed, the 'way of love' (*bhaktimārga* [*q.v.*]): love of, devotion and entire submission to, God is the shortest and surest way to union with Him. One of the earliest and most perfect products of this movement is the famous *Bhagavad-Gītā* (*q.v.*), which forms part of the *Mahābhārata*; it has become a canonical text for all Vaiṣṇavite sects. A later authority for them is the *Vedānta Sūtra*, which almost every founder of Brāhmanical sects feels obliged to interpret in such a way that its teachings shall be in perfect harmony with his own doctrines.

Rudra-Śiva became in the Brāhmanical period a Supreme God, the highest god according to the Śaivites as Viṣṇu is the highest god according to the Vaiṣṇavites. In the Rig Veda, Rudra (the Howler) is the father of the Maruts or Rudras (wind- or storm-gods), but no distinct cosmical function is ascribed to him; he is principally regarded as a malevolent deity who by his shafts brings disease and death on men and cattle. A plurality of Rudras, the host of Rudras, is frequently mentioned in the following period, and has never been forgotten; in classical mythology the number of Rudras is eleven, but in addition to them Rudra is surrounded by hosts of spirits, called his *gaṇas* and *pramathas*. He thus appears as the leader of troops of beings greatly inferior, yet similar, to himself; it may therefore be assumed that from the beginning he was the representative of a class, or rather classes, of evil spirits, and that the many Rudras whom the *Śatarudrīya* mentions have all been blended in the conception of the one Rudra, who is present in woods, streams, desert places, etc. A similar process seems to have gone on in the later Vedas and the *Brāhmaṇas*; for other terrific gods, notably various forms of Agni, conceived not as the sacrificial fire but as the destructive element, have been combined with the original Rudra. As mentioned above, the *Śatapatha Brāhmaṇa* states that Agni was called *Śarva* by the Prāchyas, and *Bhava* by the Vāhīkas; but in the Atharva Veda, Bhava and Śarva are distinct gods, similar to Rudra, while, as early as the *Vājasaneyī Saṁhitā*, Bhava and Śarva occur as names of Rudra, and in classical literature they are common synonyms of Śiva. It is therefore a plausible conjecture that other names or epithets of Śiva, besides *Bhava* and *Śarva*, originally denoted distinct deities who were blended with him into one great god, Mahādeva. Thus his epithets Nīlagrīva, Śitikaṇṭha, Nīlalohita, of which the two first names occur already in the *Śatarudrīya* of the *Vājasaneyī* and *Taittirīya Saṁhitās*, belong to fire (as first pointed out by Weber, *Indische Studien*, 1850–98, ii. 20), and designate some forms of a fire-god merged in Rudra.

Giriśa and similar epithets of Rudra in the *Śatarudrīya*, which have become names of Śiva in later mythology, seem to indicate that he was identified with the mountain-sprite, or that he absorbed, as it were, into his character the anonymous mountain-goblins born of the imagination of hill tribes in India and other parts of the world. Rudra-Śiva is therefore intimately connected with the mountains, especially with the Himālaya; indeed Megasthenes remarks that Dionysos (Śiva) is worshipped in the hills, and Herakles (Kṛṣṇa) in the plains. His character as god of the mountains may have made him the favourite god of the people of Southern India; but a more potent cause was probably the 'devil-worship' common to all Dravidians, which prepared them for the adoration of Bhūteśa. For he is also the *Bhūteśvara*, the lord of ghosts in general (*bhūtas*), and especially of those who haunt cemeteries. Connected with the latter are the sorcerers, *yogins*, who practise their awful rites in places haunted by such spirits, and were imagined thus to acquire power over them. Śiva is also the master of the yogins as *Yogīśvara*, and hence is believed to practise *yoga*. The garland of skulls which Śiva wears, the corpse on which he is seated, the terrific shape in which he is adored as Mahākāla, the destructive god of time, death as well as the vanquisher of death (*Mṛtyuñjaya*)—all these items are so many indications that Śiva was regarded first as the ruler, and then as the representative of the vast and various classes of demonic beings who were created in the imagination of the superstitious by the fear and awe inspired by everything relating to death and the dead.

Though the concept of Rudra-Śiva seems to have had an almost unlimited power of assimilating, and thereby absorbing, kindred spirits and godlings of the popular creed, still gods of a well-defined personality or of distinct functions were not subject to this process of assimilation, however like they might be to Śiva in character and perhaps even in origin. Thus Kumāra and Gaṇeśa, notwithstanding their striking affinity with Śiva, have not been merged in Mahādeva.

It will have been remarked that most of the elements which coalesced with Rudra were malicious spirits; still Śiva is not an exclusively malignant deity. Probably it was thought that as leader and king of those spirits he might be appeased, and thus the harm apprehended from his subjects be averted, just as a chief of robbers is bought off by blackmail (Rudra is called 'lord of robbers' in the *Śatarudrīya*). Therefore he is given auspicious names as *Mṛḍa* (cf. Pāṇini, iv. 1, 49) and *Śiva*, 'the Gracious'; the latter has become the most usual name in classical mythology.

Finally, mention must be made of a prominent feature of the Śiva-cult, viz. that he is worshipped under the form of the *liṅga* or *phallus*. It can hardly be doubted that phallic worship was once a wide-spread popular cult in India, but how it came

to be connected with Śiva we are at a loss to understand. But a curious mythological parallel may be noticed in this connexion. Śiva impersonates death as *Mahākāla*, but he is also the vanquisher of death as *Mṛtyuñjaya*; similarly he impersonates the generating power worshipped in the *liṅga*, but he also destroys the god of sexual love, Kāma.

Śiva's consort, Rudrāṇī or Mṛḍānī, is known by many names, as Devī, Umā, Gaurī, Pārvatī, Durgā, Bhavānī, Kālī, Kapālinī, Chāmuṇḍā. Unlike the wives of other gods, she is a very prominent figure in classical mythology, and may be said to be scarcely inferior to Śiva himself. Her equality of rank with her husband is naively expressed in the dual form of this divinity, the *Ardhanārīśvara*, of which one half is male and the other female, representing the right side of Śiva and the left of Devī. The great number of names of this goddess and the diversity of her character (benignant, awful, cruel, horrible) render it probable that, like Śiva, she is a combination of many deities. One of her names, *Kumārī* (Kanyakumārī in *Taittirīya Āraṇyaka*, 10, 1, 7),—after which the southernmost point of India, Cape Comorin, is supposed to have been called since the time of the Periplus,—seems to be given her as a female counterpart or equivalent of Kumāra, probably as the representative of the Kumārīs who ensnare little children. Malignant spirits are of both sexes; the representative of female sprites must be a goddess, as they could not well coalesce with a male deity. Therefore, if Kumāra be the representative of the Kumāras, Kumārī may be assumed to be the representative of the Kumārīs. Similar may have been the origin of Ambikā, who in the *Vājasaneyī Saṁhitā* is called the sister of Rudra, but in later mythology is Śiva's wife; for *Ambikā* means 'little mother'; and there are superhuman beings, both benignant and malignant, called 'mothers' (*mātaras*), who are connected with Kumāra; therefore Ambikā may be assumed to be the representative of the mothers, just as Kumārī is that of the Kumārīs.

As Śiva is Lord of the Mountains (*Giriśa*), so is his spouse Lady of the Hills (*Pārvatī*). According to classical mythology, Śiva married Umā, daughter of Himālaya; but in the *Kena Upaniṣad*, where she is first mentioned (iii. 25), Umā Haimavatī appears as a heavenly woman, conversant with Brahman. Apparently she was originally an independent goddess, or at least a kind of divine being, perhaps a female mountain-ghost haunting the Himālayas, and was later identified with Rudra's wife. A similar mountain-goddess had her home in the Vindhyas; she was of a cruel character, as might be expected from a goddess of the savage tribes living in those hills. Her name is Vindhyavāsinī, and she too is identified with Śiva's wife. Other names of the latter indicate some connexion with Agni (as was first pointed out by Weber, *Indische Studien*, i. 237, ii. 188 f.), for Kālī and Karālī are names of two of the seven tongues of Agni (*Muṇḍaka Upaniṣad*, i. 2, 4); and these seven tongues of Agni may be assumed, with some probability, to have been originally female demons representing fire as the destructive and voracious element, since they are also names of Durgā as the object of a bloody sacrificial worship. Finally, a plausible guess of Weber with regard to Durgā may be mentioned. He is of opinion that this goddess is connected somehow with Nirṛti, the Vedic goddess of all evil, by which assumption the terrific character of Durgā would be accounted for. At any rate, it can scarcely be doubted that several goddesses or female demons from different parts of India, and worshipped by different classes of people, have in the course of time been combined into one great goddess, the spouse of Śiva, who was adored as his *śakti*, or 'energy.' In the case of Śiva and Devī the syncretistic tendency of mythology as a most powerful factor in the formation of Indian gods is beyond question; but the same factor has also been at work, as we saw above, in the case of the sun-god, of Kumāra, and perhaps of Gaṇeśa.

The cult of Rudra-Śiva and of his consort, originally, perhaps, chiefly the property of tribes loosely or not at all connected with Brāhmanical society, has in course of time been fully brahmanized, in the same way as the cult of Viṣṇu and his *avatāras*, by being based partly on the doctrines of the Upaniṣads, partly, however, on independent systems of Śaiva philosophy. Thus the worship of the two Supreme Gods, Viṣṇu and Śiva, under a great variety of shapes, represents the highest form of religion of Brāhmanical India; but at the same time some sects claiming to worship the same Supreme Gods are addicted to debauchery and gross immorality, and thus exhibit religion in its most degraded form.

In conclusion, it may be remarked that we have left out of sight the great un-Brāhmanical religions, Buddhism and Jainism, which must be treated in separate articles; yet it cannot be doubted that they have in many ways influenced Brāhmanism. Buddhistic ideas, especially, have been adopted and adapted by Brāhmanical thinkers and religious men, and they survived in their systems and creeds long after Buddhism itself declined and decayed in India.

Besides the elements of religious life described in this article, there were other social forces at work which had a great influence upon the development of Brāhmanism, viz. the system of caste and the organization of the family. But as these subjects have an interest of their own, distinct from their religious aspect, they must be treated in separate articles.

BRĀHMA SAMĀJ.—1. Introduction.—The Brāhma Samāj (*Brāhma Samāja*) is a theistic reforming movement, springing from Hi duism, which appeared in Calcutta about eighty years ago, and has had rather a changeful and ventful history, in the course of which it has exercised a large influence in Bengal and slighter influence in other parts of India. The name, 'Brāhma Samāj,' is a Bengali phrase which may be tra ıslated 'Society of Brahman,' *Brāhma* being an adjective formed from *Brahman*, a neuter substanti e used in Hindu philosophical language for 'God,' whether conceived as the impersonal Divine Being of the stricter Vedānta or the personal God of Rāmānuja's system. *Samāj* usually means a society that is an organism rather than a mere association. The name shows that the movement has close connexions with the religious past of India. This is true, first, in the sense that much that has b en taught in the Samāj has come straight out of ancient Hinduism; and, secondly, in the sense tha it is but one of the latest of a very long series of attempts to produce a pure spiritual religion which mark Hindu history almost from the beginning.

The Upaniṣads themselves are the deposit of the first great movement in the direction of pure spirituality. The Vedānta and Yōga systems and the theistic sects known as Bhāgavatas, Pāśupatas, and Pāncharātras followed; and the *Bhagavad-Gītā* is the expression of a similar movement in Kṛṣṇa-worship. The modern *Bhakti* movements both in North and in South India, with their literature in the various vernaculars, had similar ends in view. But the impact of Europe, and especially of Christianity, started new currents of religious thought of great force during the 19th century. Of these the earliest is the Brāhma Samāj. Later came the Ārya Samāj (*q.v.*) and other movements of less importance. Towards the close of the century there came a great revival of orthodox Hinduism. The Brāhma Samāj is not only the earliest of the group, but is also a much more direct and legitimate result of Christian influence than the others.

2. History of the movement: antecedents.—Ram Mohan Ray (*Rāmamōhana Rāi*) (1772–1833), who founded the Brāhma Samāj, was the son of a Bengali Brāhman landowner, and received, in addition to the ordinary school education in Bengali, a thorough training in Persian and Arabic, which brought him into contact with Muhammadan thought. Consequently, when he was only fifteen years of age, his outspoken condemnation of idolatry led to his having to leave his father's house. He travelled in Tibet learning Buddhism, settled at Benares to master Hinduism, and, finally, through the study of English and intimacy with an Indian civilian named Digby, became acquainted with Christianity. Thereafter, in 1804, he gave expression to his religious convictions in a pamphlet in Persian, *Tuḥfatul Muwaḥḥiddīn*, 'a Gift to Deists.' It is a brief and arid argument against all formal religions, and in favour of deism. For some ten years after this he held a financial position under Government, and gave most of his energy to his duties, amassing a fortune for himself the while; yet he continued his religious inquiries and discussions in his leisure, and suffered a good deal of persecution in consequence.

In 1814, now a man of forty-two, he left the service of the Company and settled in Calcutta. Fourteen years of varying experimental effort followed—effort spent in the study of Hindu philosophy and Christianity, in the publication of pamphlets and books, and in struggles for social reform. Shortly after settling in Calcutta, he established (in 1815) the *Ātmīya Sabhā*, or Spiritual Association. Meetings were held weekly, at which texts from the Hindu Scriptures were recited, and hymns composed by Ram Mohan and his friends were chanted; but the society did not last long. He published translations of the *Vedānta-sūtras* and of certain Upaniṣads, in Bengali and English. Then followed, in 1820, *The Precepts of Jesus, the Guide to Peace and Happiness*, being a catena of passages from the teaching of Jesus. It is as deplorable as it was inevitable that Christian missionaries should have condemned this most remarkable work, pregnant as it was with prophecy for the religious future of the Hindu people.

Ram Mohan early made the acquaintance of the Serampore missionaries, and indeed gave them both advice and help in the translation of the New Testament into Bengali. Questions arose as to the meaning of certain passages, and collaboration ceased; but one of the missionaries, the Rev. W. Adam, sided with Ram Mohan, and finally became a Unitarian. In consequence of this a Unitarian Committee was formed in Calcutta, consisting of four Indians and six Europeans; and Adam became the pastor and missionary of the society. A house was rented, and Unitarian services were conducted in it in English. A press was founded, and a good deal of literature was put into circulation. Educational methods were also used. Ram Mohan found most of the money required for the work. These efforts were carried on for several years, but with little success. The attendance at the services dwindled to almost nothing; and in the other parts of the work Ram Mohan's autocracy rendered Adam's position practically impossible. The Mission collapsed.

3. First period, 1828–1841: Ram Mohan Ray: Deism.—The failure of the Mission was the occasion of the birth of the Samāj. At the suggestion of two friends, Ram Mohan decided to start an Indian service. A house was rented in Chitpore Road, and the first meeting was held on 20th August 1828. The name at first was *Brāhma Sabhā*, but it was soon altered to *Brāhma Samāj*. Besides Ram Mohan himself, the leading spirits were, first the wealthy triumvirate, Prince Dwarka Nath Tagore (*Dvārakanātha Thākur*), Kali Nath Ray of Taki, Jessore (*Kālinātha Rāi*), and Mathura Nath Mullick of Howrah (*Mathuranātha Mullick*), and then Prasanna Kumār Tagore (*Prasannakumāra Thākur*), Chandra Sekhar Deb (*Chandrasekhara Deva*), and Ram Chandra Bidyabagish (*Rāmachandra Vidyāvāgīśa*). The society met every Saturday evening from 7 to 9. The service was divided into four parts: the recitation of texts from the Vedic hymns, the reading and translating into Bengali of passages from the Upaniṣads, the delivery of a sermon in Bengali, and the singing of hymns accompanied with instrumental music. Only Brāhmans were allowed to lead in the service. Two Telugu Brāhmans were set apart for reciting the hymns, while Utsabananda Bidyabagish (*Utsavānanda Vidyāvāgīśa*) was appointed to read from the Upaniṣads, and Ram Chandra Bidyabagish to translate them into Bengali.

The attendance from the outset proved satisfactory, there being usually sixty or seventy persons present. Ram Mohan insisted that the worshippers should wear suitable dress, and went so far as to prescribe a definite costume. The utmost care was taken to keep the whole proceedings within the bounds of Hinduism. The Vedas were chanted from a sort of ante-chamber, so that they might not be polluted by contact with the vulgar. This was not merely a diplomatic move. The leader was deeply impressed with the need of making the movement genuinely national, and he believed he was restoring Hindu worship to its pristine purity. Yet now, as before, his advocacy of spiritual religion brought him much opposition and persecution. The new society had a very loose organization: there were the four reciters and a secretary, but there were no conditions of membership. The finances were found partly by subscription, the rest being supplied by Ram Mohan himself and the Prince.

It is plain on the very surface that the movement was largely inspired by Christianity. The weekly congregational worship (now first introduced into Hinduism), consisting of the reading of the Scriptures, a sermon, and the singing of hymns, is quite sufficient proof. Prayer seems to have had a very subordinate place, if it had any place at all, in the service; but that is sufficiently explained by Ram Mohan's deistical turn of mind, and by the absence of prayer from the Hindu philosophical systems.

Already the forces of reaction were organizing themselves against Ram Mohan. To fight the *Brāhma Sabhā* and Ram Mohan's social crusade, the *Dharma Sabhā*, or Religion Association, was formed, and a newspaper was published to support the orthodox cause.

Very soon after the founding of the society a site was bought in Chitpore Road, and a building, specially designed for the use of the Samāj, was erected. It was opened on the 23rd of January 1830, a date which has ever since then been celebrated annually by all Brāhmas with great enthusiasm. The Trust Deed of the building is rather a remarkable document. The following extract will be read with interest:

'To be used . . . as a place of public meeting of all sorts and descriptions of people without distinction as shall behave and conduct themselves in an orderly sober religious and devout manner for the worship and adoration of the Eternal Unsearchable and Immutable Being who is the Author and Preserver of the Universe but not under or by any other name designation or title peculiarly used for and applied to any particular Being or Beings by any man or set of men whatsoever and that no graven image statue or sculpture carving painting picture portrait or the likeness of anything shall be admitted within the said building . . . and that no sacrifice . . . shall ever be permitted therein and that no animal or living creature shall within or on the said premises be deprived of life . . . and that in conducting the said worship and adoration no object animate or inanimate that has been or is . . . recognized as an object of worship by any man or set of men shall be reviled or slightingly or contemptuously spoken of . . . and that no sermon preaching discourse prayer or hymn be delivered made or used in such worship but such as have a tendency to the promotion of the contemplation of the Author and Preserver of the Universe to the promotion of charity morality piety benevolence virtue and the strengthening the bonds of union between men of all religious persuasions and creeds.'

Religion was the chief, but by no means the only, interest of Ram Mohan's active mind. He was an eager social reformer, and worked hard against polygamy, and in favour of the marriage of Hindu widows. But no social question stirred him so much as *satī*, the burning of Hindu widows. For the abolition of this inhuman custom he wrote and spoke and toiled for many years, and finally had the joy of seeing it put down by Lord Bentinck on the 4th of December 1829, six weeks before the opening of the Brāhma building.

Now that the battle against *satī* was won, and the Brāhma Samāj not only established but comfortably housed in a building of its own, Ram Mohan thought he might safely carry out his long meditated plan of a voyage to England. He had written to his friend Digby about this project as early as 1817. Many reasons would unite to urge him to go. Realizing to the full the meaning of the introduction of Christianity and of European thought and method into India, he was naturally most eager to see with his own eyes the land and the people which were destined to help so largely in the rejuvenation of his own. There were also a number of questions on which he hoped to influence the Government at home, notably the great problem of the renewal of the Charter of the East India Company. The old Emperor of Delhi, now a pensioner of the Company, wished him to plead his cause with the home authorities, and with this in view gave him the title of *Rājā*. Ram Mohan undertook the task.

Before sailing for England in November 1830, Ram Mohan appointed three trustees to look after the Samāj: Mahārājā Ram Nath Tagore, Kali Nath Munshi, and his own son, Radha Prasad. Visambar Das became secretary. The services were conducted as before; only the day of meeting was changed from Saturday to Wednesday; and this rule obtains in the old building to this day. In arranging to cross the ocean, Ram Mohan took great care to preserve his caste. He took two Hindu servants with him, one of them being required to cook his food in accordance with caste regulations.

Ram Mohan, now Rājā Ram Mohan Ray, was received in England with the greatest warmth and honour by the public generally, by leading Unitarians and other religious men, and by the chief statesmen of the day. He exercised a much greater influence than he could have ever hoped to do; and at the same time came into such close living touch with the best in English life as to be deeply influenced himself. But, to the great sorrow of his friends, he was taken ill, and died at Bristol on the 27th of September 1833.

He was a man of unusually wide sympathies and of large judgment. He realized, as very few men did in his day, the immeasurable results that were destined to flow from the association of England with India, and believed that India would reap very great good therefrom. He also looked forward to India's becoming a Christian country: the exact meaning of this prophecy is discussed below. On the other hand, he realized to the full that no real blessing could come to India by the mere adoption of Western things unchanged. India, he said, would inevitably remain Indian. No gift from the outside could be of any real value except in so far as it was naturalized. His long bold struggle, on the one hand, for religious and social purity, for educational progress and journalistic freedom, and his brilliant literary work and unchanging fidelity to Indian ideals, on the other, had made him not only the most prominent of all Indians, but the one man able to stand between Indians and Englishmen as interpreter and friend.

His death caused dismay in the infant Society which he had left behind in Calcutta, and many of those who at first took part in its work fell away. Prince Dwarka Nath remained a staunch friend, but the chief stay of the whole work was Ram Chandra Bidyabagish, who took charge of the services. Yet the cause steadily decayed. Had it not been for the liberality of the Prince, the current expenses could not have been met.

In 1838, however, five years after the great leader's death, Prince Dwarka Nath's youthful son, Debendra Nath Tagore (*Devendranātha Thākur*) passed through a very decided spiritual change, which made him a consecrated man for the rest of his life. He was then twenty years of age. Next year he gathered a few serious-minded young men round him and formed the *Tattvabōdhini Sabhā*, the 'Truth-learning Association.' They met once a week in his house for the discussion of religious questions, and once a month for worship.

4. Second period, 1841–1865: Debendra Nath Tagore: Indian theism.—In 1841, Debendra and his friends joined the Brāhma Samāj, and the young man was soon recognized as leader. Then the tide turned, and a new period of growth and fruitful labour opened for the Samāj. The *Tattvabōdhini Sabhā*, however, was not merged in the Samāj, but continued to do most valuable work as its auxiliary for many years. A Vedic school, the *Tattvabōdhini Pāthsāla*, was opened, to train young men as Brāhma missionaries, but also with a view to arrest the progress of Christianity, now making considerable headway in Calcutta under Duff's leadership. From beginning to end Debendra wished to be a Hindu, and, unlike Ram Mohan, believed that India had no need of Christ. In 1843 the society's monthly paper, the *Tattvabōdhini Patrikā*, the 'Truth-learning Journal,' began to appear. It was edited by a friend of Debendra, Akshay Kumār Dutt (*Akshāyakumāra Datta*), one of the greatest of Bengali prose-writers, and soon became a very influential paper, leading many thinking men towards the main ideas of theism.

Debendra saw that the Samāj required to be more carefully organized; that, if it was to be a permanent and growing influence, it must have a regularly appointed ministry and definite rules of membership. By the end of 1843 he had drawn up what is known as the Brāhma Covenant, a short series of solemn vows to be taken by all who

wished to become members of the Samāj. The most important of these vows were promises to abstain from idolatry and to worship God by loving Him and by doing such deeds as He loves. The old reciter, Ram Chandra Bidyabagish, was now formally set apart as *āchārya*, i.e. 'minister'; and Debendra and twenty of his friends solemnly took the vows of the Covenant before him. The conscientious observance of these vows involved a good deal of trouble and difficulty. Debendra himself had to leave the paternal mansion and wander in the fields when any of the domestic ceremonies were being performed, as they were full of idolatry. At the same time a brief form of prayer and adoration, known as *Brahmōpāsana*, *i.e.* 'worship of Brahman,' was compiled, and became the norm for the services. This introduction of prayer is a most noteworthy point.

The work of the Vedic school began to bear fruit. By 1844, Debendra was able to send out a number of young missionaries, and *samājes* began to appear outside Calcutta. From time to time Debendra himself also travelled and preached in the chief towns of the north, from East Bengal to the Panjāb. By the year 1847 the number of covenanted Brāhmas had grown to 647.

The Samāj tended to become a Vedic sect. In 1845 the *Tattvabōdhini Patrikā* declared that the Vedas were the sole foundation of their belief; and in 1846, Debendra said: 'We consider the Vedas, and the Vedas alone, as the standard of our faith.' But many serious questions arose about the text, the interpretation, and the inspiration of the Vedic hymns and the Upaniṣads. Duff had twitted Brāhmas with believing in the infallibility of the Vedas. Consequently four scholars were deputed to go to Benares so that each might study and copy one of the four Vedas and might return to Calcutta with the fruit of his labours.

Debendra steeped himself in the Upaniṣads, and compiled from them in 1850 a volume of extracts for use in the services of the Samāj. This volume, named *Brāhma Dharma*, 'Religion of Brahman,' contains what is known as the *vīja*, or 'seed,' a brief outline of Brāhma doctrine in four statements; the *Brahmōpāsana*, or order of service; and then a selection of passages from the Upaniṣads, followed by passages from other Hindu books. Later an exposition of Brāhma doctrine was added by Debendra.

Meanwhile the results of the labours of the four Vedic students had become available. After much discussion the doctrine of the infallibility of the Vedic literature was abandoned, and it was decided that only those parts were to be accepted as true which harmonized with pure theism. As Keshab Chandra Sen afterwards said, 'The Vedas were thrown overboard by Babu Debendra Nath Tagore, and the Brāhma Samāj bade farewell to Vedāntism.' This happened in 1850. The Samāj thus found itself without an authoritative sacred standard, and was thrown back on natural religion. This raised the whole problem of religious knowledge. At first no definite theory was advanced, but within a few years the leaders found it possible to express themselves; and the Brāhma doctrine came to be this, that our knowledge of God has two sources, *Nature* and *Intuition*.

The faith of the Samāj at this time may be summed up in the following six propositions:

(1) God is a personal being with sublime moral attributes.
(2) God has never become incarnate.
(3) God hears and answers prayer.
(4) God is to be worshipped only in spiritual ways. Hindu asceticism, temples, and fixed forms of worship are unnecessary. Men of all castes and races may worship God acceptably.
(5) Repentance and cessation from sin is the only way to forgiveness and salvation.
(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.

It is noticeable that the doctrines of the Fatherhood of God and the immortality of the human soul had not as yet found their way into the creed.

The Samāj had proved itself a progressive movement; but circumstances were now approaching which were destined to accelerate the rate of progress for a time. In 1857 a young man named Keshab Chandra Sen (*Keśavachandra Sena*) joined the Samāj. He was not a Brāhman, but belonged to an influential and well-to-do family of the Baidyā caste and of the Vaiṣnava sect of Hinduism, and he had received a good modern education. He had suffered from religious melancholy, but through prayer had found peace. For two years he took no active part in the work, but from 1859 he threw himself into it with great energy. Keshab Chandra Sen had to endure serious persecution for the sake of his faith. Debendra took a great liking to this gifted young man, while Keshab looked up to Debendra with love and reverence. From this time they enjoyed five years of strenuous, yet happy and harmonious, work together.

The Brāhma Vidyālaya, or School, was opened—a sort of informal Theological College. Keshab lectured in English on the philosophy of Theism, while Debendra discussed in Bengali the theology of the Brāhma Samāj, with the double result that Brāhma doctrine was more clearly formulated, and a number of young men received a very useful theological training. Keshab's capacity as a lecturer in English became known, so that he frequently addressed audiences both of Brāhmas and of others in Calcutta, in English, and occasionally took a tour in the country.

The year 1860 produced large results in social reform. Keshab formed the *Saṅgat Sabhā*, or 'Friendly Association,' the meetings of which were now devotional, now given up to the discussion of pressing questions both religious and social. The findings of this enthusiastic group of young men greatly influenced Debendra himself. As a result of the reasons urged by them, he gave up wearing the sacred Brāhmanical thread. He also took up the whole question of domestic ceremonies. Every noticeable event in Hindu family life is marked by the careful performance of ancient traditional rites, all of which are tainted with references to the gods of Hinduism and with idolatrous practices. Debendra set to work to purge his own family of idolatry; and also worked out, for the use of the Samāj, new or modified rites whence everything heathen and idolatrous had been eliminated. These are known as Brāhma rites; the manual is the *Anushṭhān Paddhati*; and Brāhmas who use them in their families are known as 'Anushṭhānic Brāhmas.' At Keshab's suggestion the Samāj also began to follow the example of Christian philanthropy, and gathered money and food for the famine-stricken.

After leaving college, Keshab had obtained a post in the Bank of Bengal. In 1861 he gave this up in order to devote his whole time and energy to the work of the Samāj. Several of his followers belonging to the *Saṅgat Sabhā* followed the example of his self-sacrifice, among them his life-long friend and biographer, Pratāp Chandra Mozoomdār (*Pratāpachandra Majumdār*). The *Indian Mirror* was started, that the movement might have an English journal for the expression of its views; and the Calcutta College was founded—the earliest attempt made by a native of India to found a college for English education.

Next year (1862) Debendra resolved to honour his brilliant young friend by giving him the place in the Samāj which his great capacities deserved. Hitherto only Brāhmans had been

allowed to lead in the services; and while Debendra himself was the *āchārya*, or 'minister,' the other two who took part in the services were called *upāchāryas*, or 'under-ministers.' Debendra decided to ordain Keshab, non-Brāhman though he was, and to give him the full title *āchārya*. It was also arranged that henceforward no 'minister' should be allowed to wear the sacred thread. The steady pressure of rational principles, urged largely in the *Saṅgat Sabhā*, had brought Debendra to this notable advance. Keshab had to struggle and to dare before he succeeded in being allowed to bring his young wife, in defiance of all Hindu custom, to the solemn service in which he was set apart as *āchārya*; but his courage produced fruit, for from this time Brāhmas began to give their wives more liberty, and the uplifting of the women of India was thus helped onward. From this time Debendra was known as the *pradhān āchārya*, or 'chief minister.'

Two years later, Keshab took a more extended tour. Among other places he visited Bombay and Madras, and was received with so much honour and enthusiasm that he was able to draw men out who afterwards founded *samājes* in these great cities. His brilliant success on this tour, and the wide outlook which the journey gave him, first suggested to his mind the idea of a Society representing the whole of India—a Brāhma Samāj of India.

But the pace at which affairs were moving was too fast for some of the older members, and Debendra himself began to be afraid that Keshab and the other progressives would lose spiritual religion in their zeal for change. As we have seen, Debendra had gone a long way in the matter of reform; yet there were several points on which his Hindu prejudices had not given way. He disliked inter-caste marriages, and he could not endure the marriage of widows. Then the two men looked at the whole matter from different points of view. Debendra regarded social questions as secondary in comparison with religion, and wished to initiate no change unless it was absolutely necessary. This explains his unwillingness to drive men by regulation to give up the sacred thread.* Keshab, on the other hand, saw clearly that the social health of the people demanded radical change. There were also religious differences. Debendra's was a deeply devotional nature, but he was still Hindu in temperament, and the great facts of sin and repentance did not obtrude themselves much in his prayers or his teaching; while Keshab was keenly alive to the ethical side of religious experience, and was daily coming more under the influence of Christ.

During Keshab's absence on his long tour, the more conservative spirits gained an increasing hold of Debendra; two parties began to appear more distinctly in the Samāj, and suspicion was soon rife between them. Attempts were made to heal the breach, but without result. Debendra was determined to resist Keshab. The cyclone of 5th Oct. 1864 so damaged the building that it became necessary to hold the services in Debendra's house, and he took the opportunity to allow *upāchāryas* wearing the sacred thread to officiate.† Keshab and his party protested, but received no satisfaction. Finally, they sent Debendra what was really an ultimatum. It contained three points, but only one had any significance, viz. the old demand that no man wearing the sacred thread should be allowed to lead the devotions of the Samāj. Debendra felt it to be his duty to refuse; and Keshab and his party withdrew, leaving all the property of the Samāj behind them. The date was Feb. 1865. Keshab was only twenty-seven years of age, and Debendra, who had already been a religious leader for twenty-four years, was only forty-seven. He had still forty years of life before him. At this time there were only a few *samājes* in existence outside Calcutta.

5. Third period, 1865–1878: Keshab Chandra Sen: universal theism: the two Samājes.—Keshab did not organize a new Samāj at once, but spent some eighteen months in seeking to rally sympathy and supporters to his cause. He had carried the *Indian Mirror* with him. He started a vernacular paper called *Dharma Tattva*, 'the Truth of Religion,' in opposition to Debendra's paper, the *Tattvabōdhini Patrikā*. Both were used vigorously in favour of his party. He toured in East Bengal and lectured in Calcutta. Early in 1866 a copy of Seeley's *Ecce Homo* fell into his hands, and greatly stimulated his thought. He was already deeply impressed by Christ; this made his heart overflow. He delivered a lecture on 5th May in the theatre of the Medical College on 'Jesus Christ: Europe and Asia.' It is no theological discourse, but a manly appeal to his fellow-countrymen and to Europeans to listen to the teaching of Christ and to imitate Him. The most notable point in the address was the calling of attention to the fact that Jesus was an Asiatic. Keshab got at the heart of his audience by the appeal founded on that telling fact. He speaks of Christ's 'extraordinary greatness,' His 'supernatural moral heroism'; but nowhere does he depart from the strictest theistic position. Yet the enthusiasm for the character of Christ and the very high estimate of His influence which the lecture expressed led many to believe that Keshab was about to become a Christian. At least one young man was won by this lecture to the spiritual life, and afterwards to the position of a Brāhma missionary—Pyari Mohan Chundhuri.

On 11th Nov. 1866 a meeting was held to form the new society. It was opened with a rather startling religious service. Besides the usual prayer and hymns, it included the reading of passages from the Hindu, Christian, Muhammadan, Zoroastrian, and Confucian Scriptures. Keshab's distinctive ideal, the rising above the limitations of the Hindu system to a rational faith which should give complete social and intellectual freedom, was thus set forth in a way which no one could misunderstand. His immediate object, however, was to receive the adhesion of all Brāhmas in every part of India to the organization which he proposed to form. Hence the following resolutions, which were put to the meeting and carried unanimously:

(1) That the Brāhma Samāj of India be established for the admission of all Brāhmas, and for the wide propagation of the religion.
(2) That this association be bound to preserve the purity and universality of its religion.
(3) That people of both sexes, believing in the fundamental principles of Brahmaism, shall be admissible as members.
(4) That mottoes and maxims agreeing with the principles of Brahmaism be gleaned and published from the religious writings of all nations.
(5) That a vote of thanks be given to Debendra Nath Tagore for the unflagging zeal he has ever exhibited, and the indefatigable labour he has undergone, for promoting the progress of the religion.

Keshab was appointed the secretary of the Samāj, and the further organization was left altogether in his hands. From this date onward, then, we have two societies—Debendra's organization, hereafter known as the *Ādi Brāhma Samāj*, or original society, and Keshab's new body, the *Bhāratvarshīya Brāhma Samāj*, or Brāhma Samāj of India.

* The equivocal position of Debendra's family makes his defence of caste practice the more piquant. They have Brāhman birth, wealth, and high character; yet they are known as *Pirali* Brāhmans, for the family was outcasted long ago on account of some contact with Muhammadanism.

† Pratap puts this event in 1865, Lemard's chronology would put it in 1863, but the cyclone gives us the true date.

As to the balance of the two parties, Mr. P. C. Mozoomdar writes: 'The Pradhān Āchārya had a number of elderly adherents, and his accomplished sons, some of whom were of the same age as Keshab, helped his cause energetically. But there is no doubt that Keshab's enthusiasm and genius drew all the youth and intelligence of the community, and his important reforms attracted the sympathy of influential outsiders.' The new organization won to itself many earnest men hitherto unattached to the Samāj, including a number of outstanding personalities whom Keshab had influenced during his tour in Bombay and Madras.

In accordance with the fourth resolution as given above, a selection of texts from the Hindu, Buddhist, Jewish, Christian, Muhammadan, and Chinese Scriptures was made and published, in 1866, under the title *Ślōkasaṅgraha*, i.e. 'A Collection of Verses,' for use in the service of the Samāj.

As Keshab's party did not yet possess a building of its own, weekly services were held in his house in Colutola Street. The closer relation which the new body sustained to Christianity was indicated in these services being now regularly held on *Sunday*; while, to show their continued sympathy with the old Samāj, the leaders still attended the weekly service there on Wednesday.

One of Keshab's chief cares was to form *the Mission Department*. His young comrades, who had been members of the *Saṅgat Sabhā* (see above), became the missionaries. Including himself, there were at this time seven or eight, the chief others being Pratap Chandra Mozoomdar, Gaur Gabinda Ray, Mahendra Nath Bose, Bejay Krishna Goswami, and Aghar Nath Gupta. They were each and all of them attached by the closest personal ties to Keshab, for he had been the means through which they had entered into the joy of the new life. His enthusiasm and self-sacrifice laid hold of them. They gave up all worldly prospects, and accepted a life of poverty, strenuous work, and persecution. But there was practically no organization. Consequently, while each man's relation to the leader was all that could be desired, their relations with each other were governed neither by regular rule nor by personal attachment. In spite of this, however, things went fairly well at first. The missionaries went preaching and teaching in the city and the country, and many individuals were won for the cause, while here and there a new Samāj was formed. But there were frequent quarrels among the missionaries, personal animosities, divisions on principle and on method; and their leader was powerless to overcome them. He pleaded and waited patiently for peace and bound each man to himself, but could not compose differences.

The great breach with the original Samāj depressed Keshab. He was very lonely in his separation from his friend and benefactor, Debendra. This sadness and loneliness threw him back on God. In prayer and fervent adoration he found new strength. He drew the missionaries and many others into his devotions, and with them held long daily services in his house. Here the heart of the new Samāj was formed; here the members were united by common prayer and consecration into a working body. Keshab himself passed into an experience of religious feeling such as he had never had before—not even at his conversion. He had always prayed, but prayer now became to him one of his chief joys and necessities. In this new experience Keshab freely drew from the Vaiṣnavism which was traditional in his family, and also from Christianity. The old Hindu word *bhakti*, which includes both love to God and faith in Him, became one of the watchwords of the movement. Vaiṣnava modes of worship were also introduced, musical instruments, originally used in Chaitanya's propaganda, being employed to accompany the singing of hymns. The Vaiṣnava *nagarkirtan* (i.e. 'town-praise'), or procession through the streets with flags flying and drums beating, with chorus-singing and dancing, was taken over and used with success. In the midst of this tempest of devotion, Keshab drew up a *Liturgy* for the services of the Samāj, which is still very widely used. Another most useful feature, first elaborated at this time, is the holding of annual festivals, when the whole day is spent in fervid prayer and worship. The *Brahmōtsava* ('Feast of Brahman'), the day of rejoicing in the Lord, was first held on 2nd Nov. 1867. So the anniversary of the opening of Ram Mohan's building, which is regularly celebrated by all Brāhmas, became the *Māghōtsava* (festival of the month *Māgha*); and the opening of Keshab's building later led to the keeping of a third annual day in August, the *Bhādrōtsava* (festival of the month *Bhādra*). Nor did this satisfy Keshab's longing for fellowship with God: a little house was found about twelve miles from the city, where he and the missionaries were accustomed to retire periodically to spend the time in reading, prayer, and meditation, under rigorous rules of self-denial.

In 1867, Keshab delivered a lecture in Calcutta on 'Great Men.' It seems to have been meant partly to correct the misapprehensions created by his lecture on 'Jesus Christ: Europe and Asia,' partly to give expression to his latest convictions on the subjects of Inspiration and Revelation. His utterances on this occasion again caused a great deal of questioning and excitement. Debendra recognized two sources of knowledge of God—Nature and Intuition; Keshab added a third—God in history, speaking through great men. It was surmised that he regarded himself as one of the great men he had spoken of, one sent by God on a special mission, and therefore to be followed, honoured, and obeyed. Early in 1868 he left Calcutta on a wide tour, accompanied by a number of his young helpers. The first place visited was Monghyr. His eloquence, his fervid piety, and his new Vaiṣnava methods took the place by storm, and there was a great outburst of religious emotion. Here some of his followers began, in accordance with the supposed ideas of his lecture on 'Great Men,' to prostrate themselves before him and treat him with special honour. Others protested vigorously against this '*guru*-worship'; and a serious division began to show itself in Keshab's Samāj. The leader said he did not wish for these demonstrations; yet he did not rebuke those who practised them. As a result two of the missionaries left him. From Monghyr he passed on to Simla, where Lord Lawrence, drawn to him by his lecture on Jesus Christ, received him with great kindness, and discussed with him the details of a law which he proposed to pass with regard to Brāhma marriages. On the 22nd of August 1869, Keshab's building, styled the *Mandir* (Temple), in Machua Bazaar Street, was opened for public worship with great rejoicings. Several noteworthy men, destined to be leaders, joined the Samāj at this time.

Shortly after the opening of the Mandir, suddenly, without any warning, Keshab announced that he intended to proceed to England. His friends were considerably astonished at his proposal, for, as there was no organization, the whole work of the Samāj depended on him personally, and no one knew how things would get on without him. Keshab arranged in general how the work was to be distributed, the duty of editing the *Indian Mirror* being laid upon Pratap. The visit to England won him many new friends, and greatly extended both his experience and his influence.

He was received with the utmost cordiality, and addressed large audiences all over the country. The Queen gave him an audience. What impressed him most of all that he saw in Britain was the Christian home.

On his return to Calcutta in Nov. 1870, Keshab set himself to advance social reform in several directions. A new society was started, 'The Indian Reform Association,' and five departments of effort were resolved on: Cheap Literature, Charity, Female Improvement, Education, Temperance. Work along several of these lines was started under the Samāj, especially a Normal School for girls, the Victoria Institution for women, an Industrial School for boys, and the *Bhārat Āśram* (Indian Refuge), a sort of club-home, in which family life was cultivated, and women and children educated. A Bengali paper, the *Sulabh Samāchār* ('Cheap News'), was published weekly at one farthing, and did a great deal to stimulate native journalism. In connexion with all this social activity, we must note the passing of the Brāhma Marriage Act in 1872, largely as a result of Keshab's advice and agitation.

Pratap Chandra Mozoomdar had meanwhile been steadily growing in experience and strength. In 1873 he published his most noteworthy book, *The Oriental Christ*, which shows great spiritual insight, and also demonstrates how completely the author's own religious life depended on Christ. The following year he paid his first visit to England, and was very well received.

In 1873, Keshab further defined his position with regard to Revelation and his own place in the Samāj by a public lecture on Inspiration. Inspiration, he declared, is the other side of prayer. Man asks; God gives. Inspiration is not God speaking by fits and starts, but a perpetual breathing of His spirit.

He felt very distinctly that opposition was developing against him within the Samāj. There were three main causes: his autocracy, his doctrine of *adesh* (*ādeśa*), and his attitude towards the emancipation of women. He ruled the whole Samāj as sole authority, and many believed that his lecture on 'Great Men' was meant to suggest that he had a right to demand obedience; the party opposed to him was democratic, and wished to establish a constitutional government in the Samāj. By *adesh* Keshab meant the direct command of God laid upon him by special revelation at certain definite moments in his career. To his opponents these special revelations were both blasphemous and dangerous. They were also eager to give their women more liberty, and to allow them to participate in university education; while Keshab was opposed to both ideas. He feared that such freedom as is enjoyed in Europe would be most dangerous in India, and desired to secure for young girls a very quiet training, to fit them for the life of the home, rather than the same education as their brothers were receiving.

Keshab was only too conscious of all that was going on, and in consequence fell once more, in 1875, into his old melancholy. Once again, however, he fought his way to light through prayer and consecration. He called his followers around him, and, declaring that the Samāj was becoming immersed in the world, called for *vairāgya*. This is an old Vaiṣṇava word meaning 'separation,' separation from the world. He called for new asceticism, for fresh vows of poverty, and himself led the way. The daily services in his house now became longer than ever, and a settled habit in Keshab's life. His followers responded to his leadership as loyally as ever, ready to do all that he was ready to lead them into. A little later he arranged them in four groups, calling them devotees of *yōga*, *bhakti*, *jñāna*, *seva*, according as their chief method of devotion was mystic union with God, love, knowledge, or service. The first three are genuine Hindu ideas; the last he took from Christianity.

But the self-consecration of the central party failed to draw the opposition back to allegiance; and soon an act of Keshab not only convinced them that all their surmises were justified, but led to an open schism. The young Mahārājā of Kuch Bihār, a Native State in North Bengal, had been carefully trained as a minor under English officials. These men were most anxious that he should marry a girl who would be a help and not a hindrance to him; and the proposal was made that he should marry Keshab's daughter. The Mahārājā and the girl were both under age, and the Mahārājā and his family were Hindus. Now Keshab had been fighting against child-marriage and heathen-marriage, and had even seen his convictions worked into the Brāhma Marriage Act of 1872. Consequently, as soon as the proposal was made public, Brāhma opinion made itself very distinctly heard against it. But Keshab believed that God had told him to go on with the wedding; and having, as he believed, received satisfactory guarantees that the wedding would really be only a betrothal, so that the parties would not live together until they came of age, and that the marriage ceremonial would contain nothing idolatrous, he gave his consent. But whether through misunderstanding or through deceit, what Keshab expected was not carried out. He allowed himself to be hustled in the matter, and idolatrous ceremonies were introduced in defiance of his wishes. Keshab returned to Calcutta covered with shame. There could be only one result. He had flouted public opinion and had dishonoured his own principles. The opposition now became insistent that he should be deposed from his position in the Samāj. A meeting was held, but no business could be transacted. Attempts were made to seize the Mandir, but failed. So the protesters, a large body of intelligent influential men, left the Samāj.

The Ādi Samāj from 1865 to 1878.—There is very little to say with regard to the Ādi Samāj; for it was left with only a small group of supporters at the time of the secession, and the lost ground was never recovered. Just about the time when Keshab left, ladies were present for the first time at the Anniversary, and they have since attended the services. In 1872, Debendra gave up the active management of the Samāj, and betook himself to religious retirement, his son Dvijendra (*Dvijendranātha Thākur*) being appointed *āchārya* in his place; yet until the day of his death he kept in close touch with the work of the Samāj.

Statistics.—In 1878 there were already 124 *samājes* in existence, most of them connected with the Brāhma Samāj of India. When the second schism took place, a majority of the provincial *samājes* sympathized with the protesters.

6. Fourth period, 1878–1884: three Samājes: Keshab's ritualistic theism.—Those who left Keshab in 1878 were, as we have seen, a numerous body of men, most of them men of character and influence. Nearly all the missionaries, a number of the other leaders, and a section of the rank and file remained with him; but a large part of the church went out. It was decided to establish a new Samāj. All the provincial *samājes* were consulted; and, with the approval of the majority, a meeting was held in the Town Hall, and the following resolution was passed:

'That this meeting deeply deplores the want of a constitutional organization in the Brāhma Samāj, and does hereby

establish a Samāj to be called the *Sādhāran Brāhma Samāj*, with a view to remove the serious and manifold evils resulting from this state of things, and to secure the representation of the views and the harmonious co-operation of the general Brāhma community, in all that affects the progress and well-being of the Theistic cause and Theistic work in India.'

An organization was sketched, consisting of four officers and a committee containing representatives of the provincial *samājes* as well as of the Calcutta society. Services were begun in temporary rooms, and arrangements were soon commenced for the erection of a building. The name *sādhāran* means 'general,' and is clearly meant to suggest the catholic and democratic nature of the new Samāj. An English and a Bengali magazine were started to represent the views of the society. Only those who were willing to sever themselves so definitely from idolatry as to give up caste and adopt Brāhma rites at their domestic ceremonies were counted as members of the Samāj.

One fact of great importance remains to be noted. The Samāj had many able men, but no single man of religious genius like Ram Mohan, Debendra, or Keshab. Pandit Siva Nath Sāstrī was their most prominent man, but he did not dwarf the others. While the Samāj may not have grown so rapidly as it would have done had it been under a great leader, this circumstance has made the evolution of a workable free government a much simpler problem. Four missionaries, Pandit Siva Nath Sāstrī being the leader, were set apart for the work of the Samāj; and a large number of educational and religious activities were commenced. A great deal of attention was given to female education. On 22nd Jan. 1881 the new Mandir *in* Cornwallis Street was opened.

The creed of the Sādhāran Samāj is the same as the creed of the original Samāj (given above under 4), with the addition of the three following articles :

(7) God is the Father of men, and all men are brothers.
(8) The soul is immortal and its progress eternal.
(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.

Keshab's Samāj.—During the first two years after the division there is not much to note in the history of Keshab's church except his lectures. He first of all discussed publicly the question, 'Am I an inspired prophet?' and gave a negative answer, but declared himself in the same breath to be 'a singular man,' with special relations with heaven. 'The Lord said I was to have no doctrine, no creed, but a perennial and perpetual inspiration from heaven.' In another lecture he dealt again with Christ, definitely saying, 'There is such a thing as divinity in Christ,' but explaining his words by the doctrine of Divine humanity. The most important pronouncement, however, of this time was a proclamation, issued as a direct message from India's Mother. He thus announced for the first time his adhesion to the doctrine of the Motherhood of God. It was that most eccentric yet most interesting ascetic, Ram Krishna Paramhansa, who brought Keshab to believe the doctrine.

But if these first two years were quiet and uneventful, 1881 opened in a different way. At the Anniversary in January, Keshab appeared, with twelve of his missionaries around him, under a new red banner, on which were inscribed the words, *Naba Bidhan* (*Nava Vidhāna*, 'New Dispensation'). On a table lay the four great Scriptures of the world : the Hindu, the Buddhist, the Christian, and the Muhammadan. He proclaimed the Brāhma Samāj to be God's latest dispensation, His new gospel sent to complete and to harmonize all existing religions, and himself and the twelve around him to be the God-appointed apostles of the movement. Henceforth Keshab's Samāj was known as the Church of the New Dispensation.

At a later meeting the Twelve were solemnly ordained for their duties. They were now Keshab's twelve apostles ; and they met regularly under his presidency as the Apostolic Durbar. Strict vows were laid upon them. Four of the apostles were selected, to each of whom was entrusted the study of the Scriptures of one of the four great religions. Orders were also arranged for women and girls, for men and for boys. Each Order was a consecrated Brotherhood or Sisterhood, and was under strict vows.

But the most striking innovation was the introduction of a number of picturesque ceremonies from Hinduism and Christianity. The purpose was to adapt theism to the comprehension and imagination of the common people. Several well-known Hindu sacrifices were performed in the Mandir, and by means of mystic explanation were harmonized with Brāhma belief. Baptism and the Lord's Supper were introduced, and became integral parts of New Dispensation ritual, their symbolism being explained in accordance with Keshab's ideas. Fantastic pilgrimages to various prophets and leaders were imagined and acted, and belief in the possibility of communion with these saints of former days was encouraged. A sort of Calendar of the Saints was arranged, so that at fixed times all the faithful might concentrate their thoughts on the same individuals. Next year a Mystic Dance was introduced ; and, a little later still, Keshab appeared before his people as a juggler, performing magical feats with tree-leaves, beads, stones, with the Cross, the Crescent, the Trident, and other symbols, illustrating the equally marvellous jugglery of New Dispensation theology. All this eclecticism and ritualistic show naturally widened and deepened the gulf between Keshab and the large party who had left his church.

In 1882 his doctrine underwent a further extension, or at least an unfolding. Christ had been declared 'divine' in his lecture on 'India asks, Who is Christ?' He now taught the Christian doctrine of the Trinity, declaring that the one God existed as the Father, the Son, and the Blessed Spirit.

'In this plane figure of three lines you have the solution of a vast problem. The Father, the Son, the Holy Ghost ; the Creator, the Exemplar, the Sanctifier ; I am, I love, I save ; the Still God, the Journeying God, the Returning God ; Force, Wisdom, Holiness ; the True, the Good, the Beautiful ; *Sat, Chit, Ānanda* ; Truth, Intelligence, Joy.'

He similarly adapted Hindu polytheism to Brāhma belief, speaking of the analytic process by which the idolater selects an attribute or attributes of the Eternal for his particular use, and the synthetic process whereby the theist reaches the One God of the whole earth.

The great leader passed away on 8th Jan. 1884. He was a man of great natural gifts. He had imagination, intellect, eloquence ; and he had in a very high degree the electric personality, the piercing speech, and the dramatic action which make the brilliant leader. But it was not these things that most impressed his followers. What conquered them was his devotional life, his religious fire, the depth and sincerity of his moral and religious nature. It was this that made them follow him through everything, despite all his faults. For Keshab, having won them by moral forces, led them by the passion and strength of his religious feeling, not by any intelligible movement of reason. He had enough insight and imagination to enable him to present a case with great force ; but he was no quiet, convincing thinker, far less a system-builder. His teaching, especially during the last period, is a collection of powerful but disjointed ideas, a heap of sparkling stones instead of a building. He had singularly

little organizing power. In all the work he controlled, every activity depended upon his personal relationship to the worker. Hence, as soon as the personality was withdrawn, the whole combination fell in pieces. In spite of the simplicity and generosity of his nature, there was a strain of deep reserve, not to say concealment, in his character, which caused him trouble with those who loved him most: he did not realize the wisdom of sharing his mind with his colleagues. This trait partly explains the confidence with which he uttered some of his later declarations of belief, and the amazement with which they were received. They had probably been a long time in his mind before he gave utterance to them.

The late Registrar of Calcutta University, Mr. K. C. Banurji, always maintained that Keshab died a Christian, that in the last few months of his life his mind changed. Mr. Banurji was very intimate with Keshab, and he was not the man to speak without serious evidence; his confident affirmation must therefore not be abruptly dismissed as untrue. On the other hand, Keshab maintained such a consistent attitude to Christ throughout his life, and, despite his reserve, was so little likely to change on a point of such importance and not tell his friends, that it is difficult to believe that Mr. Banurji was not mistaken.

Pratap Chandra Mozoomdar was absent on his second tour in the West, visiting Europe and America, when Keshab died—a circumstance which complicated the situation in Calcutta seriously.

In order to complete the creed of the New Dispensation Church, three articles require to be added to the nine of the Sādhāran Samāj:

(10) God is a Trinity in Unity—Father, Son, and Spirit. God is Mother as well as Father.

(11) Brāhmaism is not a new religion, but the essence of all religions, the one universal faith; the Brāhma Samāj is God's latest Dispensation; and the missionaries are the God-appointed apostles of the new gospel.

(12) Knowledge of God comes through *Inspired Men* as well as through *Nature* and *Intuition*. He reveals His will on occasion to His servants by command, *Adesh*.

Statistics.—When Keshab passed away, the number of *samājes* all told was 173. There were said to be about 1500 covenanted members, and about 8000 adherents.

7. Fifth period, 1884-1909: progress of the Sādhāran Samāj.—During this period both the Ādi Samāj and the New Dispensation Church have declined. Indeed, the old Samāj is now almost a family affair. Keshab's apostles still hold bravely on, but they have a comparatively small following in Calcutta, and their relationships with *samājes* outside are not very definite. With Keshab's death the New Dispensation at once became a staid body with an unchanging theology, like the other two branches: the contrast between this period and Keshab's last quinquennium is very marked. When he passed away, the development of Brāhma doctrine ceased. Indeed, a blight seems to have fallen on all three Societies; for during the last quarter of a century no theological work of any importance has appeared, although hymn-writing still flourishes.

The Sādhāran Samāj.—This has gone forward, not changing much in matters of faith or of practice, but slowly growing in numbers and in influence. The absence of a great leader robs their annals of great events; and we need not linger over the various difficulties they have had to encounter in working out and maintaining a constitutional government. We shall therefore merely sketch the position of the Samāj of to-day.

The affairs of the Samāj are controlled by the General Committee, which consists of 63 members, representing Calcutta and the rest of India in about equal proportions. The officers are a president, a secretary, three assistant secretaries, and a treasurer. These, with 13 others, chosen by the General Committee, form the Executive. The general work of the Samāj throughout India as well as in Calcutta is conducted by the missionaries, with their two auxiliaries, the Sadhan Asram (*Sādhana Aśrama*) and the Sebak Mandali (*Sevaka Mandali*). Pandit Siva Nath Sāstrī, though now well advanced in years, is still [1909] their chief missionary. He represents the Hindu side of the Samāj. Beside him there stands a young man of considerable promise, Hem Chandra Sircar, who was trained in Manchester New College, Oxford, and represents the Christian element. There are nine other missionaries. Sita Nath Tattvabhushan, a well known Vedāntist, is their chief educationalist and philosopher. The *Brāhma Vidyālaya*, or Brāhma School, is a Theological Institution for training young missionaries. The Sadhan Asram, or 'Work Refuge,' is a hostel attached to the Mandir; but the phrase is now more frequently used of the group of students and other workers residing in the Asram who form a society for practical service. Their work ranks next in importance after that of the missionaries. Similar societies have been formed in a few places outside Calcutta. Several notable laymen render the Samāj large assistance in the Sebak Mandali, or 'Lay-workers' Union.' The Samāj possesses a press in which its publications are printed, the *Indian Messenger* and the *Tattva Kaumudi*, i.e. 'Moonlight of Truth,' being the two journals. There are 43 provincial *samājes* formally affiliated with the central organization, and as many more in fellowship, although not affiliated. There are 1044 initiated members in all; but large numbers of men and women are practically members, though they have not been initiated. The activities of the Calcutta congregation, besides the Sunday services, are the Sunday School; the Sañgat Sabhā, which meets weekly and discusses religious questions; the Theological Society; the Students' Weekly Service, which, though not organically connected with the Samāj, is conducted in the Mandir every Saturday evening, and draws many students to theism; the Brāhma Girls' School; and the City College.

The New Dispensation Samāj.—After Keshab's death, those members of the Apostolic Durbar who were in Calcutta met and declared that Keshab was still their leader, and that no one could ever take his place in the Mandir. But other members of the missionary body who happened to be absent, notably Pratap Chandra Mozoomdar, seriously objected to this decision, and the mass of the members stood with them. Keshab's family, on the other hand, wished to treat the Mandir and Keshab's pulpit as a sort of family preserve. Pratap, who was by far the best known of the missionaries, and the only one at all fitted for being the leader of the Samāj, wished to be elected to take Keshab's place. But the Apostolic Durbar would not agree to do that or anything else. On the one side, then, stood the quarrelling missionaries; on the other, the members, begging them to be reconciled and to make arrangements for the work and the worship of the Samāj; and so affairs have continued ever since. The old personal quarrels which Keshab was unable to put down, and which were prevented from breaking up the Samāj only by his personal influence, came uppermost, and ruined everything. For a time the laity took the Mandir into their own care, and conducted the services, excluding the missionaries from control, because they would not agree. There have been many attempts at reorganization and as many failures. Once at least the police had to be called in. There has been no open schism, but there has been constant dis-

union; and to-day three competing services are conducted under the name of the New Dispensation every Sunday; and even so there are some members who refuse to attend any one of the three.

The active work of the Samāj was thus brought almost to a complete standstill, and growth became impossible. The New Dispensation counts for less and less in the life of India.

Pratap Chandra Mozoomdar, who was often spoken of as the leader of the Brāhma Samāj, never became the acknowledged leader even of the New Dispensation Church. His name and influence were far greater in England and America than they ever were in Calcutta and India. Failing to obtain Keshab's position, he went into semi-retirement, editing his paper, *The Interpreter*, and writing elsewhere occasionally, but seldom doing any missionary work for the Samāj except when he appeared to deliver the annual address in the Town Hall. His appearance at the Parliament of Religions in Chicago in 1893 still further widened his reputation, and he was always a welcome speaker on Calcutta platforms, but he was scarcely a religious force in the city. He passed away in 1905. His funeral demonstrated in a very remarkable manner, to one observer at least, what a large number of fine intellectual men were still connected with the New Dispensation Church. Every one seemed fit to be a leader.

Since Keshab's death the fantastic elements of his later teaching and practice have not been obtruded on the public. The tendency is towards simplicity except on one point: the death of Keshab is celebrated annually as the day of the 'Ascension of the Master.'

To-day there are still a number of the old missionaries connected with the Samāj, notably Gaur Gabinda Ray, Mahendra Nath Bose, Pyari Mohan Chaudhury, but they do not pull together. Christ is one of several causes of division among them. Then there are a number of younger men who take a prominent place, especially Prof. Benoyendra Nath Sen, who is a very finished speaker, and Pramatha Lal Sen, who is an acceptable preacher, and does a good deal of work among young men.

Besides the Sunday services, the publishing work of the Samāj and the educational activities are still kept up. There is a hostel for students. The missionaries do a good deal of visiting, keeping the flame burning in families.

The Ādi Samāj.—The history of the original Samāj during the last quarter of a century is very little more than the doings of Debendra Nath Tagore and his phalanx of gifted sons. Yet there are a few societies outside Calcutta which retain their connexion with the Ādi Samāj. The theology of the Samāj has remained stationary since the schism of 1865. Debendra gave up his position after more than thirty years of service. For thirty-three years more he lived the life of a religious recluse; for he survived until 1905. He was almost exclusively under Hindu influence, his master being Rāmānuja. To him ancient India was the cradle of all that was pure in morals and religion. So powerful was Hindu thought in his life, that up to the very end he never definitely told his disciples that he had given up the doctrine of transmigration, as practically all Brāhmas have done. He was never known to quote the Bible, and in his printed sermons no reference to the teaching of Christ is to be found. The direct communion of the human soul with the Supreme Spirit was the most salient point in his teaching. His public life proved him to be a man not only of religious genius and intellectual capacity, but of a peculiarly noble and generous character. His long retirement added to the spell he had thrown over the minds of his fellow-townsmen. By common consent he was called the *Maharshi*, i.e. the great *ṛṣi*, or saintly seer. The bleached complexion and massive architecture of his face still revealed, a few months before his death at the age of eighty-seven, the lofty spiritual nature and the sensitive heart which had done so much in the far-away years.

The provincial samājes.—These continue to grow slowly in number and influence. A few are still in closer sympathy with the Ādi Samāj than with the more progressive bodies; a number belong in doctrine and worship to the New Dispensation order, but a great and increasing majority have their closest connexion with the Sādhāran Samāj. These distinctions, however, count for far less in the country than they do in the metropolis; and a missionary is certain to receive a warm welcome almost anywhere, no matter to which of the branches he belongs. The Prārthanā *samājes* in Western India, though not organically connected with the Brāhma Samāj, are on terms of close friendship and fellowship.

These societies vary largely both in size and vitality. A number have a considerable membership, own their own building, and do a good deal of work. Their activities follow the lines laid down in the older bodies. They have their weekly religious service, usually on Sunday, and sometimes a prayer-meeting besides. Keshab's original *Saṅgat Sabhā* ('Friendly Society') was copied in the Sādhāran Samāj in Calcutta, and the example has been very generally followed elsewhere. It is a sort of Wesleyan class-meeting. The annual festivals are celebrated with enthusiasm. A library and some simple missionary work complete their religious activities. But they consider their work incomplete, if they do not advance education, especially for girls. Some form of philanthropic work is usually attempted also.

It will probably conduce to clearness if we represent the theological affinities of the three *samājes* graphically:

(1) God is a personal being with sublime moral attributes.
(2) God has never become incarnate.
(3) God hears and answers prayer.
(4) God is to be worshipped only in spiritual ways. Men of all castes and races may worship God acceptably.
(5) Repentance and cessation from sin is the only way to forgiveness and salvation.
(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.

Creed of the Ādi Samāj.

(7) God is the Father of men, and all men are brothers.
(8) The soul is immortal and its progress eternal.
(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.

Creed of the Sādhāran Samāj.

(10) God is a Trinity in Unity—Father, Son, and Spirit. God is Mother as well as Father.
(11) Brāhmaism is the universal religion; the Brāhma Samāj is God's latest Dispensation; and the missionaries are His apostles.
(12) Knowledge of God comes through *Inspired Men* as well as through *Nature* and *Intuition*. He reveals His will on occasion to His servants by command, *Ādesh*.

Creed of the New Dispensation Samāj

8. **Characteristics of the movement.**—(*a*) *Width of diffused influence, narrowness of effective range.*—The Brāhma Samāj, while claiming to be a world-wide movement, and actually making its voice heard in Europe and America, has not succeeded in extending its effective service beyond India, has made no deep impression outside the province of its birth, and even where it is strongest has touched only the educated class. There is a Brāhma Mission to hill tribes in Bengal, and a Prārthanā Samāj Mission to the depressed classes in Bombay, but nowhere has the movement taken a serious hold of the common people. It is a remarkable fact that in 1901, when the Samāj was already seventy-three years old, only 4050 inhabitants of India were returned as Brāhmas in the Census papers. This, in the case of a really indigenous movement, which has had three men of high religious genius amongst its leaders, is very noteworthy.

(*b*) *Influence on India.*—The Samāj has exercised a very great influence on religious opinion all over India. The work of the Samāj has also had a good deal of weight, especially in Bengal, in the matter of social reform. But the number of those who have been induced to become real theists by the Brāhma propaganda is certainly disappointingly small. The great success of the revival within Hinduism has operated powerfully to check the drift to Brāhmaism; for men are now inclined to believe that they can get as much spiritual religion in Hinduism as in Brāhmaism, and that social reform is almost as possible within as without the camp.

(*c*) *Debt to Christianity.*—Brāhmaism owes a large debt to Christianity. The primal impulse came largely from Christianity; Brāhma methods are almost without exception Christian; Brāhma criticism of Hindu social wrongs is simply Christian criticism; and large masses of Keshab's religious and moral teaching were taken direct from Christ, and still fertilize Brāhma thought and conduct in the Sādhāran as well as in the New Dispensation Samāj.

But the Church in India also owes a considerable debt to Brāhmaism. The latter has done much to open the Hindu mind to serious monotheism; has helped to break down prejudice against Christ; like John the Baptist, has prepared the way for Christianity in more than one centre; and has drawn out of Hinduism into spiritual religion many an individual who has finally found peace in the Christian Church.

(*d*) *Relation to Hinduism and Christianity.*—The official doctrine of the Samāj puts Hinduism and Christianity in the general catalogue of particular religions as opposed to Brāhmaism, which is regarded as the absolute and universal religion. But in actual fact these two religions hold an altogether different position. They are the sources of Brāhmaism. A careful survey of the doctrines that have been professed in the Samāj will show that there is not one which has not been drawn either from Hinduism or from Christianity. The frequently repeated assertion that Brāhmaism is the essence of all religions is without any basis in fact. The Brāhma system is drawn from Hinduism and Christianity.

The next point to note is how these twin sources are related to each other in the product. The most cursory glance will convince any one that the Hindu and the Christian elements stand side by side, neither controlling the other. Indeed, the controlling principle throughout has not been revelation, whether Hindu or Christian, but rationalism;* and the elements taken from Hinduism and Christianity have been selected as being in harmony with the dominant rationalistic idea. The only complicating circumstance is this, that the rationalism has not remained constant, but has altered in the course of the history; under Ram Mohan taking its colour from Deism, under Debendra from Rāmānuja, under Keshab from Unitarianism in the earlier period, from Christianity in the later. Hence the clear distinctions between the *samājes* to-day.

The way in which all this came about is also clear. There were two points on which Ram Mohan and Keshab, the two creative leaders, were thoroughly convinced: (1) that Christ would yet be supreme in India;* (2) that the future religion of India would be Indian and loyal to Hinduism. On both these points, we may be certain, history will justify them. It was in the inference they drew that they went wrong. Believing that the future religion of India would be loyal both to Christ and to Hinduism, they imagined that they had only to bring the two together and the result would be the future religion of India. They both failed to see that essential Hinduism and essential Christianity can no more mingle than oil and water. Had they lived later, they would not have made the mistake; for they were men of open mind; and the science of religions would have revealed the truth to them.

Hinduism is ancient not only in age, but in character. It enshrines a very early conception of the universe—a conception which men's minds have now outgrown. This is to the effect that time and matter and souls are as eternal as God; the world is a never-ending series of meaningless, self-repeating changes; matter is the seat of all evil, and nature does not reveal God; men in the world are spirits in prison, and their only hope is release from its toils.

Christianity, on the other hand, brings us a conception of the universe which modern men can believe, and which stimulates and invigorates man's life in every direction: God is the loving Father; men are His children; the world is God's good world, prepared for the disciplining of His children; progress, not repetition, is the inner secret of the world-process.

These two conceptions cannot be reconciled or brought to act in harmony; the one excludes the other. The history of the Samāj supplies a clear illustration of the truth. Ram Mohan and Debendra endeavoured to keep the Samāj within the limits of the old religion, but the outcome of the history has been to drive Brāhmas to stand outside the caste system altogether and to avoid most scrupulously the touch of Hindu sacerdotalism and worship. In no other way can the health and strength of the community be secured. The Ādi Samāj has withered, because it has attempted to remain within the caste system—has attempted to graft Brāhmaism upon Hinduism. The Christian elements in the Brāhma faith are hopelessly antagonistic to the Hindu system. So Brāhmas to-day are as completely outside Hinduism as Christians are.

Thus Ram Mohan and Keshab were wrong in thinking that a new, vigorous, modern religion could be created merely by placing a few of the leading ideas of Christianity alongside of a few of the leading ideas of Hinduism and allowing the two to come together on equal terms. In order to reach the end in view, two things are indispensably necessary: (1) The supremacy of Christ must be frankly and ungrudgingly accepted. Only

* This became explicit in 1850, when the authority of the Vedas was abandoned.

* Cf. Ram Mohan Ray's *Precepts of Jesus*; the last chapter of Miss Collet's *Life and Letters of Raja Ram Mohan Roy*; and Keshab's two lectures on 'Jesus Christ.' Pratap's position was precisely the same; see *The Interpreter, passim.*

in this way can a system be secured which modern men can accept, and which will produce a healthy modern nation. Rationalism is sterile in India as elsewhere. (2) Christ must be set forth as coming not to destroy Hinduism, but to fulfil it; not as the enemy, but as the consummator of the religion. For, while the basal conceptions of the Hindu system are utterly opposed to Christianity, all the highest and holiest things in it—all that the modern thinking Hindu feels he cannot turn his back on, all that Ram Mohan, Debendra, and Keshab wished to conserve, everything that has vitality and growth in it—all this arose in reforming movements, eager spiritual struggles to transcend the traditional Hindu system. Within the pale of Hinduism these lofty spiritual aims have never had a chance to realize themselves. It is only in Christianity that a free open field for their development is found. Hinduism must die into Christianity, in order that the best that her philosophers, saints, and ascetics have longed and prayed for may live. Thus the truth with regard to the long controversy between Brāhmaism and Christianity is that the missionaries were right in insisting on the supremacy of Christ, and the Brāhmas were right in insisting that Hinduism should not be treated as a weed.

LITERATURE.—The best brief outline of Brāhma history is found in Monier Williams, *Brāhmanism and Hinduism*[3], London, 1887, pp. 475–528. There are four longer narratives: Leonard, *A History of the Brāhma Samāj*, Calcutta, 1879; Mozoomdar, *The Faith and Progress of the Brahmo Somaj*, Calcutta, 1882; F. Lillingston, *The Brahmo Samaj and Arya Samaj*, London, 1901; and Slater, *Keshab Chandra Sen and the Brāhma Samāj*, Madras, 1884 [the first two interesting but inaccurate, the last two reliable, and the last containing numerous extracts from the writings of Keshab Chandra Sen]. For further detail consult the following biographies: Collet, *The Life and Letters of Raja Ram Mohan Roy*, London, 1900; *The Autobiography of Maharsi Devendranath Tagore*, translated from the original Bengali, with an introduction by Satyendranath Tagore, Calcutta, 1909; Mozoomdar, *The Life and Teachings of Keshub Chunder Sen*, Calcutta, 1887; and *Heart-Beats by P. C. Mozoomdar with a Biographical Sketch* by S. J. Barrows, Boston, 1894; the monograph, Sastri, *The New Dispensation and the Sadharan Brahma Samaj*, Madras, 1881; the works of the leaders: *The English Works of Raja Ram Moham Ray*, edited by J. C. Ghose, 2 vols., Calcutta, 1885–87; *The Complete Works of Raja Ram Mohun Roy, Sanskrit and Bengali*, Calcutta, 1880; Keshab Chandra Sen, *Lectures in India*, 2 vols., London, 1901; *The Brahmo Somaj: Keshab Chandra Sen in England*, Calcutta, 1881; Mozoomdar, *The Oriental Christ*, Boston, 1883; the collections of texts, *Brāhmadharma*, Calcutta, 1850, and many editions later; *Slokasaṅgraha*, Calcutta, 1866, and many editions later; the Year Books, the Annual Reports, and the Periodicals.

BRAHŪIS.—See BALUCHISTĀN.

BRAIN AND MIND.—**1. Historical.**—That the brain of man is that part of his bodily organism which is in immediate connexion with his mind—whatever the intimate nature of that connexion may be—is to-day an accepted fact. That it has not always been so may be seen from the number of words in our own and in other languages which appear to connect mental and moral qualities with the heart, with the stomach, and even with the kidneys and bowels. In early Greek speculation, Alcmæon of Crotona (beginning of 5th cent. B.C.), a reputed pupil of Pythagoras, is referred to as holding that sense-impressions are combined together in the brain, which receives them through certain avenues (the nerves), and constructs out of them 'memory, opinion, and science'; and that the controlling centre (τὸ ἡγεμονικόν) of the body resides in the brain (Diels, *Frag. d. Vorsokratiker*[2], i. 101 f.). Hippocrates also and Democritus were credited with a similar belief. It was partially adopted by Plato, who placed the reasoning portion of the soul in the head, passion in the heart, and desire in the lower part of the body (*Timæus*, 69–72). According to Aristotle, the soul, as the *entelechy* of the body, was correlated with its every part; while the brain was an inert mass, the function of which was to cool the blood for the heart (*de Part. An.* ii. 7).* Galen (2nd cent. A.D.) recognized the dominant part played by the brain as the centre of the nervous system, by which the 'vital spirits' were distributed over the body; but it was in the ventricles or spaces rather than in the substance of the brain that he placed the 'seat of the soul' (*de Usu Partium*, lib. 8). These or similar views prevailed until the beginning of the 17th cent., when the anatomy of the brain began to be more clearly understood through the work of Varolius and others. From this date the tendency was to subdivide the brain, and to ascribe to separate centres the different mental functions; the most comprehensive attempt of this kind being the phrenological system of Gall and Spurzheim (1810). Their system was deficient, however, both in psychological analysis and in scientific proof: they referred different moral and intellectual characters to different areas of the surface—and underlying parts—of the brain, and assumed that the skull with its 'bumps' followed closely the outline of the brain. Causality, Combativeness, Philoprogenitiveness, the Sense of Language, and Calculation are a few out of their thirty-eight promiscuously grouped 'faculties.' A reaction followed with Flourens, who taught (in his *Recherches expérimentales*†) that the whole brain is the organ of mind, that loss of or injury to any part of it weakens its general function, *i.e.* lessens the degree of mental activity, but does not remove any *special* function. It was not until 1861, when Broca published his paper *Sur le Siège de la Faculté du Langage articulé*, that the theory of special localization began to take a new and more adequate form. The researches of Hitzig, Munk, Meynert, Flechsig, and many others in Germany, and of Ferrier, Horsley, Schäfer, etc., in England (see Literature at end of this art.), have, since 1870, gone far to establish the doctrine on a sound basis, although its interpretation is still disputed.

2. General relationship.—The general correlation between brain and mind is established partly by comparative, partly by pathological, data. (*a*) In closely allied animal species, it is found that the relative weight of the brain or corresponding ganglia increases with the complexity of the life of the animal, with its adaptability to new surroundings—in short, with all that is summed up in the vague term 'intelligence.' A striking instance is the ant's brain (the *corpora pedunculata*), which in the worker ant is very large, in the queen ant much smaller, and in the male ant almost absent; while activity and 'intelligence' are proportionately distributed (Forel). The correlation is closer still if, instead of weight, the surface-area of the brain is taken. In higher animals the nerve-elements are massed in the grey matter, the *cortex*, of the brain; and by means of *fissures* and *sulci*—dippings and foldings of this outer 'bark' into the substance of the brain—the surface may be enormously extended without a proportional increase in volume or weight. In the main, also, if animals of different species, but of approximately the same size and of similar *habitat*, are compared, the brain increases in relative weight (or surface-area) as the rank of the animal in the scale of evolution is higher. Nearest (but *longo intervallo*) to man in this respect come the anthropoid apes.

In the development of the brain with *age* in the human individual a similar comparison is found to hold. As the mental capacities improve, the brain

* ὁ μὲν οὖν ἐγκέφαλος εὔκρατον ποιεῖ τὴν ἐν τῇ καρδίᾳ θερμότητα καὶ ζέσιν (Berlin ed. 652 a. 24).

† *Recherches expér. sur les propriétés et les fonctions du système nerveux*, 1824, [2]1842. Cf. his *Phrenology Examined*[2], 1845, tr. Meigs, 1846.

grows in volume until about the age of fifteen, when it reaches a certain maximum relative weight; after this *development* takes the place of *growth*, the brain-elements entering into more and more complex relation with each other, but without much increase in size or number. From the age of fifteen there is a gradual decline in relative weight. In general, also, a lower value has been found for the *average female* than for the *average male* brain, alike in weight, in surface-area, and in thickness of cortex. This is true even when allowance is made for the differences in relative size of body. Various interpretations of the fact may, however, be given. Lower races also show, on the average, lower standards of brain-weight. Individual men of markedly superior intellectual powers have in many cases been found to possess brains in which there was more than average development of the brain surface, the *sulci* being cut deeper, and having more numerous ramifications than in the normal man. The brains of Gauss and Helmholtz are well-known examples. On the average, 'eminent men' tend to have higher than the normal brain-weight; at the same time some great personalities have had skulls of relatively small brain-capacity for their race; and *vice versa*, it has been remarked, many persons of large skull capacity have been inmates of our poorhouses and prisons. The factors making for development, more especially the all-important one of *opportunity for exercise*, are, of course, co-determining elements with the initial growth-capacity itself. The actual development attained in adult life is a resultant of many diverse factors. It is to be noted especially that, apart from its correlation with mind, the brain has important functions that are purely physiological; it regulates the movements of the body and of its different members, and especially it regulates the nutrition, and other processes of metabolism, which take place in the particular organs of the body. Accordingly, such factors as body-weight, stature, mobility, rate of metabolism or vitality, and plasticity stand in intimate relation to the brain-capacity of the organism. Biologically considered, intelligence falls under 'plasticity'; it is a function by which the organism adapts itself readily to new surroundings or situations, and by which it carries over the experience of the past into the present, to the advantage of itself or of its species.

(*b*) The argument from the pathology of mind and of brain points in the same general direction, viz. to the conclusion that mental capacity on the one hand, mental vivacity on the other, are correlated with the development and with the functioning—healthy or the reverse—of the brain. No responsible physician now regards mental perturbations as anything but *symptoms*, that is, as consequences or effects, of which the immediate cause, whatever the primary or ultimate cause may be, is a defect or disease of *the brain*. The disease may be (1) *developmental*, the result of a defective start-off in life, owing to which the brain does not reach its full growth, or grows disproportionately, or is more sluggish in its working than the normal or average brain (as in imbecility), or is more unstable, and therefore unfit to cope with a great crisis in life such as the onset of puberty, for example, constitutes. The disease may be (2) *adventitious*, the result of any one of the innumerable strains and stresses to which the brain is liable from bodily disease, accidental injury, excessive use, the abuse of stimulants, etc.; or (3) *degenerative*, an accompaniment of *decay*—the wearing out of the brain or of part of the brain in old age, while the body as a whole remains relatively healthy. Again the cases are recognized as falling into two broad divisions, according as they derive from organic, structural defects or changes of the brain, or from merely functional changes — changes depending on the nutritive or other chemical processes in the brain or in any part of it. But mental pathology has by no means advanced so far as to be able to foretell the changes that will be found at death in any given form of insanity: there may be no visible degeneracy at all, and, *per contra*, the brain of a person dying in perfect sanity, according to the judgment of his neighbours, may show marked signs of organic defect. Numerous cases are recorded in which very extensive degenerations of the brain, even to the whole of one of the hemispheres, have been found without any mental defect having been remarked during the subject's lifetime. While this is admitted, however, it only alters our interpretation of the correlation between mind and brain; it does not throw any doubt upon the existence of a correlation.

3. **Elements of the central nervous system.**—The morphological element in the cortex or grey outer layer of the brain is the *neurone*. It consists of (1) the cell-body, (2) the *dendrites* or short branching outgrowths, (3) the long axis-cylinder. There are numerous different forms of cell. Thus, as many as eight different layers may be distinguished in some parts of the cortex from without inwards, each marked by the presence of a characteristic form of cell. The largest are the pyramidal cells, which are most numerous in the motor-zone, and measure from 50 to 120 μ.* In the body of the cell is a nucleus, and often within this can be distinguished a nucleolus. The nucleus undergoes marked changes under exhaustion, as does also the form of the cell. From the cell branch out, usually in several directions, a number of protoplasmic fibres, giving off collaterals at right angles, and ending (as do the collaterals also) in basket- or bush-like masses of fine terminal fibrils: hence the name *dendrites*. One of the prolongations of the cell is, however, of a different nature. It is the axis-cylinder, or axone, issuing usually in a direction different from that of the dendrites. The axones form the white fibres of the brain and spinal cord; each is protected or isolated by a sheath of connective tissue, and a layer of myeline—a fatty substance—between the fibre and the sheath. It is this myeline that gives the white appearance to the nerve-fibres, and it has been shown that it is formed only with the actual functioning of the nerve-cell. Thus Flechsig has determined, through this fact, the successive dates at which in life the different 'brain-centres' become active. The axis-cylinder or axone is the true nerve-process, *i.e.* that by which the excitation is conveyed to the brain from a sense-organ, or to the muscle from a brain-centre, or between two such brain-centres themselves. Some of the fibres are of great length, running in some cases from the cortex down to the foot of the spinal cord. The dendrites, with their shorter processes and basket-work endings, may be regarded as the receptors, the means through which the excitation of one element is transmitted to another.† There is no continuity, according to the prevailing view, between the endings of one cell and those of another, the fibres in all cases ending freely, but usually in the close neighbourhood of, or perhaps in contact with, those of another cell or group of cells. On the other hand, it has been shown that the fibrils of the axone are continuous, passing *through* the nerve-cells to the various dendrites or branches.

The function of the cell-body seems to be mainly either (*a*) that of a nutritive centre, or (*b*) that of a store-house of energy. Distributed between and among the nerve-cells are cells of the *neuroglia*, or supporting tissue.‡ The axones, as has been said, become medullated fibres, passing either vertically downwards to the lower brain and spinal cord (projection-fibres), or horizontally along to the neighbouring centres, or across by way of the *corpus callosum*—the central commissure of the brain—to the other hemisphere. The nerve-fibres are either afferent (centripetal) or efferent (centrifugal), the former leading *to* the cortex from the lower brain or spinal cord, and being ultimately connected through other neurones with the sense-organs, the latter leading *from* the cortex to the lower brain and spinal cord, and finally, through connecting links, to the muscles, the glands, the viscera, or other organs of the body. Experiments show that the direction in which the current of excitation will flow is not dependent upon the *nerve-fibre* itself, but upon the *connexions* at either end. Thus an afferent fibre may be transformed into an efferent fibre. The law of the Specific Energy of Nerve-fibres (Johannes Müller) was interpreted as implying that a given nerve-fibre, no matter by what means or at what point in its course it was stimulated,

* μ=1/1000th millimetre.

† Energy is transmitted *to* the cells through the dendrites, and *from* the cells through the axis-cylinder (v. Gehuchten); Golgi regards the function of the dendrites as that of taking up food from the blood-vessels.

‡ Various other functions have been suggested for the neuroglia. Cajal regards the expansions and contractions of its cell as conditions of sleep and of waking respectively.

would give rise to its proper sensation, or would contract its given group of muscles, or cause secretion in its given gland, whatever its particular function might be, and that this specificity was inherent in the fibre itself. Later it was thought to depend upon the brain-centre in which the fibre ended; but there can be little doubt that Wundt is right in his view that it is the peripheral organ, sensory or muscular, that determines in the first instance the character of the reaction, and that the peripheral organ in its turn has been gradually developed in adaptation to the physical stimuli acting upon the organism, which in their sum make up its environment. This is true at least of the *origin* of such paths. Thus, when an electric current sent through any part of the optic nerve gives rise to a sensation of light, this is because the excitation first runs backward to the eye, and there sets up in the retina the changes which are normal conditions of visual sensation.

The neurone, like all other living substance, is subject to conditions of growth and decay: its growth and development are determined by moderate use, its decay and degeneration by excessive use or by disuse. Stimulation causes first of all an increase in volume, and a change of internal structure; later the cell branches out in various directions, until a fairly active cell may have innumerable ramifications—prolongations, collaterals, and brush-like terminals: in this development may be found the physical basis of *practice*, of *memory*, of *mental growth* generally. The effect of drugs or poisons (with which *fatigue* must be classed) is to cause a diminution of volume, and withdrawal of the processes, followed, if prolonged, by other more radical changes. Activity seems to determine reflexly an increased flow of blood to the parts involved,—processes of waste and repair take place more rapidly; if there is excessive activity, however, the continued flow of blood may cause permanent injury of various kinds according to the tissue affected. On the other hand, impaired activity, as in fatigue, reflexly produces diminished flow of blood to the parts involved: the neurones contract in volume and withdraw their pseudopod-like expansions. This is probably the condition of which sleep is the expression. It is noticeable that unconsciousness appears to arise alike from excessive *loss* of blood from the brain (anæmia), and from excessive *flow* of blood to the brain (hyperæmia), the result of which is probably a check to the pulse of the blood (*stasis*). The immediate cause of many mental diseases also is said to be the morbid accumulation of blood in special parts of the brain (Luys, after Forbes Winslow).

4. The special centres: localization of functions.—The complexity of the grey matter of the brain, its numberless cells, the endless tracery of interlacing fibres being understood, the question arises: What is the precise relation of the neurone to mental function? Does the activity of the neurone determine consciousness, and have different neurones different parts to play in giving rise to different mental contents or ideas?

Since 1861, as has been said above, a mass of evidence has been collected which goes to show that not merely does the *general* health and capacity of the mind depend upon the integrity and healthy functioning of the brain, but that also *special* mental functions or capacities are dependent upon certain localized areas or regions of the upper brain. In particular, it has been shown that the capacities to receive and co-ordinate 'impressions' from the different sense-organs—the impressions which are the physical correlates of sensations and perceptions—are connected with definite brain 'centres,' as are also the powers of effecting or voluntarily carrying out movements of the different parts of the body. In the year mentioned, Broca published the paper whose title is given above (p. 824[b]); he claimed to have found that in cases of aphasia—a disease symptomatized, in its pure form, by loss of the power of articulate speech, without any defect in the general intelligence, or any paralysis of the vocal muscles—a small portion of the third frontal convolution of the *left* hemisphere is almost always affected. It was afterwards added that in *left-handed* persons, if aphasia occurs, the injury will be found in the corresponding part of the *right* hemisphere. Since then, many other forms of partial loss of mental powers have been studied both as to their symptoms during life, and as to the state of the brain at death. Again, evidence has been collected since 1870 (Hitzig) from various experiments upon animals. The methods have been (1) the extirpation of smaller or larger portions of the brain, with observation of the animal's behaviour after recovery; (2) the stimulation of the naked brain at different points, with observation of the movements made; and (3) the study of the degeneration of tracts running between the brain and the sense-organs or muscles, after a given portion of the brain has been excised. More recently, our knowledge of the connexion of the nervous elements in the different parts of the brain and spinal cord has been greatly extended by newer methods of section-making and of staining. As a result we obtain a scheme like the following:—

The centres for consciousness, intelligence, and will, as distinct from the centres for reflex and automatic movements and co-ordinations, are located in the cortex or outer grey mantle of the hemispheres; they are usually classified as (1) *sensory centres*, (2) *motor centres*, and (3) *association centres*.

(1) Of the *sensory* centres, that for Sight is placed in the occipital or hindmost *lobe*, more especially in the parts lying about the *calcarine fissure*; that for Hearing in the first and second convolutions of the *temporo-sphenoidal* lobe; that for Smell in some part or all of the so-called *limbic lobe*,* seen on the internal and inferior aspects of the hemisphere; that for Taste perhaps in the lower part of the *temporal lobe* (but on this there is no agreement among anatomists); that for Cutaneous Sensations—including under this title what is called common or general sensibility, organic sensibility, muscular sensibility, sensibility to touch, to temperature, to pain, etc.—is, as might be expected, the most extensive and least definable of all the centres: the tentative conclusion of Bianchi is that its centre is the wide area lying about (and below) the *Rolandic zone*, but that within this there are various centres of 'greater functional intensity'; these vary greatly, both in position and in development, in different individuals (*Text-Book of Psychiatry*, 57).

(2) The so-called *motor* centres, the stimulation of which gives rise to limited movements of different limbs according to the part stimulated, and injury or disease of which is in man connected with limited paralysis of different parts of the body, lie within the area described above as that of common sensibility; but there are also one or two smaller 'centres' in other parts of the cortex. The principal motor zone is that which lies close to the fissure of Rolando; according to most recent views (Sherrington, etc.), just *in front of* and *in* the fissure itself, but not passing behind it, *i.e.* in the ascending frontal convolution, and parts of the first, second, and third frontal convolutions; also, on the inner side of the hemisphere, parts of the marginal convolution, and of the *Gyrus fornicatus*. It is from these parts of the cortex that the great band of white pyramidal fibres issues, passing inwards and downwards between the grey masses of the mid brain (the *Optic Thalamus* and the *Lenticular Nucleus*) to the lower brain, where the greater part of those fibres which 'serve' the limbs of the body cross over ('decussation of the pyramidal fibres') to the side opposite to that from which they set out. Probably all the true motor or efferent fibres, except possibly those of the trunk of the body, cross over at some point in their course, whether through the various commissures or connecting bands between the hemispheres themselves, or in the *Pons* and *Medulla Oblongata* of the lower brain, or in the spinal cord. Thus injury to the motor zone of the right hemisphere is followed by total or partial paralysis of some of the muscle-groups on the left side of the body, and *vice versa*. The motor zone, like the band of pyramidal fibres passing through the internal capsule, has been subdivided into smaller centres. From the front of the brain backwards to the fissure of Rolando, lie

* *Gyrus fornicatus* and *G. hippocampi*.

the centres for movements of head, trunk, and leg, in that order; from the top, downwards towards the fissure of Sylvius, the centres for movements of trunk and leg, of shoulder, arm, hand, and face. In a cross-section of the internal capsule the efferent fibres lie in a similar order—those for the head in front; next, those for the arm; and, finally, those for thigh, knee, foot, and toes.

In what sense are these 'psychical' centres, *i.e.* points at which physical stimulation gives rise to mental impression, or at which mental activity initiates physical action? The first scientific view, held to some extent by Munk, was that the *individual* cell was the *seat* of the sensation or mental image; images were, so to speak, stored up in the cells, much as electric energy may be stored up in an accumulator, and were touched off by stimulation coming either from the periphery (sensation proper) or from other centres of the brain (the memory-image). The destruction of the cell wholly removed the power alike of sensation, of recognition, and of recall in memory; the cutting of the path from the sense-organ to the cell removed the power of sensation, but left the memory intact; and the disconnecting of the cell with other regions of the brain made the memory-recall (recall by association of ideas) impossible, although the power of sensation remained. Some cells were sensory, *i.e.* end-points at which nerve-process was transformed into conscious sensation; others were motor, *i.e.* starting-points at which conscious volition was transformed into nerve-process. This simple 'corpuscular' theory has no longer many supporters.

(i.) The distinction between sensory and motor centres is questioned. The motor centres were held to be those at which movement might be initiated voluntarily or spontaneously, their destruction involving the loss of such power, while the movements could still be reflexly excited, through the lower brain or spinal cord centres. To the idea of such special motor centres objections are urged, both from the physiological and from the psychological sides. It is now known that innumerable sensory fibres lead from the muscles and joints to the brain, and that the muscular sensations derived from these—sensations of the extent, duration, complexity, resistance, etc., of the movements carried out, or being carried out—play a very important part in the formation and development of our ideas of space, of objective reality, and even of our consciousness of personal identity. If from any cause we cease to feel a movement that is in course of completion, the co-ordination becomes imperfect, and indeed absolute paralysis may occur. Quick, emotional speakers frequently show this in a slight degree; both the 'thick' speech and the imperfect control of the limbs in drunkenness must be largely attributed to the same cause. *Locomotor ataxia* springs mainly from disease of the posterior columns of the spinal cord, *i.e.* the sensory nerve-columns; the patient can stand and walk correctly so long as his eyes are open, but collapses when he closes them; he has no longer any sensory consciousness of the position of his limbs, and therefore his movements are paralyzed. The paralysis that occurs in dreams, the failure of actual movement during them, is largely due to a similar cause; not being conscious of the position of our limbs, we have no basis for movement. Accordingly, the motor zone may be really a *sensory* zone, as Goltz, Schiff, Munk, and others hold; or a *senso-motor* zone, as Luys, Luciani, and Horsley maintain. The paralysis that appears after injury may spring not from inability to *innervate* the muscles, *i.e.* to originate and co-ordinate the various contractions or extensions required, but from inability to *feel* the muscles in play, or to form an image of their position—a necessary antecedent to their voluntary control. It may be said, then, that the whole of the cortex is sensory in its functions; there is no doubt that in development it is closely connected with the *posterior*, i.e. the *sensory*, portion of the spinal cord; the strictly motor centres for the co-ordination of movements would then lie in the cerebellum and lower brain.* On the other hand, neither psychology nor histology offers grounds for any fundamental division between sensory and motor processes. (*a*) Every sensation is at the same time a feeling and an effort, every idea is an emotion and a desire. Consciousness is invariably accompanied by changes occurring in the muscular system, in the glands or viscera, as well as in the external muscular system. Every change of consciousness reverberates through the body, and issues outwards in action, *i.e.* every idea is *ideo-motor*. (*b*) There is no break or change apparent in the structure or prolongation of the cells as we pass from a 'motor' to a 'sensory' zone: the large pyramidal cells may be more frequent in the former, but they are not absent in the latter; the fibres are alike throughout, and it is even possible, as Apathy and Bethe hold, that the fine fibrils which make up the fibres are continuous throughout their course in the whole central system. If so, there is no real centre anywhere—no seat either of the soul generally, or of any special faculty or function of it. There is no end-point at which *nerve-process* comes to a stop and *sensation* begins; no starting-point at which volition is transformed into motion. Consciousness must be a correlate not of the functioning of this or of that part of the brain, but of its functioning as a whole. The action of the brain is equivalent to that of a higher and more complex reflex-centre, like the centres of the spinal cord. It performs similar functions also, viz. (*a*) it isolates the excitations, rendering them both more rapid and more effective; (*b*) it co-ordinates movements with greater delicacy of adjustment to different sense-impressions; (*c*) it co-ordinates movements with more effective adjustment (*a*) to the condition of the organism as a whole (fatigue, hunger, satiety, etc.); and (*β*) to the results of the immediate or of the past experience of the individual and of the race. This is the view which, though in a less extreme and materialistic form, is becoming generally accepted. The 'centre,' on this theory, would merely be an important *junction*, not a *terminus*, in the cerebral system. Its injury disorganizes the system, and does so in a definite way for each centre, just as the break-up of the railway lines at Perth would cause a different kind of disturbance and affect different systems from the break-up of the lines at Carstairs.

(ii.) A second point of dispute is whether there are different 'centres' for *sensation* and for *imagery*, respectively, within the same field of experience. Certain facts of mental pathology, and results of experiments on animals, suggest that the sensory cell or group of cells is distinct from that which underlies the memory-image.† In the case of vision, for example, two forms of blindness arise from disease or injury to the visual zone: in the one the subject is completely blind (cortical blindness); in the other he is able to see, but fails to recognize the most familiar objects (psychic- or soul-blindness): thus a dog no longer recognizes its master, its food-dish, or its kennel, except by smell. The failure to recognize might arise from one of two causes, either (*a*) the connexion had been cut between the visual region and the regions correlated with other sensations and memories, hence the sense-impression could not

* Cf. Donaldson, p. 260.

† See Ward's 'Assimilation and Association,' *Mind* [N.S.], vols. ii. and iii.

arouse its associate ideas—in other words, it could not be understood; or (*b*) the memory-image cells of the given objects had been destroyed, and hence the earlier experiences were no longer capable of revival; or, finally, both might have occurred. In man, the failure to *recognize* scenes and persons formerly familiar (psychic blindness) has occasionally occurred, while the power to *recall* visual images and other memories was unaffected. Hence three *pure* forms of mental defect may occur in connexion with injury to the occipital lobe: (α) sensory or cortical blindness, (β) perceptual or psychic blindness, and (γ) visual amnesia, loss of memory for visual images (while the power of recognition remains intact). Corresponding defects are found in connexion with hearing also, and with touch and muscular impressions.* Finally, either of the two last forms may be *partial* or limited; the most important case of such limited blindness is that called verbal blindness—loss of the power to recognize, *i.e.* to read and understand, written or printed words in one's own language. The part of the brain usually affected in such cases is the *angular gyrus*, and the *supramarginal convolution*. This, accordingly, is described as the visual word-centre. There are four such centres, two 'sensory,' and two 'motor.' Of the former, the second is the auditory word-area (called Wernicke's area), in the first temporal convolution; with it is connected the recognition and understanding of heard speech, of spoken words. The two others are the *articulo-motor* area (Broca's centre, referred to above), at the foot of the third frontal convolution; and the *graphomotor* area in the second frontal convolution. Injury to these centres gives rise, in the one case, to loss of the power to utter speech, in the other, to loss of the power to write, in one who has already acquired it. All four centres are located on one side of the brain only—the left side (except, it is said, in left-handed people, with whom the speech-centres are on the right side of the brain). Pure or unmixed forms of any of the mental diseases referred to as aphasia rarely occur, but when they do they are sufficiently striking. Thus a patient may be able to speak, to write and to read, intelligently, and to hear sounds of all kinds, but cannot understand words spoken to him in his own language. This is pure acoustic (sensory) aphasia. It is obvious that persons, blind deaf-mutes, for example, who have learned to read by touch, and to speak with the fingers only, will have different centres from the normal ones, viz., a sensory centre for *tactual* word-images, and a 'digito-motor' centre for gesture and word-making. The language-centres, as is clear from their position, are merely extensions of the ordinary centres for (*a*) visual, auditory and tactual impressions; and (*b*) the kinæsthetic impressions of mouth and throat or hand movements.

It has been supposed, however, that the different *horizontal* layers of the cortex may have diverse functions corresponding to sensation, percept, and image. Both the psychological analysis and pathological evidence prove that the image is not simply a fainter copy of the sensation; it is not even a 'composite' picture derived from a number of successive sensations of the same kind. Thus, the idea that the image corresponds to a weaker excitation of the same nerve-cell or group of nerve-cells as that with which the sensory-impression was connected is no longer seriously held. There is, and can be, no memory of a pure sensation: memory is of a percept, and therefore of a sensation only so far as it forms part of a percept, that is, part of a complex total group or series of impressions. Again, the simplest perception involves elements belonging to more than one sense-region, taste *plus* odour sensations, visual *plus* muscular impressions, and the like; on the other hand, the same sensation enters into innumerable combinations with others, both of its own and of other kinds. A memory image differs from its corresponding percept not only in *content*, i.e. in containing fewer of the characters of the real objects than were perceived in the direct experience, but also in its *accompaniments*—in the absence of those factors which give 'reality' to the percept, the bodily sensations from the accommodating muscles of the sense-organs, and from the limbs, which have reflex tendencies to action in the presence of every 'real' experience. It is true that what is 'real' to me may not be real to my neighbours, in which case my supposed perception is in fact an imagination: it is for me, however, indistinguishable from a perception, and is acted upon as one, simply because it has all the marks of one.

Thus, the differences in brain structure and function which might be supposed to correspond to the differences of sensation, perception, and memory are the following:—(α) *Complexity*: the sensation is correlated with the smallest group of cortical elements, confined to a small more or less definitely localized area; the perception with a larger number, belonging to different areas; the memory-image with a still larger number. The connexions with motor centres in the lower brain are probably equally diverse, and have the same rising scale of complexity. (β) A result of these factors is the *functional* difference, that sensation, perception, memory correspond to cortical processes which are increasingly difficult to excite, which offer a *greater resistance*, therefore require an increasingly strong stimulus, unless where habituation has weakened their resistance-force; which are more unstable, more dependent upon the condition of the body, or of the brain, as a whole, therefore more uncertain; the reaction or response taking a longer time, being more complex and modifiable according to a wider range of conditions, as we pass from sensation to perception, and from perception to imagery. Being the most unstable, the physical basis of the memory-image is also the most likely to suffer, both from chemical deterioration of the blood supply to the brain (as in fatigue, illness, senile decay, etc.), and also from any physical shock to the cerebral system. So in an electrical system, the more numerous the 'connexions' the more likely is a derangement to occur, and the more serious is it when it does occur.

(3) Some writers have gone farther still in their localization, and have determined centres of *association* (Flechsig), of *attention*, of *intelligence*, or of *apperception* (Wundt). Certain regions of the cortex lying between the various sensory centres, and especially the greater part of the frontal lobes, have no special functions that are determinable either by stimulation or by excision in animals, or by the comparison in man of mental symptoms during life with *post-mortem* examination of the brain after death. If defect is obvious at all, it appears to be general: the animal is stupid, irresponsive, mentally sluggish; it lacks spontaneity, and liveliness in its actions. In man, the onset of dementia in old age, or after some severe shock, is frequently found to have been conjoined with extensive degeneration of the frontal lobes. Again, it is here in the main that the wide difference between the human and the lower animal brain is most marked, while Flechsig has shown that in a child's brain the connexions of the sensory areas

* Thus in Heubner's case the subject could repeat any word spoken to him, but could not understand its meaning. It was a mere blur of sound. His 'hearing centre' was found to have been isolated by a lesion, *i.e.* its connexion with other centres had been destroyed.

with the sense-organs and with the lower motor centres are complete a considerable time before the connexions between the frontal lobe cortex and other parts of the brain are perfectly formed. Microscopic examination also shows that these areas have innumerable connexions with the different sensory areas, as well as with the opposite hemisphere and with the lower centres; the former connexions are the so-called 'association fibres.'

The power of abstraction or generalizing, which is the basis of *intelligence*, consists in (*a*) the summarizing of similar experiences, (*b*) the combination of diverse experiences, (*c*) the bringing of these results to bear upon new experiences (adaptation). The main process by which this is achieved is the formation of a type-idea, a representative idea of some kind, of which the *name* is the concrete symbol or counter. Whether the name be a spoken, written, or printed word, or a mere gesture, is immaterial: its relation to the type-idea, and to the many experiences from which the type-idea has been derived, is the same. The name may not be essential to the type-idea, but it is necessary to its communication and to its development: it gives it the necessary fixity and stability. The simplest assumption, accordingly, for the physical basis of intelligence appears to be that of a hierarchy of cell-groups; group V (visual, in the occipital lobe) is connected with group A (auditory, in the temporal lobe) through an intermediate group I (in the intervening or some other area): the excitation of the whole system, V-I-A, gives a combination of the visual and auditory images. Thus, when I see a bell, the excitation of the cortical area V, on which the perception directly depends, passes on to I and A, and thus gives rise to the thought of the *sound* of the bell. There can be no doubt that the great difference between human and animal intelligence depends upon the greater readiness with which these 'associations' are formed, and the rapidity with which they can be called up. It may readily be granted that in the synthesis of diverse sensations and memories into ideas and thoughts, an increasing number of connexions are laid down between different groups of neurones; and central stations will come into existence between the different regions, uniting them with each other and with remoter parts. In this sense, and in this sense only, the frontal lobes may be regarded as the centre for intelligence; they form the largest or most extensive of these intermediary regions.

Diseases and defects of the frontal lobes are frequently accompanied by defective power of attention or concentration (cf. Ribot, *Psych. de l'Attention*), suggesting that this region is the 'centre of Attention.' It is said, however (Schäfer, *Text-Book of Physiology*), that only 20 per cent. in a large collection of cases of injuries, involving the frontal lobes alone, showed evidence of intellectual deficiency accompanying the physical defect. In Goltz's dogs, loss of intelligence was apparent whether the *front* or the *hind* parts of both hemispheres were removed. In the former case, however, the animal became savage and ill-tempered; in the latter, it became gentle and good-natured. What is lost, according to Flechsig (1896), by degeneration of the frontal lobes, is the idea of the self as capable of action—personal interest in outer or inner events, the power of volition, of directing the attention upon this or that. In other words, the frontal lobes, as Wundt implies in calling them the apperception-centres, represent central stations by which new connexions, connexions based on individual experience, are formed between the various particular centres, by which impressions are grouped and correlated, not according to their kind, but according to their bearing on the purposes and aims of the individual. An animal deprived of the frontal lobes can no longer make use of its acquired skill or experience; it falls back to the level of instinctive action and perceptual consciousness. A human being in whom the frontal lobes are undeveloped remains at the level of the infant in intelligence, although he may, should he live, show the instincts and passions of the man.

We may conclude: (i.) that so far as consciousness is concerned the brain areas are *primitively indifferent*. In the nature of things there is nothing to prevent cases occurring in which the so-called visual area is found to be in the service of the auditive consciousness; as a matter of fact, relatively wide variations do occur in the positions of the different centres.

(ii.) In the course of development, a centre is formed not as a *terminus a quo* or as a *terminus ad quem*, but as a connecting station, by which, *e.g.* afferent and efferent fibres may be brought into relation with each other, according to the needs of the organism.* The evolution of the brain as the great *locus* of these connecting points has brought it about that the principal stations are mainly within the same neighbourhood in different individuals. Organic selection also has determined that the right side of the body should be 'served' by the left side of the brain, perhaps because a right limb is more frequently and extensively exercised than a left limb, while the blood is more rapidly and effectively circulated through the left hemisphere (as Wundt suggests): the right *limb* requires more frequent renewal of its material, etc., which the left *brain* is more able to supply. Hence functions which are not bilaterally developed, such as those involved in speech, the appreciation and production of music, mathematical calculation, etc., are also relegated to the left side of the brain. (Language was primitively gesture, involving chiefly actions of the *right* hand.)

(iii.) The localization is not fixed, however, even for the individual. (*a*) Some peculiarity of training may lead to the adoption of the right hemisphere as the field with which the functions of speech, etc., are correlated, or may cause a dislocation of particular centres.† (*b*) After injury to a centre, and the loss of any particular mental ability, the loss may be made good by practice, by re-learning or the like, and thus a new centre becomes trained for the functions which the defective centre performed. This *compensation*, or *vicarious functioning*, may take place either through neighbouring areas or through the symmetrically opposite region in the other hemisphere taking over the function. (*c*) It must be added that in man this compensation is limited in range: if a sensation area is completely destroyed, no recovery of the corresponding sensibility takes place; but the patient may learn to use other sensations to replace those he has lost, as guides for action. Thus a person who has become blind in one half of the field of vision (hemianopsia) cannot after a short time be distinguished in his actions from a normal individual. In the case of higher functions, as thought and speech, the patient may re-build his knowledge upon new material: a 'visualist,' whose visual imagery has been taken from him, and who accordingly has lost the ability to read, may re-acquire it

* Cf. Foster, p. 1060, on the cortical motor area and pyramidal tract: 'We are driven to regard them rather as links, important links, it is true, but still links, in a complex chain.'

† Cf. Bateman, p. 350, on the variations in the 'centre' for language; Foster, p. 1065: 'The passage of nervous impulses . . . is not rigidly and unalterably fixed by the anatomical distribution of tracts of fibres.'

by using the sensations of movement as his materials, and correlating these with the optical impressions. (*d*) In comparing different animals in regard to the effect of excising portions of the brain, it is found that the lower the animal stands in development, the more complete is the recovery from loss of any particular brain-organ likely to be; in other words, the remaining parts more rapidly take up the functions of those removed, and in this case the lower brain-centres appear to act as vicarious organs as well as the neighbouring and symmetrically opposite centres. Even the apparently complete loss of the cerebral lobes from both hemispheres may not permanently destroy the sensibility or general capacity of the dog. Substitution and compensation are rarer in the monkey than in the dog, rarer and less complete in the dog than in the rabbit, in the rabbit than in the pigeon, etc.

(iv.) When new impressions are received, or new ideas formed, it may be supposed that some new portion of the cerebral cortex becomes functionally active: this probably occurs through its entering into contact with other cell-groups. The undeveloped portions of a child's or of an uncultured person's brain cannot, of course, be wholly *in*active, but they remain simple in structure and form; with use they put out prolongations, and enter into touch with others, while at the same time they become more highly differentiated within themselves; with deficient exercise of a developed cell, the opposite processes of contraction and degeneration set in. It may be added that exercise appears to increase the vitality of the brain, and hence the vitality of the body as a whole (Donaldson, chs. 16 and 17). Capacity for work or exercise depends in its turn on interest, and finally on the will of the subject. Hence the remarkable freshness and vigour of intellect which some men have shown even in extreme old age (Thomson, p. 274).

This leads to the final question, *Which is primary, the brain or the mind?* Does the brain with which he is born determine the character and capacity of each individual, or do his character and capacity, *plus* the environment in which he is set, mould and form the brain into an efficient instrument for themselves? There can be no doubt that, as in all such cases, *both* questions may be answered in the affirmative. A child born with an imperfect brain can never achieve a rational mind, and the man with the most perfect brain will *tend* to be foremost in his occupation (which may be that of a philanthropist or that of a 'sharp') and neighbourhood. But the greatest weight in individual life, and the *whole weight* in evolution, must be laid on the two factors of opportunity and use. That is to say, the mind itself and the environment determine between them the structure of their intermediary—the brain. Consciousness is correlated not with any limited section of the brain, but with the whole brain, indeed with the whole nervous system. We may go further and say that consciousness is a response to the functioning of the whole living organism; and that the mind, through the feelings and the will, is '*dynamic*' to the whole organism; in other words, that the action and reaction we have postulated between body and mind are between body *as a living whole* and mind as a *unity*, as an unextended system of qualitative determinations and tendencies. As de Sanctis has said, 'an idea cannot be the uniform and invariable product of a pyramidal cell (the *psychic* cell of Cajal): it exists only at the moment of its appearance, and for the appearance there is required the synergic concurrence of almost all the elementary activities of the brain, *i.e.* the functioning of manifold systems of all kinds of neurones' (*Fenomeni del Contrasto*, pp. 75, 76 note). Cf. Loeb, ch. 17: 'The cerebral hemispheres act as a whole and not as a mosaic of a number of independent parts.' The anatomical localization of fibres is not a 'psychic localization of functions.' This is especially true of the higher ideas, abstract and general ideas, ideas of relations, etc. The formation, the use and the adaptation of a general idea involve not a single group of cells in the frontal lobes or elsewhere; but systems in different parts of the cortex, some acting with greater intensity, some with less, and so in a gradually decreasing scale, all parts of the nervous organism being more or less affected. The localization of functions means that certain parts of the cortex have by their primitive connexions with sense-organs or muscles or both, and by their use in the life of the individual, become centres more readily excitable by particular forms of stimulation. The destruction of such a centre renders the corresponding process impossible until a new area has been educated, *i.e.* has been brought into connexion with the same sensory or muscular organs as the original area. In many cases this may no longer be possible. A large part of the brain may, however, be destroyed without any gap in the mental field, or any serious defect in the mental capacity being observable. A case is reported in which the whole of the right hemisphere was affected, the front portion being entirely void of grey matter, and the remainder degenerate; yet the only symptom manifesting itself was a paralysis of the left side; this had begun ten years before death (Bailey, 1889 [reported by Thomson, p. 63 f.]).

In general, the *degree* of consciousness appears to be correlated with the amount of resistance which is overcome. Learning new ways is always accompanied by intense consciousness, as shown by the concentrated attention it involves, while it also involves a large expenditure of energy, as shown by the readiness with which fatigue occurs. The more familiar the action becomes, the less the intensity of consciousness, until the latter may be wholly latent, as in many of the automatic actions the civilized man goes through in the course of a day. This does not mean that the nerve-process has been 'short-circuited,' that it takes place through lower, reflex centres, and therefore by shorter paths; it means rather that with the same path the resistance is less, and therefore the current flows more rapidly. On the other hand, whatever increases the resistance increases the intensity of consciousness involved in the action. Many poisons, whether of external or internal origin, have this effect. In some forms of insanity, the simplest actions—speaking, walking, or dressing—are accompanied by vivid and painful consciousness, and at the same time by such extreme physical exhaustion that the patient soon becomes quite unable to carry them out. In such cases a very strong stimulus may occasionally overcome the great resistance, and the normal reaction takes place. Thus an overwhelming emotion has been known to do so.

In verbal amnesia, a parallel instance is that known as Wolff's case (cf. Loeb, p. 281).* The patient in this case could not tell the names of objects or their qualities except when some actual sensation was given him: thus he could not say whether sugar was sweet unless he *tasted* it, or whether snow was white or black, unless he *saw* it. Mainly it was the visual sensation that was most effective; but in general the most vivid or most striking sensation was that which was required to arouse the idea or memory. An umbrella, for example, could be named only when it was seen *open*.

We may conclude, then, that the brain-connexions vary in the greater or less resistance they offer to excitation; that consciousness is a correlate of

* For another case see Bateman, p. 103.

high resistance; habituation, automatic action, of low resistance: and the higher the resistance, the stronger the impression that is required to 'touch off' the conscious process as a whole in any given case. In amnesia of all kinds, the most *complex* mental achievements or the most *recent* memories are the first to fail: thus a Bohemian peasant learnt German when he entered the army; after some time, at sword practice, his brain was accidentally pierced; his German failed him, but he retained the power of speech in his native tongue (Adamkiewicz; for other cases see Bateman p. 188). In such cases the brain-associations which are least firmly fixed (either because of their recentness or because of their complexity), *i.e.* those which offer greatest resistance to excitation, are those which first fail in their functions; and in recovery from the disease or injury the order is the reverse, the last memories to return being those of the events immediately preceding the illness, etc. These are only a few of the phenomena which make it certain that the relation between mind and brain is functional, not structural, except so far as structure follows and is determined by function; that the general function served by the upper brain is to correlate the results of past individual experience, as the lower brain correlates those of race-experience, with present and immediate needs and situations, *i.e.* retention and co-ordination; but that individual mental activity is the essential condition both of retention and of co-ordination; that, accordingly, the brain is mainly the instrument, the means, rather than the cause or condition, of mental development.

BRANCHES AND TWIGS.—Branches and twigs are used in a variety of rites and ceremonies, and their use is generally conditioned by the sacred nature of the trees from which they are taken, though this is not always the case.

1. Ritual.—In the ritual of primitive peoples, other ceremonial articles being few in number, branches and twigs have a prominent place. Thus, among the Australian tribes, they are used in a great variety of rites. In the fire ceremony of the Warramunga tribe, huge torches are prepared, made of saplings 15 feet long, thickly encased in a mass of gum-tree twigs; while another part of the ceremony consists in the erection of a long pole to which gum-tree twigs are attached. The men of the tribe at this rite enter a *wurley* made of boughs, and sing there for hours. Bunches of similar twigs are also attached to different parts of the body (Spencer-Gillen[b], p. 380 ff.). At mourning ceremonies, widows of the dead man mourn under the shelter of a bough *wurley* (*ib.* p. 521). In these tribes the dead are often left on a platform of boughs erected on a tree (*ib.* p. 517). Further, at the totem ceremonies of the Kingilli tribe, each performer wears on either thigh what is known as a *tjintilli*. This consists of a central stick, about a yard long, to which are attached a number of leafy green gum-twigs (*ib.* p. 198). A bamboo, to which is tied a leaf of the sago-palm, is used by some tribes in New Guinea to indicate tabued articles (Haddon, *Head-Hunters*, London, 1901, p. 270 f.). But at higher levels, branches and twigs are variously employed. Thus in Japan, at the festival of first-fruits, a place for the *inami-dono*, or rice fruit hall, is chosen by divination and marked out at the four corners by twigs of the sacred evergreen tree, hung with tree fibre. In the setting apart of a portion of rice field, two *sakaki* twigs are planted (Aston, *Shinto*, London, 1905, p. 269). In the Hindu village ritual-marriage of Śiva and Pārvatī, clay images of the divinities are attached to the ends of forked branches, the prongs of which are stuck into heaps of grass and flowers (*IA* xi., 1882, p. 297 ff.). The pious Hindu also uses for the ceremony of teeth-cleaning a twig or small stick, which is cut fresh every day (Monier Williams, *Rel. Thought and Life in India*, London, 1883, pt. i. p. 376). Again, Pliny says of the Celts that they used oak branches in nearly all their ceremonies (*HN* xvi. 44). At the Greek Olympic games the victors' crowns were made of branches of sacred olive, cut with a golden sickle by a boy whose parents were both alive (schol. on Pindar, *Olymp.* iii. 60). The Jews, during the feast of Tabernacles, connected with the ingathering of the fruits of the land, dwelt in booths made of branches of olive, pine, myrtle, willow, palm, and of 'thick trees' (Lv $23^{40ff.}$, Neh $8^{14ff.}$). It is probable that this custom arose out of the practices of an earlier cult of vegetation (see § 5).

2. Lustration.—In lustration, branches and twigs form a natural, and therefore a primitive, form of asperger for sprinkling water or blood over the worshippers, or over sacred objects. In such a ceremony their use is doubtless wider than can now be ascertained, as the method of sprinkling is not always clearly reported. At the native baptismal ceremony in Polynesia, the priest asperged the child with a green branch or twig dipped in water, to the accompaniment of archaic prayers (Tylor[3], ii. 430; BAPTISM [Ethnic], § 7). Lustration ceremonies among the Romans were frequently performed by means of branches of laurel or olive. Ovid speaks of the moistened laurel bough sending forth the sprinkled water at the *Palilia* (*Fasti*, iv. 721 ff.), and describes the rites at the fountain of Mercury, where traders sprinkled themselves and their goods with a dripping laurel branch dipped in its waters (*ib.* v. 663 ff.). Among the Semites, branches and other parts of sacred trees were used for lustrations (W. R. Smith, p. 178). Certain of the sprinklings in the rites of purification used by the Hebrews were performed by a bunch of hyssop. Thus, water was sprinkled with hyssop by a ceremonially clean person over the persons and things which had come in contact with a corpse (Nu 19^{18}). Hyssop and cedar wood, the latter probably in the form of a twig, were also used in the ritual of cleansing the leper or the leprous house (Lv 14); and, in the account of the origin of the Passover, a bunch of hyssop is ordered to be dipped in the blood of the lamb, and used to strike the lintel and doorposts (Ex 12^{22}; cf. also He 9^{19}, Ps 51^{7}). In Scandinavia the blood of sacrificed animals was collected in bowls and sprinkled over the altar, temple walls, and people by means of *blautteinar*, or sortilege twigs (Vigfusson and Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 403 f.; Simrock, *Handb. der deutschen Myth.*, Bonn, 1887, p. 509; de la Saussaye, *Rel. of*

the Teutons, Boston, 1902, p. 376). Sometimes sacred twigs were placed in water which was to be used ritually, as in the Lapp ceremony of baptism, in which sacred alder twigs were used in this way (Tylor[3], ii. 437; cf. BAPTISM [Ethnic], § 7 [5] and [8]). In other cases, a branch is used by itself as a means of purification. In the New Hebrides, it suffices to draw a branch down the body to remove the contagion or defilement (*JAI* xxiii. 12), or, as in Japan, at the new moon ceremonies a branch of *sakaki* is waved in token of the purification of sins (Aston, p. 292). Scourging or beating with branches, whose sacred or magical virtues are supposed to drive away evil influences, is not uncommon (see AUSTERITIES, § 5; de la Saussaye, p. 376; Frazer, *GB*[2] iii. 98, 126–133, 217 ff.).

3. **Sacrifice.**—In sacrifice, branches and twigs are frequently used. In the more primitive forms of sacrifice by fire, the fire is naturally fed with branches. But occasionally branches and twigs of some sacred tree are thrown upon the fire or are burned for purposes of purification or to bring good luck. Instances are found in the burning of cedar and hyssop in the Hebrew sacrifice of the red heifer (Nu 19[6]), the Roman custom of throwing laurel on the sacrificial fire or on the hearth (Granger, *Worship of the Romans*, London, 1895, p. 305; Ovid, *Fasti*, iv. 741), the Hindu feeding of the sacred hearth fire every morning with pieces of consecrated wood generally taken from the *Palāśa-tree* (Monier Williams, pt. i. p. 366), etc. Reference may also be made to the images, made of osiers, within which human victims were consumed by fire among the Gauls (Cæsar, *de Bell. Gall.* vi. 16). For probable late survivals of this custom, see Frazer, *GB*[2] iii. 320 ff. Branches or twigs of sacred trees sometimes accompany offerings; thus, in Scandinavia, twigs were cut from special kinds of trees, and these, interwoven with flowers, were afterwards fastened to the tails of animals intended for sacrifice (de la Saussaye, p. 376). A Hindu instance is that of the balls of rice used in the funeral ceremonies, in which sprigs of the *Tulasī* plant are inserted (Williams, p. 302). Or, again, they are offered as sacrifice, as in the case of the Japanese *kedzurikake*, wands of elder or willow, whittled at the top into a mass of shavings, which are also symbols of deity and fetishes (Aston, p. 191 ff.). Among the Ainus similar wands of willow or lilac, called *inao*, are both sacrifices and fetishes (Batchelor, *The Ainu of Japan*, London, 1892, p. 87 ff., *The Ainu and their Folklore*, London, 1901, p. 92 ff.; see also AINUS, § 23 ff.).

4. **Divination.**—In certain processes of divination the use of branches and twigs occurs. Tacitus says of the ancient Germans that, in order to consult lots, they cut off the twig of a fruit-bearing tree and made it into little wands. Upon these they put distinguishing marks and scattered them at random upon a white garment (*Germania*, ch. 10). These twigs, whether or not the marks on them were runes, are probably connected with the Norse sortilege twigs, or consecrated chips used in divination, and the Frisian *tein*, or twigs, used for casting lots in judicial procedure (de la Saussaye, p. 394; Vigfusson and Powell, p. 411; Simrock, p. 531). For a similar Celtic instance see CELTS, § xiii. (4). Here, too, may be noted the widespread use of the divining rod, a forked twig, usually of hazel. The forks of the twig are held, one in each hand of the seeker, and the twig twists in his grasp when he arrives at the spot under which what he seeks is concealed (Barrett, 'The so-called Divining Rod,' in *Proc. Soc. Psych. Research*, 1897; Lang, *Making of Religion*, London, 1898, p. 164 ff.; Baring Gould, *Curious Myths of the Middle Ages*, London, 1868, p. 55 ff.; see also DIVINATION).

5. **Vegetation-cults.**—Many folk survivals show the uses of branches and twigs in connexion with vegetation-cults. Under various names (Jack-in-the-Green, etc.) and at various times puppets are made of green stuff, twigs, and branches; or selected persons are clad in green boughs, leaves, and flowers, and undergo various ceremonies. These represent the old tree-spirit, or spirit of vegetation, though now no longer regarded in that light by the folk. At such times, also, especially after the ceremony of 'carrying out death,' boughs are cut and brought home to the village, and these have also some connexion with the spirit of vegetation. Many instances of these are collected by Frazer (*GB*[2] i. 214 ff., ii. 82 ff.) and by Grimm (*Teut. Myth.* pp. 769, 772, 775, 784 ff.). The power of the tree-spirit is communicated also to the fields by placing a branch in the furrow, or by carrying branches round the fields, and it is also conveyed to houses which are decked with branches at the times of the old pagan festivals, May-day and Midsummer, and, under Christian influences, at Christmas—probably a survival of the practice at the festival which began the winter season (Elworthy, *The Evil Eye*, London, 1895, p. 103; Brand, *Popular Antiquities*, London, 1870, i. 71, 121, 125, 173, 174, 246 f., 288 ff.; Grimm, pp. 778, 786; *GB*[2] iii. 276 f.; for decking houses at weddings and funerals, and for Palm Sunday customs, see Brand, i. 71, ii. 71 ff., 175). The connexion of the branch with the vegetation- or fertility-spirit is seen in an Irish instance when a bough set up on the house on May-day is supposed to produce plenty of milk during the summer (Brand, i. 131). Branches or twigs from trees regarded as sacred, the rowan, the elder, etc., were placed on houses, stables, sheepfolds, and barns as a protection against evil spirits, witches, and other evil influences. They were also placed in boats, or carried on the person as a talisman. These practices occur very widely in modern European folk custom (*GB*[2] iii. 132, 261, 265; Elworthy, p. 347; Brand, i. 151; MacCulloch, *The Misty Isle of Skye*, Edinburgh, 1905, p. 237). But that it is derived from ancient paganism is shown by similar practices among pagan peoples (Ovid, *Fasti*, iv. 721 ff., vi. 151 ff.; de la Saussaye, p. 376 f. [Scandinavians]; Monier Williams, p. 296 [Hindus]; for the Parsi custom see BARSOM). The Midsummer and other bonfires, as well as the need fire, were fed by branches, twigs, and leaves of oak, especially in Celtic and Teutonic districts (Grimm, p. 605); in the case of need fires, nine sorts of wood were used in Sweden and elsewhere (Grimm, p. 607; *GB*[2] iii. 270, and *passim*). Through these fires cattle were driven, and burning brands or branches were carried through the fields or villages, and set up in the fields (*GB*[2] iii. 313; Brand, i. 215; Grimm, p. 621; de la Saussaye, p. 375 ff.). New fires were lit on the hearth with blazing brands from these fires or with branches lit at their flames (*GB*[2] iii. 245). Brands were also taken from the bonfires and kept in houses or in cattle-sheds, as preservatives against thunder and lightning, fire, and other evils, or were carried about for luck (*ib.* p. 254 ff.). In some cases walnut branches are carried by the people in procession round the fire or passed over it, and then placed on the cattle-sheds, or the backs of cattle are singed with a hazel-twig lit at the fire, or birch boughs are thrown into the fire, in Russia, to cause the flax to grow to the height of the boughs (*ib.* pp. 275, 284, 291). The fires are sun-charms, and the brands have the virtues of the fire and the sun, which they impart to field, house, or hearth, promoting growth of crops, warding off evils, bringing luck, etc.

Connected with the cult of sacred trees was the practice of hanging sacrificial offerings upon their

branches. This practice has occurred wherever tree-worship is found, or where worship took place in sacred groves (see art. TREES; and, for particular instances from South America, New Zealand, and among the Dayaks, cf. Tylor[3], ii. 223 f.; for the Semites, cf. W. R. Smith, p. 169; for the Scandinavians, cf. de la Saussaye, p. 356; and for the Celts, Jullian, *Recherches sur la Religion gauloise*, Bordeaux, 1903, p. 55). Among the Japanese, presents to a superior were delivered attached to the branch of a tree (Aston, p. 215).

In the ritual of healing at sacred wells, a rag which has been in contact with the patient, or part of his clothing, is hung on the branches of a sacred tree near the well, either as an offering or as a magical means of conveying the disease to the tree or of bringing the sufferer within the healing influence of the tree-spirit (see Tylor[3], ii. 150; Brand, iii. 10). Sacred wells are also decked with green boughs on certain occasions, *e.g.* Holy Thursday and the day of the saint to whom the well is dedicated (Brand, iii. 9).

Where sacred trees are venerated, either in actual cult or in late folk-survivals, it is considered sacrilegious to break even a twig from them. To do so will be followed by a punishment, misfortune, or ill-luck. The same is true of trees growing on graves (Tylor[3], ii. 115 [Malagasy]; W. R. Smith, p. 169 [Semites]; Elworthy, p. 99 [Livonians]; Brand, iii. 13 [Celts]; Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871 [Bechuanas]).

Branches are also used in rain magic in a variety of ways, probably because the tree-spirit was originally believed to have influence over the weather. Thus, among the Congo people, mounds are covered with branches of trees and fetish-ornaments. Round these mounds a priest walks, muttering incantations (Reade, *Savage Africa*, London, 1863, p. 363). Pausanias mentions a temple on Mt. Lycæum, whose priest had power to produce rain by throwing an oak branch into a fountain (viii. 38). In Gaul, a naked virgin standing up to her knees in the river was asperged by her companions with branches dipped in the water, as a charm to produce rain (Grimm, p. 593).

The ceremonial cutting of the mistletoe from the oak by the druids, and its use in magico-medical rites, are described by Pliny (*HN* xvi. 44). Frazer connects this rite with the Scandinavian myth of Balder, slain by the mistletoe, and with the plucking of the bough from a tree in the sacred grove by the slayer and successor of the priest of Nemi. The mistletoe was regarded as the soul of the oak, and had to be plucked before the tree, in which dwelt the spirit of vegetation, could be destroyed, or the human representative of the same spirit could be slain (*GB*[2] iii. 446 ff.; FESTIVALS [Celtic]). Mistletoe is also ceremonially plucked in modern folk-custom in Scandinavia, and elsewhere in Europe (*ib.* p. 343). For the bough which had to be plucked by Æneas, before his descent to the under world, see Virgil, *Æneid*, vi. 203 ff.; and for the magic silver boughs of Celtic myth with their precious fruits, see BLEST, ABODE OF THE (Celtic).

See also BARSOM.

LITERATURE.—The literature has been given fully throughout the article. J. A. MACCULLOCH.

BRAWLING.—The word 'brawling' is technically used in English Law for the offence of quarrelling or creating a disturbance in a place of worship, churchyard, or burial-ground. The word is derived from the French *brailler*, 'to be noisy,' which gives the main idea of the term, viz. the disturbing of people at their devotions.

1. **Legal.**—Brawling is a branch of sacrilege, though the latter term is now usually confined to the robbery of churches. The punishment for sacrilege in most countries up to the date of the French Revolution, and later, was death. In England, sacrilege involving the taking of goods from a church or chapel remained a capital offence till 1835, being abolished by statute 5 & 6 Will. IV. c. 81. Brawling, however, had always been treated more leniently. The most vindictive of the English 'brawling' statutes requires merely that the offender shall be adjudged to have one of his ears cut off, or (what a comment on the customs of the period!), if he have no ears, to be marked and burned in the cheek with a hot iron having the letter F, whereby he may be known and taken for a fray-maker and fighter; in addition, of course, to the usual excommunication.

With reference to this law, it must be said that the Act was passed in 1552, a time of great religious disturbance, when the change of religion was taking place in England, and that there had been a good deal of open fighting with weapons, even in churches; so that strong measures were necessary. It must also be said that these barbarous penalties applied only to persons who actually smote with a weapon or drew a weapon with intent to smite. Those who merely 'smote' without weapons, or only 'chided,' received much lighter punishment.

This Act (5 & 6 Edw. VI. c. 4) remained on the statute-book till 1829, in company with many other statutes of our Draconian code. The principle, however, still exists that disturbances in sacred places deserve greater punishment than those occurring elsewhere; in fact, some acts of disturbance which are commendable if done in another place are criminal if performed in church; for example, arrests by virtue of legal process. This principle seems to be recognized in all countries, and in France during the Revolution protection was extended to religious services of all kinds.

In England, at present, brawling by a layman, which by the Act of 1860 (23 & 24 Vict. c. 32) is defined as being riotous, violent, or indecent behaviour in a place of worship (as also molestation of a minister while celebrating any divine service in church), is no longer punishable by the ecclesiastical courts, but as a civil offence it is a misdemeanour under several statutes. The penalty under 52 Geo. III. c. 155 is £40; under 23 & 24 Vict. c. 32, £5. The statute 24 & 25 Vict. c. 100 § 36 enacts as follows:

'Whosoever shall, by threats or force, obstruct or prevent, or endeavour to obstruct or prevent, any clergyman or other minister in or from celebrating divine service or otherwise officiating in any church, chapel, meeting-house, or other place of divine worship, or in or from the performance of his duty in the lawful burial of the dead in any churchyard or other burial-place, or shall strike or offer any violence to, or shall, upon any civil process, or under the pretence of executing any civil process, arrest any clergyman or other minister who is engaged in, or to the knowledge of the offender is about to engage in, any of the rites or duties aforesaid, or who, to the knowledge of the offender, shall be going to perform the same or returning from the performance thereof, is guilty of a misdemeanour, and, being convicted thereof, is liable to two years' imprisonment with or without hard labour.'

The offender may also be fined and required to give sureties (*ib.* § 71).

Also, by the Burial Law Amendment Act, 1880, provision is made to prevent improper conduct at burials.

Under 23 & 24 Vict. c. 32, any constable or churchwarden of the parish has power to apprehend the offender and take him before a justice. There is an appeal to Quarter Sessions from a conviction under this Act.

A man may be convicted for brawling, although acting in the *bona fide* assertion of a claim of right, and that independently of the question whether the claim is a good one or not (*Asher* v. *Calcraft* [1887], 18 Q.B.D. 607).

It was held, by London Quarter Sessions, that under this Act the behaviour must be really riotous, violent, or indecent; mere protests in words are not sufficient.

In a case where in a Church of England church a crucifix was placed on the altar steps and the congregation crawled up, two by two, to kiss it, and a person present took up the crucifix and said (holding it above his head) in a loud voice: 'In the name of God I protest against this idolatry,' it was held that violent conduct or brawling was not proved (*Kensit* v. *Ross* [1898], 62 J.P. 489).

But, on the other hand, in a case which went to the Divisional Court, where, in answer to the invitation in the ordination service a statement was read in a perfectly orderly manner, this

was nevertheless held to be brawling (*Kensit* v. *St. Paul's Chapter* [1905], 2 K.B. 249).

A minister of religion can commit the offence of brawling as well as a layman (*Vallancey* v. *Fletcher* [1897], 1 Q.B. 265), and may, if a minister of the Church of England, be punished in the ecclesiastical instead of in the civil court (*Girt* v. *Fillingham* [1901], P. 176). This is obvious if he indulges in an open quarrel or wordy warfare in the sacred place; but he also commits the offence if he uses violent language, unsuitable to public worship, either in the course of his sermon or at any other part of the service, or 'improves the occasion' against individual members of the congregation in a violent or scolding manner.

Instances of this have come before the courts in the case of clergymen of the Church of England, who are strictly bound (during prayers), by the Acts of Uniformity, to the words prescribed for use. Thus in one case a clergyman interpolated, when reading the lesson, the following: 'I have been accused by some ill-natured neighbour of making alterations in the service; I have done so now and shall do so again, so mark.' In another case the clergyman paused in the service to deliver a long address in a chiding, quarrelsome, and brawling manner, in which passages like the following appeared: 'You were perhaps surprised at the pause I made at the end of the prayer [in the Litany], but it reminded me of my enemies.' 'Some one in the congregation has had the audacity to write to the archdeacon.' 'Who has had the audacity to do this?' 'Some one has committed perjury against me.' 'Another of my enemies has written a letter to the bishop full of falsehoods.' Such conduct is punishable.

The object of the laws of England is well put by Sir John Nicholl in the case of *Palmer* v. *Roffey*, 2 Addams 144. It is to protect the sanctity of those places and their appurtenances set apart for the worship of the Supreme Being and for the repose of the dead, in which nothing but religious awe and Christian goodwill between men should prevail, and to prevent them from being converted with impunity into scenes of human passion and malice, of disturbance and violence. The sacredness of the place being thus the object of this protecting law, it is no part of a legal inquiry, when more than one person is implicated in the transaction, which of the two persons so implicated is more to blame or which of them began the quarrel. Each who engages in it violates the law; each is bound to abstain from quarrelling, chiding, or brawling in the sacred place. Therefore, as Blackstone (*Commentaries*, iv. 145) says, 'mere quarrelsome words, which are neither an affray nor an offence in any other place, are penal here.'

Churchwardens, however, and also constables may, for the purpose of maintaining order during Divine service, eject disturbers; and churchwardens may take off a person's hat if, on being asked, he refuses to remove it; and, it has been said, may whip boys who play in church during or immediately before service. But such action might be attended with awkward consequences in these days (*Burton* v. *Henson* [1842], 10 M. & W. 108; *Worth* v. *Terrington* [1845], 13 M. & W. 781; the Church of England canons of 1604, Nos. 19, 85, and 111 may also be consulted). It has, however, been decided that a churchwarden has no right forcibly to prevent an inhabitant from entering the church for the purpose of attending service, on the ground that in his opinion there is no room (*Taylor* v. *Timson* [1888], 20 Q.B.D. 671).

2. Ethical.—From the ethical point of view there may be considerable difference of opinion on the question, Is brawling, that is, the disturbance of other people's worship, under any circumstances justifiable? The answer will depend largely on the view taken of the ethical standard of right and wrong. Those who think that the law of the particular country is the only standard, and must be obeyed, can easily answer this question. The laws of many civilized countries now protect all public worship from disturbance and all ministers of religion from molestation, and the answer in those countries would be—No.

Those who find the will of the Deity expressed in the Bible, and regard this as the ultimate standard, have a more difficult task. It is undoubted that many instances of 'brawling' are commended in Holy Writ. For example, there is the case of Moses, who at a 'feast to the Lord' (Ex. 32^5) took the golden calf which the Israelites had made, and burnt it in the fire, and ground it to powder and strewed it upon the water, and made the children of Israel to drink of it (v.^{20}). Further OT examples are numerous—the destruction of the high places and the altars of the priests of Baal at various times; and of the brazen serpent by king Hezekiah. It is true these cases raise points as to the rights of heads of States. But from the abstract point of view they involve questions of sacrilege and brawling.

To come to the NT, we may mention (with all reverence) the action of Jesus Christ, who went into the temple of God and cast out all them that sold and bought there, overthrowing the tables of the money-changers and of them that sold doves. These people were in the house of God by lawful authority; the doves were no doubt required for sacrifice. Our Lord's reason was founded on the law: 'It is written,' He said, 'my house shall be called the house of prayer; but ye have made it a den of thieves.' Such a plea would not be admitted in a modern court of justice. It is a clear case of 'brawling' according to modern ideas.

The third point of view is that of people who think that the law of their particular Church or sect is the ultimate test. The Church of Rome has undoubtedly taught, and its adherents have acted on the opinion, that it is proper not only to disturb devotions which are contrary to its tenets, but also to molest and even to put to death ministers of religion and others who teach doctrines inconsistent with theirs. Members of religious bodies of this type would undoubtedly hold that 'brawling' at the command of their religious superiors is not only justifiable, but virtuous. Their sense of duty is of that kind which would burn the body to save the soul.

Lastly, there is the point of view of those who think that the ethical standard is a certain fitness, suitability, or propriety in actions as determined by our understanding or reason (Bain, *Mental and Moral Science*, p. 430) or, in Kant's words, that people should act in such a way that their conduct might be a law to all beings. It is conceived that all those who hold this view would approve of the laws of England practically as they now stand; that is, that, although a person may be constrained by an overpowering sense of duty to put down false religion, illegality, and wrong, he must not take the law into his own hands, and act so as to disturb, annoy, or injure his fellow-men. *Sic utere tuo ut alienum non laedas.*

LITERATURE.—Most of the law-books deal with brawling, but not completely: amongst others, B. Whitehead, *Church Law*[2], London 1899, and Lord Halsbury, Laws of England, 1909. Stephens' *Laws relating to the Clergy*, London, 1848 (*s.v.* 'Brawling and Smiting'), is the fullest, but its date precludes the new statutes and cases. Archbold, *Criminal Law*, 1905, gives statutes and cases to that date. The encyclopædias also have short articles, the best being Larousse, *Grand Dict. Univ.* Paris, 1875, *s.v.* 'Sacrilège.' The ethical view is almost always ignored.

BENJAMIN WHITEHEAD.

BRAZIL.—The area enclosed by the confines of the present Republic of Brazil contains four principal ethnological stocks—the Arawak, the Carib, the Tupi-Guarani, and the Tapuya. But many of the sub-sections of these races overlap into territory outside the boundaries of Brazil proper, so that the information in this article must be taken as referring to the religious con-

ceptions of those four families as a whole, and not to those of them who are strictly confined to the territories of the Republic.

The status of religious conception among the native tribes of Brazil is not very far advanced in the scale of belief. It consists mainly of a crude anthropomorphism. Indeed, it may be said that the distinction between the natural and supernatural has not yet been realized by them. Many of the agencies by which they believe the universe to be ordered are of a human or *quasi*-human character. They appear to be, for the most part, incapable of the abstract thought required to conceive of an eternal spirit, and their ideas of a Supreme Being are of the faintest. The general theogony of the Tupi, for example, though extremely hazy, appears to consist in the primal idea of a universal maternal agent. Fetish and animistic beliefs are also widely prevalent; and, as in nearly every religion of the lower cultus, the explicit (or comparatively explicit) belief is accompanied by an extraneous and confused body of semi-legendary superstition, such as a belief in demons and evil spirits of the forest, river, and mountain. These last vary in their characteristics according to locality, and in the course of generations several may have attained the distinction of godhead, if the name may be applied to entities few of whose attributes appear to be truly supernatural. It may be said that the religious conceptions of all four families mentioned above are on a similar level, and that certain beliefs are common to all.

1. **The Arawaks.** — The Arawak tribes are widely distributed over an area extending from the River Paraguay to the extreme north of the South American continent, and they have contributed largely to the formation of the existing stocks inhabiting the Antilles and Bahamas groups. It is generally admitted that they originated in the northern part of the continent; but their nomadic traits, and the ready manner in which they have intermingled with other stocks, have caused marked differentiation between the various tribes belonging to the family. At the present day most of them have ceased to be nomads, and are engaged mainly in hunting and fishing; certain of them, however, exist on an agricultural basis. Their principal divisions are: *Northern group*—Maypures, Atorais, Wapisianas, and other insignificant confederacies; *Southern and Western Groups*—Piris of the Uccayali River, Minanhas of the Jurua River, Canamaris of the Purus River, Manaos of the Rio Negro, Custenaús, Vaurás, Mehinakus, Yualapiti (all of the River Xingu territory), and Guanas, dwelling on the left bank of the Upper Paraguay.

(1) *Cosmogony.*—The Creation and Flood myths of the various Arawak tribes bear a close resemblance to those generally current throughout the South American continent; that is, they assume a twofold destruction of the world prior to its present condition. Thus the Arawaks of Guiana believe that Aimon Kondi scourged the world with fire, from which the survivors sought refuge in subterranean dwellings. Then a great flood followed, from which Marerewana and his followers saved themselves in a canoe. Such a Flood-myth is practically identical with that of the Quichés of Guatemala, as found in the *Popol Vuh*, the sacred book of that people, and in the mythologies of many other American races. That man originated in a subterranean world is a belief widely disseminated among the Arawaks. There death was unknown, but the ruler of mankind chanced to discover the upper world, and, returning, warned his people that, though sunlight was there, so was death. Many, despite the warning, sought the upper air; but multitudes are still believed to exist in bliss far below. Another Arawak version of the Creation asserts that the Great Spirit, having completed the heavens and earth, seated Himself on a huge silk-cotton tree by a river side, and cut off pieces of its bark, which He cast all around. Those which touched the water became fish, those which touched the air, birds; and those which alighted upon the earth became animals and men. The Arawaks of Guiana are almost wholly in a condition of totemism.

(2) *Theogony and ritual.*—The theogony of many of the Brazilian tribes clusters round the cult of the god Jurupari, which is best exemplified by that phase of it practised by the Uapes. This cult is invested with the utmost secrecy, but has been fully examined by Coudreau and Stradelli. The name Jurupari (*Juru-para-i*) signifies 'Issue from the mouth of a river,' and the myth of his birth states that he was born of a virgin who possessed no sexual parts. She, however, conceived through swallowing a draught of *cachiri*, or fermented liquor, but could not be relieved of her offspring until, when bathing, she was bitten severely by a fish called 'Tarire,' when Jurupari was born. He grew speedily to manhood, and one day invited the men of the tribe to partake of a great bowl of *cachiri*; but the women refused their assistance in its manufacture, and thus gained his ill-will. Their children likewise incurred his enmity through eating the fruit of the *uacu* tree, which was sacred to him; and for this offence he devoured them. Enraged at the loss of their children, the men of the tribe surrounded him, and cast him into a fire, from the cinders of which sprang the *paxiuba* palm, which the Uapes believe to be his bones. Whilst it was still night, the men cut down this tree, and fashioned it into sacred instruments, which it is ordained the women of the tribe must never see. Should a woman of the Uapes set eyes upon any of the sacred symbols of Jurupari, she is at once poisoned.

This exclusion of women from the secret rites of the worship of Jurupari seems to point to some remote totemic origin of which all but the mere remembrance has been lost. There would appear to have been an ancient apprehension among the Uapes that Jurupari, who was regarded by them as more of a demiurge than a god proper, might exercise upon the women of the tribe 'le droit d'un dieu.' Indeed, a myth exists which relates how one woman who had in her possession the sacred symbols was violated by Jurupari, and that the exclusion of the women from his worship dates from that event.

On the days upon which the worship of Jurupari is to be celebrated, the men proceed from the place of his adoration on a tour of the surrounding district, playing loudly upon pipes and flutes. Upon hearing the 'Jurupari music' the women shut themselves up in their houses, and do not emerge again until they are certain that all risk of their beholding the procession is over. The men then return to the headquarters of the priests, where the sacred symbols are exposed to view. These are the *macacaraua* and the *paxiuba*. The former is a black cloak without arms, descending to the middle of the body, and made of monkeys' hair interwoven with hair cut from the heads of virgins immediately after their arrival at puberty. The *paxiuba* is a portion of the palm-tree of that species, about the height of a man, and some ten centimetres in diameter. By a device consisting of holes bored in the part of the tree beneath the foliage, its leaves are made to tremble by the breath of the priest who evokes it.

The principal religious ceremony in the worship of Jurupari is the *Dabucuri*, or initiation of the young men. This occurs six times in the year, as follows: the *assaby* on Jan. 1; the *ucuqui* on Feb. 2; the *miritz* on March 3; the *pataud* on May 4; the *umari* on July 5; and the *uiga* on Nov. 6. Of all these indigenous fruits the Indians make intoxicating beverages. These are freely

partaken of in the accompanying revels, which are of the most riotous description. On the day of the festival those who have arrived at manhood are painted in black and red. They chant mournful melodies, whilst the *pagés*, or priests, join them in marriage to women of the tribe, who are then sent into the forest. Three men in barbaric costumes then carry in the *paxiuba*, and several Indians disguised as Jurupari dress in the *macacaraua* and symbolize the god's myth. The *paxiuba* horn is then sounded, and the women return. Mutual flagellations commence, and the proceedings degenerate into a saturnalia. Jurupari is invited, but replies through the mouth of the *pagés* that he dare not be present, as, if he were to have relations with a woman, he would 'be changed into a serpent.'

The demiurgic nature of Jurupari is indicated by his relative position to Tupan, a primitive deity common to many Brazilian tribes. The Tupan of the Indians of the period immediately subsequent to the discovery of Brazil was by no means a beneficent deity, but typified the thunder, or any agency terrible or majestic. The first missionaries in the southern part of Brazil identified Tupan with God the Father, and the Christian reminiscences which we discover in the Jurupari cult doubtless had their origin in the old missionary idea of Tupan. The *pagés* differ regarding the identity of Tupan. Some regard him as a species of All-father, whilst others construct a vague hierarchy from Jurupari the Terrible, the Tupan of the Indians ('the Good'), and the Tupan of the Whites ('the Mighty'). Jurupari is not at strife with Tupan, but rather supplementary to him; for whereas the former has a local and precise significance, that of Tupan is vague and general. Tupan, it is said, created Jurupari 'for evil.' When he visits the earth, Jurupari is always his guide. Jurupari dwells with Tupan in heaven; and if in life the men of the Uapes have honoured the cult of Jurupari, they go to dwell with him after death. If they have not done so, they perish on the long road from earth to heaven. The women who behold the sacred symbols go to Bichiu, a place inhabited by inferior spirits—a species of purgatory; but if they have not thus offended, they go to the heaven of Jurupari. Tribes akin to the Uapes believe that those women who see the symbols are changed at death into serpents or crocodiles. In the heaven of Jurupari the dead hunt, fish, drink *cachiri*, and make sacred symbols. Grief and ennui are unknown. Those men who are lost on the route finally arrive at a hell, a badly-defined, shadowy extension of earth, where they continue the terrestrial life.

The Arawaks have a wholesome dread of evil spirits and forest-giants, which they designate *canchemar*. They have also a Jurupari of the Forest, an evil and malignant being, who, however, appears to bear no relation to the demiurge of the same name.

(3) *Priesthood.*—Among the Uapes the sacerdotal caste of the *pagés*, or priests, is strongly organized in a hierarchy, and is subdivided into the *uarassu*, or adepts, the *assu*, or arch-priests, and the *mirim*, or neophytes, who are very numerous. The secret of their organization is little known and well guarded. It is, in fact, a species of freemasonry, and candidates are initiated into the several degrees by similar processes. The *pagés* are also doctors, but, above all, exorcists. They possess magical formulæ, which vary with each tribe. Certain *pagés* act as mediums to demons whom they profess to have in their service, and others undertake invocation of the dead. The thoroughness with which they carry out their purely religious duties is remarkable. Even the children are examined and interrogated by them in secret regarding the cult of Jurupari. In fact, the initiation of the layman into that cult lasts during the entire period of his life. Although the *pagés* resort to symbolism, they are not fetish worshippers, and distinguish strongly between the symbol and the being it symbolizes. The *macacaraua* is not Jurupari, they say. It is his 'figura' (*rangaua*). The Guaycurús of Paraguay possess a similar religious order, whom they call *Vünägeneté*, and who act principally as exorcists of the evil in man, which they designate *nanigo gigé*. They believe that the goat-sucker bird and the screaming vulture act as messengers from the dead to the priest, between whom and the deceased persons of the tribe there is frequent communication. They also practise exorcism by fumigation. The dualism which the *pagés* of the Puris profess was in all probability communicated to them by European missionaries (Spix and Martius).

2. The Caribs.—The Caribs, one of the first American races to come under the notice of the European discoverers, were until recently supposed to be confined to Venezuela, Guiana, and the Antilles; but von den Steinen met with tribes cognate to them in speech and physiological characteristics in the very heart of Brazil—the Bakairi and Nahuquas of the Upper Xingu, which he regarded as the Carib cradle-land. They were, *par excellence*, the maritime race of America, and in their great sea-canoes extended their piratical voyages to Cuba and Haiti, and permanently occupied some of the Lesser Antilles. On the mainland they were in possession of the shore west of the mouth of the Orinoco, nearly to the Cordilleras. From their name is derived that of 'cannibal,' owing to their custom of eating human flesh. Most of the present-day Caribs are nominally Christians.

(1) *Mythology.* — The Caribs of the Antilles regarded the earth, which they called Mama Nono, as 'the good mother from which all things come.' Their mythological ideas corresponded with their degree of civilization, which was extremely primitive. The first ancestor of the Caribs created his offspring by sowing the soil with stones, or with the fruit of the Mauritius palm, which sprouted forth into men and women. They believed that a multiplicity of souls inhabited one body, and that, wherever they might detect a pulsation, a soul was present. All these, however, were subordinate to one principal spirit enthroned in the heart, which alone would be transported to the skies at death (anon. *Voyage à la Louisiane fait en 1720*). The seat of the deceased was named by them *Hueyu Ku*, the Mansion of the Sun, where, as in the Mexican paradise, the barbaric idea of bliss was to be attained. With the Caribs of the mainland, some shadowy belief in resurrection seems to have obtained, as they were most punctilious in preserving the bones of their ancestors, which, after having cleaned, bleached, and painted them, they kept in a wicker basket full of spices suspended from the doors of their dwellings.

They possessed a culture-hero, Tamu (Grandfather), who was also known as 'Old Man of the Sky.' He appears to have been almost identical with the Nahuatlac Quetzalcoatl, the Quiché Gucumatz, and the Mayan Cuculcan, in that he was of light complexion, came from the east, and, after having instructed the Caribs in agriculture and the primitive arts, disappeared in the direction whence he came. Brinton believed him to be identical with the Zumé of the Guarani of Paraguay, and Ehrenreich with the Kanu of the Arawaks (a culture-hero), and the Kaboi of the Karayas. In the legend of the latter he dwelt

with their ancestors in the under world until a bird, the *Dicholophos cristatus*, by its call, led them to life and light in the upper world. With the Caribs the sun and moon shared sovereignty with the earth as the supreme beings of the Universe. It is almost certain that the god Hurakan (from whose name is derived our word 'hurricane'), who figures in the Quiché *Popol Vuh* as 'the Heart of Heaven,' the supreme god, was of Carib origin, although it is possible that he may have been borrowed by the Caribs from the indigenous tribes of the Antilles; but von den Steinen gives the Carib form as *ye'lo*, 'thunder,' whence Island-Carib *toüallou*.

(2) *Priesthood.*—Although the Carib religion was of an extremely primitive type, it was well organized by a hereditary class of shamans called *piayes*, similar to the *pagés* of the Arawaks, to whom the Caribs were probably ethnologically related. This class exercised unlimited power, and, besides performing the very elaborate religious rites appertaining to their worship, were, as with the Arawaks, exorcists.

3. **The Tupi-Guarani.**—This stock, so called to show the ethnic affinity existing between the Tupi of Brazil and the Guarani of Paraguay, originally advanced in a northerly direction from the River Plate region, and drove the Tapuyas from the coast lands, which it thenceforth occupied as a maritime people. It is now represented by tribes occupying various belts of country in a territory so vast as that between the rivers Maroni in French Guiana, to the north, and the Plate, to the south. In Guiana the principal divisions are the Oyampi and the Émerillons, in Brazil proper the various tribes of the Central Plateau, and in Paraguay the Guarani. These various tribes were at one time addicted to cannibalism, but large numbers have become converted to Christianity, although many still retain their ancient beliefs. They speak a dialect of the ancient Tupi language, called the Lingoa Geral, which was standardized by the early Portuguese missionaries for their own uses, and gradually became the general tongue of the Amazonian tribes. Tupi branches are also found in Argentina and Uruguay.

(1) *Cosmogony.*—A certain magician, Irin Magé, is credited by the Eastern Tupi with the creation of seas and rivers, and at his intervention Monan, the Maker or Begetter, withdrew the *tata*, or Divine fire, with which he had resolved to destroy the world. An early account (Hans Staden, 1550) states their belief in a destruction of their ancestors by a powerful supernatural enemy called Mair, who sent upon them an inundation, from which only a few were saved, by climbing trees and hiding in caves—a variant of the *Popol Vuh* legend. The same authority gives the names of three brothers—Krimen, Hermittan, and Coem—from whom they claimed descent; and the Guarani speak of four brothers, and give two of their names as Tupi and Guarani, parents of the tribes called after them respectively. These four brothers are identical with similar quartettes in other American mythologies, and typify the cardinal points of the compass.

(2) *Theogony.*—The theogony of the Tupi is a simple nature-worship, although much confusion exists among authorities as to its constituents. The Vicomte d'Itabayana sees in Tupi belief the quality of dualism (a rare occurrence in American religions), and gives it as his opinion that Toru-shom-pek, the sun, stands for their principle of good, and Toru-guenket, the moon, for their evil principle. The latter is supposed to fall periodically and wreck the earth; and all baneful influences, such as thunders and floods, proceed from her. Magalhães (*O Selvagem*) is of opinion that Tupi theogony rests on the primal idea that all created things have a mother or maker, who is responsible for the general scheme of animate and inanimate matter. There are, further, three superior deities, to whom are apportioned the making of the various natural families. These are Guaracy, the sun, creator of all animals; Jacy, the moon, creator of plants; and Perudá or Rudá, the god of love, who promotes the reproduction of human beings. Each of these is assisted by inferior beings. Subordinate to the sun are Guirapuru, who has charge of the birds; Anhanga, who protects the field game; Caá-póra, who protects the forest game; Uayará, who guards the fishes. Under Jacy are Saci Ceréré (in South Brazil) Mhoitatá, the fire-snake, who protects the country from fire; Urutaú, the phantom-bird; and Curupira, the guardian of the forests. Subject to Rudá are Cairé, the full moon, and Catití, the new moon. Each of these, in turn, has as many inferior assistants as the Indians admit classes; and these are served by as many beings as the Indians admit species, and so on, until every lake and river and kind of animal or plant has its protective genius or 'mother.' Brinton describes this polytheism as 'simple animistic nature-worship.' Though this may be said to apply to the Tupi race in general, its standards undoubtedly vary with locality; and this fact accounts for the seemingly widely differing accounts of Tupi theogony furnished by its several investigators.

With the Guarani, the southern branch of the Tupi, belief and worship appear largely to cluster round the figure of the god Zumé, a culture-hero, probably identical with the Carib Tamu. He, like other American culture-heroes, 'came from the East'; but the Guarani, according to the myth, grew so tired of his sententious advice and constant patronage, that they tried to drive him away with arrows. These, however, he caught, and hurled back upon his tormentors, and, dividing the waters of a neighbouring river by his Divine power, he walked to the other bank dryshod, and disappeared from view. He indicated to the Guarani his intention of returning in order to gather them into towns, and rule them in peace. Zumé is, of course, like the Mexican Quetzalcoatl, the Man of the Sun, the civilizing agent. He has been identified with Cemi, an Antillean deity, and his worship is found under various guises throughout South America.

A less mild personage is Tupa or Tupan,* the god-in-chief of the Tupi proper of Brazil. The earliest notice of this god is that of the missionary Père d'Evreux, who directly compares him with God the Father. He alone of the four brothers survived the Flood, and became the highest divinity of the Tupi, ruler of the lightning and the storm, whose voice is the thunder. He is, indeed, the Tupan of the Uapes, who, although of Arawak stock, have been deeply influenced by Tupi and Carib beliefs. Anhanga, the protector of field game, is sometimes opposed to him as an evil principle; but it is vain to affect to discern dualism where the notion of divinity is so slight, and that of anthropomorphism so strong. In any case, it cannot be an ethical dualism, but merely the opportunist invention of the priestly caste (see remarks on American dualism in Brinton's *Myths of the New World* and Spence's *Popol Vuh*). There is not wanting evidence, however, that Tupa was also a 'culture-hero,' who latterly attained godhead. He is credited with teaching the Tupi the use of fire, the *pisang*, and the cane, as well as with instructing them in agriculture.

(3) *Inferior spirits.*—Many of the Amazonian

* The name is derived by Tatevin (*Anthropos* ii. 269 f.) from *tuba upaym*, 'Father of All.'

tribes of the Tupi have an elaborate system of myths clustering round the tortoise—a favourite figure in South American folklore. In these many inferior spirits are the principal actors, the most important of them being Kurupira, the wood-demon, and Oiara, the water-sprite. Paituna, 'the wonder-monkey,' is no simian, but the son of a woman belonging to a tribe of females with only one husband. He possesses miraculous powers, which he uses to discomfit his enemies in an amusing manner.

4. The Tapuyas.—The Tapuyas or Ges tribe are the oldest of the Brazilian races. They are best known perhaps by their name of Botocudos, from a lip-peg (*botoque*) which they wear. They are found on the eastern slopes of the Cordilleras, from the peninsula of Goajira in the north to the borders of Chili, and in large numbers in Eastern Bolivia. Their principal divisions are the Karayas, the Kayapos, and the Suyas of the rivers Xingu and Araguaya. They have not as yet realized the distinction between the natural and the supernatural. The universe is kept together or disturbed, as the case may be, by human or *quasi*-human agencies. The Karaya Flood-myth relates that the hostile demon Anatiwa originated the Deluge, and sent fish to pull down those who had taken flight to the hill Topirapé. The Ges attributed the re-building of the earth to the water-hen Saracura, which fetched earth to the hills, where those saved from the Flood congregated, so that the area of safety might be enlarged. The Karaya ancestral god, Kaboi, led his people from the under to the upper world by the cry of a bird. All these myths, though in circulation among the various tribes of the Tapuya family, have their counterparts in many other American mythologies. It cannot be discovered, however, whether or no the Tapuya tribes worship those 'deities' to whom they give the credit of creating the cosmos. Indeed, there is good reason to believe that they do not. 'They have,' says Brinton, 'no definite religious rites, but are careful to bury the dead, and have a belief that the spirit of the departed survives and wanders about at night (*Amer. Race*, p. 144). They are firm believers in metempsychosis, and the appeasement by mimicry of those vague powers who cause natural phenomena. Thus they shake a burning brand and shoot arrows at the sky to appease the powers of the storm. Semi-religious dances are common among them. They are, in fact, on the borderland between totemic practice and the anthropomorphism which generally succeeds it, as is proved by the circumstance that a sub-stock, the Tucanos, take their name from the toucan bird which they adopted as the totem of their tribe.

Ital.*), 1890, pp. 659 ff., 798 ff.; Brett, *Legends and Myths of the Aboriginal Indians of British Guiana* (1868).—2. *THE CARIBS*: Karl von den Steinen, *Die Bakairi Sprache* (1892), *Unter den Naturvölkern Zentral-Brasiliens* (1894); Müller, *Amer. Urreligionen* (1855); de la Borde, *Religion des Caraïbes* (Paris, 1674).—3. *THE TUPI-GUARANI*: Barboza Rodriguez, *Exploração do Rio Jamundá* (1875); 'Poranduba amazonense' (*Ann. d. Bibl. nac.* xiv., Rio, 1890); Couto de Magalhães, *O Selvagem* (1874); Guevara, *Hist. del Paraguay, Rio de la Plata y Tucuman* (1836); d'Orbigny, *L'Homme américain* (1850).—4. *THE TAPUYAS*: Ehrenreich, 'Über die Botocudos' in *ZE*, 1887, 1 ff.; Keane, *On the Botocudos* (1883).
General works are Ehrenreich, 'Beiträge zur Völkerkunde Brasiliens' (*Veröff. des Mus. fur Völkerkunde*, Bd. ii. Heft 1/2), 'Die Mythen und Legenden der Süd-Amer. Urvölker' (Suppl. to *ZE*, 1905); and the several interesting but rather out of date works of C. F. P. von Martius.

LEWIS SPENCE.

BREAD.—See FOOD.

BREATH.—Breath consists of air alternately drawn in and expelled from the lungs, and constitutes a vital element in man's spiritual as well as in his physical being. As a manifestation of existence, breath is frequently used, among many peoples, as synonymous with 'life,' 'spirit,' and 'soul.' The force of these several meanings becomes clear, for example, from such passages in the Bible as Gn 2^7, 1 Co 15^{45}, and from the various designations for 'breath,' 'spirit,' 'soul' in Hebrew (*ruaḥ, nephesh, nĕshāmāh*), Greek (*πνεῦμα, ψυχή*), Latin (*animus, anima, spiritus*), and Old Church Slavic (*duchŭ*, 'breath,' 'spirit,' *duša*, 'soul'; cf. Lithuanian *dausos*, 'air'). This is equally true of the kindred designations in other languages, even in savage tongues (see Tylor,[3] i. 433). The natural association, moreover, of the breath and breathing with the spiritual phenomenon of inspiration is seen in such a passage as Jn 20^{22}, where Jesus breathed upon the disciples when imparting to them the gift of the Holy Spirit. Cf. also Job 4^9 33^4, Is 11^4, Ezk $37^{9f.}$, and artt. SOUL, SPIRIT.

In classic times, among the Greeks and Romans, there were current a number of well-recognized ideas (all of them perfectly natural) which show the wide-spread and normal association of breath and air as the vital principle. Philosophers started with the postulate that the soul was drawn into the body with the first breath at birth, and they sometimes made the kindred element, wind, a vital factor in generation (*e.g.* Chrysippus, cited by Plutarch, *de Stoic. Repugn.* xli. 391; also Dio Chrysos. *Borysth. Orat.* xii. 387; cf. also the *αὖραι ζωογόνοι* of *Anth. Pal.* x. lxxv. 4, the *πνοαὶ ψυχοτρόφοι* of *Hymn. Orph.* xxxviii. 22, and, in general, Lobeck, *Aglaophamus*, i. 753–764). In connexion with death, moreover, the Romans regarded it as a religious duty that the nearest relative should catch the last breath of the dying, at the moment when the vital spark was leaving the body, in order to ensure the continued existence of the spirit (see Vergil, *Aen.* iv. 684; Cic. *Verr.* ii. 5. 45; Ovid, *Metam.* xii. 424). A somewhat similar custom formerly existed among the Seminole Indians of Florida; and the fancy of the Tyrolese peasants saw the soul out-breathed like a little white cloud at death (cf. Tylor, *l.c.*). This receives still stronger exemplification among the Athapascan Tahkali, who bring breath into direct connexion with transmigration. When one is either dead or dying, the medicine-man lays his hands on the breast of the individual in question, and then places them on the head of a kinsman of the dead or moribund. The medicine-man now breathes through the hands thus imposed, and the next child born to the kinsman of the dead man is held to have received the soul of the deceased, whose rank and name he assumes (Waitz, *Anthropologie*, iii. 195). Among some of the Tupi-Guarani tribes of South America, medicine-men frequently endeavour to effect cures by breathing on the diseased or injured part, and at certain ceremonies they blow tobacco smoke on the warriors, saying, 'Receive the spirit of bravery, wherewith ye conquer your foes' (*ib.* p. 419).

None of the nations of the world, however, paid so marked attention both to the physical side of breathing and to the psychical phenomena connected with it as did the early Hindus. By them breathing was regarded as one of the sciences, and the regulation of respiration in connexion with ascetic and ritual practices was of paramount importance; nor has the art disappeared in India to-day. In early times, as shown by the philosophic treatises of the Upaniṣads, careful observers, who were imbued with the idea of the importance of controlling the vital breath, had faithfully counted the normal number of respirations *per diem*, and found the average to be 22,636 inhalations and exhalations (*Amṛtabindu Upaniṣad*, 33), or 21,606 (*Haṁsa Upaniṣad*, 4), a round 21,600

(*Sarvadarśanasaṅgraha*, p. 175, 4), or again 21,000 (Rāmatīrtha in his notes on *Maitrāyaṇa Upaniṣad*, vi. 1); see Deussen, *Sechszig Upaniṣads*, pp. 656 n. 4, 675 n. 2; Ewing, 'Hindu Conception of the Functions of Breath,' in *JAOS*, xxii. 264. This calculation (about 15.9 respirations per minute) answers well to the modern computations made by Western scientists, who estimate the normal breath of the healthy adult to be between 16 and 20 respirations a minute. The meditative calm and the unsurpassed self-control of the Hindu ascetic, it must be remembered, would tend to reduce the frequency of respiration, and thus justify the lower figure as claimed.

Hindu devotees and philosophers not only made these statistical observations of respiration in connexion with their religious practices and their recluse life of self-abnegation, but they also distinguished various phases of the breath-element, and assigned a particular function to each. The spiritual and religious aspect of breath is to be recognized as early as the Vedas and Brāhmaṇas, but it reaches its full development in the Upaniṣads, where it assumes a paramount place.

In Sanskrit the cardinal words relating to breath and breathing are all derivatives of the root *an*, 'breathe,' 'respire' (cognate with Gr. ἄνεμος, Lat. *animus*, Goth. *us-anan*). The principal word for 'breath' in general is the derivative *prāṇa* (from *an* with prefix *pra*). This word heads the fivefold list (sometimes known as the *prāṇa*-series), consisting of *prāṇa*, *apāna*, *vyāna*, *udāna*, and *samāna*, under which the early Hindu physiological and psychological views grouped breath in its various functions.

Much attention has been devoted to studying this fivefold series of *prāṇa*, *apāna*, *vyāna*, *udāna*, *samāna*. The most thorough of the Western investigations of the subject are those by Deussen and especially Ewing, in the works alluded to already, and quoted with full titles at the end of this article. So painstaking and exhaustive an examination as that made by Ewing (*op. cit.* 250–275, 305) proves that the first member of the series, *prāṇa*, breath in general, designates either the double process of respiration or, more particularly, 'in-breathing,' 'inhalation,' as contrasted with 'out-breathing,' which is designated more especially by *apāna*, 'exhalation,' 'exspiration.' These two words, *prāṇa* and *apāna*, occur very often together (frequently united in a *dvandva*-compound), and are used to denote the composite act of respiration. This very frequency of occurrence has caused their common long *a* (which is etymologically correct in composition of the vocalic prefixes *pra*, *apa*, with *an*) to be assumed analogically by the other three members of the group (in which the long *a* is not authorized by composition of the consonantal prefixes *vy*, *ud*, *sam*, with *an*). As to the meanings assigned, it should be noted, however, that Deussen maintains that *prāṇa* sometimes signifies 'exspiration' (*Aushauch*), and *apāna*, 'inspiration' (*Einhauch*); see his *Allgem. Gesch. d. Philos.* I. i. 294–305, I. ii. 248–252, I. iii. 69–72, 441, 492, 605, 627, 649, and his *Das System des Vedânta*, 359–364. Ewing (*op. cit.* 292) strongly combats the point. His own investigations, moreover (*op. cit.* 275–276), tend to show that *apāna* denotes not only 'out-breathing,' but also the physiological breath-functions of that part of the body below the navel.

The term *vyāna*, lit. 'breathing apart,' appears to denote a permeating or abiding breath-factor which forms a sort of connecting link between *prāṇa* and *apāna*, though separate from them, and occupies also the interval between respirations (see Ewing, *op. cit.* 277–303). Deussen's rendering of the word is 'interspiration' (*Zwischenhauch*). The other two terms, *udāna* and *samāna*, are less frequent in occurrence and more obscure in significance. They seem to have to do with the function of breath in connexion with digestion. Deussen's renderings are 'up-breathing' (*Aufhauch*) and 'all-breathing' (*Allhauch*); see his *Philos. of the Upanishads*, 279–280. Ewing's various allusions to these last two breath-elements of the *prāṇa*-series (*op. cit.* 260–287) should be compared.

In modern times the Hindu *yogi*-ascetics and certain of the advanced native thinkers of India still look upon breathing as a science to be cultivated under competent teachers. The practice of appropriately regulated breathing, they maintain, affects not only the vital activity, but also the mental activity, and produces corresponding psychic results. The complete control of the vital breaths, even to suspending the breath for a considerable length of time, brings with it a mastery over all the forces that govern both mind and body. For some of the claims still made by living exponents of these views, reference may be made to the writings of **Rāma Prasād** and the Swāmi Abhedānanda, cited below.

LITERATURE.—The full titles of the chief works alluded to in this art. are: Ewing, 'The Hindu Conception of the Functions of Breath—a Study in Early Hindu Psycho-physics,' in *JAOS*, xxii. 249–308, New Haven, 1901; Deussen, *Allgem. Gesch. der Philos.* i. (3 parts), Leipzig, 1894–1908, his *Sechszig Upanishads des Veda*, Leipzig, 1897, also *Das System des Vedânta*, 359–364, Leipzig, 1883, and *The Philosophy of the Upanishads* [Eng. tr. by Geden, pp. 274–280, Edinburgh, 1906]; Tylor, *Primitive Culture*[3], i. 431–433, London, 1871 [[4]1903]; Lobeck, *Aglaophamus*, Königsberg, 1829; Waitz, *Anthropologie der Naturvölker*, iii., Leipzig, 1862; Rāma Prasād, *Nature's Finer Forces* (Science of Breath), Bombay, 1890; Abhedānanda, *How to be a Yogi* (Science of Breathing), pp. 125–160, New York, 1902.

A. V. WILLIAMS JACKSON.

BRETHREN OF THE COMMON LIFE.—

1. Founders.—The Brethren of the Common Life represent one of the most successful of the many efforts made during the Middle Ages for the revival of piety. Some of their external arrangements were similar to those of the Beghards and Beguines, but their organization was more closely connected with the system and discipline of the Church, as was intended by their founders, Gerard Groot and his chief disciple, Florentius. Gerard (1340–1384) was the son of Werner Groot, a wealthy citizen and magistrate of Deventer. He took his degree at the University of Paris, acquiring a considerable reputation for talent and attainments, and then settled at Cologne, which had long been a celebrated seat of learning, and subsequently became a university town. Here he combined the pursuit of study with worldly amusements, and became very popular among his associates. Converted by the efforts and prayers of a former friend, named Henry Kalkar, the prior of a Carthusian monastery, he completely changed his mode of life. Throwing off his elegant clothes, he assumed the simplest and humblest dress, while for his inward improvement he withdrew for three years into a Carthusian monastery, where he spent his time in meditation and self-discipline. He also visited the saintly Ruysbroeck, prior of the monastery of Grünthal, to whose spiritual influence he owed much of the progress of his soul. After five years he came forth as an evangelizing preacher of great force and persuasiveness, full of zeal for the revival of truly spiritual religion among the people at large, and anxious for the reform of the monks and clergy. He was ordained deacon, but never regarded himself as worthy of the priesthood. For three years and a half he went about preaching in Holland and the Netherlands, with the result that he drew many souls out of worldliness and sin and led them to holiness of life. His success, and his severe condemnation of the laxity of the clergy, however deserved, led to opposition to his preaching; and the Bishop of Utrecht was persuaded to

silence him, by withdrawing licences to preach from deacons. An appeal was made to the Pope, but it is uncertain whether this was successful, for Groot died soon after, in his 44th year. He was prematurely cut off by the plague, caught while visiting a sick friend. But he had had time, with the help of his foremost disciple, Florentius, to plan arrangements for confirming his converts in Christian ways. These two good men sought to establish Brotherhoods and Sisterhoods, in which those who had been rescued from worldliness might find refuge, and they decided on the foundation of some monasteries which might serve as a support and means of guidance to the inmates of the Houses, and might also offer a model of monastic reformation. The movement received the name of the 'moderna devotio.' Groot had some years before his death given over his own spacious house to the town authorities of Deventer as an abode for widows and maidens who should live together in piety and good works. The Brotherhoods were also begun at Deventer, while the first monastery was established at Windesheim. It was Augustinian, and became the centre of several new and many reformed monasteries. The next was founded on Mount St. Agnes, near Zwolle. A brother of Thomas à Kempis was the first prior of the latter, and Thomas himself, after his education at Deventer, spent his life in it as a monk.

2. Regulations. — In common with all pious persons in the mediæval Church, Groot regarded the career of the monastic regulars as the highest; but his societies were intended as a link between the monks and the people, and his Brotherhoods and Sisterhoods formed a kind of modified monasticism without any vows. Their members, living a common life in their respective houses, were to work for their maintenance, to give what they could save to the poor and sick, and to interest themselves in the religious teaching of the young. The members of a Brotherhood were drawn from various classes. The educated copied books, as was done in monasteries, and, later on, attended to printing them, while those who had been brought up to handicrafts practised these for the benefit of the House. The hours of prayer and of attendance at Mass were diligently observed. There were several priests in each house, besides the lay members. The head of the community was called 'rector,' and implicit obedience to him was required. Under him was the 'procurator,' who was general manager. Various offices, such as those of librarian, sacristan, warden of the infirmary, down to the humbler ones of tailor, baker, and cook, were distributed among the Brethren. Besides being called *Fratres vitæ communis*, the brothers acquired several other appellations, such as *Fratres bonæ voluntatis*, from their benevolence, and *Fratres cucullati* from their cap or head-dress, and they were often called Lollards by their enemies, though they had no real connexion with that sect. Owing to their educational labours, they also acquired the designation of *Fratres Hieronymi*, 'Brothers of St. Jerome,' who was regarded as a patron of learning. The dress of the Brothers was black or grey; for priests and clerics it went down to the feet, for lay brethren to the knee; and a black cap was worn on the head. The under garment was washed every month in summer, every two months in winter. On entrance into the society each man could deal with his property as he liked; but if he once gave it over to the House, he could not withdraw it in the event of his leaving. The Brothers rose at half-past three in the morning, and went to bed at nine in the evening. During the day an interval was allowed for repose. Dinner was at ten o'clock, supper at five. At meals the Scriptures or the *Lives* of the Saints were read, the Brothers taking a week each, from the seniors downwards. Meat might be eaten on Sundays, and other days except Fridays and fast days. Their drink was one little mug of beer of the small size out of which wine was usually drunk (Dumbar, *Analecta*, i. 14). Many members of the society injured themselves by excessive fasting, in a degree not required by the rules. Constant industry, according to the previous training of each man, was inculcated; and where there was a farm or garden, outdoor labour was required. All these activities of the Brothers contrasted favourably with the begging habits of the friars, who were mostly living in idleness, and became in consequence the bitter enemies of the Brothers; while the domestic work of the Sisterhoods and their instruction of girls made them appear to great advantage as compared with the degenerate nuns. It might well be supposed that these hard-working and devout societies would have been commended of all men, but the friars succeeded in raising much opposition against them, while among the people at large the reverence which was felt for the regular and long-established monastic orders, bound by lifelong vows, was not bestowed upon the more secular system of the new society, till eventually they were known by their fruits and became respected for their good deeds. It was doubtless better for them not to be thought much of, at any rate at first, as they were thereby guarded from the temptation to pride which beset the old religious orders. The opposition, however, was carried to the verge of persecution, for at the Council of Constance a Dominican named Grabow accused the Brethren of the Common Life, and maintained that it was a mortal sin to form a community without the vows of poverty, obedience, and chastity. They were, however, defended by their friends and supporters, the Windesheim monks, and also by Gerson. The Council condemned Grabow, and offered him the choice of retractation or the stake. Several Popes also had the good sense to support the Brotherhoods and Sisterhoods by their rescripts.

3. Influence on education.—The eventual estimation of the Brothers among the people at large was mainly promoted by their devoted efforts on behalf of the religious education of boys. At their first centre, Deventer, they boarded many of the scholars who attended the noted school already existing there, or obtained hospitality for them among devout widows or benevolent burghers. Their religious teaching was mainly given in their Houses, but some of their scholars rose to be assistant teachers, or 'lectors,' in the school, and thus their work and influence became blended with the secular parts of education. Similar arrangements were made in the many other towns to which the educational work of the Brotherhoods rapidly extended. There was no opposition in those days to the religious side of education. On the contrary, the authorities of towns in Holland and Germany frequently invited the help of the Brothers, and induced members of their Society to settle in their midst, providing houses for them. In some places they were entrusted with the reorganization of the schools. Distinguished and pious schoolmasters, such as Hegius at Deventer and John Cele at Zwolle, were in close touch with the Brothers, and there can be no doubt that not a few of the latter became teachers of classics as well as of religion. When the culture brought in by the Renaissance, with its revived study of Greek, extended to Germany, through the energy of Rudolph Agricola and others, it gradually won over members of the Brotherhoods, and added thereby to the effectiveness of their educational labours. In some of the schools there were more

than a thousand scholars, and the spectacle of devoted men giving their best energies to bringing up the rising generation in true religion and sound learning gave new hope to all who had the good of their country at heart. At the same time it must be admitted that it was the aim of the Brothers not only to produce good laymen and priests, but also to recruit the monasteries with more earnest novices; and Erasmus complains that they unduly pressed their youths to enter monastic life. This was certainly not the case with Florentius, but it may have been so later on; and we must remember that Erasmus was induced by the desire of his guardians to become a monk, because they had wasted his patrimony, so that he was somewhat prejudiced.

It has been sometimes stated that the Brothers founded schools of their own, but this is a mistake; for instance, Erasmus was not educated in schools belonging to them, as has been usually alleged. He attended the public schools, while boarding with the Brothers and receiving religious teaching from them. Their educational labours continued for about a hundred and fifty years, when most of the schools in which they had taught came under the influence of the Jesuits. The Lutheran Reformation occasioned the Roman Catholic movement that has been called the Counter-Reformation. This was led mainly by the Jesuits, and their pushing and aggressive methods eventually superseded the more modest and quiet work that the societies founded by Groot and Florentius had carried on.

In connexion with the name of Florentius Radewin (1350–1400), we have to notice the boyhood of Thomas à Kempis (1380–1471) before his entrance upon the life of a monk in the Augustinian monastery of Mount St. Agnes. Very early in life Thomas was sent to the school of Deventer, and was brought into connexion with the saintly Florentius, who had, for the sake of being near Gerard Groot, given up higher ecclesiastical emoluments to become one of the Vicars of the collegiate Church of St. Lebuin. He was, after Groot's death, the recognized leader of the societies that Groot and he were establishing, but he did not become at first the Rector of the House at Deventer. He had accepted that office by the time à Kempis applied for admission, and his winning and gracious manners and a natural dignity of bearing had given him a predominant influence for good. He befriended the youthful à Kempis and placed him with a devout widow, receiving him for a part of the time into his own house. It is not too much to say that we owe the spiritual meditations written by à Kempis to the effect on his after life of the saintly character of Florentius. Among many such writings the *Imitatio Christi* is usually included; and if, as we fully believe, the authorship of that well-known book of devotion is rightly ascribed to him, the debt we owe to the revered teacher of his early days can hardly be over-rated. Thomas himself has commemorated Groot and Florentius and some of the early Brethren in a remarkable work, which has long been bound up with his other writings in the edition of Sommalius. In this he gives most interesting details of his spiritual Father and Rector, as well as of other members of the House. A short sketch of a youth of his own age, named Arnold of Schoonhoven, who was his model of piety, closes these valuable memoirs. They are also interesting as affording one among many evidences of the *Imitatio* having been composed by à Kempis. Dr. Hirsche, in his *Kritisch-exegetische Einleitung*, brings forward a number of quotations to show the similarity of many expressions in these biographies to those in the *Imitatio*. And it may be added that the lives of the founders and brothers so recorded afford an impressive realization of the precepts of that manual of devotion, and exhibit a spirit of piety which belongs to the same lines of religious thought. It is scarcely too much to say that the *Imitatio* cannot be fully understood without a perusal of these records.

4. Doctrines.—The remarks just made bring us to the question as to the doctrinal limitations of the Brothers and their kindred monks. Groot was a firm adherent of all the dogmas of the Roman Church, and had even been called *malleus hæreticorum*, 'the hammer of heretics.' When the saintly Ruysbroeck expressed himself, as Groot thought, with too great freedom in the direction of mysticism, he opposed his sentiments. Yet if we take the word 'mysticism,' which may be used in many senses, as meaning the personal and inward realization of spiritual truth imparted by the Holy Ghost as contrasted with a mere outward and formal religion, we shall find it present in the teaching of Groot and Florentius and in that of à Kempis; and some of the Windesheim monks were even more definitely mystics. Yet none of the earlier Brothers would have allowed himself to question any belief that was a part of the Papal system. And those writers are wrong who have maintained that the Brethren of the Common Life were 'Reformers before the Reformation.' In one respect, indeed, they were reformers, but they never intended to be so in the sense that we associate with Protestantism. This point was their advocacy of encouraging the laity to read the Scriptures in the vulgar tongue; but they did so without any doubt occurring to them as to the Bible being fully consonant with Roman doctrine. They wished laymen to study Holy Scripture for their personal improvement, and frequently gave informal addresses to them in their houses on passages of the Bible, and especially on those that bore on practical duty. Among the Brothers at Deventer, Gerard Zerbolt, one of the librarians, was the strongest advocate of translations of Holy Writ and of prayers being supplied to the lay-folk in the vernacular; and his arguments are well worthy of study in the treatises that he put forth, and which still exist.

When, later on, the Lutheran Reformation began to make progress, the Brethren of the Common Life were found, as was natural, on the side of the Papacy; yet in time the new doctrines made their way into some of the Houses, and individual members were won over by them. After a while several of the Brother-houses went over entirely to the Reformed faith, and that at Wesel received the warm approbation of Luther himself.

The welcome given in many towns to the greater freedom of doctrine promised by the Reformers damaged the continuance of Brother-houses in which the Roman teaching was still maintained; but a few here and there survived for a long time; and while the educational work passed either to the Protestants or to the Jesuits, some Brother-houses lingered on till suppressed by Napoleon Bonaparte. The Sister-houses, begun in the first instance by Groot himself at Deventer, became widely extended, and accomplished good work in the training of girls, as well as in copying books, in miniature painting, and in the humbler offices of household duty. The Superior was usually called 'Martha,' and one of the most impressive of the treatises of Thomas à Kempis is an encomium on the duties and influence of a woman who thus cares in practical matters for the welfare of the devout. There was usually a priest attached to the Sister-houses who acted as ruler and confessor. Among the most remarkable of the latter was Brinckerinck, who ruled Groot's house for women at Deventer. Some of his addresses to the Sisters still exist, and are full of helpful words of encouragement for the spiritual life. A good many of the Sisters eventually joined Augustinian nunneries.

It has been stated that the monasteries of Windesheim and St. Agnes, and others afterwards established, were a part of Groot's scheme, and remained in close sympathy with the Brothers. A *Chronicle of Windesheim*, by Busch, a contemporary of à Kempis, contains many references to Groot and Florentius, and extracts from their letters, which show that the spiritual teaching in both these parts of Groot's system was identical, and that Florentius, when Rector of the House at Deventer, exercised the greatest care as to recommending Brothers to take the vows at Windesheim, or elsewhere, fully knowing the danger it had been to monasteries to receive persons who had no adequate vocation for lifelong devotion. The *Chronicle of Mount St. Agnes* was written during

his life by à Kempis, and a touching notice of his death is added at the close by another hand.

LITERATURE.—I. *ORIGINAL SOURCES.*—The most readily available of these are the lives of Gerard, Florentius, and others, by Thomas à Kempis, in the editions by Sommalius, in the 17th cent., of the works of à Kempis (earlier editions: *Opera et libri vitæ*, Nuremberg, 1494, and *à Kempis opera*, Antwerp, 1574; Eng. tr. *The Founders of the New Devotion*, by J. P. Arthur, Lond. 1905); also Thomas à Kempis, *Chronicon canonicorum regularium Montis S. Agnetis* (Eng. tr. *Chroniole of Mount St. Agnes*, by J. P. Arthur, Lond. 1905–1906); J. Buschius, *Chronicon Windeshemense*, Antwerp, 1621, re-edited by Karl Grube, with the *Liber de reformatione monasteriorum*, Halle, 1886 (an indispensable source for the study of Gerard Groot, and the Brothers and monks influenced by him); and a tr. of Gerald Zerbolt's *Beatus vir* and *Homo quidam*, by J. P. Arthur, London, 1908.

II. *MODERN LITERATURE.*—Delprat, *Verhandeling over de Broederschap van G. Groote en over ten invloed der Fraterhuizen*, Utrecht, 1830 (revised ed. Arnheim, 1856); Acquoy, *Het Klooster te Windesheim en zijn invloed*, 1875–1880; Hirsche, *Kritisch-exegetische Einleitung in die Werke des Thomas von Kempen*, Berlin, 1873; artt. on 'Gerard,' 'Florentius,' and others in *PRE* (3 editions); artt. on 'Brüder des gemeinsamen Lebens' in *PRE*[1] (Ullmann), in *PRE*[2] (Hirsche), and in *PRE*[3] (Schulze). Of these, the article by Hirsche goes the deepest, Schulze treating chiefly of the outward development. See also K. Grube, *Groot und seine Stiftungen*, Cologne, 1883. One of the most valuable treatises on the characteristics and work of the Brotherhood is that by E. Möbius, Leipzig, 1887. Bonet-Maury, *Gérard de Groote*, Paris, 1878, contains a useful list of Gerardic writings, and extracts from them. Kettlewell, *Thomas à Kempis and the Brothers of the Common Life*[2] (abridged), Lond. 1885, will be found useful, but does not contain the more recent criticism and information. An interesting sketch of the Brethren of the Common Life is contained in Neale's *History of the Jansenist Church of Holland*, Oxford, 1858. Sir Francis Cruise, *Thomas à Kempis: a Visit to the Scenes in which his Life was spent*, Lond. 1887, contains a very valuable list of the bibliography and literature of the whole subject. A further list of original sources is given in S. Harvey Gem, *Hidden Saints: the Brothers of the Common Life*, London, 1907.

S. HARVEY GEM.

BRETHREN OF THE FREE SPIRIT.—This name has been given to mystic-pantheists who emerged in the 13th cent., were associated with different sects such as the Beghards, and continued generation after generation down to the 16th century. Mosheim found, as he thought, their characteristic doctrines in writings of the 11th cent.; but it is safer to connect the origin of the Brethren with a speculative movement of the 13th century. At the beginning of that century there was a philosophical revival, which was quickened by Aristotelianism mixed with Neo-Platonism and introduced to the West in an Arabic dress. Under its influence David of Dinant indulged in speculations tending to pantheism; and at the same time Almaric of Bena, also affected by the Oriental Aristotelianism, set forth mystic doctrines which were accounted pantheistic and therefore dangerous to religion. At Paris in 1204, Almaric was charged with teaching 'quod quilibet Christianus teneatur credere, se esse membrum Christi, nec aliquem posse salvari, qui hoc non crederet.' On an appeal to Rome he was condemned; and it is evident, therefore, that his teaching must have had some meaning other than the mystical union of the believer with Christ, since it was judged to be heretical.

Thomas Aquinas, enumerating three errors regarding the being of God, distinguished between David of Dinant and Almaric:

'Alii autem dixerunt deum esse principium formale omnium rerum, et haec dicitur fuisse opinio Almaricanorum. Sed tertius error fuit David de Dinando, qui stultissime posuit deum esse materiam primam' (*Summa*, I. iii. 8).

Though the men were both dead, a Council of Paris in 1209 condemned their works; and it was asserted that Almaric had inspired the dangerous doctrines of the Almaricians, as they were called. Among these doctrines this was set forth:

'Pater in Abraham incarnatus, Filius in Maria, Spiritus Sanctus in nobis quotidie incarnatur—omnia unum, quia quidquid est, est deus.'

Further, the Almaricians were accused of teaching that now, in the time of the Spirit, salvation in no way depends on the sacraments of the Church, and that what are accounted sins of the flesh are not sins if done through love. It was not likely that these men would escape the censure and punishment of the Church, and a persecution directed against heretics was begun in Paris in 1210, and in 1212 was raging in Strassburg. Among those who perished at Strassburg were *Ortliebenses*, a name derived from Ortlieb, whose teaching marked him as a follower of Almaric.

These men were hardly entitled to be considered speculative thinkers, but none the less there were elements of pantheism and mysticism in their principles. They maintained that the uncreated universe is eternal, and that, while there is no resurrection of the body, immortality is for all. The Trinity was represented in some mystic fashion by three members of their community. They were not charged with carnal practices, but they roused ecclesiastical opposition by repudiating the sacraments and ordinances of the Church as unnecessary for men united with God. In 1215, at the fourth Lateran Council, the theories of Almaric were once more condemned, and condemned with the full authority of the Church. The mystic-pantheistic doctrines set forth by the Almaricians were not crushed, however, by the persecution of 1210, by the Lateran decree, or by a persecution which took place in 1216, as they were wide-spread, and had reached even the Waldenses, in the middle of the century, when they were attacked by Albertus Magnus. The opposition of Albertus did not stay the progress of these doctrines, and they began to affect the Beguines and Beghards, who, though they had long enjoyed the blessing of the Church, were exciting suspicion by their fanatical laudation of poverty. In these communities, prophets or teachers appeared who taught that God could best be served in freedom of spirit, and they and their converts were known as 'Brethren of the Free Spirit.' The orthodox Beghards and Beguines suffered from the evil reputation of the heretics, and the Franciscan spirituals, often confused with the Beghards, suffered in the same way.

It is difficult to determine the circumstances under which the name of 'Brethren of the Free Spirit' was adopted or applied, and also to discover the author of the phrase. Lea in his *History of the Inquisition* (ii. 321) says:

'Even the orthodox Cæsarius of Heisterbach [died *c.* 1240] argues that much is permitted to the saints which is forbidden to sinners; where is the Spirit of God, there is liberty—have charity and do what thou pleasest. When the fatal word had once been spoken, it could not be hushed to silence.'

In an episcopal letter of 1317, quoted by Gieseler (*Lehrbuch*, III. vii. 90), the writer enumerated the errors of those

'quos vulgus Beghardos et Schwestrones nominant, ipsi vero et ipsae se de secta liberi spiritus et voluntariae paupertatis parvos fratres vel sorores vocant.'

The name, whatever its origin, was directly associated neither with pantheism nor mysticism, but with the liberty of which Cæsarius of Heisterbach wrote, and for which Pauline authority was claimed. Yet this liberty was asserted not as mere licence, but as the natural right of men with the Divine Spirit.

The logic of the doctrines of the Brethren is intelligible. God is what is, and men, being of Him, come from and return to Him. There is therefore neither purgatory nor hell, and the sacraments and ordinances of the Church are unneeded. As man is essentially Divine and is able through contemplation and withdrawal from things of sense to know himself united with God, he can in his freedom do what God does, and must act as God works in him. There is therefore for the free man neither virtue nor vice. God is all, and all is God, and all is His; and men are therefore free to take or beg their bread, so that they

may not be entangled through labour in the things of sense. Intelligible though the logic may be, the doctrines contradicted the dogmas, and led to a violation of the practices, of the Church, with the destruction of morality. The same Cæsarius of Heisterbach who had a plea for liberty condemned the men who indulged in it (*de Miraculis*, v. 22):

'Maximam etiam blasphemiam ausi sunt dicere in Spiritum Sanctum, a quo omnis munditia est et sanctitas. Si aliquis est in Spiritu Sancto, aiebant, et faciat fornicationem, aut aliqua alia pollutione polluatur, non est ei peccatum, quia ille spiritus qui est Deus, est in eo, ille operatur omnia in omnibus.'

Mosheim (*Instit.* II. v. 11) quotes the following from *de Novem Rupibus*, a private book of the Brethren:

'Moreover, the godlike man operates and begets the same that God operates and begets. For in God he worked and created heaven and earth. He is also the generator of the eternal word. Nor can God do anything without this man. The godlike man should, therefore, make his will conformable to God's will, so that he should will all that God wills. If, therefore, God wills that I should sin, I ought by no means to will that I may not have sinned. This is true contrition. And if a man have committed a thousand mortal sins, and the man is well regulated and united to God, he ought not to wish that he had not done those sins; and he ought to prefer suffering a thousand deaths rather than to have omitted one of those mortal sins.'

An indictment of a Beghard in 1367 is recorded by Döllinger in his *Sektengesch. des Mittelalters* (ii. 386). The charges may have been exaggerated, but they show at least what could be urged against the Brethren. The accused had declared, it was alleged,

'quod talis homo liber redditur impeccabilis et potest agere quidquid vult et sibi placet, et si natura inclinaret ad actum venereum, potest licite ipsum perficere cum sorore sua vel matre et in quocumque loco sicut in altari; et dixit quod magis naturale est talem actum venereum exercere cum uxore sua carnali quam cum alia muliere, propter affinitatem naturae; et subjunxit quod perfectus liber a se licentiat virtutes sub tali distinctione, quod homo liber non est sub lege quocunque, nec tenetur ad statuta ecclesiae nec praecepta qualiacunque, quod talis est liber spiritu id est *ein fry Geist*, quod idem est quam homo liber, et statuta et praecepta ecclesiae debent saltem tenere grossi homines, id est homines sub lege existentes, quos ipse grossos homines appellat.'

The ecclesiastical councils of the 14th cent. condemned from time to time the doctrines of the Brethren, and the Inquisition added many of them to the number of its victims. One of those who suffered death (in 1310) was Marguerite de Hainault, described as *béguine clergesse*. She was charged with teaching that the soul absorbed in Divine love could yield without sin or remorse to all demands of the flesh. At the end of the century (in 1397), Nicholas of Basel, the most noted of the Brethren of his time, was burned, along with two of his disciples, at Vienna by the Inquisition. The famous Eckhart, the founder of the German Mystics, was harassed by the Inquisition, and, but for his natural death, might have perished as a heretic. John XXII. condemned twenty-eight articles said to be founded on Eckhart's teaching, and among these were the assertions of the common divinity of God and man, and of sin and virtue as the same in the sight of God. The accused, however, was not alive to defend himself. The famous company of the Friends of God sprang from the Brethren, Lea asserts (*op. cit.* ii. 365); but he admits that they 'avoided the deplorable moral extravagances of the parent sect.' Tauler was careful in his sermons to mark the difference between his doctrines and those of the Brethren, and the author of the *Deutsche Theologie* condemned theories which were those of the Brethren.

In the 15th cent. the Brethren, thanks to the Inquisition, were less active than they had been in the 14th; but amidst the Hussite troubles there was evidence of them in Bohemia, where the name of *Beghard* was modified to *Picard*. In 1453, Pope Nicholas V. ordered the wandering Beghards to ally themselves to the Tertiaries of the Mendicant Orders, and thus many of the Brethren, or those professing the doctrines of the Free Spirit, were brought under rule. Even then, however, the doctrines were not altogether suppressed, for in 1492, Friar John of Moravia was crushing Hussites and Beghards; and in the Libertines of the Netherlands, France, Germany, and Switzerland who flourished in the 16th cent., and even in some of the Anabaptists, were found doctrines and practices associating them with the Brethren of the Free Spirit.

J. HERKLESS.

BRETHREN (Plymouth).—In the 2nd quarter of the 19th century the State Churches in Great Britain were worldly and dead; the Dissenters were orthodox and cold; the great Evangelical Revival was on the wane. Edward Irving had translated Ben Ezra's book, *The Coming of Messiah in Glory and Majesty*. He had been greatly moved by it, and was preaching that the Lord was coming. This had stirred people of all classes, and it seemed like the midnight cry: 'Behold the Bridegroom cometh.' It was in the midst of this state of things that the movement of Brethrenism originated (1827). The first 'Brother' was Edward Cronin, a doctor, who felt that true Christians, being one body in Christ, ought to be welcomed to the Lord's Table, wherever His Table was spread. But the movement received its impulse and direction from men far excelling Cronin in gifts and power. Anthony Norris Groves, a missionary to Syria and India, suggested to John Gifford Bellett, a lawyer: 'This, I doubt not, is the mind of God concerning us, that we should come together in all simplicity as disciples, not waiting on any pulpit or ministry, but trusting the Lord will edify us together by ministering to us, as He sees good, from ourselves.' This idea got hold of Bellett's mind, and was the germ of the movement. With Francis Hutchinson, John V. Parnell (afterwards Lord Congleton), and others, he organized a meeting in Hutchinson's house, to which Cronin came. In 1830, at Parnell's suggestion, they removed to a large room in Aungier Street, Dublin, so that they might be more of a testimony. Another eminent man associated himself with them, John Nelson Darby. Born at Westminster, London, November 18th, 1800, he graduated with honours at Trinity College, was trained for the law, but forsook it for a clerical career, and became a curate in Co. Wicklow, where he was reputed a saint on account of his holy life. He was now in the prime of life; his intellectual abilities were of the highest order; his piety was sincere and deep, while his power to hold men under his influence was the wonder of his foes and the admiration of his friends. The way in which he controlled the Brethren for fifty years exemplifies this.

Groves asserted that ordination to preach was not needed by a spirit-gifted minister; Cronin, that there was only one church-membership, viz. the body of Christ; while Darby, in a pamphlet written in 1828 (while he was a clergyman in the Irish Church), entitled 'The Nature and Unity of the Church of Christ,' set forth the principles of gathering to the Lord's name and the Church's union with Christ. Thus, Cronin, Groves, Bellett, Parnell, and Darby were the founders of the movement. It would be difficult to determine the relative influence of the first four, but, undoubtedly, Darby was the great leader and teacher.

To the company in Aungier Street many were

added between 1830 and 1832. At first they did not think of separating from the Churches around. This came as the result of their principles and practice, and when they increased in power and numbers. Darby visited Oxford in July 1830, where he met, amongst others, B. W. Newton and G. V. Wigram, both of whom came under his influence and power. A meeting was formed at Plymouth. Newton and other able men ministered there for years. From it the name 'Plymouth Brethren' was derived, while from Darby the name 'Darbyites' was received. Newton had a speculative mind, was grave and earnest, and became the most prominent leader at Plymouth. George Müller, brother-in-law to Groves, was the co-pastor with Henry Craik at Bethesda Chapel, Bristol. Both these and their congregation, in a measure, adopted the principles of the Brethren. A few brethren joined them, and one meeting was formed, but most Brethren now think this was a mistake. A gathering was formed at Rawstorne Street, London, and meetings sprang up both in England and Ireland. Between 1832 and 1838 meetings to study prophecy were held in Lady Powercourt's mansion, Co. Wicklow. They were attended by eminent clergymen, and Darby, Bellett, and Wigram went to them, and took part in them.

From 1830 to 1835 the movement swept on. J. L. Harris, a clergyman, joined the ranks of the Brethren. He edited their first magazine, *The Christian Witness*, to which Darby, Bellett, Newton, S. P. Tregelles and other writers contributed. It set forth the doctrines of Brethrenism with vigour and freshness (1834–40). A tract depôt was begun, from which issued a steady stream of tracts. The clergy became alarmed as several of their order joined the movement, which was at first, undoubtedly, a 'better-class' movement, containing lords, ladies, and officers not a few. The people were evangelized with great zeal; lay preaching was held to be the duty of all who had received grace and gift, and in the open air and in meeting-rooms the doctrines of Brethrenism were expounded. Separateness from the world was necessary; for the Lord was at hand, and every one must be ready to meet Him.

Groves went on a mission to Baghdad, and then laboured in India, with the result that many Anglo-Indians became disciples of the new faith. On returning to England, however, he found a stricter system of fellowship existing than when he left. He wrote to Darby protesting against this, but it was too late, for his own words to Bellett had raised a force which he could not now control.

Darby evangelized in Ireland, and visited Switzerland, where his success was phenomenal. The Evangelical Revival had taken place. He preached the Atonement of Christ, His Resurrection, Intercession, and Second Coming. He engaged in controversies with the Wesleyans and with Church leaders. Seventy companies of Brethren were gathered in Switzerland. He also visited France and Germany, where he gained many disciples. His labours extended, with intervals of visitations to England, several years. A reference to the first vol. of his *Letters* will show his great activity. Later, he devoted his attention to Germany, and translated the New Testament, and afterwards the Old, into German. G. Müller visited Germany in 1843. Ministering amongst the Baptists, he spread the tenets of the Brethren in the Fatherland.

Meanwhile, Newton remained at Plymouth, but, unlike Darby and others, never heartily adopted the doctrine of the Spirit's presence in the assembly, but set up what Tregelles called 'a modified Presbyterianism,' which was self-elected, and confined the services of prayer, praise, teaching, and rule to himself and those associated with him at Plymouth.

This was to be the model for all meetings, and an effort was made to carry it out. He denied the immediate return of the Lord, teaching that certain events must take place before He did come. He discouraged brethren who held opposite views from ministering. His lectures, copied in manuscript, were circulated widely amongst a select few. J. L. Harris and others, helpless to combat this state of things, left Plymouth. It was at this time (1845) that Darby returned. He had borne with Newton's views on the Second Coming, but would not tolerate the setting aside of the Spirit's presence in the Church, for that Darby viewed as the re-establishment of the clerical system that the Brethren had left in the Churches around. Darby maintained that by Newton's clerical control the Spirit was displaced in the assembly. He protested against this, but Newton and his supporters would not yield. Darby and many others withdrew from communion, and, after waiting from March till December, they broke bread apart from the Newton party at Raleigh Street, Plymouth. Indignation against Darby was intense. He had broken the unity of the Brethren, and they, who had testified to unity, were now in disunion. Darby's contention was that he 'could not maintain union to support evil,' and that 'truth was more to him than friends, religious reputation, or unity.' Two years' controversy followed, in which the leaders took part. Charges against Newton's writings and his rule in the Plymouth assembly were interwoven with the main issue, viz. the 'Spirit's freedom to use whomsoever He pleased in the assembly while gathered to the Lord's name for worship and ministry.' This was what Darby and his followers contended for, and it was this that Newton and his associates resisted. Round this same question of clericalism many later disputes arose and caused divisions.

In 1847, Newton's opinions on the sufferings of Christ came to light. He had taught, amongst a select body of disciples, that our Lord, being a man and an Israelite, was born relatively under the curse of God, which rested on the human race generally, and on Israel specially, on account of their having broken the Law and rejected their Messiah; and that, from childhood to His baptism in Jordan, Christ was obnoxious to the wrath of God, but escaped much on account of His prayer and piety. When Newton's views became known, they were rejected by the mass of the Brethren, and many of his former supporters, such as Soltau, Batten, Dyer, and Clulow, abjured their errors, and confessed they had been under the delusion of Satan as to their doctrines, and in supporting Newton. Newton made a confession, which was considered insufficient, and withdrew his tracts, which he never re-issued, for re-consideration. He admitted that in expressions he was wrong, and that in one particular he had erred, viz. in contending that our Lord was under Adam's federal headship. The meeting at Ebrington Street, Plymouth, was broken up. Newton removed to London, modified his views considerably, and formed a church of which he became minister, having no fellowship with any other religious body. He wrote largely on Prophecy, and in his writings there are passages of great literary beauty. He died in 1899, aged 92, having outlived all his compeers.

It was Newton's teachings that caused the first division amongst Brethren, which took place at Bethesda in 1849. Müller and Craik refused to allow a congregational judgment on Newton's

tracts. Several who had sympathized with Newton's views, and two Brethren who had imbibed his teachings, were received by the Bethesda congregation. It is a moot point whether Müller and Craik knew of the views of those disciples of Newton who did not openly promulgate them. Their reception called forth from G. Alexander and sixty others a vigorous protest. Müller and Craik would not allow the congregation to judge and condemn Newton's tracts until it adopted a paper called 'The Letter of the Ten,' signed by themselves and eight other leaders, and to which some of Newton's sympathizers adhibited their names. This paper committed the Church to a neutral position, and defined for years the ecclesiastical position of those afterwards called 'Open' Brethren. It became a document of discord, and a barrier to fellowship between the two great sections of the Brethren. Bethesda assembly adopted the paper, and retained the ministry of their pastors, who had threatened to resign unless this were done. To Darby, Wigram, Dorman, and others the position thus taken up was wrong, and they would not tolerate it. Darby was branded as a schismatic, and severely attacked. The result was that the dispute affected all the meetings throughout the land. Bethesda assembly, with its pastors, now took up the question. Seven meetings were held before the end of the year, as a result of which some of those who had supported Newton withdrew from fellowship, in order to relieve the Church from its dilemma. Two of these, on retiring, in a paper read to the congregation, declared that Newton was fundamentally sound. With some others they attempted to form a congregation, but failed, and were afterwards re-admitted to Bethesda on their confessing that they had erred in leaving. By Darby and those who agreed with him this was not considered a proper judgment of the evil doctrines. Müller and Craik both condemned Newton's doctrines, and declared that, if Newton's teachings were right, then Christ would require a Saviour Himself. But their judgment came too late, as what might have prevented a schism in July could not heal the division in December.

When Bethesda had judged the question in this fashion, Darby called on Müller with a view to reconciliation; but the accounts of the interview differ essentially, as can be seen by comparing Darby's letter to J. S. Oliphant with Müller's letter to an unknown correspondent in 1883. Darby issued a letter to all the Brethren condemning Bethesda, and calling upon all assemblies to reject her principles. He denounced as evil 'The Letter of the Ten,' which, he said, permitted association with a heretical congregation by allowing persons coming from it to have fellowship, provided they had not imbibed the evil doctrines. And this the Exclusive Brethren hold with inflexible strictness to this day. Fellowship with meetings where evil doctrines are held is repudiated, and no one is allowed fellowship unless he is sound doctrinally, and leads a godly life.

Henceforward Müller devoted himself to evangelical and philanthropic labours. He continued to be co-pastor at Bethesda. During the later years of his life he went on evangelical tours, and died on 10th March 1898, greatly honoured.

Müller and his followers took a definite stand against Darby, and the division became permanent. The Müller party was in the majority at first. J. L. Harris, W. H. Soltau, Lord Congleton, and other leaders sided with Müller, and stood for 'Open' principles, declaring them to be the original views of the Brethren. The Open Brethren devoted themselves to gospel work. Spurgeon called them a 'simple evangelical race.' They made converts in large numbers. They have had a number of earnest teachers and evangelists. Their books and tracts have been circulated in millions during the past fifty years.

Several attempts have been made to effect reconciliation with their Exclusive friends, one especially by Henry Bewley in 1870–71, but all have been unsuccessful. As late as 1892, the Exclusive Brethren in Grant's fellowship in America were approached with a view to reunion. In 1906, however, Bethesda adopted a declaration which had been drawn up in 1894 by fourteen leaders on their own responsibility, and was now signed on behalf of the Assembly by eleven Brethren. It explained and modified some of the objectionable statements in 'The Letter of the Ten,' and had as its object a union with G. W. Heath and his associates who sought the re-union of all sections of Brethren. This movement is still in progress.

Amongst the Open Brethren disputes have been few. Their principal dispute, which took place in 1892, was over what is called the 'Needed Truth' question. The majority rejected the 'Needed Truth' principles, which were: (1) complete separation from all Christians not in their own fellowship; (2) only those baptized after conversion to be allowed to break bread; (3) elders in the oversight to be recognized in the place of rule over the assemblies. The movement has not been a success, as many of the 'Needed Truth party have returned to the 'Open' fold, and in 1904 a dispute arose causing division amongst that party. The 'Open' Brethren are active and earnest, fraternize freely with other Christians, and do not evoke the same opposition as the 'Exclusives.' Their meetings are numerous, being established in nearly all large towns. It is generally admitted that in writers they are poorer than the Exclusives; still they have had some able writers, such as Thomas Newbery, editor of a valuable edition of the Bible, J. Denham Smith, W. Lincoln, Arthur Pridham, W. H. Soltau, etc.

From 1849 to 1879 the Exclusive Brethren had a period of prosperity. In 1849, G. V. Wigram commenced their chief organ, which extended to 18 vols. (1849–81), the *Present Testimony*. To it Darby contributed his 'Synopsis of the Books of the Bible,' and other writers gave of their best. It was in 1845 that William Kelly, the son of an Ulster squire, and a graduate with highest honours in Classics at Dublin, joined the movement. After having edited *The Prospect* (1848–50), he, in 1856, took up the editorship of the *Bible Treasury*, which he conducted for fifty years. To it Darby, Stoney, Mackintosh, Denny, Grant, Bellett, and others contributed, and, though its editor has passed away, it is still issued, and is the oldest organ of the Brethren. All their chief doctrines and controversies have been discussed in its pages. It was in it that Kelly's 'Commentaries' first appeared. W. H. Dorman edited the *Girdle of Truth*, 10 vols. (1855–66); J. B. Stoney conducted *A Voice to the Faithful* for thirty years; and C. H. Mackintosh, who had been engaged in scholastic work, and had given it up (1853), wrote *Notes on the Pentateuch*, which has had a wide circulation, and has greatly popularized Darby's views. There were many other publications during this period of great activity, which strengthened the Exclusive movement; and a ceaseless circulation of books and tracts went on. The Revivals of 1857–60 and 1870 got a considerable impetus and colouring from the Brethren, and, ultimately, many of the converts joined their assemblies. A band of young officers resigned their commissions, devoting themselves to evangelizing and teaching. England, Ireland, Scotland, Canada, and the

United States came under their labours, and to this day some of these continue teaching the tenets of the Brethren, such as E. Cross and J. W. Smith.

Darby and Wigram visited foreign parts again and again. Though small at first, Darby's success in America was considerable. He influenced two men, viz. F. W. Grant and Dwight L. Moody. Grant joined the Exclusive Brethren's fellowship, and became their foremost author and leader in America, and meetings were established in most of the great American centres. In 1864, Dr. W. Wolston came to Scotland. Then there were meetings only in Edinburgh, Glasgow, and Aberdeen, but, chiefly through his labours and those of others, gatherings sprang up all round, though many have died out since. Another man, William Reid, a Scottish clergyman, helped the movement greatly. He edited the *British Herald*, which had a wide circulation, and in it were inserted the choicest writings of the Brethren. In 1864, Bellett died. His piety and writings (which have been called prose-poems) left a deep impression on the Brethren, and greatly moulded their theology. It is worthy of note that, amid all the bitter controversies of those days, he was beloved by all parties. In 1872, Wigram visited Australia, where he gained many converts, and where, to this day, the tenets of the Brethren are taught and believed in.

From 1849–79 might be termed the flowing tide of the Exclusive movement. Though attacked and assailed on all hands, they steadily increased in numbers. Between 1858–66 controversy arose regarding some articles on the 'Sufferings of Christ' contributed by Darby to the *Bible Treasury*. W. H. Dorman and P. H. Hall charged him with holding views similar to Newton's. He offered to retire from fellowship, but the mass of the Brethren refused to regard him as a heretic. The controversy was bitter. Dorman, Hall, and others retired from communion, but formed no party. A host of writers attacked the Brethren. Darby, Kelly, and others replied vigorously. Darby's views were eventually adopted, and the controversy died down. Two other small disputes of no consequence occurred, one at Jersey, the other at Sheffield. Then in 1876, at Ryde, Isle of Wight, a dispute arose regarding marriage within the prohibited degrees. A clergyman, named Finch, who had left the English Church, and had broken bread in London, would not, on his return to Ryde, identify himself with the Ryde meeting because of its state, but, with some others, broke bread apart. In 1879 the aged Dr. Cronin, while on a visit to Ryde, broke bread with the Finch party. This brought the matter to a climax. On returning to London, Cronin was challenged for his action. As he affirmed that he was right, his act became a question for judgment. The Kennington meeting, though slow to judge, condemned his act, and on 31st August 1879 he was excluded from fellowship. It is generally conceded that serious blunders were committed during this dispute, with which the question of baptism mingled; and, as a result of it, the Ramsgate meeting divided into two parties, called after the names of the places at which they met, viz. Guildford Hall and Abbotshill. Finally, a letter commending a person from Guildford Hall was presented at Park Street, London. That meeting, after considering the case, decided to receive that person. This entailed the rejection of Abbotshill. Kelly, with others, maintained that this judgment was wrong, and would not accept it, even though his old leader Darby was the adviser. The result was that Blackheath, where Kelly resided, with other meetings, rejected the Park Street judgment, upon the plea that it was not the voice of all the London meetings, which hitherto had always acted in unison. A new section of Brethren was formed, led by Kelly, and marked by very exclusive principles. They have not increased in numbers, and in 1899 a revolt, led by W. W. Fereday, took place on the question of freedom in preaching the gospel; but he has since joined the Open communion, and the movement is dissolved.

Kelly died at Exeter on 27th March 1906. Next to Darby he was perhaps the greatest amongst the Brethren. As a scholar, an expositor, and a controversalist, he stood high, and had a clear and convincing style of expression. When he died, the *Times* and many religious magazines proclaimed him the 'Nestor' of the Brethren. His works are highly spoken of by such scholars as Ewald, Westcott, and Sanday. In the British Museum catalogue his works fill ten pages. On the suggestion of the Archbishop of York, he presented his unique library, weighing 17 tons, to the town of Middlesborough.

Darby died on 29th April 1882. He felt keenly the Kelly division, as can be seen from one of his last letters to the Brethren, in which he requested them not to attack Kelly. His writings extend to 50 vols., and he translated the Bible into English, German, and French.

A small division, occasioned by S. O'Malley Cluff, took place in 1881, but the party is now nearly extinct.

In 1882, after fifty-five years spent amongst the Brethren, the aged Dr. Cronin died. He was marked for his piety and fervour. Previously (in 1879) Darby's trusted friend, G. V. Wigram, had passed away. He was the editor of the *Englishman's Hebrew and Greek Concordances to the Old and New Testaments*, a work of accuracy and scholarship on which he spent a fortune, and in the production of which he received invaluable help from the learned Tregelles, who had been identified with the Brethren in their early days, but had disagreed with their judgment in the Newton case.

When Darby died, J. B. Stoney, whose religious ideas and teaching were said to be High Church, became leader in Britain; while, in America, F. W. Grant, who had put forth, while Darby was alive, some views on the 'Old Testament Saints having life in the Son,' and had affirmed that 'the man in the seventh of Romans was sealed by the Holy Spirit,' became leader. Darby had borne with Grant's views, but now that Darby was gone, fault was found with them, especially by Lord A. P. Cecil. Grant published his views in a pamphlet, which was severely criticized by W. J. Lowe and A. C. Ord. In 1884, Cecil and Alfred Mace, the evangelist, visited Montreal, where they condemned Grant's views, and, with a majority of the Montreal meeting, pronounced him a heretic, and excluded him from communion. This action affected only America and the few followers of C. E. Stuart in England. Most of the American meetings sided with Grant, and the Grant company prospered greatly. Mace in 1905 tendered a confession to the Grant Brethren for his rash act, lamenting that the man he had chiefly wronged was dead. Grant's death in 1903 prevented his completing his *Numerical Bible*, a work of considerable merit. He was beloved and honoured by those amongst whom he had laboured for forty years.

In 1885 a dispute took place at Reading. C. E. Stuart, a learned Brother, published a pamphlet on 'Christian Standing and Condition.' This provoked a controversy mingled with a petty local quarrel, and brought about the separation of

Stuart, with a small body of followers in England and some in the north of Scotland. The party has not grown, and Stuart died in January 1902. It is now generally thought that, if the pamphlet had been left alone, it would have passed into oblivion, and this division would have been averted. The Grant section in America and the followers of Stuart are now joined in fellowship.

During the last ten years of Stoney's leadership there was associated with him F. E. Raven, who went even beyond Stoney in pressing the subjective side of truth. About 1890, Raven expressed views such as that 'eternal life is not imparted to the saint; it is a sphere in which he lives in the love of God,' and is distinct from the new birth; Christ did not manifest eternal life to the world, but only to His own; 'Eternal Life' is not a title of Christ prior to incarnation, and the righteousness of God in 2 Co 5^{21} is future. Irreverent expressions concerning Christ's infancy were used by some of Raven's followers. These were condemned, but, nevertheless, a separation took place at Bexhill. This assembly refused to receive from Greenwich a person commended in the usual way, and cut off Raven and his meeting from fellowship. The Bexhill decision was upheld by W. L. Lowe, H. H. MacArthy, C. Stanley, and others in England, and by A. H. Rule and others in America; while, on the Continent, C. Brockhaus and many Dutch, French, and Swiss Brethren refused Raven's views. In England the division was serious. In France, Germany, and Switzerland the Brethren practically as a whole rejected Raven's doctrines.

At a conference in 1895, Raven questioned the ancient formula, 'the unity of His Person,' when applied to Christ's being God and man in one Person. His definition of Christ's Person was 'a Divine Person in human condition.' He affirmed that the Incarnation did not change or add to the Person of the Son. These and other assertions caused trouble. W. T. Turpin, a gifted Brother, who had long been in fellowship, retired from the Brethren; and many of their best men, though still remaining in communion, did so with much misgiving. Raven's teaching was severely criticized by Brethren outside his own communion, such as E. A. Thomas (Australia), F. W. Grant (America), and W. Kelly (England). Raven did not press his views, but his followers did. His visit to America in 1898 caused a division at Minneapolis. The extremists pressed his views too much, and some English Brethren supported E. Acomb, who opposed Raven; but most of the London leaders upheld Acomb's opponents. A small number were recognized as being in fellowship by the London Brethren in July 1905. These had all accepted Raven's views. J. S. Oliphant and Mace protested against the reception of this party, and would not withdraw their protest; so they were excluded from fellowship by the London leaders. It was at this time that Mace joined G. W. Heath in his attempt to amalgamate the different companies of Open and Exclusive Brethren.

Another storm burst after Raven's death. Several evangelists were preaching with considerable freedom, claiming the right to act on their own responsibility in their work. This was pronounced 'looseness and independency.' J. Taylor, of New York, set forth the view that 'we are saved by Christ and what He has established down here, viz. the Church or House of God.' A brother named James Boyd visited Taylor, and thereafter judged Taylor's views to be semi-Romanism. He wrote criticizing Taylor's errors. A controversy ensued. Boyd was called upon to withdraw his tract, or retire from fellowship. He would do neither, and in this he was supported by a great many Brethren in the north of England.

In 1905–7 a local dispute arose at Alnwick, Northumberland. That meeting was 'broken to pieces,' it was said, 'by its own folly.' Efforts were made to effect a reconciliation. At the end of two years (1907), Glanton and the neighbouring assemblies, with the concurrence of most Brethren in the district, decided to receive any person who had judged himself and sought reconciliation with his Brethren at Alnwick. This had been the practice of Brethren hitherto; but those who opposed Glanton's action in so doing pronounced this an infringement of the principle of 'local responsibility' and an interference with the Lord's rights. A few withdrew from fellowship at Newcastle and South Shields, and so forced on a crisis. An effort was made to suspend fellowship with the Northumberland meetings, as they were said to be 'in confusion.' This principle of 'suspending fellowship' was resented in many places; and, finally, when a sister from Whitley Bay presented a letter of commendation at George Street, Edinburgh, the Brethren there refused this principle of 'suspended fellowship,' and received her. There was a secession in consequence, and those opposed to Glanton formed a new meeting. The London Brethren were called upon to consider the rival claims of the two companies in Edinburgh, when a sister presented a letter to a London meeting, and most of the London meetings decided that Glanton infringed the principle of 'local responsibility,' extinguished the Alnwick assembly, and 'usurped the Lord's functions' in so doing. This decision, carried into effect 31st August 1908, cut off Glanton, Edinburgh, and all other meetings associated with them. W. T. P. Wolston's pamphlet, 'Hear the Right,' gives the history of this last division, and deals in detail with all the contributory causes that led to it.

Such is a very brief outline of the history of the Brethren. Forty years ago their early dissolution was prophesied; but they are still, though divided, a living force. Their religion is a simple one. The Bible to them is an infallible and living book; Christ is an all-sufficient and living Saviour; God is a loving Father revealed in the Son of His bosom; salvation is a reality, and can be known now; Heaven with its glories, and the everlasting Kingdom of our Lord and Saviour Jesus Christ, are proclaimed, and believed in; the Lord's Coming is the great object of hope; the world is under the judgment of the Cross, and men must be saved from impending doom; Hell and eternal punishment are realities; the world's politics, philosophy, and mere social reform advocated for the betterment of the world are but the whitewashing of a house built on sand, or the attempted renovation of a system morally corrupt; their mission is not to save the world but to save people out of it, and while passing through it the Christian is to live soberly, righteously, and godly; his business is to get right and keep right in his soul with God; it is his duty to obey the powers that be, save only when the civil government interferes with his conscience in obedience to God's command. The Brethren all take the place of the Christian priesthood, and gather to the Lord's name. They look for His Holy Spirit to guide some brother to break the bread, pray, or minister, in subjection to the Lord in the midst. Women are not allowed to speak in the assembly. Their teachers minister by lecture or Bible-reading; their pastors care for and tend the flock, while their evangelists preach the gospel. In the present condition of the Church they do not believe in appointing elders, seeing that their meeting is but a fragment of the body of true

Christians resident in their own locality, and some who might be elders are in the churches around. If, however, in their meetings there be men possessing the requisite qualifications, these are thankfully owned and honoured, though not officially appointed. Statistics of Brethren cannot be ascertained, but they form a good proportion of the Christian community in Britain and America and on the Continent.

LITERATURE.—The clearest statement of the general views of the Brethren is found in Darby's *What I Learn from Scripture*, which was revised by Wm. Kelly in his *Bible Treasury*, and is published by Morrish, London, as a tract. The following is a select Bibliography from hundreds of books and pamphlets, and gives both sides of their disputes, and what is written against them:—For the general history of the Brethren: W. B. Neatby, *A History of the Plymouth Brethren*, 1901; J. S. Teulon, *History and Teaching of the Plymouth Brethren*, 1883; A. Miller, *The Brethren: their Rise, Progress, and Testimony*, c. 1877. For the Plymouth Question: J. N. Darby, *Narrative of Facts, Proceedings at Rawstorne Street*; Lord Congleton, *Reasons for Leaving Rawstorne Street*. On the Sufferings of Christ: Wm. Trotter, *The Whole Case of Plymouth and Bethesda*, 1898. On Bethesda: G. V. Wigram, *The Present Question*, 1848–9; H. Groves, *Darbyism, its Rise and Development: A Review of the Bethesda Question*, 1867; J. N. D., *The Sufferings of Christ*; W. H. Dorman, *The Close of Twenty-eight Years of Association with J. N. D.*, 1886. On the Law and the Righteousness of God: J. N. D., *Brethren and Their Reviewers*; S. P. Tregelles, *Five Letters of the Recent Denials of Our Lord's Vicarious Life*, 1864. On the Ramsgate Question: J. H., *A Fresh Testimony . . . Ecclesiastical Error . . . an Epitome of the Ramsgate Sorrow*, 1882. On Grant and Montreal: *Narrative of the Facts at Montreal*, 1884; E. C. L. and E. Crain, *Statement of Separation*; F. W. Grant, *Letter on the Montreal Division*. On Reading: C. B., *The Reading Question, the History and Review*; F. H. B., *A Concise Statement of the Reading Question*. On F. E. Raven, or the Bexhill Division: F. E. R., *Papers on Eternal Life*, etc.; H. A. Hammond, *Record of Some Correspondence, Documents, and Facts*, 1890–1. On the attempted union of Open Brethren with Grant: F. W. Grant, *What is the Present Position of Open Brethren?* 1888. On the second Raven trouble: F. E. R., *Readings and Lectures in United States and Canada*, 1898–1902; Wm. Kelly, *F. E. R.'s Heterodox on Eternal Life and other Divine Truths*; F. W. Grant, *Retracings of Truth*; E. A. Thomas, *Refutation of False Doctrine, being Truth for the Time* (No. 3). On the American and English troubles: J. S. Oliphant, *Minneapolis*, 1905; J. Taylor, J. Pillatt, and others, *Readings at Chicago, Dec. 1904 and Jan. 1905; Letters from J. Boyd on American Teaching*, 1908, 1909; W. T. P. Wolston, *Hear the Right; Two Letters by H. Vinal on the Glanton Question*. On 'Needed Truth' and Open Brethren Dispute: *Brief Statement of the Doctrines of Holy Scripture* (views of the 'Needed Truth' party). For attacks on the Brethren generally (of these there are many, but the following are the strongest): W. Reid, *Plymouth Brethrenism Unveiled and Refuted*, 1880; *The Plymouth Brethren, their Rise, Progress, Practice, and Doctrines*, a lecture by Edward Dennett, 1871. To this, Dennet himself replied later when he became a Brother, in his *The Step I have taken*, 1876. See also J. C. L. Carson, *The Heresies of the Plymouth Brethren*, 1870; Thomas Croskery, *Plymouth Brethrenism*, 1879.

BRIDE, BRIDEGROOM.—See MARRIAGE.

BRIDGE.—To the awe with which primitive man regarded the flowing of a wide, deep river, effectually barring his access to the opposite side, may be traced an extensive series of superstitious and religious practices current in former ages, and still observed in modified forms to-day. The subject may be approached under the following three postulates: (i.) To all early races, rivers were part of a Divine scheme for delimiting frontiers, for apportioning territories to the different races of mankind, and for obstructing the interference of district with district. Rivers accordingly acquired a semi-sacred character, and each stream had its tutelary divinity. The torrent that foamed across man's path was the vomit of a local demon. (ii.) To interfere with what the gods had laid down as a natural boundary, to bridge the stream which had been intended to act as a barrier to the insatiable and the restless curiosity of man, was a daring, nay, a sacrilegious act. In the event of a bridge being built, therefore, the local river-spirit must be appeased by some compensating sacrifice. (iii.) Once this sacrifice has been made, and the river-spirit been placated, the bridge becomes in a sense sacred. It is the aim of this article to trace out the ramifications of these three fundamental ideas.

i. THE PRIMITIVE CONCEPTION THAT EACH STREAM HAD ITS RESIDENT DIVINITY OR RIVER-SPIRIT.—It is beyond the scope of this article to marshal the evidence in support of this first notion. The conception that each stream had its protecting divinity, whose majesty must not be trifled with, was a very common one in Greek and Roman mythology. The customary emblematic representation of the idea in Greek art was that of a figure of an old man with a long beard, clothed in blue garments, and crowned with a chaplet of reeds. He is usually depicted reclining upon an urn from which water continually flows, and, as the river-god, he was supposed to dwell by preference in the caverns and deepest recesses of the river's bed. His care of the river extended to its pollution, and Homer (*Iliad*, xxi. 136 ff.) has described the resentment of the two rivers of Troy, the Scamander and Simois, against Achilles, when he presumptuously profaned their waters. (For further illustration of the hostility of a river-spirit if his majesty be insulted and his quiet disturbed, see J. Rhys, *Celtic Folklore*, ii. 425–430; W. Gregor, *Folklore of the North-East of Scotland*, pp. 66, 67; *Trans. Asiatic Soc. of Japan* for Ainu river-gods and goddesses; J. Abercromby, 'Beliefs and Religious Ceremonies of the Mordvins,' in *FLJ* vii. 72; also *Annales Archéol.* tom. ix. pp. 107–108; and for the idea of the impiety of disturbing natural boundaries, cf. Horace, *Carm.* i. 3. 21: 'Nequicquam deus abscidit Prudens Oceano dissociabili Terras, si tamen impiae Non tangenda rates transiliunt vada').

ii. THE APPEASING OF THE OFFENDED RIVER-SPIRIT.—1. Was this observed in connexion with the Pons Sublicius?—The necessity of some expiatory sacrifice to the river-god, when a bridge was built across the stream, defying his supremacy, seems to have been recognized at a very early period. The early history of Rome shows traces of it. Probably not more than three bridges were erected over the Tiber before the end of the Republic. Of these the most ancient and by far the most famous was the *Pons Sublicius*.* Erected by Ancus Martius to unite Rome to his new fortification on the Janiculum, it was probably situated at the Forum Boarium, not far from the broken arches of the Ponte de Rotto (Livy, i. 33; Dionys. iii. 45, ix. 68; Plut. *Numa*, 9). Down to its latest days, the entire structure, including every bolt and fastening, was constructed of timber [for the reason for this see p. 855]. On the Ides of May (Ovid says the day before), an annual procession of Pontifices, Prætors, and Vestal Virgins marched to this bridge. On the way they visited the so-called 24 *Sacella Argeorum* (chapels), and from them carried away a corresponding† number of *Argei*. These *Argei* were puppets or effigies made of bulrushes, and stuffed so as to represent bodies of old men bound hand and foot. The Flaminica Dialis, the priestess of Juppiter, was present, dressed, not in her customary bridal attire, but in mourning garb. To the accompaniment of the chanting of appropriate hymns and prayers, the puppets were lifted by the Vestal Virgins and flung into the river from the parapet of the bridge (Dionys. i. 38; Ovid, *Fasti*, v. 621 ff.; Plutarch, *Quæst. Rom.* 32 and 86). Of a custom so peculiar,

* From the *sublica*, or piles, on which it was built.

† Dionysius gives 30 as the number.

the Roman antiquarians suggested various explanations:—

(*a*) The *Sacella* were reported to be the graves of the Greeks who came to Italy with Hercules, and the *Argei* were his followers. Though settled in fair Italy, they entertained tender memories of sweet Argos; and, as each hero died, he bequeathed to his friends the sacred duty of throwing his body into the Tiber that it might be transported by the waves to the far-off shore of his fatherland. The rush-made image was the later substitute for the dead body of the early Greek (Ovid, *Fasti*, v. 656). The ancient etymology of *Argei* from Ἀργεῖοι is supported by Mommsen (*Staatsrecht*, iii. 123).

(*b*) The second explanation of the practice was that it was the harmless survival of an earlier and ruder epoch, when old men, above the age of sixty, being considered useless for military service, were cast into the stream and drowned. Though Ovid acknowledges that this traditional explanation was an old one, he nevertheless indignantly repudiates it as a slander on the humanity of his ancestors. Such practices, however, were not unknown in the ancient world. That those past their prime, and afflicted with the increasing infirmities of age, should thus be put to death, was not considered incompatible with filial piety, but rather in the line of kindness, and even of patriotic duty to the State (Cæsar, *de Bell. Gall.* vi. 16; Tac. *Germ.* 9 and 39; cf. also art. OLD AGE).

In later days there arose a belief that the *pons* from which these old men were flung was a more innocuous structure than the Pons Sublicius. On the day of the Comitia, a number of polling-booths were erected in the forum, or wherever the voting was to take place. These booths, or *septa*, were entered by a narrow passage or plank termed *pons* or *ponticulus*, and, when the voter had received his *tabella*, or voting-ticket, out of one of the large vases called *sistæ* or *cistellæ*, he passed along the *pons*, and emerged from the booth by a corresponding 'bridge' on the other side (Cicero, *in Pison.* 15. 40, *pro Plancio*, 6, *pro Harusp. resp.* 20). Festus (p. 334, *s.v.* 'Sexagenarii') argues that, though the aged men were free from the burden of active service for the State, they jealously retained their right to vote. The younger men accordingly were annoyed, and, as their seniors went up the *pons* to record their vote, they raised the cry, which became proverbial, that the old men should be thrown from the bridge ('sexagenarios de ponte'). Ovid (*Fasti*, v. 634) states that the youths actually threw the old men from the bridge (see Cic. *pro Roscio Amerino*, 35. 100; Varro, *apud* Lactant. *Inst.* i. 21. 6). But as these voting *pontes* were comparatively late institutions, and the proverb is a very old one, it would seem after all that the bridge referred to was not the plank of the Comitia polling-booth, but the more fatal Pons Sublicius. The fact, however, remains that parricide was always looked on with horror by the Romans, and it is hard to see how the practice should have passed into a yearly ceremony.

(*c*) By others the rite was regarded as a relic of the time when human sacrifices were general. Ovid states that it was believed by some that Hercules was the first to throw into the stream as sacrifices to the river-god, not living citizens, but fictitious bundles of straw. That human sacrifices were not infrequent in the early days of the Republic is shown by the evidence collected by Merivale (*Hist.* iii. 35). O. Müller (*Etrusker*, ii. 20) believes that the practice was introduced into the Roman cultus from Etruria. It continued down to A.U.C. 657, when Cn. Corn. Lentulus and P. Licin. Crassus, as consuls for the year, made a law which, for the future, prohibited any such human sacrifices. There is, therefore, nothing inherently impossible in the notion that the Pons Sublicius was the scene of primitive human immolation. J. G. Frazer points out (*JPh* xiv. [1885] p. 156, note) that, in early Rome, bridges, being novelties, were viewed with suspicion. They were an insult to the river-god, inasmuch as 'they robbed him of his food by carrying dry-shod over his head the people who, in the course of nature, would have been drowned at the ford.' Thus arose the practice of yielding to Father Tiber a yearly compensation, at first of living citizens who were flung into the river, but later of substitutes in the form of stuffed effigies of old men.

On the other hand, W. Warde Fowler (*Roman Festivals*, p. 112 ff.), in an elaborate analysis of the ancient rite, arrives at the conclusion that the ceremony was dramatic rather than sacrificial, and had primarily to do with the annual purification of the land. He dwells upon the presence at the rite of the Pontifices, and especially of the Vestals, on whom lay the duty of throwing the puppets into the stream, the idea being that the food and nourishment of the State depended on an accurate performance of their duties. He points to the presence and the dress of the Flaminica Dialis, who appeared in this garb only on those great occasions of purification that marked the conclusion of one season, and the beginning of a new season which must be entered on with great care. It was something akin to Adonis-worship, which in Egypt was observed in the same method by the immersion in water of a puppet accompanied by wailings. Mannhardt (*Ant. Wald- und Feldkulte*, p. 276) mentions a Russian practice in which figures of straw, dressed in female clothing, are laid on a bier, carried to a lake or river, torn up, and thrown in, while the spectators hide their faces and wail; and again, in another district, on the same day (June 29th), an old man is carried out of the town, as a symbol that spring has gone, and is followed by *women* singing mournful songs, and indulging in gestures of grief.* Mannhardt (*Baumkultus*, chs. iii. iv. v.) gives many instances from mediæval and modern times of the practice of similar rites, showing that the place of the puppet is sometimes taken by a sheaf, a small tree, or a man or boy dressed up in foliage or fastened in a sheaf. In almost every case the puppet is ducked in water or sprinkled, though sometimes it is burned or buried. The Bavarian *Wasservogel* was an effigy which was carried round the fields at Whitsuntide and then thrown from a bridge into a stream. There is still extant a law passed in A.D. 1351 forbidding the ducking of persons at Erfurt at the Easter or Whitsuntide festivals. Warde Fowler follows Mannhardt in maintaining that all this is a symbol of the departure of winter, and the arrival of the fruitful season. In support of this theory he points out that, while the old Roman practice was to throw in 'old men,' it is a curious coincidence that the name of the puppet thrown in at Whitsuntide at Halle is 'der Alte.' The German puppet, again, is *white*, and the Roman effigy bore a name Ἀργεῖοι, which is probably derived from a root *arg* (seen in *argentum*), meaning the *white* ones (=the old ones). This explanation, however, though it explains some things very aptly, and fits in with some otherwise obscure details, fails to give any satisfactory reason why *a bridge over a river* should be the scene of the purification of the *land*, or why in each case there should be *water*, and the casting of a puppet into a *stream*. We come back, therefore, to the view, supported by a multitude of corroborative facts, that the casting into the stream in early times of a live victim, and the substitution in later ages of effigies, were due to a belief in the necessity of placating the river-spirit, whose majesty was offended by a structure spanning his waters, the very object of which was to rob him of his toll in human victims.

2. This root-idea of the necessity of a sacrifice traced to modern times.—The wide-spread nature of this custom will be recognized from the following instances. Herodotus (ii. 90) states that the priests of the Nile-god claimed the right to bury with high honours all bodies drowned in the river, 'as being something more than human.' The god had claimed them, and they were his property. Maspero (*Dawn of Civilization*, p. 39) describes the sacrifices to the river at Silsileh on the rising of the Nile. See also Lane (*Mod. Egyptians*, ch. xxvi.) for the *'arooseh* (bride)—the virgin thrown into the river as a sacrifice to obtain a plentiful inundation. Picart (*Cerem. and Relig. Cust. of the World*, 1733, iii. 87) refers to the practice of the savages on the Mississippi of sacrificing prisoners to the genii who preside over the waters. Compare also the yearly sacrifice of a girl to the spirit of Niagara. When a man is drowning in a river, it is a common saying in Germany that 'the spirit of the stream is getting his yearly victim' (Grimm, *Deutsche Mythol.* p. 409). There is a legend that the spirit of the river Ribble, in York-

* In Silesia, as late as the 16th cent., according to Guagnin (*Sarmatiae Europeae descriptio*, fol. 105), on March 17 of each year, being the anniversary of the destruction of the pagan idols by Mieczyslaw I. (962–992), 'pueri in villis et oppidis ex more recepto simulacrum quoddam ad similitudinem mulieris conficiunt, oppidoque turmatim egressi quandam cantionem ingeminantes simulacrum illud de ponte in flumen praecipitant.' This would seem, however, to be merely a sort of Guy Fawkes celebration of the destruction of paganism. In this general connexion it should be noted that Gruppe (*Griechische Mythologie und Religionsgeschichte*, p. 821) holds that such ceremonies as those associated with the *Argei* were originally rain charms.

shire (known as Peg o' Nell), demanded a victim every seven years (W. Henderson, *Folklore of the Northern Counties*, p. 265); and the American Indians have a tradition that the Falls of Niagara must have two human victims annually. The notion, however, is very prominently brought out in the following connexions:—

(*a*) *Sacrifices necessary at the foundation of bridges.*—A legend is current about London Bridge that, in order to render the structure secure, the stones were besprinkled with the blood of little children. When the broken dam of the Nogat was repaired in A.D. 1463, the peasants were advised to throw in a living man. They seized a beggar, made him drunk, and buried him (Tylor, *Primitive Culture*[3], i. 104). In 1843, on the erection of a new bridge at Halle, it was widely believed that the structure ought to have had a child built into it (Grimm, *op. cit.* p. 956). The builder of the 'Loh-Family Bridge' at Shanghai experienced some difficulty in laying the foundation. He vowed to Heaven 2000 children if the river-spirit would allow the stones to be laid properly. The divinity (she was a goddess on this occasion) replied that she would not require their lives, but that the number named would be attacked by smallpox. The epidemic actually broke out, and half the number died. It is a Chinese belief that a bridge built without attention to these religious observances will bring about a visitation of smallpox. In Tibet, when smallpox is raging, the inhabitants of the villages as yet untouched by the disease try to stay its progress by placing thorns on the bridges to terrify away the evil spirits who bring the plague. Those who die of the disease are thrown into the rivers (Annie W. Marston, *The Great Closed Land* [Tibet], p. 41). At Hang-Chow, a tea-merchant cast himself into the river Tsien-tang as a sacrifice to the spirit of the dykes which were constantly being washed away (Moncure D. Conway, *Demonology and Devil-lore*, 1879, i. 204). In 1872 there was a scare at Calcutta when the Hooghly Bridge was built. The Hindus imagined that the spirit of the river would consent to have its majesty invaded only on condition that each pier of the structure was founded on a layer of children's heads (A. B. Gomme, *Traditional Games of England, Scotland, and Ireland*, i. 346 ff.; G. L. Gomme, *Folklore Relics of Early Village Life*, p. 29). In 1890 the *Pall Mall Gazette* reported that heads of unwary travellers in China were being cut off, and £10 was being paid for each head by the Department of Public Works in order that they might be built into the foundations of the piers of a number of new bridges that were in course of erection. It was stated that such was the terror of the coolies that for no money could they be induced to carry fares to the suburbs at night. (For a similar story see *Nature*, April 30, 1896, under title 'Megalithic Folklore,' by S. E. Peal, Sibsagar, Assam, March 27.) Among the popular traditions of Albania, there is one to the effect that human beings were formerly buried under the foundations of important bridges. Throughout the Greek East there is a current belief that every building has a resident spirit, and every stream a resident genie, which goes by the name of the στοιχεῖον. It is believed that the man whose shadow falls on the first-laid stone of a house will die within the year, and his shadow, remaining in the building, becomes its στοιχεῖον; hence the practice of sacrificing fowls and sheep at the beginning of any important construction to avert danger from the workmen. 'But sometimes, instead of killing an animal, the builder entices a man to the foundation-stone, secretly measures his body, or a part of it, or his shadow, and buries the measure under the foundation-stone, or he lays the foundation-stone upon the man's shadow. It is believed that the man will die within the year' (B. Schmidt, *Das Volksleben der Neugriechen*, p. 196 f., quoted by J. G. Frazer, *Golden Bough*[2], i. 291). Until a sacrifice has been offered to this spirit, no bridge will be allowed to stand secure. A bridge so secured is termed 'stoicheion-built' (στοιχειοθεμελιώμενα), and legends regarding such bridges are everywhere met with. Some of the Greek folk-songs are famous, *e.g. The Bridge of Adana in Kappadocia*: 'All day long they built the piers: by night they fell in ruins.' The builders are at their wits' end. They know that the bridge will never stand until a living spirit is given to it in sacrifice. But who is willing to be thus offered? The engineer entices his wife to the edge of the excavation for one of the piers. He drops his ring into it, and induces his wife to fetch it up:

> 'Then down goes she, and down goes she, steps forty-two descends she,
> And fall upon her as she goes of stones a thousand litras,
> And throw they down upon her, too, of earth a thousand spadefuls.'

As she dies, she calls out:

> 'Hear thou my words, Yiannáki mine, let not the world rejoice thee,
> Three only sisters once were we, we were three sisters only;
> The one did build the Danube's bridge, the second the Euphrates,
> And I, I too, the murdered one, the bridge build of Adana' (Lucy M. J. Garnett and J. S. Stuart-Glennie, *Greek Folk Poesy*, 1896, p. 71).

The same legend is current in Italy as regards the Bridge of Arta, which collapsed till the master-builder walled in his wife. With her dying curse, however, she prophesied that the bridge would always tremble (*ib.* p. 81). The same story is told of the 'Lady's Bridge' in Peloponnesus (*ib.* p. 70) and the 'Trembling Bridge' near Canea in Crete. So engrained is the belief in the necessity of such sacrifices, that it is alleged that in Zacynthus the inhabitants would still kill a human victim if they were not deterred by fear of the law's vengeance (B. Schmidt, *op. cit.* p. 197 ff.). The idea that underlay the old Roman substitution of rush-men for human victims is still observable occasionally in different parts of the world; and to this day sacrifices of a less dreadful character than that of human beings continue to be offered to the water-spirits of Austria and Germany (Th. Vernaleken, *Mythen u. Bräuche des Volkes in Oesterreich*, 1859, p. 168; A. D. Wuttke, *Deutscher Volksaberglaube*[2], 1900, § 429).

(*b*) *The 'bridge-sacrifice' a part of the widespread belief in the necessity of a 'foundation-sacrifice' for all structures.*—This placating of the river-spirit is thus in strict harmony with the almost universal belief in the necessity of a sacrifice as a rite preliminary to the erection of all buildings. Thus the Picts are said to have bathed their pre-historic foundation-stones with human blood to propitiate the spirit of the soil (Forbes Leslie, *Early Races of Scotland*, i. 149). Mackinnon (*Culture in Early Scotland*, p. 53) asserts that 'even after the humanizing doctrines of Jesus had become the popular creed, the power of this grim rite occasionally asserted itself in the practice of slaying or burying a victim, before or during the erection of a building, in the belief that only thus could it be made secure' (see also Gaidoz, *Mélusine*, iv. 16). A Thuringian legend is extant that, to make the castle of Liebenstein secure and impregnable, a child was bought from its mother for hard cash, and walled into the foundations. The wall of Copenhagen sank during its erection as fast as it was built. The workmen took an innocent little girl, set her on a chair at a table with toys and eatables, and then twelve master-

masons closed a vault over her. The wall thereupon was completed and stood firm (Tylor, *Primitive Culture*[3], i. 104 f.). There is a Servian legend that three brothers combined to build the fortress of Scutari, but were baffled by the demons, who razed by night what it had taken 300 masons to erect by day. At last the fiends were appeased by the immolation of the wife of the youngest of the three, who happened to be the first to come with food for the workmen (*ib.*). When Vortigern was erecting a strong fort in Snowdon, what the workmen built in one day was always swallowed up in earth the next night. The king consulted Merlin, who advised that the stones and mortar should be sprinkled with the blood of a child born of a mother without a father (Nennius, *Mon. Hist. Brit.* p. 67; also Selden's note to Drayton's *Polyolbion*, p. 158). In Adamnan's *Life of St. Columba* (Reeve's tr. 1857, p. 203) there is the following naive yet significant statement:

'Columkille said then to his people, "It would be well for us that our roots should pass into the earth here." And he said to them, "It is permitted to you that some of you go under the earth of this island to consecrate it." Odhran arose quickly, and then spake. "If you accept me," he said, "I am ready for that." "O Odhran," said Columkille, "you shall receive the reward of this: no request shall be granted to any one at my tomb unless he first ask of thee." Odhran then went to heaven. He (Columkille) then founded the church of Hy.'

Thus the spirits of the soil of Iona were propitiated, whereas till then they had overthrown by night what had been erected by day (see Scott's *Minstrelsy of the Scott. Border*, note to the 'Court of Keeldar' and 'Glenfinlas'; Innes, *Eccles. Hist.*; Pennant, *Voyage to Scotland*, i. 286 ff.; Joyce, *Social History of Ancient Ireland*, i. 284 ff.).

Human skeletons have been found under foundations of the round towers in Ireland (*FLJ* i. 23). A Highland tradition relates that, when the workmen had assembled to lay the foundation of Tigh-an-Torr, in Western Ross-shire, they caught the first person who chanced to pass, and buried him under the foundation-stone. At the laying of the foundation of Redcastle, a red-haired girl was buried alive under the stone (Haddon, *The Study of Man*, 1898, p. 354; see also MacBain, *Celtic Mythology and Religion*, pp. 45, 46; Stokes, *Revue Celtique*, ii. 200, 201; Windisch, *Irish Grammar*, p. 139). Fitzstephen, in his account of London in the 12th cent., mentions that, when the Tower was built, the mortar was tempered with the blood of beasts (A. B. Gomme, *Tradit. Games*, p. 346 f.). Formerly in Siam, when a new city gate was being erected, it was customary for a number of officers to lie in wait and seize the first four or eight persons who happened to pass by. These were then buried alive under the gate-posts to serve as guardian-angels. The *Ceylon Observer* of Jan. 27th, 1887, had a paragraph in which it was stated that the schools in Colombo were empty, many children were missing, and parents were afraid to let their offspring venture out of doors, because the report had got abroad that 350 boys under the age of 12 were required as sacrifices to propitiate the deity who was responsible for the crack in the great Maligakanda reservoir (*FLJ* v. 260). For further illustrations of this 'foundation-sacrifice' idea see Gerard, *The Land beyond the Forest* (Transylvania), ii. 17; H. Clay Trumbull, *The Threshold Covenant*, p. 47; Macalister in *PEFSt*, 1904, p. 16, where a plate shows a skeleton of a woman discovered at Gezer as a foundation-sacrifice in a pre-Israelitic Palestine town; Rodd, *Customs and Lore of Modern Greece*, p. 168; *FLR*, vol. iii. pp. 282–283, vol. iv. pp. 124, 186; *FLJ*, vol. i. pp. 23–24, 92; Bowring, *Servian Popular Poetry*, p. 64; Grimm, *Deutsche Mythologie*, pp. 972, 1095; St. John, *Far East*, i. 46. See also art. FOUNDATION.

(c) *The primitive heathen 'river-spirit' becomes the 'devil' of Christian times.*—In the Christian centuries the heathen idea of a water-spirit, or genius of the river, gave place to the conception that the devil assumes guardianship over all streams. And yet there was a wide-spread belief that the jurisdiction of the devil extended no further than the middle of a running stream (cf. Burns, *Tam o' Shanter*). He has accordingly a special antipathy to bridges, as was the case with his ancient prototype. Numerous, therefore, are the legends to be found over all Europe attached to so-called 'Devils' Bridges,' narrating how the Evil One would not allow the bridge to be erected until he had received payment of an offering like that of Iphigenia. In Herzegovina the Muslims regard the office of a civil engineer with pious horror, and curse a new bridge when they pass it. It is to them the symbol of the devil's presence, and the token of an unholy compact between the Evil One and the architect (A. J. Evans, *Through Bosnia and Herzegovina*, p. 314). Like his predecessor the river-spirit, the devil, however, was sometimes cheated of his due. Many of the more ancient bridges of Germany and Switzerland have legends attached to them narrating how the hard conditions laid down by the great enemy (whose tale of victims by drowning was cut short by the erection of a bridge) were successfully evaded.

The Montafon bridge in the Tyrol and the bridge at Ratisbon are illustrations. In the case of the latter, the architect was apprenticed to a master who was building the Cathedral. He laid a wager that he would bridge the Danube before his superior laid the cope-stone of the church. After many failures, the apprentice entered into a compact with the devil, who appeared to him in the garb of a friar. The devil undertook to build fifteen arches of the bridge, on the understanding that he would get the first three living creatures that crossed the bridge. The work was completed in time. The wily apprentice sent across the bridge a dog, a cock, and a hen. The devil in wrath tore the animals to pieces and disappeared. A procession of holy monks passed over the bridge and rendered it safe, and in proof of the reality of the story the figures of the three animals are still triumphantly shown, carved upon the bridge (Moncure D. Conway, *op. cit.* vol. i. p. 204; Tylor, *op. cit.* i. 106; for other instances in Germany, see Grimm, *op. cit.* p. 853). Goethe (*Faust*, ii. 4, Hayward's tr.) makes Mephistopheles say:

'My wanderer on faith's crutches hobbles on
Towards the Devil's Bridge and Devil's Stone.

A French legend of another 'Pont du diable' describes how an apple was thrown along a newly-finished bridge, and a cat allowed to go in chase of it. The devil was again thus cheated. Principal Rhys has kindly favoured the writer with a similar legend from Wales. 'The devil bargains with an old woman who wants the bridge built, to have as his pay the first creature that crosses the bridge, and expects thus to get the old woman herself. But she takes her dog with her, and throws a piece of bread before her. The dog rushes after it over the bridge, and the devil does not score in the end.' Cf. Longfellow (*The Golden Legend*, Canto v.), who describes the Devil's Bridge at Pilatus, near Lucerne:

'And the Devil promised to let it stand,
Under compact and condition
That the first living thing which crossed
Should be surrendered into his hand,
And be beyond redemption lost.
At length the bridge being all completed,
The Abbot, standing at its head,
Threw across it a loaf of bread,
Which a hungry dog sprang after,
And the rocks re-echoed with peals of laughter
To see the Devil thus defeated!'

It is the same idea which appears in the practice of building *empty* coffins into walls in Germany; in the walling of a *lamb* instead of a child under an altar in Denmark to ensure the stability of the church; in the killing of 12 *sheep*, and placing their heads under the foundations of the pillars of a new bridge over the Arcen in Albania (J. G. von Hahn, *Albanesische Studien*, 1854, i. 161); in the sacrifice of a *chicken* in place of a girl as a foundation-sacrifice in Borneo (Haddon, *op. cit.* p. 355). For further illustrations see Garnett, *Women of Turkey*, ii. 286; Alexandri, *Ballades de la Roumanie*, 1855, under 'The Monastery of Argis'; Tylor, *op. cit.* i. 106 f., with references to the custom in Galam in Africa, in Polynesia, in South Asia, in Japan, and in Tenasserim.

It is clear from these myths that the idea of regarding the devil as the actual architect of the bridge is a later development. The early conception that the devil merely allowed the erection of the structure on payment of a solatium passed into the idea that the devil himself was the builder,

and must have his payment accordingly. A still more developed form of the notion of diabolical or infernal power being invoked in the rearing of a bridge is seen in Froissart (*Chron.* i. 391), who tells how, in A.D. 1381, when the Duke of Anjou was besieging a strong castle on the coast of Naples, a necromancer (doubtless with the help of the devil) built a bridge which carried ten soldiers abreast, until one that passed over the bridge 'made the signe of the crosse on hym, then all went to nought, and they that were on the bridge fell into the sea.' A companion tale is told of the rearing and the destruction of the 'Kelpie's Bridge,' or Drochaid-na-Vouha, at the mouth of the Dornoch Firth (see Miss Dempster's 'Folklore of Sutherlandshire' in *FLJ* vi. 172 [1888]), where the exclamation of an admiring countryman, 'God bless the workmen and the work,' caused the infernal labourers to vanish, and the magnificent golden bridge to sink into the waves.

(*d*) *Survival of the idea of sacrifice to the river-spirit in modern children's games.*—One of the most curious survivals of the ancient custom is seen in many modern children's games. The singing game known as 'London Bridge' has many variants in the different localities where it is played, but fundamentally the theme is the same:

'London Bridge is broken down,
London Bridge is broken down,
London Bridge is broken down,
My fair lady.'

Mrs. Gomme, in her *Traditional Games of England, Scotland, and Ireland*, has analyzed this rhyme very thoroughly. She shows that the song describes the difficulty encountered in building the bridge by *ordinary* means, and that it asks many questions how the structure is to be reared. At last the children seize a 'poor prisoner,' to whom they say, 'Off to prison you must go.' The prisoner in the game is actually 'caught,' and 'released' on payment of a forfeit. The game is thus a curious survival of the old-world notion that a bridge could stand secure only by the death of a 'prisoner,' or, if need be, of his substitute. It is thus allied to the στοιχεῖον folksongs of the Greek Orient. Prof. Léon Pineau has suggested in regard to another children's game, a very popular French '*ronde*,' which commences:

'Sur le pont de Nantes,
Sur le pont de Nantes
Un bal est affiché . . .'

that this game relates to 'a ritual dance on the occasion of a human sacrifice to the divinities of the water' (quoted in Haddon, *op. cit.* p. 356).

(*e*) *Transference of the dread associations of bridges to the 'Bridge of Judgment' in the under world of spirits.*—So firmly lodged in men's minds was the conviction that the erection of a bridge implied some kind of preliminary transaction with supernatural powers by way of satisfying their animosity, that, in view of the life beyond the grave, similar conceptions were held regarding the river of death. In the lower world of Shades will there not be a bridge to be crossed, a bridge spanning the dark stream of death, nay, it may be, the very mouth of hell itself? The idea became a fixed belief in nations far sundered geographically. The river-spirit, who in the upper world demanded an adequate satisfaction in the event of his stream being crossed by a bridge, was represented in the lower regions sometimes by the devil, sometimes by stern guardian-angels. The primitive conception of human sacrifices as an offering to the river-god developed in later ages into the belief that the devil received as his prize all who could not successfully pass the ordeal of crossing the narrow bridge.

Sale (*Koran*[2], 1825 Prel. Disc. § iv. p. 121) describes how integral a part of Muhammadan theology this is. The Muslims hold that those who are to be admitted into Paradise will take the right hand way, and those who are destined to hell-fire will take the left; but both of them must first pass the bridge (called in Arabic *al-Ṣirāt*) which is laid over the midst of hell, and is finer than a hair, and sharper than the edge of a sword. It seems very difficult to conceive how any one can stand upon it. The bridge, moreover, is beset on each side with briars and hooked thorns, which will, however, be no impediment to the good, who will pass with wonderful ease and swiftness, like lightning on the wind, Muhammad and the Muslims leading the way. The wicked, what with the slipperiness and extreme narrowness of the path, the entangling of the thorns, and the extinction of the light which directed the faithful to Paradise, will soon miss their footing, and fall down headlong into hell, which is gaping beneath them (Pocock, *Specim. Hist. Arab.*, pp. 282–289). Other Muhammadan legends affirm that this awful bridge stretches between the Temple of Jerusalem on the W. and the Mount of Olives on the E., while between lies the Valley of Hell (the Valley of Jehoshaphat). The pious will be upheld, as they cross, by an angel who will hold them by a single lock of the head ('Shasheh'), but the wicked will fall into the Valley el-Jehennam beneath. Although the bridge of *al-Ṣirāt* is not mentioned in the *Qur'ān*, it is much elaborated in later Muhammadan eschatology, where it is described, in addition to the details already given, as in length a journey of 3000 years, 1000 ascending, 1000 level, and 1000 descending, while fire shoots up about it a journey of 40 years. While, as already noted, the righteous pass over it like a flash of lightning, less perfect Muslims take longer periods in proportion to their guilt, some requiring 25,000 years to complete the journey. Yet other sources make the bridge to consist of seven arches, each a journey of 3000 years, and during the passage all but the most righteous suffer agonies from the fire of hell (cf. Wolff, *Muhammedanische Eschatologie*, pp. 109, 114 f., 148 f.; al-Ghazālī, *Perle précieuse*, ed. and tr. Gautier, pp. 43, 69–70, 72–73; Rühling, *Beiträge zur Eschatologie des Islam*, pp. 27, 58, 63).

The Muhammadan bridge of al-Ṣirāt was borrowed from the Parsi *Chinvatperetu*, or 'Bridge of the Decider,' mentioned repeatedly both in the Avesta and in Pahlavi literature (Bartholomae, *Altiran. Wörterbuch*, col. 596 f.; Gray, *Muséon*, new series, iii. 160 f., 163–165; Modi, *JRASBo* xxi. 49–65; Scherman, *Materialien zur Geschichte der indischen Visionslitteratur*, p. 105 f.; Söderblom, *Vie future d'après le mazdéisme*, pp. 92–96). This bridge, which stretches from the 'Peak of Judgment' (*Chakāṭ-ī Dāītīh*), in Airān-Vēj, to Alburz, is described as follows (*Dāṭistān-ī Dēnīg*, xxi. 1–7): 'As it were, that bridge is like a beam of many sides, of whose edges there are some which are broad, and there are some which are thin and sharp; its broad edges are so large that its width is twenty-seven reeds, and its sharp sides are so contracted that in thinness it is just like the edge of a razor. And when the souls of the righteous and wicked arrive, it turns to that side which is suitable to their necessities, through the great glory of the creator and the command of him who takes the just account.' The Parsi concept of the 'Bridge of the Decider' has also been borrowed not only in Mandaism (Brandt, *Mandäische Religion*, p. 195), but also in the *Yalqut* to Isaiah, § 359 (Kohut, *Jüdische Angelologie und Dämonologie in ihrer Abhängigkeit vom Parsismus*, 1866, p. 70), and perhaps, as Böklen (*Verwandtschaft der jüdisch-christlichen mit der parsischen Eschatologie*, 1902, p. 37 f.) suggests, in 2 Es 7[6ff.].

It is not impossible that the bridge of the dead is found in Indian literature as early as the

Upaniṣads (Scherman, pp. 117–119), and it is certain that the belief in such a bridge occurs in Chinese Buddhism, and among the Jews of the Caucasus, the Transylvanian Gypsies, the modern Greeks, the Badaga of the Nīlgirī Hills, the Solomon Islanders, the Gold Coast Negroes, etc. (*ib.* pp. 99, 102–110), as well as in New Caledonia (cf. above, vol. i. p. 493[a]). The belief thus found in Zoroastrian, Jewish, Muhammadan, and Indian circles, as well as in other parts of the world (see also below), would seem to be a later and modified analogue of that primitive conception of the trial of the soul after death, which is seen in many early religions. We recognize the same underlying features in the Egyptian myth of the weighing of the scales before the bar of Osiris, and in the Greek fable of the judgment of the soul by Minos, Æacus, and Rhadamanthus in the under world. Cf. Dante, *Hell*, Canto v. 4 ff. (Cary's tr.):

> 'There Minos stands,
> Grinning with ghastly feature: he, of all
> Who enter strict examining the crimes,
> Gives sentence, and dismisses them beneath,
> According as he foldeth him around:
> . . . . . in his turn
> Each one to judgment passing, speaks, and hears
> His fate, thence downward to his dwelling hurl'd.'

In Tooke's *Pantheon* (Edin. 1791, p. 242) there is a curious and grotesque plate of the Hades of the Greek imagination, with Charon ferrying his fares across the Styx, Cerberus the three-headed dog guarding the passage, while in the distance there is a *bridge* with three individuals on it, who pass thereby from the flames of hell to the pleasant woods of Elysium. So also in ancient Celtic mythology there was cast over hell a bridge of exceeding narrowness (sometimes a mere cord), which souls were obliged to traverse if they hoped to reach the mansion of light beyond. This was 'The Brig o' Dread, na brader than a thread' (Baring-Gould, *Curious Myths of the Middle Ages*, p. 248; Rhys, Hibbert Lect. on *Celtic Heathendom*, p. 450).

There is a Hindu analogue to this belief in the Indian Baitaraṇī (*q.v.*), or swift River of Hell, flowing with blood and filth, which can be crossed only by holding a cow's tail. Aynsley (*Indian Antiq.*, May 1886) learned that the Hindus of Chamba, in the Panjāb, have a bridge over which every corpse must pass on its way to the burning *ghât* beside the river. Though there is a safe road by which the procession may travel, the corpse is invariably carried over a perilous causeway, only 18 inches wide, without a protecting balustrade. In the Solomon Islands there is a kindred belief. At Bogotu, in Ysabel, is a little island called Laulau. On the top of the island is a pool of water, Kolapapauro, and hither all departed spirits of men and women must at death repair. Across the pool lies a narrow tree-trunk, and along this bridge all souls must advance. Bolafagina, the Master-Spirit, examines their hands to see if they have the mark cut upon them (a conventional outline of the frigate bird) which admits them to his company. Those who cannot pass the ordeal are hurled from the bridge into the gulf beneath and perish (R. H. Codrington, *The Melanesians*, p. 257). A similar idea is prevalent among the Chinese in Formosa. With them the good pass over a narrow bamboo bridge to a paradise of sensual enjoyment; the wicked fall from the bridge into a bottomless pit of torment (Forlong, *Faiths of Man*, i. 340). One of the beliefs of the New Zealanders is to the effect that at death the soul on its way to Reinga (= Hades) has to pass a river called Wairotane, the keeper of which places a plank for him to go over. Sometimes the guardian spirit will not permit him to cross, but with friendly violence drives him back to the world he has quitted, in order that he may take care of the family he has left behind (Taylor, *New Zealand and its Inhabitants*, p. 103). In another legend of the same race, a tree has its top pulled down by ropes, so that, when released, it rebounds to the sky, and forms a swinging bridge. The soul that is ready for translation mounts the perilous structure, clings to it, and is swung up into heaven (K. M. Clark, *Maori Tales and Legends*, 1896).

The same ideas of a dread river, and a still more dreadful bridge, are to be found in Scandinavian mythology. In the romance of Hermód, the hero rides nine nights and days through dark and deep valleys, and sees nothing till he comes to the river Gjöll (='the sounding one'), when he steps on to the Gjallar Bridge, which is plated with shining gold. Its guardian maid, Modgud, who asks him his name, says that the day before five arrays of dead men had passed over the bridge, 'but the bridge sounds not less under thee alone, and thou hast not the colour of dead men; why ridest thou here on the way of Hel,' which 'lies downward and northward?' (du Chaillu, *The Viking Age*, 1889, i. 34; Mallet, *North. Antiq.*, 1859, p. 448). Here, as in Vedic India, we find the belief that this bridge of the dead can be crossed in safety by one who, having given a cow to the poor whilst on earth, will find himself provided with a cow at this dread passage, which will carry his soul in comfort across the gulf. In Friesland, the name given to the Milky Way, which was reckoned the Way of Souls, was the Cowpath ('Kaupat') (see Mannhardt, *Die Götterwelt der Deutschen u. Nordischen Völker*, 1860, p. 51). Hence of yore the funeral custom arose in Sweden, Denmark, Upper and Lower Germany, and England, that a cow should follow the coffin to the graveyard. Till recent times this custom was continued on the Continent, being accounted for on the ground that the cow was a gift to the priest for saying masses for the dead man's soul, or for preaching his funeral sermon (Kelly, *Curiosities of Indo-Europ. Tradition and Folklore*, 1863, p. 320). In England, when pagan sacrifices had been abolished, the cow was similarly devoted to pious uses, under the name '*saul-sceat*' (=soul-shot), or mortuary payment.

But, having passed Gjallar Bridge, and entered Hel (one of the nine Scandinavian under worlds which stood under Ygdrasil, the mystic ash), there was no way to heaven but by a still more precarious bridge. This was the famous *Bifröst*, or the Bridge of the Asar, connecting earth with Asgard, the home of the gods (Bifröst, from Icelandic *bifa*= tremble, and *rost*=path, the tremulous or aerial bridge, the rainbow; Mallet, *op. cit.* p. 548; Brewer, *Dict. of Phrase and Fable*, p. 133). According to the Eddas (§ 27), by this rainbow bridge from heaven to earth the gods daily descended, passing on horseback over it to sit in judgment in the under world on the souls of men brought before them. The red of the rainbow is the burning fire which keeps back the frost and mountain giants from entering Asgard. But, lest other giants should attempt to scale the heights of heaven by this bridge, at the foot, on Himinsbjörg ('heaven-mountain'), sits Heimdall, the watchman of the gods, with his terrible dog Garm. (Cf. the 'Great Dog' of the North Amer. Ind. legends, and the fact that the baying of a dog is currently held throughout northern lands to be coincident with, or prophetic of, death.) Heimdall needs less sleep than a bird; he can see equally well by night and by day 100 leagues away; he hears the grass growing and the wool on the sheep's back. But there will come a day when all his watchfulness will be in vain. Strong though the bridge be, and 'constructed with more art than any other work,' it will be stormed and destroyed by the sons of Muspell. These giants, led by Surtur (the 'black'), with a sword brighter than flame, will advance against heaven with irresistible might. In vain will Heimdall blow his Gjallar-

horn, the sound of which will be heard throughout all worlds. The wild horde will swarm up Bifröst on horseback, and attempt to break into Asgard. In the awful onslaught the tremulous bridge will break into a thousand pieces, and the end of the world will have come (Mallet, *op. cit.* pp. 95, 408–452; Crichton and Wheaton, *Scandinavia Ancient and Modern*, 1838, i. 91–95).

The conception of the rainbow as a bridge between earth and heaven, over which the gods descend and ascend, is found also among the South Sea Islands (see the adventures of Oro in Ellis, *Polynesian Researches*, 1829, i. 313). Perhaps also the 'Floating Bridge of Heaven' in Japanese legends is derived from the same conception (see W. G. Aston, *Shinto, the Way of the Gods*, 1905, p. 87; and Sir E. J. Reed, *Japan: its History, Traditions, and Religions*, 1880, i. 30).

This notion of a bridge in the unseen world over which the soul at death must pass was imported into mediæval Christianity from paganism, and became an essential part of its stock of beliefs. In *St. Patrick's Purgatory* (Wright's ed. 1844, ch. iii.) it is told how the pilgrim made a tour through hell in person, how he crossed the narrow bridge that spans the river of death, how he turned about on a great wheel of fire, how he passed the devil's mouth over the awful bridge, and thus at last reached Paradise (Tylor, *op. cit.* ii. 55; Baring-Gould, *op. cit.* p. 237). A bridge is likewise a prominent feature in the mediæval Visions of Alberic, St. Paul, Tundale, and Thurcill; and the same idea is met with in the 'Lyke-Wake Dirge' (a dirge which continued to be sung in Yorkshire till A.D. 1624), the funeral chant of the North Country, which tells of the passage over the dreadful bridge of death:

> 'From Whinny-moore when thou may passe,
> Every night and alle;
> To Brig o' Dread thou comes at laste,
> And Christe receive thy saule.
> From Brig o' Death when thou art paste,
> Every night and alle;
> To Purgatory fire thou comes at laste,
> And Christe receive thy saule.'

(J. C. Atkinson, *Glossary of Cleveland Dialect*, p. 595; cf. Scott, *Minstrelsy of the Scottish Border*, ii. 367; Tylor, *op. cit.* i. 495; Kelly, *Indo-European Folklore*, p. 115, who quotes the dirge in full; Becker, *Contribution to the Comparative Study of the Medieval Visions of Heaven and Hell*, pp. 44, 76, 83, 90, 97.)

The conception is found even amongst North American Indians, either as one of their primitive myths or as a distorted belief derived from their early intercourse with Roman Catholic peoples. The Hurons and Iroquois tell of some whose spirits, travelling in dreams, have returned to earth to tell what they have encountered in the world of ghosts—the river of the dead with its snake-bridge, or swinging log, at the far end of the bridge the Great Dog, and in the distance the villages of the dead (Tylor, *op. cit.* ii. 50). Brebeuf, an early Jesuit missionary, tells of the Indian belief in the tree-trunk which bridges the river of death, and how some of the dead, as they cross it, are attacked by the Dog that guards it, and made to fall into the abyss (*ib.* p. 94). Yet the myth underwent the same natural modification as it had experienced in the Old World. The passage of the bridge came to signify the ordeal whereby the good and the evil were sifted. Catlin (*North Amer. Ind.* ii. 127) refers to the Choctaw idea that souls at death travel far westwards to where the long, slippery, barkless, pine-log, stretching from hill to hill, bridges over the deep and dreadful river: the good pass safely to a beauteous Indian Paradise; the wicked fall into the abyss of waters, and go to dwell in a dark, hungry, wretched land (for further American Indian data, see above, vol. i. p. 435; for similar beliefs among the Ojibwas and the Minnetarees of North America, see Tylor, *Early Hist. of Mankind*, p. 360; and on the ideas of the Aztecs and the Euroks of N. California, as well as the Indians of South America, see Brinton, *Myths of the New World*, 1876, pp. 108, 247 ff.).

In presence, therefore, of a belief, wide-spread and deeply rooted in the mediæval mind, that there existed a bridge in the under world over which every soul must pass, it is not surprising that men should have formed the theory that at this bridge there takes place a conflict between the devils on the one hand and the good angels on the other for the possession of each man's soul. This was an integral part of the Parsi faith. When a soul arrives at Chinvat Bridge the gods and the unclean spirits fight for possession of it. If it be one of the righteous, it is defended by other pure souls, and by the dogs that guard the bridge (*Fargard* vii. 52). A curious reminiscence of this is seen in a children's game, which is played all over Europe and America, and is everywhere fundamentally the same. Newell has described it as it is played in America (*Games and Songs of American Children*, New York, 1884, p. 204), and shows how it is a variant of the game described above (p. 852) as 'London Bridge.' Haddon (*op. cit.* p. 357) points out that in Swabia the two keepers of the 'Golden Bridge' are called respectively the 'Devil' and the 'Angel'; in France the game is known as 'Heaven and Hell'; in Italy the name of the sport is 'Open the Gates.' The gates are those of the Inferno and Paradiso. St. Peter is the keeper of the one, St. Paul of the other. 'When the destiny of the last child is decided, the two girls who represent the keepers of the bridge break their arch of lifted hands and move in different directions, followed by their subjects, while the criës and shrieks of the players condemned to the Inferno contrast with the pathetic songs and sweet cadences of those destined to the happiness of Paradise.' He further points out that the game is mentioned by Rabelais (c. A.D. 1533) under the name of the 'Fallen Bridge.' In German versions the keepers are called 'Devil and Angel,' 'King and Emperor,' or 'Sun and Moon.' In this latter form the game has been one of the few kept up by the Germans of Pennsylvania, who call it 'The Bridge of Holland' (*Die holländische Brücke*). An Irish version of it obliges the little girls to dress as angels, while one personates the devil. The bridge, which is actually constructed of sticks and boards, is made to fall repeatedly, and this is ascribed to the devil. At last a victim is caught, and is made to undergo a test whether he will be the devil's captive or not, by being obliged to walk on a straight line drawn on the ground. And thus we find the idea of the necessity of a tribute to the river-spirit in the case of the erection of a bridge—an idea current in the very earliest ages of the world—perpetuated to-day amongst ourselves in the games which our children play.

iii. THE SEMI-SACRED CHARACTER OF THE BRIDGE, SUBSEQUENT TO THE PLACATING OF THE RIVER-SPIRIT.—This is the third stage in the growth of opinion. Once the sacrifice has been offered, and the river-spirit or devil been placated, the bridge itself takes on an air of sanctity. Can it be some kindred idea which lies at the root of the Japanese custom of bridge-divination (*hashi-ura*)? The end-post of a bridge is a *wo-bashira*, *i.e.* a male pillar or phallus, and, as persons pass over the bridge and engage in conversation, stray words overheard from their talk are interpreted by the inquirer, who sits beside the post, as an indication from the gods of what is desired to be learned. The bridge is a place where it is believed 'sacred' influences are felt (see W. G. Aston, *Shinto, the Way of the Gods*, p. 341).

It is probably from this sacrosanctity of bridges that we may find:—

1. The origin of the name 'pontifex' as the primitive 'priest-engineer.'—It stands to reason that the appeasing of an offended river-spirit could be accomplished only by one who was cognizant of the right method of propitiating the divinity. The rites must be conducted by him who was most deeply instructed on these profound subjects, in other words, by the priest. He alone could interpret to his fellow-men the demands of the river-god, and he alone could prescribe the proper ritual for appeasing him. But in primitive times not only religious but also almost all technical and scientific knowledge was the exclusive possession of the priestly cult. Public works requiring skill in mathematics, engineering, and mechanical contrivances, were therefore nearly all the product of priestly brains and priestly hands. What more natural, then, than that the name 'pontifex,' 'bridge-builder' (from *pons* and *facio*; see Smith's *Gr. and Rom. Ant.* 939 f.), should arise, suggesting in itself the twin functions of a servant of religion and a civil engineer? This simple explanation of a word round which much mystery has gathered is probably the true one. The priest whose business it was to placate the river-divinity was originally also the architect of the bridge; and in later years, when the two functions were separated, and there came to be civil engineers who were not priests, the name still clung to the original possessor of the word, and hence we have 'pontifex,' 'pontifical,' 'pontiff,' all of priestly significance (cf. Milton for the old connotation of the word:

> 'Now had they brought the work by wondrous art
> *Pontifical*, a ridge of pendent rock
> Over the vexed abyss'
>
> [*Paradise Lost*, x. 312 ff.]).

2. This furnishes a reason why the Pons Sublicius was always of wood.—The priestly mind is essentially conservative, and the first form of the bridge was jealously preserved through all succeeding ages. We have every reason to believe that this bridge was the first which spanned the Tiber. It was the erection of this wooden structure by some priest-engineer in pre-historic times (tradition assigns it to the reign of Ancus Martius [Livy, i. 33]), who defied and appeased the river-spirit, which originated the title 'pontifex.' But no sooner was the bridge successfully reared, and Father Tiber placated by some sacrifice, than the structure acquired a semi-sacred character, and was ever afterwards regarded as holy (see Dionys. ii. 73, iii. 45; Plut. *Numa*, 9; Serv. *ad Virg. Æn.* ii. 166). The idea of its holiness was perpetuated through succeeding centuries by the fact that its upkeep and repair were undertaken solely by the College of Pontifices, of whom the head was the Pontifex Maximus; while its sanctity is further attested in that neither bolt nor bar nor nail of iron entered into its construction, which was entirely of oak (see the passages quoted in Jordan's *Topographie der Stadt Rom im Alterthum*, 1885, I. i. 396; Varro, *Ling. Lat.* v. 83; Pliny, *HN* xxxvi. 15; Tac. *Hist.* i. 86; Seneca, *de Vita Beata*, 25). The conservative priestly mind could tolerate no change. 'In the history of man iron is a modern innovation as compared to bronze and still more to wood and stone; therefore, like every innovation, it is offensive to the gods' (so Frazer, *JPh* xiv. [1885] p. 157 note, who adduces many examples of the prejudice and hatred with which iron is regarded by the old deities in countries as far sundered as Scotland and Korea, Cappadocia and Morocco; he refers also to the Hebrew practice, Dt 27^5). It was therefore a religious notion, traceable to the innate conservatism of the priestly mind, which maintained the practice of allowing no iron to invade the virgin purity of this old wooden bridge.

If this way of accounting for the sacred character of the Pons Sublicius be the correct one, a number of competing theories are ruled out of court. Mommsen supposes that it was owing to the political exigencies of the Roman commonwealth that the bridge was always kept in its primitive wooden condition—that the bridge might be the more easily broken down at the approach of an enemy. Undoubtedly the legend of how Rome was saved by Horatius Cocles keeping back the Etruscan enemy under Lars Porsena, while the Romans hewed down the wooden structure behind him, lends countenance to this view (Livy, ii. 10; a fine bronze medallion of Cocles and the Sublician bridge of the time of Antoninus Pius is figured in Fröhner's *Méd. de l'Empire Rom.* 1878, p. 60). J. H. Middleton (*Ancient Rome in 1888*, 1888, p. 484) and Dennis (*Cities and Cemeteries of Etruria*, i. 14) adopt similar views, the latter asserting that, as the Tiber was the natural rampart of Rome, the Pons Sublicius was kept as a wooden drawbridge until all fear of invasion was removed by the conquest of Etruria and by the downfall of Hannibal. Thereafter, stone bridges were erected, as the principle of the arch had been known for centuries before, and had been applied in the construction of the Cloaca Maxima (see also Marion Crawford, *Ave Roma Immortalis*, i. 6, ii. 127). But this theory fails to account for the perpetuation of the practice of retaining the bridge in its primitive wooden form and avoiding the use of iron. It is therefore the religious, rather than the political, reason, to which we are confined, as the true explanation.

3. Transference of the name 'Pontifex' to the pagan and Christian Emperors and latterly to the Popes.—With the passing of the Republic into the Empire, the office of Pontifex Maximus was conferred on Augustus (13 B.C.) by the vote of the Senate; and thus the supreme sanction of religion lay in the grasp of him who wielded the Imperial sword. It was held that under no circumstances could there be more than one Pontifex Maximus, and this rule was never violated until Pupienus Maximus and Balbinus were named joint-Emperors by the Senate (A.D. 238). The rule having been broken, it was never afterwards observed. Frequently the junior colleague of an Emperor was styled Pontifex Maximus equally with his senior, and the legend occurs on their medals and coins. When Christianity became the official religion of the Roman State, the Christian Emperors carried over the title into their adopted religion. Seven Christian Emperors assumed the name, ensigns, and prerogatives of Sovereign Pontiff, until finally Gratian refused to wear the Pontifical robe (see Gibbon, ii. 394 [Bury's ed.], and note on the testimony of Zosimus).

The next step was the transference of the title to him who claimed to be spiritual head of the Christian Church, though the exact date at which the name was first applied to the Bishop of Rome cannot now be traced. (There is a very doubtful affirmation in Tuker and Malleson, *Handbook to Christian and Eccles. Rome*, iv. 334, that the title was first given to Pope Leo I. [A.D. 440–461].) The first prominent application of the title is from the pen of Tertullian (*de Pudicitia*, c. i.) in an ironical sentence addressed to the Roman Pontiff: 'Audio etiam edictum esse propositum, et quidem peremptorium. Pontifex scilicet Maximus, quod est episcopus episcoporum, edicit.' The correspondence of Cyprian shows no trace of the recognition by the African Church of the exclusive right of the Bishop of Rome to the title. Indeed, in a petition to Boniface, Bishop of Carthage, A.D. 525, the monks there address him as 'Christi venerandus Pontifex' (*Thomassin*, ed. Bourassé, ii. 366). Similarly Hilary of Arles was styled 'summus Pontifex' by Eucherius, Bishop of Lyons (Migne, *Patr. Lat.* l. 773). The term is first applied directly to a bishop of Rome, when Anastasius, on the ordination of Pelagius I. to that dignity, wrote (A.D. 555): 'et ordinaverunt eum pontificem' (Migne, *op. cit.* cxxviii. 611). There is abundant evidence (adduced in Smith's *Dict. Christ. Ant.* ii. art. 'Pontifex') to show that in all the succeeding centuries down to the 11th, many prelates in different countries of Europe

were styled 'Pontifex,' and that 'Maximus' was added where the see was more important and distinguished. But gradually, with the growth of the Papacy in power and worldliness, the title was centred in the Pope; and from the 11th cent. to the present day the name which was originated, perhaps by Ancus Martius in the early ages of the world's history, to designate the engineer-theologian who bridged the Tiber and placated the offended river-spirit, has been limited to the Pontiff who to-day sits in the Vatican, and overlooks the spot where the Pons Sublicius once stood.

4. **The Church assuming control of bridges.**—Bridges finally became sacred objects. The Church took bridges into her sacred keeping, and they became surrounded with many religious associations. The German Emperors of the Holy Roman Empire had to reiterate thrice a royal oath to maintain the liberties of Rome, 'at *the bridge*, the gate, and on the stairs of the Vatican' (Gibbon, vii. 211 [Bury's ed.]; Gregorovius, *Geschichte der Stadt Rom im Mittelalter* [Eng. tr.], iv. 59). Bridge-building became a part of religion, a pious and meritorious work before God. In 1189 a regular Order of Hospitallers was founded in Southern France, under Pope Clement III., by St. Benezet, under the name of the 'Bridge-Builders' (*Frères Pontifes, Fratres Pontifices*). The object of the Order was the building of hospices and bridges at points where pilgrims crossed the large rivers, and for the ferrying of pilgrims over the streams. A hospital of this Order at Avignon at an early period built the celebrated bridge of which four arches still survive. As a badge they wore a pick upon their breast. Their constitution was modelled upon that of the Knights of St. John; and as the association gradually dissolved in the 13th cent., most of their number found their way into that Order (Kurtz, *Church Hist.* [Eng. tr.] ii. 76; Grégoire, *Recherches historiques sur les congrégations hospitalières des frères pontifes*, Paris, 1818).

To leave money to build a bridge came to be reckoned an act of great piety. In many cases the funds bequeathed were administered by priest-engineers, whose names have been permanently associated with the structures which they erected (cf. the origin of London Bridge built by the priests of St. Mary Overie from money dedicated by the daughter of a ferryman [Allen, *Hist. and Ant. of London*, ii. 454 ff.]). Sometimes, however, the bridges of the Middle Ages were erected from the sale of indulgences. Hutchinson (*Hist. of Cumberland*, i. 283) records: 'In the year 1360 a bridge at Great Salkeld was taken away by floods; for the repairing and re-edifying of which Bishop Welton published an indulgence of 40 days.' The Bishop of Durham (1311–1316) was fond of this practice, as the registry of his episcopal chancery shows. There are frequent entries such as the following: 'His lordship grants 40 days' indulgence to all who will draw from the treasure that God has given them valuable and charitable aid towards the building and repair of Botyton Bridge' (*Registrum Palatinum Dunelmense*, ed. Hardy, in *Rolls Series*, 1875, i. 615, 641 [quoted in Jusserand, *English Wayfaring Life in the Middle Ages*, p. 41]). Similar cases might be cited from Devonshire and other records (see Walford, 'Bridges, their Hist. and Literary Associations' in *TRHS* [new series], 1884, p. 364). Prof. Hume Brown gives the facts for Scotland (*Scotland in the Time of Queen Mary*, 1904, p. 60).

Most of the bridges erected by priests had a chapel attached, built as part of the structure. Nearly all the early bridges on the Continent and in Britain were adorned with these chapels, *e.g.* that at Wakefield over the Calder in the time of Edward III.; that over the Wye at Monmouth, still extant; that over the Avon at Bath; and the first stone London Bridge erected in 1205, on which the chapel was dedicated to St. Thomas à Becket (see Walford and Jusserand, *opp. citt.*). As a curious perpetuation of the ancient Roman idea that the duty of keeping the bridge intact was a religious obligation resting on the sacerdotal orders, the priests attached to these mediæval chapels were enjoined, as an indispensable part of their office, to keep the bridge in repair (Allen, *London*, ii. 458 note; see also Ritson, *Gammer Gurton's Garland*). Perhaps the most remarkable of all these mediæval chapels is that at Droitwich, in Cheshire, where the high road passes through the chapel, and divides the congregation from the reading-desk and pulpit (Fosbrooke, *Cyc. of Ant.* p. 147; Nash, *Worcestershire*, i. 329). These bridge-chapels were not used exclusively for devotional purposes. The chapel of the old Norman bridge over the Aire at Leeds was utilized till the middle of the 18th cent. as a cloth market, and the traders were summoned to the spot by the ringing of the chapel bell. In 1276 an ordinance of the Common Council of the City of London forbade the holding of a market on London Bridge. But, on the other hand, Philip the Fair of France in 1304 ordained that the Public Exchange of Paris should be held on the Great Bridge there, as it was anciently accustomed to be (see *Gephyrologia* [1751], the basis of Rees' *Cyclopædia*; *of Arts, Sciences, and Lit.* 1819). As a still further development of this sacredness attaching to bridges, the ancient Danes are said to have erected bridges as a pious memorial of their deceased friends. Olaus Wormius in his *Monumentorum Danicorum*, 848 (A.D. 1643), states that two or three persons built a bridge on the island of Foesoe in Denmark, not only to preserve their own names to posterity, but also to commemorate that of Jotheimnt, who had converted them to Christianity. Others have erected bridges to express their gratitude for rescue from drowning.

Thus with the placating of the river-spirit, the defeat of the devil, and the hallowing of their structure by their association with the monastic orders, mediæval bridges eventually became shrines, and with the erection of chapels on them, the process of rehabilitation was complete. The ill-omened structure of antiquity grew into the holy and sacred sanctuary of the Middle Ages, and memories of their religious character have lingered to the present day. Bridges are no longer objects of censure, hated of God and devil alike, but holy spots, across which even material blessings may pass. It is over a golden *bridge* at Bingen that German tradition asserts that the spirit of Charlemagne annually crosses the Rhine, whenever a season of unusual plenty betokens that the vineyards and cornfields of Germany have been supernaturally benefited. Thus Longfellow sings (*Sonnet on Autumn*): 'Thou standest, like Imperial Charlemagne, upon thy Bridge of Gold'; and again (*The Golden Legend*, Canto v.):

> 'God's blessing on the architects who built
> The bridges o'er swift rivers and abysses,
> Before impassable to human feet,
> No less than on the builders of cathedrals,
> Whose massive walls are bridges thrown across
> The dark and terrible abyss of Death.
> Well has the name of Pontifex been given
> Unto the Church's head, as the chief builder
> And architect of the invisible bridge
> That leads from earth to heaven.'

LITERATURE.—The writer is acquainted with no work which deals with the whole subject. He has to express his indebtedness to Dr. J. G. Frazer for kind references to other literature bearing on certain aspects of the question, besides the excellent note referred to above in his article in *JPh* xiv. [1885

p. 156. W. Warde Fowler's *Roman Festivals of the Period of the Republic*, 1899, well repays very careful study, though the writer of this article has felt obliged to dissent from his verdict on the ceremonies at the Pons Sublicius. Much valuable information will be found in Mannhardt's *Baumkultus*, 1875; Grimm's *Deutsche Mythologie*[2], 1844; and Tylor's *Primitive Culture*[3], 1891. The literature on 'foundation-sacrifices' is cited in the text. Mrs. Gomme's work on *Traditional Games*, 1894–98, is full of suggestive material, which has been worked over by Haddon, *Study of Man*, 1898. Many references to other literature are given in Scherman, *Materialien zur Geschichte der indischen Visionslitteratur*, Leipzig, 1893, pp. 102–119. G. A. FRANK KNIGHT.

BRIEFS.—See BULLS AND BRIEFS.

BRINDĀBAN (Skr. *vrindāvana*, 'grove of the sacred basil tree,' *ocymum sanctum*).—A town situated on the right bank of the river Jumnā, in the Mathurā District of the United Provinces, lat. 27° 33′ 20″ N.; long. 77° 42′ 10″ E. The place is held sacred as the scene of many adventures in the life of Kṛishṇa. It has been computed that there are as many as one thousand temples within the limits of the town, of which four are of special interest—those of Govinda Deva and Gopīnātha, dedicated to Kṛishṇa, as a god of cattle and companion of the Gopī milkmaids; Madan Mohan and Jugal Kishor, representing him in his youthful and erotic character. The temple dedicated to Govinda Deva, built about A.D. 1590, is the most impressive building that Hindu religious art has ever produced, at least in Northern India. 'The body of the building,' says Growse (p. 241), 'is in the form of a Greek cross, the nave being 100 ft. in length and the breadth across the transepts the same. The central compartment is surmounted by a dome of singularly graceful proportions; and the four arms of the cross are roofed by a waggon vault of pointed form, not, as is usual in Hindu architecture, composed of overlapping brackets, but constructed of true radiating arches as in our Gothic cathedrals.' The design has suggested to some authorities the influence of the Jesuit missionaries which was considerable in the court of the Emperor Akbar. If this were really the case, 'the temple would be one of the most eclectic buildings in the world, having a Christian ground-plan, a Hindu elevation, and a roof of modified Saracenic character.' But it is most improbable that Jesuit missionaries assisted in planning a Hindu temple, and, as Growse remarks, there are earlier Hindu temples which display a similar design. Fergusson regards this as 'one of the most interesting and elegant temples in India, and the only one, perhaps, from which an European might borrow a few hints.' The temple of Madan Mohan is in a ruinous condition, and the idol has been removed to Karaulī in Rājputāna. That in honour of Jugal Kishor was built in the reign of the Emperor Jahāngīr, about A.D. 1627. Among the modern temples, that erected by the Seṭh bankers of Mathurā is one of the most remarkable. It follows the Madras style, with the lofty *gopuras*, or gate-towers, characteristic of the great fanes of Southern India. It was built during the years 1845–1851. It contains a *rath*, or processional car, of the god, an enormous wooden tower in several stages, with monstrous effigies in the corners, in which he is taken once a year in procession from his temple to a neighbouring garden, where a pavilion is erected for his reception (Growse, 260 f.). Every event in the life of Kṛishṇa is the occasion of a local festival, of which Growse (*ib.* 267) enumerates forty-six.

LITERATURE.—Growse, *Mathurā, a District Memoir*[3] (1883), ch. viii., where illustrations of the more important sacred buildings will be found. The Govinda Deva temple has been described by Fergusson, *History of Indian and Eastern Architecture* (1899), p. 462 ff. W. CROOKE.

BROTHERHOOD (Artificial).

[P. J. HAMILTON-GRIERSON.]

1. 'Relationship' in ordinary acceptation means connexion by birth or marriage. Accordingly, it is usual to describe blood-brotherhood, adoption, and the ties formed by sponsorship, fosterage, and the like as 'artificial relationships.' Nor, indeed, is this description open to serious objection, provided that we do not leave two facts out of sight—the fact that, in the process of their evolution, artificial relationships do not always follow the same course as natural relationships, and the fact that what seems artificial to us may, and often does, seem perfectly natural to uncivilized man.

We propose to treat the subject under the following heads:

i. *The ceremony establishing brotherhood.*
  (*a*) *Where blood is employed* (§§ 2–17).
  (*b*) *Where blood is not employed* (§§ 18–29).
ii. *Where the relation is due to force of circumstances* (§§ 30–31).
iii. *The institution among the Southern Slavs* (§§ 32–43).
iv. *The institution in Roman and Byzantine law and in modern Greece* (§ 44).
v. *Where the compact is entered into with women, dead persons, supernatural beings, or animals* (§§ 45–46).
vi. *What persons are bound by the compact* (§§ 47–48).
vii. *What purposes are served by the compact* (§§ 49–50).
viii. *What legal consequences flow from the compact* (§§ 51–52).
ix. *General observations on the nature and history of the institution* (§§ 53–56).

i. The ceremony.—(*a*) *Where blood is employed.*

2. Livingstone (*Missionary Travels and Researches in South Africa*, London, 1857, p. 488) describes the rite as practised by the Balonda and shows us its most usual characteristics. 'The hands of the parties are joined . . .; small incisions are made on the clasped hands, on the pits of the stomach of each, and on the right cheeks and foreheads. A small quantity of blood is taken off from these points in both parties by means of a stalk of grass. The blood from one person is put into one pot of beer, and that of the second into another; each then drinks the other's blood, and they are supposed to become perpetual friends or relations. During the drinking of the beer, some of the party continue beating the ground with short clubs, and utter sentences by way of ratifying the treaty. The men belonging to each then finish the beer. The principals in the performance of "*Kasendi*" are henceforth considered blood-relations, and are bound to disclose to each other any impending evil.' In some cases the parties drink one another's blood undiluted. Thus, among the people of Rubunga, the 'brothers' bent their heads, and sucked the blood from each other's arms (Henry M. Stanley, *Through the Dark Continent*, London, 1878, ii. 286); and a like practice prevails among the Rokka of Flores (A. Bastian, *Indonesien oder d. Inseln d. malayischen Archipel.* pt. iv.: 'Borneo u. Celebes,' Berlin, 1889, p. 65), in Syria (H. C. Trumbull, *The Blood Covenant*, London, 1887, p. 5) and Madagascar (W. Ellis, *History of Madagascar*, London, 1838, i. 187–188), among the Karens of Burma (R. M. Luther *ap.* Trumbull, *op. cit.* p. 313), the Wanyoro (J. A. Grant, *A Walk across Africa*, London, 1864, p. 271), and the people of Comana (Jean sire de Joinville, *Histoire de S. Louys . . . enrichie de nouvelles observations et dissertations historiques . . . par Charles du Fresne, sieur du Cange*, Paris, 1668, p. 94). Baldwin, Count of Flanders, reproached the Greeks with so far accommodating themselves to the manners of the barbarians, with whom they made alliances, as to drink their blood (*ib.* Diss. xxi.); and Tacitus (*Ann.* xii. 47 [Church and Brodribb's tr.]) says of the Iberians and Armenians that it was the custom for their princes, whenever they joined alliance, to unite their right hands and bind the thumbs together in a tight knot; then, whe

the blood had flowed into the extremities, they let it escape by a slight puncture and sucked it in turn. Further, Herodotus (i. 74 [Rawlinson's tr.]) tells us that, when they took oath, the Medes and Lydians made a slight flesh wound in their arms from which each sucked a portion of the other's blood. Among some of the Australian tribes 'the drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship and obliged to assist one another' (Spencer and Gillen, *The Northern Tribes of Central Australia*, London, 1904, p. 598; *The Native Tribes of Central Australia*, London, 1899, p. 461). The parties to the rite drink one another's blood, or sprinkle one another with their blood (see below, § 49). So, too, in ancient Ireland, parties to a league are said to have ratified it by drinking each other's blood—a custom derived from the heathen, who were wont to seal their treaties with blood (Giraldus Cambrensis, *Typogr. Hib.* iii. 22).

3. Sometimes the blood of the 'brothers' is mixed with some other liquid—water, wine, beer, or spirits; and of this practice instances are supplied by the natives of Timor (H. O. Forbes, *A Naturalist's Wanderings in the Eastern Archipelago, 1878–1883*, London, 1885, p. 452) and of Bohol (M. de Zuñiga, *An Historical View of the Philippine Islands* [tr. by Maver], London, 1814, i. 67; see also *Relation by Loarca*: 'The Philippine Islands,' ed. by Blair and Robertson, Cleveland, Ohio, 1903, v. 161–163), of Amboina, of Leti, Moa, and Lakor, of the Babar Archipelago, of Wetar, of Ceram, and of Tanembar and Timorlaut (J. G. F. Riedel, *De sluik- en kroesharige Rassen tusschen Selebes en Papua*, The Hague, 1886, pp. 41, 396, 342, 446, 128–129, 284), by the Bali of North Cameroon (Hutter, 'Der Abschluss von Blutverwandtschaft u. Verträgen bei d. Negern d. Graslands in Nordkamerun' in *Globus*, 1889, lxxv. 1), the Balonda (D. Livingstone, *op. cit.* p. 488; H. Wissman, etc., *Im Innern Afrikas*, Leipzig, 1888, p. 151), the Wanyamwesi (J. Kohler, 'Das Bantu-recht in Ostafrika' in *Zeits. f. vergl. Rechtsw.* xv. 41), the Kimbunda (L. Magyar, *Reisen in Süd-Afrika in d. Jahren 1849 bis 1857*, tr. from the Hungarian by J. Hunfalvy, Budapest and Leipzig, 1859, i. 201–202), the Kayans (S. St. John, *Life in the Forests of the Far East*[2], London, 1863, i. 116), and the Scythians (Herod. iv. 70).

4. The 'brothers' do not always drink each other's blood. Sometimes they sprinkle it over one another (Spencer and Gillen, *Northern Tribes*, pp. 598, 372; see below, § 49). It is smeared by the Karens over their lips (Luther, *op. cit.* p. 313), while the Wachaga wipe it on a piece of flesh, which each of the parties thrusts several times into the mouth of the other (Kohler, *op. cit.* p. 40). A somewhat similar practice is found in Uhehe (J. Thomson, *To the Central African Lakes and Back*, London, 1881, i. 243–244). In Uganda and Bukoba each of the 'brothers' dips a coffee-bean from a pod containing two in his blood, and presents it on the palm of his hand to the other, who must take it up with his lips (J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda' in *JAI*, 1902, xxxii. 68; Kohler, *op. cit.* pp. 40–41). And, among the Kayans of Borneo, the blood of the parties is either mixed with some other liquid and drunk, or is rolled up with a cigarette and inhaled with the smoke (S. St. John, *op. cit.* i. 116).

5. At Mruli, a coffee bean (C. T. Wilson and R. W. Felkin, *Uganda and the Egyptian Soudan*, London, 1882, ii. 41); among the Swahili, a hen's liver (R. Niese, 'Die Personen- u. Familienrecht d. Suaheli' in *Zeits. f. vergl. Rechtsw.* xvi. 240); and among the Wazaramo, Wazeguro, Wasagara (R. F. Burton, *The Lake Regions of Central Africa*, London, 1860, i. 114), and Masai (M. Merker, *Die Masai*, Berlin, 1904, p. 101), a piece of flesh, are eaten, smeared with the 'brother's' blood. Among some of the tribes to the south of the Welle, a piece of sugar-cane, with which the blood of the parties has been wiped off, is chewed and the fibres are blown over the wound. At the same time each 'brother' declares the motives which induce him to enter into the compact, and the obligations which he binds himself to perform, and imprecates evil on the breaker of the bond (W. Junker, *Travels in Africa during the Years 1879–1883*, London, 1891, p. 405; see below, § 56).

6. This last instance introduces us to the performance of the rite by way of inoculation, which in many cases takes the place of blood-drinking. Grant (*op. cit.* p. 108 f.) gives the following description of this form as practised by the Wanyamwesi

'The process between Bombay and the Sultan's son, Kee enga, may be mentioned. My consent having been given, mat is spread, and a confidential party or surgeon attends on each. All four squat, as if to have a game at whist; before them are two clean leaves, a little grease, and a spear-head; a cut is made under the ribs of the left side of each party, a drop of blood put on a leaf and exchanged by the surgeons, who rub it with butter twice into the wound with the leaf, which is now torn in pieces and strewn over the "brothers'" heads. A solemn address is made by the older of the attendants, and they conclude the ceremony by rubbing their own sides with butter, shaking hands, and wishing each other success. Ten rounds of ammunition are then fired off, a compliment from each of the four drums is sounded, and they parade the village all the afternoon. . . . An Uganda lad, the magician of the Sultan, made brotherhood with Rehan, the cook, by cutting marks on his chest and rubbing in the fat of lions.'

Similar usages are said to prevail among the Wajiji (Burton, *op. cit.* i. 114), on the Congo, and in other parts of Africa (H. M. Stanley, *The Congo*, London, 1885, i. 385, ii. 24, 29, *Through the Dark Continent*, i. 493; H. Ward, *Ethnographical Notes relating to the Congo Tribes*, 1895; *JAI* xxiv. 291; V. L. Cameron, *Across Africa*, London, 1877, i. 333).

7. In Scandinavia, men made brotherhood by letting their blood flow together in a footprint and mingle where it fell ('The Long Lay of Brunhild, in *Corpus Poeticum Boreale*, G. Vigfusson and F. York Powell, Oxford, 1883, i. 308), or by 'going under the turf,' a ceremony of which an account is given in *The Story of Gisli the Outlaw* (from the Icelandic by G. W. Dasent, Edinburgh, 1896, p. 23). We are told that Gisli and the three men who were to make oath along with him

'cut up a sod of turf in such wise that both its ends were still fast to the earth, and propped it up by a spear, scored with runes, so tall that a man might lay his head on the socket of the spear-head. Under this yoke they were all four to pass. . . . Now they bleed each a vein, and let their blood fall together on the mould whence the turf had been cut up, and all touch it; and all afterwards fell on their knees, and were to take hands, and swear to avenge each the other as though he were his brother, and to call all the gods to witness.'

Several explanations of this curious ceremony have been suggested. In Jacob Grimm's opinion (*Deutsche Rechtsalterthümer*[3], Göttingen, 1881, p. 119), the 'brothers,' by placing themselves underneath the turf and falling on their knees, appear to indicate their abasement before the Higher Powers, and their solemn purification from the world. Konrad Maurer (*Die Bekehrung d. norwegischen Stammes zum Christenthum*, Munich, 1855–1856, ii. 170–171, 229) regards the rite as an ordeal of which the purpose was to secure the performance of the promises made. And this view seems to receive some support from the following passage:

'This was then the ordeal at that time, that men should pass under the earth-collar; that is, a turf was carven out of a field. The ends of the turf shall be fast in the field, and that man who was to undergo the ordeal should pass thereunder. . . . So was he cleansed who went under the earth-collar, if the turf fell not

upon him' (*The Story of the Laxdalers*, done into English by R. Proctor, London, 1903, ch. xviii.).

M. Pappenheim (*Die altdänischen Schutzgilden*, Breslau, 1885, p. 18 ff.), however, points out that this ceremony was used not only in making brothers and in ordeals, but in cases where an offence had been committed and the offender was required to humble himself by going under the turf, as a condition precedent to the acceptance of a composition. He holds that one explanation will not suffice for all three cases, and he explains the use of the ceremony in making brothers—the mixing of the blood with the earth—as symbolical of the common origin of the brothers. They are children of one womb—born of one mother, the earth (see also Vigfusson and Powell, *op. cit.* i. 423).

8. Muir (*Life of Mahomet*, London, 1858, i. p. ccxlvi) tells us that, in a dispute among the Koraish, the men of one party solemnized their compact by dipping their hands in blood, while their opponents dipped their hands in perfume and rubbed them upon the Ka'ba. Robertson Smith (*Kinship and Marriage in Early Arabia*, new ed. London, 1903, pp. 57–59) says that at Mecca in historical times a life and death covenant was solemnized by an oath, each of the parties to which dipped his hands in a pan of blood and tasted its contents; and he expresses the view that these forms are variations of one and the same rite—the rite in which the contracting parties drank or tasted one another's blood. He shows (*op. cit.* p. 59, note 1) that in some instances water or fruit-juice was substituted for blood; and in this connexion it is interesting to notice Herodotus' (iv. 172 [Rawlinson's tr.]) statement regarding the Nasamonians that, 'when they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they take up dust from the ground, and put their tongues to it' (cf. W. Crooke, 'The Hill Tribes of the Central Indian Hills,' in *JAI* xxviii. 241). It may be that the practice of ratifying an agreement to take part in a common undertaking by shaking hands dipped in blood (Hector Boethius, *Scotorum Historiæ*, Paris, 1526, lib. ii. fol. xviii *b*; cf. § 15 below), and that of drinking human blood, attributed to conspirators at Rome (Sall. *de Conj. Cat.* 22; Plut. *Vit. Publicolæ* iv. [both statements are regarded as unreliable by T. Mommsen, *Römische Forschungen*, Berlin, 1864, i. 332, n. 1]), and in China (Trumbull, *op. cit.* p. 43), are truly adaptations of the primitive institution of 'making brothers' (see below, § 15).

9. With the form of the rite in which the hands are dipped in blood Jacob Grimm (*op. cit.* p. 194) compares the dipping of weapons in blood, mentioned by Herodotus (iv. 70 [Rawlinson's tr.]) in the following passage:

> 'Oaths among the Scyths are accompanied with the following ceremonies: a large earthen bowl is filled with wine, and the parties to the oath, wounding themselves slightly with a knife or an awl, drop some of their blood into the wine; then they plunge into the mixture a scymitar, some arrows, a battle-axe, and a javelin, all the while repeating prayers; lastly the two contracting parties drink each a draught from the bowl, as do also the chief men among their followers.'

So, too, the Benuas, in making alliances or in taking solemn vows, 'dip their weapons into a mixture of which blood forms the principal ingredient' (T. G. Newbold, *Political and Statistical Account of the British Settlements in the Straits of Malacca*, London, 1839, ii. 395). Lucian (*Toxaris*, 37), in his account of the Scythian form, gives the additional fact that the parties, having dipped the points of their swords in the blood, held them together. It would seem that this touching of swords signified the union of the parties; and this view is corroborated by the curious practice of scraping the spear-shafts and musket-stocks of the 'brothers' on a banana-leaf, and dropping these scrapings, with a pinch of salt and a little dust from a pod, upon the wounds (Stanley, *The Congo*, ii. 24, 89; cf. Hutter, *op. cit.* p. 1 ff. as to the Bali of North Cameroon, and see § 13 below). It seems that scrapings of wood from the stool of a chief add strength to an oath (A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast of West Africa*, London, 1887, p. 198). A similar explanation appears to apply to the ceremony of sword-biting practised by the Kanowit Dayaks. According to St. John (*op. cit.* i. 55),

> 'a pig was placed between representatives of two tribes, who, after calling down the vengeance of the spirits on those who broke the treaty, plunged their spears into the animal, and then exchanged weapons. Drawing their knives, they each bit the blade of the others, and so completed the affair.'

So, too, the Garos swear to observe peace by biting each other's sword, and seal the compact by putting food into each other's mouth and pouring beer down each other's throat (E. T. Dalton, *Descriptive Ethnology of Bengal*, London, 1872, p. 62). It is of interest to note in this connexion that the Norman lawyers explained the word 'wapentake' in reference 'to the formal recognition of the local magistrate by touching his arms' (W. Stubbs, *The Constitutional History of England*[2], Oxford, 1885, i. 96). This ceremony is described in a law of Edward the Confessor (c. 33) as follows:

> 'Ipse vero erecta lancea sua ab omnibus secundum morem fœdus accipiebat; omnes enim quotquot venissent cum lanceis suis ipsius hastam tangebant et ita confirmabant per contactum armorum, pace palam concessa.'

Du Cange (*Glossarium mediæ et infimæ Latinitatis*, ed. L. Favre, Niort, 1883, *s.v.* 'Arma' [Arma mutare]) understands that it was thus that the subjects of the early kings of England made themselves 'fratres conjurati,' bound to cherish and protect one another and to join in preserving the kingdom from its enemies. G. Tamassia (*L'Affratellamento*, Turin, 1886, p. 32, note 2), however, cites authority to show that what is described is not an *armorum conjunctio*, but a *modus per strepitum concussorum armorum plebiscita condendi* (see Grimm, *op. cit.* p. 770 f.; Tac. *Germ.* xi., *Hist.* v. 15).

10. Sometimes the parties to the compact hold the ends of a forked branch, while one of them cuts it in two, or while a medicine-man draws their blood (Stanley, *The Congo*, ii. 88, 104). It is observed by C. A. L. M. Schwaner (*Borneo, Beschrijving van het Stroomgebied van d. Berito*, Amsterdam, 1853, i. 214–215) that, in the district of Borneo with which he deals, a third party hacks through the branch held by the 'brothers,' and at the same time pronounces imprecations upon the oath-breaker. In view of the whole circumstances, it seems not improbable that the act of holding had a twofold significance. In the first place, it symbolized the union of the parties (it had the same meaning as the contact of swords in the Scythian ceremonial), and, in the second place, it was a ritual act similar to the act of holding an animal while it is being slaughtered for sacrifice. An instance of this sacrificial ceremony is supplied by the Kumi of Chittagong. Among them, the parties to the covenant hold the ropes by which a goat is secured. One of their number stands over it, holding a fighting *dâo*. He takes a mouthful of liquor from a cup and blows it over the parties and the victim. Then he raises his *dâo* and invokes the river-spirit, while he pulls some hairs from the goat and scatters them to the winds. With one stroke the head is severed from the body, and the blood is smeared on the foreheads and feet of the 'brothers' (T. H. Lewin, *Wild Races of South-Eastern India*, London, 1870, p. 228). Among the Bali and the Dusuns, and in Shira (see below, §§ 13, 17, 21), the act of holding or touching the victim forms part of the ceremony.

11. Trumbull tells us of a curious Syrian form of the rite. The parties publicly announce their reasons for entering into the compact. These declarations are written down in duplicate; and each 'brother,' having smeared his copy with the other's blood, and having uttered the wish that the deceiver may be deceived by God, wears it suspended from his neck or bound to his arm 'in token of the indissoluble relation' (*op. cit.* p. 5 f.; see below, § 21).

12. Probably Grimm (*op. cit.* p. 194; cf. Livy, i. 32) is justified in referring to the notion of union brought about by an exchange of blood both the 'hasta sanguinea praeusta' of the Romans—the symbol of the declaration of war by a united people—and the 'Fiery Cross' of the Scottish Highlanders—the half-burnt stake dipped in blood which called the clans to arms against a common foe.

13. A group of observances in which the introduction of weapons forms a prominent feature seems to be susceptible of a different interpretation. Forbes (*op. cit.* p. 452) tells us that at Timor the contracting parties slash their arms, and collect the blood in a bamboo, into which *kanipa* (coarse gin) or *laru* (palm-wine) is poured. Having provided themselves with a small fig-tree, they adjourn to some retired spot, taking with them the sword and spear from the *Luli* chamber of their own houses, or from the *Uma-Luli* of their *suku*, if between large companies. Planting there the fig-tree, flanked by the sacred sword and spear, they hang on it a bamboo receptacle, into which—after pledging each other in the mixed blood and gin—the remainder is poured. Then each swears, 'If I be false, and be not a true friend, may my blood issue from my mouth, ears, nose, as it does from the bamboo!', the bottom of the receptacle being pricked at the same moment to allow the blood and gin to escape. The tree remains and grows as a witness to the contract. With this tree of witness Trumbull (*op. cit.* p. 316 ff.) connects—erroneously, we venture to think—the blood-stained 'Fiery Cross' and a similar symbol made use of in Southern Arabia (see A. von Wrede, *Reise in Hadhramaut*, Brunswick, 1870, p. 197 ff.; see above, § 12). It is not uninteresting to note that the planting of a tree, which, at Timor, is an accessory only, is, among the Karens of Burma, in itself constitutive of the bond of brotherhood (Luther, *op. cit.* p. 313). Trumbull (*op. cit.* pp. 266 ff., 316) refers in this connexion to the planting of trees in ancient Israel; but the Israelitish practice seems to be susceptible of an altogether different explanation (see Robertson Smith, *Rel. Sem.*[2], London, 1894, p. 185 ff.). What then was the purpose served by the introduction of weapons? It may be that it was the same as that of planting the tree; and, in support of this view, an instance from Madagascar may be cited. W. Ellis (*Hist. of Madag.* p. 188 ff.), in describing the ceremony of the *fatidrá* (a form of the blood-rite), says that

'to obtain the blood, a slight incision is made in the skin covering the centre of the bosom, significantly called *ambavafo*, "the mouth of the heart" . . . Some gunpowder and a ball are brought, together with a small quantity of ginger, a spear, and two particular kinds of grass. A fowl also is procured; its head is nearly cut off; and it is left in this state to continue bleeding during the ceremony.' The parties then join in pronouncing a long imprecation upon the oath-breaker, in which occur the following invocations: 'Oh the mouth of the heart! Oh the ball! Oh the powder! Oh the ginger! Oh this miserable fowl weltering in its blood!' And then follows the statement: 'If we keep and observe this covenant, let those things bear witness.'

Take again Hutter's (*op. cit.* p. 1 ff.) account of the ceremony among the Bali of North Cameroon:

It seems to consist of two parts—the making of 'brothers' and the making oath to keep the covenant. The parties, holding kola and pepper in their open hands, interchanged promises of mutual friendship and assistance. The kola and pepper were chewed and eaten, and the blood of the 'brothers' was mixed with palm-wine and drunk by each. Then followed the second part of the rite. Bullets were produced, and, while imprecations were being pronounced upon the oath-breaker, a trench was dug. Each 'brother' pricked his arm, and the bullets, some scrapings of redwood, together with several fetish articles, human bones, and two bleeding human ears were thrown into the trench. It was filled up and a flat stone was placed upon it. Upon this stone a ram was slaughtered by one of the 'brothers,' while the others held it fast, its blood falling on the stone and trench. Some of the blood was mixed with wine in a calabash into which bullets were dropped; and the contents of the calabash were emptied out on the trench. Then the 'brothers' poured wine on the trench, and, having set a jar containing redwood on the stone, they rubbed one another's arms and breasts with the wood, while words of magic were being said. Lastly, kola and pepper and horns of wine were distributed among the followers and attendants.

The view that the articles thrown into the trench and the stone placed upon it serve as 'witness' of the compact, derives support from the practice of the Chinhwans in making oath. They dig a hole in the ground, place a stone on it, throw earth at one another with loud cries, and cover the stone with earth; and by these acts they signify that, like the stone in the ground, their word or oath remains unalterable (Kisak Tamai, 'Die Erforschung d. Tschinwan-Gebietes auf Formosa durch die Japaner' in *Globus*, 1896, lxx. 93 ff.). A very similar form of oath is found among the Bendowen Dusuns. According to F. Hatton's account (*North Borneo*, London, 1885, p. 201 f., cf. pp. 203, 207), the whole tribe assembled, and, the ground having been cleared for a space of about twelve yards, a hole was dug, a foot in depth, a large water-jar was placed in it, the earth dug out of the hole was thrown into the jar, and the old men called upon their god. A stone was then placed near the jar, and the old men declared by fire, represented by a burning stick, by water, which had been poured into the jar, and by earth, that they would be true to all white men. The divinity was then summoned by shooting an arrow into the air; and the guns of the Europeans were placed upon the jar, out of which each man took a little earth.

14. But weapons are not infrequently introduced into the ceremony for a different purpose; they are 'invoked,' that is to say, 'to punish treachery' (D. M. Smeaton, *The Loyal Karens of Burma*, London, 1887, p. 169). When two villages in Ceram wish to make friendship after a war, the inhabitants of one come into the other bringing gifts, and are entertained with food and drink. While they are eating, a large bowl of liquor is prepared. The elders add some drops of pigs' or chickens' blood; and the chiefs wound each other and let their blood flow into the liquor. The elders stir the potion with a sword, a spear, arrows, and, in later times, with the muzzle of a musket. Then one of them comes forward and imprecates evil upon the oath-breaker, the other feasters show their concurrence by signs, the chiefs of the two parties begin to drink the liquid, and the rest of the company drink after them. On a set day a feast is given in the other village, and the bond is then regarded as inviolable. This solemnity is called *pela* (Riedel, *op. cit.* p. 128 f.). Riedel does not give the terms of the imprecation, nor does he state the purpose for which the weapons are introduced. It is, however, instructive to observe that, in the Ceramese procedure, by way of oath for the discovery of crime, a *parang* and a little arrow-rust are introduced along with other symbols, and that an imprecation is pronounced upon the guilty person to the effect, *inter alia*, that his throat shall be cut with a *parang* and his body pierced with arrows (*ib.* p. 116). Further, in the Tanembar and Timor-Laut Islands, in making brothers, sea-water, palm-wine, and other ingredients, together with a small stone, or tooth, are poured into a bowl and mixed with the blood of the contracting parties. Dudilaa is invoked as witness to the covenant, and evils are imprecated upon the breaker of the bond. He shall be unstable as the sea, weak as a man drunk with palm-wine, and the like. Then the parties drink the liquor, and the stone or tooth is broken in two and preserved as a memorial or 'witness' (*ib.* p. 284). It is thought that these practices throw some light upon the symbolical meaning of weapons in the *pela* ceremony (see also Riedel, *op. cit.* p. 396, as to brother-making at Leti), and that a similar explanation applies to the two instances which

follow. Among the Wazaramo, Wazeguro, and Wasagara, the candidates for brotherhood seat themselves opposite to one another, their bows and arrows being placed across their thighs, 'whilst a third person waving a sword over their heads vociferates curses against any that may break the brotherhood' (Burton, *op. cit.* i. 114); and to the westward of Lake Tanganyika, after the transfusion of blood by inoculation had been completed, one of the proxies held a sword resting on his shoulder, while the other went through the motions of sharpening a knife upon it, both joining in pronouncing imprecations upon the oath-breaker (Cameron, *op. cit.* i. 333). A somewhat similar act formed part of the ritual among the Wakikuju, and was followed by imprecations (v. Höhnel, *Zum Rudolph-See und Stephanie-See*, Vienna, 1891, p. 341 f.; A. Arkell-Hardwick, *An Ivory Trader in North Kenia*, London, 1903, p. 147).

15. It is, of course, plain, from some of the examples of the ceremony with which we have been dealing, that the blood employed is not always that of the contracting parties (see C. Hose and W. McDougall, 'The Relations between Men and Animals in Sarawak,' in *JAI*, 1901, xxxi. 209; cf. p. 185). In very many cases it is that of their proxies (Livingstone, *op. cit.* p. 488; J. Thomson, *Through Masai Land*, new ed. London, 1887, p. 88; Cameron, *op. cit.* i. 333; Stanley, *Through the Dark Continent*, ii. 146, 332). Sometimes the 'brothers' shake hands, after having dipped them in the blood of a slaughtered animal (J. M. Schuver, *Reisen im oberen Nilgebiet*, Ergänzungsheft, No. 72, to *Peterm. Mitth.* p. 50), or they are marked with its blood—the blood of a pig among the Kiniahs (St. John, *op. cit.* i. 117, 75), of a goat among the Kumi of Chittagong (Lewin, *op. cit.* p. 228), of a goat or a heifer among the Shendoos (*ib.* pp. 315, 322). Sometimes they smear their lips with blood drawn from a bullock's ear (*Le Tcheou-Li, ou Rites des Tcheou*, tr. from the Chinese by E. Biot, Paris, 1851, i. 126, ii. 247 f.). Or the blood may be that of a human victim, either stupefied with drink, as among the wild tribes of Mexico (H. H. Bancroft, *The Native Races of the Pacific States of N. America*, London, 1875, i. 636, 637; see below, § 48), or slain, as among the Danoms of Borneo (Schwaner, *op. cit.* ii. 77).

16. Some of these ceremonies are plainly sacrificial, and recall to us Herodotus' account of the formation of blood-brotherhood among the Arabs (iii. 8 [Rawlinson's tr.]). He tells us that,

'when two men would swear a friendship, they stand on each side of a third: he with a sharp stone makes a cut on the inside of the hand of each near the middle finger, and, taking a piece from their dress, dips it in the blood of each, and moistens therewith seven stones lying in the midst, calling the while on Bacchus and Urania.'

Robertson Smith identifies these divinities with Orotal and Alilat (*Rel. Sem.*[2] p. 316), and observes that at Mecca, within historical times,

'the form of the oath was that each party dipped their hands in a pan of blood and tasted the contents. . . . The later Arabs had substituted the blood of a victim for human blood, but they retained a feature which Herodotus had missed, they licked the blood as well as smeared it on the sacred stones. . . . The seven stones in Herodotus are, of course, sacred stones, the Arabic *ansāb*, Hebrew *maṣṣēbōth*, which, like the sacred stones at the Ka'ba, were originally Bætylia, Bethels or god-boxes.' He adds that the essence of the rite was that the parties 'commingled their blood, at the same time applying the blood to the god or fetish so as to make him a party to the covenant also' (*Kinship*, etc., pp. 57, 59, 60).

17. In some of these sacrificial rites an exchange of garments or weapons or gifts forms a part. Thus St. John (*op. cit.* i. 117), in speaking of the Kayans, says that

'they sometimes vary the ceremony, though the variation may be confined to the Kiniahs, who live farther up the river, and are intermarried with the Kayans. There a pig is brought and placed between the two who are to be joined in brotherhood. A chief addresses an invocation to the gods, and marks with a lighted brand the pig's shoulder. The beast is then killed, and, after an exchange of jackets, a sword is thrust into the wound and the two are marked with the blood of the pig.'

So, too, among the Wachaga, an exchange and re-exchange of clothing enter into the rite (Kohler, *Das Banturecht*, p. 40). Among the Kanowit Dayaks, 'a pig was placed between the representatives of the two tribes, who, after calling down the vengeance of the Spirits on those who broke the treaty, plunged their spears into the animal and then exchanged weapons' (St. John, *op. cit.* i. 55). Again, among the Dusuns, an exchange of weapons followed the ceremony, in which, having invoked his god, the chief and the traveller held the head and legs of a fowl, while a third person almost severed its head. The movements of the dying fowl were taken to indicate the intentions of the parties. Lastly, guns were fired and presents were given (Hatton, *op. cit.* p. 195; see below, § 20).

(*b*) *Where blood is not employed.*

18. We shall now proceed to consider the cases in which the use of blood does not enter into the ceremony; and, first of all, we shall deal with instances where the exchange of food forms an essential element in the ritual. Thus, among the Mapuches the compact is made by an exchange of names, one of the parties at the same time presenting a lamb to the other to be eaten by him (E. R. Smith, *The Araucanians*, New York, 1855, pp. 261, 262; see also E. Pöppig, *Reise in Chile, Peru, u. auf die Amazonenströme während d. Jahre 1827–1832*, Leipzig, 1835, i. 384 f., as to the Pehuenches). The Reschîât of Lake Rudolph make 'brothers' with strangers by eating pieces of the liver of a sheep together (A. Donaldson Smith, *Through Unknown African Countries*, London, 1897, p. 297; according to v. Höhnel, *op. cit.* p. 657, 660, they spit upon the sheep and pour milk upon it; see below, § 21); and of the Abors it is said that they 'hold as inviolate any engagement cemented by an interchange of meat as food. This is called *sengmung*. Each party to the engagement must give to the other some animal to be killed and eaten; it is not necessary that they should eat together, or that the feast be held at the same time' (Dalton, *op. cit.* p. 25). The latter part of this statement recalls the account of the Mapuches, given above, and that of the *magus* ceremony among the Khoi-Khoin. The parties to the rite last mentioned must be relatives. A man, for example, may enter into it with his sister's son or daughter. On a day fixed, the nephew sends a ewe or a cow to his uncle's house, where it is slaughtered. The ceremony itself is called *gao nais* ('navel-cutting'). The animal is divided between uncle and nephew, each of whom eats his share apart from the other—generally in his own house. The blood boiled with the kidney-fat forms the ceremonial food (cf. A. W. Howitt, *The Native Tribes of South-east Australia*, London, 1904, p. 751), and of it only the parties and their nearest relatives partake, the rest of the flesh being eaten apart by strangers. After the meal the uncle gives the nephew his hand, promises to be a father to him, and asks him not to injure him in any way. Some days afterwards the uncle gives a feast in return. He slaughters an animal in the house of his sister—the mother of the man with whom he is entering into the *magus*—and afterwards gives him the best of his cows. The covenant draws the ties of relationship more closely together, but does not form a new bond (C. Wandrer, 'Die Khoi-Khoin oder Naman,' in H. S. Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika u. Ozeanien*, Berlin, 1903, p. 315 f.). The Beni take the oath of friendship by 'chopping juju.' A kola nut is placed on a brass tray with water poured on it. One of the parties touches himself with the

water and nut and eats part of it. Then the other party eats the remainder of it (R. H. Bacon, *Benin, the City of Blood*, London, 1897, p. 100). Again, among the Karens of Burma, brotherhood is made by eating together, or by planting a tree, or by exchanging blood. Of those methods, the first is said to be of but little binding force, being a mere agreement to abstain from hostilities for a certain time (Luther, *op. cit.* p. 313). The Bauris, Bagdis, and Mahilis admit into their caste men of any caste ranking higher than their own, on the candidate paying a small sum of money to the headman and giving a feast. He must taste a portion of the food left by each of the guests (H. H. Risley, *The Tribes and Castes of Bengal: Ethnographic Glossary*, Calcutta, 1891, ii. 41). Among the Māls, he must give a feast, and drink water into which the headman has dipped his toes (*ib.* p. 49). When a man of the Murmi—a Mongolian caste in Nepāl—desires to make another man his brother, he intimates his feelings; and if these are reciprocated, presents are exchanged. A day is fixed for the ceremony, at which a Brāhman officiates. The men face one another, each with a rupee at his feet. They exchange the rupees, and each daubs the other's face with the mixture of rice and curds used in the marriage rite. The proceedings end with a feast. The tie thus formed is regarded as equivalent to that of actual kinship. 'The adopted brothers may not address or speak of one another by name, nor may they talk to each other's wives, even though these may have taken part in the ceremony. Their descendants, again, are supposed not to intermarry till seven generations have passed' (*ib.* p. 111). A somewhat similar account is given of the Limbus (*ib.* p. 16).

19. With the usages as to eating may be compared what Herodotus (iv. 172 [already quoted]) says of the Nasamonians: 'When they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they take up dust from the ground, and put their tongues to it.' In making friendship with the Wakikuju, the two parties threw water on their heads and caught and drank it as it fell (v. Höhnel, *op. cit.* p. 315 f.); and it is said of the wild tribes of the Naga Hills that, when peace is concluded between the villages after a war, the chiefs meet face to face on opposite sides of a table raised on the roadside about eight feet from the ground, and approached on either side by a broad ascent, and exchange bamboo mugs of wine (R. G. Woodthorpe, 'Notes on the Wild Tribes inhabiting the so-called Naga Hills,' *JAI* xi. 211).

20. Not infrequently the bond is constituted by an exchange of garments or weapons. Thus, in Tahiti, the natives made friends by taking off a great part of their own clothes and putting them upon the voyagers (J. Cook in J. Hawkesworth, *An Account of Voyages in the Southern Hemisphere*, London, 1773, ii. 251). It is said of the villagers of the Gangotri valley in the country of the Teri Rājā, that with them an exchange of caps is as certain a mark of friendship as an exchange of turbans between two chiefs in the plains (F. Markham, *Shooting in the Himalayas*, London, 1854, p. 108); and a similar statement is made regarding the Khamtis (H. B. Rowney, *The Wild Tribes of India*, London, 1882, pp. 162, 163); while the Masai are said to conclude peace by an exchange of clothing (Merker, *op. cit.* p. 101). Edmund of England entered into an intimate alliance with king Cnut by exchanging clothing and arms (du Cange, *Glossarium, ut cit. supr.*); and, according to the same authority (Diss. xxi. in Jean sire de Joinville (*ut cit. supra*), where many other instances will be found), it was the practice of the Saracens to make friendships by an exchange of arms. The case of Glaucus and Diomede (Hom. *Il.* vi. 235; see Tamassia, *op. cit.* p. 6 ff.) is, of course, familiar. Again, it is said of the Khamtis that 'by an exchange of weapons even the most deadly enemies become fast friends, and if one falls in fight, it is the duty of the other to avenge him' (Rowney, *op. cit.*); and Dalton (*op. cit.* p. 20) gives a like account of the Mishmis.

21. Sometimes the compact is formed by exchanging pieces of a slaughtered animal. Thus the Reschiât (see Donaldson Smith, *op. cit.* p. 297, referred to above, § 18) hang strips of its paunch on the necks of those with whom they are making friendship (P. Paulitschke, *Ethnographie Nordost-Afrikas, Die materielle Cultur d. Danâkil, Galla, u. Somâl*, Berlin, 1893, pp. 249, 250), while the headman spits and whispers (v. Höhnel, *op. cit.* p. 660). Joseph Thomson gives an interesting account of a somewhat similar practice in Shira:

'A goat was brought, and, taking it by one ear, I was required to state where I was going, to declare that I meant no harm, and did not work in *uchawi* (black magic), and, finally, to promise that I would do no harm to the country. The other ear was then taken by the Sultan's ambassador, and he made promise on his part that no harm would be done to us, that food would be given, and all articles stolen returned. The goat was then killed, and a strip of skin cut off the forehead, in which two slits were made.' The Sultan's representative 'taking hold of this, pushed it on my finger by the lower slit five times, finally pushing it over the joint. I had next to take the strip, still keeping it on my own finger, and to do the same for' him 'through the upper slit. This operation finished, the strips had to be cut in two, leaving the respective portions on our fingers' (*op. cit.* p. 88).

The missionary Rebmann, who received this token of friendship from the king of Kilema, calls it 'kishogno' (J. L. Krapf, *Travels in Eastern Africa*, London, 1860, p. 238). Thomson's description of the rite explains what is said of the Wakamba—that the 'brothers' exchange rings made of the skin of a sacrificial victim, which they have eaten together (J. M. Hildebrandt, 'Ethnographische Notizen über Wakamba und ihre Nachbaren' in *ZE* x. 386). Further, Trumbull (*op. cit.* p. 66) quotes an Indian authority ('Tod's Travels,' *Journal of the Indian Archipelago*, Singapore, 1851, No. 32) to the effect that among the Rājput races of India women adopt a brother by the gift of a bracelet; and with this custom may be compared the Slavonic practice of tying the 'brothers' together (see below, § 37).

22. Sometimes the ceremony consists in the application of saliva (see above, §§ 18, 21). The Southern Somali spits on his right hand and rubs it on the forehead of his friend to indicate that he is a fellow-tribesman; and among the Oromó, a like ceremony seems to entitle the guest to tribal rights (Paulitschke, *op. cit.* p. 246). In the old days, the Masai spat at the man with whom they swore eternal friendship (S. L. and H. Hinde, *The Last of the Masai*, London, 1901, p. 47); and, among the Dyoor, 'spitting betokens the most affectionate good-will; it was a pledge of attachment, an oath of fidelity; it was to their mind the proper way of giving solemnity to a league of friendship' (G. Schweinfurth, *The Heart of Africa*, tr. by E. E. Frewer, London, 1873, i. 205). A similar practice is said to prevail in Guiana (Lawrence Keymis, *Second Voyage to Guiana in the year 1596*; R. Hakluyt, *The Principal Navigations . . . of the English Nation*[3] . . . London, 1598–1600, iii. 677), and in the Bissagos Archipelago, off Senegambia (E. S. Hartland, *The Legend of Perseus*, London, 1894–1896, ii. 264); and Grimm (*op. cit.* p. 194) observes that the old northern symbol of concluding peace was not blood but saliva (see Hartland, *op. cit.* ii. 258 ff., where many instances in which saliva is employed are collected).

23. A remarkable form of the practice is spoken to by Taplin (in J. D. Wood's *Native Tribes of*

South Australia, Adelaide, 1879, p. 32 ff.). He says in his account of the Narrinyeri that

> there appears to have existed a sort of traffic between the tribes on the Murray and those near the sea, and a curious sort of provision is made for it, the object of which may be the securing of perfectly trustworthy agents to transact the business of the tribes—agents who will not by collusion cheat their employers and enrich themselves. . . . When a man has a child born to him, he preserves its umbilical cord by tying it up in the middle of a bunch of feathers. This is called a kalduke. He then gives this to the father of child or children belonging to another tribe, and those children are thereafter ngia-ngiampe to the child from whom the kalduke was procured, and that child is ngia-ngiampe to them. From that time none of the children of the man to whom the kalduke was given may speak to their ngia-ngiampe or even touch or go near him; neither must he speak to them.'

We learn from the same authority (Taplin, in E. M. Curr, *The Australian Race*, London, 1886, ii. 254) that, 'if one ngia-ngiampe sees another in need of anything, he or she must send a supply of it if possible; but yet there must never be any direct personal intercourse between the two.' Sometimes the relation is entered into for a time only by dividing the kalduke and giving a part to each. When these parts are returned to the original owner, the relation ceases (Taplin, in J. D. Woods, *op. cit.* p. 33).

24. Many instances may be cited in which the compact is made by an exchange of names. This is the form observed by the Mapuches, one of the parties to the exchange at the same time presenting a lamb to the other, to be eaten by him.

> 'The giving of a name establishes between the namesakes a species of relationship which is considered almost as sacred as that of blood, and obliges them to render to each other certain services and that consideration which naturally belongs to relatives' (E. R. Smith, *op. cit.* p. 262; see also Pöppig, *op. cit.* i. 384 f. as to the Pehuenches).

At Shupanga, on the Zambesi, the exchange of names with men of other tribes is not uncommon. The parties to the transaction regard themselves as close comrades, owing special duties to each other ever after; and each is entitled, if he visits the other, to food, lodging, and other friendly offices (D. and C. Livingstone, *Narrative of an Expedition to the Zambesi and its Tributaries, 1858–1864*, London, 1865, p. 149). In Ugogo names are exchanged as a pledge of friendship (C. T. Wilson and R. W. Felkin, *op. cit.* i. 60), and the practice is common in Polynesia (Hawaii [J. Cook and King, *A Voyage of Discovery to the Pacific Ocean in the years of 1777–1780*, London, 1784, iii. 17], Huahine [J. Cook, in Hawkesworth, *op. cit.* ii. 251]). It is said to be in use in the Marshall Islands (C. E. Meinicke, *Die Inseln d. stillen Oceans*, Leipzig, 1875–1876, ii. 342; A. von Chamisso, in O. von Kotzebue, *A Voyage of Discovery into the Southern Sea and Beering's Straits*, London, 1821, iii. p. 172, affirms that the friend is obliged to give his wife to his friend, but is not bound to avenge him); and it is found in the islands of Torres Straits (see *Reports of the Cambridge Anthropological Expedition to Torres Straits*, 1904, v. 125, 131 f.; see also J. B. Jukes, *Narrative of the Surveying Voyage of H.M.S. 'Fly,'* London, 1847, i. 209 f., where it seems that the exchange forms a bar to marriage between one of the parties and the sisters of the other), and among the Caribs (*Histoire naturelle et morale des Iles Antilles de l'Amérique*[2], Rotterdam, 1681, p. 513), the Chopunnish (M. Lewis and W. Clarke, *Travels to the Source of the Missouri River . . . in the years 1804–1806*, new ed., London, 1815, iii. 254), the Spokanes (Bancroft, *op. cit.* i. 285, note), the Shastika Indians (S. Powers, *Tribes of California: Contributions to N. American Ethnology*, Washington, 1877, iii. 247), and the Chugachigmiut of Alaska (N. Porlock, *A Voyage round the World . . . in 1785–1788*, London, 1789, p. 254; J. Meares, *Voyages made in the years 1788 and 1789, from China to the N.W. Coast of America*, London, 1790, p. 365). It was at one time in use on the Lower Murray (G. F. Angas, *Savage Life and Scenes in Australia and New Zealand*, London, 1847, i. 59) and in New Zealand (J. S. Polack, *Manners and Customs of the New Zealanders*, London, 1840, ii. 131). Of the natives at Wide Bay, Queensland, it is said (H. S. Russell, 'Exploring Excursion in Australia' in *JRGS*, 1845, xv. 314) that 'they rub their noses with their finger and mention their name, and you are then expected to follow the example by rubbing your nose and mentioning your name; then rub noses again with names exchanged.' The Kingsmill Islanders make friendship by rubbing noses and exchanging names (C. Wilkes, *Narrative of the U.S. Exploring Expedition during the years 1838–1842*, London, 1845, iv. 51); and de Sainson gives a very similar account of the ceremony at Tonga (J. Dumont d'Urville, *Voyage de la Corvette 'L'Astrolabe': Histoire du Voyage*, Paris, 1830–1833, iv. 349). The Vanikoros exchange names and presents (*ib.* v. 329); and the same usage prevails in some parts of New Guinea (W. W. Gill, *Life in the Southern Isles*, London, 1876, p. 233; J. Chalmers and W. W. Gill, *Work and Adventures in New Guinea, 1877–1885*, London, 1885, pp. 42, 99). As to making 'brothers' with animals by exchange of names, see below, § 46.

25. Among the Yahgans of Cape Horn, artificial ties of friendship are constituted by an exchange of gifts, and by painting the face and body in a distinctive fashion. The friends assume the names of blood-relationship—uncle, brother, cousin, or nephew—and behave themselves as if they were really akin (T. Bridges, 'Mœurs et Coutumes des Fuégiens,' tr. by P. Hyades, *Bulletin de la Soc. d'Anthrop. de Paris*, 1884, ser. iii. vol. vii. p. 182). And this practice is not confined to males; for women, unconnected by blood, often call themselves sisters, and act as such in all the conduct of life (P. Hyades and J. Deniker, *Mission du Cap Horn, 1882–1883*, Paris, 1891, vii. 238). So, too, among the Ovaherero, persons of the same sex are frequently united in a formal association (*omapanga* or *oupanga*). The men have their wives in common, and are entitled to use each other's property in time of need; while married as well as unmarried women join the sisterhood (G. Fritsch, *Die Eingeborenen Süd-Afrikas*, Breslau, 1872, p. 227; G. Viehe, 'Die Ovaherero,' in S. R. Steinmetz, *op. cit.* p. 304; see also J. Kohler, 'Recht d. Herero' in *Zeits. f. vergl. Rechtsw.* xiv. 298–299). An interesting parallel to these female associations is furnished by the Oräons. 'When two girls feel a particular penchant for each other, they swear eternal friendship and exchange necklaces, and the compact is witnessed by common friends. They do not name one another after this ratification of goodwill, but are "my flower" or "my giu" or "my meet to smile" to each other to the end of their lives' (Dalton, *op. cit.* p. 253). A like custom exists among some of the Papuan tribes on the north coast of New Guinea (J. Kohler, 'Recht der Papuas' in *Zeits. f. vergl. Rechtsw.* xiv. p. 366), and in certain districts of the Abruzzi (E. S. Hartland, *op. cit.* ii. 218 f.). As to similar usages among the Southern Slavs see below, § 34.

26. Among the North American Indians, we find many examples of companionships in arms. Thus, of the Kongas and Omahas it is said that 'the young men are generally coupled out as friends; the tie is very permanent, and continues oftentimes through life' (Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains . . . in the years 1819–1820 . . . compiled from the notes of Major Long* . . . London, 1823, i. 117, 235; see also W. J. McGee, 'The Siouan Indians,' in *Fifteenth Annual Report of the Bur*

eau of Ethnology to the . . . Smithsonian Inst. 1893–1894, Washington, 1897, p. 178); the existence of a similar institution has been noted among the Wyandot (*First Annual Report . . . 1879–1880*, Washington, 1881, p. 68), and the Iroquois (P. F. X. de Charlevoix, *Histoire de la Nouvelle France*, Paris, 1744, vi. 14); and J. Adair (*The History of the American Indians*, London, 1775, p. 190) says that the Cherokees 'reckon a friend in the same rank with a brother both with regard to marriage and any other affair of social life.' In Fiji,

'instances of persons devoting themselves specially to arms are not uncommon. The manner in which they do this is singular, and wears the appearance of a marriage contract: and the two men entering into it are spoken of as man and wife, to indicate the closeness of their military union. By this mutual bond the two men pledge themselves to oneness of purpose and effort, to stand by each other in every danger, defending each other to the death, and, if needful, to die together. In the case of one of the parties wishing to become married in the ordinary style to one of the other sex, the former contract is duly declared void' (T. Williams and J. Calvert, *Fiji and the Fijians*, ed. G. S. Rowe[2], London, 1860, i. 45–46).

Further, the custom of joining in companionships for mutual defence prevails among many of the Afghan tribes:

'Individuals enter into engagements to support each other in specific enterprises, or in all cases that may arise. These alliances are called Goondees, and they may include any number of persons. The connexion between two persons in the same Goondee is reckoned stronger than that of blood. They are bound to give up all they have, and even their lives, for each other. A Goondee between two chiefs is not dissolved even by a war between their tribes; they may even join in the battle, but as soon as the contest is over their friendship is renewed. Goondees also take place between tribes' (M. Elphinstone, *An Account of the Kingdom of Caubul . . .* new ed. London, 1839, ii. 4).

With these brothers in arms we may compare the Celtic 'Soldurii' and 'Ambacti,' whom Cæsar (*de Bell. Gall.* iii. 22, vi. 15) mentions.

27. Throughout all Circassia there exist fraternities and extensive associations, the members of which 'are bound mutually to protect each other, and assist in paying the fine of individuals who may commit manslaughter or other crimes.' In travelling, the members enter one another's houses 'as freely as if they were brothers in reality' (J. S. Bell, *Journal of a Residence in Circassia during the years 1837–1839*, London, 1840, i. 84). All the members of a fraternity are regarded as springing from the same stock; and not only they, but their serfs, are precluded from intermarriage (*ib.* p. 347).

28. J. Macgillivray (*Narrative of the Voyage of H.M.S. Rattlesnake*, London, 1852, i. 310) noted at Evans Bay, Cape York, the existence of an association between certain whites and certain natives, by which the latter appeared to be bound to assist the former and care for their safety. The native was said to be the white man's *kotaiga*—the term being derived from the Kowrarega word for 'younger brother.' The Kowrarega is an Australian tribe, altered by contact with the Papuans of the adjacent islands so as to resemble the latter in most of their physical, intellectual, and moral characteristics (Howitt, *op. cit.* pp. 3, 11). We are not told how this relation was entered into, or whether it subsisted between natives, as well as between natives and whites. It may be that it is to be classed not with blood-brotherhood, but rather with those associations for the purpose of mutual assistance in trade of which an example is furnished by the Klaarwater Hottentots in their intercourse with some of the Bechuana tribes (W. J. Burchell, *Travels in the Interior of South Africa*, London, 1824, ii. 555; cf. R. F. Burton, *op. cit.* ii. 55; and J. Chapman, *Travels in the Interior of S. Africa*, London, 1868, i. 97, note).

29. In this connexion a curious belief of the Algonquins may be mentioned. They regarded the mingling of the bones of deceased relatives and friends as constituting a bond of friendship between their descendants (S. de Champlain, *Œuvres*, ed. by C. H. Laverdière, Quebec, 1870, v. 305), and Adair (*op. cit.* pp. 183–184) seems to indicate that the same notion prevailed among the Choctaws. He adds that they reckoned it irreligious to mix the bones of a relative with those of an enemy or even of a stranger (cf. Robertson Smith, *Kinship*, pp. 314, 315).

ii. Where the relation is due to force of circumstances.

30. Hitherto we have been considering artificial relations into which the parties enter by choice. We now turn to relations which are brought about by force of circumstances, and not by the volition of the 'brothers.' Livingstone (*Missionary Travels and Researches*, p. 526) tells us that he became blood-relation to a young woman by accident. As he was removing a tumour from her arm, he was spattered with blood from one of the small arteries. 'You were a friend before,' she exclaimed, 'now you are a blood-relation.' Some of the Papuan tribes on the north coast of New Guinea recognize the existence of a friendly bond between those who have been circumcised at the same time, especially between two youths who have occupied the spirit-house together. After the ceremony, they address one another no longer by name, but as 'my man' (J. Kohler, 'Recht d. Papuas' in *Zeits. f. vergl. Rechtsw.* xiv. 366; cf. Brooke, *op. cit.* ii. 224). Again, the rite of circumcision (*boguera*) is observed by the Bechuanas and all the Kāfirs, south of the Zambesi. All the boys between ten and fourteen or fifteen are made the life-companions of one of the sons of the chief. The members of the band (*mopato*) recognize 'a sort of equality and partial communism ever afterwards, and address each other by the title of *molekane*, or 'comrade.' When a fugitive comes to a tribe he is directed to the *mopato* analogous to that to which in his own tribe he belongs and does duty as a member' (Livingstone, *op. cit.* pp. 147–148; see E. Casalis, *Études sur la langue séchuana*, Paris, 1841, p. 70, as to the Basutos). Again, among the Kurnai, all the youths who have been initiated at the same time are brothers, and ever afterwards address each other's wife as 'wife,' and each other's children as 'child.' The tie thus formed is one of great strength, binding together all the contemporaries of the various clans (L. Fison and A. W. Howitt, *Kamilaroi and Kurnai*, Melbourne, etc., 1880, pp. 198–199). With this tie may be compared the relation between lads and those who operate on them in the initiation ceremonies (Spencer-Gillen[2], pp. 248, 260). In some of the islands of Torres Straits, boys who are mates in the initiation ceremony may not marry each other's sisters (*Rep. of Camb. Anthr. Exp. to Torres Straits*, v. 211). It may be noted that at Nukahiva, professional tatuers were bound, under sanction of a tabu, to support those of their fellows who came to be in need (G. H. von Langsdorff, *Voyages and Travels in various parts of the World during the years 1803–1807*, London, 1813, i. 121).

31. Among the Wakamba, the relation of protector and protégé is one of extraordinary intimacy. The fugitive who touches the penis of his enemy becomes thenceforth entitled to his protection and to that of his tribe; and so strong is the bond between them, that the protégé is made free of the house and the wife of his protector (Hildebrandt, *loc. cit.* p. 386 f.). A form of oath in use in ancient Israel (Gn $24^{2f.}$ 47^{29}; H. Ewald, *Die Alterthümer d. Volkes Israel*[3], Göttingen, 1866, p. 26) and the Kāfir mode of making a vow (H. Somerset, *Adventures in Caffraria*, London, 1858, p. 180) may be recalled in this connexion, as well as a practice of some Australian tribes in swearing

friendship (G. Grey, *Journals of Two Expeditions of Discovery in North-West and Western Australia*, London, 1841, ii. 342; cf. Spencer-Gillen[b], pp. 556, 560; but see R. Brough Smith, *Aborigines of Victoria*, London, 1878, i. 514). Hildebrandt says further, that if a fugitive can succeed in putting his lips to a woman's breast, he thereby creates an indissoluble bond between himself and her tribe, which is thenceforth bound to protect him (*loc. cit. supra*).

iii. The institution among the Southern Slavs.

32. We now propose to turn to a centre of the institution—to the countries of the Southern Slavs, where it is a living force admitted within the walls of the sanctuary by the recognition of the Christian Church. Here we shall meet with many forms, of which some are familiar and some are novel; and we shall commence with an instance in which blood-drinking plays a part. According to a Bosnian authority quoted by F. S. Krauss (*Sitte und Brauch d. Südslaven*, Vienna, 1885, p. 628), the priest offers up a prayer in which he dwells upon the reciprocal duties of the 'brothers.' He makes them kiss one another, and repeat after him the words of a solemn oath. Then the younger brother scratches his arm so as to draw a few drops of blood, which he mixes with wine. The brothers drink the liquid and the compact is sealed. Krauss doubts the accuracy of this account, but S. Ciszewski (*Künstliche Verwandtschaft bei den Südslaven*, Leipzig, 1897, pp. 60-68) accepts it as reliable, and adduces corroborative evidence from many other quarters. (See § 40 below.)

33. We are told (M. Chopin et A. Ubicini, *Provinces danubiennes et roumaines*, Paris, 1856, i. 197, cited by Ciszewski, *op. cit.* p. 32) of a brotherhood 'per arma,' known to Montenegro and Bulgaria. The two men who wish to enter into the compact go to a church, accompanied by several friends as witnesses. They lay their arms crosswise on the floor, and, after swearing that now they are united in life and death, take them up and exchange them. If one dies, his weapons pass to the survivor.

34. According to Medacović (cited by Ciszewski, *op. cit.* p. 33), the bond in Montenegro is one not of friendship only but of relationship—the parties to it are looked upon as actual brothers. He distinguishes three grades, of which the first is called the 'little brotherhood.' It is constituted by a kiss thrice repeated. The 'brothers' exchange gifts; and he who first expressed the wish to perform the rite entertains the other. 'Brothers' of this first degree may determine to form a still more intimate relation, and in such a case the ceremony is one of greater solemnity. They call a priest to say a prayer while they stand under the stola, and, having drunk wine from the chalice to which they set their lips at the same time, they eat a crumb of the bread, receiving the Eucharist in both kinds according to the observance of the Eastern Church. Having kissed the cross, the evangels, and the holy pictures, they kiss one another thrice; and he who proposed the union entertains the other. Presents are exchanged, and the men are brothers until death. So, too, women, married as well as single, enter into similar friendships by drinking wine together, kissing one another, and exchanging gifts. A. Fortis (*Viaggio in Dalmazia*, Venice, 1774, i. 58 ff.) tells us that he was present in the church of Perušić when a union between two young Morlak girls was solemnized on the steps of the altar. He observes that in his day friendships of this sort between persons of different sexes were less common than they had been in the past. According to Krauss (*op. cit.* p. 641), the 'sisters' are always together—in church, at work, and in amusement. They wear similar clothes and ornaments, and address one another as 'little sister,' 'my gold,' 'my little fawn.' No relationship could be more intimate or more affectionate (see § 25 above, where parallel instances are noted).

35. In some parts of Croatia the bond seems to be formed without wine-drinking or witnesses; while, in Northern Bulgaria, the rite exhibits the characteristics of a family gathering, without the intervention of the Church. In some districts the ceremony resembles that of a marriage (Ciszewski, *op. cit.* pp. 35–36).

36. All the old ritual books prescribe the same, or nearly the same, formalities. The parties stand before the altar, the elder on the right, the younger on the left. The priest hands a candle to each. Each lays his right hand on the Gospels, and holds a cross in his left. According to another form, they stand before the altar with crosses and candles in their hands. The priest utters a prayer, in which the importance of the act is emphasized, the reciprocal duties of the brothers are laid down, and God's blessing is invoked upon them. Then the priest exchanges the crosses and candles which the brothers are holding in their hands, and reads to them certain passages of Holy Writ; and the brothers kiss the Gospels and embrace each other. It is only in Bulgaria that the exchange of candles and crosses takes place (*ib.* p. 37).

37. It is customary in one of the districts of Bulgaria for the priest to tie the men together with a small cord which he uses in saying Mass. He then takes off his vestments, and lays them on their heads; and, after having said a prayer suitable to the occasion, he sprinkles them with holy water, and, untying the cord, bids them kiss hands, telling them that they are henceforth brothers in spirit. This ceremony takes place at the end of Divine service, when the church is empty (*ib.* p. 38; see § 21 above, where parallel instances are noted).

38. Among the Bulgarians of Prilep, after the ceremony in church is over, one of the brothers entertains his relatives, with the other brother and his relatives, gifts being distributed among all who are present. A few days afterwards a similar meal is provided in the house of the other brother, and gifts are again distributed. All those who have received these gifts are henceforward regarded as relatives, and may not intermarry; and this kind of union may be contracted by men with men, by men with women, or by women with women (*ib.* p. 39).

39. In Little Russia, brotherhoods and sisterhoods are formed by swearing eternal friendship upon a holy picture, by drinking wine, and by exchanging gifts. In some parts of Russia a meal, to which the whole company is invited, completes the ceremony; and the brothers make it the occasion of an exchange of presents—very often of their baptismal crosses. Their children may not intermarry (*ib.* pp. 54–59).

40. From Servia, Croatia, and Bulgaria we are supplied with notices of ceremonies by which temporary bonds of brotherhood and sisterhood are constituted. These bonds continue from year to year, and form an actual relationship and a bar to intermarriage (*ib.* pp. 41–47). Parallel instances have been observed in Italy and among the Poles and Czechs (*ib.* pp. 48–50). In Servia and Croatia these unions are formed on St. John Baptist's day by the exchange of willow crowns and gifts and kisses. In Southern Bulgaria, on the same holy day, the brothers exchange bunches of twigs, with needles like the pine, in presence of their invited guests, and, having pricked themselves, suck each other's blood in order to show the intimacy of their union. Thenceforward they treat one another as if they were blood-relations. After this exchange of blood they approach the hearth and place their

feet upon it, the guests at the same time beginning the feast. Then the brothers embrace one another, kiss hands, and, exchanging the bunches of twigs, drink out of the same bowl. They give one another presents, and visit their friends and relatives. Upon the corresponding day of the next year the compact is renewed—the elder brother, who on the previous occasion was the younger brother's guest, being now his host (*ib.* p. 44 f., and see § 32 above).

41. In Bulgaria, a bond of brotherhood subsists between children who have been christened in the same water. Brothers or sisters born in the corresponding month in different years, and also twin children, are regarded as so intimately connected that the death of one involves that of the other. A ceremony is therefore necessary to break this connexion, and the person who performs it becomes, in consequence of his act, the brother or sister of the child saved from death. On similar grounds there is said to be a like tie between the person who rescues another from death by drowning, or on the battlefield, and the person rescued; between pilgrims who exchange certain kindly offices; between foster-brothers; and between those who attend upon a bride and bridegroom on the occasion of their marriage (Ciszewski, *op. cit.* pp. 4–22, 101 ff.).

42. Ciszewski (*op. cit.* p. 84 ff.) supplies two instances in which the relation was entered into in obedience to a Divine command; and Krauss (*op. cit.* p. 633) states that, if a man dream that he has made brotherhood with another, he will deem the latter's refusal to form the union as the bitterest of insults. In the ordinary case the dream becomes a reality, and the parties shake hands, kiss one another, and exchange gifts (see below, § 46).

43. Another form of brotherhood mentioned by Ciszewski (*op. cit.* p. 72 ff.) and Krauss (*op. cit.* p. 632) is that made between a man who is in extreme danger and another to whom he appeals for help in the name of God and St. John, at the same time taking him solemnly for his brother. An interesting example of this variety of the relation is given by Krauss (*op. cit.* p. 638). A girl who has to go over the mountains alone may invite the first man she meets to be her brother. He is bound to guard her as if she were his own sister; and, were he to illtreat her, he would be regarded as a criminal against Heaven.

iv. The institution in Roman and Byzantine law and in modern Greece.

44. It is interesting to notice the attitude which the Roman lawgivers assumed towards this institution. A rescript of the emperors Diocletian and Maximian (§ 7 c. *de Hered. Instit.* 6. 24) is in the following terms:

'Nec apud peregrinos fratrem sibi quisquam per adoptionem facere poterat. Cum igitur quod patrem tuum voluisse facere dicis irritum sit, portionem hereditatis, quam is adversus quem supplicas velut adoptatus frater heres institutus tenet, restitui tibi curae habebit praeses provinciae.'

It seems clear that this rescript proceeds upon a confusion of the institution of brotherhood with that of adoption, and that the former, which was completely foreign to Roman ideas, was treated as if it were a monstrous form of the latter and declared to be of no force. The same view received effect in a collection of Syro-Roman laws (*Syrisch-römisches Rechtsbuch*, revised and edited by K. G. Bruns and E. Sachau, Leipzig, 1880), which belongs to the 5th cent. of our era. One of its provisions declares that, if a man wishes to write a compact of brotherhood with another so that they shall hold in common all that they possess or shall acquire, the law forbids it, and annuls the written compact. For their wives are not common, and their children cannot be common. So, too, the Byzantine lawyers of the 11th cent. refused to recognize ἀδελφοποιία, or ἀδελφοποίησις, or ἀδελφοποιητία as binding. It was forbidden by the Church, especially to her monks; and the argument against it which found most favour was that of an archbishop of Bulgaria in the 13th century: ἡ θέσις μιμεῖ τὴν φύσιν, ἡ φύσις δὲ υἱὸν ἐπιγιγνώσκει διὰ γεννήσεως, ἀδελφοποίταν δὲ οὐδαμῶς. Still, the ceremony was practised frequently and in many places; and although the Church forbade it, it was always celebrated with the Church's rites. Like sponsorship, it constituted a πνευματικὴ ἀδελφότης, and created a marriage bar between the parties to it, and, according to some authorities, between their children (Bruns and Sachau, *op. cit.* pp. 255-256; Tamassia, *op. cit.* p. 63 ff.; Robertson Smith, *Kinship*, p. 160). It played an important part in the Greek war of independence, and is said even now to survive in certain districts of Greece (J. Kohler, 'Studien über die künstliche Verwandtschaft' in *Zeits. f. vergl. Rechtsw.* v. 438; Ciszewski, *op. cit.* p. 69).

v. Where the compact is entered into with women, dead persons, supernatural beings, or animals.

45. We have seen that the compact is not confined to males. Thus, among the Southern Slavs, men enter into it with women (Krauss, *op. cit.* pp. 619, 624, 638, 640), and women with women (*ib.* p. 641); and female associations are likewise found among the Yahgans, the Orāons, in certain districts of the Abruzzi, among the Papuans on the north coast of New Guinea, the Ovaherero (see above, § 25), and the Swahili (Niese, *op. cit.* p. 240). Nor are these compacts always confined to mortals, if we may rely on the evidence of Bulgarian folk-tales and of the modes of address used by the fishermen of Ragusa to those whom they regard as witches (Ciszewski, *op. cit.* pp. 69–71; cf. Frazer, *Golden Bough*[2], London, 1900, iii. 380, note). In some cases the bond seems to be formed with a dead enemy. Thus, among the sea Dayaks, his head is brought on shore with much ceremony. For months after its arrival

'it is treated with the greatest consideration, and all the names and terms of endearment of which their language is capable are abundantly lavished on it; the most dainty morsels are thrust into its mouth, and it is instructed to hate its former friends, and that, having been adopted into the tribe of its captors, its spirit must be always with them; sirih leaves and betelnuts are given to it,—and, finally, a cigar is frequently placed between its ghastly and pallid lips. None of this disgusting mockery is performed with the intention of ridicule, but all to propitiate the spirit by kindness' (H. Low, *Sarawak*, London, 1848, p. 207).

46. This curious ceremony recalls to us the treatment of the dead bear by some of the Canadian Indians. According to Charlevoix (*op. cit.* v. 173), as soon as he has killed a bear, the hunter puts the mouthpiece of his lighted pipe between its teeth, blows into the bowl, and, having filled the animal's jaws with smoke, adjures its spirit not to resent what has happened nor thwart him in his hunting expeditions. With this account that of the festival of the bear among the Ainus may be compared (I. L. Bird, *Unbeaten Tracks in Japan*, London, 1880, ii. 97–98), and also that of Macrae ('Account of the Kookies or Lunctas' in *Asiatic Researches*, London, 1803, vii. 189) as to the revenge which the tribesmen take on the tiger, and even on the tree by which a relative has met his death (cf. E. B. Tylor, *Primitive Culture*[4], London, 1903, i. 286). In a Malagasy folk-tale we read of a bad man who was blood-brother of certain beasts (*FLJ*, London, 1883, i. 309); and in Sarawak a man sometimes dreams that he has become blood-brother of a crocodile by going through the regular ceremony and exchanging names. Thereafter he is quite safe from crocodiles (C. Hose and W. McDougall, *op. cit.* p. 190 f.; see above, § 42).

vi. What persons are bound by the compact.

47. In some cases the compact is obligatory only

upon those who have personally become parties to it. In Timor and Borneo, and among the Wachaga, a chief may represent his tribe, but a simple tribesman binds himself only (Forbes, *op. cit.* p. 452; Schwaner, *op. cit.* i 214–215; Kohler, 'Das Banturecht,' *loc. cit.* xv. 40). Nor does the bond reach further in the *fatidrá* of Madagascar, in the old Northern ceremony of 'going under the turf,' in the companionships in arms of the American Indians, the Fijians and the Afghans, in the brotherhoods of the Syrians of the Lebanon (see above, §§ 13, 7, 26, 11) and of the Swahili (Niese, *op. cit.* p. 240), in the friendships of the Polynesians, Yahgans, Orāons, and the natives of the Abruzzi, and the Celts (see §§ 52, 25, 2, 8).

48. In many instances the participants in the rite bind not themselves only, but other persons on behalf of whom they act. Thus, among the Karens of Burma, 'the chief stands as the representative of the tribe, if it be a tribal agreement; or the father as the representative of the family, if it be a more limited covenant' (Luther, *op. cit.* p. 313); and in Timor, the parties may be the representatives of families or tribes or kingdoms (Forbes, *op. cit.* p. 452). Chiefs bind their tribes amongst the wild peoples of the Naga hills (Woodthorpe, *op. cit.* p. 211), the natives of the Bismarck Archipelago (E. Sorge, 'Nissan-Inseln in Bismarck-Archipel.' in Steinmetz, *op. cit.* p. 405), in Borneo (Schwaner, *op. cit.* i. 214), and among the Wachaga (Kohler 'Das Banturecht,' *loc. cit.* xv. 40). Sometimes the chiefs take the principal parts in the ceremony, while their followers join only in its later stages; as, for example, by drinking what remains of the diluted blood, by participating in a common feast, or by receiving gifts from the 'brothers'; so with the Scythians (Herodotus, iv. 70), Balonda (Livingstone, *Missionary Travels and Researches*, p. 488 f.), Ceramese (Riedel, *op. cit.* pp. 128–129), and Bulgarians (see above, § 38). In other cases the tribe is represented by a certain number of tribesmen (Garos and Kanowit Dayaks [see above, § 9], Bali of N. Cameroon [Hutter, *loc. cit.* p. 1]). A very curious instance of the representation of a tribe by a single tribesman is given by Bancroft (*op. cit.* i. 636–637). He says of certain Mexican tribes, that if one of them wished to make 'a close connexion, friendship, alliance, family or blood relationship' with another, its members seized a man of the latter tribe, and, having made him intoxicated, pierced his ears with awls and smeared themselves with his blood.

It is, of course, sufficiently obvious that the blood-brother of a chief may, in the general case, at all events, rely upon the good offices of the subjects of his protector, *e.g.* among the Kimbunda (Magyar, *op. cit.* i. 445). Among the Arabs, 'the compact is primarily between two individuals, but the obligation contracted by the single clansman is binding on all his "friends," *i.e.* on the other members of the kin' (*Rel. Sem.*[2] p. 315; see Herod. iii. 8, quoted above, § 16). By the Southern Slavs each participant is recognized as a near relative by the kinsmen of his chosen brother, the brotherhood being regarded as a true relationship (Krauss, *op. cit.* p. 624; Ciszewski, *op. cit.* pp. 99–101); and, among the Somali and Oromó, a stranger admitted to friendship becomes entitled to all the rights of a tribesman (Paulitschke, *op. cit.* p. 246).

vii. What purposes are served by the compact.

49. It is clear from what has already been said that the rights and duties which spring from this relation are not the same in all cases. In some the bond amounts to little more than a formal declaration of mutual goodwill. Thus the friendships between girls among the Orāons and in certain districts of the Abruzzi are strong and intimate, but they create no new tie (see above, § 25). The *magus* ceremony is confined to relatives; it strengthens the natural bond, but does not form a fresh one (see above, § 18); while, among the Swahili, the sole effect of the relation is to establish an obligation between the members to help one another in time of danger (Niese, *op. cit.* p. 240). In other cases the brotherhood seems to effect a complete identification of interests, as, for instance, in the case of the Polynesian *taio* (see below, § 52). It may, however, be affirmed that it is of the essence of the obligation imposed upon the parties to act towards one another faithfully and helpfully as true friends and loyal brothers. Thus we find, among some of the Australian tribes, that

'the drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship and obliged to assist one another. At the same time it renders treachery impossible' (see above, § 2).

The same authorities add that the men taking part in the *atninga* avenging expedition of the Arunta tribe

'assembled together, and, after each one had been touched with the girdle made from the hair of the man whose death they were going out to avenge, they drew blood from their urethras and sprinkled it over one another' (Spencer and Gillen, *The Northern Tribes*, p. 598, cf. p. 556 ff.). 'Sometimes, for the same purpose, blood is drawn from the arm and drunk, and on rare occasions a man, declining thus to pledge himself, will have his mouth forced open and the blood poured into it' (*ib.* p. 598).

Among the Hungarians of the 9th cent. the chief men, in taking the oath of fealty to the chief, signified, by shedding their blood into a single bowl, that the blood of the oath-breaker should be shed as theirs had been (J. G. Schwandtner, *Scriptores rerum Hungaricarum*, Vienna, 1746, i. 6). Again, it is said of the Karens that, when individuals, villages, or clans unite in confederacies,

'the contracting parties bind themselves by drinking spirits in which the blood of both has been mixed, and in which a number of weapons have been dipped. The blood of each is supposed to live as an agent or ambassador in the blood of the other, and thus to prevent treachery. The weapons are likewise invoked to prevent treachery' (Smeaton, *op. cit.* pp. 168–169).

The same notion underlies the brotherhood between the king of Unyoro and his servants, especially his cooks (*Emin Pasha in Central Africa*, ed. G. Schweinfurth, Eng. tr., London, 1888, p. 78), the oaths of those making a league or conspiracy, and the *ngia-ngiampe* relation of South Australia (see above, §§ 2, 8, 23). So, too, among the Melangkaps, the object of making brothers by exchange of gifts was to ensure that the Europeans should not cease to be friendly and injure the natives when at a distance from them (J. Whitehead, *Explor. of M. Kina Bahu, N. Borneo*, London, 1893, p. 123).

50. The members of the companionships of the old Norsemen were bound to avenge one another as if they were truly brothers (see above, § 7), and a like obligation is imposed on those who have entered into brotherhood in Herzegovina, Montenegro, and Bosnia (Ciszewski, *op. cit.* p. 89). Among the Wyandot, the youthful braves 'agree to be perpetual friends to each other, or more than brothers. Each reveals to the other the secrets of his life, and counsels with him on matters of importance, and defends him from wrong and violence, and at his death is chief mourner' (*1 RBEW*, p. 68; see § 26 above, where references to similar statements regarding other tribes will be found). So, too, the Afghan tribesmen who join in 'goondees' for mutual defence and support are regarded as more than natural brothers (see above, § 26); and the Fijian brotherhood in arms wears the appearance of a marriage contract (*ib.*)—a characteristic which may be compared with that of the bond of the 'nazil,' which can be dissolved only by the formula of triple divorce (R. F. Burton, *First Footsteps in East Africa*, London, 1856, p. 124). The parties to the blood-rite among the Balonda become 'perpetual friends and relations' (Livingstone, *Missionary*

Travels and Researches, p. 488); and it has been observed (Wilson and Felkin, *op. cit.* ii. 41; cf. Grant, *op. cit.* p. 271; F. L. James, *The Wild Tribes of the Soudan*[2], p. 91) that, if an African be your blood-brother, you may really trust him. 'This contract is never broken.' Among the Somali and Oromó, the saliva ceremony secures to the stranger a tribesman's rights (Paulitschke, *op. cit.* p. 246), while, among the Karens, the blood-covenant

'is of the utmost force. It covers not merely an agreement of peace or truce, but also a promise of mutual assistance in peace and war. It also conveys to the covenanting parties mutual tribal rights. If they are chiefs, the covenant embraces the entire tribes. If one is a private individual, the immediate family and direct descendants are included in the agreement. I never heard of the blood-covenant being broken. The blood-covenant gives even a foreigner every right which he would have if born a member of the tribe' (Luther, *op. cit.* p. 314).

viii. What legal consequences flow from the compact.

51. In certain cases the relation of brotherhood operates as a bar to marriage. Thus it is said of the Cherokees (see above, § 26) that they 'reckon a friend in the same rank with a brother, both with regard to marriage and any other affair of social life.' So, too, Lery ('Historia navigationis in Bresiliam,' cap. 16, in De Bry, *Americae tertia pars*, Frankfort, 1592) says that among certain Brazilian tribes

'nemo eorum matrem, sororem, vel filiam in uxorem ducit; reliquorum ratio nulla habetur; patruus neptem ducit; atque ita deinceps. Tamen . . . nemo filiam aut sororem sui *Atourassap* matrimonio sibi jungere potest. Is autem *Atourassap* dicitur cujus tanta est cum quodam necessitudo ut bona inter utrumque sint communia.'

In some of the islands of Torres Straits a man may not marry the sister either of his particular friend or of his comrade in the ceremony of initiation (Haddon, *JAI* xix. 411–412, 315, 356); nor may those intermarry who take part in the *pela* ceremony of Ceram, or in the friendly associations of individuals or villages at Wetar (Riedel, *op. cit.* pp. 128–129, 446–447; see above, § 14). Among the Murmi a similar bar subsists between the brothers (see above, § 18); it is said of the Kanakas of the Bismarck Archipelago, that if two chiefs enter into an artificial relationship, their peoples are precluded by the closeness of the connexion from intermarriage (Joachim Graf Pfeil, *Studien u. Beobachtungen aus der Südsee*, Brunswick, 1899, p. 26); and a like prohibition affects those who are *ngia-ngiampe* to one another, and the brothers and even the serfs of a Circassian fraternity (see above, §§ 23, 27). Ciszewski, to whose work reference must be made for details, observes that, among the Southern Slavs, the institution of brotherhood is giving way to the influence of modern ideas; and that, if we were to gather from the different districts the various notions held regarding its legal and social consequences, we should be able to construct a complete scheme of the stages through which it has passed. Thus, in some cases, the relationship does not constitute a bar to marriage; in some, it makes a marriage impossible not only between the parties to the rite, but between their children; while, in Prilep, it precludes marriage not only between the parties and between their children, but between those of their relatives who participated in the distribution of gifts at the time of the ceremony (Ciszewski, *op. cit.* pp. 86, 94, 99–100; see above, § 38). We have in the last case, as Ciszewski observes, an interesting example of a collective brotherhood. The rite is performed by the representatives of the two kindreds; but that the relatives are also included in the association by accepting presents from the principals is shown by the fact that they may not intermarry.

52. According to Forbes, if one of the members of a Timorese brotherhood comes to the other brother's house, he 'is in every respect regarded as free, and as much at home as its owner. Nothing is withheld from him; even his friend's wife is not denied him, and a child born of such a union would be regarded by the husband as *his*' (*op. cit.* p. 452). By the terms of the compact of the *fatidrá* the brothers enjoyed community of wives and property; although, in later times, and in the case of Europeans, those obligations may not have been treated as literally binding (Ellis, *History of Madagascar*, i. 190). So, too, the members of the *omapanga* of the Ovaherero, and, according to A. von Chamisso, 'brothers' in the Marshall Islands have their wives in common (see above, §§ 25, 24); and in the countries of the Kimbunda, and among the Wakamba, the brothers exercised mutual privileges over wives and property (Magyar, *op. cit.* i. 201–202; Hildebrandt, *op. cit.* p. 387). Ellis (*Polynesian Researches*, London, 1831, iii. 124) observes that the wife of every individual is the wife also of his *taio*, or friend; and an earlier authority (W. Wilson, *A Missionary Voyage to the S. Pacific Ocean in 1796–1798, in the ship 'Duff,' commanded by Capt. James Wilson*, London, 1799, p. 359), in making a similar statement, adds that a *taio* 'must indulge in no liberties with the sisters or the daughters, because they are considered as his own sisters, and incest is held in abhorrence by them; nor will any temptation engage them to violate this bond of purity.' Further, it is said, on the testimony of Lieut. Corner, a previous observer, that the relation of *taio* formed between persons of different sexes operated as an absolute bar to all personal liberties. The later missionaries, however, doubted the accuracy of Corner's evidence, at all events in regard to the Tahitians of their time (*ib.* cf. § 43 above). Lastly, the provisions of the Syro-Roman law (see above, § 44) point to a compact, the parties to which held their wives and children in common.

ix. General observations on the nature and history of the institution.

53. We have seen in the preceding pages that the form of the rite by which the bond is constituted is not always one and the same. In some cases the use of blood is the only requisite; in some it is an essential element; in some it is a mere accessory; and in some it does not enter into the ceremony. And the question presents itself—Is the blood-rite the original type of which other forms are variations, or is it itself but one of the forms in which the need of man for union with, and security against, his fellow found expression? It is, no doubt, true that, in many instances, the use of the blood, while it is of the essence of the solemnity, is accompanied or followed by some other ritual act or acts, such as an exchange of food or weapons or garments or other gifts; and it has been argued that a form in which the performance of such act or acts is sufficient without the use of blood for the completion of the rite is a maimed form, which has lost what was originally essential and retained only what was originally of secondary importance. Such an explanation, however, hardly meets the case: for it does not account for those modes of entering into the compact with which the blood-rite is never found in connexion. It suggests, of course, that even in those cases the use of blood at one time formed part of the ceremony; but there is no evidence to that effect. Now, in the instances which we have adduced, we have found that the parties to the compact are brought together in a great number of different ways. They exchange blood or wine or food or names or garments or weapons or rings of the skins of sacrificial victims or gifts of some sort or kind. Or they dip their hands or their weapons in one another's blood or in the blood of the sacrifice, or shake hands smeared with blood, or let the blood mingle as it falls to the ground. Or they join in holding the victim during the sacrifice, or hold branches while an imprecation is being pronounced or blood

is being let. Or one of them rubs the other with his saliva; or a father makes his child *ngia-ngiampe* to another's child. Or, lastly, the union may be due to community of aim and interest, as in the case of companions in arms; or to circumstances beyond the control of the parties, as in the case of those who are initiated together, or associated as operator and patient in the performance of the initiatory rite; or to the pressure of an overwhelming necessity, as in the case of the fugitive and his protector. It is to be observed that it is quite in accordance with primitive ideas to regard 'the nature of anything as inhering in all its parts' (H. Spencer, *Principles of Sociology*, London, 1879, ii. § 346), even when the parts are separated from it (cf. E. Durkheim, 'La Prohibition de l'inceste et ses origines,' *L'année sociologique*, i. 51); and to treat as parts of a man's substance not only his blood, saliva, umbilical cord, sweat, and other *excreta*, hair, nail parings, and the like, but also his garments, weapons, and name. To our thinking, blood is, weapons are not, vitally connected with the man himself; but, to the mind of the savage, the connexion is of the same quality in either case.

As an illustration of this mode of thought, it may not be out of place to indicate here a feature of primitive 'giving' which sharply distinguishes it from its modern counterpart. It is hardly an exaggeration to say generally of uncivilized man what has been said of the Western Eskimo—that 'a free and disinterested gift is wholly unknown to him.' The gift is regarded as an investment, and a return is expected (see P. J. H. Grierson, *The Silent Trade*, Edin., 1903, p. 18). But it seems probable that this conception has its origin elsewhere than in the desire to lose nothing by the transaction. It is rooted rather in the notion that, unless a return be made, the recipient obtains a power over the donor which he may use to the latter's injury. 'Payment,' says Hartland (*op. cit.* ii. 75; cf. Crawley, *op. cit.* pp. 236–245, 256–257), 'is always held to neutralise a witch's power over a person through something received from him'; and instances are not wanting in which savages have refused to touch the articles set out by traders for their acceptance, until the latter have taken what was offered to them (see GIFTS). Accordingly, an exchange of weapons no less than of blood is regarded as an exchange of very substance, and as establishing between the parties 'an actual community of nature' (H. Spencer, *loc. cit.*; see Hartland, *op. cit.* ii. 55–116, 442 and *passim*). This community is brought about not only by an interchange of externals, but by the devotion of the parties to a course of conduct which demands an absolute identity of aims and interests, or by outward circumstances which force them into an intimate contact. In other words, they enter voluntarily or involuntarily into a relation in which each is regarded not by way of metaphor or fiction, but in very truth, as the *alter ego* of the other. Now, it has been said that, according to primitive notions, blood-brotherhood 'is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother is, or becomes, the brother of all my brethren; the blood which flows in the veins of either party to the blood-covenant flows in the veins of all his kin' (F. B. Jevons, *Introduction to the History of Religion*[2], London, 1902, p. 99; cf. W. R. Smith, p. 315).

We seem, at first sight, at all events, to be in the presence of two conflicting theories. First of all, we have what we may call the 'identity-theory,' which regards the bond as personal to the parties to it, and explains the blood-rite not as the typical form, but as one of many forms; and, secondly, we have what we may call the 'kinship-theory,' which regards the bond as a union of kins, and explains all forms, other than that of the blood-rite, as variations, or modifications, or deteriorations of it (see Hartland, *op. cit.* ii. p. 248 ff.; esp. p. 257). It must be admitted that the evidence which bears upon the claims of those rival views is, in some respects, very imperfect. Not infrequently we are supplied with full details of the ceremonies performed, while we are left wholly in the dark as to the legal incidents of the bond. In other cases, we are told what is its operation, but not a word is said as to the ritual accompanying its formation. For example, we have no facts before us to show how the compact was constituted in the case of the Brazilian *Atourassap*, or in that of the Ovaherero *omapanga* (see above, §§ 51, 25). At the same time, facts are reported which seem to be hardly reconcilable with the 'kinship-theory' as stated. It is, for instance, clear that in many cases the obligations undertaken bind only those persons who are parties to the compact. Thus, the Yahgans of Cape Horn enter into formal friendships by exchanging gifts, by painting themselves in a distinctive fashion, and by assuming one or other of the titles of blood-relationship (see above, § 25). There is no evidence to show that the reciprocal rights and duties of the friends extend to persons other than themselves, or that, by assuming such titles, they mean to do more than emphasize the intimacy of the relation between them. And that this is their meaning is made the more probable by a somewhat analogous instance from Fiji, where comrades in war 'are spoken of as man and wife, to indicate the closeness of their military union.' So, too, the compact which subsists between those who are companions in arms, or who have exchanged names, or who are *ngia-ngiampe* to each other, seems to be strictly personal, even where they are regarded as subject to certain marriage prohibitions, as among the Cherokees, some of the islanders of Torres Straits, the natives of Tahiti, and the Narrinyeri (see §§ 26, 24, 51, 23). The effect of the *lacu*-relationship will be noted below.

In the cases already mentioned, blood is not used in the ceremony; but there are cases in which it is used, and in which only the parties to the bond are affected. We have, for example, the temporary blood-bond, such as that which unites the members of a league, or of an Arunta punitive expedition (see above, § 2). In either instance, its purpose is to prevent treachery; in neither is it productive of a union of kins; and the same observations apply to those who join in 'going under the turf' (see above, § 7). In Timor and Borneo, and among the Wachaga, while a chief may represent his tribe, a simple tribesman binds himself only; and other examples of a like limitation have already been given (see above, § 47). In some of these cases the parties are entitled to share in one another's most sacred rights (see above, § 52); and that these privileges are not necessarily connected with the use of blood in the constitution of the bond, appears from the instance of the Polynesian *taio* and that of the Wakamba fugitive (see above, §§ 52, 31). At the same time it is quite true that sometimes they are found as consequents of a paction solemnized with blood, as in the cases of the Kimbunda and of the natives of Timor and Madagascar (see above, §§ 3, 13, 52). Thus friend is identified with friend; each is entitled to share the other's wife and property; each must regard and treat the other's sisters and daughters as if they were his own. At the same time, the relation is, in its inception at all events, a union of individuals and not a union of kins. The case of the Wakamba is peculiar. The fugitive, by a solemn act, acquires a right of participation in his pro-

tector's wife and house, and a claim on the support and assistance of his protector's tribe (see above, § 31). Here the relation extends beyond the parties to it, and is at the same time accompanied by privileges which are strictly personal to them. It may be thought that this instance presents to us the two theories in combination—the theory that the parties are made one, with the result that they, and they alone, enjoy certain intimate rights; and the theory that they are made kinsmen, with the result that the fugitive can rely upon the assistance of the tribe to which his protector belongs. This view receives some confirmation from a curious mode of peace-making practised by the Masai. One of their women proceeds with her infant to the border of the tribe with whom peace is to be concluded—the Kahe, for example—and meets there a Kahe woman with her infant. The women exchange their children in the presence of witnesses, and each puts the stranger child for a moment to her breast. Then each takes back her child, and each, having been cut by one of the witnesses, smears the blood from her wound on a piece of a bullock's heart and thrusts it into the other's mouth. During these proceedings the Masai representative and the Kahe headman make protestations of mutual goodwill, and imprecate evil upon the breaker of the compact (Merker, *op. cit.* p. 101). Here we have a rite compounded of an adoption ceremony and a brotherhood ceremony; and this instance suggests an explanation of the fact that among the Mapuches, a father, by making a stranger his son's *lacu*, or namesake, adopts him into his family (E. R. Smith, *op. cit.* pp. 260–262; see above, § 24). The parties become relatives by virtue of an exchange of names, and of giving food and eating what is given; and it may be that, in this case, the first of the theories above mentioned has yielded to the second—that the 'kinship-theory' has displaced the 'identity-theory.' Further, it is not without significance that, so far as we know, the blood-rite, as productive of a relationship which extends to the whole clan, is not to be found among the rudest peoples, such as the Yahgans of Cape Horn, the Botocudos, the Andaman Islanders, the Semangs, and Aetas, the Kubus of Sumatra, the Veddas of Ceylon, the dwarf races of Central and Western Africa, the Hottentots and Bushmen, and the natives of Australia, while the use of blood and other *media* is found among some of them in the formation of compacts creative of rights and duties which affect only the persons immediately concerned.

54. Plainly it is matter of no small difficulty to determine what is the relation of these two theories to one another; and, accordingly, we shall content ourselves with an attempt to indicate the direction in which the evidence points. Now, it seems to show that the relation with which we are dealing was not primarily and essentially a relation of kins. We are not concerned to affirm or deny that the tie which held men together in the earliest times known to us was the tie of blood. What we do assert is that primarily and essentially this relation was strictly personal to the parties to it. They might be forced into it by the pressure of external circumstances, or they might enter into it of their own free will. They might be kinsmen, as we count kinship, or they might be strangers in blood. But, whether akin or not, they were somehow brought into a contact so intimate that they became, in the eyes of their fellows, possessed of a common nature. The logical result of this community was that each of the parties became entitled to the rights and subject to the disabilities of the other. Each had a right to share the other's wife and property; each was precluded, wherever marriage of a sister by a brother or of a daughter by a father was prohibited, from marrying the other's sisters or daughters. These marriage bars, even if they did not owe their origin to a recognition of the principle of blood-relationship, were plainly susceptible of being referred to it, and accounted for by it, when it came to be recognized; and this explanation would appear most natural when the use of blood entered into the formation of the bond. Accordingly it would hardly be matter of surprise that, where circumstances favoured the change, the 'kinship-theory' gradually encroached upon the 'identity-theory' and finally usurped its place.

55. What, it may be asked, is the nature of the sanction which supports the compact? It cannot have escaped observation that, in many instances at all events, the institution with which we are dealing closely resembles an oath or an ordeal (see above, § 7). An oath consists in general of two parts—of an asseveration that what is said is true, or that what is undertaken will be performed, and an imprecation of evil by the person taking the oath upon himself, if he prove forsworn. Sometimes a divinity is invoked not merely to bear witness to the oath, but to punish the oath-breaker. Sometimes mere things, such as weapons, are introduced into the ceremony to symbolize the evil which will fall upon the perjured person—he will be cut down with a sword, or pierced with an arrow, or run through with a spear. What Polybius (iii. 25) says of the oath with which the treaties between Rome and Carthage were solemnized is very instructive. The Carthaginians swore by the gods of their country. The Romans swore 'in accordance with ancient custom' and in addition by Mars and Quirinus. He who made oath 'according to ancient custom' took a stone in his hand and said—'If I keep faith, may I fare well; but if I knowingly deceive, then may I, while all other men are assured of their right to their country, their laws, their gods, and their sepulchres, be alone cast out as I now cast out this stone'; and, with these words, he cast the stone away. It seems plain that we have here an account of two forms. In the later form the gods are invoked to be witnesses to the oath, and to punish the oath-breaker. In the earlier form the gods are not invoked, and the stone is thrown away to signify the fate of the false swearer (see H. A. A. Danz, *Der sacrale Schutz*, Jena, 1857, p. 13 ff.; O. Schrader, *Reallexikon d. indogerm. Alterthumskunde*, Strassburg, 1901, p. 168; cf. Grimm, *op. cit.* p. 897; B. W. Leist, *Græco-italische Rechtsgeschichte*, Jena, 1884, pp. 226 f., 703 f.). In many instances an act of touching is an essential part of the ceremony. Thus, in the Indian form, the man who took the oath by touching himself drew down the powers of evil upon his head (Schrader, *op. cit.* p. 167); and, in old Germany, he must touch some object which brought him into relation either with the gods whom he invoked, or with the punishment which followed upon perjury. In Scandinavia the oath-breaker touched a ring smeared with blood and consecrated to a divinity; and it was in accordance with a very ancient German practice that a man swore by his sword; while Christians swore by the cross, by relics, and by book and bell (Grimm, *op. cit.* p. 895 f., where many other forms will be found). Sometimes an animal was slaughtered to show how the perjurer would be dealt with—'Juppiter populum Romanum sic ferito, ut ego hunc porcum hic hodie feriam; tantoque magis ferito, quanto magis potes pollesque' (Livy, i. 24. 8). See on oaths A. H. Post, *Grundriss d. ethnologischen Jurisprudenz*, Oldenburg and Leipzig, 1895, ii. 478 ff., and art. OATHS.

56. When we turn to the bond of friendship, and

examine the cases in which blood is employed in its constitution, we find varieties in form, remarkably similar to those which we have been discussing. Sometimes the gods are adjured to punish those who break the compact (see above, §§ 10, 11), or simply to be witnesses to it (see above, §§ 7, 13, 14, 16). Sometimes they are made parties to it (see above, §§ 8, 16), or are invoked while an animal is being slaughtered (see above, §§ 10, 17). In other cases, the parties touch the blood (see above, §§ 7, 8), or dip their weapons in it (see above, §§ 9, 14), or touch or hold an animal while one of them slays it (see above, §§ 10, 13). Weapons or other articles are often introduced into the ceremony either as a 'witness' of the compact (see above, § 13) or as a symbol of the punishment which awaits the breaker of it (see above, § 14, and cf. § 33); and imprecations are frequently pronounced without any direct appeal to a supernatural power (see above, §§ 9, 10, 13, 14, 53). In some cases, as among the Bali, the rite consists of two parts,—of a blood-rite effecting the formation of the bond, and of a blood-rite with the operation of an oath,—while, in other cases, as among the Bendowen Dusuns, the oath stands alone (see above, § 13). There are instances, however, in which the ceremony consists of drinking or sprinkling blood without invocations or imprecations (see above, §§ 2, 49). In this connexion, Junker's (*op. cit.* p. 405; see above, § 5) account of the rite as practised by certain tribes south of the Welle is very instructive. The parties sit opposite to one another. A scratch is made on the chest of each, and a drop of blood is squeezed out. Each wipes the blood off the other with a piece of sugar-cane, which he chews, and the fibres of which he afterwards blows over his wound. At the same time, he repeats the points which have induced him to enter into the compact, and which are to be kept sacred; and at the end of each clause he adds the solemn words: 'If thou dost not hold to this, may my blood destroy thee' (cf. § 49). Here, then, we have an instance of a relation in which blood is the medium not only of formation, but of punishment (see Westermarck, *MI*, London, 1908, ii. 206 ff., 566 ff.). We have, in other words, an example of the operation of the principle which underlies the oath and the ordeal. That the same principle operates in cases in which the blood of the parties is not employed appears from such instances as that of the Beni, where the parties make friendship by eating portions of the same fruit or vegetable, and touching themselves ceremoniously with it before they eat (see above, § 18); or as that of the natives of Shira, where the 'brothers' hold a goat while it is being slaughtered, and fit rings of its skin upon one another's fingers (see above, § 21). A further confirmation is furnished by the cases in which the formation of the compact is due not to the volition of the parties, but to the force of external circumstances. The bond between them is of so intimate a character—the union between them is so complete—that its rupture cannot fail to be productive of evil consequences to the man who breaks it; and thus the sanction has its origin not in the intention of the parties, but in the essential character of the relation. It may well be that, in many instances, the sole punishment which awaits the false 'brother' is that which follows a breach of tribal custom or an outrage on public opinion. Still, it appears to be not improbable that, even in these instances, tribal custom and public opinion owe their force to a sanction of the nature indicated above.

P. J. HAMILTON-GRIERSON.

BROTHERHOODS.—Brotherhood, in its literal sense, is the condition in which a male person is descended from the same father or mother as one or more other persons; full brotherhood, that in which he is descended from the same father and the same mother as one or more other persons. Thus the sons of Jacob by his two wives and by their two handmaids together address their unknown brother Joseph: 'Thy servants are twelve brethren, the sons of one man in the land of Canaan' (Gn 42[13]). In theology, the term is metaphorically applied in two senses: the general sense in which all men are brethren, sometimes limited to those who are of the same faith, as when St. Peter says, 'Honour all men; love the brotherhood' (1 P 2[17]); and the particular sense in which it signifies persons living together in artificial communities as natural brothers live together in families before they leave the family home to establish families of their own. The ideal of brotherhood is one of the closest of all human relations—the only one that implies equality—there being no difference between brothers other than that arising from age.

The system of living in cloistral communities with a religious object belongs to the Brāhman religion, and was adapted by Sākyamuni to the Buddhist religion, and has been largely imported into Christianity. Under it, men have retired from the world by hundreds and by thousands. The grand Buddhist monastery of Nālanda, consisting of six convents, had ten thousand monks. They employed themselves chiefly in the study of the books of their religion and of science, especially medicine and arithmetic. In Ceylon, the monks take upon them vows not to kill, not to rob, to observe celibacy, not to lie, not to drink strong liquors, not to take food after noonday, not to dance or sing or make music; to use no perfumes, unguents, or ornaments; to have no luxurious bed or chair, and never to possess gold or silver. The general idea involved in these communities or brotherhoods is that of a simple and studious life, devoted mainly to the contemplation of religious subjects, and existing in circumstances of self-denial and asceticism—an ideal which has rarely been maintained for long in its original vigour.

The Buddhist monastic system has been practised from ancient times in Tibet. The monastery is there termed *gompa*, or 'solitary place.' Lhasa, the centre of religion in Tibet, was till recently inaccessible to Europeans, although it had been visited by Sarat Chandra Das and other Hindus. One of the most ancient and famous of the monasteries in the neighbourhood is that of Samye, visited by Chandra Das in 1882. It contains a chief temple, Wu-tse, four minor temples, and eight lesser shrines, the dwellings of the monks being in a two-storeyed building near the chief temple. The grand monastery of Tashi-Lhumpo is another, and a sketch of it has been published by the Royal Geographical Society. Here the monks are summoned by a trumpet to the great hall for prayers at 3 a.m. At the lamasery of Yarlung Shetag live 40 monks and as many nuns, whose children are brought up to succeed them. This is allowed because of the loneliness of the situation of the lamasery. In the *gompas* at Lhasa there are said to be 15,000 lamas, and in the province of Amdo nearly 30,000 in 24 lamaseries; and it is estimated that one-seventh of the entire population belong to the priesthood. The lamasery of Kumbum has

temple covered in with tiles of gold, in commemoration of Tsongkapa, a Tibetan saint.

In the British provinces of Little Tibet, monasteries exist, which are thus described: The monastery at Kee in Spiti has the appearance of a hill-fort crowning an eminence. That at Kyelang in Lāhul stands on the projecting spur of a mountain side, distant from all other habitations, at an elevation of more than 12,000 feet above the level of the sea, and is approached by a steep and difficult path, which at some seasons is dangerous. In the spring of 1874 a monk and a nun were buried in an avalanche while walking up this path. In the richer monasteries in Tibet proper are extensive wardrobes of great value. Along the walls of the galleries are arranged numerous praying wheels. On one side of the hall is a wheel 5 feet in diameter, on each revolution of which a bell is struck. Outside the main building are the cells of the brethren. Col. Paske witnessed the performance by the monks of Kyelang of what is termed by him a spirit dance. The abbot took his position, attended by a band of musicians, who played loudly, when a party of 30 or 40 monks entered attired in grotesque costumes and wearing masks; after an excited and noisy dance, they retired to change these costumes.

The Tibetans take off their hats when they pass a monastery and shuffle past it on their knees. In these circumstances, it is easy to understand that the monks have acquired great political power.

In Siam, the monasteries are recruited from every class of society, especially the higher classes, and every son of a respectable family spends a year in one of them—a system which reminds one of that of the lay brethren in several English orders.

The account given by Herodotus (ii. 37) of the Egyptian priests implies that they lived in communities. He says: 'They are of all men the most excessively attentive to the worship of the gods, and observe the following ceremonies. They drink from cups of brass, which they scour every day; nor is this custom practised by some and neglected by others, but all do it. They wear linen garments, constantly fresh washed, and they pay particular attention to this. They are circumcised for the sake of cleanliness, thinking it better to be clean than handsome. The priests shave their whole body every third day, that neither lice nor any other impurity may be found upon them when engaged in the service of the gods. The priests wear linen only, and shoes of *byblus*, and are not permitted to wear any other garments or other shoes. They wash themselves in cold water twice every day and twice every night; and, in a word, they use a number of ceremonies. On the other hand, they enjoy no slight advantages, for they do not consume or expend any of their private property; but sacred food is cooked for them, and a great quantity of beef and geese is allowed each of them every day, and wine from the grape is given them; but they may not taste of fish. . . . The service of each god is performed, not by one, but by many priests, of whom one is chief priest; and when any one of them dies, his son is put in his place.'

It was in Egypt that the monastic movement in Christianity commenced. It is alleged that Frontonius established the first 'laura' in the year 151 at Nitria. In the early part of the 4th cent. the movement had taken root. It is said that the sanctity of St. Anthony attracted so many monks to his neighbourhood that he had to undertake the direction of them. St. Pachomius also, who died in 348, was head of a community; and that under Apollonius consisted of 500 individuals. The name *Dêr el-Bahari* signifies 'the convent of the North.'

From Egypt the practice speedily spread to Rome and to Gaul; and, when Augustine came to England, he found Celtic monks established there. Abbot Gasquet enumerates not fewer than 21 different orders.

They are distinguished into five classes as follows:—(1) Four orders of monks: the Benedictines, established at Monte Cassino early in the 6th cent. A.D.; the Cluniacs, dating from the 10th cent.; the Cistercians and the Carthusians, from the 11th. (2) Three orders of Canons Regular: the Augustinian, the Premonstratensian, and the Gilbertine. [The last is the only order originating in England, and was established in 1148.] (3) Two military orders: those of the Knights of St. John and the Knights Templar. (4) Four orders of Friars: the Dominicans, or Black Friars; the Franciscans, or Grey Friars; the Carmelites, or White Friars; and the Austin Friars. [These were all introduced into England in the 13th cent., and are commemorated in London by the names of places where their houses formerly stood.] (5) Eight lesser orders of Friars: the Brethren de Penitentia; the Pied Friars at Norwich; the Brethren of St. Mary de Arens at Westminster; the Brethren de Domine; the Trinitarian Friars; the Crutched Friars; the Bethlehemite Friars; the Boni homines. [These all date from the middle of the 13th century.]

The expression 'brotherhood' was also anciently applied to Gilds. The popular assemblies in the Cinque Ports are styled Court of Brotherhood and Guestling. Before the passing of the Judicature Act in 1873, the judges and serjeants-at-law together constituted the Society of Serjeants Inn, and the serjeants were always addressed by the judges in court as 'brother.'

E. W. BRABROOK.

BROTHERLY LOVE (Buddhist).—See LOVE (Buddhist).

BROTHERLY LOVE (Christian).—The principle of brotherly love was not first enunciated by Christianity. Exponents of earlier systems had given it notable expression, both among Gentiles and among Jews (see, *e.g.*, Ex 23^4, Lv 19^{18}, Dt 22^{1-4} 24^{10-15}, To 4, etc.; cf. art. 'Brotherly Love' in *JE*). Even the 'Golden Rule' had been anticipated, at least in a negative form (see Allen on Mt 7^{12}), and the association of the Christian with the Jewish doctrine is openly declared both by our Lord (Mt 7^{12} 22^{40}) and by His Apostles (Ro 13^{8-10}, Ja 2^8). In the earlier dispensation, however, the conception was narrowed by racial prejudice. For the practical realization of what was there implicit we must turn at once to the words of Jesus Himself.

1. **The teaching of Jesus.**—(*a*) The teaching of Jesus not only inculcates the duty of brotherly love (Mt $5^{21-24.\ 38-48}$ 7^{12}, Mk 10^{42}, Lk 10^{27} etc.), but assigns to it the utmost emphasis. From His doctrine of the Divine Fatherhood He leads us to infer the doctrine of human brotherhood (see the use of ἀδελφός in Mt $5^{22.\ 23}$ 7^3 $18^{15.\ 35}$ etc., and cf. 23^8). The love of our neighbour is placed side by side with our love of God as the supreme obligation of religion (22^{34-40}); and so inseparable are the two, that in Christ's portrayal the heavenly love finds in the earthly love alike its truest expression and its unerring criterion (25^{40}, Mk $9^{36.\ 37}$, Lk $6^{32ff.}$; cf. Jn 13^{35} $15^{10.\ 12}$). No formal devotion grants

exemption from the claims of justice and mercy (Mt 23^{23} 15^{6}). To be wrong in one's relations with a brother is no less than to be wrong in one's relations with God ($5^{23, 24}$ 25^{45}).

(*b*) There is a noble universalism in the love thus enjoined by our Lord. In His thought the term 'neighbour' loses all such limitations as in the earlier Jewish interpretation were imposed by national or personal animosity. It embraces all men (7^{12}) irrespective of race (Lk 10^{25-37}), of social status ($14^{12, 13}$), of character (Mt 5^{43-48}), and even of personal relationships (5^{44}, Lk 6^{27}). While the wider human brotherhood itself includes an inner brotherhood of discipleship (Mk 3^{35}, Jn 13^{34} 15^{12}), all children of the common Father have a place in the one great fraternity of love.

2. The Apostolic writings.—(*a*) The prominence assigned to brotherly love in our Lord's own teaching is re-asserted in that of His Apostles. Frequent exhortations are found in the Epistles reminding the early Christians of the obligations it involves (see, *e.g.*, Ro 12^{10}, He 13^{1-3}, 1 P 1^{22}, 1 Jn 3^{11} 4^{21}). So well known, indeed, are those obligations, that in one place there is almost an apology for allusion to them (1 Th 4^{9}). Whether viewed from the standpoint of worship (*θρησκεία*) or from that of piety (*εὐσέβεια*), love is to be the inevitable outcome of religion (see Ja 1^{27}, 2 P 1^{7}), and all that is implicit in it St. Paul sets himself carefully to expound (1 Co 13). Its practical influence in the life of the Church is to be seen in its power to place master and slave upon equal terms (Philem ^{16}), and in the adoption of 'brother' as an acknowledged term both of address (see 1 Th 1^{4} etc.) and of reference (1 Co 8^{13}, Ja 1^{9}, 1 Jn 2^{9}). Even so specific an expression as 'the brotherhood' appears to have been recognized before A.D. 64 to signify the body of Christian believers (1 P 2^{17} 5^{9}).

(*b*) The brotherly love thus required or assumed is regarded as essential to the Christian life. Its obligation is 'the royal law' (Ja 2^{8}). Its absence nullifies all other virtues (1 Co 13^{1-3}); its presence implies fulfilment of all duty (Ro 13^{8-10}, Gal 5^{14}). It is, in fact, the pledge of a live faith (Ja 2^{14-18}), and the criterion of true sonship (1 Jn 2^{9-11} $3^{10, 14}$ 4^{7} 5^{1}). In all this the servants' doctrine is as their Lord's.

(*c*) It has been disputed, however, to what extent the Apostles are also at one with Christ in their conception of the scope within which this law of love holds sway. In favour of a distinction between the two points of view, it may be argued: (*α*) that the prevalent sense of *ἀδελφός* in the NT is that of 'fellow-Christian'—a restricted meaning which is sometimes markedly imposed by the immediate context (see, *e.g.*, 1 Co 5^{11} 6^{6}); (*β*) that the love required frequently refers to the brotherhood of believers only (Ro 12^{10}, 1 Th 4^{9}, He 13^{1}, 1 P 1^{22} 2^{17} 3^{8}); and (*γ*) that, even in the report of our Lord's own teaching, the universalism of the Synoptic Gospels has, in the Fourth Gospel, been merged in the more limited conception (see Jn 13^{34}, 15^{12}). On the other hand, it is quite clear, from such injunctions as are found in Gal 6^{10} and 1 Th 5^{15}, that the Apostolic law of love towards men possessed an application as broad as humanity itself, and the specific reference of Ro 12^{20} shows that not even enemies were excluded from its operation. The teaching of Jesus, therefore, has not really been limited by His followers. The utmost that can be maintained is that the Apostles thought of two separate circles of brotherhood—the inner circle, which comprised their fellow-believers, and the outer circle, in which all mankind were allowed a place. They themselves specifically distinguish these two degrees of fellowship (see Gal 6^{10}, 2 P 1^{7}). Yet, though there may be special stress upon the more limited love, the wider love is recognized as its natural outgrowth and its perfect fulfilment (see 2 P 1^{7}).

3. The practice of the Early Church.—Certain special forms, in which the brotherly love of the first Christians found expression, call for particular mention at this point. (*a*) *The Love-feast and the Lord's Supper.*—The early disciples used to share in a common meal, which was intended not only as a means of assisting the poorer brethren, but also as a manifestation of the Church's unity of spirit (see Ac $2^{42, 46}$ 6^{2} 20^{7}, and Tertullian's famous passage, *Apol.* 39). At first these love-feasts were connected with the Lord's Supper (see 1 Co $11^{20ff.}$, and Ign. *Smyr.* 8; and cf. art. AGAPE). But it was not long before the association of the two meals led to serious abuse (1 Co $11^{20ff.}$, Jude ^{12}, 2 P 2^{13})—a fact which, along with the Roman government's suspicion of all secret societies, led, in the 2nd cent., to their ultimate separation (see Pliny's Letter to Trajan, 96). Even after the separation, however, the Lord's Supper, as well as the Agape, would constitute an expression of the disciples' common brotherhood (see 1 Co 10^{17}). In the 18th cent. John Wesley made an interesting attempt to revive the love-feast in his own societies, and in an attenuated form it still survives among them.

(*b*) *Hospitality.*—The circumstances of the age in which Christianity had its birth rendered hospitality a practical necessity. It is not surprising, therefore, that the early Christian literature lays stress on this particular application of brotherly love. The entertainment of strangers was the duty not merely of the 'bishop' (1 Ti 3^{2}, Tit 1^{8}), but also of the ordinary disciple. In certain Scriptural injunctions its exercise is confined to the case of fellow-Christians (1 P 4^{9}, 3 Jn $^{5-8}$); but the absence of restriction in other places shows that the broader conception of the duty was also appreciated (Ro 12^{13b}, He $13^{1, 2}$, 1 Ti 5^{10}; Clem. Rom. 1). See HOSPITALITY.

(*c*) *Charity.*—The practice of liberality towards the poor was another expression of the Church's brotherhood. As was natural, this was directed mainly to relieving the necessities of fellow-disciples (Ro 12^{13a}, He 6^{10}, 1 Jn $3^{17, 18}$, and probably Ac 9^{36}), although the limitation is not always named (see He 13^{16}). A signal illustration of such charity is found in St. Paul's collection for the saints at Jerusalem (Ro 15^{25}, 2 Co 8^{1-15} etc.). See CHARITY.

(*d*) *The 'communism' of the Early Church.*—It was in connexion with such care for the poorer brethren that an experiment was undertaken which has sometimes been described as the 'communism' of the Early Church. 'And all that believed were together, and had all things common; and they sold their possessions and goods, and parted them to all, according as any man had need' (Ac $2^{44f.}$; cf. also 4^{32}). We must be careful, however, not to exaggerate the significance of this beautiful manifestation of brotherly love.

'There is,' in the words of Peabody (*Jesus Christ and the Social Question*, p. 24), 'no evidence that what is reported of the little company at Jerusalem became in any degree a general practice, as though enjoined by the teaching of Jesus. No other instance of communal ownership is cited in the Book of Acts; but, on the other hand, the mother of Mark continues to own her home in Jerusalem (Ac 12^{12}), and voluntary relief is sent from Antioch by "every man according to his ability" (11^{29}). The Apostle Paul knows nothing of such communistic regulations (2 Co 97, 1 Co 16^{2}). . . . In short, the communism of the day of Pentecost, like the gift of tongues described in the same chapter, was a spontaneous, unique, and unrepeated manifestation of that elevation and unity of spirit which possessed the little company in the first glow of their new faith. Still further, this sharing of each other's possessions, which was thus for the moment a sign of their perfect brotherhood, was even then no formal or compulsory system.' (See Ac 5^{4}; cf., further, art. COMMUNITY OF GOODS.)

It is probable that the disappointment of the hope of a speedy Parousia, the rapid growth of the Church, and the presence of unworthy members in the Christian community, prevented the repetition or the expansion of this experiment (see J. H.

Moulton's essay in *The Social Teaching of the Bible*, pp. 214–216).

4. **Later development.**—The history of the world's social progress, since the days of the Apostles, has been largely that of the leavening of human life with the principles of brotherly love inherent in the Christian gospel. It is to its spirit that we owe the abolition of slavery, the cleansing of the prisons, the care of the sick poor, the suppression of infanticide, the exaltation of womanhood, the improvement in conditions of labour, and, in general, the birth of our modern concern for the down-trodden masses dwelling in our great cities. And, as men look forward to future progress, working towards a reformed society securely based upon truth, justice, and mercy, it is in the gospel of Christian brotherhood that the adequate motive-power is to be sought. Only when the universal brotherhood of man is acknowledged as an inevitable inference from the universal Fatherhood of God, only when the world's law of greed and hate is vanquished by the Christian law of service and love, will the principle of love have received its perfect fulfilment, and the City of God at length have been built upon earth.

BROWNING.—See POETRY (Christian).

BROWNISM.—1. **Life of founder.**—Brownism derives its name from Robert Browne, third son of Anthony Browne of Tolethorpe,* Rutlandshire. Born about 1550,† of his earlier years nothing is known, but he appears to have entered Corpus Christi College, Cambridge, in 1570, and to have graduated in 1572.‡ The college at that time was noted rather for licence than for learning or seriousness.§ The university, however, as a whole was a centre of Puritan influence; and Browne, yielding to this, became one of those 'known and counted forward in religion.'‖ In other words, he was concerned about 'the woeful and lamentable state of the Church,' and its need of a further reformation. He 'debated' those things 'in himself and with others,' and 'suffered some trouble about them'¶ from opponents. Then, at some indefinite time after 1572, he taught 'schollers' for the space of three years**—having a 'special care to teach religion,' and keeping them 'in such awe and good order as all the townsmen where he taught gave him witness.' Moreover, he still 'bent himself to search and find out the matters of the Church'; he 'laboured to put in practice all he found, both in his school and the town'; †† in consequence, 'he got himself much enmity of the preacher,' and was 'presently discharged.' For a time, however, he continued to teach 'with great good will and favour of the townsmen ‡‡ till' an outbreak of the plague occasioned his recall home to Tolethorpe. Next, with his father's leave, he returned to Cambridge, not for study so much as with the hope of staying 'his care' about the absorbing Church question. To this end he resorted to Mr. Richard Greenham, rector of Dry Drayton, 'whom of all others he heard say was most forward.'* Mr. Greenham allowed him—'with others'—to expound in his house 'that part of Scripture which was used to be read after meals'; and, contrary to law, did not forbid him to teach 'openly in the parish.' This led to his being 'moved' by 'certain in Cambridge,' 'and also with consent of the Mayor and Vice-Chancellor,' to his preaching in Cambridge. He was not unwilling, but was checked by his objection to receiving the Bishop's 'license and authority.' He could go so far as to be 'tried' (*i.e.* examined) by the Bishops, and to 'suffer their power, though unlawful, if in anything it did not hinder the Truth.'† But he would not admit their right to authorize or ordain him; and when Archbishop Grindall's 'seals were gotten him by his brother'‡—apparently three times over—he lost the first, burned the second, and, though he kept the third by him,§ openly declared that they meant nothing to him. He preached to his Cambridge congregation for 'about half a year,' but refused to take charge of them, because 'he saw the parishioners in such spiritual bondage that whosoever would take charge of them must also come into that bondage with them.' This confirmed him in the principle which had gradually been growing clear to his mind, that 'the Kingdom of God was not to be begun by whole parishes, but rather of the worthiest were they never so few';‖ and, failing to convert the people to a like view, he 'sent back' the 'stipend' they had 'gathered' for him, 'and gave warning of his departure.'¶ His next sphere was in Norfolk—where some very forward** were said to be. He lodged with Robert Harrison,†† master of an hospital in Norwich; but went out from that city on preaching tours which roused the whole neighbourhood, and soon embroiled him with the Bishop.‡‡ Another result, however, was the gathering of a 'company' who agreed to join

* The family is described as 'ancient and worshipful.' For full accounts of it, see *Transactions of the Congregational Historical Society*, vol. ii. no. 3.

† An inference from the fact that he was over 80 at the time of his death in 1633.

‡ Masters, *History of Corpus Christi College*, p. 9. There is some uncertainty, as two others of the same name entered—the one in 1557, the other in 1565.

§ See Strype's *Parker*, 1821, bk. iii. (sub. 1548).

‖ See his own *True and Short Declaration* (unpaged). A copy is in the *Congregationalist* for 1882; the original is in the Lambeth Library.

¶ *Ib.* ** *Ib.* †† Perhaps Stamford.

‡‡ Tradition says Islington, but his residence there was some time after he 'conformed' in 1585. The statement (Strype's *Parker*, bk. iv., sub. 1571) that he became chaplain to the Duke of Norfolk before 1571 is due to the confounding of him with another Robert Browne, the Duke's messenger, often mentioned in the State Papers and Acts of Privy Council between 1571 and 1591. Nor is there any proof of his identity with the Browne cited in connexion with 'Undertree's Plot' (*ib.* bk. iv., sub. 1574), nor yet with the Brown (of Trinity College) 'convented' before the Vice-Chancellor for Puritan leanings in 1572 (*ib.* bk. iv.).

* Rev. Richard Greenham, 'a man renowned for his care, pietie and paines; and for his singular dexteritie in comforting afflicted consciences' (see dedication of works to James I. [1612]).

† *True and Short Declaration.*

‡ Most likely his eldest brother Philip, made incumbent of Little Casterton in 1591 (a family living), and deprived in 1604 for conformity. Two seals were issued—on 6th and 7th June 1579 respectively—one a Dismissory Letter, and one a Licence to preach (Burrage, *The True Story of Robert Browne*, 1906, p. 5).

§ Later he parted with it (*i.e.* the Bishop's licence) to a Justice of the Peace, who delivered it to the Bishop of Norwich. But apparently he was not ordained.

‖ *True and Short Declaration.* This shows that Browne did not borrow his conception of a Church, but worked it out for himself.

¶ About the same time he 'fell sick,' and during his illness was served by an 'officer named Bancroft' (Richard, future Archbishop) with the Bishop's letter forbidding him to preach.

** Immigrants from the Low Countries were numerous in and near Norwich—including some Anabaptists (Blomefield, *Norfolk*, 1805–10, vol. ii. pp. 282, 292–3). Lollard influence was also strong (see, *e.g.*, map in Trevelyan's *England in the Age of Wyclif*, 1899, p. 352).

†† A Cambridge associate whom he converted to his views. They went to Middelburg together, and there disagreed. He died before 1588 (Bredwell, *Rasing the Foundations*; see also Strype's *Parker*, bk. iv. cap. 35).

‡‡ See his (*i.e.* Freke, Bishop of Norwich) letters to Burghley, April 19 and August 2, 1581 (Lansdowne MSS, xxxiii. 13, 20). Burghley was a *distant* kinsman to Browne.

together, on the basis of his teaching, for Church fellowship, by means of a solemn covenant to the following effect: *

(1) That they would 'keep and seek agreement' one with another under Christ's laws.

(2) That they did choose, and would obey, certain to 'teach them and watch for the salvation of their souls,'—having had due 'trial and testimony' of their fitness.†

(3) That they would hold regular meetings for 'prayer, thanksgiving, reading of the Scriptures, exhorting, and edifying—either by all *men* which had the gift, or by those who had the special charge before others.'

(4) That they would allow any member of the Church to 'protest, appeal, complain, exhort, dispute, reprove, etc., as he had occasion, but yet in due order.'

(5) That they would 'further the Kingdom of God in themselves, and especially in their charge and household, if they had any; or in their friends and companions, and whosoever was worthy.'

(6) That they would observe the rules agreed upon 'for gathering and testifying voices in debating matters'; 'for an order of choosing teachers, guides, and relievers'; 'for separating clean from unclean'; 'for receiving any into the fellowship'; 'for presenting the daily success of the Church and the wants thereof'; 'for seeking to other Churches to have their help bring better reformed, or to bring *them* to reformation'; 'for taking an order that none contend openly, nor persecute, nor trouble (the Church) disorderly, nor bring false doctrine nor evil cause (into it)—after once or twice warning or rebuke.'

This took place at Norwich,‡ probably early in the spring of 1581, and marks the formation of the first Church of its kind in England.§ The 'covenant' here described presents a rough outline of Brownism on its positive or constructive side; its negative or aggressive side may be illustrated by Browne's own report‖ of a conversation which he had with his colleague Harrison some time before. From this it appears that Browne (showing himself more extreme in some points than Harrison) maintained that 'preachers who submit themselves to the popish power of the Bishops, or any way justify or tolerate it,' cannot 'do duty as lawful pastors and preachers'; that 'Parishes guided either by such preachers or by the Bishops' and their 'officers' cannot 'be lawful and the Churches of God'; that such preachers cannot really 'beget faith by their preaching,' neither can they really 'call or win men to goodness,' nor can any profit be got from their 'blind reading of chapters and the (Church) service.' With these convictions fierce invectives against the preachers came naturally. Here, *e.g.*, is a specimen: 'Therefore say no more ye wicked preachers that ye hold the foundation, or that ye preach. For what is it worth to say unto Christ, "Hail, King of the Jews," and bow the knee before Him, when you cast your filthy disorders and popish government as dung on His face. You have not yet gathered the people from the popish parishes and wicked fellowship, neither have planted the Church by laying the foundation thereof . . .' Declamation in this strain made a sensation. The common people of Bury St. Edmunds and thereabout heard him gladly, and 'assembled themselves to the number of a hundred at a time in private houses and conventicles to hear him.'¶ But it also led to his imprisonment by the Bishop 'upon complaint made by many godly preachers for delivering unto the people corrupt and contentious doctrine.'¶ Released at the instance of his kinsman Burghley,** and straightway resuming what he considered his mission, he presently found himself 'a prisoner at London.'* Harrison, too, was imprisoned† with others of the Church. So 'at last, when divers of them were again imprisoned, and the rest in great trouble and bondage out of prison, they all agreed and were fully persuaded that the Lord did call them out of England.'‡ The place selected (possibly because of Thomas Cartwright's congregation there) was Middelburg;§ and thither the greater portion‖ of the Norwich 'company,' including Browne and Harrison, transferred themselves — near the end of 1581. In Middelburg Browne's ideal seems to have encountered little or no outward hindrance, but it broke down woefully under the stress of inward disabilities.¶ Two years later, Browne, sore at heart but keeping a bold front, was on his way to Scotland—accompanied by just four or five men and their families. The rest of his career need not be dwelt upon. Landing at Dundee, he reached Edinburgh by way of St. Andrews on Thursday, 9th January 1583–4, and was soon in trouble. On three successive Tuesdays he appeared before the Edinburgh Presbytery—maintaining (on the 14th) that 'witnesses at baptism were not a thing indifferent, but simply evil'; alleging (on the 21st) that 'the whole discipline of Scotland was amiss'; and acknowledging (on the 28th) the authorship of certain books exhibited. Out of these Mr. James Lawson and Mr. John Davidson were deputed to gather the articles deemed erroneous for presentation to the King—Browne, meanwhile, being, it would seem, held in custody. But His Majesty, assuredly rather to spite the Presbytery than to befriend Browne, let him go free.**

After some months he appears to have returned to Stamford; then to have gone abroad, leaving his wife behind; and then again to have come back to Stamford. This was about March 1585; and in the autumn of the same year, October 7th, he betrayed the crushing effect upon him of several months' imprisonment by a promise of 'conformity' to the Established Church.†† Next day he set out for Tolethorpe, bearing a letter of intercession from Burghley to his father. Here he lived, under paternal surveillance, till February 1585–6, when his father, not having found him sufficiently docile, asked and obtained leave to remove him 'to Stamford or some other place.' Whether Browne actually removed is doubtful—since there is proof that later in the year (April 19th, May 5th, June 25th) both he and his wife were three times cited—on a charge of non-attendance at church—in the Bishop of Peterborough's Court by the churchwardens of Little Casterton, the parish in which Tolethorpe Hall is situated.‡‡ The next certain fact is his appointment on November 21st as schoolmaster in St. Olave's Grammar School, Southwark§§—an uneasy situation, which he had vacated before June 20, 1589, when Burghley solicited Howland, Bishop of Peterborough, for his re-admission 'into the ministry' and 'some ecclesiastical preferment,' on the ground that he 'hath now a good time' been an obedient son of the Church.‖‖ Two years later, 'on the

* See *True and Short Declaration*, pt. ii.

† This implies that Browne (as pastor) and Harrison (probably as teacher), etc., were then chosen.

‡ Browne speaks of his 'coming to Norwich, and how the company *there* joined together.'

§ The Independent Church of Richard Fitz (1571) hardly (perhaps) deserves the name, and the next was not formed till 1592, in Nicholas Lane, London.

†† See Burrage, *op. cit.* pp. 29–31, 37–39. The 'five points' to which he subscribed practically cover the whole ground of 'conformity'; and imply a thoroughly broken spirit at the time.

‡‡ Burrage, *op. cit.* p. 41.

§§ An exact transcription of the (drastic) terms of his engagement is printed by Burrage, *op. cit.* pp. 44, 45

‖‖ Lansdowne MSS. ciii. 60.

30th June 1591, Robert Browne, clerk, was admitted and instituted to the rectory of the ecclesiastical parish of Little Casterton in the county of Rutland and diocese of Peterborough'—of which parish his eldest brother, Francis Browne, then occupant of Tolethorpe Hall, was the patron.* Finally, on September 2, 1591, he became 'rector' of the parish of Achurch-cum-Thorpe, Waterville, in Northamptonshire; 'was admitted to the holy orders of deacon and priest' on the 30th of the month;† and here (perhaps excepting one obscure period of ten years) he lived out the remaining forty-two years of his existence. He died in Northampton gaol, and was buried at St. Giles' Church of that town on October 8th, 1633.‡

2. Principles.—Though Browne had receded from some of his extreme views and taken office in the Church he had so bitterly condemned, there is proof § that he still held to the essentials of his Church theory; and if this be taken as evidence of conscious insincerity, it may be remembered at least, by way of extenuation, that, to quote his own words, he was 'broken . . . much with former troubles,'‖ that the influences brought to bear upon him in his weakness were of exceptional force,¶ and that the limited extent of his 'conformity' seems to have been generally understood.**

Some indication of the principles connoted by the term Brownism has already been given. But a more systematic statement is desirable.

(1) First, then, it should be said that Brownism concerned itself merely with a doctrine of the Church. Theologically, Browne was even severely orthodox†† in the current Calvinistic sense. Equally so were his successors.‡‡

(2) With Protestants generally, of the consistent sort, he accepted the Scriptures as the sole rule of Christian faith and practice—unaffected by the traditions of men, including those of the Early Fathers.

(3) Starting from this basis, he came to the conclusion that the Protestant Churches (particularly the English Church), while Scriptural as to their faith, were far from Scriptural as to their practice. Reformed up to a certain point, the English Church had stopped short of the full Reformation which was demanded if it would correspond to the NT model of a Church. Many even of the more 'forward' Puritans stopped short of this—pleading as a sufficient excuse that the needed reforms were not to be had without concurrence of the civil power, and that till such concurrence was forthcoming they could only 'tarry.' Here Browne took his stand. He thought the evils arising from an imperfect Reformation of the Church so great and pressing, that the very existence of Christianity called for the instant removal of them. Since, too, the will of Christ—made clear in the NT—necessitated their removal, to plead for delay on the ground of a 'Prince's' unwillingness was intolerable disloyalty to Christ. The Prince is supreme in his own sphere, but his sphere is not the Church. He is 'to rule the commonwealth in all outward justice, to maintain the high welfare and honour thereof with outward power, bodily punishment, and civil forcing of men.' He is also to 'look to' the Church so far as 'outward provision and outward justice' are concerned: for it is of his 'charge' 'because it is *in* a commonwealth.' But the Prince has no manner of right to compel the Church to be, or to remain, what Christ forbids. Nay, he has no right directly to 'compel religion' at all, *i.e.* 'to plant churches by power, and to force a submission to ecclesiastical government by laws and penalties.' If a true Church is already established, the Prince either is or is not a member of it. If he is, then—as God is no respecter of persons—he is, like every other member, subject to its discipline. If he is not, and has no mind to further or favour its establishment, then those who are Christ's freemen must proceed without him; and even though he should oppose them to the uttermost, they must go on just the same. Thus it appears that separation from a false Church, or from one persistently corrupt, in order to set up and realize the pure and true, is a right which the Prince dare not withhold, and a duty which the 'faithful' dare not decline.

Such is the pith of Browne's *Treatise of Reformation without tarying for anie*, which he wrote and printed at Middelburg in 1582. Not without reason has it been called* the first plea in English for the Church's independence of the State and essential autocracy. But on the Continent he had been more than anticipated by the Anabaptists;† for, in one respect at least, his plea, as compared with theirs, presents a remarkable limitation, viz. that he seems to permit, if not to oblige, the Prince—after the example of 'the good kings of Juda'—not indeed to 'force the people by laws or by power to receive the (true) Church government,' but yet, when once they had received it, to keep them to it, and even to 'put them to death' if 'then they fall away.' How entirely subversive this might become of his whole position—supposing him serious—Browne did not pause to reflect.

(4) Published at the same date and place, and (in some copies) bound up with the *Treatise*, was a *Catechism* to which the *Treatise* was meant to serve as an introduction. Its title began, 'A booke which sheweth the life and manners of all true Christians . . .,' and if the *Treatise* urged the instant need of proceeding to establish the true Church, this sets forth the character of the Church to be established. In some points it obviously agrees with the Presbyterian ideal, as expounded, *e.g.*, by his contemporary Cartwright. The conception of the sacrament is the same; its permanent officers are the same—Pastor, Teacher, Elders, Deacons, Widows—and also its description of their functions; and it makes the same demand for 'discipline.' But there are notable divergences. Thus the definition‡ of a Church is much more strict—'a companie or number of beleevers which by a willing covenaunt made with their God as under the governement of God and Christ, and keepe his lawes in one holy communion.' Again, it was more democratic. From first to last the people of the Church, as just described, are accounted supreme. This appears (*a*) in the

* Burrage, *op. cit.* p. 65 f. † *Ib.* ‡ *Ib.* p. 72.

§ In a MS of his recently found in the British Museum by Mr. Champlin Burrage, and edited by him for the Congregational Historical Society. It is in the form of a letter to his uncle Mr. Flower, is dated 31st December 1588, and contains the passages quoted by Dr. Bancroft in his famous '8t. Paul's Cross' sermon of the following February.

‖ See the aforesaid MS, where he speaks of having been imprisoned 23 times.

¶ *e.g.* the breakdown of his Church experiment at Middelburg, his bad state of health, his loneliness, the pressure brought to bear upon him at home and by Burghley, etc.

** Bredwell, *e.g.*, assumes this in his *Rasing of the Foundations of Brownism*, 1588.

†† Cf. Questions 2–34 of his *Booke which sheweth the life and manners of all true Christians*, 1582.

‡‡ Cf., *e.g.*, their *Confession of Faith*, 1596.

* See, *e.g.*, Walker, *Creeds and Platforms of Congregationalism* (New York, 1893), p. 12.

† *Ib.* for the Anabaptist position; see § 35 of the (Mennonite) Confession quoted by Walker (p. 5). The latter's date is 1609, but it expresses their earliest views. See also pp. 15–17 for possible influence of Anabaptists on Browne. Dexter's opinion seems nearest the truth 'that Browne owed nothing to Anabaptist influences, and that he was a disciple of no one' (*Congregationalism as seen in its Literature*, p. 103).

‡ The first words are—'Christians are a companie. . . . Browne did not believe that Christians could be such and live apart from Church fellowship.

declared equality of all the members as regards spiritual privilege: 'Everie one of the church is made a Kinge, a Priest, and a Prophet under Christ, to upholde and further the kingdom of God, and to breake and destroie the kingdome of Antichrist and Satan.' (*b*) In the mode of appointing and ordaining officers. These must first be tried by the whole Church as to their 'guiftes and godlines.'* If, indeed, a man has already given proof of his 'gifts and godliness' by the right gathering of a church, then those composing that church, or those who afterwards join it, must tacitly receive him 'by obedience' as their 'guide and teacher.' But if a church already planted is in need of any officer, then the free and clear 'consent of the people' 'gathered by the elders or guides' must precede his appointment. (*c*) In the power of the Church as a whole to discipline and even depose unworthy officers. (*d*) In the right of the Church, through its own 'elders or forwardest,' to recognize its officers by ordination 'as called and authorized of God.' Usually this is done 'with prayer and imposition of handes'—but as to the latter it 'is no essential pointe of their calling,' and ought to be left, when it is 'turned into pomp or superstition.' (*e*) In the fact that, while the holding of 'synodes or meetings of sundrie churches' may be expedient, it is voluntary. Their use is to enable the stronger churches to help the weaker in 'deciding or redressing of matters' when such help is sought or when it is evidently needed.*

(5) Brownism, as thus outlined, became the accepted platform of all the early Separatists. Younger leaders like Henry Barrow, John Greenwood, Francis Johnson, and Henry Ainsworth may have varied the emphasis, cleared away ambiguities, or given to this or that principle a more rigorous and detailed application; but, notwithstanding their vehement desire to repudiate† all connexion with Browne or his name, it could not reasonably be denied that he was 'the shop of their store and the steel of their strength.'‡ Proof of this lies to hand in their writings, particularly in a series of authoritative documents which they issued for the chief Separatist Church during the first twenty years of its existence.§ Only on one point of importance has there seemed room for doubt, and here the difference between Browne's teaching and that of Barrow seemed great enough to warrant a description of the latter as 'Barrowism.' This point is the eldership and its relation to the Church. According to Dexter, the teaching of Barrow presents the Church as having power to elect the elders, but not to control them or 'seriously limit their action' or remove them from office for any cause whatever. Thus he practically destroyed the Church's self-government, and erected the eldership into 'a ruling oligarchy,' whereas Browne made it a pure democracy.‖ But against this view may be set Barrow's explicit statement of the contrary. 'I never thought,' he says in one place, 'that the practice of Christ's government belonged only to those officers. I rather thought it had been their duty and office to have seen this government faithfully and orderly practised by all the members of the Church, . . . so that if these officers or any of them transgress, *the Church reserveth power to every member freely (according to the quality of the offence and the rules of the word) to admonish and reprove the whole, to censure and excommunicate such officers so offending.*' No less conclusive is the evidence of a document published in 1596 under the title, *A true confession of the faith and humble acknowledgment of the alegeance which wee hir Majesties subjects falsely called Brownists doo hould towards God and yeild to hir Majestie.*' It emanated from the Separatist Church formed in London, 1592, and soon afterwards exiled to Amsterdam. This Church had Francis Johnson for pastor, and Henry Ainsworth for teacher—joint authors of the Confession, and both disciples of Barrow. Thus its words on the point in question may be taken as Barrow's own. But these say decidedly:

'That as every Christian Congregation hath powre and commandement to elect and ordeine their own ministerie according to the rules prescribed, and whilest they shal faithfully execute their office to have them in superaboundant love for their worke sake—to provide for them, to honour them and reverence them, according to the dignitie of the office they execute: so have they also powre and commandement when anie such defalt, either in their lyfe, doctrine or administration breaketh out, as by the rule of the word debarreth them from, or depriveth them of their ministerie, by due order to depose them from the ministerie they exercised; yea, if the case so require and they remayne obstinate and impenitent orderly to cut them off by excommunication.'†

Johnson, it is true, drew off from this position and split the Church by urging a strictly Presbyterian view of the eldership.‡ But a majority of the people adhered to Ainsworth in his strenuous defence of the confessional view—which he calls the Church's 'ancient faith'—and he had also the warm support of John Robinson§ with his church at Leyden. A more plausible case of difference between Browne and Barrow seems to lie in their respective ways of speaking about the relation of the Civil Power to the Church. For, while Barrow declares it to be 'the office and duty of Princes and Rulers . . . to suppress and root out of their dominions all religions, worship, and ministries'‖ other than the true, Browne's language is certainly more restrained. But here also the contrast is less in reality than in appearance. One drastic assumption of his has already been noted. And the following from his reply to Mr. Cartwright¶ is not so very far short of Barrow's position:

'If the commonwealth (as it ought) had long ago taken from the ministry those tenths and popish livings, then Jericho being once destroyed (I mean the antichristian churches put down) had not so soon been built again. . . .'

Nor did he show himself (previous to his conformity) less extreme in a third point—his practical attitude towards the establishment. Barrow's attitude is perfectly explicit in the *Confession* of 1596 (Art. 32), which calls upon all who 'will be saved' to come forth with speed from this antichristian estate; upon all its ministers 'to give over and leave' their unlawful offices; and upon all people of what sort or condition soever to withhold their goods, lands, money or money worth

* *Catechism*, questions 55, 118–119, 55–58, 119, 51.

† Cf., *e.g.*, Barrow and Greenwood's outburst during the 'conferences' with London ministers (April 1590). The one says: 'We are no Brownists. We hold not our faith in respect of any mortal man, neither were we instructed by him, or baptized into his name, until by such as you were so termed.' The other says: 'Browne is an apostate, now one of your Church.' Yet it is probable that Greenwood at least had been influenced by Browne (see the writer's *Henry Barrow*, p. 13), and both must have read his writings.

‡ Bredwell, *Razing the Foundations*, Introd.

§ See end of article.

‖ See Walker, *Creeds and Platforms*, p. 81 f.

* See the present writer's *Henry Barrow* (p. 106) for this and other references. The only argument alleged to the contrary seems to be one drawn from the 'silence' of what is called the London Confession of 1589: 'A true description out of the Word of God of the visible Church.' But the absence of specific reference to the point may be explained by the ideal character of this document. It is a declaration rather than a Confession.

† §§ 23, 24.

‡ He defends it in his latest book, *A Christian Plea* . . . (1617), pp. 306–16. But he had been advocating it since 1609 (see present writer's *Henry Barrow*, pp. 254 ff., 288 ff.).

§ See his *Justification of Separation* . . . *against Mr. Richard Barnard his invective* . . . (1610), where, *re* the 6th error alleged by Mr. Barnard, he goes into the question with great thoroughness. Johnson replied in his *Answer touching the Division* (1611), p. 27; and Robinson rejoined—at Ainsworth's instance (see the latter's *Animadversion to Mr. Clifton's Advertisement* [1613], pp. 111–117).

‖ Henry Barrow, *Platform*, 1590 (unpaged).

¶ *An answer to Mr. Cartwright his letter* . . ., p. 20.

from the maintenance of its false ministry and worship. Browne's was the same. It is, *e.g.*, the burden of his letter to Mr. Cartwright that you cannot communicate with a false Church without partaking in its pollution; and so neither the true Church as a whole nor any 'part' or 'member' of it ought to communicate.* Perhaps the utmost which can be conceded to him is that he may not have forbidden absolutely a casual 'hearing' even of prelatic ministers or attendance at their services, as did the authors of the *Confession*.†

Brownism of the strictest type — that which pushed its differences‡ from the Church of England to the forefront—found a temporary asylum in Amsterdam and turned out unequal to the test of experience. In Leyden—under the leadership of John Robinson, who at first was as thoroughgoing§ as Barrow or Ainsworth, but became with time increasingly tolerant—it learnt to lay the greater stress on constructive elements;‖ and to develop these in a form of church-life which could bear translation to the shores of New England, and there plant the germs of a vigorous democratic Church-State. In England it ran a somewhat similar course. Stripped of its harshest features, it was accepted from the hands of John Robinson by Henry Jacob (1563?–1624), who 'gathered' at least some of the scattered 'remnants' of the London congregation of 1592 and organized (on a semi-Separatist basis)¶ what has been called the first distinctively Independent Church in England. But the name 'Brownism' did not die out. It lived on as a descriptive or abusive epithet of 'all and sundry' who, for whatever cause, broke away from the National Church. Nor did the extreme views originally suggested by the name cease to win vehement and consistent advocates.** These appear from time to time far down the 17th century.†† Indeed, such advocates have never been absent altogether from the ranks of English Nonconformity. But, on the whole, it may be said that Brownism has survived only on its nobler side; and that its essential witness has been continued and fulfilled in the principles which give life and power to modern Congregationalism.

See also art. CONGREGATIONALISM.

* P. 70. Cf. p. 52: 'For the reading ministry is abominable wickedness,' etc., and in *Treatise upon 23 Matt.* § 'against Parish Preacher.'

† And he would not have thought of going Barrow's length in his argument for the total destruction of 'church buildings' which called forth Hooker's stately protest in *Eccles. Polity*, bk. v. ch. 3, pp. 12–17.

‡ See *The Points of Difference*, under 14 heads, published in 1603 (reprinted in Walker, *Creeds and Platforms*, pp. 77–80).

§ The stages are indicated by (*a*) *A Justification of Separation*, 1610, (*b*) *Religious Communion Public and Private*, 1614, (*c*) *A Just and Necessary Apology*, 1625, and (*d*) *A Treatise of the Lawfulness of Hearing Ministers in the Church of England*—printed in 1634 but written some years before.

‖ Cf. the curiously Erastian and studiously negative 'Seven Articles' prepared for submission to the Privy Council in 1618 and signed by Robinson and William Brewster (reprinted by Arber, *Story of the Pilgrim Fathers*, pp. 280–81).

¶ See *A Confession and Protestation of the Faith of Certain Christians in England*, 1616, reprinted in Hanbury, *Historical Memorials relating to Independents*, i. 293 ff.

** See *A Necessitated Appeal Humbly tendered to the High Court of Parliament, by such as are commonly (but unjustly) called Brownists.* Its date is May 1645, and its subscription runs: 'The meanest and unworthiest servants of God the free Churches of Christ resident in and about this city' [London] (Manchester New College Library, Tract No. 55*a*). In the Lambeth Library (40.2.24) is a pamphlet of 1640 entitled 'Information for the Ignorant. . . . Containing a few observations upon 1 Cor. 10, which do strongly prove it to be absolutely sinful to hear the word preached in any false estate or assembly whatsoever.' To which is added (in a P.S.) a 'Public challenge made by N.E. to all the Nonconformists or Reformists in Old and New England and Holland in the behalf of the total Separation.'

†† See *More Work for the Dean* (1681), by Thomas Wall, an answer to Stillingfleet's *History, Nature, and Pleas of the Present Separation from the Church of England*, strongly defensive of Barrow, Greenwood, and Peury, whose cause is said to be still that of 'many thousand Protestants' in England.

LITERATURE.—i. *BROWNE'S WRITINGS.*—A list of these so far as known up to April 1906 is printed in Champlin Burrage, *The True Story of Robert Browne* (1906), p. 74 f. The most important are those numbered: (3) *A Booke which sheweth the life and manners of all true Christians*, Middelburg, 1582; (4) *A Treatise of Reformation without tarying for anie*, Middelburg, 1582, reprinted by Congregational Historical Society, 1903; (5) *A Treatise upon the 23 of Matt.*, Middelburg, 1582 or early in 1583 (a satisfactory account of these, with full titles, is given by Burrage, pp. 17–25); (8) *A True and Short Declaration both of the gathering and joyning together of certaine persons: and also of the lamentable breach and division which fell amongst them*, Middelburg, ?1, 1583?; (18) *An Answer to Mr. Cartwright's Letter for joyning with the English Churches*, 1584–85 (?) (MS printed and published at London, before Oct. 7, 1585); (19) *A Reproofe of certaine schismatical persons and their doctrine touching the hearing and preaching of the Word of God* (MS of 31 folio pages, 1588 [?], discovered by Burrage at the Lambeth Library in 1905 and since published [London, 1907] as the *Retractation of Robert Browne, Father of Congregationalism*). The schismatical persons are taken to be Henry Barrow, John Greenwood, and their congregation. No doubt is expressed on this point—or any as to its authenticity. But the present writer is not convinced of the latter, at least. (22) *A Letter written to Mr. Flower*, Dec. 31, 1588–89 (MS in the B.M., published at London [Memorial Hall], 1904, under the title *A New Year's Guift*; the printed copy contains a narrative of the finding of the MS by Burrage in 1901).

ii. *BROWNE'S LIFE.*—All previous biographies are superseded by Champlin Burrage, *The True Story of Robert Browne*, Oxford, 1906, together with two papers in *Transactions of the Congregational Historical Society*—'Robert Browne's Ancestors and Descendants' (vol. ii. No. 3) and 'New Facts Relating to Robert Browne' (vol. ii. No. 4)—both by F. Ivas Cater. Dexter's study of Browne, however, in his *Congregationalism of the last three hundred Years, as seen in its Literature* (1879), pp. 61–128, is still valuable.

iii. *EARLY BROWNIST LITERATURE.*—The words of Robert Harrison (d. 1585?), Henry Barrow (1550–1593), John Greenwood (d. 1593), John Penry (1559–1593), Henry Ainsworth (1571–1622), Francis Johnson (1562–1618), John Robinson (1576?–1625), Henry Jacob (1563–1624), for which see Dexter, *Congregationalism of the last three hundred Years* (Bibliography, pp. 8–32), and T. G. Crippen, 'Early Nonconformist Bibliography' in *Transactions of Congregational Historical Society*, vol. i. Nos. 1, 2, 3.

iv. *MODERN LITERATURE.*—Histories of Congregationalism, *passim*, particularly Dexter, *op. cit.*; R. W. Dale, *Hist. of Eng. Congregationalism*, 1907; E. Arber, *Story of the Pilgrim Fathers*, 1897; J. Brown, *Pilgrim Fathers of New England*, 1895; F. J. Powicke, *Henry Barrow*, 1900; W. Walker, *Creeds and Platforms of Congregationalism*, 1893; A. Mackennal, *Story of the English Separatists*, 1893, and *Sketches in the Evolution of English Congregationalism*, 1901.

FRED. J. POWICKE.

BRUNO.—1. Life.—Giordano Bruno was born in 1548 in the ancient township of Nola, not far from Naples. At the latter town he studied, and in 1563 he entered the monastery of the Dominican order there as novice. It was at this time that he took the name of Giordano, his original name having been Filippo. In 1572 he became priest. Early in his monastic career charges of heresy had been brought against him, and these were renewed in 1576. Bruno escaped to Rome, and thence, hearing of his excommunication, made his way to North Italy. Earning a livelihood by various means and in various cities, he finally crossed the Alps, and in 1579 reached Geneva. There he attended the Protestant services held by an Italian pastor, and thus became formally a member of the Protestant community, although he does not seem to have entered into full communion or to have adopted the Calvinist confession of faith. A violent dispute with a Professor of Philosophy at the Genevan Academy led to his departure from the city in the autumn of the same year. He passed to Lyons and thence to Toulouse, where for two years he lectured on Aristotle and other subjects, being elected (by vote of the students) to a chair at the University. We next find him at Paris, in one of the Colleges of which he lectured (as extraordinary professor). Here he published two works on the Art of Memory (a subject concerning which he had been interviewed by the king, Henry III.), and a curious comedy, *Il Candelaio*. Apparently he fell into disfavour at the University, and in 1583 he crossed the Channel and came to London. There, after a three months' stay in Oxford, where his reception was the re-

verse of cordial, he took up his abode in the house of the French Ambassador, Mauvissière, probably as a secretary, and remained till 1585, when the Ambassador returned to Paris. During his stay in London, Bruno had some acquaintance with Sir Philip Sidney (to whom he dedicated a number of his writings), Fulke Greville, Florio, and others of the literary men and courtiers of the time. Seven of his most important works, six being written in Italian, were published in London at this period, although false names are usually given on the title-page for the place of publication. These works included the dialogues *La Cena de le Ceneri* (1584), *De la Causa* (1584), *De l'Infinito* (1584), *Spaccio de la Bestia Trionfante* (1584), and *De gli Eroici furori* (1585). At the same time he had already begun the Latin works which were completed in Germany, so that his stay in England represents a period of extraordinary productiveness. With Mauvissière he returned to Paris in October 1585, but was compelled to leave it again in the following summer.

At this time he made an attempt at reconciliation with the Church, his hope being that he might be allowed to return without renewing his monastic obligations. The negotiations were broken off, however, and he made his way to Protestant Germany, settling for another brief period at Luther's city of Wittenberg. Here he associated with the then dominant Lutheran or Reformed Church party, was welcomed by the University, lectured on such subjects as the *Organon* of Aristotle and Lullism—avoiding dangerous topics—and continued his philosophical writings. With the overthrow of the Lutheran by the Calvinist party in 1588 he was compelled once more 'to take to the road.' With varying fortunes he visited Prague, Helmstadt, Frankfort, Zürich, and again Frankfort, where he remained from March 1591 till a fatal chance led him to Italy in the autumn of the same year. During this period he published various works: the *120 Theses adv. Peripateticos* (Paris, and also Wittenberg), the *Oratio Valedictoria* at Wittenberg, the *Oratio Consolatoria*, or Funeral Address on Duke Julius, at Helmstadt, and two mathematical writings at Prague. The Latin poems (with prose commentaries), which contain the sum and final statement of his philosophy, the *De Minimo*, *De Monade*, and the *De Immenso*, were published at Frankfort along with a mnemonic work, the *De Imaginum Compositione*, in 1591. In response to an invitation of the patrician Mocenigo, who wished to learn his art of memory and his supposed magical powers, Bruno re-entered Italy in August 1591.

He was again anxious to be reconciled to the Roman Church, and to be allowed to live and write at peace as a layman, being curiously unconscious of the reputation his writings had built up for him. No doubt he trusted also to Mocenigo's influence for protection. In May 1592, Mocenigo, who had not obtained the secret knowledge he expected, denounced him to the Inquisition at Venice. In the process that followed Bruno at one point made solemn abjuration of all errors and heresies of which he had been guilty, and later made entire submission, throwing himself on the mercy of the court. Meantime, however, Rome had intervened, demanding that the heretic be sent to the Papal court. For political reasons Venice yielded, after considerable dispute and under strong pressure; and in February of 1593, Bruno entered the prison of the Inquisition at Rome. For some unknown reason no further steps were taken till January 1599—a most unusual delay. The process was then renewed and carried on to December of that year; but the unfortunate man, refusing to recant any of his philosophical opinions, or to acknowledge the right of the Church to dictate in matters of philosophy, was condemned to death in the usual cynical formula, and, on 17th Feb. 1600, was publicly burnt alive in the Campo dei Fiori, where the statue by Ferrari now stands. Bruno suffered not for the Protestant religion or indeed for any form of religion, but for Science, and for the freedom of the scientific spirit from the Church.

2. **Works.**—Apart from the comedy of *Il Candelaio*, and one or two occasional works such as the Orations at Wittenberg and at Helmstadt, Bruno's works fall into three groups, viz. (1) commentaries and summaries; (2) works on the Art of Memory and the Art of Knowledge; (3) philosophical works.

(1) The first group includes expository and critical accounts of Aristotle's *Physics*, the posthumous collections *De Magia*, the *Medicina Lulliana*, and perhaps a number of the accounts of the Lullian Art of Knowing. (2) Such works as the *De Compendiosa Architectura* (1582), the *Lampas Combinatoria* (1587), and the posthumous *Lampas Triginta Statuarum* present in various forms a scheme, based on the writings of Raymond Lully (13th cent.), for the analysis of thought, and its reduction to a few elementary concepts, from which, with their combinations, all possible knowledge might be discovered, retained, and imparted. Leibniz also, and others after him, devoted some attention to this idea of a Universal Art of knowing or discovering truth by thought alone, or, more strictly, by the manipulation of words. Along with these works may be placed the *De Umbris Idearum* (1582), *Cantus Circaeus*, *Sigillus Sigillorum* (1583), and other works on the Psychology and supposed Art of Memory, upon which Bruno laid great stress, but to which the familiar criticism applies, that what is good is old, and what is new is worthless. (3) The main philosophical works, Italian and Latin, have been enumerated above under their short titles; there remains to be added only the *Summa Terminorum Metaphysicorum* (1609, the first part having been previously published by itself in 1595). The *Cena* introduces us to the Copernican theory of the universe, and Bruno's extension of it; the *Causa* gives the metaphysical basis; the *Infinito* places the new cosmology in a fuller light, and criticizes the prevailing theory and its Aristotelian origins; the *Spaccio* and *Cabala* (1584) deal with the ethics and religion of the common man; while the *Eroici furori* give those of the speculative philosopher, imbued with the true *amor Dei intellectualis*. Finally, in the Latin poems the system receives unity and finish; its relations with, and its advantages over, previous theories are expressed in clear and dignified, if not inspired, verse. There is no doubt also that in these later works Bruno comes nearer to a spiritual Monadism such as that of Leibniz, while in the earlier writings he teaches rather a Pantheism of a Neo-Platonic type.

Bruno has been called the Philosopher of Astronomy (Riehl, p. 28). What is new in his teaching is his whole-souled adoption of the theory of the universe foreshadowed by Copernicus, and already in Bruno's time being established by the astronomical discoveries and calculations of Tycho Brahe, Kepler, Galileo, and others. Early in his studies he became dissatisfied with the prevailing philosophy of the Church,—Aristotelianism,—and turned with fresh interest to the cosmic speculations of the pre-Aristotelian thinkers, and to the mystical imaginations of the Neo-Platonists. These, with the Scholastics, orthodox and unorthodox, the alchemists, the astrologers, and finally Cardinal Nicolaus of Cusa, last of the

Mediævals and first of the Moderns, were the chief influences that determined Bruno's thought, and gave his philosophy its strange confusion of old and new, of crass superstition and daring speculation, of dull pedantry and vivacious originality, of ignorant folly and supreme insight.

(*a*) *The physical universe.*—The universe is infinite, without bounds, everywhere the same in nature or kind, everywhere diverse in its individual forms or modes. Its centre is at once everywhere and nowhere; it is all centre or all circumference; or again its centre is relative to the spectator; thus to us the earth appears the pivot about which the universe revolves, but in precisely the same way, said Bruno, the inhabitant of the moon would regard the moon, and the inhabitant of the sun the sun, as the centre of his world. Each sun, each star, each planet is a world like our earth, with living beings in its air, on its soil, in its fire and its waters; but the worlds are of two kinds, each complementary to each, each necessary to the other's existence; the two kinds are the suns, including the fixed stars, and the earths or planets, including the comets. The latter revolve about the former, as the earth about the sun, but the suns themselves are also in motion. Nowhere is there any permanence or fixity in Nature; all these worlds are alive, are living beings, and the condition of life is change. Permeating the whole universe is the ether, which Bruno thought of as a formless fluid, a passive, yielding, yet unchangeable, medium through which light, heat, and bodies pass without loss of force. Underlying all movement, small or great, is spirit or soul; all things have soul; the ether itself Bruno sometimes identifies with the Soul of the Universe. Again, since Nature is everywhere the same, everything is implicitly or potentially the whole universe; and what it is implicitly it strives to become explicitly or in actuality. Thus every *element* passes, in the course of its history, through every portion of the universe, and every *composite being* becomes, by gradual change, every other nature or thing. Thus suns and earths, like all other beings, have had a beginning in time and will decay and perish in time. Nature never repeats herself; that is, there are never at a given moment of time two forms or things exactly alike, and nothing is ever for two successive moments the same: nowhere is there a perfectly straight line or a perfect circle or arc of a circle. There are three kinds of monads, *i.e.* of simple substances or elements, according to Bruno: (1) God, the Supreme Unity, Monad of Monads; (2) the soul, the substance or spirit of the composite body; and (3) the atom, the simple element of body or matter. All are immortal, each soul passing, as has been said, through every type of body the universe contains. In this metempsychosis there is, however, a possibility of progress; the soul has it in its power to rise gradually to higher and higher types of being, until it approaches unity with God and is absorbed into the eternal life of the Divine being.

(*b*) *God and Nature.*—Relatively to us God has two modes of existence and two ways of access. As a transcendent Being, outside of and prior to the universe, its Creator and Source, He is accessible only to faith through revelation; He cannot be approached by reason or by thought. As an immanent Being, the soul, spirit, or inner nature of the universe, which is His image or expression, He is knowable by sense, understanding, and reason in gradual approximation. As the soul of the universe He is in all and every part; all things are one, and the one is God. Indeed, in the earlier phase of Bruno's Pantheism the individual or finite being has no real existence at all; it is not a part or a division or even a special mode or expression of the Divine or world-soul; it is simply the world-soul itself in a particular aspect. Again, in the infinite (*sub specie aeternitatis*, in Spinoza's phrase), there is neither less nor greater; a man is no higher, no nearer God than an ant, a star than a man; all values are relative to the finite standpoint. In the Infinite, as Nicolaus of Cusa taught, all opposites, including good and evil, coincide; liberty and necessity, the possible and the actual, power and will, will and thought or idea, all these in God are one. Hence the universe that exists is the *only possible* universe, and because it exists it is also a *perfect* universe. But again Bruno's maturer thought compelled him to recognize gradations in value, in spite of himself. In law, natural and moral, in the beauty and order of Nature, God is more fully, more adequately, expressed than in any single being or individual thing (*Op. Lat.* i. 2, p. 316).

(*c*) *Ethics and religion.*—The end and aim of a Church is the same as that of a State; it is social and practical—the security of the community, the prosperity and well-doing of its members. Dissension and strife are dangerous to the State, hence the need of an authoritative doctrine, and the enforcement of its acceptance and of outward conformity with it; but the Church has no right to go further, to interfere with the pursuit of knowledge, of truth, which is the object of philosophy or science. Thus the Bible teaches not science but morality, an ideal of conduct. No discovery therefore may be condemned because it conflicts with a supposed statement of fact in the Bible. God does not need the worship of men, He cares nothing for what they say or think of Himself, but only for what they do to each other, *i.e.* for their happiness. Thus all worship, all religion has a purely practical and human end. The ordinary man must be governed by authority, by fear of punishment, whether in this life or in the next; ignorance and bodily pleasures are his paradise. He must live by faith. But the wise or heroic soul is able to attain, through reason, and through the love with which it is inspired, to the knowledge of and to eternal union with the Divine. Thus Bruno comes in the end to the same conception as that with which Spinoza concluded his Ethics—the *amor Dei intellectualis*. His philosophy of religion is a rationalism, but limited always by a belief in the Transcendence of God, by which the sphere of faith is separated from that of reason, and indeed remains, as Bruno sometimes saw, above it.

3. Influence.—Although his writings were placed upon the Index in 1603 and became very scarce, and although in his lifetime he aroused antagonism wherever he went, Bruno nevertheless had many followers in England, in France, and in Germany. No doubt his Lullian works formed the first attraction, but through them his philosophical ideas received an entrance into current thought. The influence was general rather than special; the courage, independence, and enthusiasm with which he defended the new and lofty conception of the universe and of Nature in its relation to God made themselves felt and were imitated. Traces of his teaching may be found in Bacon, in Descartes, and above all in Spinoza and Leibniz, with both of whom he has many doctrines in common. Except, however, for the somewhat mistaken admiration of the English Deists, he was generally neglected until the German idealists re-discovered him in the first half of the 19th century. Ample amends has now been made by his countrymen in the study of his writings, their careful editing, and complete publication; and a multitude of monographs upon his life and phil-

osophy have appeared during the last thirty years in various languages.

LITERATURE.—1. *WORKS*: *Opera Latina*, 1879–1891, State edition, 3 vols., with Introduction, etc., Naples; *Opere Italiane*, ed. Lagarde, 2 vols., Göttingen, 1888; *Opere Italiane* (philosophical works only), ed. Gentile, 2 vols., Bari, 1907–8. 2. *PHILOSOPHY*: F. Tocco, *Le Opere Latine di G. B. esposte e confrontate con le italiane*, Florence, 1889, also *Le Opere Inedite di G. B.*, Naples, 1891, and 'Le Fonti piu recenti della Filosofia del Bruno' (*Acad. dei Lincei*, Rendic. ser., v. i.). Many other references will be found in these and in the following. 3. *GENERAL WORKS ON BRUNO*: Christian Bartholmess, *Jordano Bruno*, 2 vols., Paris, 1846–7; Domenico Berti, *Giordano Bruno da Nola*[2] (with documents), 1889; H. BRYANITES.—See METHODISM.

BUDDHA, LIFE OF THE.—Gautama, the Buddha (Pāli *Gotama*), the founder of the Buddhist faith, which at one time numbered in all probability more adherents than any other form of religious belief, was born in or about the year 560 B.C., in the Lumbini Grove, near the ancient town of Kapilavastu, the ruins of which lie hidden beyond the British border in the dense *tarai* region of south Nepāl, a few miles north of the Basti District of the United Provinces. The place of his birth, unknown and unidentified before, was determined by the discovery, in the year 1895, of a pillar erected there by the Buddhist Emperor Aśoka (*q.v.*) during a pilgrimage which he undertook for the purpose of visiting and worshipping at the chief sites made sacred by the presence and acts of the Buddha while he lived upon earth. The route which he followed led him from his capital city of Pāṭaliputra (Patna [*q.v.*]) to the Lumbini Grove and Kapilavastu, Bodh Gayā, Sārnāth, near Benares, Śrāvasti, Kuśanagara, and other sacred sites, the exact position of some of which is still uncertain; and at each place he appears to have set up a pillar or built a *stūpa* commemorative of his visit and of the incident in the Buddha's life of which it had been the scene. The inscription on the Lumbini Grove pillar is perfect, and the letters as clear and legible as on the day they were inscribed; of a few words, however, the meaning is uncertain:

'The king Devānampiya-Piyadassi, when he was twenty-years-anointed, did [*this place*] the honour of coming [*here*] in person. Because Buddha was born here, the Śakya saint, he caused a stone surrounding and screening wall to be made, and a stone pillar to be set up. Because the Blessed One was born here, he made the village Lummini free of rent and entitled to the [*king's*] eighth share [*of the grain*].'*

The name *Gautama*, by which the future Buddha was known, is perhaps derived from that of Gotama, the ancient *ṛṣi*, or seer, to whom are ascribed some of the hymns of the Rigveda. He becomes *buddha*, or *the Buddha*, the 'enlightened' or 'wise,' only after his attainment of perfect wisdom under the Bo-tree. Other titles given to him are *Śākyamuni*, 'the sage of the Śākyas'; *Siddhārtha*, 'he who has accomplished his aim'; and *Tathāgata*, 'he who has arrived at the truth.' His father was named Śuddhodana, the chieftain or prince of a Śākya clan, who ruled from Kapilavastu over a small kingdom in the N.E. part of the United Provinces and the neighbouring District of southern Nepāl; and his mother, Māyā or Mahāmāyā, is said to have conceived him after a dream in which she beheld the future Buddha descending from the heaven, and entering her womb in the form of a white elephant. Hence the elephant is sacred to all Buddhists. Māyā herself, according to the tradition, died within seven days after the birth of her son, and was carried to the *Trayastriṁśa* heaven of Indra, whither the Buddha himself ascended later, to give her instruction in the Law.*

In the *Jātaka* (*q.v.*) the story of the life and experiences of the Buddha in his earlier existences is narrated, and how the characteristics and perfections of a Buddha were exhibited by him in patience, self-sacrifice, and the other virtues. As the time drew nigh for him to enter the world in this the final birth, the gods themselves prepared the way before him with celestial portents and signs. 'Earthquakes and miracles of healing took place; flowers bloomed and gentle rains fell, although out of season; heavenly music was heard, delicious scents filled the air, and the very water of the ocean lost its saltness and became sweet and refreshing.' Before his birth also the prophecy was uttered concerning him, that he would become either a Universal Monarch (*chakravartin*), or, abandoning house and home, would assume the robe of a monk, and become a Buddha, perfectly enlightened, for the salvation of mankind; and he himself, in the *Tuṣita* heaven, before consenting to undertake the office, makes the 'five great observations,' in order to determine the right family in which to be born, the right continent,† the appropriate district,‡ the proper time, and the predestined mother of the Buddha. He is accordingly conceived in the womb of Queen Mahāmāyā, and she is delivered of a son in the Lumbini Grove, under the shade of a Śāl-tree, a branch of which bends down to her, that she may grasp it with her hand. The body of the child bore at birth the thirty-two auspicious marks (*mahāvyañjana*) which indicated his future greatness, besides secondary marks (*anuvyañjana*) in large numbers. The chief of the divinities, including Indra, were in attendance, and the boy was received by four Brahma angels. Immediately also he uttered the 'shout of victory,'§ taking seven steps forward, and finding in none of the ten directions a being equal to himself. At the same moment his future wife was born, and also the sacred Bo-tree, under which he was destined to attain Buddhahood.

In many of the legends the young Gautama performs marvellous feats of strength. His father also, mindful of the prophecy that he would retire from the world, surrounded him with all manner of luxury and indulgence, in order to retain his affections, and prevent him from undertaking a vow of solitariness and poverty. In particular, he endeavoured to keep from him the 'four signs,' the sight of which, it had been announced, would move him to enter upon the ascetic life.

'Then said the king, "What shall my son see to make him retire from the world?"
"The four signs."
"What four?"

* The translation is that of J. F. Fleet in *JRAS*, 1908, p. 486; cf. p. 823, and *ib.* 1909, p. 760 ff.; V. A. Smith, in *IA* xxxiv. [1905], p. 4, gives a rendering that differs only in details. For a facsimile and transcription see G. Bühler, *Epigr. Ind.* v.; V. A. Smith, *Aśoka* (1901), p. 145, etc. Earlier articles and discussions will be found in *JRAS*, 1897, *et al.*, and in the references in V. A. Smith, *op. cit.* Not far from the Lumbini (Rummindei) pillar there was found, near the village of Nigliva, a second pillar of Aśoka, with an imperfect inscription recording his visit to the *stūpa* of Koṇāgamana (Skr. *Kanakamuni*), one of the four Buddhas of the present age (Kakusandha, Koṇāgamana, Kassapa, and Gautama himself; Warren, *Buddhism in Translations*, p. 32 *et al.*; V. A. Smith, *op. cit.* p. 145). Other pillar-inscriptions are known; see art. AŚOKA.

* Rockhill, *Life of the Buddha*, p. 80 f.; Warren, *op. cit.*, p. 42 ff. The story of the virginity of Māyā, the mother of the Buddha, is late, and owes its inspiration, it can hardly be doubted, to Christian sources. According to L. de la Vallée-Poussin, the doctrine is asserted in the *Mahāvastu* (*q.v.*) but not elsewhere (cf. above, p. 741[b] and note ‡).

† 'In three of the continents the Buddhas are never born; only in the continent of India are they born.'

‡ *Madyadeśa*, the Middle Country.

§ In two of his previous existences the Buddha is said to have spoken at birth—the *Mahosadha* and *Vessantara* existences (see *Jātaka*, i. 53, quoted in Warren, p. 47). The ten directions are the zenith and nadir, with the four cardinal and the four intermediate points.

"A decrepit old man, a diseased man, a dead man, and a monk."

"From this time forth," said the king, "let no such persons be allowed to come near my son. It will never do for my son to become a Buddha. What I would wish to see is my son exercising sovereign rule and authority over the four great continents and the two thousand attendant isles, and walking through the heavens surrounded by a retinue thirty-six leagues in circumference." And when he had so spoken he placed guards for a distance of a quarter of a league in each of the four directions, in order that none of these four kinds of men might come within sight of his son.'*

On successive occasions, however, issuing from the palace, he is confronted by the four signs the sight of which fills him with amazement and distress; and, realizing the impermanence of all earthly things, he determines to forsake his home and take refuge in the forest for solitary meditation, and 'to obtain the highest immortality.' His resolution is strengthened by the appearance of the attendant women of the palace, whom he finds asleep in all manner of uncomely attitudes;† and he pays a final visit to his wife and child in the inner chamber, checking himself in his desire to waken and bid them farewell, lest their entreaties and caresses should avail to turn him from his fixed purpose. He is said to have been twenty-nine years old when he thus made the 'Great Renunciation.' On his horse Kaṇṭhaka he left the city by night, and miraculous signs accompanied his departure, in the same manner as when he had been born. The gods themselves silenced the neighing of his steed, lest the city and its warders should be aroused; and bore up the horse's hoofs, preventing them from touching the ground; while the city gates, heavy with bolts and bars, opened noiselessly to him of their own accord.‡ And Māra, the prince of evil, sought to win him back by the promise of universal dominion, which he should immediately obtain.

On the further side of a broad stream Gautama dismissed his horse and attendant, the latter seeking permission, which was refused, to remain with him;§ and the two returned to the city, to announce that their master had finally and for ever renounced the world. The prince himself proceeded alone and on foot to Rājagriha (Rājgir), whose king greeted him as the future Buddha, and obtained from him a promise that, after gaining enlightenment, he would re-visit his kingdom and give him instruction in the right knowledge. Thence he made his way to Uruvelā (Skr. *Urubilvā*, the great or wide-spreading Bel-tree, the wood-apple), a village or grove near Gayā, and there in the company of five ascetics entered upon a course of extreme self-discipline, carrying his austerities to such a length that his body became utterly emaciated and lost all its brightness and grace; finally, he fell down senseless and was believed to be dead. For six years the 'Great Struggle' continued, at the close of which, becoming convinced that the truth was not to be won by the way of asceticism, he resumed an ordinary course of life as a beggar living on alms. These six years are said to be 'like time spent in endeavouring to tie the air into knots.' His companions, however, the five ascetics, now deserted him, because they regarded his action as a proof of faithlessness to his principles, and departed to the Deer-Park at Benares.

There followed the assaults of Māra, who with his hosts endeavoured by every means, first by violence and then by varied allurements, to distract his attention and turn him from his purpose. Seated under the Bo-tree on a couch or platform of grass, on its eastern side and facing the east, Gautama remained steadfast and immovable, taking no notice of the showers of rocks and darts which, as soon as they reached him, turned into flowers. Here he resolved to remain — 'Never from this seat will I stir, until I have attained the supreme and absolute wisdom.' The period of the temptation closed with sunset, when the army of Māra was finally driven off in utter defeat. During the following night, in deepest meditation, the desired knowledge and the perfect state were attained, and Gautama became *Buddha*, 'the enlightened one,' to whom all the secrets of the universe were laid open—omniscient.

'A legend relates that in the first night-watch he gained a knowledge of all his previous existences; in the second, of all present states of being; in the third, of the chain of causes and effects; and at the dawn of day he knew all things.'*

During the seven weeks spent under the Bo-tree, he is said to have been miraculously sustained on an offering of milk-rice, brought to him by a woman of Uruvelā, named Sujātā, and neither to have moved from his place nor to have taken any further nourishment. Until this time he had been merely a *Bodhisattva* (*q.v.*), one who is destined to gain supreme wisdom, on the way to Buddhahood but not yet perfectly enlightened.

For a discussion of the doctrine or truth which the Buddha thus believed himself to have grasped, and which he made it his business henceforth to preach, see art. HĪNAYĀNA. 'All existence involves suffering; suffering is caused by desire, especially the desire for continuance of existence; the suppression of desire therefore will lead to the extinction of suffering; this deliverance can only be effected by the Noble Eight-fold Path.' These are the *āryasatyāni*, or Noble Truths, the four terms of which are *duḥkha*, 'pain'; *samudaya*, 'cause'; *nirodha*, 'suppression'; *mārga*, 'way' or 'path.' The same four truths or axioms are propounded in the Sāṅkhya philosophy (*Mahāvagga*, i. vi. 19; *SBE* xiii. 95 f., etc.; see also R. Garbe, *Sāṅkhya und Yoga*, Strassburg, 1896, p. 18, and art. SĀṄKHYA).

With regard to the events immediately succeeding the Buddha's attainment of omniscience, the traditions are more than usually divergent. That which is perhaps the best attested, and most generally finds expression in Buddhist art, represents him as spending in succession seven days under the Bo-tree, in deep meditation, 'enjoying the bliss of emancipation'; the same period under the 'Goat-herd's Banyan' (*ajapāla*), where a Brāhman is said to have approached him with the request that he would define the characteristics of a true Brāhman; the Buddha replied that he only could justly claim the name who was 'free from pride, free from impurity, self-restrained, wise, and who has fulfilled the requirements of holiness.' A third week was spent under the *Muchalinda*-tree, from beneath which Muchalinda, the serpent-king, came forth, and spread his hood as a canopy over the Buddha to protect him from the wind and heat, the storm-cloud and the rain; and, finally, a fourth period of equal duration was spent under the *Rājāyatana*-tree, whence he returned to the Banyan. Thus were completed four periods of seven days. During the last week, two merchants, moved by a divine suggestion, approached the Buddha, and with respectful salutations offered him food, rice-cakes, and honey. The gift was accepted, and received in a bowl (or four bowls of stone), presented to him at the moment by the four divinities that guard the four quarters of the globe.† The merchants declared their faith in the Buddha and his Law,‡ and begged to be received as disciples. Their request was granted, and they thus became the earliest lay-disciples in Buddhism.

After his return the Buddha is represented as

* *Jātaka*, i. 56, in Warren, p. 53. The story of the four signs recurs in all the narratives of the Buddha's early years (cf. *e.g. Buddha-Charita*, bk. iii.). It would seem to be one of the best-attested of the early traditions, as it is most characteristic.

† Cf. the description of Hanuman's visit by night to the palace of Rāvaṇa in Ceylon, finding his wives asleep (*Rāmāyaṇa*, v. 10); and the similar story of the noble Yasa (*Mahāvagga* i. 7).

‡ *Buddha-Charita*, v. 80 ff., etc.

§ According to one form of the tradition, the horse died of grief on the spot, and was re-born as a god in the *trayastriṁśa* heaven.

* Monier-Williams, *Buddhism*, p. 34; cf. Warren, p. 82.

† *Mahāvagga*, i. 2–4; cf. Warren, p. 83 ff.

‡ Employing the 'two-refuge' formula, because the *saṅgha*, the order of monks, was not yet instituted.

debating in his mind whether he should undertake the wearisome and thankless task of communicating to men the profound truths which he had thus perceived. Brahmā appeared to him, and with reverential obeisance recalled him to high office and duty, reminding him of the misery and ignorance of mankind, who, if they do not hear the doctrine preached, cannot attain to salvation. The Buddha assented; but a further doubt arose to whom he should first proclaim his doctrine with the assurance that they would understand. He decided that the five ascetics with whom he had previously lived in the practice of austerities should be the first to receive the new teaching. He therefore sought them out in the Deer-Park, *Isipatana*, at Benares, and to them delivered his first sermon, or brief exposition of doctrine, 'setting in motion the wheel of the Law,'* and founding 'the highest kingdom of truth.' The *bhikṣus* accepted the truth, and at their own request were duly ordained, becoming the first members of the Buddhist Order (*saṅgha*) of monks.

The number of the disciples rapidly increased; and Gautama sent forth his monks on missionary tours hither and thither, bidding them wander everywhere, preaching the doctrine (*dharma*), and teaching men to order their lives with self-restraint, simplicity, and chastity. Of these, his earliest converts, two of the most renowned were Sāriputta and Moggallāna (*Maudgalyāyana*), members of an ascetic community resident at that time at Rājagriha, who received the truth from the lips of the monk Assaji, one of the five original disciples; he taught them the substance of Buddhist doctrine, explaining that he himself, being only a novice, was unable to expound it at length.

'Of laws or principles that originate from a cause, the cause of these the Buddha hath declared, and also the destruction of them. Thus the great Teacher (Monk) hath spoken.†

The recitation of these words by the venerable monk Assaji is said to have aroused in the mind of the hearers a clear understanding of the fact that 'whatever is subject to origination is subject also to cessation or destruction.'‡ They were thereupon admitted into the Order by the Buddha himself. Both are recorded to have died before their Master. Other disciples, whose names and actions fill a large place in the early chronicles, were Upāli, who recited the text of the *Vinaya* at the first Council after the Buddha's death; Kāśyapa (Kassapa) or Mahā-Kāśyapa, the president of the Council, for whose coming the cremation of the body of the Buddha was delayed; and Ānanda (*q.v.*), his cousin and favourite attendant, who seems to have watched over him during life with closest care, and to have been nearest to him at death. Others of high birth became lay-disciples. And there were also female followers, who, later, were permitted to form themselves into an Order of Buddhist nuns (see art. MONASTICISM [Buddhist]).

Thereafter the Buddha spent a life prolonged, according to the tradition, over forty-five years, in itinerating from place to place, and preaching the doctrine to all who would listen. The details of his journeyings, as recorded in the chronicles, are not of much interest; they seem to have been confined mainly to the kingdom of Magadha,* and especially the country around Rājagriha and Śrāvastī;† but are traditionally said to have extended also far into the north-west of India and the Panjāb. During the whole of this period he appears to have had no settled dwelling-place, although gifts of land and buildings were made to him by wealthy disciples; the most extensive and important of these apparently were the Jetavana park and monastery at Śrāvastī—the gift of Sudatta or Anāthapiṇḍika, who bought it from Jeta, the king's son, at the cost of covering the ground with gold pieces. Jeta retained a portion, and built thereon a *vihāra* for the monks; whence the whole estate was known as *Jetavana*, the grove or park of Jeta. In the rainy season (*Vassa* [*q.v.*]) it was his wont to abstain from travelling, ostensibly lest the animal and insect life which then abounded should be inadvertently injured or destroyed; but partly also, no doubt, because of the physical difficulty which the heavy rains placed in the way of much movement.‡ The doctrines which he taught seem generally to have been received with approval, often with enthusiasm, although opposition was at times aroused. His chief rival was Devadatta, a cousin of the Buddha, who is represented as being jealous of his influence and popularity, and as repeatedly seeking to compass his death. Devadatta had been received into the Order at the time of a visit which Gautama paid to Kapilavastu in the sixth year of his ministry, but had never been a sincere believer. The final attempt which he made to poison the Buddha was frustrated, and he himself, for making a false profession of faith, fell down into hell, where he was condemned to remain for an entire world-cycle.

At the age of over eighty years, according to the tradition, at the close of a long life devoted to teaching and preaching, Gautama Buddha realized that the time drew near for him to die, to leave his disciples and his work, and to attain *parinirvāṇa*,§ final or perfect *nirvāṇa*.

The authoritative account of the death of the Buddha, as related by the Southern School of Buddhism, is contained in the *Mahā-Parinibbāna Sutta* of the *Digha-Nikāya*, the 'Book of the Great Decease,' translated by T. W. Rhys Davids in *SBE*, vol. xi.; Warren, pp. 95–110. See art. LITERATURE (Buddhist). The narrative from Tibetan sources is given by W. W. Rockhill, *Life of the Buddha*, pp. 132–147. The date of his death has been discussed at great length, and by many scholars. The Sinhalese reckoning, representing the tradition of the South, places the event in the year 544 or 543 B.C.; but it seems certain that this is too early. More than fifty years ago, Sir A. Cunningham (*Bhilsa Topes*, London, 1854), from a full consideration of all the available data, gave his decision for the year 477 B.C. Prof. Max Müller arrived at the same conclusion (*SBE* x.[2] p. xliii ff.; *History of Sanskrit Literature*[2], pp. 262 ff., 299), which was endorsed by Dr. Bühler. Others, as Westergaard and Kern, bring the time of his death down to a considerably later period, *c.* 370 B.C. The most recent essay in favour of a yet earlier date is by the Indian scholar P. C. Mukherji, who argues for the early part of the 6th century (see review in *JRAS*, 1900, p. 568 ff.). There can be little doubt that Sir A. Cunningham's date is very near to the truth. Dr. Fleet re-examines the whole question with great care in *JRAS*, 1909, pp. 1–34, endeavouring to determine the precise day of the year on which the Buddha died, which he concludes to have been Oct. 13th, 483 B.C. Cf. also M. de Zilva Wickremasinghe in *Epigr. Zeylanica*, i. 142 n. 7, 156 f.

Accompanied by Ānanda, the Buddha then came

* *Dharmachakrapravartana* (Pāli *Dhammachakkappavattana*); see *SBE* xiii. 94 ff., and the references there given; Kern, *Indian Buddhism*, p. 23. The wheel is a continually recurring symbol in Buddhist art; the original intention probably was to represent as well the perfection of the doctrine, the circle denoting all-rounded completeness, as its unceasing, unresting progression. The sermon itself, as given in the texts, is a manifesto of Buddhist doctrine, inculcating the avoidance of the two extremes of a life of sensual pleasure or of ascetic self-mortification, and urging the pursuit of the 'Middle Path' which leads to insight, supreme wisdom, and nirvāṇa.

† *Ye dharmā hetu-prabhavā hetum teṣām Tathāgataḥ hy avadat teṣāñcha yo nirodha evaṁ-vādī Mahāśramaṇaḥ*—the Buddhist creed or confession of faith. (Cf. *SBE* xiii. 144 ff.; Kern, p. 25; Warren, pp. 87-91.)

‡ *Mahāv.* i. 23; cf. Warren, p. 87 ff.

* Beal, *Siyuki*, ii. 82 ff.; cf. art. MAGADHA.

† Legge, *Fā-Hien*, p. 55 ff.; Beal, *op. cit.* ii. 1 ff. The site of Śrāvastī was identified by Cunningham with Sahet Mahet, in the Gonda District of the United Provinces, and this identification has been confirmed by recent discoveries (see *JRAS*, 1908, pp. 971 ff., 1098 f., 1909, p. 1061 ff.; *IGI*, *s.v.*). There is a description of Śrāvastī from Sinhalese sources in W. Geiger, *Liter. u. Sprache d. Singhalesen*, Strassburg, 1901, p. 14 f.

‡ Vassa was also observed by the Jainas, and in this respect apparently both sects followed the earlier practice of the Hindu monastic orders.

§ Pāli *parinibbāna*, see art. NIRVĀṆA; *nirvāṇa* is a state attainable and attained during life, and was enjoyed by the Buddha himself and by many Buddhist saints; *parinirvāṇa* is reached only at death, with the dissolution of the bodily frame.

to the *Śāla*-tree grove *Upavartana* at Kuśanagara,* in the country of the Mallas. There, by his direction, a couch was spread between two *Śāla*-trees, with its head to the north, on which he lay down 'on the right side after the manner of a lion, and placing foot on foot remained mindful and conscious.'† The trees bloomed out of season, and scattered their flowers on him as he lay. His last hours were spent in giving counsels and directions to Ānanda and the assembled monks. Subhadra also, a wandering ascetic, was admitted to his presence, listened to his teaching, and was converted, thus becoming 'the last disciple made by the Blessed One himself.' Finally, he invited his disciples to state any doubt or difficulty felt by them with regard to the teaching of the Buddha or the rules of the Order, that he might remove it; and bade them regard his Doctrine and Discipline as their teacher after he was gone. Three times the question was repeated:

'"It may be, brethren, that some brother has a doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. Ask any question, brethren, and do not have to reproach yourselves afterwards with the thought, Our Teacher was present with us, but we failed to ask him all our questions."

And when he had thus spoken the brethren were silent.

. . . . . .

"It may be, brethren, that it is out of respect to the Teacher that ye ask no questions. Then let each one speak to his friend."

And when he had thus spoken the brethren were silent.

Then the venerable Ānanda spake to the Blessed One:

"How wonderful a thing it is, Reverend Sir, and how marvellous! Verily, I believe that in this whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting the Buddha or the Doctrine or the Order or the Path or the course of conduct."

"With you, Ānanda, it is a matter of faith, when you say that; but with the Tathāgata, Ānanda, it is a matter of knowledge that in this whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. For of all these five hundred brethren, Ānanda, even the most backward has become converted, and is no longer liable to be born in a state of suffering, but is assured of final salvation."

Then the Blessed One addressed the brethren:

"And now, brethren, I take my leave of you; all the constituents of being are transitory; work out your salvation with diligence."

This was the last word of the Tathāgata.

Thereupon the Blessed One entered the first trance (*dhyāna*); and rising from the first trance, he entered the second trance; and rising from the second trance, he entered the third trance; and rising from the third trance, he entered the fourth trance; and rising from the fourth trance, he entered the realm of the infinity of space; and rising from the realm of the infinity of space, he entered the realm of the infinity of consciousness; and rising from the realm of the infinity of consciousness, he entered the realm of nothingness; and rising from the realm of nothingness, he entered the realm of neither perception nor non-perception; and rising from the realm of neither perception nor non-perception, he arrived at the cessation of perception and sensation.'‡

The same process is then repeated in reverse order until the first trance is again reached. Thence he passes successively to the second, third, and fourth. And at the close it is said:

'And rising from the fourth trance, immediately the Blessed One passed into Nirvāṇa.'

In the Mahāyāna school of Buddhism a mystical doctrine of three bodies (*kāya*) of the Tathāgata is taught—the *dharmakāya*, or body of the Law, *sambhogakāya*, or body of perfect bliss, *nirmāṇakāya*, the illusory or apparitional body. The first is said to be discernible in the whole air of the Tathāgata, the second in the whole air of a Bodhisattva, the third in the air of different pious men. The underlying idea would seem to be that of completing the connexion, or chain of evolution, between the living earthly Buddha and his spiritual or mystical counterpart, invisible in the heaven.*

A curious tradition, the origin of which it is not easy to trace, represents the death of the Buddha as due to over-indulgence in 'dried boar's flesh,† at a feast which Chunda, the blacksmith, had prepared for him and his disciples. Recognizing the danger of the dish, Gautama refused to allow the others to partake lest they should suffer injury, and gave orders that what was left over should be buried in the ground. In view of the Hindu aversion to a meat diet, or the taking of life in any form, it is hardly likely that the tradition is a mere invention of later times. It is more probable that the preparation consisted of some vegetable or root, perhaps truffles; a 'boar's delicacy,' or favourite food; or the name of some dish prepared for the feast may have been confused in course of time with 'boar's flesh' or 'pork.' The refusal to permit his disciples to share was then invented to exalt his magnanimity, and to account for the fact that he alone suffered after the meal. If this were really the case, his great age would itself be a sufficient explanation. It should be noticed also that in the Tibetan books no reference is made to the pork, although the last feast in the Buddha's honour is described as in the Pāli narratives.‡

The death of the Buddha, like his birth, was accompanied by signs and portents from heaven; and the spirits of the earth and sky united in lamentation with his disciples and the men of Kuśanagara. The Mallas of the town paid due honour to the corpse, with processions and garlands and music, for a space of six days. On the seventh the body was carried by eight of their chieftains to a shrine outside the city, on the east, where a funeral pyre was raised of sweet-scented woods. The Malla chiefs, however, were unable to set fire to the pile; and it was explained to them that the final ceremony of cremation must await the arrival of Kāśyapa, who with five hundred brethren was at that moment approaching Kuśanagara. When Kāśyapa reached the shrine, he saluted with reverence the Buddha's corpse, and with his companions passed thrice round the funeral pile, bowing down in homage. The pyre then spontaneously began to burn; and, after the flames had done their work, they were again miraculously extinguished.

The bones and relics that remained from the fire were claimed by the Mallas of Kuśanagara (Kusinārā), on the ground that the Buddha had died in their territory. Others, however, advanced claims to a portion; and the danger of strife was allayed only by the remonstrances of a Brāhman, Drona (Doṇa) by name, who, at the instance of the Mallas themselves, undertook to distribute the relics. An eightfold division was made, as follows: (1) Ajātaśatru, king of Magadha; (2) the Lichchhavis of Vaiśālī; (3) the Śākyas of Kapilavastu; (4) the Bulis of Allakappa; (5) the Koliyas of Rāmagrāma; (6) a Brāhman of Vethadīpa,§ whose name is not recorded; (7) the Mallas of Pāvā; (8) the Mallas of Kuśanagara. Further, the earthenware vessel (*kumbha*), in which the relics had been gathered together after cremation, was given to Drona himself; and to the Mauryas (Moriyas) of Pipphalīvana, who, after all the relics had been distributed, sent a message demanding a share, were granted the

* The scene of the Buddha's death has not been certainly identified; according to Fa-Hien, chs. xxiii., xxiv., it lay 25 *yojanas* east of Kapilavastu (cf. Beal, *Siyuki*, ii. 31 ff.). Sir A. Cunningham identified the site with the village of Kasiā, about 40 miles east of Gorakhpur, in the United Provinces, where there are extensive Buddhist ruins; but doubt is thrown on the correctness of his conclusions by recent discoveries and investigations. See V. A. Smith in *JRAS*, 1902, p. 139 ff.; J. F. Fleet, *ib.* 1906, p. 907 and note; J. H. Marshall, *ib.* 1907, p. 993 ff., with plate showing excavations at the great monastery; *IGI*, *s.v.* 'Kasiā.'

† The attitude and scene are represented from sculptures, *e.g.* in A. Grünwedel, *Buddhist Art in India*, 1901, p. 119 ff.

‡ *Mahā-Parinibbāna Sutta*, vi. 1. 6–11; *SBE* xi. 112 ff.; Warren, p. 108 f.; Kern, p. 44 f.

* See Rockhill, *Life of the Buddha*, p. 200 ff.; L. de la V. Poussin in *JRAS*, 1906, p. 943 ff., and art. Ādibuddha in vol. i. p. 97 ff.

† *Sūkara* (*śūkara*) *maddava*, *Parinibb. S.* iv. 16 ff., *SBE* xi. 71 ff. J. F. Fleet (*JRAS*, 1906, pp. 658, 881 f.) suggests 'the succulent parts, tit-bits, of a young wild boar' (*maddava*, Skr. *mārdava*, 'softness,' 'delicacy' [*mṛdu*]).

‡ Rockhill, p. 133 f.

§ Probably represented, according to Dr. Vogel, by the ruins at Kasiā; see *JRAS*, 1907, p. 993 ff.

embers of the fire. Thus there were altogether ten portions, and over each a cairn (*stūpa*) was erected and homage paid. These buildings remained for many years centres of pilgrimage, and were visited not only by Buddhists of India, but by pilgrims from distant lands.* In one form of the narrative the Emperor Aśoka is said to have undertaken a re-distribution of the relics among 84,000 *stūpas*, which he built. One of the original *stūpas*, however, that at Rāmagrāma (5), he was unable to violate, being prevented by the spirits (*nāgas*) that watched over the cairn.

At Piprāwā (Piprāhavā, Piprāhwā), in the United Provinces, excavations were made some years ago in an ancient mound and relic chamber; and among the objects discovered was a large stone box, containing steatite vases (one of which bore a short inscription), pieces of bone, gold leaf, jewels, beads, etc. The inscription when read was understood to describe the relics enclosed in the vase as those of the Buddha himself; and it was inferred that these fragments of bone were the actual portions of the body of Gautama, preserved after cremation, over which was erected the *stūpa* which had now been re-discovered. Dr. Fleet, however, interprets the inscription differently; and understands it to refer, not to the founder himself, but to the Śākyas, his kinsmen, many of whom, according to the tradition, were massacred, and their city wholly or partially destroyed, in revenge for a slight put upon the neighbouring king of Kosala.† In either case the inscription would seem to carry with it the identification of Piprāwā with Kapilavastu, the capital of the Śākyas.

The discovery is also reported of the ancient *stūpa* built near Peshāwar, according to the reports of the Chinese pilgrims, by Kanishka,‡ which they describe as the finest in India. Buddha himself, when travelling in the country, is said to have prophesied to Ānanda that on that spot, four hundred years after his death, a king named Kanishka would raise a great *stūpa* in his honour, 'which will contain many various relics of my bones and flesh.'§ Many marvels are related concerning the fulfilment of the prophecy, and both Fa-Hien and Hiuen-Tsiang record the presence in former times of the almsbowl (*pātra*) of Buddha in that country. Two large mounds lying east of the city have been identified as the site of the great building erected by Kanishka, and excavations have been carried on for the last two years, under the direction of the Archæological Survey of India. Under one of the mounds were found 'remains of an enormous monument, which proves to be the lost pagoda, so minutely described by the Chinese travellers.'‖ In a relic-chamber was discovered a casket containing small fragments of bone, which may therefore be portions of the remains of Gautama himself. The magnificence of the monument indicates the importance attached to the sacred relics which it was intended to enshrine. And the tradition recorded by Hiuen-Tsiang proves that in his day they were believed to be actual relics of the Founder of Buddhism.

* *Parinibbāna Sutta*, vi. 51-62.

† *JRAS*, 1906, p. 150. Dr Fleet reads the text, and translates as follows: *Sukiti-bhatinaṁ sa-bhagiṇikanaṁ sa-puta-dalanaṁ iyaṁ sailā-nidhane Budhasa bhagavate sakiyanaṁ*, 'Of the brethren of the Well-famed One, together with (their) little sisters (and) together with (their) children and wives, this (is) a deposit of relics; (namely) of the kinsmen of Buddha, the Blessed One.' Earlier interpretations understood the reference to be to a relic-shrine of the Buddha himself, set up by his Śākya brethren. See Fleet's article, *loc. cit.*, in which he discusses the inscription; and for a description of the original discoveries, *ib.* 1898, p. 474, etc.; Mukherji, *Antiquities in the Nepalese Tarai*, 1897; cf. Fleet in *JRAS*, 1905, p. 679 ff.; and on the identification of Kapilavastu, W. Vost, *ib.* 1906, p. 553 ff.

§ Beal, *l.c.*, p. 99.

‖ *Times*, 17th Aug. 1909; see *JRAS*, 1909, p. 1056 ff.

Among the prophecies uttered by the Buddha was one concerning the future of the religion which he established, and its ultimate decline and disappearance from the earth. The declaration is contained in the *Anāgata-Vaṁśa* ('Narrative of Coming Events'), and was given at Kapilavastu in response to a question by Sāriputta. The history of the future Buddha, Maitreya (Pāli *Metteyya*), is described; then at long intervals after his own death will occur the 'five disappearances': of the attainments, when his disciples will rise to ever higher degrees of sanctity; of the method, when the knowledge of the precepts and the way of salvation shall be lost; of learning, when the sacred texts themselves shall be forgotten; of the symbols, the monastic robe, bowl, etc.; and at the close of five thousand years 'the relics will begin to fail of honour and worship, and will go wherever they can receive honour and worship. But as time goes on they will not receive honour and worship in any place. Then . . . the relics will come from every place . . . and having congregated together at the throne under the great Bo-tree . . . will teach the Doctrine. Not a single human being will be found at that place; but all the gods from ten thousand worlds will come together and listen to the Doctrine, and many thousands of them will attain to the Doctrine. . . . Then they will weep, saying, "From henceforth we shall be in darkness." Then the relics will put forth flames of fire and burn up . . . without remainder.'*

[The subject of Barlaam and Josaphat, which was referred to this article by a cross-reference at BARLAAM, it has been found more convenient to treat in a separate article under the title JOSAPHAT.]

A. S. GEDEN.

BUDDHAGHOṢA.—This was the name of several members of the Buddhist Order. It will be sufficient here to deal with the best known among them, the celebrated author and scholar who flourished early in the 5th century A.D.

1. **Life.**—The authorities regarding the life of Buddhaghoṣa the Great are as follows. In the first place, certain important portions of his works have already been published. The few details they contain as to the life of the author are the only contemporary records of it that have survived. Secondly, Dhammakitti, in the middle of the 13th cent. A.D., wrote a continuation of the *Great Chronicle* (tr. in Turnour's *Mahāvaṁśa*, p. 250 ff.) of Ceylon. In it he inserted an account, in thirty-three couplets, of the life and work of Buddhaghoṣa. It is not exactly known from what sources this account was drawn; but it probably gives

* Warren, pp. 482-485.

the tradition as preserved at the Great Minster in Anurādhapura (*q.v.*) in written documents now no longer extant. Thirdly, we have a life of Buddhaghoṣa, written in Pāli, in the middle of the 16th cent., by a Burmese *bhikṣu* named Mahā Maṅgala. It is of a legendary and edifying character, and of little independent value. The title is, *Buddhaghos-uppatti* ('Advent of Buddhaghoṣa'); and the text has been edited and translated by James Gray. The results to be obtained from these sources will best be stated chronologically.

In the introductory verses to his commentary on the *Dīgha* (ed. Rhys Davids and Carpenter), Buddhaghoṣa says that he compiled it in accordance with the opinions of the Elders at the Great Minster; and that since he had already, in his *Visuddhi Magga* ('Path of Purity'), dealt with certain points, he would omit these in his commentary. Lastly, he says that the authorities on which he relied were in the Sinhalese language, and that he reproduces the contents of them in Pāli. In his commentary on the *Vinaya* (quoted *JRAS*, 1871, p. 295) he gives the names of some of these Sinhalese works. They are the Great Commentary, the Raft Commentary (*i.e.* written on a raft), and the Kurundī Commentary (*i.e.* the one written at Kurunda Veḷu). In his commentary on the *Parivāra*, Buddhaghoṣa states (*teste* Gray, p. 12) that he studied these three under Buddhamitta. In his *Attha-sālinī* (ed. Müller), Buddhaghoṣa also quotes as his authorities these and other commentaries written in Sinhalese; refers frequently to his own *Visuddhi Magga*, and twice at least to his commentary on the *Vinaya*; and mentions otherwise (apart from the canonical works) only the *Milinda* and the *Peṭakopadesa*.*

These meagre but important details show conclusively that Buddhaghoṣa worked at a date subsequent to that of the two books last mentioned, under the auspices of the scholars at the Great Minster in Ceylon, and on the basis of materials written in Sinhalese.

The authority next in point of date explains how this was supposed to have occurred. It tells us that, during the reign in Ceylon of Mahā-Nāma (who ascended the throne A.D. 413), there was a young Brāhman born in India who wandered over the continent maintaining theses against all the world. In consequence of a discussion that took place between him and Revata, a Buddhist *bhikṣu*, he became interested in Buddhist doctrine, and entered the Order that he might learn more about it. It was not long before he became converted, and wrote a treatise entitled *Jñāṇodaya* ('Uprising of Knowledge'); and also an essay entitled *Atthasālinī* ('Full of Meaning'), on the *Abhidhamma* manual included in the Canon under the title *Dhamma-saṅgaṇī*. On Revata observing that he contemplated a larger work, he urged him to go to Anurādhapura, where there were better materials and greater opportunities for study, and make himself acquainted there with the commentaries that had been preserved in Sinhalese at the Great Minster, with a view to re-casting them in Pāli. Buddhaghoṣa agreed to this, went to the Great Minster, studied there under Saṅghapāli, and when he had mastered all the subjects taught, asked permission to translate the commentaries. The authorities of the School gave him two verses as the subject of a thesis, to test his ability. What he submitted as this thesis was the work afterwards to become so famous under the title of *Visuddhi Magga*. This proved, with the assistance of good fairies, so satisfactory that his request was granted. Then, according to the chronicler, 'he translated the whole of the Sinhalese commentaries into Pāli.'

* See the references given in Mrs. Rhys Davids' *Buddhist Psychology* pp. xx–xxv.

We need not take every word of this edifying story *au pied de la lettre*. We know, for instance, that it was not the whole, but only a part, though a very important part, of the Sinhalese commentaries that he reproduced in Pāli. Other scholars, some of whose names we know, while some are not yet known, reproduced other parts of it. The work was by no means a translation in the modern sense. It was a new work based on the older ones. And the intervention of the fairies (*devatā*) is only evidence of the curious literary taste of the time of the poet. But, in the main, the story bears the impress of probability.

The *Buddhaghos-uppatti* takes over this story, telling it with many flowers of speech and at greater length. It adds a few details not found in Dhammakitti's couplets, giving, for instance, the names of Buddhaghoṣa's father and mother as Kesī and Kesinī, and the name of the village they dwelt in as Ghosa. Both the authorities locate it at Gayā in Magadha, near the Bo-tree. The *Gandhavaṁśa* (*JPTS*, 1896, p. 66) adds that Kesī was the family chaplain (*purohita*) of King Saṅgāma. The *Saddhamma Saṅgaha* (*JPTS*, 1890, p. 55) gives the additional detail that Buddhaghoṣa worked at his translations in the Padhānaghara, an apartment to the right of the Great Minster. The Sinhalese chronicler concludes his account with the simple statement that Buddhaghoṣa, when his task was accomplished, returned home to India, to worship at the Wisdom tree. The Burmese authorities (quoted by Gray in his introduction) all agree that he went to Burma. This is merely a confusion between our Buddhaghoṣa and another *bhikṣu* of the same name (called more accurately Buddhaghoṣa the Less), who went from Ceylon to Burma towards the end of the 15th cent. (Forchhammer, p. 65).

2. **Works.**—The extant books written by Buddhaghoṣa would fill many volumes. Of these only one, and that one of the shortest, has so far been edited in Europe. The most important is probably the *Visuddhi Magga*, a compendium of all Buddhism, in three books: on Conduct, Concentration (or mental training), and Wisdom respectively. Henry C. Warren has published an abstract of this work (*JPTS*, 1891); and a complete edition, with translation, introductions, and notes, is in preparation for the Harvard Oriental Series. The rest are all commentaries. Those on the four great *Nikāyas*, on the *Abhidhamma*, and on the *Vinaya*, would each fill three or four volumes. A late authority, the *Saddhamma Saṅgaha* (*JPTS*, 1890, p. 56), gives 137,000 lines as the extent of these six works. Another late authority, the *Gandha-vaṁśa* (*JPTS*, 1896, p. 59), in giving a complete list of Buddhaghoṣa's works, mentions in addition commentaries on the *Pātimokkha*, *Dhammapada*, *Jātaka*, *Khuddaka Pāṭha*, and *Apadāna*, adding on p. 68 the *Sutta Nipāta*. This list probably errs both by excess and by defect. It does not include the *Attha-sālinī*, which we now know, from the edition published by the Pāli Text Society, to have been written by him, and it does include the commentaries on the *Dhammapada* and the *Jātakas*. Now we have before us the text of the introductory verses to each of these works. In each case the author describes the circumstances under which, and names the scholars at whose instigation, he undertook and carried out the work. In neither case is any reference made to Buddhaghoṣa. In both style and matter each of these books differs from the other, and from such portions of the works of Buddhaghoṣa as are accessible to us. In the similar cases of Nāgārjuna and Śaṅkara, works not written by them have been ascribed to famous writers. The tradition of Buddhaghoṣa's authorship of either of

the books above named has not as yet been traced back earlier than the 10th cent.; and, for the above reasons, it is at present very doubtful. A large number of short quotations from Buddhaghoṣa's commentaries have been printed by the editors of the various texts with which he deals; and sixty consecutive pages from the historical introduction to his commentary on the *Vinaya* have been edited by H. Oldenberg (*Vinaya*, vol. iii.). Rhys Davids and Carpenter have published one volume, out of three, of the *Sumaṅgala Vilāsinī*, his commentary on the *Dīgha*. And one complete work by him, the *Attha-sālinī* above referred to, has been edited by E. Müller. This turns out to be, not the essay under that title said by Dhammakitti to have been composed in India, but another work written in Ceylon subsequently to the *Visuddhi Magga* and the six great commentaries. It is doubtless an enlarged edition of the essay, and the latter has therefore not been preserved. Manuscripts of the undoubted works of Buddhaghoṣa, containing the texts, sufficient to fill some twenty-five volumes more, are extant in European libraries; and the Pāli Text Society, having completed its edition of the canonical works, is now engaged on the publication of these.

3. General conclusions.—Buddhaghoṣa's greatest value to the modern historian is due largely to the limitations of his mental powers. Of his talent there can be no doubt; it was equalled only by his extraordinary industry. But of originality, of independent thought, there is at present no evidence. He had mastered so thoroughly and accepted so completely the Buddhist view of life, that there was no need for him to occupy time with any discussions on ultimate questions. In his 'Path of Purity' he gives, with admirable judgment as to the general arrangement of his matter, and in lucid style, a summary of the Buddhism of his time. There is no argument or discussion. In his six great commentaries—those on each of the four *Nikāyas*, containing the Doctrine; on the *Vinaya*, containing the Canon Law; and on the *Abhidhamma*, containing the advanced Psychology—he adheres to one simple plan. He first gives a general introduction—dealing mainly with literary history—to the work itself. To each of the more important Dialogues, or *Suttas*, he gives a special introduction on the circumstances under which it was supposed, when he wrote, to have been originally spoken, and on the places and the persons mentioned in it. He quotes in the comment on the *Sutta* every word or phrase he considers doubtful or deserving of notice from a philological, exegetical, philosophical, or religious point of view. His philology is far in advance of the philology of the same date in Europe, and his notes on rare words are constantly of real value, and not seldom conclusive. He gives and discusses various readings he found in the texts before him; and these notes, together with his numerous quotations, go far to settle the text as it lay before him, and are of great service for the textual criticism of the originals. Of the higher criticism Buddhaghoṣa is entirely guiltless. To him there had been no development in doctrine, and all the texts were the words of the Master. He is fond of a story, and often relieves the earnestness of his commentary with anecdote, parable, or legend. In this way, without in the least intending it, he has preserved no little material for the history of social customs, commercial values, folk-lore, and belief in supra-normal powers. His influence on the development of the literary faculty among Buddhists throughout the world has been very considerable. It is true, no doubt, that the method adopted in his commentaries follows very closely the method of those much older ones preserved in the Canon; but the literary skill with which he uses it is a great advance, more especially in lucidity, over the older documents.

Gray, London, 1892); *Digha*, ed. Rhys Davids and Carpenter (*PTS*, 1899, 1903); E. Forchhammer, *Jardine Prize Essay* (Rangoon, 1885); Mrs. Rhys Davids, 'Buddhist Psychology' (*RAS*, 1900).

T. W. RHYS DAVIDS.

BUDDHISM.—The character of Buddhism varies according to the country in which it prevails, so that a general sketch would be of very little value. The origin of Buddhism has been given in the article BUDDHA; its early developments will be described in two articles, one on the HĪNAYĀNA, or Little Vehicle, the other on the MAHĀYĀNA, or Great Vehicle. Then the Buddhism of each country will be separately treated under the name of the country. See BHUTĀN, BURMA, CENTRAL ASIA, CEYLON, CHINA, INDIA, JAPAN, JAVA, KOREA, SIAM, TIBET. See also SECTS (Buddhist).

BULGARIANS.—See BOGOMILS.

BULL.

Egyptian.—See ANIMALS, EGYPTIAN RELIGION.
Greek and Roman.—See ANIMALS, TAUROBOLIUM.
Hindu.—See ANIMALS, VEDIC RELIGION.
Semitic (A. H. SAYCE), p. 887.
Teutonic (C. J. GASKELL), p. 889.

BULL (Semitic).—The wild bull (Assyr. *rîmu*, Heb. *rĕ'ēm*) was found in Mesopotamia, whence it wandered into Babylonia and the level parts of Palestine, while the domesticated short-horned ox seems to have been indigenous in Western Asia before the rise of Bab. civilization. Further south, in Arabia and the Sinaitic Peninsula, the country was unsuitable for cattle, and sheep took the place of oxen. This fact is important in view of the general opinion of anthropologists that the original home of the Semitic race was Arabia.

In Babylonia, figures of bulls guarded the approach to a temple, house, or garden. They were believed to protect the building from the entrance of evil spirits, and were often represented with wings, to which, in the Assyrian period, a human face was added. Colossal figures of them in stone or metal, called *lamassi* (from the Sumerian *lamma*), were placed on either side of the entrance. At times they were represented on the gates or walls as goring the enemy. The Semitic Babylonians included them among the *šēdi* (Heb. *shēdîm*), or 'spirits,' partly beneficent, partly evil, with which the air was filled. Among the Sumerians, however, they had the specific name of *alad*. Ashurbanipal, in describing his destruction of Susa, states that he 'broke in pieces the *šēdi* (written *alad*), the colossal bulls (*lamassi*) which guarded the temple,' and 'removed the raging wild bulls that adorned the gates'; and in the legend of Chedorlaomer (?) we read that, when Bel determined to bring evil upon his temple at Babylon, 'its *šēdu*,' or guardian-bull, departed from it, and so allowed the Elamite to enter and destroy the sanctuary. The guardian-bulls were also known as *kirubi*, and corresponded with the cherubim which stood at the entrance to the Garden of Eden, protecting 'the way of the tree of life' (Gn 3^{24}). In a list of Bab. deities, the

names of 'the two divine bulls' of Ea of Eridu are given (*WAI* ii. 56, 59–60).

A bilingual hymn in Sumerian and Semitic (*ib.* iv. 23), addressed to 'the bull' who is 'the offspring of Zu,' the storm-god, describes it as 'the great bull, the supreme bull which treads the holy pasturage . . . planting the corn and making the field luxuriant.' 'Between his ears,' it is added, 'is the mouth of the deep,' or 'sea,' a great basin of water which stood in the court of a Bab. temple. As there is also a reference in the same hymn to 'the twelve gods of copper,' we are reminded of the 'sea' of Solomon's temple which 'stood upon twelve oxen' (1 K 7^{25}).

Among the Babylonians the bull symbolized strength, and hence was a synonym for 'hero'; it was probably on this account that the spirit which protected the gate was supposed to have a bull-like form. For the same reason Jahweh of Israel was compared to a wild bull (Nu 23^{22} 24^{8} etc.), and it is possible that the *abbîr* of the OT should be rendered 'bull' rather than 'mighty one.'

According to the Epic of Gilgamesh, Anu, the god of heaven, created a bull to avenge the insults offered by Gilgamesh to his daughter Ishtar, and to punish the hero by devastating his country and destroying his countrymen. The bull is called an *alû* (a word of Sumerian origin), and its horns are described as being of lapis lazuli, and of enormous size. The bull, however, was killed by Gilgamesh and his companion, in consequence of which, it would seem, Gilgamesh was afflicted with disease, while his companion suffered a premature death. The bull was really the constellation Taurus or the star Gud-ana, 'the bull of heaven'—a name which goes back to the age when the vernal equinox coincided with the entrance of the sun into Taurus. Jensen believes that it was a storm-god before being thus transplanted to the sky, and that a connexion was assumed between *alû*, 'the bull' and *alû* (Sumer. *alâ*), 'a storm-demon' (*Assyr.-bab. Mythen und Epen*, 1900, p. 452). The suggestion is supported by the fact that the bull is called the son of the storm-god (see above), and that it was a symbol of Hadad-Rimmon, the god of the air and the thunderbolt. Hadad is often depicted standing on the back of a bull. Hadad, however, was known in Babylonia as *Amurrû*, 'the Amorite god,' and it is therefore possible that his association with the bull was derived from Northern Syria. A recollection of the bull as a malevolent storm-deity may survive in the Mithraic representation of the sun-god slaying a bull.

In Northern Syria, where Hadad, the Cilician *Sandes*, was specially worshipped, the bull was his sacred animal. When the worship of the god under the name of *Juppiter Dolichenus* ('Juppiter of Dolichê') was transplanted to Rome, monuments were erected to him on which he is figured standing on a bull, with a double-headed battle-axe in one hand and a thunderbolt in the other. At Hierapolis (*Membij*), the successor of Carchemish, he was throned upon bulls as his consort was upon lions (Lucian, *de Dea Syria*, 31), and bulls were among the sacred animals kept in the court of the temple. On the stele of Esarhaddon found at Zinjerli he also stands upon a bull, and the same is the case in the rock-sculpture of Maltaiya (Place, Pl. 45) to the N.W. of Mosul. The earliest known representation of the god in a similar position is upon Babylonian seal-cylinders of the age of Hammurabi.

Further south the association of the bull with the supreme Baal can also be traced. Europa was carried from Phœnicia by Zeus, *i.e.* Baal, under the form of a bull; and the Cretan Minotaur was termed 'Asterius,' pointing to a belief in a connexion between the bull and the Phœnician *Ashtoreth*. Bulls of iron existed in the sanctuary of Zeus Atabyrius in Rhodes which may have owed their origin to Phœnician influence; and Silius Italicus (*Punica*, iii. 104 ff.) refers to the 'cornigera frons' of Milichus or Melkarth. The name (Ashtoreth-) *Karnaim* seems to imply the existence of a cow-headed Ashtoreth; and a cow is found on an early Bab. seal-cylinder as a symbol of Ishtar. A cow-goddess naturally presupposes a bull-god. On a Nabatæan monument a bull represents a god whom Sachau identifies with Kaẓiu or Kasios (*PSBA*, 1896, p. 1056).

According to Ex 32, a golden 'calf,' or more correctly a bull, was made by Aaron during the absence of Moses on Mount Sinai, and was worshipped by the Israelites as a visible representation of the God who had brought them out of Egypt. At a later date, Jeroboam set up images of bulls in the sanctuaries of the Northern Kingdom, where they were adored as likenesses or symbols of Jahweh. This Israelitish worship of bulls has been thought to have been derived from Egypt. But against this it is urged that the Egyptians worshipped the living animal, and not the image of it. The objection, however, is not convincing, since votive images of the Egyptian bulls Apis and Mnevis are numerous, and the Semitic equivalent of Egyptian beast-worship would have been image-worship. But the bull-worship of the Northern Kingdom was unknown in Judah, and it is therefore probable that it was derived from Northern Syria, Jahweh being identified with Hadad.

The bull-worship even of the Semites in Northern Syria was probably of foreign origin. The divine bulls of Babylonia were originally Sumerian, and the names applied to them by the Semitic Babylonians were borrowed from the Sumerian language. On the other hand, Hittite influence was strong in Northern Syria, and 'the bull-god' was one of the chief Hittite deities in whose honour images of bulls were dedicated. At Eyuk, near Boghaz Keui, a bull, mounted on a pedestal, is represented as being worshipped; and among the Phrygians the stealing of an ox was punished with death (Nic. Damascenus, 148, ed. Orelli). Asia Minor, in fact, was a land of cattle-breeding and agriculture, where the ox which drew the plough was held in special veneration. When an anthropomorphic conception of the deity was introduced from Babylonia, the human god accompanied by the animal took the place of the animal alone as an object of worship. The cuneiform tablets from the Assyro-Babylonian colonies near Kaisariyeh show that this must be dated at latest in the Hammurabi age.

It would thus appear probable that Northern Syria was the meeting-place of a twofold Sumerian conception of the bull: as a beneficent guardian of the homestead, and a malevolent storm-demon—derived in the one instance from the character of the domesticated animal, and in the other from that of the wild bull—and the Hittite worship of the bull-god as the protector of the cultivated land. Sumerian beliefs in regard to the bull were adopted by the Semitic Babylonians, and the association of the bull with the Syrian Hadad would have been the result of foreign influences. Bull-worship, in short, would seem to have been unknown to the early Semites, as indeed must necessarily have been the case if their primitive home was Arabia. It is significant that the Heb. word for 'wild bull' is borrowed from Babylonian, and is not found, at all events in that sense, in Arabic. The custom of hanging up *bucrania*, or ox-heads, above the doors of houses, moreover, was not Semitic. It was derived from the belief in the protecting powers of the divine bull, and, like the Bab. *lamassi*, of

which they were a survival, the *bucrania* prevented the entrance of evil spirits into a house, as a horse-shoe is still supposed to do in certain parts of England. The custom was naturally prevalent throughout Asia Minor, and the bull's head frequently makes its appearance on Cyprian seal-cylinders of the early Copper Age. The custom was also known to the Nubian settlers in Egypt in the time of the XIIth and following dynasties, from whom the usage, described by Herodotus (ii. 39), of making an ox-head a scapegoat, may have been derived (see also Dt 21^{4-6}). In Arabia and Palestine the apotropæic use of the *bucranium* was practically unknown.

A. H. SAYCE.

BULL (Teutonic).—Plutarch in his life of Marius (cap. 23) states that the Cimbri took with them on their expedition into Italy a brazen bull, on which they were accustomed to swear solemn oaths. Apart from this, there is little evidence for the sacred character of cattle among the Teutonic races, beyond the fact that they were used for sacrifice. A primitive cult of the cow would appear to be reflected in the Edda account of the creation of the world, where the cow Audhumbla exists before either gods or men, and plays an important part in their origin. There is, moreover, in the saga of Olaf Trygvason, a curious legend, which relates that a certain Ogwald worshipped a cow, which he took everywhere with him, and which at his death was buried beside him in a second cairn. The only addition to these vague indications is the statement of Tacitus (*Germania*, 40), that the sacred car of the goddess Herthus was drawn by yoked cows; and it may be noted that in the Middle Ages oxen drew the chariots of the Merovingian kings.

C. J. GASKELL.

BULL-ROARER.—'Bull-roarer' is the English name (Germ. *Schwirrholz*) of a common toy in the country districts of Great Britain and the Continent. It is merely a thin slat of wood, with a hole for the insertion of a string, and is usually either oval or oblong in shape and pointed at the extremities; sometimes the edges are serrated. Tied to a string, and the string firmly held, the bull-roarer is swung round, and produces a kind of muffled roar. The mystic or magical connexions of the bull-roarer in Europe will be noticed later; we must first consider its very important part in the religion of the most backward races. It has been most carefully studied among the aborigines of Australia, and its uses are analyzed by Père P. W. Schmidt in his paper 'Die Stellung der Aranda' (Arunta), in *ZE*, 1908, Heft 6.

Beginning with the Arunta, in the exact centre of Australia, we find a people who, in one region described by Spencer and Gillen, have no conception of a sky-dwelling superior being, or 'All-Father'; while in the area studied by Strehlow the sky is understood to be tenanted by a magnified man, Altjira, called *mara* ('good'), but as indifferent to mankind as they are to him. In this tribe, as in most others where initiations of the boys exist, the bull-roarer is swung by the men at the secret ceremonies; the noise warns the women to keep at a distance, and they are told that the roar is the voice of a being named Twanyirika. The long absence of the boys while their wounds are healing is explained by the circumstance that Twanyirika 'enters the body of the boy after the operation and takes him away into the bush until he is better.'* The operation over, the boy is shown the bull-roarers (always carefully concealed from women), and his elder brother comes to him with a bundle of Churinga, saying, 'Here is Twanyirika, of whom you have heard so much, they are Churinga [sacred things] and will help to heal you quickly.' The boy is told that women of his tribal kin will be slain if he lets them see the bull-roarers.*

So far, Twanyirika seems to be a mere bogle, in whom the initiated do not believe. Among the tribe next to the north of the Arunta, the Unmatjera, the boy is told, before being circumcised, that Twanyirika will carry him away if he reveals any of the secrets of initiation.† After the process of sub-incision he is told to swing the bull-roarer, while in the bush, or else another *arakurta* (youth circumcised, but not yet sub-incised), '*who lives up in the sky*, will come down and carry him away. If this *arakurta* hears the *luringa*—that is, the noise of the bull-roarer—he says, "That is all right," and will not harm him.'‡

This idea of a sky-dwelling being, concerned with the initiations, is not found among Spencer's branch of the Arunta; the being of the Unmatjera is not an All-Father; nor are the Unmatjera known to have any belief in an All-Father. This notion of a sky-dweller, however, forms a link with the belief of the Loritja or Luritcha tribe, whose lands march with those of the Arunta on the east. They believe in a celestial and powerful being, Tukura, who has no concern with ethics or any interest in men, but does perform ceremonies like those of the tribe, involving the use of the bull-roarer, and the initiation of celestial young men. Tukura is known to the women, as is Altjira, the sky-dweller of Strehlow's Arunta, or Aranda; but Altjira does nothing but hunt, eat, and amuse himself. Among the Loritja, beings named Maiutu play the part of Twanyirika; one cuts off the heads of the boys, sticks them on again, and is slain; another receives food from the boys. He has a sharp-pointed leg-bone, like Daramulun among the Wiradjuri of the south-east, and Daramulun is, with them, the being of the bull-roarer, but subordinate to the sky-dweller, or All-Father, the ethical Baiame.§

North of the Arunta are the Kaitish tribe, who are but half-converts to Arunta ideas. They believe in an All-Father, Atnatu, who 'arose up in the sky in the very far back past, . . . made himself, and gave himself his name.' Before the Alcheringa (*q.v.*) he drove some disobedient sons out of heaven to earth, whence he dropped down 'everything which the black-fellow has,' including bull-roarers. These sons are the ancestors of half the tribe. Two *churinga* (bull-roarers), dropped by Atnatu, became men, who, making wooden bull-roarers, imitated the sound of Atnatu's bull-roarer in the heavens, that is, obviously, thunder. They were named Tumana; they died an ill death; but now the women (who know not Atnatu) believe that Tumana plays the part of Twanyirika among the Arunta. Atnatu himself is an All-Father, insisting on ceremonies and bull-roarers, but unconnected with morals.‖

The Warramunga have no Atnatu, as far as is known; their bull-roaring being is Murtu. Murtu, like the Tumana, was killed by a dog, which could not destroy the bull-roarer, *murtu-murtu*. The spirit of *murtu-murtu* instantly sprang up in certain trees, of whose wood bull-roarers are made.¶

The N. by E. Binbinga and Anula have, or teach to the women, similar beliefs; the bull-roarer is *watamura* or *mura-mura*; the beings connected with it are Katajalina and Gnabaia. The women are told that these beings swallow the boys, and disgorge them, re-born, as initiated men. This

form of the exoteric myth is very common, occurring even among the tribes of the south-east.*

The S.E. tribes had not the spiritual philosophy of the central and northern communities. In that philosophy primal souls are perpetually re-incarnated, or in some regions spirits, *ratapa*, emanating from the primal totemic beings, are incarnated, and, after one earthly life, retire to the isle of the dead, and are finally annihilated.† There is thus no place of rewards and punishments for souls, while the evolutionary theory (see ALCHERINGA) makes a creative being superfluous, though, as Atnatu, he survives among the Kaitish.

The S.E. tribes in parts of Queensland, and in Victoria and New South Wales, had not the spiritual and evolutionary philosophy of the northern tribes, or among them it was not dominant, and they believed in a great sky-dwelling anthropomorphic being, the maker of most things, ethical, and the source of customary laws, who gives his sanction to morals, and is invoked at the initiatory rites, where a temporary image of him is made. Like Atnatu, he is unknown to the women and children. The thunder is his voice, and the bull-roarer, imitating the thunder, is sacred. Like the central and northern tribes, those of the south-east inculcate the belief in a being closely connected with the bull-roarer, but this being is taken more seriously than in the north and centre. He is the son, or 'boy,' practically the deputy, of the superior being, the All-Father. Among the Kurnai he is Tundun (which is also the name of the bull-roarer); among the Euahlayi and Kamilaroi he is Gayandi, under Baiame; among the Wiradjuri he is Daramulun, under Baiame; but among the Yuin, Daramulun is himself the All-Father.

The functions of the bull-roarer being, with the exoteric myth that he swallows the boys and disgorges them, are practically identical with the functions of Twanyirika and Tumana and the rest in the centre and north. The Wiradjuri Daramulun, like the Maiutu of the Loritja, has a leg which ends in a sharp bone.‡ Among seven of these tribes a larger (male) and a smaller (female) bull-roarer are used: among the Kurnai the larger represents Tundun, father of the race, the smaller represents his wife; but the distinction of sex is not said to exist among the Chepara and Turbal;§ with the Chepara the small bull-roarers given to the initiates are only tokens of initiation. Mr. Howitt thinks, 'but could not be sure,' that the female bull-roarer among the Kurnai indicates ceremonies in which the women take a certain part;‖ the Parnkalla also use a larger and a smaller bull-roarer; nothing is said of their sex.¶ Among the Wiradjuri the bull-roarer (*mudjigang* or *bobu*) does not, as among the Kurnai, bear the name of the bull-roarer being, *Daramulun*. 'There is an absence in the western tribes of a belief in an anthropomorphic Being by whom the ceremonies were first instituted.'** These western tribes conform to the ideas of the Dieri, who have no known All-Father, but believe in a multitude of *Muramura*—fabulous primal beings like those of the Arunta Alcheringa. Among them only bull-roarers marked with notches indicating their use at ceremonies are sacred; others are made a joke of.†† Practically they have not been consecrated. 'Changes in custom,' according to Howitt and Spencer-Gillen, 'have been slowly passing down from north to south,' from the Arunta and Dieri to the sea at Port Lincoln, among the western tribes. The ideas of Alcheringa and evolution appear to be northern and western; the All-Father belief is southern and eastern.

Père Schmidt, who finds the bull-roarers of sex in the reports of R. H. Matthews* among the Wiradjuri and other tribes (where Howitt found nothing about sex), and of Strehlow, in connexion with the maternal totem, has a theory that the large bull-roarer represents Twanyirika, Maiutu, etc., as fathers of the race, the small their wives as the mothers of the race,† and connects this with the sun and moon myths, and a period of so-called 'matriarchate' among tribes now reckoning descent in the male line, also with the 'sex totems' (animal friends of either sex) of the Kurnai and many other Australian tribes. There is also a theory of Papuan invasions, but the whole hypothesis cannot here be criticized.‡

The bull-roarer is in general use, among the central tribes, for magical purposes, and the spiritual element of their philosophy, as regards conception, is involved, especially in connexion with the stone *churinga nanja* of the Arunta nation, which are often, but not always, shaped like bull-roarers. Elsewhere these stone *churinga*, with totemic markings, are not found in use among the Australians.

Marett has advanced the opinion that 'the prototype' of the All-Fathers 'is nothing more or less than' the bull-roarer. 'Its thunderous booming must have been eminently awe-inspiring to the first inventors, or rather discoverers, of the instrument, and would not unnaturally provoke the "animatistic" attribution of life and power to it . . . a genuine Religion . . . has sprung up out of the Awe inspired by the bull-roarer.'§

But, as we have seen, there are, even in Australia, plenty of bull-roarers where there is no All-Father. Among the Arunta, Altjira has nothing to do with the bull-roarer, nor has Ulthaana, another sky-dwelling being of the Arunta.‖ It is usually not the All Father, but his 'boy,' as Tundun, who manages the bull-roarer. Moreover, it is thunder, not the bull-roarer, which very naturally inspires awe; it is the voice of the All-Father; the bull-roarer only represents that voice. Finally, the All-Father is found all over the world, in places where the bull-roarer is unknown.

The bull-roarer is of more importance in Australian religion, myth, and ritual than elsewhere. Its use at the Greek mysteries of Dionysus was explained by the story that it was a toy of the child-god.¶ Two or three bone bull-roarers of palæolithic times have been discovered and published. Like those of the north and central Australian tribes, they are decorated with incised concentric circles or half-circles. Thus palæolithic man may have had a religion akin to that of the Australians.

Bull-roarers in connexion with religion or magic are found in South and West Africa; among the Apache and Navaho Indians of North America, and the Koskimo of British Columbia,** where the

** To these tribes may be added the Eskimo, Kwakiutl, Arapaho, Ute, Central Californians, Pueblo, and the ancient cliff-dwellers. 'The Hopi, who regard the bull-roarer as a prayer-stick of the thunder, and its whizzing noise as representing the wind that accompanies thunderstorms, make the tablet portion from a piece of lightning-riven wood. . . . The Navaho make the bull-roarer of the same material, but regard it as representing the voice of the thunder-bird, whose figure they often paint upon it. . . . Apache, Hopi, and Zuñi bull-roarers bear lightning symbols; and while in the semi-arid region the implement is used to invoke clouds, lightning, and rain, and to warn the initiated that rites are being performed, in the humid

bull-roarer being, as in Australia, is said to carry away the young initiate. This fable is, of course, intended merely for the women and children; the boys, when initiated, discover the absurdity of the figment. Central Brazil, New Guinea, the Torres Islands, Florida in the Melanesian group, the North-West Solomon Islands, and Sumatra are all familiar with the bull-roarer.* For modern Europe, as well as for the lower culture, see A. C. Haddon, *The Study of Man*, pp. 277–327, and *GB*[2] iii. 424. In Aberdeenshire the cow-herd boys used to swing the bull-roarer as a charm against thunder.

The most astonishing parallel to the Kaitish story of a bull-roarer dropped from heaven to earth by Atnatu occurs in the following note of the present writer, which, fortunately, is dated: 'Bull-roarer in Cantyre' (Argyll) "*Srannan*, pronounced *Strantham*, the first in this quarter fell from Juppiter." Macalister, October 20, 1885.' Mr. Macalister was a Gaelic-speaking schoolmaster at St. Mary's Loch, in the parish of Yarrow, Selkirkshire, and was an aged man in 1885, full of vigour and intelligence. The parallel myth of the Kaitish was not published till 1904. For a drawing of a Maori bull-roarer, in the Christy Museum, and for an early study of the subject, see 'The Bull-Roarer' in Lang's *Custom and Myth*, pp. 29–44 (1884 and later editions). For the use of *jurapari* pipes in Brazil, to scare away the women from the rites of the men, see A. R. Wallace, *Travels on the Amazon*, 1853, p. 349.

LITERATURE.—The literature has been given throughout the article. A. LANG.

BULLS AND BRIEFS.—Under this heading may be conveniently considered not only those documents of the Papal chancery which are technically so designated, but also the various other classes of 'apostolic letters' which in comparatively modern times have been increasingly employed by the Roman Pontiffs in their most important utterances. For this wider interpretation of the name 'bulls' there is excellent authority. Both bulls and briefs are in their essence Papal letters, and the *quasi*-official collection known as the *Bullarium Romanum* includes Encyclicals, Motu Proprios, and other similar constitutions which possess just the same force, as sources of the Canon Law, as the bulls, briefs, and decretals which we should primarily expect to find there (see the prefatory letter prefixed to vol. i. of the *Bullarium* of Benedict XIV.). For the same reason any calendar of Papal *Urkunden*, such as the important *Regesta Pontificum Romanorum* (from the beginning to 1198) of Jaffé-Löwenfeld (continued to 1304 by Potthast), might be correctly described as an abstract of the letter-books of the Holy See; and in point of fact the first authentic document which Jaffé has summarized, or in other words the first Papal bull, in the wider sense, of which the text is preserved to us, is the famous letter addressed by Pope Clement I. (Clemens Romanus) to the Church of Corinth. This, and two other letters of the time of Pope Cornelius, form the only complete specimens we possess of the official correspondence of the Popes down to the middle of the 4th century.

1. **Early Papal letters.**—Beginning, however, with the time of Pope Julius I. (337–352), a much larger collection of documents becomes available. This fact alone lends a certain probability to the conjecture based upon the language of the *Liber Pontificalis* (i. 205, ed. Duchesne), that a reorganization of the Papal archives took place under this pontificate. We hear of a body of officials (*schola notariorum*) and of a responsible director (*primicerius*), while only a few years later an inscription of Pope Damasus seems to speak of the construction of a special *archivium*, later called the *scrinium* (see de Rossi, 'La Bibliotheca della Sede Apostolica,' in *Studi di Storia e Diritto*, v. 340).

The natural result of the official registration of documents which all this organization seems to imply must have been to create by degrees a recognized Pontifical chancery, and to establish the use of traditional forms and customs with regard to the drafting, dating, and expediting of Papal letters, which we find fully developed at a later period. Down to the time of Hadrian I. (772–795) our knowledge of these forms is somewhat vague, and in no case founded upon the original documents themselves. For the most part the texts of which we have copies are of an epistolary or hortatory character, often mere extracts, in which addresses, salutations, and subscriptions are naturally little regarded. The earliest Papal writings known to us which have any claim to be regarded as legal instruments date from the beginning of the 5th cent., and were addressed by Pope Zosimus to the Bishops of Arles (see Mansi, *Concilia*, iv. 359; and H. J. Schmitz in *Histor. Jarhb.* xii. [1891] 1 ff.; but cf. Nostiz-Rieneck, *ZKT* xxi. [1897] 6 ff.). Still, the number of Papal letters of earlier date than the year 772, preserved to us in whole or in part, amounts in round numbers to nearly 2400, and in some cases, notably in that of Pope Gregory the Great, we can argue back to the arrangement of these letters in the *Regesta*, or letter-books, from which they have ultimately been copied. Even from an early period it seems that the Papal chancery was carefully organized, for already in the time of Gelasius I. (492–496) we find traces of the numbering of the letters in the *Regesta*, and we know that the *primicerius notariorum*, or head of the chancery, was one of the most important officials in the Roman Church. He was the Pope's counsellor (*consiliarius*), by which name he is sometimes designated, and during the vacancy of the See he exercised for the time being a supreme authority in conjunction with the archpriest and the archdeacon. We have also reason to believe that the *secundicerius*, or second in command, was regarded as holding an important post of trust.

As regards the drafting of the documents of this early period, it seems clear that they were all modelled on the type of an ordinary Roman letter. Like a Roman letter, the missive is preceded by an *intitulatio*, or formal naming of the writer, and an *inscriptio*, or naming of the addressee, this last being often coupled with a form of salutation. Thus: 'Leo Episcopus, Presbyteris et Diaconibus Ecclesiae Alexandrinae, dilectissimis filiis, in Domino Salutem.' In many cases, however, the *inscriptio* precedes the *intitulatio*, as, for example, 'Gloriosissimo et clementissimo Filio Justiniano Augusto, Vigilius Episcopus.' Gregory the Great seems to have been the first to employ habitually the formula 'servus servorum Dei' in the *intitulatio* of his letters, but this style was not at once adopted by his successors. It seems, however, to have gradually won its way back into favour, and in the Papal letters of the 8th cent. it is rarely omitted. The salutation, which was by no means always appended to the *inscriptio*, takes different forms. In the earlier letters we find simply

area it is used to implore the wind to bring fair weather. The bull-roarer is a sacred implement, associated with rain, wind, and lightning, and among the Kwakiutl, according to Boas, with ghosts' (Hough in *Handbook of Amer. Indians*, i. [= *Bulletin 30 BE*] 170 f., where further literature is given). From these American examples it appears that the bull-roarer is rather a magical instrument than a thing associated with the religious idea of a Lord of Thunder, as among certain Australian tribes.

* Frazer, *GB*[2] iii. 424. Note 1 contains a list of authorities.

'salutem'; under Julius I. (337–352), 'in Domino salutem,' and, later on, other amplifications. Pope Adeodatus (672–676) adopted the form 'salutem a Deo et benedictionem nostram,' and this perhaps paved the way for the existing usage 'salutem et apostolicam benedictionem.' At the close of the Papal letter was appended, first, the *subscriptio papae*, and, secondly, the date. The *subscriptio papae* did not take the form of what we should now call a signature, *i.e.* the writing of the Pope's own name, but consisted simply of a word of blessing and farewell. For example, 'Deus te incolumem custodiat, frater carissime,' or, more commonly, 'Bene vale, frater carissime'; but from the 7th cent. onwards the Papal missives of a more formal and legal character rarely had any other subscription than the simple 'Bene vale,' or 'Bene valete.' As for the date, which comes last of all, it was probably never omitted in the originals, though it is so often lacking in the copies which have been preserved to us. Down to the end of the 5th cent. we usually find only the day of the month and the names of the consuls, *e.g.* 'Data tertio idus Februarias, Arcadio et Bautone consulibus'; but from about 490 onwards the year of the indiction is, at first sometimes, and later on invariably, added. With regard to the body of the document, it is easy, especially with the aid of the numerous extant letters of St. Gregory the Great, to recognize the gradual introduction of certain traditional forms and phrases. The occurrence in our copies of such abbreviations as 'secundum morem,' or 'de more solito,' implies the same, and in the so-called *Liber Diurnus* a collection of Papal formularies is preserved to us, the earliest portion of which is believed to have been compiled shortly after St. Gregory's time. We meet also in these early letters, particularly from the time of Leo I. (440–461), a certain rhythmical cadence known as the *cursus*, which, after falling into abeyance for a long period, re-appears at the end of the 11th cent. (see Duchesne, 'Note sur l'Origine du *Cursus*,' in the *Bib. de l'École des Chartes*, vol. l. p. 162), and was then maintained until near the close of the Middle Ages. Finally, the document was probably written on papyrus, and had attached to it a cord, with a leaden seal, the *bulla*. As already stated, no original deeds of this period remain to us, but we have the leaden seals which must once have been attached to letters of Pope John III. (560–573), of Deusdedit (615–618), and others. These *bullae* are about an inch in diameter, and bear on one side the Pope's name in the genitive, and on the other the word PAPAE. It is, of course, from this feature that the Papal letters themselves have come to be called 'bulls'; but this designation is not used officially in any early document. The Popes speak of their own letters, or of those of their predecessors, as *litterae*, *epistola*, *pagina*, *scriptum*, or, less generally, as *privilegium*, *praeceptum*, or *auctoritas*.

2. **From 772 to 1048.**—With the accession of Hadrian I. it is convenient to begin a new period in the history of the Papal chancery, and this for two reasons: first, because the earliest specimen of an original bull—even then a mere fragment, seemingly of a letter on papyrus addressed to Charlemagne—belongs to this pontificate; secondly, because some re-organization of the chancery must have occurred at this time, the result probably of the improved political status of the Holy See, now strong in the support of Pepin and his son. Already we may begin to trace that broad division of Papal documents into two categories (see Schmitz-Kallenberg, 'Papsturkunden,' in Meister's *Grundriss*, i. 198), which is practically perpetuated in the popular locution of 'bulls and briefs,' though, perhaps, for these earlier periods it is better to retain the terminology of Bresslau, Diekamp, and Léopold Delisle, and to speak of 'privileges' and 'letters.' The latter class were, as the name imports, simply letters. They were written on sheets of papyrus of smaller size, and elaborate formulas of dating were dispensed with. Their purpose was ephemeral, and as a result the originals have almost completely disappeared, only one entire specimen (of the time of Clement II. [1046–1047]) being preserved to us. Of 'privileges,' however, though these must have been far more rarely issued, a comparatively large number of originals remain, their preservation being the natural result of the fact that they commonly conferred or confirmed a title in matters either of property or of jurisdiction. A catalogue of these early Papal documents on papyrus, twenty-three in number, has been given by H. Omont in the *Bib. de l'École des Chartes*, 1904 (cf. also Melampo in *Miscellanea di Storia e Cultura Ecclesiastica*, 1905–1907). Concerning these more formal 'privileges,' therefore, to which it is usual to give the names of bulls, we are fully informed, and their peculiarities have often been described. They are made of broad strips of papyrus, and the whole document is sometimes as much as 10 ft. long and from 18 to 24 in. broad. A wide margin is left at the top; then follows in large writing the *intitulatio* and *inscriptio*, with the formula 'in perpetuum.' The body of the document comes next in a smaller hand, and beneath it the so-called 'double date.' This consists of two distinct entries, of which the one seemingly has reference to the engrossing of the instrument, for it begins with the words 'scriptum per manus N.N.,' with the day of the month and the indiction, the other concerned with its final expedition or delivery, and expressed in the words 'Data' or 'Datum,' with month and day and fuller details of the year, 'per manum N.N.' Between these comes the *subscriptio papae*, which takes the form of the words †BENE VALETE† generally written in two lines in uncial letters with a cross preceding and another cross or SS (*subscripsi*) following. That this was at first written by the Pope's own hand is rendered probable by the fact, first, that the hand of the BENE VALETE always differs from that of the body of the document and of the dates; and, secondly, that in the cases in which we possess more than one original bull of the same Pontiff, the identity of the characters of the BENE VALETE seems well established. Further, in certain 'privileges' of Pope Silvester II. (999–1003) we find invariably added to the BENE VALETE a few words in the so-called 'Tironian notes' or short-hand, for example, 'Silvester Gerbertus Romanus episcopus subscripsi,' or 'Gerbertus qui et Silvester episcopus' (see Ewald in *Neues Archiv*, ix. 321 ff.). Still it would seem that already in the time of Clement II. (1046–1047) the practice was being given up, and that the Pope henceforth was usually content with marking a cross or other private signs beside the BENE VALETE already written there by the engrosser. Finally, the *bulla*, or leaden seal, was attached to the document, strings of hemp or silk being passed through the lower margin of the papyrus, which was folded once or twice to give greater strength, while the seal was impressed upon these strings. Down to the end of the 11th cent. the *bullae* bore nothing more than the name of the Pope on one side and the word 'papae' on the other, though the arrangement of the letters, complicated with certain crosses and dots, varied considerably. At this period also, as we may often learn from the details given in the second (or 'delivery') date of the 'privileges' just described, the chief position

in the Papal chancery was taken by an official known as the *bibliothecarius sanctae apostolicae sedis*, who no doubt was originally no more than the custodian of the archives. By degrees, however, he seems to have taken over the functions of the *primicerius notariorum*. He was generally a bishop, and soon we find him commonly invested with the title *cancellarius*. As an illustration of the kind of details given in the second dating clause, the following specimen taken from a bull of Silvester II. of the year 999 may be worth quoting:

'Data VIIII Kl. decemb. per manum Johannis, episcopi sancte Albanensis ecclesie et bibliothecarii sancte apostolice sedis, anno pontificatus domini nostri Silvestri secundi pape primo, imperante domino nostro tertio Ottone, a Deo coronato, magno et pacifico imperatore, anno quarto, in mense et indictione suprascriptis.'

Although the year of the Incarnation is not here mentioned, it is to be met with occasionally in Papal documents somewhat earlier than this. Details of this kind, which are often of great critical importance, will be found noted at the head of each pontificate in Jaffe-Löwenfeld's *Regesta* and in Mas Latrie's *Trésor de Chronologie*, 1889, pp. 1035–1148.

3. From 1048 to 1198.—After the accession of Leo IX. in 1048, the more stable traditions of the Papal chancery seem to have given place to a period of very rapid development. There was at first a good deal of chopping and changing in the forms observed, but after the lapse of about a century we find a pretty general uniformity of usage in documents of the same nature. In any case the broad distinction between 'privileges' and 'letters' still held good, though these great groups themselves have now to be divided into classes, each with characteristics of its own. To begin with the more formal and elaborate documents (the 'privileges'), the era of Leo IX. seems to have introduced the general use of parchment in place of papyrus, and possibly as a consequence of this, the employment of minuscule instead of 'Lombardic' writing; but there were also other changes which may be said to have transformed the external features of the great bulls and to have lasted down to the present day. The *subscriptio papae* ceases to consist in the writing of the words BENE VALETE, this being now represented by a monogram followed by three dots and a huge comma (see, upon this, Pflugk-Harttung in *Mittheil. Inst. Oest. Gesch.* v. [1884] 434 ff.). The comma and dots, which appear but for a short period, probably stood for 'subscripsi.' In place of the BENE VALETE, the Pope's sign manual now took the form of a 'rota' drawn in the blank space below the centre of the document, but a little to the left. The 'rota,' or wheel, derives its name from the two concentric circles, from 2 to 5 in. in diameter, inside which a cross was drawn, with the words 'scs petrus scs paulus' and the Pope's name arranged thus:

SCS	SCS
PETRVS	PAVLVS
PASCHA	LIS
PP	II

Between the concentric circles was written the Pope's motto—usually a brief text from the Psalms. That of Paschal II., for example, was 'Verbo Domini coeli firmati sunt.' Before the first word a rude cross is marked, and this at least is believed to have been done by the Pope's own hand. Between the 'rota' thus drawn to the left and the BENE VALETE monogram standing parallel to it a little to the right, the Pope's name was engrossed in the following or some similar form: 'Ego Paschalis Catholicae Ecclesiae Episcopus subscripsi.' At a somewhat later time the attestations of a certain number of Cardinals present were also written below the name of the Pope in three columns, consisting respectively of Cardinal Bishops, Cardinal Priests, and Cardinal Deacons. We may say that the 'rota' and B.V. monogram, which appear first in the time of Leo IX. and which with slight variations have lasted down to the present day, still constitute the most striking external feature of the most solemn kinds of bulls. Of the other changes connected with this period it is only needful to notice that the *Scriptum* clause, *i.e.* the date of the engrossing, disappears from all Papal documents, and that the leaden *bulla*, which was, as a rule, appended alike to 'privileges' and 'letters,' assumed under Pope Paschal II. (1099–1107) the type which it has retained ever since; that is to say, the obverse of the seal shows the busts of St. Peter and St. Paul facing each other—St. Peter to the spectator's right, St. Paul to the left, with a rude cross between them, while above their heads appear the letters S. PA. and S. PE. On the reverse we find the name of the reigning Pope in the nominative, *e.g.* 'Urbanus PP. III.' On both sides of the *bulla* are circles of dots, and there is some reason to believe that the exact number of these dots for any given pontificate was a point carefully attended to, and was meant to be used as a test of authenticity. There can be no doubt that, like the documents themselves, the leaden *bullae* appended to them were freely fabricated at a later date. Even in the British Museum *Catalogue of Seals* a number of these early *bullae* are entered (vol. vi., Nos. 21681–21698), without any indication of the fact that the examples so described are forgeries.

The tendency to reserve the more elaborate forms of authentication with 'rota,' monogram, and signatures, as above explained, for certain very solemn 'privileges' became accentuated even during this early period; and Schmitz-Kallenberg already distinguishes from them a class of 'simple privileges,' which, while of substantially the same nature as regards their inscription and contents, lack these and some other formalities. In the case of the 'letters' also, we may note two kinds, viz. the *litterae cum filo serico* (*i.e.* in which the *bulla* hangs by silken cords) and *litterae cum filo canapis* (in which hemp was employed). The authority just named also attributes to this period the first appearance of *litterae clausae*. This does not mean to say that ordinary Papal 'privileges' and 'letters' were sent to the recipient open, so that all men could read them, but only that their fastening, which seems to have been effected by the strings to which the *bulla* was attached, could be undone without mutilating the document. In the case, however, of the *litterae clausae* the parchment was so folded and the *bulla* so attached that nothing of the contents could be read without destroying the *bulla* as an authentication (see Diekamp in *Mittheil. Inst. Oest. Gesch.* iii. [1882] 865 ff.). It is possible that the use of waxen seals with the 'Fisherman's ring' may also date from this time (cf. Jaffe, *Regesta*, Nos. 5225 and 5242), but no specimen is now in existence.

4. From 1198 to modern times.—The pontificate of Innocent III. (1198–1216) marks an epoch of the highest importance in the history of the Papal chancery. From this time forward not only do the original documents exist in abundance, but the official *Regesta*, or letter-books, of which only a few fragments are known before this date, are preserved to us in an almost uninterrupted series. Furthermore, Innocent III., like the great organizer that he was, devoted special attention to this most important matter (*Nouveau Traité de Diplomatique*, vi. 168 ff.). He built new premises for the chancery, and it was no doubt due to his per-

sonal influence that a strict uniformity and an adherence to certain recognized rules are henceforth observable in all its instruments. With the greatly extended authority of the Holy See and its more frequent intervention in matters other than purely religious, the scope of the many Papal pronouncements seems to be widened. The distinguished canonist Alexander III. (1159–1181) by his *litterae decretales* (letters containing decisions of points of law submitted to him) had already built up a vast edifice of Case Law, which was soon to be published to the world by Pope Gregory IX. in the Book of the Decretals compiled under Pontifical direction by St. Raymond de Pennaforte (1234). The great mass of this material was furnished by the replies of Alexander III., Innocent III., and his two successors, Honorius III. and Gregory IX. himself; and the tone of the law-giver seems insensibly to become emphasized in all subsequent Papal utterances. Moreover, we now touch upon a period when such documents often seem to be addressed to all Christendom, and no longer consistently observe the form of letters directed to an individual or group of individuals. From this date the 'great privileges' with their 'rota' and B.V. monogram and their elaborate attestations of Cardinals become less numerous; while, on the other hand, only a few years later, under Innocent IV., we are for the first time confronted with that form of Papal document, technically and strictly known as a 'bull,' which is something intermediate between the formal 'privilege' and the simple 'letter.' In this, as in a 'privilege,' the first line is written in tall letters, but it ends not with the abbreviation IN PP. (*in perpetuum*), but with the phrase 'ad perpetuam rei memoriam,' or something equivalent, *e.g.* 'ad certitudinem perpetuam et memoriam futurorum.' There is often no mention of the person addressed; but the document concludes with certain minatory clauses, 'Nulli ergo,' etc., and 'Si quis,' etc., directed against all who may contravene what is therein laid down, ending, without any other subscription, in a simple date mentioning the place, the year of the Incarnation (but this was a later addition), and the year of the pontificate. To this document the ordinary leaden *bulla* was attached by silken cords. It was in this form that many important pronouncements were given to the world during the 13th and 14th cents., more particularly the manifestos of Boniface VIII., *e.g.* the *Ausculta fili* and the *Unam sanctam* which provoked so much resistance from their appeal to the authority of 'the two swords' and the consequent claim to far-reaching authority in temporal matters. As the initial words themselves of the bull *Ausculta fili*, directed to Philip IV. of France, would suffice to show, many of these utterances were still letters in form and addressed to individuals, but in their scope they appealed to Christendom at large.

In Innocent III.'s days some of these *quasi*-political documents took the form of 'privileges.' This was the case with the bull in which Innocent accepted and ratified the surrender by which king John made England a fief of the Holy See. But after the 14th cent. this more elaborate form of instrument—'consistorial bulls,' as they were called, from the fact that the attestations of the Cardinal Bishops, Cardinal Priests, and Cardinal Deacons were given in one of those assemblies of Cardinals in council with the Pope, known as 'Consistories'—became very unusual. It was confined, in fact, to concessions which called for special solemnity, to bulls of canonization, and to a few important constitutions such as the bull of Julius II. (18th July 1511), convoking the Fifth Lateran Council, or the confirmation of the Council of Trent by Pius IV. (26th Jan. 1564). By exception the bull conferring on Henry VIII. the title of 'Defender of the Faith' was made out in consistorial form and sealed with a golden *bulla*; but even such a document as the condemnation of the Pragmatic Sanction on 19th Dec. 1516, though decided upon in the Lateran Council itself, was executed in an ordinary bull; and it may in general be assumed that from the 14th cent. onwards, when the term 'bull' is used (as, for example, the 'bull of demarcation of Alexander VI.' determining the respective limits of the Portuguese and Spanish possessions in the Indies; the 'dispensation bull' for the marriage of Henry VIII. with his brother's widow; or the bull of Pius V. deposing Queen Elizabeth, etc.), the instrument so designated observed the following forms which for clearness' sake it will be well to recapitulate:

(1) The document begins with the Pope's name and 'servus servorum Dei' followed by a perpetuity clause or, less commonly in the case of a bull addressed to an individual, by the name of the addressee and salutation. Thus in the former case we have: 'Leo episcopus, servus servorum Dei, ad perpetuam rei memoriam'; or, in the latter: 'Leo episcopus, servus servorum Dei, dilecto filio suo N. salutem et apostolicam benedictionem.'—(2) The dating clause, which comes at the end of the whole, takes the following form and order: 'Datum Romae apud S. Petrum (or elsewhere) anno Incarnationis Dominicae MDCXX, quinto Kal. Mali, pontificatus nostri anno quinto.'—(3) To this was appended, by strings of silk or hemp, the *bulla* bearing the heads of SS. Peter and Paul, and on the other side the name of the reigning Pope.—(4) The document was engrossed upon thick parchment, in an archaic hand, which, after the modern Roman style of writing came into use, became very artificial and ungraceful, and was known as *scrittura bollatica*. During the 17th cent. this writing and its contractions became so unfamiliar that it was customary to issue a *transsumptum*, or copy in ordinary handwriting, along with the official document.—(5) After the substance of the bull, and before the dating clause, we commonly find inserted certain imprecatory clauses: 'Nulli ergo,' etc., and 'Si quis autem,' etc., though this rule was not invariable. It may be well to set down the precise form which these clauses ordinarily take: 'Nulli ergo omnino hominum liceat hanc paginam nostrae concessionis infringere vel ei ausu temerario contraire. Si quis autem hoc attemptare presumpserit, indignationem omnipotentis Dei et beatorum Petri et Pauli, apostolorum ejus, se noverit incursurum.' Sometimes these imprecatory clauses are further followed by directions as to the execution and publication of the bull, or again by clauses of derogation, beginning: 'Non obstantibus constitutionibus et ordinationibus apostolicis, privilegiis quoque et indultis,' etc.

Some of the distinctions here indicated, notably the presence or omission of the imprecatory clauses, correspond with a distinction in the bulls themselves, which in the 13th and subsequent centuries are commonly classified as either *tituli* or *mandamenta*. The *tituli* were for the most part acts of grace (*indulgentiae*), concessions of privileges, confirmations, decisions of points of doctrine or law, etc. On the other hand, the *mandamenta* represented the ordinary correspondence of the Holy See. They were orders of the Pope, commissions to conduct an inquiry or to reform abuses, letters written to communicate some important intelligence, or to invite the co-operation of temporal sovereigns, or to prescribe a line of conduct for clergy or laity. Their tenor nearly always includes the formula 'per apostolica scripta mandamus,' or 'precipiendo mandamus'—a phrase for which the words 'rogamus,' 'exhortamur,' 'monemus' are sometimes substituted. Of these two classes the *tituli*, though of less interest to the student of history, were the more solemn in form, the imprecatory clauses being rarely omitted. The writing was elegant, and carefully executed according to certain strict rules, while the *bulla* was attached with cords of red and yellow silk. On the other hand, the *mandamenta* showed both in substance and form that they were intended to serve a more temporary purpose. The writing was in a more flowing hand, less ornate and less carefully executed, the imprecatory clauses were generally omitted, and the *bulla* was attached with cords of hemp. Throughout we recognize the tendency to simplify and to make the issue of bulls, especially

those of an administrative nature, more expeditious. But though the formalities observed in the preparation of a *mandamentum* of the 14th cent. fell far short of what was needed for a consistorial bull, still even in the former the endorsements of the various officials of the chancery, mostly entered upon the *plica*, or fold of the parchment, show that it must have passed through a large number of different hands—*abbreviatores*, *scriptores*, *registratores*, and finally the department of the *bullatores*, who affixed the seal (see Baumgarten, *Aus Kanzlei und Kammer*, Freiburg, 1907). No wonder we find that under the pontificate of Eugenius IV. (1431) a new form of Papal letter of a more summary kind was instituted by the Holy See, and that henceforth this was commonly employed in all matters requiring despatch.

This was known as a 'brief,' and it soon almost entirely took the place of the earlier *mandamentum*. A brief was a document written upon fine vellum, and sealed, not with a leaden *bulla*, but with a wax seal bearing the imprint of the 'Fisherman's ring.' It was written in a fine cursive Roman hand, and at the head occurs simply the Pope's name standing by itself thus:

EUGENIUS PP. IIII.

Immediately below this, the Pope greets the addressee in the vocative, according to his rank and condition, *e.g.* 'Dilecte fili,' or 'Carissime in Christo fili,' or 'Venerabilis pater in Domino,' etc., with the salutation 'salutem et apostolicam benedictionem.' In constitutions of a more solemn and permanent character we often find, instead of this greeting, the formula, also already long familiar in bulls, 'ad perpetuam rei memoriam.' Another distinctive feature of briefs is the final clause expressing the date. It almost invariably takes this form: 'Datum Romae apud Sanctum Petrum, sub annulo Piscatoris, die IX Novembris MDXCII pont. nri. anno primo.' In contradistinction to the dating of bulls, which generally, though not invariably, at any rate down to the pontificate of Innocent XII., is to be referred to the years of the Incarnation, beginning 25th March, the years are here to be understood as those of the Nativity. Beneath the date the name of the Cardinal Secretary of Briefs is usually written as an attestation of authenticity.

With regard to the form of instrument chosen, let us note that this has little to do with the importance or binding force of any Papal pronouncement. The decretals, upon which the fabric of Canon Law was largely built up, almost invariably took the form of lesser bulls, *i.e.* simple letters or *mandamenta*. The first known *Bulla in Coena Domini*, containing the 'Reserved Cases' of the Holy See, issued by Urban V. in 1364, was a *mandamentum*. No doubt there was at times a very natural wish to impart some extraneous solemnity to documents of dogmatic importance. For example, the constitution of Benedict XII., beginning 'Benedictus Deus' (29th Jan. 1336)—which decides a controversy regarding the Beatific Vision, and contains the notable formula, 'Hac in perpetuum valitura constitutione auctoritate apostolica definimus'—was issued as a *titulus* with imprecatory clauses. The dispensation for the marriage of Henry VIII. with his brother's widow was drawn up first in great haste, and secretly transmitted to Spain as a brief, while it was afterwards more publicly expedited as a bull; but the brief, its authenticity once admitted, was of just the same force as the bull. So again, Benedict XIV., when compiling the first volume of his own pontifical acts, and sending it officially to the University of Bologna as a collection of authoritative rulings in the Canon Law, declares that it contains 'nostras Constitutiones, videlicet Bullas, et aliqua Brevia, Litteras Encyclicas et alia huiusmodi,' making no distinction between the authority attaching to these different instruments. So, in more modern times, the Society of Jesus, suppressed by Clement XIV. with a brief, was restored by Pius VII. in a bull; while Leo XIII. used a bull to re-establish the Catholic hierarchy in Scotland, though Pius IX., twenty-eight years before, had issued only a brief to effect the same purpose in England. The seal with the 'Fisherman's ring,' which is the distinctive mark of the brief, was formerly always impressed upon red wax within a loop formed by a twisted strip of parchment, and arranged in such a way that the seal served at the same time to close and secure the folded sheet of vellum to which it was affixed. The 'Fisherman's ring' is mentioned in 1265 as used by the Pope to authenticate his private correspondence, and is probably much older. The earliest existing impression is said to have been discovered in the treasury of the Sancta Sanctorum at the Lateran. It belongs to the time of Nicholas III. (1277–1280), and represents St. Peter fishing with a rod and line; but the identification seems somewhat doubtful. In the later examples St. Peter is represented in a boat drawing in the net.

In quite modern times some notable modifications have taken place in the rules of the Papal chancery regarding the issue of bulls and briefs. Since 1842 the impression of the 'Fisherman's ring' upon red wax attached to briefs has given way to a stamp in red ink bearing the same device. In the case of bulls, the *scrittura bollatica* engrossed upon great sheets of parchment has for ordinary purposes been discarded—this took place at the beginning of the pontificate of Leo XIII. in 1878—and the document is now written in the same legible Roman hand which is used for briefs, while the leaden *bulla* has given way in most cases to a stamp in red ink that can more conveniently be sent by post. It is likely also that the complicated formalities, which till quite lately attended the ordinary expedition of bulls by the *via di cancelleria*, will be much simplified in consequence of the recent re-organization of the Roman Curia.

Other Apostolic Letters.—As a further consequence of the delays and complications attending the issue of bulls, another new kind of instrument came into use at the end of the 15th cent. under Innocent VIII. It was a species of brief known as a *motu proprio*, and it was without any authenticating seal. As its name imports, it professed to be a document issued by the Pontiff of his own initiative, without any instance being made to him by interested parties. The documents of this class, which continued to be very common during the 16th cent., closely resembled briefs in their general features, but there are differences in the manner of dating, and, of course, there is no mention of the 'Fisherman's ring.' On the other hand, the words 'motu proprio' are always introduced, and occur not uncommonly as the initial words of the document. For the most part these *motu proprios* were concerned with the administration, ecclesiastical or civil, of the city of Rome and the government of the Papal States, and, in contrast to the more formal bulls and briefs, were frequently couched in Italian. From the insistence which their form seemed to lay upon the Papal initiative, they were regarded by foreign governments, notably by that of France, with disfavour, and treated as an encroachment upon the liberties of the Gallican Church.

In more modern times, the Roman Pontiffs, when wishing to impart instruction to the clergy and laity of the Church over which they rule, especially in matters which require somewhat elaborate treatment, have most commonly had recourse to an

'encyclical.' As the term imports, this is in form a circular letter intended to be passed on from one to another of a group of persons, but in practice it is a letter addressed to all the bishops in communion with the Holy See, or at least to all the bishops of a single district or province. The term 'encyclical letter' has been in use from an early date, but it was not commonly adopted for Papal documents before the 18th century. Since then it has come increasingly into favour, and Pius IX., Leo XIII., and Pius X. have issued numerous and very lengthy encyclicals, dealing not only with dogmatic questions, but also with problems that are primarily social and ethical in their scope. One of the most famous of these encyclicals was that of Pius IX., *Quanta cura* (8th Dec. 1864), of which the main purport was to condemn the principles of Naturalism (*i.e.* the exclusion of religion from the government of human society), to denounce Socialism and Communism, and to vindicate the sacred rights of family life; but it is perhaps principally remembered on account of the 'Syllabus' of condemned errors which was published along with it. Leo XIII., again, published a long and very remarkable series of encyclicals, dealing with a number of modern questions, *e.g.* the encyclical *Immutabilis* (21st Apr. 1878), on the evils of the times; *Arcanum divinae sapientiae* (10th Feb. 1880), on Christian marriage and family life; *Diuturnum illud* (29th June 1881), on the origin of civil authority; *Immortale Dei* (1st Nov. 1885), on the Christian constitution of States; *Libertas praestantissimum* (20th June 1881), on true liberty; *Rerum novarum* (16th May 1891), on the Labour question; and *Satis cognitum* (29th June 1896), on religious unity. Most of these utterances have been collected and translated, *e.g.* by J. Wynne in *The Great Encyclical Letters of Leo XIII.* (New York, 1903), and by W. Eyre, *The Pope and the People* (London, 1897).

The present Pope, Pius X., has also shown special favour for this form of manifesto, and many of his instructions have taken this shape: *e.g.* his first letter to the clergy and faithful of France, *Vehementer nos* (11th Feb. 1906); and the condemnation of Modernism, *Pascendi dominici gregis* (8th Sept. 1907), with very many others. In form an encyclical is simply a letter, which in its *inscriptio* mentions the 'Patriarchs, Primates, Archbishops, Bishops, and other local Ordinaries,' and concludes with the Apostolic blessing and a simple date including the year of the pontificate. The Pope's name 'Pius PP. X.' appears at the foot. It is generally held by Catholic theologians that the mere fact of an encyclical being addressed to the whole of Christendom does not constitute it an *ex cathedra* pronouncement, even if it deals with dogmatic matters. The degree in which the infallible *magisterium* of the Papacy is involved must be judged from the terms used in the document itself, and from attendant circumstances. This question is discussed with some fullness in Choupin, *Valeur et décisions doctrinales et disciplinaires du Saint-Siège* (Paris, 1908).

Another form of Papal utterance which calls for notice is the 'allocution,' which is an address delivered by the Pontiff to the Cardinals assembled in secret consistory. This address is sometimes printed and published by order of the Pope, who chooses this way of making known his judgment or wishes with regard to questions, often semi-political, which are of pressing importance. But, of course, this pronouncement is not a Papal letter, and cannot even in a wider sense be classed as a bull.

The remaining words, which are used to describe documents emanating from the Papal chancery, are of a general character, and for the most part rather loosely used. For example, almost any kind of instrument may be described as a 'rescript,' but strictly the term should be limited to some form of answer to an application addressed to the Holy See. Such answers in early times often began with the words, 'Significavit nobis dilectus filius,' and ended with the formula, 'Deus te incolumem servet.' Another very general word is 'constitution,' and this may be correctly applied to any written act which determines some question submitted, or lays down a rule to be followed.

With reference to the collection of Papal bulls and letters, it is to be noted that all the extant editions of the *Bullarium Romanum*, so far as regards mediæval documents, are of a very unsatisfactory character. The *Bullarium Romanum* was originally nothing but a private compilation, first formed by one Laertius Cherubini at the end of the 16th century. Its purpose was to print certain Papal constitutions which had been issued since the formation of the *Corpus Juris Canonici*, and which, though of great importance to students of law, were not accessible in any collected form. Naturally such a work did not concern itself much with the Papal letters of remote ages. It was the recent utterances which were important for the compiler's purpose. The various editions which followed greatly enlarged the collection and brought it up to date; but even in the scholarly work of Cocquelines, who edited the great *Bullarium Romanum* (printed in Rome in 32 volumes, between 1739 and 1762), nothing but the most meagre gleanings are presented of the Papal letters issued during the first 1500 years of the Church's history. For these early letters the reader must be referred to Coustant, *Epistolae Pontificum Romanorum* (extending to the year 440), and to Thiele's continuation (which brought the collection down to 553), but, most conveniently, to the already mentioned *Regesta* of Jaffé-Löwenfeld with the continuation by Potthast (which covers the whole period from the beginning to the 14th century). Special attention has, of course, been paid to certain isolated pontificates of importance. For example, the letters of St. Gregory the Great have been edited with great care in the quarto series of the *MGH*, by P. Ewald and L. Hartmann, while the Papal letters to Charlemagne and Louis the Pious have been studied by Carl Hampe, also in the *MGH*. Again, under the title of *Italia Pontificia*, a most thorough piece of work has been undertaken by P. F. Kehr in calendaring the 'privileges' and other Papal documents connected with the churches of Italy. Further, we must note that the pontificate of Innocent III., from which time onward, as stated above, the Papal *Regesta* are preserved, marks a period of much fuller knowledge. The *Regesta* of Innocent III. and of Honorius III., in part, have been published in the *Patrology* of Migne, while that of Honorius III. has subsequently been re-edited. None, however, of these Papal *Regesta* seems to contain copies of all the bulls issued during any pontificate, and consequently the fact that any document is lacking in the official register is no sufficient proof of its spuriousness. It is probable that for such registration, constituting, as it did, an additional safeguard of authenticity in case of dispute, a fee was demanded, and that registration was denied to those who were unwilling to pay the fee. During recent years a great effort has been made to publish the *Regesta* of the remaining Popes of the 13th and following centuries. The chief work has been done by the École Française de Rome with results which may be thus summarized:

Regesta completely edited.

Benedict XI. (1303–1304), ed. C. Grandjean; 1 vol.
Nicholas IV. (1288–1292), ed. E. Langlois; 2 vols.
Honorius IV. (1285–1287), ed. M. Prou; 1 vol.

Regesta in progress.

Gregory IX. (1227–1241), ed. L. Auvray; 3 vols. (two completed).
Innocent IV. (1243–1254), ed. E. Berger; 4 vols. (three completed).
Alexander IV. (1254–1261), ed. Bourel de la Roncière and others; 2 vols. (one nearly complete).
Urban IV. (1261–1264), ed. J. Guiraud; 4 vols. (three completed).
Clement IV. (1265–1268), ed. E. Jordan; 1 vol. (nearly complete).
Gregory X. and John XXI. (1271–1277), ed. J. Guiraud and L. Cadier; 1 vol. (nearly complete).
Nicholas III. (1277–1280), ed. J. Gay; 1 vol. (begun).
Martin IV. (1281–1285), ed. ?; 1 vol. (begun).
Boniface VIII. (1294–1303), ed. G. Digard, M. Faucon, A. Thomas; 3 vols. (1 vol. complete).

Besides these, the École Française de Rome has undertaken the publication of the letters of the Avignon Popes which have reference to French affairs. Amongst these considerable progress has been made with the letters of John XXII. (1316–1334) and Benedict XII. (1334–1342). Further, the École Belge de Rome has recently begun the publication of the *Regesta* of Clement VI. under the editorship of Dom U. Berlière.

As regards England in particular, an important undertaking has been for some time in progress under the general title of *A Calendar of Entries in the Papal Registers relating to Great Britain and Ireland*. This work, begun by the late W. H. Bliss and continued by J. A. Twemlow, has now extended to nine volumes, bringing the record down to the middle of the 15th cent., and it provides short summaries in English of all documents in the Roman *Regesta* which have any reference to the British Isles.

Amongst other isolated efforts may be mentioned the Benedictine edition of the *Regesta* of Clement v. (1305–1314), and Cardinal Hergenröther's incomplete calendar of the bulls and other documents of Leo x. At a much earlier period, A. Theiner, librarian of the Vatican, published, chiefly from the *Regesta*, large numbers of Papal bulls, etc., dealing with various countries of Europe—the British Isles, Hungary, Poland, Lithuania, etc., among the number. Special *Bullaria*, chiefly collections of 'privileges,' to which formerly the name *Mare Magnum* was often applied, have also been published for most of the great Religious Orders and for some of the Roman Congregations.

LITERATURE.—Regarded as a branch of the science of 'Diplomatics,' the subject of Papal bulls and briefs possesses an abundant literature. A very large number of spurious documents of this kind have always been in existence, and the detection of these has exercised the acumen of scholars from quite an early period. Naturally the Popes themselves have at various times prohibited the fabrication of Papal letters and 'privileges,' under the severest spiritual penalties; and many references to the subject will be found among the bulls of such Pontiffs as Alexander III. and Innocent III. The foundations of the true science of diplomatic criticism were laid in Mabillon's great work, *De Re Diplomatica* (1681–1704), and this was further developed and systematized a little later by his fellow Benedictines, Dom Toustain and Dom Tassin, in their *Nouveau Traité de Diplomatique*, in six volumes quarto. For a compendious modern introduction to the subject, the reader may most conveniently be referred to A. Giry, *Manuel de Diplomatique* (Paris, 1894), and to the section on Papal diplomatics contributed by Schmitz-Kallenberg to H. Meister's *Grundriss der Geschichtswissenschaft* (Leipzig, 1906, vol. i. pp. 172–230), both of which works contain ample bibliographies. Besides the treatises mentioned in the course of the foregoing article, special reference should be made to H. Bresslau's *Handbuch der Urkundenlehre*, still, unfortunately, incomplete; to Pflugk-Harttung's great collection of facsimiles, *Specimina Selecta Chartarum Pontificum Romanorum* (3 vols., Stuttgart, 1887); and to books and papers by P. Kehr, Tangl, Diekamp, Mühlbacher, and others. Many of these contributions have appeared in the *Mittheil. des Instituts f. Österreichs Geschichtsforschung*, or in the Göttingen *Nachrichten* (Phil.-hist. Classe). The newly founded *Archiv für Urkundenforschung*, edited by Brandi, also contains some most valuable work of this kind. For the practical working of the Papal chancery, the *Practica Cancellariae Apostolicae*, edited by Schmitz-Kallenberg (Munich, 1904); the work of Baumgarten, *Aus Kanzlei und Kammer* (Freiburg, 1907); and that of E. von Ottenthal, *Regulae Cancellariae Apostolicae* (Innsbruck, 1888), are of great importance. Good work of the same kind has also been done by French scholars, notably M. Léopold Delisle and the Comte de Mas Latrie.

From the legal point of view, all the larger treatises which touch on the sources of the Canon Law devote a certain amount of space to the question of Papal bulls and letters. It will be sufficient to mention here (besides the great works of Phillips, Hinschius, von Scherer, and Wernz): Maassen, *Gesch. der Quellen und Lit. d. can. Rechts*, i. (1870); J. F. von Schulte, *Gesch. der Quellen u. Lit. des can. Rechts*, 3 vols. (1875–80); A. Tardif, *Histoire des sources du droit canonique* (1887); C. Mirbt, *Quellen zur Gesch. des Papsttums und des röm. Katholizismus* (1901). Much useful information about the building up of Roman Case Law will be found in F. W. Maitland's *Roman Canon Law in the Church of England* (1898). The Catholic standpoint regarding the pronouncements of such mediæval Popes as Gregory VII., Innocent III., and Boniface VIII. may be gathered from Hergenröther's *Catholic Church and Christian State* (Eng. tr., Lond. 1876)—a work which grew out of the 'Janus' controversy; or, better, from the various articles in the *Staatslexikon* (Herder, Freiburg), edited by Bruder and Bachem, the 3rd ed. of which is now in course of publication.

HERBERT THURSTON.

BUNYAN.—1. Life.—John Bunyan, the greatest of allegorists, and also the greatest exponent of the Puritan doctrine in popular form, was born at Elstow near Bedford in 1628, and died in London in 1688. His life thus covered the troubled period of the Civil War, the Commonwealth, and the Restoration, and ended on the eve of the Revolution. His origin was humble,—'low and inconsiderable,' he calls it,—his father being a tinker or itinerant brazier. He himself adopted the same trade. He learned to read and write, 'according to the rate of other poor men's children,' but his small stock of education was quickly lost. He seems to have had a somewhat nervous and morbid childhood, disturbed by dreams and fears. About 1645, when he was still but a lad, he served as a soldier. He himself does not say on which side he was enrolled, and his biographers have either followed their own fancy in the matter or have been content to regard the point as undecided. But probably Dr. Brown's carefully considered verdict would not now be disputed, based as it is upon a survey of the local circumstances and the 'strong set of the stream in the Parliamentary direction': 'It seems scarcely likely that he would think his way to independent conclusions so wide apart from those of his neighbours, break through all the carefully kept lines of the Parliamentary forces . . . and join the Royalist army with the king' (*Life*, p. 49). Bunyan owed much to his first wife. She restored to him the simple education he had lost by disuse; and she brought to him his first impressions of practical religion. They were very poor,—'not having so much household stuff as a dish or a spoon betwixt us both,'—but she brought with her two little books. The titles of these are noteworthy. They are seeds of a harvest. One was *The Plaine Man's Path-way to Heaven, Wherein every man may clearly see, whether he shall be saved or damned*, by Arthur Dent. The other was Lewis Bayly's well-known book, *The Practice of Pietie, directing a Christian how to walke that he may please God*. These little books must have left a deep mark upon the young man's mind. The former is written entirely in dialogue form. The latter, though somewhat heavy and common-place as a whole, has near its close a long 'colloquie' between Christ and the soul, so simple, tender, and beautiful that Bunyan himself might almost have written it.* We have possibly here the germ of his love for dialogue, both in allegory and in preaching.

After his marriage there came a period of spiritual upheaval lasting about four years, and recorded with wonderful power and skill in his *Grace Abounding to the Chief of Sinners* (1666). This book is the key to all his other writings: it is his experience compressed; the other books are his experience writ large, for in his case, as in that of St. Paul, doctrine and experience are in continual contact. No summary can do justice to the vividness of this great little autobiography; and this period of his life, when his soul was in the throes of birth, can be suitably described only in his own words. It was a period of many difficulties about such matters as election, the day of grace, the sin against the Holy Ghost; of many sacrifices—one game and pleasure after another being given up in the hope of finding peace; of many unsatisfied yearnings and aspirations,—'Oh! how I now loved those words that spake of a Christian's calling! as when the Lord said to one, Follow me; and to another, Come after me: and oh, thought I, that he would say so to me too: how gladly would I run after him!' It was a period of swift alternations of feeling, ranging from moments of an ecstatic joy—which lasted all too short a time, and was quickly caught up again, like Peter's sheet, to heaven—to moods of morbid self-torture, as when voices seemed to tempt him to sell Christ and he persuaded himself that he had sold his Saviour.† He himself admits that there was something distraught and unbalanced in his condition at this time: 'This is the man that hath his dwelling among the tombs with the dead; that

* '. . . *Soule*: Lord, wherefore wouldest thou be lift up upon a Crosse? *Christ*: That I might lift thee up with me to heaven. *S.*: Lord, why wouldest thou have thine armes nayled abroad? *C.*: That I might embrace thee more lovingly, my sweet soule. *S.*: Lord, wherefore was thy side opened with a Speare? *C.*: That thou mightest have a way to come nearer my heart. *S.*: Lord, wherefore wouldst thou be buried? *C.*: That thy sinnes might never rise up in Iudgement against thee. . .'

† Cf. the 'Meditation upon Peep of Day' from *A Book for Boys and Girls*:

'I oft, though it be peep of day, don't know
Whether 'tis Night, whether 'tis Day or no.
I fancy that I see a little light;
But cannot yet distinguish day from night.
I hope, I doubt, but steady yet I be not,
I am not at a point, the Sun I see not.
Thus 'tis with such, who Grace but now possess,
They know not yet, if they are curst or blest.'

is always crying out and cutting himself with stones.' But the essence of his case did not lie in its morbid extremes, but in a genuine conviction of sin which was the Divine preparation for the comfort of the Cross. Gradually he found his way to peace, the two chief influences being Luther's commentary upon *Galatians*,—'most fit for a wounded conscience,'—and the ministry of John Gifford. This man had formerly been a loose liver and an officer in the Royalist army, then a physician in Bedford; finally from 1650, being now a changed man, he became the pastor of the newly formed Nonconformist congregation in Bedford. He was doubtless the prototype of 'Evangelist'; he helped Bunyan the pilgrim towards the wicket gate and the shining light, and received him into the fellowship of the congregation in 1653. From that year until 1660 the congregation met in St. John's Church at Bedford, for the experiment of a comprehensive national Church was being tried under Cromwell, and Gifford had been presented to the living of St. John's.

In 1655, Bunyan removed from Elstow to Bedford. In the same year he lost his first wife, and was also called by his brethren to open his lips as a preacher: 'They desired me, and that with much earnestness, that I would be willing at sometimes to take in hand, in one of the meetings, to speak a word of exhortation unto them.' His message proved immediately acceptable: people came by hundreds to hear him; during the period of tolerance he preached more than once even in parish churches. But the Restoration brought the Act of Uniformity. Even as early as March 1658 there had been trouble. The minutes of the Bedford church mention a meeting 'for counsaile what to doe with respect to the indictment against bro: Bunyan at ye Assizes for preaching at Eaton.' Nothing seems to have come of that, but 1660 brought his arrest and the beginning of his imprisonment. There has been much uncertainty as to the number and places of his incarcerations, but once more Dr. Brown's careful weighing of evidence must decide the matter, reinforced as it has been by the discovery of the actual warrant of arrest for his second and shorter imprisonment in the end of 1675. The first imprisonment was in the County Gaol at Bedford, and lasted for twelve years, with a break in the middle, and with a considerable amount of liberty at times, varied with periods of greater strictness. He made tagged laces for his own support; wrote *Grace Abounding* and several other books; and preached in the gaol, and occasionally outside it. The second was in the Town Gaol on Bedford Bridge: it lasted six months, and produced the first part of *The Pilgrim's Progress*. When the first imprisonment drew to a close, the prisoner found new and enlarged service waiting for him. The following appears in the records of the Bedford church for 21st Jan. 1672:

'After much seeking God by prayer and sober conference formerly had, the Congregation did at this meeting with joynt consent (signifyed by solemne lifting up of their hands) call forth and appoint our brother John Bunyan to the pastorall office or eldership. And he, accepting thereof, gave up himself to serve Christ and his Church in that charge; and received of the Elders the right hand of fellowship.'

An orchard was purchased, and a barn that stood upon it was converted into a meeting-place, which was the home of the congregation until long after Bunyan's death.

From this point onwards his fame as a preacher, aided by his growing popularity as a writer, spread far and wide. He became known as 'Bishop Bunyan,' and travelled in many directions through England. He was often in London, where crowds would gather to hear him even at 7 o'clock in the morning. Some of the secrets of his success as a preacher may be guessed from his printed sermons, even though these in their revised and enlarged form may differ somewhat from the spoken word. He used strong and simple language, —his whole mind being saturated with the English Bible. He spoke with intense conviction, especially at first, upon the guilt and power of sin: 'I preached what I felt, what I smartingly did feel. . . . I went myself in chains to preach to them in chains, and carried that fire in my own conscience that I persuaded them to be aware of.' Later he gave more emphasis to 'Jesus Christ in all His offices, relations, and benefits,' and 'the mystery of the union of Christ'; but still, he says, 'I preached what I saw and felt.' There must have been a strongly dramatic element in his preaching, as in his enlargement of St. Peter's words, 'Repent every one of you,' in *The Jerusalem Sinner Saved*:

'*Objector*: But I was one of them that plotted to take away his life. May I be saved by him? *Peter*: Every one of you. *Obj.*: But I was one of them that bare false witness against him. Is there grace for me? *Peter*: For every one of you. *Obj.*: But I was one of them that cried out, Crucify him, crucify him; and desired that Barabbas the murderer might live, rather than him. What will become of me, think you? *Peter*: I am to preach repentance and remission of sins to every one of you, says Peter. . . Oh! what a blessed *Every one of you* is here!'

And his message must have been full of a limitless pity and tenderness, the true spirit of an evangelist, the spirit of the Christ whose mercy he had tasted for himself. John Owen is said to have remarked to Charles II. that he would gladly give up all his learning for the tinker's power of reaching the heart, and it is very evident that one of Bunyan's secrets of reaching the heart was just his intense compassion. 'Mark Rutherford,' himself no mean stylist, selects the following passage from *The Heavenly Footman* as unmatched in its simple eloquence:

'To encourage thee a little farther, set to the work, and when thou hast run thyself down weary, then the Lord Jesus will take thee up and carry thee. Is not this enough to make any poor soul begin his race? Thou perhaps cryest, O but I am feeble, I am lame, etc.; well, but Christ hath a bosom; consider, therefore, when thou hast run thyself down weary, he will put thee in his bosom. He shall gather the lambs with his arms, and carry them in his bosom, and shall gently lead those that are with young. This is the way that fathers take to encourage their children, saying: Run, sweet babe, while thou art weary, and then I will take thee up and carry thee. He will gather his lambs with his arms and carry them in his bosom; when they are weary, they shall ride.'

There is more than eloquence in such a passage: there is the tenderness of a true shepherd of souls.

In addition to his wide-spread work as preacher and evangelist, Bunyan played a not unimportant part in the earlier history of the Baptist denomination, as an advocate of open communion. The church of which he was pastor had been founded upon a broad basis:

'The principle upon which they thus entered into fellowship one with another, and upon which they did afterwards receive those that were added to their body and fellowship, was *faith in Christ and holiness of life* without respect to this or that circumstance or opinion in outward and circumstantiall things.'

So runs the old church record, and both Gifford and Bunyan seem to have been in sympathy with the basis. Dr. Brown says that, though Gifford is often called a Baptist, there is no evidence to prove him such; and though Bunyan was himself baptized by immersion in the Ouse, he was drawn into controversy with some of the stricter Baptists who found fault with him for his principle of open communion. The substance of his treatise, *Differences in Judgment about Water Baptism no bar to Communion* (1673), and of various other pamphlets and passages, amounts to this—that the point is one for the judgment of the individual, and that the Church dare not reject those who are true believers, whatever their opinion on this point. 'Christ, not baptism, is the way to the sheepfold. . . . Baptism also may be abused, and is, when more is laid upon it by us than is commanded by God.' He gives us his own preference and practice

in a phrase in *The Heavenly Footman*, when, after bidding his readers beware of Quakers, Ranters, Freewillers, he adds, 'Also do not have too much company with some Anabaptists, though I go under that name myself.' It is a little surprising to find that one who bore the name 'Anabaptist' should have two of his children christened after his own immersion—one at Elstow in 1654 and one at St. Cuthbert's, Bedford, in 1672. Can it mean that neither Bunyan's first wife, nor his second, whom he married in 1660 and who proved herself during his tribulation to be a woman of some courage and character, shared his personal view, and that he did not care enough about the matter to insist upon his own preference?

2. Works. — According to the list given by Dr. Brown, based upon that of Bunyan's friend, Charles Doe, Bunyan produced in all 60 works, one for each year of his life. But this includes such items as *A Map of Salvation*, and various tracts and poetical pieces of small bulk, as well as the longer controversial, evangelistic, and allegorical works. *Grace Abounding* is referred to above. Of the others, apart from the three greatest, the most noteworthy are: *Some Gospel-Truths opened*, interesting now chiefly as Bunyan's first book, published in 1656, a fiery protest against Quaker Mysticism, clear in its style and orderly in its arrangement, but giving a hint only in an occasional phrase of the greater riches that were to come; the various books, such as *Come and Welcome to Jesus Christ*, *The Jerusalem Sinner Saved*, and *The Heavenly Footman*, which preserve for us the style and substance of Bunyan's actual preaching; his Catechism, *Instructions for the Ignorant*; and *A Book for Boys and Girls, or Country Rhimes for Children*. This last is quaint and valuable in itself, and is perhaps the *fons et origo* of a slender but sparkling literary stream which has flowed intermittently through the generations, and has not yet spent itself—witness *The Child's Garden of Verses*. Probably the modern child, accustomed to the skilful and dainty catering of R. L. Stevenson and others, would count Bunyan's verses, except in one or two cases, somewhat heavy and didactic. Yet to the boys and girls of the 17th cent. these 'rhimes' may have been almost as much of a relief and joy as R. L. S. and Edward Lear to the happier children of the later 19th century.

Bunyan's poetry has been severely criticized. It may be admitted that in verse he seldom found his liberty, and that his more extended poems are doggerel. Yet in this region Bunyan is better worth knowing than the critics would have us believe. Many of his verses are at least melodious, pithy, and memorable. And something is to be said for the poetic quality of the man who wrote the song of the Shepherd Boy, and these lines *Upon the Swallow*:

'This pretty Bird, Oh! how she flies and sings!
But could she do so if she had not Wings?
Her Wings bespeak my Faith, her Songs my Peace;
When I believe and sing, my Doubtings cease.'

The first part of *The Pilgrim's Progress* was published in 1678, the second part about seven years later. The book was an immediate and amazing success. Three editions of the first part were sold in a year, and in the second and third of these the original scheme was wisely added to — Worldly Wiseman, Mr. By-end's relations, and Giant Despair's wife being among these happy afterthoughts. In Bunyan's lifetime 100,000 copies were sold. It is the greatest of allegories. It is the fine flower of Puritan theology and experience. It may be called the first great English novel. 'John Bunyan may pass for the father of our novelists,' says Hallam. Into it, with a pen that had found freedom and mastery, he put all his marvellous powers of observation: the man who has given us Mr. Talkative and Mr. Fearing went about the world with his eyes and ears open. Into it he also put all his own experience, so rich in sorrows and in joys. The temptation is strong to suggest originals for the allegorical scenes and personages. Was Elstow Abbey the House Beautiful, and was the Slough of Despond suggested by the miry fields near Bunyan's birthplace? Was Judge Jeffreys or Sir John Kelynge the original of Judge Hate-good? Was Faithful's voice, overheard in the valley, the voice of Martin Luther? And was Christiana Bunyan's second wife and Mercy his first? These things are better left vague. But we touch the real source of the whole matter when we study Bunyan's own experience. Here, *e.g.*, is the original of the Slough of Despond in *Grace Abounding*: 'I would in these days, often in my greatest agonies, even flounce towards the promise, as the horses do towards sound ground, that yet stick in the mire.' There have been very varying judgments as to the value of the second part of *The Pilgrim's Progress*. Its geographical interest is, of course, less than that of the first, because the story leads the reader along a familiar path; and the dialogue is in places weaker. But Mr. Froude's severe disparagement is entirely misleading, if only because of the extraordinary richness of the second part as a book of character. Mr. Brisk, Mr. Honest, Greatheart, Mercy, Mr. Fearing, Madam Bubble, and the rest are inimitable and immortal. But, indeed, criticism of *The Pilgrim's Progress*, if it be based on sympathy, soon loses itself in affection. Sir Walter Scott speaks for the multitude of Bunyan's readers when he says:

'John Bunyan's parable must be dear to many, as to us, from the recollection that in youth they were endued with permission to peruse it at times when all studies of a nature merely entertaining were prohibited' (*Quart. Rev.*, Oct. 1830).*

No other book except the Bible so unites the hearts of young and old, learned and simple, the lover of beauty and the lover of sanctity.

In *The Life and Death of Mr. Badman*, published in 1680, Bunyan made an attempt to tell the opposite story, and describe a pilgrimage from bad to worse. The attempt is not very successful. It is retarded by being cast in dialogue form throughout; it is weighted with amazing anecdotes, which, however interesting from their mere incredibility, distract attention from the main story; it loses itself in tedious discussions, *e.g.*, on the difference between cursing and swearing. But the pen that created the Pilgrim had not lost all its cunning. There are many passages acute in observation and happy in expression, like the phrase about Mr. Badman's 'mournful, sugared letters' to his creditors; and the book is full of Bunyan's keen observation and knowledge of life: 'I think I may truly say that, to the best of my remembrance, all the things that I here discourse of, I mean as to matters of fact, have been acted upon the stage of this world, even many times before mine eyes.' And the book has value still as a picture of the rougher and uglier side of English life in Bunyan's time. Perhaps the author's artistic restraint is never more finely exhibited than in giving Mr. Badman a quiet and peaceable deathbed.

In *The Holy War* (1682) Bunyan rose again almost to his own loftiest level, and created another allegory second only to *The Pilgrim's Progress*. The task in this case was more difficult. Though there is more Biblical foundation for the figure of a war than for that of a pilgrimage, the former is less easy to draw out into a connected story. Defects and inconsistencies are easily observable, *e.g.*, Mansoul seems now the soul of a man, now the soul of humanity. It is dangerous also to bring

* Cf. Macaulay in his Essay on 'John Bunyan': 'That wonderful book, while it obtains admiration from the most fastidious critics, is loved by those who are too simple to admire it.'

the Persons of the Trinity into action and dialogue. But if there be defects in construction, there is not a weak page in the actual writing, and the style throughout seems mysteriously to take on a quality kindred to its theme—something of the strength of a rampart, something of the sound of a trumpet. Once more observation and experience are manifest continually. Bunyan's soldiering serves him well in his battle scenes. His heart remembers how this sort of thing is done: the evolutions of Emmanuel's army, 'the handling of their arms and managing of their weapons of war, were marvellously taking to Mansoul and me.' The new modelling of Mansoul is a reflexion of the changes that were compulsorily brought about in the civic arrangements of towns like Bedford as Commonwealth or Monarchy got the upper hand. The setting up of a ministry in Mansoul is also full of echoes of times when the ecclesiastical foundations were unsettled, and contending ideals enjoyed alternate periods of supremacy. Bunyan handles all this with exhaustless skill and ingenuity: *e.g.*, there is a whole analysis of persecution, clear and complete, packed into one corner of the plot. When the Bloodmen were taken, they were had before the Prince, and

'he found them to be of three several counties, though they all came out of one land. One sort of them came out of Blindmanshire, and they were such as did ignorantly what they did. Another sort of them came out of Blindzealshire, and they did superstitiously what they did. The third sort of them came out of the town of Malice, in the county of Envy, and they did what they did out of spite and implacableness.'

In the scheme of this allegory, there is naturally less room for character-drawing than in the other, yet who can forget that deaf and angry man, old Mr. Prejudice, or the darling of Diabolus, Captain Anything? Moreover, in the dealings between Emmanuel and Mansoul there appears, as in all Bunyan ever wrote, his passionate love for his Lord, and the Lord's love and pity for his sinful but aspiring servants.

3. Place and influence.—Bunyan's influence was immediate and enormous, not in his own denomination only, not in his own country only. *The Pilgrim's Progress* was translated into Welsh in 1688, into Dutch in 1682, into German in 1703, into French in 1685. Bunyan's empire has grown steadily with the passing generations, mainly through this his best known book: perhaps the best criterion of its extent to-day is the fact that in the summer of 1909 the Religious Tract Society announces versions in 112 different languages and dialects. Even such an edition as that produced by J. M. Neale in 1853, with insertions and alterations in the worst possible taste, designed to make the book teach a different scheme of doctrine from that of its author, is a proof of Bunyan's wide sovereignty and of the appeal he makes to minds of many different types. In addition to the qualities alluded to incidentally above—his pictorial style, uniting the young and the old; his strong, simple, Biblical English, uniting the educated and the unlearned; his knowledge of life; his faithfulness to his own deep experience; his historical position as our great exponent of Puritanism at its best—the following may be mentioned as among the secrets of an influence so wide and enduring:

(*a*) Bunyan's real *originality*.* This quality may be claimed for him even apart from the question of borrowed materials. Shakespeare can be original even when he is working over the story of some old chronicler: resurrection can be so managed as to be equivalent to creation. Much ingenuity, however, has been expended on the attempt to find a source for the Pilgrim-story. Guillaume de Guileville's *Le Pèlerinage de l'Homme* in Lydgate's version; Bernard's *The Isle of Man, or the Legal Proceedings in Manshire against Sin*; and other existing allegories or romances have been suggested as the source of Bunyan's inspiration; or it is alleged that he found his seed-thought, say, in *The Plaine Man's Path-way*, or in the letter of an Italian martyr in Foxe's *Booke of Martyrs*, which says, 'I will travel up to the New Jerusalem. . . . Behold, I have entered already on my journey.' Probably Bunyan gathered seed-thoughts everywhere, and plagiarized prodigiously from the open book of life. But the question of his literary originality is very carefully examined in the preface to Furnivall's edition of Lydgate's *de Guileville*, and the wise conclusion reached is this: 'In one Book alone, the Bible, supplemented by Bunyan's own experience, we may trace all the influences necessary for the production of *The Pilgrim's Progress*.'

(*b*) His *practical sagacity and ethical force*. Bunyan the evangelist does not altogether hide Bunyan the moralist: the two are one. 'He was securely weighted with unshifting ballast, the ballast of common sense.' The story of Mr. Badman's fraudulent bankruptcy shows how Bunyan had an eye for the insincerities and corruptions of the commercial world. Some of his counsels are startlingly close to modern problems of commercial morality: 'Art thou a seller and do things grow cheap? Set not thy hand to help or hold them up higher. Art thou a buyer and do things grow dear? Use no cunning or deceitful language to pull them down.' There is no thought more characteristic of Bunyan, in spite of his lurid pictures of the agonies of the lost, than this—that sin is hell; sin is the worm; sin is the fire; it would be better to be sinless in hell than to be a sinner in heaven.

(*c*) His *broad and genial humanity*. This shows itself in many ways,—not least in his kindly and hearty humour,—his portraits, such as those of Mr. Brisk, Talkative, Sir Having Greedy, Christiana and her comrades dancing over the fate of Giant Despair, his skill in inventing amusing and delightful names, and his way of poking fun at those whom he would gently rebuke. Still more strikingly does his breadth of humanity come out in his whole management of the Pilgrim's story. There are so few ecclesiastical waymarks that one would never guess the author's own position, and when Giant Pope is omitted the book can be used with profit and pleasure by Catholic readers. He avoids the temptation to which religious teachers of strongly marked experience often yield—the temptation to think that all others must walk in their footprints in order to be safe. This is finely brought out in the contrast between the experiences of Christian and Faithful in the first part, and in the room that is found in the second part for a rich variety of character and experience.

(*d*) *The note of the Evangel*. The most intimate and enduring secret of the hold that Bunyan has over multitudes of men is this, that he was so great a lover of men, and so passionately loyal to the supreme Lover of men. His friend Doe calls him 'a great convert'; and, because he was so great and so thorough a convert, he is a great exponent of the motives that have supreme converting power Hence *The Pilgrim's Progress* is, as Coleridge calls

* Hallam, 'that niggard of applause,' has this: 'His success in a line of composition like the spiritual romance or allegory, which seems to have been frigid and unreadable in the few instances where it had been attempted, is doubtless enhanced by his want of all learning and his low station in life. He was therefore rarely, if ever, an imitator; he was never enchained by rules. Bunyan possessed in a remarkable degree the power of representation; his inventive faculty was considerable, but the other is his distinguishing excellence.' He saw, and makes us see, what he describes; he is circumstantial without prolixity, and, in the variety and frequent change of his incidents, never loses sight of the unity of his allegorical fable' (*Lit. History*, iv. 331).

it, '*Summa Theologiae Evangelicae*.' And, in spite of the many changes of standpoint and vocabulary since Bunyan's day, he will still be for many generations to come the teacher and the friend of those who have no other explanation of their own deliverance than this: 'He hath given me rest by his sorrow and life by his death.'

LITERATURE.—The literature of this subject is now enormous. Among the biographies, that by John Brown (London, 1885; new ed. 1902) stands alone in its completeness, and in its wealth of extracts from historical sources such as the minutes of Bunyan's church. Among smaller biographies and critical studies there may be mentioned: Macaulay, *Essays*, 'John Bunyan' (1831); J. A. Froude in the 'English Men of Letters' series (1887); 'Mark Rutherford' in the 'Literary Lives' series (1905); lives by Southey (1831) and Canon Venables (1888); lectures by Dean Howson in 'Companions for the Devout Life' (1877), and by W. Robertson Nicoll in the 'Evangelical Succession' series (1884). There is also a large literature of exposition, devoted mainly to *The Pilgrim's Progress*. In addition to the older books, such as Cheever (1844), there are Kerr Bain's two volumes on *The People of the Pilgrimage* (1887)—unique in their thoroughness and in the almost too great weight of learning they bring to their task. The lecture-sermons of A. Whyte (two volumes on *The Pilgrim* [1893, 1894], one on *The Holy War* [1895], one on *Grace Abounding* [1908]), are also the product of deep knowledge, sympathy, and enthusiasm, and have done much to create a new public for Bunyan. A series of papers on *The Pilgrim* has recently been contributed by J. Kelman to *The Expository Times* (xvi. [1905] ff.). Among earlier fugitive pieces, Sir Walter Scott's review of Southey's *Life* in the *Quarterly Review*, Oct. 1830, is interesting, especially for its comparison and contrast between Bunyan and Spenser. The best vindication of Bunyan's originality is that alluded to above, in 10 pp. of the introduction to Furnivall's *de Guileville*. Bunyan's *Complete Works* have been edited by G. Offor and R. Philip, 3 vols., London, 1853 (new ed. 1862); and there are critical texts with notes and glossaries issued by the Clarendon Press, Oxford, and (the text alone) by the Cambridge University Press.

J. M. E. Ross.
